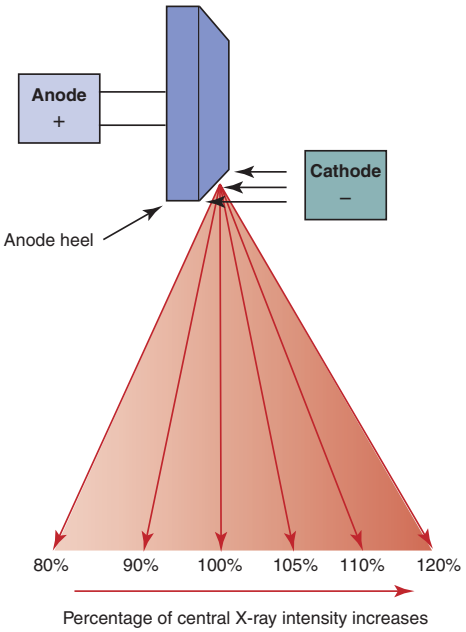
h. metals examples include lead, mercury, silver, zinc, copper, arsenic and iron.

H-17: Heave line in a horse with chronic obstructive pulmonary disease.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

heavy-chain disease a monoclonal gammopathy in which the heavy chain fragment alone is produced in large amounts and can be detected in both serum and urine.
hebetic [*hə-bet'ik*] pertaining to sexual maturity.
hecatomeric [*hek"ə-to-mer'ik*] having processes that divide in two, one going to each side of the spinal cord; said of certain neurons.
hecto- (h) [Gr.] *hundred*; a prefix used in the metric system of naming units of measurement to designate an amount 100 times (10^2) the size of the unit to which it is joined, e.g. hectoliter (100 liters).
Hedera helix a member of the plant family Araliaceae. May contain a toxic saponin which causes parturient hypocalcemia (milk fever)-like recumbency in cattle. Called also ivy, common ivy.
hedge pink ***Saponaria officinalis***.
hedgehog nocturnal, insectivorous and immune to snakebite, this spiny animal plays a beneficial role in an environment by controlling some pests. Called also *Erinaceus erinaceus*, a member of the family Erinaceidae.
h. fleas see **flea**.
h. grass see ***Echinopogon***.
hedgehog proteins a family of secreted signaling proteins that are involved in the embryogenesis; mutations in these proteins are implicated in some birth defects and cancers.
Hedycarya arborea New Zealand plant in the family Monomiaceae; contains an unidentified toxin which causes weight loss. Called also pigeonwood.
heel [*hel*] 1. (rare) in cats and dogs, the hock joint or tarsus. 2. in ungulates, the place at the rear of the hoof or claw where horn and skin meet and where the wall of the hoof turns horizontally to become the sole.
h. abscess one of the forms taken by foot abscess in sheep. There is pain and swelling at the affected heel, and separation and discharge of pus occurs at the skin-horn junction. The abscess is caused by infection with *Fusobacterium necrophorum* and *Arcanobacterium pyogenes,* the infection resulting from an extension of the infection from an interdigital dermatitis.
h. bug see ***Trombicula autumnalis***.
h. bulb necrosis see infectious **bulbar** necrosis.
contracted h. the heels of the affected hoof are closer together than normal, the frog is narrow and shrunken and the bars form a narrower angle than in the normal hoof. The horse is usually lame on the leg.
h. easing trimming the foot so that the heels can spread more.
h. effect unequal distribution of the X-ray beam intensity emitted from the X-ray tube. Due to angulation of the target, the distribution of the beam intensity decreases rapidly towards the anode due to absorption of the X-ray beam by the target and anode material.
open h's. when the heels in the horse's feet are wide apart.
sheared h. vertical separation occurs between the heels of a horse's hoof causing lameness. A chronic condition due usually to overuse of one heel because of a conformational imbalance.
heft Irish name for ovine **illthrift**.

VetBooks.ir



H-18: The anode heel effect.
From Sirois M, Principles and Practice of Veterinary Technology, 3rd Edition. Mosby, 2011.

VetBooks.ir

heifer young female cattle up to the birth of first calf or in the lactation following the first calving. May be qualified as replacement, to enter the herd as a replacement for a culled cow, pregnant, maiden or spayed heifer. A springing heifer is in the last one or two weeks of pregnancy.

heifering lay term for the act of performing a penile urethrostomy on a steer as treatment for urethral calculi.

heiferette a first calf heifer that has been culled from the herd and is now being fed in a feedlot.

Heimlich valve [*hīm'lik*] a valve placed on an indwelling catheter to prevent reflux of air into cavity being evacuated, as in drainage of the pleural cavity.

Heineke–Mikulicz pyloroplasty [*hi'nĕ-ke me'koo-lich*] enlargement of a pyloric stricture by incising the pylorus longitudinally and suturing the incision transversely.

Heinz body [*hīnts*] see Heinz **body**.

Heinz–Ehrlich body [*hīnts' er'lik*] see Heinz **body**.

hekkabit see ***Capparis tomentosa***.

Heko-Heko see **porcine** reproduction and respiratory syndrome.

HeLa cells [*he'lə*] cells of the first continuously cultured cell line derived from a human cervical carcinoma.

helcoid [*hel'koid*] like an ulcer.

helenalin a sesquiterpene, a toxin in the plant *Helenium microcephalum*.

Helenium [*hə-le'ne-um*] North American genus of plants in the Asteraceae family; contain sesquiterpene lactones which cause a syndrome of abdominal pain, vomiting, diarrhea, incoordination, dyspnea. Includes *H. amarum* (*H. tenuifolium*), *H. autumnale* (sneezeweed, bitter weed), *H. flexuosum* (*H. nudiflorum*), *H. hoopesii* (orange sneezeweed), *H. integrifolium*, *H. microcephalum* (small head sneezeweed). *H. amarum* imparts a bitter taste to the milk of cattle which eat it. Called also *Dugaldia* spp., sneezeweed.

helianthrone see **dianthrone**.

Helianthus annuus toxic plant in the family Asteraceae; causes nitrate–nitrite poisoning. Called also sunflower.

helical [*hel'ĭ-kəl*] shaped like a **helix**.

helicase [*he'lĭ-kās*] an enzyme involved in DNA replication, responsible for unwinding the double helix.

Helichrysum genus in the plant family Asteraceae; in southern Africa *H. argyrosphaerum* contains an unidentified toxin which causes blindness and paresis resulting from degenerative lesions in the brain.

H. bladowskianum see ***Argentipallium blandowskianum***.

helicine [*hel'ĭ-sēn*] spiral.

h. arteries spiral arteries, as in: 1. opening into the cavernous tissue of the penis; they have an important role in enhancing erection and facilitating detumescence; 2. around the curvatures of the stomach, as the gastro-epiploic arteries, that allow the stomach to expand as it fills.

Helicobacter [*hel"ĭ-ko-bak'tər*] microaerophilic, curved to spiral-shaped, gram-negative bacteria associated with gastritis and peptic ulcer disease in humans. The type species is *H. pylori*. It may also be involved in the etiology of gastric neoplasia. A large number of different species have been isolated from the gastrointestinal tract of different animals, but many have not been associated with disease.

H. acinonychis, H. aurati, H. canis, H. felis, H. heilmannii, H. mustelae isolated from the stomach of large cat species, Syrian hamsters, dogs, cats, dogs and ferrets, respectively. They may cause gastric disease in these species.

H. bilis associated with multifocal hepatitis in mice.

H. hepaticus causes focal hepatic necrosis and focal, subacute, non-suppurative hepatitis, progressing to chronic hepatitis with bile duct hyperplasia and hepatocellular tumors in mice.

helicoid [*hel'ĭ-koid*] coiled; spiral.

helicopodia helicopod gait; a dragging, shuffling gait in which the feet describe half circles.

helicopter disease see **infectious** stunting syndrome.

helicotrema [*hel"ĭ-ko-tre'mə*] the passage that connects the scala tympani and the scala vestibuli at the apex of the cochlea in the internal ear.

Helictometra giardi see ***Thysaniezia giardi***.

heli(o)- word element. [Gr.] *sun*.

heliosupine [*he"le-o soo'pin*] toxic pyrrolizidine alkaloid in ***Cynoglossum officinale***.

heliotrine toxic pyrrolizidine alkaloid in ***Heliotropium*** *europaeum*.

heliotrope ***Heliotropium*** *europaeum*.

blue heliotrope *Heliotropium amplexicaule*.

wild h. *Heliotropium europaeum*.

Heliotropium plant genus of the Boraginaceae family; contains pyrrolizidine alkaloids; causes hepatic injury and a syndrome of depression, jaundice, wasting, hepatoencephalopathy and sometimes photosensitization. Also a significant contributor to the development of toxemic jaundice in sheep; may also cause sufficient intravascular hemolysis to result in hemoglobinuria and hemolytic anemia. Includes *H. amplexicaule*, *H. europaeum*, *H. indicum*, *H. ovalifolium*, *H. supinum* and many other species. Called also heliotrope.

helium (He) [*he'le-əm*] a chemical element, atomic number 2, atomic weight 4.003. See Table 4. Helium is a chemically inert element that is odorless, tasteless and noncombustible. Because of its low density it is easily moved through the air passages and therefore requires little effort in breathing on the part of the patient who is in respiratory distress. Although helium itself has no chemical therapeutic value, when combined with oxygen it facilitates the delivery of this gas to the lungs.

helix [*he'liks*] 1. a coiled structure. 2. the rolled free margin of the pinna of the human ear.

α-h., alpha-h. the folding arrangement of parts of protein molecules in which a single polypeptide chain forms a right-handed helix.

h. destabilizing proteins proteins that bind in a cooperative manner to DNA single-strands during DNA replication and help open up the replication fork. Called also single-strand DNA binding proteins.

double h. the native state of **deoxyribonucleic acid** (DNA), in which two antiparallel chains with complementary nucleotide sequences are wound around each other. The DNA molecule consists of two strands with alternating sugar and phosphate groups, each with the nucleotide base pairs stacked between them. The orientation of the two strands is antiparallel, i.e. 5′→3′ directions are opposite. Called also Watson–Crick helix.

helix-to-coil transition phenomenon observed in melting or denaturation of double-stranded helical DNA; as the temperature increases there is bubble formation produced by the initial separation of regions rich in adenine, thymine pairs; the single strands within the bubbles, and later the completely separated single strands, form coils.

Hellabrunn mixture ketamine and xylazine; used especially in anesthesia for wildlife species.

hellebore [*hel'ə-bor*] flowering perennials in the genus ***Helleborus*** spp. and some in the genus ***Veratrum***. Includes American hellebore (*V. viride*), black hellebore (*H. niger*), false or western

hellebore (*V. californicum, V. viride*), green hellebore (*H. viridis*), stinking hellebore (*H. foetidus*), white hellebore (*V. album*).

Helleborus [*hel"ə-bo'rəs*] European plant genus in the Ranunculaceae family; contains a protoanemonin glycoside hellebrin causing diarrhea, dysentery, abdominal pain, and cardiac glycosides which cause sudden death. Includes *H. argutifolius* (*H. corsicus*), *H. foetidus* (stinking hellebore, setterwort), *H. niger* (Christmas rose), *H. orientalis*, *H. viridis* (green hellebore).

hellebrigenin a cardiotoxic aglycone in the plants *Helleborus* spp.

hellebrin a cardiotoxic, protoanemonin glycoside in the plants *Helleborus* spp.

Heller and Paul anticoagulant a balanced mixture of potassium and ammonium oxalates used to prevent coagulation of blood samples collected for cell counts.

Heller's operation [*hel'ər*] Heller's esophagomyotomy. See **cardioplasty**.

helmet cell keratocyte.

helminth [*hel'minth*] a parasitic worm; a nematode, cestode or trematode.

helminthagogue [*hel-min'thə-gog*] anthelmintic; vermifuge; an agent that expels worms or intestinal animal parasites.

helminthemesis [*hel"min-them'ə-sis*] the vomiting of worms.

helminthiasis, helminthosis [*hel"min-thi'ə-sis*] disease caused by an helmintic infection which may take any one of a number of forms. Worms living virtually free in the gut lumen, e.g. *Moniezia*, are relatively nonpathogenic, those that suck or feed on blood may cause anemia, those causing mucosal damage, e.g. *Ostertagia* spp., are followed by inappetence, malabsorption, a protein-losing enteropathy. A group that burrows into the gastrointestinal wall, e.g. *Oesophagostomum* spp., cause physical disturbances to gut function. Some species, e.g. *Strongylus vulgaris*, migrate through other tissues and cause clinical signs related to migration.

helminthology [*hel"min-thol'ə-je*] the scientific study of worms, particularly those that are parasitic.

helminthoma [*hel"min-thol'ə-je*] a tumor caused by a parasitic worm.

helminthosis see **helminthiasis**.

Helminthosporium genus of toxic fungi.

H. biseptatum a fungus growing on onion grass (*Romulea bulbocodium*) and thought to contribute to its toxicity. Also found in maduromycosis lesions. Called also *Drechslera* spp.

H. spiciferum see ***Bipolaris spicifera***.

helmintic pertaining to or emanating from helminths.

h. immunity antibodies produced against antigens from the worm; these are thought to damage the worms and encourage their expulsion.

heloma [*he-lo'mə*] a corn.

helotomy excision or paring of a corn or callus.

helper assisting; symbiotic.

h. lymphocytes see helper **lymphocyte**.

h. substance soluble proteins that regulate the responses of other cells to antigens. More properly called cytokine; see also **lymphokine**.

h. T cells see helper **lymphocyte**.

h. virus one that helps a defective virus to complete its replication cycle in infected cells.

helvellic acid one of the toxins in the large fungus *Gyromitra esculenta*.

hem- word element. [Gr.] *blood*. See also words beginning *hemato-* and *hemo-*.

hemacytometer [*he"mə-si-tom'ə-tər*] an instrument used in counting blood cells, commonly applied to a combination of counting chambers with coverglasses and pipettes for erythrocytes and leukocytes, all meeting established specifications.

hemadsorption [*he"mad-zorp'shən*] the adherence of erythrocytes to other cells, particles or surfaces. Hemadsorption and hemadsorption inhibition are used for the assay of some viruses and their specific antibodies, e.g. paramyxovirus.

hemadynamometer an instrument for measuring blood pressure.

hemadynamometry [*he"mə-di"nə-mom'ə-tre*] measurement of blood pressure.

hemagglutinating encephalomyelitis virus disease see hemagglutinating **encephalomyelitis** virus disease of pigs.

hemagglutination (HA) [*he"mə-gloo"tĭ-na'shən*] agglutination of erythrocytes usually by either antibodies, viruses or certain plant lectins.

indirect h. test see hemagglutination inhibition test (below).

h. inhibition (HI) test an assay for the detection and quantification of specific antiviral antibodies in a test serum. The serum, usually a twofold dilution series, is mixed with a standard number, usually 4–8 HA units, of virus and incubated prior to the addition of a standard suspension of erythrocytes. The highest dilution of serum that inhibits hemagglutination is the HI titer of the serum.

passive h. test see passive **agglutination** test.

h. (HA) assay hemagglutinating viruses directly agglutinate erythrocytes by binding to specific receptors on the surface of the erythrocytes and cross linking the erythrocytes such that they clump and fall out of suspension; used for detection, identification and quantitation of the virus.

h. viruses viruses capable of agglutinating red blood cells of a variety of animals, e.g. adenoviruses, parvoviruses, togaviruses, some coronaviruses, picornaviruses, orthomyxoviruses and paramyxoviruses. Useful in classifying viruses and assaying amounts of virus and antibody. See also **hemadsorption**.

hemagglutinin [*he"mə-gloo'tĭ-nin*] a substance that causes agglutination of erythrocytes. See **hemagglutination**.

cold h. one that acts only at temperatures near 39.2°F (4°C).

warm h. one that acts only at temperatures near 98.6°F (37°C).

hemal [*he'məl*] pertaining to blood or blood vessels.

h. arch small, v-shaped bones attached to the caudal ends of the ventral surface of several caudal (coccygeal) vertebrae where they protect several coccygeal vessels; they are small in dogs, absent in horses and cattle, large in kangaroos and whales.

h. node a lymphoid structure that typically may occur under the peritoneum along the vertebral column, in some viscera, near the spleen and kidneys and in the jugular furrow in ruminants; they resemble lymph nodes but their sinuses are filled with blood instead of lymph. They have functions probably like those of the spleen. Called also hemolymph

hemalomyelia see ascending-descending **myelomalacia**.

hemanalysis [*he"mə-nal'ə-sis*] analysis of the blood.

hemangiectasis [*he-man"je-ek'tə-sis*] dilatation of blood vessels.

hemangioblast [*he-man'je-o-blast*] a mesodermal cell that gives rise to both vascular endothelium and hemocytoblasts.

hemangioendothelioma [*he-man"je-o-en"do-the"le-o'mə*] a hemangioma in which endothelial cells are the predominant component.

malignant h. see **hemangiosarcoma**.

hemangioma [*he-man"je-o'mə*] a benign tumor made up of newly formed blood vessels, clustered together. In animals they occur mostly on the skin and in the spleen. In birds, they may be caused by leukosis virus. See also bovine cutaneous **angiomatosis**, **hemangiomatosis**, **telangiectasia**.

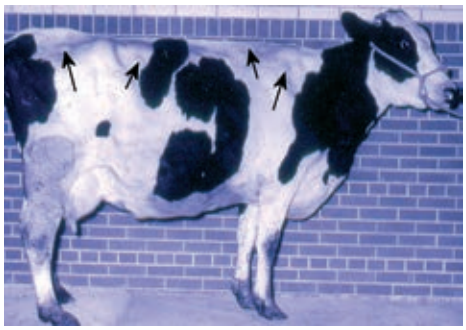
disseminated cavernous h. multiple, small hemangiomatous tumors found in skin and internal organs; in calves and pigs rarely.

verrucous h. hemangioma in superficial dermis; induce epithelial hyperplasia.

hemangiomatosis [*he-man"je-o-mə-to'sis*] the presence of multiple hemangiomas.

hemangiopericytoma [*he-man"je-o-per"ĭ-si-to'mə*] a tumor composed of spindle cells with a rich vascular network, which apparently arises from pericytes. Common in older dogs, especially German shepherd dogs, Irish setters, and Siberian huskies. Found on the legs, thorax, and flank. See also **schwannoma**, soft-tissue **sarcoma**.

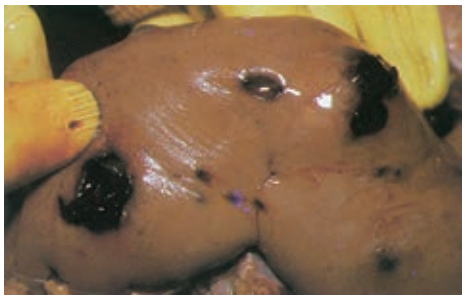
hemangiosarcoma [*he-man"je-o-sahr-ko'mə*] a malignant tumor of endothelial cells characterized by extensive metastasis, being



H-19: Lymphosarcoma involving superficial hemal lymph nodes.

VetBooks.ir

H-20: A focal vascular proliferation typical of hemangioma.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.



H-22: Hemangiosarcoma in liver.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

cavitatious and bleeding profusely if cut. Occurs in spleen, liver, skin, right atrium and muscle. It can cause severe hemorrhagic anemia by bleeding internally. Common in German shepherd dogs and Labrador retrievers. Called also angiosarcoma.

hemapheresis [*he"mə-fə-re'sis*] see **apheresis**.

hemarthros, hemarthrosis [*he-mahr'thros*] blood in a joint cavity.

hematemesis [*he"mə-tem'ə-sis*] the vomiting of blood. The appearance of the vomitus depends on the amount and character of the gastric contents at the time blood is vomited and on the length of time the blood has been in the stomach. Gastric acids change bright red blood to a brownish color and the vomitus is often described as 'coffee-ground' in color. Bright red blood in the vomitus indicates a fresh hemorrhage and little contact of the blood with gastric juices.

hematencephalon [*he"mat, hem"at-en-sef'ə-lon*] effusion of blood into the brain.

hemathermous [*he"mə- thur'məs*] warm-blooded; hematothermal.

hemathidrosis, hematidrosis [*he"mə, hem"ə-tĭ-dro'sis*] bloody sweat.

hematic [*he-mat'ik*] 1. pertaining to the blood. 2. hematinic.

h. fetal mummification a form of mummification in which degenerated blood, resembling melted chocolate has accumulated between the chorion and the uterus.

hematin [*he'mə-tin*] a compound formed by the oxidation of heme from the ferrous Fe(II) to the ferric Fe(III) state; it does not combine with oxygen.

h. methods basic method of estimating hemoglobin content of blood by converting it to acid hematin and doing a colorimetric estimation. See also **hemoglobinometer**.

parasite h. brown to black pigment observed in tissues, resulting from excreta of parasites, or their metabolism of hemoglobin. Liver flukes cause tracts throughout the liver, called fluke exhaust.

h. pigment crystalline brown deposits, mostly in vessels, formed by the action of formic acid on hemoglobin and accepted as a postmortem artifact; likely to be confused with hemosiderin. Called also acid formalin pigment.

hematinemia [*hem"ə-tĭ-ne'me-ə*] the presence of hematin in the blood.

hematinic [*he"mə-tin'ik*] 1. improving the quality of the blood. 2. an agent that improves the quality of the blood, increasing the hemoglobin concentration and the number of erythrocytes; examples are iron preparations, liver extract and the B complex vitamins.

hematinuria [*he"mə-tĭ-nu're-ə*] the presence of hematin in the urine.

hemat(o)- word element. [Gr.] *blood.* See also words beginning *hem-* and *hemo-*.

H-21: Hemangiopericytoma.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

hematobilia [*he"mə-to, hem"ə-to-bil'e-ah*] bleeding into the biliary passages.

hematoblast [*he'mə-to, he-mat'o-blast"*] hemocytoblasts.

hematocele [*he'mə-to, hem'ə-to-sēl"*] an effusion of blood into a cavity, especially into the tunica vaginalis testis.

hematochezia [*he"mə-to, hem"ə-to-ke'zhə*] blood in the feces. A characteristic of large bowel disease.

hematochromatosis [*he"mə-to, hem"ə-to-kro"mə-to'sis*] hemochromatosis.

hematocrit [*he-mat'ə-krit*] the volume percentage of erythrocytes in whole blood; also, the apparatus or procedures used in its determination. The hematocrit (which means, literally, 'to separate blood') can be determined by centrifuging a blood sample to separate the cellular elements from the plasma or, in automated analyzers, by calculation using the values obtained for the erythrocyte count (RBC) and the mean cell volume (MCV) ; the results indicate the ratio of cell volume to plasma volume (packed cell volume, PCV) and are expressed as a percentage, or in SI units as L/L. The hematocrit, in conjunction with other hematological tests, provides information about the size, functioning capacity and number of erythrocytes.

hematocyst [*he'mə-to, he-mat'o-sist"*] effusion of blood into the bladder or in a cyst.

hematocyturia [*he"mə-to, hem"ə-to-si-tu're-ə*] the presence of erythrocytes in the urine; hematuria.

hematogenic [*he"mə-to-he-mat"o-jen'ik*] 1. hematopoietic. 2. hematogenous.

h. peripheral circulatory failure peripheral circulatory failure due to loss of blood volume, either by loss of whole blood, or serum or water. See also **circulatory** failure.

hematogenous [*he"mə-toj'ĕ-nus*] produced by or derived from the blood; disseminated through the bloodstream or by the circulation.

hematogone a lymphocyte-like cell appearing in the bone marrow as a nucleus without a cell cytoplasm. Considered to be a blood cell precursor.

hematoid [*he'mə-toid*] like blood.

hematoidin [*he-mə-toid'in*] a substance apparently chemically identical with bilirubin but formed in the tissues from hemoglobin, particularly under conditions of reduced oxygen tension.

hematolactia hemolactia.

hematologic, hematological pertaining to or emanating from blood cells.

hematologist [*he"mə-tol'ə-jist*] a specialist in hematology.

hematology [*he"mə-tol'ə-je*] the science dealing with the morphology of blood and blood-forming tissues, and with their physiology and pathology.

h. reference values normal numbers per unit volume of each cell included in a blood **count**. See Tables 7.1 and 7.2.

hematolymphangioma [*he"mə-to, hem"ə-to-lim"fan-je-o'mə*] a tumor composed of blood and lymph vessels.

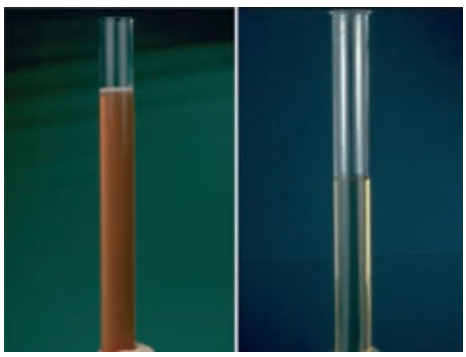
hematolysis [*he"mə-tol'ə-sis*] hemolysis.

hematoma [*he"mə-to'mə*] a localized collection of extravasated blood, usually clotted, in an organ, space or tissue. Contusions (bruises) are familiar forms of hematomas. Hematomas are almost always present with a fracture and are especially serious when they occur inside the skull, where they may produce local pressure on the brain. If small, the blood is absorbed unless infection develops; larger ones may organize and form a permanent tough deposit of collagen. For regional hematomas of individual importance see under anatomical name, e.g. ear, penile, vaginal, brain, ethmoid.

VetBooks.ir

H-23: Hematoma in the wall of the vulva of a mare.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

hematomediastinum [*he"mə-to, hem"ə-to-me"de-əs-ti'nəm*] effusion of blood into the mediastinum.
hematometry [*he"mə-tom'ə-tre*] measurement of hemoglobin and counts of various cells of the blood.
hematomphalocele an umbilical hernia containing blood.
hematomyelia [*hem"ə-to-mi-e'le-ə*] hemorrhage into the substance of the spinal cord. See also ascending-descending **myelomalacia**.
hematomyelitis [*hem"ə-to-mi"ə-li'tis*] acute myelitis with bloody effusion into the spinal cord.
hematomyelopore [*he"mə-to, hem"ə-to-mi'əl-o-por"*] formation of canals in the spinal cord due to hemorrhage.
hematonephrosis [*he"mə-to, hem"ə-to-nə-fro'sis*] the presence of blood in the renal pelvis.
hematopathology [*he"mə-to, hem"ə-to-pə-thol'ə-je*] the study of diseases of the blood; hemopathology.
hematopedesis see **hemodiapedesis**.
hematophagous [*he"mə, hem"ə-tof'ə-gəs*] subsisting on blood, e.g. hematophagous flies.
hematophilia see **hemophilia**.
hematopoiesis [*he"mə-to hem"ə-to-poi-e'sis*] the formation and development of blood cells, usually taking place in the bone marrow.
cyclic h. of collies see canine **cyclic** neutropenia.
h. depression a significant finding in cases of endotoxemia.
extramedullary h. the formation of and development of blood cells outside the bone marrow, as in the spleen, liver and lymph nodes.
fetal h. in embryogenesis migration of stem cells from the yolk sac blood islands sets up hematopoiesis in thymus, lymph nodes, liver and spleen. When fetal bone develops a marrow cavity hematopoiesis is similarly established. At birth hematopoiesis is largely medullary.
regenerative h. increased hematopoietic activity in response to a need for more cells; indicated by the presence of a higher than normal proportion of immature forms in the peripheral blood.
hematopoietic 1. pertaining to or affecting the formation of blood cells. 2. an agent that promotes the formation of blood cells.
h. dysplasia dyshematopoiesis.
h. system organs and tissues involved in the production of blood cells; includes bone marrow, spleen, thymus, lymph nodes.
hematopoietic necrosis [*he"mə-to, hem"ə-to-poi-et'ik*] see **infectious** hematopoietic necrosis of fish, **epizootic** hematopoietic necrosis of fish.
hepatopancreatic involving the liver and pancreas.
h. parvovirus disease infection by the hepatopancreatic parvovirus (HPV) causes disease in several species of penaeid shrimp. Heavy infections may result in poor growth and reduced production in farmed shrimp.
hematoporphyria a constitutional state marked by abnormal quantity of porphyrin (uroporphyrin and coproporphyrin) in the tissues and secreted in the urine, pigmentation of the mucosae (and later of the bones), sensitivity of the skin to light, vomiting, and intestinal disturbance; see **porphyria**.
hematoporphyrin [*he"mə-to, hem"ə-to-por'fə-rin*] an iron-free derivative of heme, a product of the decomposition of hemoglobin.
hematoporphyrinemia hematoporphyrin in the blood.
hematoporphyrinuria hematoporphyrin in the urine. See also bovine congenital erythropoietic **porphyria**.
hematorrhachis [*he"mə, hem"ə-tor'ə-kis*] hemorrhage into the vertebral canal.
hematorrhea copious hemorrhage.
hematosalpinx [*he"mə-to, hem"ə-to-sal'pinks*] an accumulation of blood in the uterine tube.
hematoscheocele [*he"mə-to, hem"ə-to-spər-mat'o-sēl*] an accumulation of blood within the scrotum.
hematospermatocele a spermatocele containing blood.
hematospermia [*he"mə-to, hem"ə-to-spur'me-ə*] hemospermia.
hematosteon [*he"mə, hem"ə-tos'te-on*] hemorrhage into the medullary cavity of a bone.
hematothorax [*he"mə-to, hem"ə-to-thor'aks*] see **hemothorax**.
hematotoxic [*he'mə-to, hem'ə-to-tok"sik*] 1. pertaining to blood poisoning. 2. poisonous to the blood and hematopoietic system.
hematotrachelos [*he"mə-to, hem"ə-to-trə-ke'ləs*] distention of the cervix uteri with blood.
hematotropic [*he"mə-to, hem"ə-to-tro'pik*] having a special affinity for or exerting a specific effect on the blood or blood cells.
hematotympanum [*he"mə-to, hem"ə-to-tim'pə-nəm*] hemorrhage into the middle ear.
hematoxylin [*he"mə-tok'sĭ-lin*] an acid coloring matter obtained from the wood of a tree (*Haematoxylon campechianum*); used as a stain for histological specimens and as an indicator. See also hematoxylin and eosin **stain**.
hematozoa [*he"mə-to, hem"ə-to-zo'ə*] plural of **hematozoon**.
hematozoon [*he"mə-,to, hem"ə-to-zo'ən*] any animal microorganism living in the blood; refers usually to protozoa.
hematuria [*he"mə ,hem"ə-tu're-ə*] blood in the urine; it can originate from any level in the urinary tract or from contamination from the genital tract. The urine may be slightly blood tinged, grossly bloody, or a smoky brown color and could have clots in it.
enzootic h. see **enzootic** hematuria.
false h. see **pseudohematuria**.
hembra female alpaca.
heme [*hēm*] the nonprotein, insoluble, iron protoporphyrin, pigment constituent of hemoglobin responsible for its oxygen-carrying properties. Also a component of various other respiratory pigments, and of many cells, both animal and vegetable. See also **urine** heme.
h. pigment nephropathy see **hemoglobinuric** nephrosis.
h. synthetase the rate-controlling enzyme for the synthesis of heme.
hemeralopia [*hem"ər-ə-lo'pe-ə*] day blindness; defective vision in a bright light due to degeneration of retinal cones. An inherited defect in Alaskan malamutes and German short-haired pointers.
hemerocallin see **stypandrol**.
Hemerocallis plant genus in the family Liliaceae; contains a naphthaquinone (stypandrol) which causes neuropathy and encephalomalacia experimentally but no natural cases have been



H-24: Hematuria in a cow with pyelonephritis (left) compared with normal urine (right).
From Braun U, Nuss K, Wehbrink D, Rauch S, Pospischil A: Clinical and ultrasonographic findings, diagnosis and treatment of pyelonephritis in 17 cows. Vet J 175:240-248, 2008. Elsevier.

VetBooks.ir

recorded; contains an unidentified nephrotoxin affecting cats. Called also day lily.

hemi- word element. [Gr.] *half*.

hemiacardius [*hem"e-ə-kahr'de-əs*] an unequal twin in which the heart is rudimentary, its circulation being assisted by the other twin.

hemiacetal [*hem"e-as'ə-tal*] formed by nucleophilic addition of an alcohol to the carbonyl group of an aldehyde. Most open-chain hemiacetals are not stable, but cyclic hemiacetals of the type present in aldehyde sugars such as glucose are more stable.

hemiamyosthenia [*hem"e-ə-mi"os-the'ne-ə*] lack of muscular power on one side of the body.

hemianacusia [*hem"e-an"ə-ku'zhə*] loss of hearing in one ear.

hemianalgesia [*hem"e-an"əl-je'ze-ə*] analgesia on one side of the body.

hemianencephaly [*hem"e-an"ən-sef'ə-le*] congenital absence of one side of the brain.

hemianesthesia [*hem"e-an"es-the'zhə*] anesthesia of one side of the body.

hemianopia [*hem"e-ə-no'pe-ə*] blindness in half of the visual field. Occurs with lesions of the visual cortex and unilateral lesions caudal to the optic chiasm.

hemianopsia [*hem"e-ən-op'se-ə*] hemianopia.

hemiataxia [*hem"e-ə-tak'se-ə*] ataxia on one side of the body.

hemiathetosis [*hem"e-ath"ə-to'sis*] athetosis of one side of the body.

hemiatrophy [*hem"e-at'ro-fe*] atrophy of one side of the body or one half of an organ or part.

hemiballism, hemiballismus [*hem"e-bal'iz-əm*] violent motor restlessness of half of the body, most marked in the upper extremity.

hemibladder [*hem'e-blad"ər*] a half bladder; a developmental anomaly in which the bladder is formed as two physically separated parts, each with its own ureter. See also cloaca **exstrophy**.

hemiblock [*hem'e-blok*] failure in conduction of cardiac impulse in either of the two main divisions (fascicles) of the left branch of the bundle of His; the interruption may occur in either the anterior or posterior division. Called also fascicular block.

hemic [*he'mik*] pertaining to blood.

h. murmur caused by a reduction in viscosity of the blood such as occurs in a blood loss anemia. The murmur is soft and waxes and wanes with respiration reaching its loudest at the peak of inspiration. See also heart **murmur**.

hemic–lymphatic system [*hem'ik- lim-fat'ik*] the combined blood and lymphatic systems; the secondary defense system of the body, after the skin and mucosae.

hemicardia [*hem"e-kahr'de-ə*] the presence of only one side of a four-chambered heart.

hemicellulose [*hem"e-sel'u-lōs*] structural polysaccharide of plants. Consists of β1,4-linked pentose sugars, mainly xylose.

hemicephalia [*hem"e-sə-fa'le-ə*] congenital absence of the cerebrum.

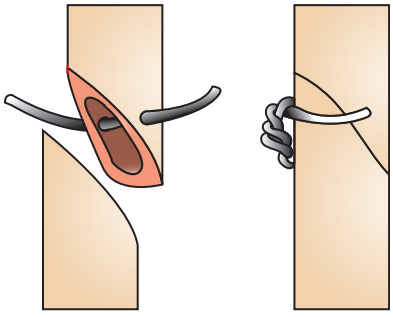
hemicephalus [*hem"e-sef'ə-ləs*] a fetus exhibiting hemicephalia.

hemicerclage use of a cerclage wire to stabilize fragments in a fractured bone, especially useful for transverse irregular or short oblique fractures. Wires are placed through holes drilled in proximal and distal bone fragments in which it is not possible to place full **cerclage** wires.

hemicholinium competes with choline for choline uptake into cholinergic neurons; results in the gradual development of paralysis.

hemichorea [*hem"e-kə-re'ə*] chorea affecting only one side of the body.

hemicolectomy [*hem"e-ko-lek'tə-me*] excision of approximately half of the colon.



H-25: Hemicerclage wire. From Slatter D, Textbook of Small Animal Surgery, 3rd Edition. Saunders, 2002.

hemicrania [*hem"e-kra"ne-ə*] a developmental anomaly with absence of half of the cranium.

hemicraniosis [*hem"e-kra"ne-o'sis*] hyperostosis of one side of the cranium and face.

hemidesmosome [*hem"e-des'mo-sōm*] see half **desmosome**.

hemidiaphoresis [*hem"e-di"ə-fə-re'sis*] sweating on one side of the body only.

hemidiaphragm [*hem"e-di'ə-fram*] see diaphragmatic **crus**.

hemidysesthesia [*hem"e-dis"es-the'zhə*] a disorder of sensation affecting only one side of the body.

hemidystrophy [*hem"e-dis'trə-fe*] unequal development of the two sides of the body.

hemiectromelia [*hem"e-ek-tro-me'le-ə*] a developmental anomaly with imperfect limbs on one side of the body.

hemiepilepsy [*hem"e-ep'ĭ-lep-se*] seizures affecting one side of the body.

hemifacial [*hem"e-fa'shəl*] affecting one side of the face.

h. spasm hypertonicity of facial muscles may occur with increased irritability of the facial nerve as in otitis media or lesions of the brainstem.

hemigastrectomy [*hem"e-gas-trek'tə-me*] excision of half of the stomach.

hemighost [*hem'e-gōst*] eccentrocyte.

hemiglossectomy [*hem"e-glos-ek'tə-me*] excision of part of the tongue.

hemiglossitis [*hem"e-glos-i'tis*] inflammation of half of the tongue.

hemignathia [*hem"e-na'the-ə*] a developmental anomaly characterized by partial or complete lack of the lower jaw on one side.

hemihidrosis [*hem"e-hĭ-dro'sis*] sweating on one side of the body only.

hemihypalgesia [*hem"e-hi"pəl-je'ze-ə*] diminished sensitivity to pain on one side of the body.

hemihyperesthesia [*hem"e-hi"pər-es-the'zhə*] increased sensitivity of one side of the body.

hemihyperhidrosis [*hem"e-hi"pər-hĭ-dro'sis*] excessive sweating on one side of the body.

hemihyperplasia [*hem"e-hi"pər-pla'zhə*] overdevelopment of one side of the body or of half of an organ or part.

hemihypertonia [*hem"e-hi"pər-to'ne-ə*] increased muscle tone on one side of the body.

hemihypertrophy [*hem"e-hi-pur'trə-fe*] overgrowth of one side of the body or of a part.

hemihypesthesia [*hem"e-hi"pes-the'zhə*] diminished sensitivity on one side of the body.

hemihypoplasia [*hem"e-hi"po-pla'zhə*] underdevelopment of one side of the body or of half of an organ or part.

hemihypotonia [*hem"e-hi"po-to'ne-ə*] diminished muscle tone on one side of the body.

hemi-inattention [*hem"e-in-ə-ten'shən*] see **hemineglect**.

hemilaminectomy [*hem"e-lam"ĭ-nek'tə-me*] removal of a vertebral lamina on one side only.

hemilaryngectomy [*hem"e-lar"in-jek'tə-me*] excision of one lateral half of the larynx.

hemilateral [*hem"e-lat'ər-əl*] affecting one side of the body only.

hemilesion a lesion on one side of the spinal cord.

hemimandibulectomy [*hem"ĭ-man-dib"u-lek'tə-me*] surgical removal of the mandible on one side.

hemimaxillectomy [*hem"i-mak"sil-ek'tə-me*] surgical removal of one entire side of the upper jaw, including the premaxilla, maxilla and hard palate. Usually carried out in removal of neoplasms.

hemimelia [*hem"e-me'le-ə*] congenital absence of all or part of the distal half of a limb.

inherited tibial h. only the first and second phalanges of each limb are missing in this inherited defect in cattle.

radial h. see **radial** hemimelia.

hemimelus [*hem-im'ə-ləs*] an individual exhibiting hemimelia.

hemin [*he'min*] porphyrin required by some bacterial species for growth. Called also X factor.

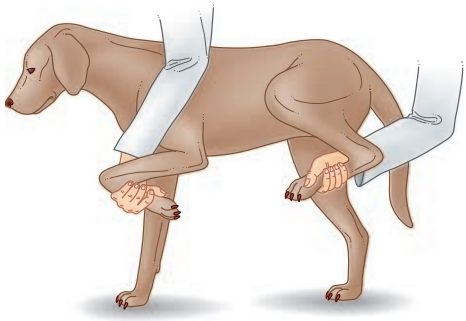
hemineglect [*hem"e-nə-glekt'*] condition in which a cerebral lesion leads to a loss in awareness of or lack of attention to one side of the body (most commonly contralateral to the side of the brain lesion). Called also hemi-inattention syndrome.

heminephrectomy [*hem"e-nə-frek'tə-me*] excision of part (half) of a kidney.

hemiopia [*hem"e-o'pe-ə*] hemianopia.

hemipagus [*hem-ip'ə-gəs*] twin fetuses joined laterally at the thorax.

H-26: Saline solution injection has everted the hemipenes.
From Mader DR, Reptile Medicine and Surgery, 2nd Edition. Saunders, 2005.



H-27: Hemiwalking.
From McCurnin D, Poffenbarger EM, Small Animal Physical Diagnosis and Clinical Procedures. Saunders, 1991.

hemiparalysis [*hem"e-pə-ral'ə-sis*] paralysis of one side of the body.
hemiparanesthesia [*hem"e par"an-es-the'zhə*] anesthesia of the posterior half of one side.
hemiparaplegia [*hem"e-par"ə-ple'jə*] paralysis of the posterior half of one side.
hemiparesis [*hem"e-pə-re'sis*] paresis affecting one side of the body.
hemiparesthesia [*hem"e-par"es-the'zhə*] abnormal sensation on one side of the body.
hemiparetic [*hem"e-pə-ret'ik*] 1. pertaining to hemiparesis. 2. a patient affected with hemiparesis.
hemipenes paired, vascular, eversible sacs which open into the posterior cloaca in snakes and lizards. The two hemipenes are brought together to act as a penis and are inserted into the cloaca of the female during copulation. Some marsupials also have hemipenes.
hemipeptone a form of peptone obtained from pepsin digestion.
hemiplegia [*hem"e-ple'jə*] paralysis of one side of the body; usually caused by a brain lesion, such as a tumor.
Hemiptera [*he-mip'tər-ə*] an order of arthropods (class Insecta); includes some 30 000 species, known as the true bugs; characterized by having mouthparts adapted to piercing or sucking, and usually having two pairs of wings.
hemirachischisis [*hem"e-rə-kis'kĭ-sis*] fissure of the vertebral column without prolapse of the spinal cord.
hemisacralization [*hem"e-sa"krəl-ĭ-za'shən*] fusion of the last lumbar vertebra to the first segment of the sacrum on only one side.
hemisection [*hem"e-sek'shən*] division into two equal parts; bisection.
hemispasm [*hem'e-spaz"am*] spasm affecting only one side.
hemisphere [*hem'ĭ-sfēr*] half of a spherical or roughly spherical structure or organ.
cerebral h. one of the paired structures constituting the largest part of the brain, which together comprise the extensive cerebral cortex, centrum semiovale, basal ganglia and rhinencephalon, and contain the lateral ventricle. See also **brain**.
hemispherium [*hem"is-fe're-əm*] pl. *hemispheria* [L.] hemisphere.
hemistanding a postural reaction that tests the animal's ability to support weight on the thoracic and pelvic limbs on one side.
hemithorax [*hem"e-thor'aks*] one side of the chest; the cavity lateral to the mediastinum.
hemithyroidectomy [*hem"e-thi"roid-ek'tə-me*] excision of one lobe of the thyroid.
hemivertebra [*hem"e-vur'tə-brə*] a developmental anomaly in which one side of a vertebra is incompletely developed resulting in it being wedge-shaped. Occurs commonly in British bulldogs, Boston terriers and the Pug without clinical effects, but occasionally leads to invertebral disk herniation, vertebral luxation or spinal cord compression.
hemiwalking a postural response in which walking is forced on the thoracic and pelvic limbs of one side.
hemizygosity [*hem"e-zi-gos'ĭ-te*] the state of having only one of a pair of alleles transmitting a specific character.
hemizygote [*hem"e-zi'gōt*] an animal exhibiting hemizygosity.
hemlock [*hem'lok*] there are a number of weeds in different genera that go by this name.
American water h. ***Cicuta*** *maculata*.
eastern h. ***Cicuta*** *maculata*.
ground h. ***Taxus*** *canadensis*.
lesser h. ***Aethusa*** *cynapium*.
poison h. see ***Conium maculatum***.
spotted h. ***Conium maculatum***.
water h. see ***Cicuta***.
hem(o)- word element. [Gr.] *blood*. See also words beginning *hemato-* and *hem-*.
hemo-acupuncture [*he"mo- ak'u-punk"chər*] in acupuncture, the drawing of small amounts of blood from a vessle that contains an acupoint to release heat from the body.
hemobartonellosis see **hemoplasmosis**.
hemobilia [*he"mo-bil'e-ə*] see **hematobilia**.
hemoblast [*he'mo-blast*] hemocytoblasts.
hemoblastosis a general term for proliferative disorders of the blood-forming tissues.
hemocatheresis [*he"mo-kə-ther'ə-sis*] the destruction of erythrocytes; hemolysis.
hemocele [*he'mo-sēl*] the body cavity in insects comparable to the celom in mammals; between the gut and the body wall.
hemochorial [*he"mo-kor'e-əl*] a deciduate placenta characteristic of humans, many other primates and rodents. At parturition the maternal vascular endothelium of the uterus is shed, as well as uterine epithelium so that the chorionic cells are in direct contact with maternal blood.
hemochromatosis [*he"mo-kro"mə-to'sis*] 1. a condition observed in sheep and cattle which have been exposed to high intakes of iron in their rations; the liver is enlarged and brown, the hepatic lymph nodes are brown; large amounts of iron are stored in liver and lymph nodes. Seen also in ostriches. 2. inherited defect in Salers cattle, characterized by increased iron absorption and wasting in young animals with the development of non-weight bearing lameness and tooth loss due to periosteal dysplasia and osteopenia. 3. common in caged mynahs and toucans characterized by weight loss, dyspnea and abdominal enlargement from hepatomegaly and ascites. These species require special feeds with a low iron content.
hemoclasis [*he-mok'lə-sis*] destruction of erythrocytes; hemolysis.
hemoconcentration [*he"mo-kon"sən-tra'shən*] increase in the proportion of formed elements in the blood as a result of a decrease in its fluid content (decreased plasma volume), e.g. in clinical dehydration.
hemoconia [*he"mo-ko'ne-ə*] pl. *hemoconiae* [L.] small, round or dumbbell-shaped bodies exhibiting brownian movement, observed in blood platelets in darkfield microscopy of a wet film of blood.
hemoconiosis presence in blood of excessive amounts of hemoconia.
hemocyst congenital hematoma on the margin of an atrioventricular valve.
hemocyte [*he'mo-sīt*] a blood cell.
hemocytoblasts [*he"mo-si'to-blast*] the central cells of the cell groups known as cell islands, which develop on the surface of the yolk sac and the allantois. The cell islands eventually form the endothelial lining of vessels, the hemocytoblasts form blood cells.
hemocytocatheresis destruction of erythrocytes; hemolysis.
hemocytogenesis [*he"mo si"to-jen'ə-sis*] formation of blood cells; hematopoiesis.
hemocytology [*he"mo si-tol'ə-je*] the study of blood cells.
hemocytolysis [*he"mo si-tol'ə-sis*] hemolysis.
hemocytometer [*he"mo-si-tom'ə-tər*] hemacytometer.
hemocytometry [*he"mo-si-tom'ə-tre*] the technique of counting blood cells.

VetBooks.ir

hemocytotripsis [*he"mo-si"to-trip'sis*] disintegration of blood cells by pressure.

hemodiagnosis [*he"mo-di"ag-no'sis*] diagnosis by examination of the blood.

hemodialyser an apparatus by which **hemodialysis** may be performed, blood being separated by a semipermeable membrane from a solution of such composition as to secure diffusion of certain elements out of the blood. Popularly called artificial kidney.

hemodialysis [*he"mo-di-al'a-sis*] removal of certain elements from the blood by virtue of difference in rates of their diffusion through a semipermeable membrane while the blood is being circulated outside the body. The procedure is used to remove uremic toxins from the blood of a patient with acute or chronic renal failure. See also **kidney**.

hemodiapedesis [*he"mo-di"a-pa-de'sis*] extravasation of blood through the skin without there being any obvious discontinuity.

hemodilution [*he"mo-di-loo'shan*] increase in the fluid content of blood, resulting in diminution of the concentration of formed elements.

hemodynamics [*he"mo-di-nam'ik*] the study of the forces and physical mechanisms concerned with the circulation of the blood.

hemoendothelial [*he"mo-en-do-the'le-al*] denoting a type of placenta in which maternal blood comes in contact with the endothelium of chorionic vessels, e.g. rabbit, rat and mouse.

hemofiltration [*he"mo-fil-tra'shan*] the removal of waste products from the blood by passing the blood through extracorporeal filters.

hemoflagellate [*he"mo-flaj'a-lāt*] any flagellate protozoan parasitic in the blood. See also ***Trypanosoma***.

hemofuscin [*he"mo-fūs'in*] a brownish-yellow pigment resulting from hemoglobin decomposition; it gives urine a deep ruddy color.

hemogenesis [*he"mo-jen'a-sis*] the formation of blood; hematogenesis.

hemogenic [*he"mo-jen'ik*] pertaining to production of blood.

hemoglobin (Hb) [*he'mo-glo"bin*] an allosteric protein found in erythrocytes that transports molecular oxygen (O_2) in the blood. Oxygenated hemoglobin (*oxyhemoglobin*) is bright red in color; hemoglobin unbound to oxygen (*deoxyhemoglobin*) is darker. This accounts for the bright red color of arterial blood, in which the hemoglobin is about 97% saturated with oxygen. Venous blood is darker because it is only about 20–70% saturated, depending on how much oxygen is being used by the tissues. The affinity of hemoglobin for carbon monoxide is 210 times as strong as its affinity for oxygen. The complex formed (*carboxyhemoglobin*) cannot transport oxygen. Thus, carbon monoxide poisoning results in hypoxia and asphyxiation. Another form of hemoglobin that cannot transport oxygen is *methemoglobin*, in which the iron atom is oxidized to the +3 oxidation state. During the life span of a red cell, hemoglobin is slowly oxidized to methemoglobin. At least four different enzyme systems can convert methemoglobin back to hemoglobin. When these are defective or overloaded, methemoglobinemia, in which high methemoglobin concentrations cause dyspnea and cyanosis, may result. As red cells wear out or are damaged, they are ingested by macrophages of the reticuloendothelial system. The porphyrin ring of heme is converted to the bile pigment bilirubin, which is excreted by the liver. The iron is transported to the bone marrow to be incorporated in the hemoglobin of newly formed erythrocytes.

h. A_{1c} see glycosylated hemoglobin (below).

carcass h. tests include hemoglobin extraction test, hemoglobin–pseudoperoxidase test. Used on suspect meat to determine if it has been properly bled out; poor bleeding is an indication of fever or septicemia.

h. concentration a measure of oxygen-carrying capacity of blood; determined by several methods, mainly spectrophotometricaly and expressed as g/dL, or in SI units as g/L.

cyanotic h. malformations insufficient oxygenated hemoglobin is received in the peripheral capillary beds resulting in blue discoloration of tissues, and an incapacity of the body to maintain a life-sustaining level of activity.

glycosylated h. (Ghb) hemoglobin A with a glucose moiety attached to the amino terminal valine of the beta chain. This type of hemoglobin is made at a slow constant rate during the life span of the erythrocyte. Increased concentrations correlate with glucose intolerance in diabetes. With adequate insulin treatment, concentrations return to the normal range and periodic assays can be helpful in evaluating effective control of diabetes mellitus. Called also hemoglobin A_{1c}.

glycosylated h. test measurement of the percentage of hemoglobin A molecules that formed a stable ketoamine linkage between the amino terminal valine residue of the beta chain and a glucose moiety; used to assess diabetic control.

h.–oxygen dissociation curve the incremental increase in oxygen saturation of the hemoglobin with each unit increase of the partial pressure of oxygen in the blood. Any factor that shifts the curve to the right will automatically reduce the concentration of O_2 held by the hemoglobin and increase the rate of its delivery to tissues.

urine h. hemoglobinuria.

h. variants the globin part of hemoglobin is composed of a large number of amino acids and the hemoglobins are therefore susceptible to a great many variations. In humans a large number of variants have been identified but only a few in animals and none are deleterious. The identified ones are the three adult hemoglobin types, HbA, HbB and HbC. There is also an embryonic, HbE, and a fetal hemoglobin, HbF.

hemoglobinemia [*he"mo-glo"bin-e'me-a*] presence of free hemoglobin in the blood plasma; usually indicative of an intravascular hemolysis.

hemoglobinolysis [*he"mo-glo"bin-ol'a-sis*] the splitting up of hemoglobin.

hemoglobinometer [*he"mo-glo"bin-om'a-tar*] a laboratory instrument for colorimetric determination of the hemoglobin content of the blood; abbreviated Hb-meter.

Sahli h. is based on the separation of globin from hemoglobin by treatment with hydrochloric acid to produce acid hematin which is measured by colorimetry.

Spencer h. measures oxyhemoglobin by light absorption using a green filter.

hemoglobinometry [*he"mo-glo"bin-om'a-tre*] the technique of using a hemoglobinometer to estimate the hemoglobin content of a sample of blood.

hemoglobinopathy [*he"mo-glo"bin-op'a-the*] any hematological disorder due to alteration in the genetically determined molecular structure of hemoglobin, with characteristic clinical and laboratory abnormalities and often overt anemia.

hemoglobinous [*he"mo-glo'bi-nas*] containing hemoglobin.

hemoglobinuria [*he"mo-glo"bi-nu're-a*] the presence of free hemoglobin in the urine. In true hemoglobinuria the protein has originated from erythrocytes hemolyzed within the vascular system and there is hemoglobinemia. In false hemoglobinuria it comes from erythrocytes in the urine that have hemolyzed there, leaving red cell envelopes in the urinary sediment. In both forms the urine is colored dark red to almost black. Occurs in new-born calves fed previously frozen bloody colostrum. See **hemolactia**.

bacillary h. see **bacillary** hemoglobinuria.

cold h. intravascular hemolysis occurs in the blood vessels in the intestinal wall immediately after the calf, rarely an adult, has drunk a large amount of very cold water after a period of deprivation. Transient hemoglobinuria may occur. See also cold **anemia**.

false h. when lysis of erythrocytes occurs after the urine is passed.

postparturient h. a disease of high-producing dairy cows in the period of about a month after calving characterized by acute intravascular hemolysis, hemoglobinuria, pallor of mucosae and a heavy mortality rate. Predisposed by a nutritional deficiency of phosphorus or copper.

hemoglobinuric [*he"mo-glo"bi-nu'rik*] pertaining to or emanating from hemoglobin.

h. nephrosis is the result of intravascular hemolysis and the excretion of large quantities of hemoglobin in the urine. The epithelial cells and lumina of the tubules become packed with hemoglobin resulting in renal failure. See also **nephrosis**.

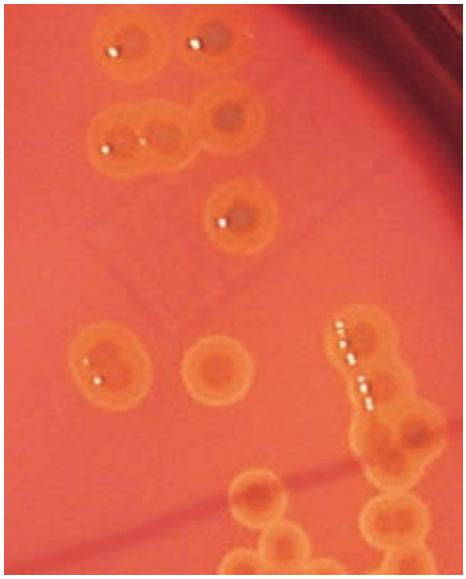
hemogram [*he'mo-gram*] a graphic or tabular representation of the differential blood count.

hemohistioblast [*he'mo his'te-o-blast"*] the hypothetical stem cell from which all blood cells are derived.

hemoid resembling blood.

hemokinesis [*he"mo-ki-ne'sis*] the flow of blood in the body.

H-28: Hemoglobinuric nephrosis.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.



H-29: Alpha-hemolysis produced by some strains of *Streptococcus*.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

hemolactia blood in the milk. Can occur transitorily in the cow at any time as a result of acute trauma such as a kick in the udder. Immediately after calving it is usually the result of rupture of many small congested blood vessels. Severity varies from large clots and frank blood to a pale pink tinge. Occurs without obvious cause in a small proportion of colostrums - called bloody colostrum.

hemolith a concretion in the walls of a blood vessel.

hemolymph [*he'mo-limf"*] 1. blood and lymph. 2. the bloodlike fluid of invertebrates having open blood–vascular systems.

h. node see **hemal** node.

hemolymphangioma [*he"mo-lim-fan"je-o'mə*] see **hematolymphangioma**.

hemolymphatic system [*he"mo lim-fat'ik*] the combined blood and lymph systems.

hemolysate [*he-mol'ə-sāt*] the product resulting from hemolysis.

hemolysin [*he-mol'ə-sin*] protein produced by specific bacteria that is capable of lysing erythrocytes.

hemolysis [*he-mol'ə-sis*] rupture of erythrocytes with release of hemoglobin. In a transfusion reaction or in alloimmune hemolytic anemia antibody mediated lysis of red blood cells occurs following activation of the complement cascade. Red blood cells also agglutinate due to cross-linking by antibodies. The agglutinated cells become trapped in the smaller vessels or are phagocytosed and eventually disintegrate. Some microbes form substances called hemolysins that have the specific action of destroying red blood cells; beta-hemolytic streptococci are an example. Intravenous administration of a hypotonic solution or plain distilled water will cause the red cells to fill with fluid until their membranes rupture and the cells are destroyed. When IgG or IgM antibodies are bound to red blood cell antigens in the presence of complement, the complement cascade is triggered, the final products of which include enzymes that result in holes being 'punched' in the wall of the red blood cell, allowing hemoglobin to escape and which is observed as lysis. Snake venoms and certain plant substances may cause hemolysis. A great variety of chemical agents can lead to destruction of erythrocytes if there is exposure to a sufficiently high concentration of the substance. These chemical hemolytics include copper. A disorder of the immune response in which antibodies are made to 'self' red blood cell antigens resulting in the lysis of the cells. See also **immune-mediated** hemolytic anemia.

alpha (α) h. a characteristic of some bacteria, especially streptococci, manifested by a zone of greenish coloration of cleared agar around a colony of the bacteria on a blood-agar plate. Note that α-hemolysin of staphylococci causes complete lysis. See also ***Streptococcus***.

beta (β) h. complete hemolysis of sheep and ox erythrocytes by bacteria in culture media. Note that β-hemolysin of staphylococci causes incomplete hemolysis.

blood transfusion h. see **transfusion** reaction.

differential h. a technique for identification of chimerism, e.g. freemartin calves. Antisera against a single blood group causes only partial hemolysis of the blood composed of two cell populations with different blood cell antigens.

double h. two types of hemolysis produced on blood agar by alpha and beta hemolysins found in *Staphylococcus aureus* and *S. intermedius*.

extravascular h. the hemolysis which occurs when fragments of erythrocytes and the majority of aged erythrocytes are phagocytosed directly by the cells of the mononuclear phagocytic system.

h. fever the rise in body temperature which accompanies each hemolytic incidence of significant size.

fragmentation h. see microangiopathic **anemia**.

h. inhibition test a serological test used in the diagnosis of *Corynebacterium pseudotuberculosis* infection.

intravascular h. disruption of red blood cells occurs while they are within blood vessels.

microangiopathic h. fragmentation hemolysis often associated with microvascular injury, as in disseminated intravascular coagulation, and resulting from a primary disease.

target h. see double hemolysis (above).

hemolytic [*he"mo-lit'ik*] pertaining to, characterized by, or producing hemolysis.

h. component a degree of extravascular hemolysis in association with other types of anemia.

h. disease of the newborn see **alloimmune** hemolytic anemia of the newborn.

h. plaque assay see **plaque** assay.

h.–uremic syndrome a microangiopathic hemolytic anemia with thrombocytopenia and severe involvement of renal vasculature which leads to acute renal failure. In humans associated with verocytoxin-producing bacteria such as *Escherichia coli*, *Shigella* and some *Salmonella*; usually associated with the ingestion of poorly cooked meat. A similar clinical syndrome has been reported in cows, horses and dogs.

hemolyze [*he'mo-līz*] to subject to or to undergo hemolysis.

hemomediastinum [*he"mo-me"di-əs-ti'nəm*] an effusion of blood into the mediastinum.

hemomelasma ilei [*he"mo mə-laz'mə*] small, up to 1 × 2 inches, slightly elevated, red-brown plaques, under the serosa of the small intestine; caused by migrating larvae of *Strongylus* spp. in horses.

hemonchosis see **haemonchosis**.

hemonephrosis [*he"mo-nə-fro'sis*] effused blood in the renal pelvis; hematonephrosis.

hemoparasite [*he"mo par'ə-sīt*] an animal parasite, specifically a bacterium, an apicomplexan, hemoflagellate or filarid worm, living in the blood of a vertebrate, e.g. ***Babesia*** spp., ***Mycoplasma*** spp., ***Trypanosoma*** spp.

hemopathology [*he"mo-pə-thol'ə-je*] the study of diseases of the blood.

hemopathy [*he-mop'ə-the*] any disease of the blood.

hemoperfusion [*he"mo-pər-fu'zhən*] the passage of blood through an extracorporeal adsorptive system to remove compounds of larger molecular size than those removed by hemodialysis.

hemopericardium [*he"mo-per"ī-kahr'de-əm*] an effusion of blood in the pericardial cavity, caused by rupture of the atrium, perforation of the ventricle or rupture of a coronary artery. It is usually manifested by very sudden death.

VetBooks.ir

hemoperitoneum [*he"mo-per"ĭ-to-ne'əm*] an effusion of blood in the peritoneal cavity.
hemopexin [*he"mo-pek'sin*] a heme-binding serum protein. Functions to scavenge free heme to protect the body against oxidative damage.
hemopexis [*he"mo- pek'sis*] coagulation of blood.
hemophagocyte [*he"mo-fa'go-sīt*] a cell that destroys blood corpuscles.
hemophagous feeding on blood.
h. zone marginal hematomas seen as circumferential bands in zonary placentas; thought to contribute to the needs of the fetus for iron.
hemophil [*he'mo-fil*] 1. thriving on blood. 2. a microorganism that grows best in media containing hemoglobin.
hemophilia [*he"mo-fil'e-ə*] a condition characterized by impaired coagulability of the blood, and a strong tendency to bleed. See also deficiency of the following clotting factors, **afibrinogenemia** and **hypoprothrombinemia**, and **proconvertin**, **Stuart factor**, plasma **thromboplastin** antecedent, **Hageman factor** and fibrin stabilizing **factor**.
h. A classical hemophilia, due to deficiency of clotting factor VIII-C; occurs in dogs, cats and horses. It is inherited as a sex-linked recessive trait so that females (normally) are carriers and males are clinically affected. Animals with low concentrations of factor VIII may not bleed spontaneously, but show prolonged bleeding after surgery or trauma. Carrier animals have concentrations of factor VIII intermediate between those of affected and normal animals.
h. B an inherited, X-linked recessive trait, clinically similar to classical hemophilia but caused by a deficiency of clotting factor IX (thromboplastin, Christmas factor) in dogs and cats. Called also **Christmas disease** and factor IX deficiency.
h. C in dogs an autosomal dominant form due to deficiency of clotting factor XI (plasma thromboplastin antecedent). Called also factor XI deficiency. The disease also occurs in cattle but the clinical disease is minor and it is inherited as a recessive character.
double h. dogs with both hemophilia A and hemophilia B have been produced experimentally.
vascular h. deficiency of clotting factor VIII and factor VIII-related antigen occurs in many breeds of dogs, particularly Doberman Pinschers, and in rabbits and pigs. See also **von Willebrand disease**.
hemophiliac [*he"mo-fil'e-ak*] an animal affected with hemophilia.
hemophilic [*he-mo-fil'ik*] 1. pertaining to hemophilia. 2. in bacteriology, growing best on culture media containing blood or having a nutritional requirement for constituents of fresh blood.
h. arthropathy bleeding into a joint due to hemophilia.
hemophilioid [*he"mo-fil'e-oid*] resembling classical hemophilia clinically, but not due solely to clotting factor VIII deficiency.
hemophilosis a septicemic disease of cattle caused by *Histophilus somni* (previously called *Haemophilus somnus*) characterized by an acute illness with a short course and a high mortality rate. In survivors there are residual lesions, especially hemorrhagic infarcts in the brain, and synovitis, pleurisy and pneumonia. Clinical signs vary widely but predominant signs are blindness due to ophthalmitis, weakness, ataxia and recumbency. Called also thromboembolic (TEME) or thrombotic meningoencephalitis.
Hemophilus [*he-mof'ĭ-ləs*] *Haemophilus*.
hemophoric conveying blood.
hemophthalmia [*he"mof-thal'me-ə*] extravasation of blood inside the eye.
hemoplasmas hemotropic **mycoplasmas**.
hemoplasmosis infection by hemotropic mycoplasmas previously in the genus *Haemobartonella* in which parasitized erythrocytes are preferentially removed from the circulation by phagocytic cells and an anemia develops. Diagnosis depends on observation of the characteristic rod-shaped and ring-shaped organisms around the periphery of the red cells. Previously called hemobartonellosis.
canine h. infection by *Mycoplasma haemocanis* or *M. haematoparvum*; transmitted by fleas and ticks. Generally, infection is inapparent unless the dog has been splenectomized or is immunosuppressed.
feline h. see **feline** infectious anemia.
hemopleura [*he"mo-ploor'ə*] see **hemothorax**.
hemopneumopericardium [*he"mo-n oo"mo-per"ĭ-kahr'de-əm*] effused blood and air in the pericardium.
hemopneumothorax [*he"mo-noo"mo-thor'aks*] an accumulation of blood and air in the pleural cavity.
hemopoiesis [*he"mo-poi-e'sis*] hematopoiesis.
hemoprotein [*he'mo-pro"tēn*] a conjugated protein whose nonprotein portion is heme.
hemopsonin [*he"mop-so'nin*] an opsonin that renders erythrocytes more liable to phagocytosis. Called also erythrocyto-opsonin.
hemoptysis [*he-mop'tĭ-sis*] coughing and spitting of blood as a result of bleeding from any part of the respiratory tract. In true hemoptysis the sputum is bright red and frothy with air bubbles; it must not be confused with the dark red or black color of hematemesis. Hemoptysis is a most unusual sign in animals, most aspirated blood being swallowed. Anything more profuse than that may gush from the nostrils and the mouth but that can hardly be classified as spitting.
endemic h. schistosomiasis.
hemorrhage [*hem'ə-rəj*] the escape of blood from a ruptured vessel. Hemorrhage can be external, internal, or into the skin or other tissues. Blood from an artery is bright red in color and comes in spurts; that from a vein is dark red and comes in a steady flow. Hemorrhages in particular anatomical sites may be found under their specific anatomical headings.
alimentary tract h. includes hematochezia, melena.
cancer-associated h. see paraneoplastic hemorrhage (below).
capillary h. oozing of blood from minute vessels.
cerebral h. see **brain** hemorrhage.
concealed h. internal hemorrhage.
ecchymotic h. see **ecchymosis**.
exercise-induced pulmonary h. see exercise-induced **pulmonary** hemorrhage.
fibrinolytic h. that due to abnormalities in the fibrinolytic system and not dependent on hypofibrinogenemia.
internal h. that which occurs into cavities, e.g. hemoperitoneum, or into tissues, e.g. vulvar hematoma in mares. The only evidence of illness may be extreme pallor and weakness. There may be moderate dyspnea and other signs related to the distention of individual organs.
h. intra-abdominal see **hemoperitoneum**.
intra-articular h. see **hemarthros**.
intracranial h. bleeding within the cranium, which may be extradural, subdural, subarachnoid or cerebral. Localizing hematomas with localizing signs occur very rarely in animals. May be multiple petechiae in asphyxial newborn lambs.
intraocular h. bleeding within one of the ocular chambers; see **hyphema**.
mesenteric h. uncommon syndrome caused by leakage of blood into the potential space between the two serosal layers of the mesentery. An extensive hemorrhage causes severe abdominal pain, shock, some blood-staining of peritoneal fluid and leakage of blood into the intestinal lumen.
paraneoplastic h. a variety of hemostatic disorders develop in association with neoplasia in animals and may result in disseminated intravascular coagulation and hemorrhage. Called also cancer-associated hemorrhage.
peritoneal h. see **hemoperitoneum**.
petechial h. subcutaneous hemorrhage occurring in minute spots.
postpartum h. that which follows soon after parturition.
primary h. that which soon follows an injury.
secondary h. that which follows an injury after a considerable lapse of time.
subcutaneous h. causes a soft, painless fluctuating swelling capable of being moved easily. Paracentesis reveals the presence of whole blood.
hemorrhagenic [*hem"o-rə-jen'ik*] causing hemorrhage.
hemorrhagic [*hem"ə-raj'ik*] pertaining to or characterized by hemorrhage.
h. bowel disease of swine see hemorrhagic **bowel** syndrome.
canine h. fever see canine **ehrlichiosis**.
h. diathesis a tendency to bleed due to any one or a combination of clotting defects. Occurs, for example, in diseases of liver in which there may be defects in the prothrombin complex, or in fibrinogen or thromboplastin availability. See **hemophilia**, **purpura** hemorrhagica, disseminated intravascular **coagulation**.
h. disease an undifferentiated disease manifested by unprovoked hemorrhage and caused by any one of a number of factors.

See also **hemophilia**, **epizootic** hemorrhagic disease, **warfarin**, canine **ehrlichiosis**, hemorrhagic syndrome (below).

h. disease of the newborn see neonatal hemorrhagic disease (below).

h. enteritis an acute, highly fatal disease of turkeys over 4 weeks of age characterized by bloody droppings, a short course and a high prevalence and caused by an adenovirus.

h. enterotoxemia profound toxemia accompanied by hemorrhagic enteritis. It is caused by *Clostridium perfringens* types A, B, C and E.

h. foal enteritis see antibiotic-associated **colitis**.

h. gastroenteritis (HGE) see hemorrhagic **gastroenteritis**.

idiopathic h. syndrome see canine **ehrlichiosis**.

neonatal h. disease hemorrhagic disease of the newborn; may be due to maternal isoimmunization, e.g. in pigs. See also **umbilical** hemorrhage.

h. septicemia (HS) a septicemic pasteurellosis of cattle and other ruminants, rarely of pigs and horses. It is caused by *Pasteurella multocida* type 1 (or B) rarely D or E, and characterized by a sudden onset of high fever, dyspnea, salivation, hot painful subcutaneous swellings and submucosal petechiae and death in about 24 hours. A disease notifiable to the OIE (see Table 22). Called also septicemic pasteurellosis, el guedda. Occurs also in finfish, caused by opportunist bacteria including *Aeromonas*, *Pseudomonas* spp.

h. shock see **shock**.

h. syndrome a widespread disease of domestic fowl causing significant losses due to death in birds about 5–9 weeks of age. The cause may be multifactorial but viruses are suspected to play an important role. Characterized by clinical anemia, leukopenia, anemia and hemorrhages in all tissues.

hemorrhagin [*hem"ə-ra'jin*] a cytolysin present in snake venoms. An endotheliotoxin which causes serious damage to blood vessels.

hemorrhea hematorrhea.

hemorrheology [*he"mo-re-ol'ə-je*] the scientific study of the deformation and flow properties of cellular and plasmatic components of blood in macroscopic, microscopic and submicroscopic dimensions and the rheological properties of vessel structure with which the blood comes in direct contact.

hemosiderin [*he"mo-sid'ər-in*] an insoluble form of intracellular storage iron which is in the oxidized (Fe^{+++}) state; can impart a brown color to tissues and stains blue with ferricyanide in histological sections (Perl's stain).

hemosiderinuria [*he"mo-sid"ər-ĭ-nu're-ə*] the presence of hemosiderin in the urine.

hemosiderosis [*he"mo-sid"ər-o'sis*] a focal or general increase in tissue iron (hemosiderin) stores without associated tissue damage.

pulmonary h. the deposition of abnormal amounts of hemosiderin in the lungs, due to bleeding into the lung interstitium.

hemospermia, haemospermia [*he"mo-spur'me-ə*] blood in the semen; can originate from the accessory sex gland or from a rent in the urethra.

hemosporidia see ***Babesia***, ***Theileria***, ***Plasmodium***, ***Haemoproteus***, ***Leucocytozoon***.

hemostasis [*he"mo-sta'sis*] 1. the complex process by which bleeding is arrested; involves interaction of **coagulation** and fibrinolytic proteins, platelets and the blood vasculature. 2. arrest of the escape of blood by either natural (clot formation or vessel spasm) or artificial (compression or ligation) means, or the interruption of blood flow to a part, or the artificial stimulation of clotting, e.g. electrocautery, topical collagen.

pressure-pad h. direct pressure applied with sponges to low-pressure bleeding points.

primary h. (1) the formation of the platelet plug; the first step in hemostasis.

secondary h. (1) the formation of fibrin through the coagulation cascade.

tertiary h. (1) the formation of plasmin for the breakdown of the clot.

hemostat [*he'mo-stat*] 1. a small surgical clamp for constricting blood vessels. 2. an antihemorrhagic agent.

hemostatic [*he"mo-stat'ik*] 1. checking blood flow. 2. an agent that checks the flow of blood.

h. defects see **coagulopathy**.

h. plug see **clotting**.

hemostyptic [*he"mo-stip'tik*] see **hemostatic**.

hemotherapy [*he"mo-ther'ə-pe*] the use of blood in treating disease.

hemothorax [*he"mo-thor'aks*] collection of blood in the pleural cavity which can cause collapse of the lung and dyspnea, absence of breath sounds and pallor of mucosae.

hemotoxic [*he'mo-tok"sik*] see **hematotoxic**.

hemotoxin [*he'mo-tok"sin*] an exotoxin characterized by hemolytic activity. More commonly called a hemolysin.

hemotroph [*he'mo-trōf*] the sum total of the nutritive material from the circulating blood of the maternal body, utilized by the early embryo. It is absorbed directly from the maternal blood by the allantochorion or vitellochorion.

hemotropic [*he"mo-tro'pik*] hematotropic.

hemoximetry measurement of oxygen saturation of hemoglobin in a sample of arterial blood. Used to monitor tissue and organ oxygenation in surgical patients. See also **oximetry**.

hemp see ***Cannabis sativa***.

hen 1. a mature, egg-laying bird, or bird of egg-laying age that is temporarily not laying eggs; in most cases a female bird more than 5 months old. 2. an adult, female bird.

spent h. egg laying hen that is no longer producing enough eggs to be economically supportable.

hen-and-chickens see ***Bryophyllum*** *delagoense*.

henbane [*hen'bān*] see ***Hyoscyamus niger***.

henbit see ***Lamium amplexicaule***.

Henderson–Hasselbalch equation [*hen'dər-sən has'əl-bahlk*] an equation by which the pH of a buffer solution, blood plasma being such a one, can be determined:

$$pH = pK' + \log \frac{[BA]}{[HA]}$$

where pK′ is the negative log of the dissociation constant of a weak acid in a buffer solution, [HA] is the concentration in the buffer solution of the weak acid and [BA] is the concentration of a salt of that acid.

Hendra virus disease a fatal disease of horses recorded on or east of the Great Dividing Range in Queensland and northern New South Wales, Australia. Zoonotic infection caused by a paramyxovirus in the genus *Henipavirus* (related to Nipah virus), originating from fruit-eating macrobats (*Pteropus* spp.) present in Eastern Australia. The method of transmission of Hendra virus from flying foxes to horses is not determined but the virus can be found in urine, placental material, aborted fetuses and birthing fluids of flying foxes. There is no evidence of spread of virus from flying foxes to humans. Respiratory disease was the predominant clinical manifestation of disease in horses in initial outbreaks, but more recent outbreaks have manifest with neurologic signs. Hendra virus infection is now suspected where there is acute onset, fever and rapid progression to death associated with either respiratory or neurological signs. Case fatality rates in horses exceed 70%. Human infection results from direct exposure to tissues and secretions from infected horses and is manifest with respiratory and neurologic disease. Veterinarians examining clinically affected horses or conducting postmortems are at high risk for infection and have died from this disease.

Henipavirus a genus in the family *Paramyxoviridae* which includes Hendra virus and Nipah virus. See **equine** henipavirus.

Henle [*hen'le*] named after Friedrich Gustav Jakob Henle, a German anatomist and histologist (1809–1885).

H's chromoreaction a color change to dark brown within 20 minutes of applying Zenker solution to the cut surface of a pheochromocytoma.

H's fissure spaces filled with connective tissue between the muscular fibers of the heart.

H.–Koch's postulates used in the evaluation of a microorganism as the cause of a disease. See **Koch's** postulates.

H's layer outermost layer of the inner root sheath of the hair follicle.

H's ligament lateral expansion of the lateral edge of the rectus abdominis muscle which attaches to the pubic bone. Called also *falx inguinalis*.

H's loop U-shaped loop of the uriniferous tubule of the kidney.

H's membrane inner layer of choroid (basal lamina) in contact with the retina.

H's sheath the endoneurium, especially the delicate continuation around terminal branches of nerve fibers.

VetBooks.ir

H's tubules straight ascending and descending portions of a renal tubule forming Henle's loop.

Henneguya a genus of protozoa causing disease in fish. Genus of the class Myxosporea.

H. exilis causes cysts in the gills of channel catfish and death due to suffocation.

H. zschokkei causes boil disease in salmonid fishes.

Henning plaster spreader heavy duty pivoted instrument. Closing the handles forces open the large, square, flat blades that have been inserted in the cut already made in the plaster cast that is to be removed.

Henrici test a field test for the detection of cyanide compounds in food material.

Henry's law [*hen'rēz*] the solubility of a gas in a liquid solution is proportional to the partial pressure of the gas.

Hensen's node the primitive knot in the early embryo from which the notochord develops. It establishes the longitudinal axis and the polarity of the embryo. Called also primitive node, primitive knot.

HEP high egg passage, with reference to virus attentuation usually for vaccine production, e.g. rabies virus.

Hepacivirus [*hep-as'ĭ-vi"rəs*] a genus in the family *Flaviviridae*; includes human hepatitis C virus.

Hepadnaviridae [*hep-ad"nə-vir'ĭ-de*] a family of viruses that are icosahedral with a circular, partially double-strand DNA genome. The prototype virus causes serum hepatitis or hepatitis B and hepatocellular carcinoma in humans; related viruses cause hepatitis and hepatocellular carcinoma in ducks, woodchucks, ground squirrels and dogs.

hepadnavirus [*hep-ad'nə-vi"rəs*] a virus in the family *Hepadnaviridae*.

hepar [*he'par*] [L.] *liver*.

heparan sulfate [*hep'ə-ran*] a sulfated mucopolysaccharide structurally related to heparin, which occurs normally in the liver, aorta and lung; it is an accumulation product in several mucopolysaccharidoses.

heparin [*hep'ə-rin*] an acid mucopolysaccharide present in many tissues, especially the liver and lungs, and having potent **anticoagulant** properties. It also has lipotrophic properties, promoting transfer of fat from blood to the fat depots by activation of lipoprotein lipase. Also, a mixture of active principles capable of prolonging blood clotting time, obtained from mucosal tissues of animals; used in the prophylaxis and treatment of disorders in which there is excessive or undesirable clotting and as a preservative for blood specimens.

low-molecular-weight h. a fractionated form of heparin that selectively inhibits Factor Xa to reduce the likelihood of thrombus formation, while minimally inhibiting coagulation. Investigated for the treatment of aortic thromboembolism in cats.

heparinize [*hep'ə-rĭ-nīz"*] to treat with heparin.

hepatalgia [*hep"ə-tal'jə*] pain in the liver.

hepatatrophia [*hep"ə-tə-tro'fe-ə*] atrophy of the liver.

hepatectomize [*hep"ə-tek'tə-mīz*] to deprive of the liver by surgical removal.

hepatectomy [*hep"ə-tek'tə-me*] surgical excision of liver tissue.

hepatic [*hə-pat'ik*] emanating from or pertaining to liver.

h. abscess common in cattle as a sequel to rumenitis; either clinically silent or characterized by fever, leukocytosis and pain on percussion over the liver.

h. acinus see hepatic **acinus**.

h. angle the angle made by the caudolateral border of the caudate liver lobe on abdominal radiography.

h. arterioportal fistula shunt between branches of the hepatic artery and the portal vein.

h. atrophy and nodular regeneration a disease of dogs, due to unknown cause but possibly a toxin, characterized by nodular regenerative hyperplasia and atrophy of severely fatty hepatocellular parenchyma and gradually developing, always fatal, liver insufficiency. See also **cirrhosis**.

h. cell hepatocyte.

h. cirrhosis see **cirrhosis**.

h. congestion acute congestion is produced in canids by anaphylaxis due to constriction of the spiral muscle of the hepatic venules in these species. May result in hypovolemic shock and fibrin deposition on the liver capsule. Chronic liver congestion occurs with long-standing restricted venous drainage from the liver from any cause, however the commonest of these is right-sided heart failure. Produces a characteristic "nutmeg" acinar pattern on the cut surface that is caused by areas of blood replacement of periacinar hepatocytes that contrast with areas of paler fatty, surviving periportal hepatocytes. The capsule is thickened by organizing fibrih deposits.

diffuse h. fibrosis results from continued, chronic hepatic injury or the summation of repeated bouts of zonal necrosis; the resulting fibrosis links portal areas and hepatic venules and bisects liver lobules.

h. distomatosis infection of the liver with flukes, e.g. *Fasciola hepatica*, *Fascioloides magna*, *Metorchus conjunctus*. See also **fascioliasis**.

h. diverticulum an outgrowth of the embryonic duodenum; it divides into a pars hepatica and a pars cystica, forerunners of the liver and the gallbladder respectively.

h. duct see hepatic **duct**.

h. encephalopathy see hepatic **encephalopathy**.

h. fibrosis a reaction to chronic injury to the liver; includes biliary fibrosis, postnecrotic scarring, diffuse hepatic fibrosis and periacinar fibrosis.

h. injury see **hepatitis**.

h. jaundice jaundice caused by disease of hepatic parenchyma in contrast to hemolytic and obstructive jaundice.

h. lipidosis see feline hepatic **lipidosis**.

h. microsomal enzymes see microsomal **enzymes**.

h. microvascular dysplasia (HMD) congenital microvascular abnormalities in the liver of dogs, most often of the small breeds, and rarely cats; inherited in Cairn terriers. Can cause clinical signs similar to, but generally less severe than, those of **portosystemic** shunts, although some remain asymptomatic. There is elevation of serum bile acids and there may be poor growth, vomiting, diarrhea and neurologic signs of hepatic encephalopathy.

h. necrosis death of hepatic parenchyma which may be single cell (necrobiosis), or multicell in piecemeal, focal, periacinar, midzonal, periportal or paracentral locations. Massive necrosis refers to events in individual acini in which all hepatocytes are dead.

omphalogenic h. abscess abscess resulting from infection of the umbilicus and direct vascular extension to the liver.

h. periacinar fibrosis fibrosis limited to the zones around hepatic venules; a response to congestive heart failure or to intoxication.

h. photosensitization see secondary **photosensitization**.

h. sinusoids the intralobular vascular supply system; lined by specialized endothelial cells and Kupffer cells.

hepatic(o)- word element. [Gr.] *hepatic duct*.

hepaticoduodenostomy [*hə-pat"ĭ-ko-doo"o-də-nos'tə-me*] anastomosis of the hepatic duct to the duodenum.

hepaticoenterostomy [*hə-pat"ĭ-ko-en"tər-os'tə-me*] anastomosis of the hepatic duct to the intestine (duodenum or jejunum).

hepaticogastrostomy [*hə-pat"ĭ-ko-gas-tros'tə-me*] anastomosis of the hepatic duct to the stomach.

hepaticojejunostomy [*hə-pat"ĭ-ko-jə-joo-nos'tə-me*] anastomosis of the hepatic duct to the jejunum.

Hepaticola hepatica [*hep"ə-tik'o-lə*] ***Capillaria hepatica***.

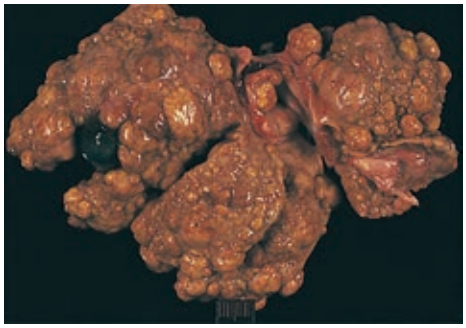
hepaticolithotomy [*hə-pat"ĭ-ko-lĭ-thot'ə-me*] incision of the hepatic duct with removal of calculi.

hepaticolithotripsy [*hə-pat"ĭ-ko-lith'o-trip-se*] the crushing of a calculus in the hepatic duct.

hepaticostomy [*hə-pat"ĭ-kos'tə-me*] fistulization of the hepatic duct.

hepaticotomy [*hə-pat"ĭ-kot'ə-me*] incision of the hepatic duct.

hepatin glycogen.



H-30: Hepatic fibrosis with nodular hyperplasia. From Nelson RW, Couto CG, Small Animal Internal Medicine, 3rd Edition. Mosby, 2003.

hepatitis [*hep"ə-ti'tis*] inflammation of the liver which may be toxic or infectious in origin; characterized by diffuse injury to the liver. See also **liver** dysfunction. There are a number of etiologically specific hepatitides which are listed under their individual headings. They are avian **vibrionic** hepatitis, infectious canine hepatitis (see below), **infectious** necrotic hepatitis, **duck** hepatitis, **turkey** hepatitis, **inclusion body** hepatitis, **mouse** hepatitis, **post-vaccinal** hepatitis, **toxemic** jaundice, and those caused by ***Fasciola*** and ***Fascioloides***, ***Cysticercus***, and plant toxins including **pyrrolizidine** alkaloids, **sporidesmin**, **aflatoxin**. See also **hepatosis** dietetica.

h. A, B, C, D and E viruses causes of hepatitis in humans and some nonhuman primates.

avian vibrionic h. a disease of domesticated poultry which has disappeared from those areas in the USA which were its sole habitat. Vibrio-like organisms were isolated from the outbreaks which occurred.

canine acidophil-cell h. an acute or chronic hepatitis reported in dogs only in Great Britain, distinct from canine adenovirus infection, and characterized histologically by the presence of acidophilic degenerate hepatocytes. Often asymptomatic, but chronic active hepatitis and hepatocellular carcinoma are suspected associations. The cause is unknown, and experimental transmission has only rarely been successful.

chronic active h. a chronic inflammatory liver disease in humans, probably of several types with different causes, but with distinctive histopathological features of piecemeal necrosis, bridging fibrosis and active cirrhosis. A similar, but not identical disease of unknown etiology has been described in dogs, in particular the Doberman pinscher.

copper-associated h. occurs in a number of dog breeds, but especially in **Bedlington terrier** copper-associated hepatopathy. In the others, which include West Highland white terriers, Doberman pinschers, Dalmations, Skye terriers and Cocker spaniels, copper accumulation is less consistent and its role in the hepatic changes is less clear.

duck h. see **duck** hepatitis.

gosling h. see **goose** hepatitis.

infectious canine h. an acute, highly contagious disease, occurring mainly in young dogs, caused by canine adenovirus type 1 (CAV-1). Subclinical infections are common. Clinical signs include fever, depression, vomiting and abdominal pain. The course is short and in severe cases death occurs within a few days. Peracute infections occur in very young puppies. Mild infections may cause only vague signs of malaise and anorexia and many cases are not diagnosed. Dogs recovering from infection sometimes develop corneal edema ('blue eye'). Chronic hepatitis is reported as an occasional sequela. The disease can be prevented by vaccination, most commonly with CAV-2 vaccines.

mouse h. a coronavirus disease of young mice that is highly contagious and characterized by a wide and highly variable spectrum of disease signs depending on the virus strain and the breed of mice; they may include enteritis, hepatitis, demyelinating encephalomyelitis and nephritis. A major concern in laboratory mouse colonies and uneradicated it may be a confounding factor in experimental studies.

mycotic h. commonly caused in cattle by extension from mycotic rumenitis due to lactic acid indigestion and damage to ruminal epithelium.

necrotic h. see **infectious** necrotic hepatitis.

porcine h. E virus an enteric virus of pigs related to human hepatitis E that is not known to be pathogenic.

toxipathic h. hepatitis caused by a very large number of toxins, including inorganic or organic. In large animals, especially ingested plant and fungal toxins, e.g. some pyrrolizidine alkaloids, diterpenopid glycosides, furanosesquiterpenes, sporidesmin, aflatoxin. Not a true hepatitis, since many features of inflammation are absent.

turkey h. see **turkey** hepatitis.

hepatitis cysticercosa damage to the liver caused by migrating cestode larvae, including oncospheres and post-oncopheral stages, cysticerci in much the same way as migrating fluke larvae cause damage.

hepatization [*hep"ə-tĭ-za'shən*] transformation into a liverlike mass, especially the solidified state of the lung in lobar pneumonia. In more severe acute cases, the pulmonary exudate is blood-stained and the change is called red hepatization. The chronic or less severe condition is called gray hepatization.

hepat(o)- word element. [Gr.] *liver*.

hepatobiliary [*hep"ə-to-bil'e-ar"e*] pertaining to or emanating from the liver, bile ducts and gallbladder.

h. system the liver, bile ducts and, in most species, gallbladder.

hepatoblastoma [*hep"ə-to-blas-to'mə*] a malignant intrahepatic tumor consisting chiefly of embryonic tissue.

hepatocarcinogen [*hep"ə-to kahr-sin'ə-jen*] a substance capable of causing hepatic neoplasia.

hepatocarcinoma [*hep"ə-to-kahr"sĭ-no'mə*] hepatocellular carcinoma.

hepatocele [*hə-pat'o-sēl*] hernia of the liver.

hepatocellular [*hep"ə-to-sel'u-lər*] pertaining to or affecting liver cells.

h. adenoma tumor is usually single, may be lobulated, sessile; no acinar development and no ductal system.

h. carconoma malignancy arising from hepatocytes, often within a pre-existing hepatoma.

h. fusion fusion of disappearance of adjacent hepatocytes, giving the tissue a syncytial appearance; has been caused by dioxin poisoning in cats and in leptospirosis in foals.

h. jaundice jaundice arising because of damage to hepatic cells.

hepatocerebral disease [*hep"ə-to sə-re'brəl*] see hepatic **encephalopathy**.

hepatocholangiocarcinoma [*hep"ə-to-ko-lan"je-o-kahr"sĭ-no'mə*] cholangiohepatoma.

hepatocholangitis [*hep"ə-to-ko"lan-ji'tis*] see **cholangiohepatitis**.

hepatocirrhosis [*hep"ə-to-sĭ-ro'sis*] cirrhosis of the liver.

hepatocutaneous syndrome [*hep"ə-to ku-ta'ne-əs*] see necrolytic migratory **erythema**.

hepatocystic [*hep"ə-to-sis'tik*] pertaining to the liver and gallbladder.

Hepatocystis [*hep"ə-to-sis'tis*] a genus of intra-erythrocytic protozoan parasites in the family Plasmodiidae.

H. kochi the common parasite of African baboons and other monkeys, transmitted by *Culicoides* spp. Rarely causes disease but may cause white to gray nodular foci on the liver.

hepatocyte [*hep'ə-to-sīt*] a liver cell.

h. acidophilic body see **cytosegresome formations**.

hepatodiaphragmatic pertaining to the liver and the diaphragm.

hepatodynia [*hep"ə-to-din'e-ə*] pain in the liver.

hepatoencephalopathy [*hep"ə-to en-sef"ə-lop'ə-the*] hepatic **encephalopathy**.

hepatogastric [*hep"ə-to-gas'trik*] pertaining to the liver and stomach.

hepatogenic [*hep"ə-to-jen'ik*] 1. giving rise to or forming liver tissue. 2. hepatogenous.

hepatogenous [*hep"ə-toj'ə-nəs*] 1. originating in or caused by the liver. 2. hepatogenic.

h. chronic copper poisoning copper accumulates in liver cells damaged by ingested hepatoxic agents in plants, e.g. *Heliotropum europaeum*.

hepatogram [*hep'ə-to-gram*] 1. a tracing of the liver pulse in the sphygmogram. 2. a radiograph of the liver.

hepatography [*hep"ə-tog'rə-fe*] radiography of the liver.

hepatoid [*hep'ə-toid*] resembling the liver in its structure.

h. cells polygonal cells with abundant eosinophilic cytoplasm and small, round nucleus, resembling a hepatocyte and found in perianal glands of dogs.

h. gland see **perianal** gland.

hepatojugular [*hep"ə-to-jug'u-lər*] pertaining to the liver and jugular vein.

h. reflux distention of the jugular vein induced by manual pressure over the liver; it suggests insufficiency of the right heart.

hepatolienography [*hep"ə-to-li"ə-nog'rə-fe*] radiography of the liver and spleen.

hepatolith [*hep'ə-to-lith"*] a calculus in the liver.

hepatolithectomy [*hep"ə-to-lĭ-thek'tə-me*] removal of a calculus from the liver.

hepatolithiasis [*hep"ə-to-lĭ-thi'ə-sis*] the presence of calculi in the biliary ducts of the liver. See **cholelithiasis**.

hepatology [*hep"ə-tol'ə-je*] the scientific study of the liver and its diseases.

hepatolysin [*hep"ə-tol'ĭ-sin*] a cytolysin destructive to liver cells.

hepatolysis [*hep"ə-tol'ĭ-sis*] destruction of the liver cells.

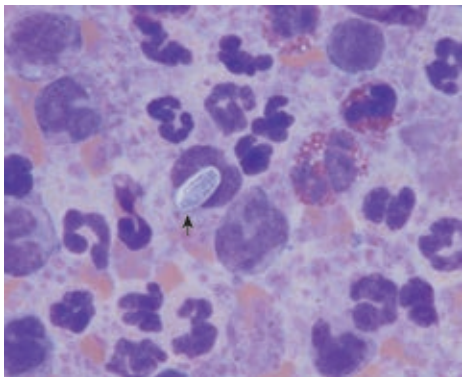
hepatoma [*hep"ə-to'mə*] hepatocellular adenoma.

hepatomalacia [*hep"ə-to-mə-la'shə*] softening of the liver.

hepatomegaly [*hep"ə-to-meg'ə-le*] enlargement of the liver.

VetBooks.ir

hepatomelanosis [*hep"ə-to-mel"ə-no'sis*] melanosis of the liver.
hepatometry [*hep"ə-tom'ə-tre*] measurement of the dimensions of the liver; often performed radiographically; valuable provided accurate criteria are available as a base for comparison.
hepatomphalocele [*hep"ə-tom'fə-lo-sēl*] umbilical hernia with liver involvement in the hernial sac.
hepatomycotoxins fungal toxins with hepatotoxic characteristics.
hepatonephric [*hep"ə-to-nef'rik*] pertaining to the liver and kidney.
hepatopancreatitis [*hep"ə-to pan"kre-ə-ti'tis*] inflammation of the pancreas and the liver.
necrotizing h. disease of farmed shrimp caused by an unidentified bacterium; subacute to chronic syndrome with cumulative mortality of up to 90%. Called also Texas pond mortality syndrome.
h. parvovirus disease usually multifactorial in etiology, including parvovirus and bacteria, in juvenile *Penaeus* spp.
hepatopathy [*hep"ə-top'ə-the*] any disease of the liver.
crystal-associated h. see crystal-associated **cholangiohepatopathy**.
glucocorticoid h. glycogen accumulation in hepatocytes occurs with administration of glucocorticoids and in hyperadrenocorticism.
vacuolar h. seen in Scottish terriers with increased concentrations of adrenal steroids other than cortisol. Most remain asymptomatic. Occurs also in primary **hyperlipidemia** in miniature Schnauzers.
hepatopexy [*hep"ə-to-pek'se*] surgical fixation of a displaced liver to the abdominal wall.
hepatopleural [*hep"ə-to-ploor'əl*] pertaining to the liver and pleura or pleural cavity.
hepatopneumonic [*hep"ə-to-n-mon'ik*] pertaining to, affecting, or communicating with the liver and lungs.
hepatoportal [*hep"ə-to-por'təl*] pertaining to the portal system of the liver.
hepatoprotectant compounds that may provide the liver with some protection from toxins or biochemical injury. Includes ursodeoxycholic acid, **S-adenosyl-L- methionine**, and **silymarin**. Many are nutraceuticals with uncertain efficacy.
hepatorenal [*hep"ə-to-re'nəl*] pertaining to the liver and kidneys.
h. syndromes diseases in which there is concurrent involvement of both liver and kidneys. This may be the result of a toxin such as carbon tetrachloride which simultaneously damages both organs, or as a result of hepatic injury causing, for example, a cholemic nephrosis.
hepatorrhaphy [*hep"ə-tor'ə-fe*] suture of the liver.
hepatorrhexis [*hep"ə-to-rek'sis*] rupture of the liver.
hepatoscan [*hep'ə-to-skan*] scintigraphy of the liver.
hepatoscopy [*hep"ə-tos'kə-pe*] examination of the liver.
hepatosis [*hep"ə-to'sis*] any functional disorder of the liver.
h. dietetica a degenerative disease of the liver of pigs due to a nutritional deficiency of vitamin E or selenium. There is massive hepatic necrosis; sudden death is the only clinical abnormality.
fatty h. see fatty **liver**.
hepatosplenitis [*hep"ə-to-splə-ni'tis*] inflammation of the liver and spleen.
h. infectiosa strigum acute viral hepatitis of owls caused by a herpesvirus and characterized by sudden death and necropsy lesions of miliary necrotic foci in the liver, spleen and bone marrow.
hepatosplenography [*hep"ə-to-splə-nog'rə-fe*] radiography of the liver and spleen.
hepatosplenomegaly [*hep"ə-to-sple"no-meg'ə-le*] enlargement of the liver and spleen.
hepatotherapy [*hep"ə-to-ther'ə-pe*] administration of liver or liver extract for its pharmacological effect rather than its nutritional value as a protein.
hepatotomy [*hep"ə-tot'ə-me*] incision of the liver.
hepatotoxic [*hep'ə-to-tok"sik*] causing liver damage.
hepatotoxin [*hep'ə-to-tok"sin*] a toxin that damages or destroys liver cells.
fungal h. includes some of the most potent hepatotoxins, e.g. sporidesmin, aflatoxin, rubratoxin, and the toxin of *Phomopsis leptostromiformis*, a fungus growing on lupins.
hepatotrophic [*hep"ə-to-tro'pik*] having a specific effect on the liver or exerting a specific effect on it.
Hepatovirus [*hep'ə-to-vi"rəs*] a genus in the family ***Picornaviridae*** that includes human and simian hepatitis A viruses.
hepatoxicity [*hep'ə tok-sis'ĭ-te*] the quality of a substance which makes it toxic to liver cells.
hepatoxin [*hep'ə tok'sin*] substance toxic to hepatic cells.



H-31: *Hepatozoon americanum* gamont (arrow) within a canine leukocyte.
Bowman, Dwight D. Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

Hepatozoon [*hep"ə-to-zo'on*] a genus of protozoan parasites in the family Haemogregarinidae. Includes more than 300 species of intraerythrocytic parasites. The most diverse and prevalent of the haemogregarines. Described for all groups of tetrapod vertebrates, and various haematophagous arthropods, which serve as vectors or definitive hosts. Can cause a tick-borne, rickettsia-like disease called hepatozoonosis in some mammals, and prevalent in amphibians and reptiles.
H. americanum infects dogs in the south central and south eastern USA.
H. canis found in dogs and other canines and in cats, in circulating leukocytes and bone marrow cells. Transmitted by the tick *Rhipicephalus sanguineus*.
H. cuniculi occurs in rabbits.
H. griseisciuri occurs in gray squirrels.
H. muris occurs in rats and transmitted by rat mites.
H. musculi found in white mice.
hepatozoonosis [*hep"ə-to-zo"o-no'sis*] an arthropod-borne infection by *Hepatozoon* spp. that affects numerous species, including amphibians, reptiles, birds and mammals. Clinical disease ranges from subclinical in some species to severe and life-threatening, particularly in dogs. *H. canis*, transmitted by *Rhipicephalus sanguineus*, infection in dogs occurs worldwide, usually resulting in mild disease. *H. americanum*, transmitted by ingestion of the Gulf Coast tick (*Ambylomma maculatum*) is the cause of severe and debilitating clinical disease in dogs in the south-central and south eastern USA. Infected dogs have high fever, persistent leukocytosis, hypoglycemia, generalized musculoskeletal pain and lameness with periosteal proliferation on long and flat bones.
hepcidin [*hep'si-din*] a peptide hormone synthesized by the liver; regulates iron homeostasis.
hepta- word element. [Gr.] *seven*.
heptachlor a **chlorinated hydrocarbon** insecticide.
heptose [*hep'tōs*] a sugar whose molecule contains seven carbon atoms.
Heracleum mantegazzianum European plant in the family Apiaceae; contains furocoumarins which cause primary photosensitization. Called also cow parsnip, giant hogweed.
herb [*ərb*] botanically, a plant with non-woody stems; in common use, the term is applied to culinary herbs - plants used in cooking - and medicinal herbs - plants used for pharmacological effects they are believed to have.
h. Christopher see ***Actaea spicata***.
herb-of-grace *Ruta graveolens*.
herbage standing growing non-woody plants, mostly annuals and especially grasses.
h. larval counts harvesting of a representative sample of herbage, washing it and sieving off larvae for the purpose of assessing levels of contamination of pasture with infective larvae of strongylid nematodes.
herbal medicine use of naturally occurring substances, usually of plant origin, in the prevention and treatment of disease. *Western* herbal medicine is based on the use of botanicals commonly available in North America and Europe. *Chinese* herbal medicine uses a combination of plants, minerals and animal products. Dietary herbs may result in positive drug tests in horses competing in athletic events and several are not allowed during competition in the USA. See also **traditional Chinese medicine**. Called also phytotherapy.

herbicide [*ur', hur'bĭ-sīd*] a substance that destroys weeds. A large number of chemical compounds are used as general and selective herbicides. Most of them have very low toxicity because their availability to animals on recently sprayed pasture is an obvious toxic hazard. Most poisoning incidents arise when animals have accidental access to large volumes of the agent, e.g. if there has been a spillage. The well-known herbicide groupings are bipyridyls, chlorinated acids, dinitro compounds, phenoxyacid derivatives, thiocarbamates and triazines. While common-use herbicides are not toxic to livestock, the feces of animals that graze pastures treated with certain herbicides such as clopyralid and picloram can still be phytotoxic when used as compost.

herbivore [*ur' ,hur'bĭ-vor*] one of the Herbivora; animals that subsist in their natural state entirely by eating plants and plant products. In confined management systems foods such as fish meal may be included in the diet.

non-ruminant h. monogastric animals, such as horses and rabbits, able to digest roughages and other fibrous feeds in their hindgut.

herbology use of Chinese herbs in medicine.

herd a group of animals, usually cattle, or pigs, or related wild animal species, which live a collective life together. This may be a natural pattern of behavior or be imposed by a human operated management system.

h. abnormality an abnormality detectable only by examination of epidemiological data, e.g. milk yield per acre, conception rate to first service, pigs marketed per sow per year.

h. composition includes bulls (where applicable), cows in milk, dry cows, heifers not yet calved, bred heifers, virgin heifers, yearlings, calves weaned and suckers or at foot. Called also herd structure.

h. diagnosis a diagnosis made to fit a herd problem which may be, for example, a low reproduction rate, or wool yield, or win rate at the races.

dairy h. herd used exclusively for milk production.

h. epidemic an epidemic confined to one herd.

h. fertility control scheme programs based on surveillance of all reproduction data and comparison of indexes with preset targets. Correction of inefficiencies may be implemented by the farmer but diagnosis of the cause and treatments and prophylaxes are largely the province of the veterinarian.

h. health program a health management system based on periodic visits to the herd by a veterinarian to check the status of a series of identifiable health parameters including production, reproductive efficiency, mastitis prevalence, calf survival, cow culling and mortality rate, fecal egg counts. Superior programs also include production management so that genetics, nutrition, housing, disease control and financial management are coordinated in a whole farm approach.

h. level test test performed on the entire herd or an adequate sample of it.

problem h's herds which do not respond to the general control program for a particular disease and require special examination to elucidate the error and additional control measures to overcome it, e.g. a mastitis problem herd with a bacterially contaminated water supply.

rolling h. average (RHA) the average milk production per herd per year based on the 12 months just finished. Upon completion of a new test record, usually at monthly intervals, the record for the same period of the previous year is deducted and the new record is added, then a new rolling 365-day average is calculated. RHSs are updated with each new test. See also **moving** average.

h. sampling examination, either physical or laboratory, of a herd to determine the herd status in a particular epidemiological parameter.

h. size a critical factor in planning for productivity efficiency. With dairy and swine units, often quoted as the number of animals of a particular age or stage of production, e.g. milking cows or number of sows, assuming that other, usually young, stock are also carried on the farm. With beef, usually the number of breeding cows, but occasionally as cow-calf pairs.

h. structure see herd composition (above).

h. udder health status of the herd with respect to the prevalence of quarter infection, clinical mastitis, teat lesions.

HERDA hereditary equine regional dermal asthenia.

H-32: Loose hyperextensible skin over the hip area, typical of hereditary equine regional dermal asthenia (HERDA).
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

herding 1. natural congregation of animals into groups; see also **flocking**. 2. management of animals into large groups or herds by humans to facilitate animal husbandry procedures.

hereditary [*hə-red'ĭ-tar-e*] transmissible or transmitted from parent to offspring; genetically determined.

h. collagen dysplasia a group of diseases which occur in most species and are characterized by looseness and stretchability of the skin, often accompanied by laxity of the joints and occasionally by absence of the tooth enamel. The inherited defect is one of deficient collagen synthesis. See also **dermatosparaxis**, **Ehlers–Danlos syndrome**. Called also hyperelastosis cutis, rubber-puppy syndrome.

h. defect anatomical or functional defect conditioned in its appearance by inherited factors.

h. equine regional dermal asthenia (HERDA) an autosomal recessive trait that occurs predominantly in Quarter horses and manifest with areas of hyperextensible and fragile skin that range from small and well demarcated areas to large, extensive areas that typically develop between 6 months and 2 years of age, often associated with initial saddling. Hematomas commonly form subcutaneously under these areas following minor trauma and skin wounds heal slowly. The regional difference of the skin disorder and the lack of joint abnormality suggests a different genesis to Ehlers-Danlos syndrome and has been found associated with a novel mutation in peptidyl-prolyl isomerase B. Called also hyperelastosis cutis.

h. melanoma benign, heritable, cutaneous tumor of pigs. Hereditary melanoblastomas in miniature pigs develop metastases.

heredity [*hə-red'ĭ-te*] the transmission of genetic traits from parents to offspring. The hereditary material is DNA in the ovum and sperm, so that the offspring's heredity is determined at the moment of conception. Inside the nucleus of each germ cell are structures called *chromosomes*. A chromosome is composed of **deoxyribonucleic acid** (DNA) which is associated with histone proteins. Genes are segments of the DNA molecule; there are an estimated 100 000 **genes** in each cell. Most genes carry code for a specific protein which may be recognized as a specific hereditary trait. These traits are physical, biochemical and physiological. Thus genes affect not only the physical appearance of an animal but also its behavior, physiological makeup, its tendency to develop certain diseases, and the daily activities of all the cells of its body. See also **inheritance**.

heredofamilial [*her"ə-do-fə-mil'e-əl*] occurring in certain families under circumstances that implicate a hereditary basis.

Hereford a breed of beef cattle, red with white head, underline and legs. There are polled and horned varieties.

H-33: Hereford beef bull.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

H. encephalopathy–microphthalmia syndrome originally called inherited hydrocephalus. Inherited as a single autosomal recessive. Characterized by a domed skull, skeletal muscle degeneration, small palpebral fissures and orbits, retinal dysplasia, vitreous liquefaction, uveal malformation, microphakia, bilateral microphthalmia.

H. pig red pig with white head, legs, belly and tail, originating in the USA.

black H. a recently recognized breed that has the same coat color pattern as Herefords, but the color is black, not red.

Herellea a genus of nonmotile, paired, gram-negative enteric bacilli. Now classified as *Acinetobacter*.

Hering–Breuer reflexes inflation and deflation reflexes that help regulate the rhythmic ventilation of the lungs, thereby preventing overdistension and extreme deflation. These reflexes arise outside the respiratory center in the brain; that is, the receptor sites are located in the respiratory tract, mainly in the bronchi and bronchioles. They are activated by either a stretching or a nonstretching and compression of the lung; the impulses are transmitted from the receptor sites through the vagus nerve to the brainstem and thence to the respiratory center. The *inflation* reflex acts to inhibit inspiration and thereby prevents further inflation. When the lung tissue is stretched by inflation, the stretch receptors respond by sending impulses to the respiratory center, which in turn slows down inspiration. As the expiratory phase begins, the receptors are no longer stretched, impulses are no longer sent, and inspiration can begin again. This is called the Hering–Breuer *deflation* reflex. It is also believed that in addition to the cessation of impulses from the stretch receptors, there may be an activation of compression receptors which transmit impulses that inhibit expiration, thus allowing inspiration to begin.

heritability [*her″ĭ-tə-bil′ĭ-te*] 1. the proportion of total variation in the population that can be attributed to variation in genetic factors. 2. the degree to which inheritance plays a part in the etiology of a disease.

broad-sense h. the degree to which a trait is genetically determined, expressed as the ratio of the total genetic variance to the phenotypic variance (V_G/V_P).

narrow sense h. the degree to which a trait is passed from parent to offspring expressed as the ratio of the additive genetic variance to the total phenotypic variance (V_A/V_P).

Hermann's tortoise **Testudo** *hermanni*.

hermaphrodism [*hər-maf′ro-diz-əm*] hermaphroditism.

hermaphrodite [*hər-maf′ro-dīt*] an individual whose body contains tissue of both male and female gonads. Rarely, the ovaries and testes may be present as separate organs, or ovarian and testicular tissue may be combined in the same organ (ovotestis). The ovarian and testicular tissues may be present at the same time (synchronous hermaphrodite) or sequentially (when the sex organs appear one after the other; protandrous when the testes come first, protogynous when the ovaries appear first), which does not occur in mammals. See also **hermaphroditism**.

hermaphroditism [*hər-maf′ro-di-tiz″əm*] a state characterized by the presence of both ovarian and testicular tissue and of ambiguous morphological criteria of sex. Hermaphroditism is not to be confused with pseudohermaphroditism, in which an individual with only one kind of gonad possesses reproductive organs that reflect some characteristics of the opposite sex, owing to improper balance of male and female hormones or other endocrine disorder.

bilateral h. that in which gonadal tissue typical of both sexes occurs on each side of the body.

false h. pseudohermaphroditism.

lateral h. presence of gonadal tissue typical of one sex on one side of the body and tissue typical of the other sex on the opposite side.

sequential h. see **hermaphrodite**.

synchronous h. see **hermaphrodite**.

transverse h. that in which the external genital organs are typical of one sex and the gonads typical of the other sex.

true h. coexistence in the same animal of both ovarian and testicular tissue, with somatic characters typical of both sexes.

unilateral h. presence of gonadal tissue typical of both sexes on one side and of only an ovary or a testis on the other.

hermetic [*hər-met′ik*] impervious to the air.

hernia [*hur′ne-ə*] the abnormal protrusion of part of an organ or tissue through the structures normally containing it. In this condition, a weak spot or other abnormal opening in a body wall permits part of the organ to bulge through. A hernia may develop in various parts of the body; most commonly in the region of the abdomen. A layman's term for hernia is rupture. A hernia is either acquired or congenital. Anatomically specific hernias are listed under their individual sites.

H-34: Umbilical hernia in a pig.
From Holtgrew-Bohling K, Large Animal Clinical Procedures for Veterinary Technicians, 2nd Edition. Mosby, 2012.

caudal abdominal h's see **inguinal**, **femoral**, scrotal hernias (below).

cerebral h. see **brain** herniation.

cord h. a type of umbilical hernia in which the midgut has failed to return to the abdominal cavity during fetal development and remains within the umbilical cord.

crural h. femoral hernia.

diaphragmatic h. see **diaphragmatic** hernia.

esophageal hiatal h. see hiatal hernia (below).

external h. protrusion of abdominal contents through an opening in the abdominal wall.

false h. a structural defect with contents but without a peritoneal sac.

fat h. hernial protrusion of peritoneal fat through the abdominal wall or through the vulvar wall during a difficult calving.

hiatal h., hiatus h. protrusion of a structure, often a portion of the stomach, through an enlarged esophageal hiatus of the diaphragm. A congenital form has been described in Sharpei dogs.

incarcerated h. hernia so occluded that it cannot be returned by manipulation; it may or may not become strangulated.

incisional h. hernia after operation at the site of the surgical incision, owing to improper healing or to excessive strain on the healing tissue; such strain may be caused by excessive muscular effort, activity, or by obesity, which creates additional pressure on the weakened area.

inguinoscrotal h. see scrotal hernia (below).

irreducible h. incarcerated hernia.

mesenteric h. hernia of a loop of small intestine through a traumatic tear in the mesentery.

muscle h. the belly of the muscle protrudes through a tear in the fascia and epimysium.

paraesophageal h. hiatal hernia in which part or almost all of the stomach protrudes through the hiatus into the thorax to the left of the esophagus, with the gastroesophageal junction remaining in place.

pelvic h. hernia caused by a loop of intestine becoming incarcerated in a hiatus between the wall of the pelvis and the ductus deferens, caused by tearing of the fold of the ductus at castration. May occur many months after the castration operation. Can be resolved, if diagnosed early enough, by traction on the taut mesentery per rectum.

pericardial h. see **peritoneopericardial** hernia.

perineal h. see **perineal** hernia.

pleuroperitoneal h. see **diaphragmatic** hernia.

prepubic h. the result of avulsion of the cranial pubic tendon.

reducible h. one that can be returned by manipulation.

scrotal h. inguinal hernia which has passed into the scrotum; may be defined as direct (rent in the abdominal wall) or indirect (passage through the inguinal canal). When the herniated tissue becomes strangulated it causes severe abdominal pain and acute local swelling. In large animals the tightened spermatic cord can be felt disappearing into the inguinal canal. See also **intestinal** obstruction.

sliding hiatal h. hiatal hernia in which the stomach and the cardioesophageal junction protrude into the caudal mediastinum; the protrusion, which may be fixed or intermittent, is partially covered by a peritoneal sac.

VetBooks.ir

H-35: Scrotal hernia in a horse.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

slip h., slipped h. sliding hernia.
strangulated h. one that is tightly constricted. As any hernia progresses and bulges out through the weak point in its containing wall, the opening in the wall tends to close behind it, forming a narrow neck. If this neck is pinched tight enough to cut off the venous return, the hernia will quickly swell and become strangulated. This is a very dangerous condition that can appear suddenly and requires immediate surgical attention. Unless the blood supply is restored promptly, gangrene can set in and may cause death.
traumatic h. protrusion of abdominal viscera into a subcutaneous site because of traumatic injury to the abdominal muscles.
uterine h. a gravid uterus can prolapse through an inguinal hernia in dogs and cats.
vaginal h. hernia into the vagina; called also colpocele.
ventral h. trauma with tearing of the body wall results in prolapse of abdominal contents into the subcutaneous tissue. Also reported in ewes from violent straining during parturition.
herniation abnormal protrusion of an organ or other body structure through a defect or natural opening in a covering membrane, muscle or bone. See also **hernia** and individual anatomical sites for hernia.
brain h. see **brain** herniation.
nucleus pulposus h. rupture or prolapse of the nucleus pulposus into the spinal canal, or against the spinal cord. See also **intervertebral** disk disease.
transfalcine h. displacement of one cerebral hemisphere under the falx cerebri to the opposite side, as a result of relatively higher intracranial pressure on that side. Most commonly the cingulate gyrus is displaced.
transtentorial h. displacement (caudal transtentorial herniation; uncal herniation) of the caudal or inferior brain structures, usually the occiptal lobes of the cerebrum through the tentorial notch as a result of raised intracranial pressure within the rostral fossa, exerting pressure on the underlying structures, including the brainstem.
uncal h. transtentorial herniation.
hernioid [*hur'ne-oid*] resembling hernia.
herniology the study of hernia.
hernioplasty [*hur'ne-o-plas"te*] surgical repair of hernia, with reconstruction of tissue.
herniorrhaphy [*hur"ne-or'ə-fe*] surgical repair of **hernia**, with suture of the defective tissue. When the weakened area is very large, hernioplasty is done and some type of strong synthetic material is sewn over the defect to reinforce the area.
heroin [*her'o-in*] a highly addictive narcotic analgesic derived from morphine; called also diacetylmorphine, diamorphine. Its sale is prohibited in the USA and in many other countries of the world.
heron tall, elegant, fish-eating wading bird, with long legs and a long neck; in the family Ardeidae, there are many species, including night herons, great blue heron, and whistling heron, and those called egrets or bitterns.
herpes pigeon virus 1 [*hur'pēz*] a cause of respiratory disease.
herpes simiae herpes B virus, the cause of a herpes simplex-like disease in non-human primates and of a uniformly fatal encephalitis in humans.
herpes simplex virus a virus in the family ***Herpesviridae*** that causes oral and genital disease, occasionally encephalitis, in humans and monkeys and fatal disease in owl monkeys and tree shrews.
Herpesvirales [*hur'pēz-vi"rəl*] order of viruses that contains three families: *Herpesviridae*, which includes mammal, bird and reptile viruses; *Alloherpesviridae*, which includes fish and frog viruses; and *Malacoherpesviridae*, which includes a bivalve (oyster) virus.
Herpesviridae [*hur"pēz-vir'ĭ-de*] one of three families in the order *Herpesvirales*, the members of which are about 150 nm in diameter, enveloped, with a nucleocapsid of about 100 nm in diameter, composed of 162 capsomers and contain a large, double-stranded DNA. The viruses replicate in the nucleus of the infected cell, where they induce the formation of a characteristic inclusion body; some also induce formation of a cytoplasmic inclusion body. The *Herpesviridae* contain three subfamilies: (1) *Alphaherpesvirinae*, which are rapidly growing viruses that cause acute diseases, except Marek's disease which causes tumors in chickens; (2) *Betaherpesvirinae*, which are slow growing, highly cell-associated viruses, also called cytomegaloviruses, which produce subtle diseases with a prolonged clinical course; and (3) *Gammaherpesvirinae*, some of which produce low grade, prolonged clinical illness typified by infectious mononucleosus/glandular fever of humans, caused by Epstein–Barr virus, and probably a similar disease of horses caused by equine herpesvirus 2; the primate viruses are associated with tumors. The important diseases of animals caused by herpesviruses are dealt with under their individual headings: **Aujeszky's disease**, **infectious** bovine rhinotracheitis, infectious pustular **vulvovaginitis**, equine **viral** abortion, **equine** viral rhinopneumonitis, **equine** coital exanthema, **equine** herpesvirus 2 infection, the Allerton form of **lumpy skin disease**, the generalized infection of cattle with bovine herpesvirus 2, **bovine** herpes mammillitis, the African 'wildebeest-associated' **malignant catarrhal fever**, **canine** herpesvirus respiratory, genital and neonatal infections, feline viral **rhinotracheitis**. In birds there are **infectious** laryngotracheitis, **pigeon** herpesvirus, duck **plague** and **Marek's disease**.
herpesvirus [*hur'pēz-vi"rəs*] a member of the order *Herpesvirales*.
canine h. infection a cause of a generalized, acute, rapidly fatal disease in neonatal puppies, transmitted from the dam in utero, transvaginally or by oronasal contact. In puppies older than 3 weeks and adults, mild to inapparent upper respiratory disease or vesicular genital lesions occur. The difference in age susceptibility is attributed to the temperature-dependent growth characteristics of the virus in that the optimum temperature for viral replication is about 91°F (33°C) so that puppies that are hypothermic develop severe, often fatal disease. Recovered puppies or dogs may have persistence of the virus in the genital or respiratory tracts.
feline h. see feline viral **rhinotracheitis**.
h. hominus infects nonhuman primates.
h.-1 infection see Table 21.2.
psittacid h. 1 (PsHV-1) Pacheco's disease virus.
h. saimiri has produced malignant lymphomas in some monkeys.
h. tamarinus a cause of inclusion body hepatitis in marmosets and owl monkeys.
herpetic [*hər-pet'ik*] pertaining to or of the nature of herpes; relating to or caused by herpesviruses.
herpetiform [*hər-pet'ĭ-form*] resembling herpes.
Herpetomonas a genus of protozoa in the family Trypanosomatidae. Found in invertebrates; of no veterinary importance.
Herpetosoma [*hər-pet"o-so'mə*] a subgenus of the genus *Trypanosoma*, containing nonpathogenic species of *T. lewisi*.
Herring bodies [*her'ing*] the accumulated neurosecretions and carrier molecules in the axons of magnocellular neurons of the neurohypophysis.
herring-gutted gaunt or tucked-up appearance.
herring meal a protein feed supplement used in Scandinavia but some batches contain a potent hepatoxin, thought to be dimethylnitrosamine. A dummy syndrome develops after several weeks of eating the meal.
herring worm see ***Anisakis***.
herringbone parlor see **milking** parlor.
Herrold's egg yolk medium a medium used for the cultivation of *Mycobacterium avium* subspecies *paratuberculosis*.
hersage [*ār-sahzh'*] [Fr.] surgical separation of the fibers of a peripheral nerve.
Hertia pallens South African plant in the Asteraciae family; contains an unidentified toxin which causes hepatitis, pulmonary edema, fibrosis and emphysema. Called also springbokbush.
Hertwig's epithelial root sheath [*hert'vik ep"ĭ-the'le-əl*] an extension formed by the free edge of the enamel organ on the developing

VetBooks.ir

tooth which goes beyond the enamel–dentin junction and molds a dental papilla to form the root of the tooth.

hertz (Hz) [*hərtz*] an SI unit of frequency, equal to one cycle per second.

herztod [*herts'tōt*] sudden cardiac death; name for **porcine** stress syndrome.

hetacillin [*het"ə-sil'in*] a semisynthetic penicillin, which is converted in the body to ampicillin, and has actions and uses similar to those of ampicillin. The potassium salt can be given orally.

hetastarch [*het'ə-stahrch*] an artificial colloid produced by addition of hydroxyethyl ether groups into amylopectin; used as a plasma volume expander for treatment of shock.

HETE hydroxyeicosatetraenoic acid.

heteradelphus [*het"ər-ə-del'fəs*] conjoined twins with one fetus more developed than the other.

Heterakis [*het"ər-a'kis*] a genus of nematodes in the family Heterakidae.

H. beramporia found in nodules in the cecal wall of chickens.

H. brevispiculum a parasite of chickens and guinea fowl.

H. dispar found in goose and duck.

H. gallinarum, H. vesicularis, H. papillosa found in most species of domestic birds and some wild species. A vector for *Histomonas meleagridis.*

H. indica found in chickens.

H. isolonche found in pheasants, quail and other gallinaceous birds. Causes nodular typhlitis, diarrhea, emaciation and death.

H. linganensis found in chicken.

H. meleagris found in turkey.

H. pavonis found in peafowl and pheasant.

H. spumosa found in the cecum of rats.

heterergic [*het"ər-ur'jik*] having different effects; said of two drugs one of which produces a particular effect and the other does not.

heter(o)- word element. [Gr.] *other, dissimilar*.

heteroagglutination [*het"ər-o-ə-gloo"tĭ-na'shən*] agglutination of particulate antigens by antibodies derived from a different antigen.

heteroagglutinin [*het"ər-o-ə-gloo'tĭ-nin*] an agglutinin (antibody) that is capable of heteroagglutination.

heteroantibody [*het"ər-o-an"tĭ-bod'e*] an antibody capable of binding antigens originating from a species foreign to the antibody producer.

heteroantigen [*het"ər-o-an'tĭ-jən*] an antigen originating from a species foreign to the antibody producer.

heteroantiserum antiserum produced by injecting antigens into a member of a different species.

Heterobilharzia [*het"ər-o-bil-hahr'zhə*] a genus of blood flukes (digenetic trematodes) in the family Schistosomatidae.

H. americana occurs in raccoons, bobcats, dogs and other mammals; causes weight loss and gastrointestinal signs. Hypercalcemia has been reported. Eggs can be found in the feces with sodium chloride sedimentation or a PCR-based assay and in histopathology of the intestine or liver.

heteroblastic [*het"ər-o-blas'tik*] originating in a different kind of tissue.

heterocaryon see **heterokaryon**.

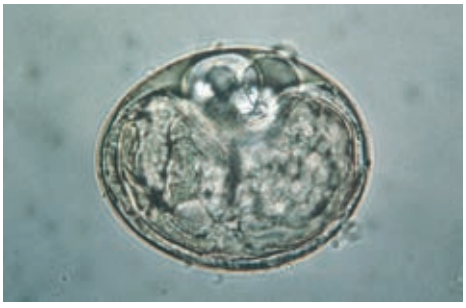
heterocellular [*het"ər-o-sel'u-lər*] composed of cells of different kinds.

heterocephalus [*het"ər-o-sef'ə-ləs*] a fetus with two unequal heads.

heterochromatin [*het"ər-o-kro'mə-tin*] that state of chromatin in which it is dark-staining, genetically inactive, and tightly coiled.

heterochromia [*het"ər-o-kro'me-ə*] diversity of color in a part or parts normally of one color.

h. iridis difference in color of one iris compared with the fellow eye (complete heterochromia iridis) or marked variation in color in different ares of the same iris (sectoral heterochromia iridis). an incidental finding, sometimes associated with other extraocular pigmentary variations. See also **walleye** (3), **odd-eyed cat**.



H-36: Thin-shelled egg of *Heterobilharzia americanum*.
From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

heterochromic pertaining to heterochromia.

heterochronia [*het"ər-o-kro'ne-ə*] irregularity in time; occurrence at abnormal times.

heterochronic [*het"ər-o-kron'ik*] 1. pertaining to or characterized by heterochronia. 2. existing for different periods of time; showing a difference in ages.

heterocyclic [*het"ər-o-sik'lik,-si'klik*] having or pertaining to a closed chain or ring formation that includes atoms of different elements.

heterocytotropic [*het"ər-o-si"to-tro'pik*] having an affinity for cells from different species.

Heterodendrum oleifolium ***Alectryon*** *oleifolius*.

heterodont [*het'ər-o-dont*] having teeth of different shapes, as molars, incisors, etc.

heterodonty the state of having heterodont teeth.

Heterodoxus [*het"ər-o-dok'səs*] a genus of lice in the superfamily Amblycera, primarily parasitic on kangaroos.

H. longitarsus a louse of kangaroos.

H. macropus found on kangaroos and wallabies.

H. spiniger parasitizes dogs.

heteroduplex DNA see heteroduplex **DNA**.

heteroecious [*het"ər-e'shəs*] requiring different hosts in different stages of development; a characteristic of certain parasites.

heterogametic sex [*het"ər-o-gə-met'ik*] the sex which produces gametes containing dissimilar sex chromosomes, i.e. males in all mammalian species.

heterogamety [*het"ər-o-gam'ə-te*] production by an individual of one sex (as the human male) of unlike gametes with respect to the sex chromosomes.

heterogamy [*het"ər-og'ə-me*] the conjugation of gametes differing in size and structure, to form the zygote from which the new organism develops.

heterogeneity [*het"ər-o-jə-ne'ĭ-te*] the state of being heterogeneous.

heterogeneous [*het"ər-o-je'ne-əs*] not of uniform composition, quality or structure.

heterogenesis [*het"ər-o-gen'ə-sis*] alternation of generations; reproduction differing in character in successive generations.

heterogenote [*het'ər-o-je"nōt*] a cell that has an additional genetic fragment, different from its intact genotype; usually resulting from transduction.

heterogenous [*het"ər-oj'ə-nəs*] 1. xenogeneic. 2. of other origin; heterogeneous.

heterogony [*het"ər-og'ə-ne*] heterogenesis.

heterograft [*het'ər-o-graft"*] see **xenograft**.

heterohemagglutination [*het"ər-o-he"mə-gloo"tĭ-na'shən*] agglutination of erythrocytes by a hemagglutinin (antibody) derived from an individual of a different species.

heterohemagglutinin [*het"ər-o-he"mə-gloo'tĭ-nin*] a hemagglutinin that agglutinates erythrocytes of animals of other species.

heterohemolysin [*het"ər-o-he-mol'ə-sin*] a hemolysin that destroys erythrocytes of animals of other species than that of the animal in which it is formed.

heteroimmunity [*het"ə-ro-ĭ-mu'nĭ-te*] an immune state induced in an individual by immunization with cells of an animal of another species.

heterokaryon [*het"ər-o-kar'e-on*] a single binucleate cell formed by fusing one cell with another. Fusion is usually accomplished by using inactivated parainfluenza virus or polyethylene glycol, both of which alter the cell membranes in such a way as to induce fusion.

heterokeratoplasty [*het"ər-o-ker'ə-to-plas"te*] grafting of corneal tissue taken from an individual of another species.

heterokinesis [*het"ər-o ki-ne'sis*] the differential distribution of the sex chromosomes in the developing gametes of a heterogametic organism.

heterolateral [*het"ər-o-lat'ər-əl*] relating to the opposite side; contralateral.

heterologous [*het"ər-ol'ə-gəs*] 1. made up of tissue not normal to the part. 2. derived from an individual of a different species.

heterolysin [*het"ər-ol'ĭ-sin*] an antibody that lyses cells of species other than the one in which it is formed.

heterolysis [*het"ər-ol'ĭ-sis*] destruction of cells of one species by lysin from another species.

VetBooks.ir

Heteromeles salicifolia a plant in the family Rosaceae; contains cyanogenic glycosides. Called also California holly, toyon.

heteromeric [het"ər-o-mer'ik] sending processes through one of the commissures to the white matter of the opposite side of the spinal cord.

heterometaplasia [het"ər-o-met"ə-pla'shə] formation of tissue foreign to the part where it is formed.

heteromorphosis [het"ər-o-mor-fo'sis] the development, in regeneration, of an organ or structure different from the one that was lost.

heteromorphous [het"ər-o-mor'fəs] of abnormal shape or structure.

heteronomous [het"ər-on'ə-məs] subject to different laws; in biology, subject to different laws of growth or specialized along different lines.

hetero-osteoplasty [het"ər-o-os'te-o-plas"te] osteoplasty with bone taken from an individual of another species.

heteropagus [het"ər-op'ə-gəs] conjoined twins with unequally developed components.

heterophagosome an intracytoplasmic vacuole formed by phagocytosis or pinocytosis, which becomes fused with a lysosome, subjecting its contents to enzymatic digestion.

heterophagy [het"ər-of'ə-je] the taking into a cell of exogenous material by phagocytosis or pinocytosis and the digestion of the ingested material after fusion of the newly formed vacuole with a lysosome.

heterophil [het'ər-o-fil"] 1. a finely granular polymorphonuclear leukocyte represented by neutrophils in humans, but characterized in other mammals by granules (lysosomes) that have variable sizes and staining characteristics. In avian species, a leukocyte functionally equivalent to neutrophils. 2. heterophilic.

h. antigen see heterogenetic **antigen**.

h./lymphocyte (H:L) ratio can be used as a measure of stress in birds.

heterophilic [het"ər-o-fil'ik] 1. having affinity for other antigens or antibodies besides the one for which it is specific, i.e. cross-reactive. 2. staining with a type of stain other than the usual one.

heterophonia any abnormality of the voice.

heterophthalmia [het"ər-of-thal'me-ə] difference in the direction of the axes, or in the color, of the two eyes.

Heterophyes [het"ər-of'e-ēz] a genus of intestinal flukes (digenetic trematodes) of the family Heterophyidae. Other genera of this family infest birds, e.g. *Cryptocotyle* spp.

H. heterophyes found in the intestine of dogs, cats, foxes and humans. Regarded as having little pathogenicity.

heterophyiasis [het"ər-o-fi-i'ə-sis] infection with *Heterophyes* spp. In dogs and cats, generally mild, but occasionally severe hemorrhagic diarrhea may occur.

Heterophyllaea pustulata South American plant in the family Rubiaceae; contains an unidentified toxin which causes photosensitization in cattle and sheep. Called also cegadera.

heteroplasia [het"ər-o-pla'zhə] replacement of normal by abnormal tissues; malposition of normal cells.

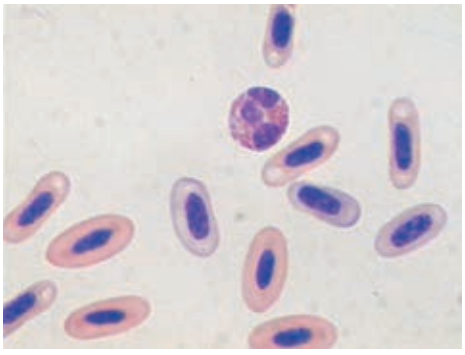
heteroplasm [het'ər-o-plaz-əm] heterologous tissue.

heteroplastic [het'ər-o-plas"tik] pertaining to or emanating from heteroplasia.

heteroplasty plastic repair with tissue derived from an individual of a different species.

heteroploid [het'ər-o-ploid"] 1. characterized by heteroploidy. 2. an individual or cell with an abnormal number of chromosomes.

heteroploidy [het'ər-o-ploi"de] the state of having an abnormal number of chromosomes.



H-37: Avian red blood cells and a heterophil. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

heteropyknosis [het"ər-o-pik-no'sis] 1. the quality of showing variations in density throughout. 2. a state of differential condensation observed in different chromosomes, or in different regions of the same chromosome; it may be attenuated (negative heteropyknosis) or accentuated (positive heteropyknosis).

heteroscedasticity [het"ər-o-skə-das-tis'i-te] an irregular scattering of values in a series of distributions; accompanied by a comparable scatter of variances.

heterosis [het"ər-o'sis] the existence, in the first generation hybrid, of greater vigor than is shown by either parent.

heterotaxia [het"ər-o-tak'se-ə] abnormal position of viscera.

heterotonia [het"ər-o-to'ne-ə] a state characterized by variations in tension or tone.

heterotopia [het"ər-o-to'pe-ə] displacement or misplacement of parts.

heterotopic [het"ər-o-top'ik] pertaining to heterotopia.

heterotransplant [het"ər-o-trans'pl ant] tissue taken from one individual and transplanted into one of a different species; a xenograft.

heterotrichosis [het"ər-o-tri-ko'sis] growth of hairs of different colors on the body.

heterotroph [het'ər-o-trōf"] a heterotrophic organism.

heterotrophic [het"ər-o-tro'fik] unable to synthesize metabolic products from inorganic materials; requiring complex organic substances (growth factors) for nutrition.

heteroxenous [het"ər-ok'sə-nəs] requiring more than one host to complete the life cycle.

h. apicomplexan protozoa includes *Besnoitia*, *Frenkelia*, *Hammondia*, *Neospora*, *Sarcocystis*, *Toxoplasma*.

heterozygosity [het"ər-o-zi-gos'i-te] the state of having different alleles in regard to a given character.

heterozygote [het"ər-o-zi'gōt] an individual exhibiting heterozygosity. Detection is critical in most programs to control genetic defects; methods used include karyotyping (rarely successful), test mating, blood typing, a full clinical pathology test spectrum, radiology.

heterozygous [het"ər-o-zi'gəs] having different alleles at the one locus.

heuristic [hu-ris'tik] encouraging or promoting investigation; conducive to discovery.

Heuter–Volkmann principle within physiological limits, compressive forces stimulate accelerated growth of articular, epiphyseal, and/or physeal cartilage.

HEV hemagglutinating encephalomyelitis virus of pigs.

hex(a)- word element. [Gr.] *six*.

hexacanth embryo the infective stage (larvae oncosphere) in a cestode egg after fertilization takes place.

hexachlorobenzene [hek"sə-klor"o-ben'zēn] a fungistatic agent used in the preservation of stored grain. In very large doses it causes liver damage but its greater importance is as a contaminant of foods of animal origin. The substance is virtually undegradable and its presence in meat is a cause for its condemnation.

hexachlorocyclohexane [hek"sə-klor"o-si"klo-hek'sān] a compound whose gamma isomer is gammexane or **lindane**.

hexachlorodibenzodioxin one of the suspected causes of **chicken** edema disease of broiler chickens.

hexachloroethane [hek"sə-klor"o-eth'ān] an anthelmintic used in the treatment of fascioliasis. Poisoning manifested by narcosis, staggering and falling. Fatal cases in cattle have abomasitis and hepatic necrosis.

hexachlorohexahydrophenanthrene one of the possible causes of toxic fat disease of broiler chickens.

hexachloronaphthalene [hek"sə klor-o-naf'thə-lēn] a high pressure lubricant capable of causing hyperkeratosis in cattle.

hexachloroparaxylene a chlorinated derivative of benzene used as a fasciolicide; effective only against adult flukes. Called also chloxyle.

hexachlorophene [hek"sə-klor'o-fēn] a compound used as a cestocide in poultry, a fasciolicide in cattle, and as a germicidal agent in soaps and dermatological preparations. Causes poisoning in sheep, cattle, cats and puppies at relatively small doses and the low safety margin has limited its use in other species. Signs of toxicity in cattle include nystagmus, tremor and opisthotonus; in sheep the signs are anorexia, diarrhea, recumbency and atrophy of seminiferous tubules. Dogs and cats may die suddenly after large doses, or show cerebellar signs with chronic exposure. Called also hexachlorophane.

VetBooks.ir

hexad [*hek'sad*] 1. a group or combination of six similar or related entities. 2. an element with a valence of six.

hexafluorenium bromide a neuromuscular blocking agent used in anesthesiology to prolong and potentiate the skeletal muscle relaxing action of suxamethonium during surgery.

Hexamastix a genus of flagellate protozoa in the family Monocercomonadidae.

H. caviae, H. robustus found in the cecum of the guinea pig.

H. muris found in the cecum of rats and other rodents.

hexametaphosphate a calcium sequestrant that forms soluble complexes that diffuse into the saliva and are swallowed. Used in some canine and feline dental calculus-control diets.

hexamethonium a ganglion-blocking quaternary ammonium compound.

hexamethylenetetramine methenamine.

hexamethylmelamine [*hek"sə-meth"əl-mel'ə-mēn*] see **altretamine**.

hexamine [*hek"sə-mēn*] methenamine.

Hexamita [*hek-sam'ĭ-tə*] a genus of flagellate protozoa in the family Hexamitidae.

H. columbae occurs in the small intestine of pigeons and may cause enteritis.

H. meleagridis a major parasite of turkeys in which it produces an enteritis and may cause serious losses with a mortality rate of up to 80%. Can cause disease in other species of birds.

H. muris occurs in the intestines of rodents and causes enteritis.

H. pitheci occurs in the large intestine of rhesus and other monkeys.

H. salmonis found in the intestine of salmonids and may cause acute enteritis or may become systemic and cause death. *Hexamita*-like organisms can be associated with hole-in-the-head disease in aquarium fish, especially **discus** and **oscar**.

H. truttae found in the intestines of fish; causes enteritis, peritonitis, cholecystitis in debilitated fish.

hexamitiasis [*heks-am"ĭ-ti'ə-sis*] an infectious catarrhal enteritis of turkey poults caused by the protozoan ***Hexamita*** *meleagridis*.

hexamitosis [*heks-a mi-to'sis*] see ***Hexamita*** *salmonis*.

***N*-hexane** [*hek'sān*] poisoning with the chemical can cause testicular atrophy.

2,5-hexanedione a neurotoxic hydrocarbon thought to be the principal toxin in *N*-hexane poisoning; causes Sertoli cell damage and testicular atrophy.

hexavalent [*hek"sə-va'lənt*] having a valence of six.

hexestrol a derivative of diethylstilbestrol and used as an estrogen.

Hexham scent ***Melilotus*** *indica*.

hexobarbital sodium [*hek"so-bahr'bĭ-təl*] an ultra-short-acting barbiturate little used in veterinary anesthesia.

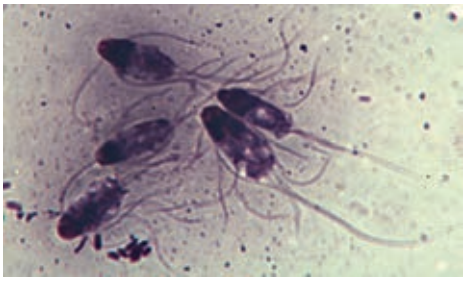
hexobarbitone [*hek"so-bahr'bĭ-tōn*] hexobarbital.

hexocyclium an anticholinergic having antisecretory and antispasmodic activities; used in the management of peptic ulcer and other gastrointestinal disorders accompanied by hyperacidity, hypermotility and spasm.

hexokinase [*hek"so-ki'nās*] an enzyme that catalyzes the transfer of a high-energy phosphate group of ATP to a hexose sugar, usually D-glucose, producing D-glucose-6-phosphate in the first step in the breakdown of glucose via the glycolysis pathway.

hexosamine [*hek-sōs'ə-mēn*] a nitrogenous sugar in which an amino group replaces a hydroxyl group.

hexosaminidase [*hek"sōs-ə-min'ĭ-dās*] an enzyme that catalyzes the cleavage of hexose from ganglioside GM_2. Occurs in two forms, A and B. Deficiency occurs in GM_2 **gangliosidosis** of dogs, cats and pigs.



H-38: *Hexamita* spp. From Mader DR, Reptile Medicine and Surgery, 2nd Edition. Saunders, 2005.

hexose [*hek'sōs*] a monosaccharide containing six carbon atoms in a molecule.

h. monophosphate shunt metabolic pathway starting from glucose-6-phosphate, and leading to the production of NADPH for reductive syntheses, ribose sugars for nucleic acid synthesis and for the diversification and rearrangement of sugars. Called also the pentose phosphate pathway or the phosphogluconate pathway.

hexosephosphate an ester of hexose sugar with phosphoric acid and an important intermediate in carbohydrate metabolism.

hexylcaine a local anesthetic, used as the hydrochloride salt.

hexylresorcinol [*hek"səl-rə-sor'sĭ-nol*] a superseded anthelmintic for intestinal roundworms and trematodes.

HF Hageman factor, or clotting factor XII.

Hf chemical symbol, *hafnium*.

Hg chemical symbol, *mercury* (L. *hydrargyrum*).

Hgb hemoglobin.

HGE hemorrhagic gastroenteritis.

hh hands high. See also **hand** (1).

HI hemagglutination inhibition.

5-HIAA 5-hydroxyindoleacetic acid.

hiatal [*hi-a'təl*] pertaining to or emanating from esophageal **hiatus**.

hiatus [*hi-a'təs*] pl. *hiatus* [L.] an aperture, gap, cleft or opening.

aortic h., h. aorticus the opening in the diaphragm between its crural tendons through which the aorta, azygous vein and thoracic duct pass.

esophageal h., h. esophageus the opening in the diaphragm between the two medial divisions of the right crus for the passage of the esophagus and the vagus nerves.

vena caval h. the opening in the diaphragm for the passage of the caudal vena cava; properly called foramen venae cavae.

hibernation [*hi"bər-na'shən*] the dormant state in which certain animals pass the winter, marked by narcosis and by sharp reduction in body temperature and metabolism.

artificial h. a state of reduced metabolism, muscle relaxation, and a twilight sleep resembling narcosis, produced by controlled inhibition of the sympathetic nervous system and causing attenuation of the homeostatic reactions of the organism. Induced hypothermia has had experimental use as an anesthetic medium for extensive surgical operations in humans.

hibernoma [*hi"bər-no'mə*] a rare benign subcutaneous tumor made up of large foamy polyhedral cells distended with multiple lipoid-filled vacuoles. A fetal fat cell lipoma.

Hibitane a proprietary name for chlorhexidine.

hiccup, hiccough [*hik'əp*] spasmodic involuntary contraction of the diaphragm that results in uncontrolled breathing in of air; called also singultus. The peculiar noise of hiccups is produced by a beginning inspiration that is suddenly checked by closure of the glottis. Commonly seen in puppies. An unusual occurrence in horses affected by electrolyte imbalances, especially hypocalcemia. The clinical effect is hiccup with each cardiac cycle, often present on only one side of the diaphragm. See also synchronous **diaphragmatic** flutter.

Hickey–Hare test hypertonic saline infusion test that induces plasma hyperosmolality. Used for distinguishing between different causes of polyuria and polydipsia.

Hickman navicular block a specially carved block of wood in which the horse is persuaded to rest its hoof while an X-ray is taken of the navicular bone.

hide raw or dressed skin of cattle, sheep or horse as removed at abattoir.

h. flayer handheld vibrating instrument for separating hide from carcass at the points where a knife would normally be used.

h. puller abattoir implement for pulling hides from carcasses at places where the hide pulls easily.

hidebound [*hīd'bound*] said of skin that is not easily lifted from the subcutaneous tissue. Occurs in emaciated animals because of the absence of fat and connective tissue rather than absence of fluid.

hidradenitis [*hi"drad-ə-ni'tis*] inflammation of the sweat glands.

hidradenocarcinoma [*hi-drad"ə-no-kahr"sĭ-no'mə*] carcinoma of the sweat gland.

hidradenoid [*hi-drad'ə-noid*] resembling a sweat gland; having components resembling elements of a sweat gland.

hidradenoma [*hi-drad"ə-no'mə*] benign tumor of the skin, the components of which resemble epithelial elements of sweat glands.

hidr(o)- word element. [Gr.] *sweat*.

hidrocystoma [*hi"dro-sis-to'mə*] a retention cyst of a sweat gland.
hidropoiesis [*hi"dro-poi-e'sis*] the formation of sweat.
hidrorrhea profuse perspiration.
hidroschesis [*hi-dros'kə-sis*] suppression of perspiration. Called also anhidrosis.
hidrosis [*hi-dro'sis*] sweating.
hidrotic [*hi-drot'ik, hī-drot'ik*] pertaining to, characterized by, or causing sweating.
hieralgia pain in the sacrum.
hierolisthesis displacement of the sacrum.
high at a level higher than normal or optimal. Most such entries will be found under the noun that is qualified, e.g. blood pressure.
h. endothelial venule (HEV) specialized areas of vascular endothelium found in lymphoid organs, which express a variety of cell-adhesion molecules and are involved in lymphocyte extravasation.
h. kVp technique radiographic technique using upwards of 100 kVp for diagnostic examination.
h. radiation area areas of a building or yards where there is some risk of radiation injury to attendants. It should be labeled as a warning.
h. tension transformer an essential component of a radiography unit; produces current of sufficiently high voltage that X-rays can be produced, i.e. 40 kV and up.
h. voltage circuits the high voltage required by an X-ray tube is generated by a step-up transformer. By appropriate electrical circuitry the voltage can be increased from 110–220 volts up to 40–150 kV.
high mountain disease altitude sickness.
high-rise syndrome a variety of injuries, including traumatic cleft palate, hyperextension injuries, vertebral compression fractures and traumatic pancreatitis seen in dogs and cats falling from heights, particularly high-rise apartment buildings.
high-tailing a horse at a fast gallop with the tail held up straight.
Highland named after the Scottish highlands.
H. cattle red-brown, brindle, dun or black, longhaired beef cattle with long spreading horns; called also West Highland.
H. collie see **Bearded collie**.
H. garron see **garron**.
H. pony gray, dun, black or brown heavyweight pony with dorsal stripe, stands 12.3–14.2 hands high.
Highlands J virus an alphavirus that causes encephalitis in horses in North and South America.
hiking gait patellar luxation when the patella catches but does not lock. Seen in Standard-bred horses.
hilar echo [*hi'lər*] an echogenic streak seen in the middle of the canine prostate gland, presumed to be periurethral fibrous tissue.
Hilaria grass genus in the family Poaceae; may be infested with ***Claviceps*** *cinerea* which causes poisoning. Includes *H. jamesii* (galleta grass), *H. mutica* (tobosa grass). See also **paspalum staggers**.
hill sickness [*hil*] see **cobalt** nutritional deficiency.
hillock [*hil'ok*] a small prominence or elevation.
hilum [*hi'ləm*] hilus.
hilus [*hi'ləs*] pl. *hili* [L.] a depression or pit on an organ, giving entrance and exit to vessels and nerves, e.g. the hilus of the kidney, lung, ovary, spleen.
Himalayan 1. longhaired cats with the short stature of the Persian and a temperature-dependent pigmentation pattern like the Siamese. Considered a separate breed by some registration bodies and a variety of Persians by others. In Europe, called Colorpoint longhair. 2. a breed of rabbits with pink eyes and a white body with colored points of black, chocolate, blue or lilac.

H-40: Himalayan cat.

H-39: Highland beef cattle.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

hind 1. emanating from or pertaining to **hindlimb**. 2. adult female deer, especially red and other large species.
blue h. (2) a hind which has not borne young.
hindbrain [*hīnd'brān*] the rhombencephalon, the portion of the brain developed from the most caudal of the three primary brain vesicles of the early embryo, comprising the metencephalon (cerebellum and pons) and myelencephalon (medulla).
hindgut [*hīnd'gət*] the caudal portion of the embryonic gut which develops into the colon and the rectum.
hindlimb [*hīnd'lim*] the pelvic limb; back leg.
hindquarter [*hīnd'kwor-tər*] the rump and legs, i.e. the loin, pelvis, pelvic limb and associated musculature.
asymmetric h. see **asymmetric hind quarter syndrome**.
hinge see hinge **joint**.
craniofacial h. flexible connection between the skull bones in many birds and reptiles which permit the upper jaw to be raised at the same time as the mandible is depressed; well developed between the nasal and frontal bones in psittacine birds.
hinge region a proline-rich portion of an immunoglobulin heavy chain between the Fc and Fab regions that confers mobility on the two Fab arms of the antibody molecule thereby allowing them to combine better with the two copies of the epitope.
hinny progeny of a stallion and a jenny (female donkey), being more horse-like in appearance than a mule.
horse h. a male hinny.
mare h. a female hinny, called also a molly.
hip [*hip*] 1. the region of the body around the articulation of the femur and the pelvis. 2. loosely, the hip joint.
h. bone os coxae, which comprises the ilium, ischium and pubis. See also Table 10.
h. dislocation manifested by inability to bear full weight on the limb, excessive mobility of the limb, crepitus at the joint, and in some cases shortening of the limb.
h. dysplasia (HD) is manifested (1) radiographically by a shallow acetabulum, a small, misshapen femoral head and sometimes osteophyes, (2) clinically, by a lax joint, weak rump muscles with or without lameness, and ultimately (3) by degenerative joint disease (osteoarthritis). In dogs inheritance has a degree of influence on the occurrence of the disease.
h. joint the ball-and-socket joint formed between the head of the femur and the acetabulum of the pelvis.
h. laxity subluxation of the coxofemoral articulation, a feature of hip dysplasia (above).
point of the h. the most lateral point of the hip; caused by the coxal tuberosity.
h. sling a metal clamplike device used to lift a downer cow. Comprises two loops which fit over both iliac tuberosities (coxal tubers) and which are clamped together so that the cow is closely held. The sling is lifted with a block and tackle or by a frontend loader or hoist on a tractor.
total h. replacement replacement of the femoral head and acetabulum with prostheses that are cemented into the bone; called also total hip arthroplasty.
hiplock the point in a dystocia at which the front half of the calf's body has been delivered but further progress is prevented by

VetBooks.ir

H-41: Hippomanes from two dfferent mares. The color difference is not significant.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

H-42: Hirsutism in a horse with pituitary adenoma.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

VetBooks.ir

the hips or stifle of the fetus at the brim of the pelvis; the fetus is jammed at the hips.

Hippeastrum see ***Amaryllis***.

hippo-harness stocks made from ropes for restraint of horses.

Hippobosca [*hip"o-bos'kə*] a genus of flies that cause fly worry for horses and cattle. Members of the family Hippoboscidae.

H. camelina attacks camels and horses.

H. capensis attacks dogs.

H. equina, H. maculata, H. rufipes attack cattle and horses usually; transmit *Trypanosoma theileri* to cattle and *Haemoproteus* spp. to birds. Called also horse louse fly.

Hippocampus [*hip"o-kam'pəs*] the genus of **seahorses**, in the family Syngnathidae.

hippocampus [*hip"o-kam'pəs*] pl. *hippocampi* [L.] in evolutionary terms, an old part of the cerebral cortex that forms part of the floor of the lateral ventricle; identified by its white surface and convoluted appearance on section. It is examined for Negri bodies in suspected cases of rabies.

h. major hippocampus.

h. minor the lower of two medial elevations in the lateral cerebral ventricle. Called also calcarine spur.

hippoid horselike.

hippolasso a set of gear for a kicking horse. A breastplate is connected directly with a breeching, both being supported by straps over the back. When the horse kicks, the breeching pulls the breastplate back hard onto the chest.

hippomanes [*hĭ-pom'ə-ne*] small (up to 1.5 inch thick and 8 inches diameter), circular, flat, smooth proteinaceous bodies found in the allantoic fluids especially in mares, cows and camelids. Called foal's bread or foal's tongue. On cut section they are semisolid, homogeneous, amber to dark brown-colored.

hippophagy eating horsemeat.

hippopotamus (*Hippopotamus amphibius*) a very large, semi-aquatic mammal in the family Hippopotamidae, native to East Africa. It has a pig-like body, little tail, short legs, small ears and a large mouth. They are aggressive and very dangerous. Called also hippo, river horse.

pygmy h. *Hexaprotodon liberiensis* is native to West Africa; similar in appearance to the hippopotamus, but smaller. They are an endangered species.

hippulin an old term for a natural estrogen found in mare's urine.

hippurate hydrolysis [*hip'u-rāt*] a biochemical reaction used to identify bacteria. Particularly used for differentiation of streptococci causing bovine mastitis.

hippuria an excess of hippuric acid in urine.

hippuric acid [*hĭ-pūr'ik*] a compound formed by conjugation of benzoic acid and glycine; it occurs in the urine of herbivorous animals, rarely in human urine.

h. acid test has been tested as a means of assessing hepatic efficiency but is not favored.

hippus [*hip'əs*] abnormal exaggeration of the rhythmic constriction and dilation of the pupil, independent of changes in illumination or in fixation of the eyes.

hiranolike body elongated eosinophilic cytoplasmic inclusion bodies in neurons; no apparent significance.

Hirschsprung's disease [*hirsh'sproong*] see aganglionic **megacolon**.

hirsute [*hur'soot*] shaggy; hairy.

hirsutism, hirsuties [*hur'soot-iz-əm, hir-soo'she-ēz*] abnormal hairiness. Seen in aged horses with functional pituitary neoplasms and hyperadrenocorticism.

hirudin [*hĭ-roo'din*] the active principle of the buccal secretion of leeches; it prevents clotting of the blood.

hirudiniasis [*hir"oo-dĭ-ni'ə-sis*] infestation by leeches or attachment of medicinal leeches (*Hirudo medicinalis*) to the skin; used on tissues with impaired venous return.

Hirudo [*hĭ-roo'do*] a genus of leeches in the class Hirudinea.

H. medicinalis up to 5 inches long and 1 inch diameter, this greenish leech may attach to animals. Used medicinally.

His histidine.

His–Purkinje system [*his' pər-kin'je*] specialized conduction tissue in the AV node.

His's bundle [*his*] see **bundle** of His.

Hissar sheep prolific, brown, Russian fat-rumped, meat and carpetwool sheep.

histaminase [*his-tam'ĭ-nās*] an enzyme that inactivates histamine.

histamine [*his'tə-mēn*] an amine, $C_5H_9N_3$, produced by decarboxylation of histidine, found in all body tissues. It induces capillary dilatation, which increases capillary permeability and lowers blood pressure; contraction of most smooth muscle tissue; increased gastric acid secretion; and acceleration of the heart rate. It is also a mediator of immediate hypersensitivity. There are two types of cellular receptors of histamine: H_1-receptors, which mediate contraction of smooth muscle and capillary dilatation; and H_2-receptors, which mediate acceleration of heart rate and promotion of gastric acid secretion. Both H_1- and H_2-receptors mediate the contraction of vascular smooth muscle. Histamine may also be a neurotransmitter in the central nervous system. It is used as a diagnostic aid in testing gastric secretion and in the diagnosis of pheochromocytoma. There are two types of histamine antagonists that act at either the H_1- or the H_2-receptors. Drugs such as diphenhydramine and chlorpheniramine are referred to as **antihistamines** or H_1-blockers; they block the effects of histamine on vascular, bronchial and gastrointestinal smooth muscle and on capillary permeability. They are used for relief of allergic and gastrointestinal disorders. Drugs such as cimetidine (Tagamet) are referred to as H_2-blockers; they block the stimulation of gastric acid secretion and are used to treat gastrointestinal ulceration.

h.-containing foods some food sources, particularly some species of fish, have high concentrations of histamine; increased concentrations can also occur from improper storage which permits conversion of histidine to histamine, and an excessive carbohydrate content may promote bacterial growth, fermentation and production of histamine.

h.-releasing foods some foods can cause release of histamine from mast cells; these include egg white, shellfish and fish.

h. shock manipulation and particularly surgical trauma to large mast cell tumors may lead to decreased blood pressure and persistant bleeding caused by the release of histamine and vasoactive amines.

histaminemia [*his-tam"ĭ-ne'me-ə*] histamine in the blood.

histaminergic [*his"tə-min-ur'jik*] pertaining to the effects of histamine at histamine receptors of target tissues.

histidase [*his'tĭ-dās*] an enzyme of the liver that converts histidine to urocanic acid.

histidine [*his'tĭ-dēn*] His; a naturally occurring amino acid, essential for optimal growth of the young; its decarboxylation results in formation of histamine.

H-43: Histiocytoma. From Kummel BA, Color Atlas of Small Animal Dermatology. Mosby, 1989.

Histiocephalus spiruroid worms found in the gizzard of free-living birds; rarely pathogenic.

histiocyte [*his'te-o-sit"*] a large phagocytic interstitial cell of the reticuloendothelial system; a macrophage.

histiocytic [*his"te-o-sit'ik*] pertaining to histiocytes.

equine h. disease see equine generalized **granulomatous** disease.

h. leukemia see malignant **histiocytosis**.

h. lymphocyte prolymphocyte.

h. lymphoma is not a tumor of the macrophage system but has large lymphoid cells with cytoplasmic vacuoles and does resemble a macrophage tumor.

h. ulcerative colitis see histiocytic ulcerative **colitis**.

histiocytoma [*his"te-o-si-to'mə*] a tumor containing histiocytes.

atypical h. Merkel cell tumor.

benign cutaneous h. dermal histiocytic nodule, relatively common in young dogs. Despite their malignant histological features, they usually undergo spontaneous immune-mediated regression.

transmissible h. canine transmissible **venereal** tumor.

histiocytosis [*his"te-o-si-to'sis*] a condition marked by the abnormal appearance of histiocytes in the blood.

cutaneous h. a benign proliferative disease in dogs, particularly Collies and Shetland sheepdogs. there are multiple plaques or nodules in the skin or subcutaneous tissue. The cause is unknown.

lipid h. Niemann–Pick disease.

malignant h. a systemic, progressive invasive proliferation of neoplastic histiocytes. Recognized as a familial disorder in Bernese mountain dogs with clinical signs of respiratory disease, involvement of the central nervous system, and anemia.

systemic h. a proliferative disorder of histiocytes with infiltrates in the skin and lymph nodes. Occurs in young Bernese mountain dogs.

histiogenic [*his"te-o-jen'ik*] histogenous.

histioid [*his'te-oid*] histoid.

hist(io)(o)- word element. [Gr.] *tissue*.

histoblast [*his'to-blast*] a tissue-forming cell.

histochemistry [*his"to-kem'is-tre*] that branch of histology that deals with the identification of chemical components in cells and tissues.

histoclinical [*his"to-klin'ĭ-kəl*] combining histological and clinical evaluation.

histocompatibility [*his"to-kəm-pat"ĭ-bil'ĭ-te*] the quality of a cellular or tissue graft enabling it to be accepted and functional when transplanted to another animal.

h. antigen genetically determined antigens present on the cell membranes of nucleated cells of most tissues, which incite rejection when tissues are grafted to a different individual and thus determine the compatibility of tissues in transplantation. *Major* histocompatibility antigens exert the strongest effect on transplanted tissues, while the many *minor* histocompatibility antigens, such as blood group substances and the secretory alloantigen system, have a weaker, though often highly significant role in graft rejection.

h. genes genes that code for the histocompatibility antigens.

major h. complex (MHC) a cluster of loci on one autosomal chromosome containing the genes that code for the major histocompatibility antigens. The best studied MHC is the H_2 complex of the mouse followed by the HLA (*h*uman *l*eukocyte *a*ntigen) of humans. In other species it is further specified: the *d*og *l*eukocyte *a*ntigen (DLA), the *b*ovine *l*eukocyte *a*ntigen (BOLA), the *s*wine *l*eukocyte *a*ntigen (SLA), etc. MHC class I is a polymorphic set of transmembrane heterodimeric proteins consisting of an α chain, encoded within the MHC gene complex, associated noncovalently with β_2-microglobulin expressed on nearly all nucleated cells and which form a trimeric complex with typically 9-mer peptides that are then transported and presented on the surface of the cells, serving as targets for cytotoxic T lymphocytes (CTL or Tc), CD8 cells. A major defense mechanism against viral infections. MHC class II is a polymorphic set of transmembrane heterodimeric proteins that consist of noncovalently associated α and β proteins, both encoded within the MHC gene complex. They form a trimeric complex with antigenic peptides, which may be up to 35-mers, in antigen presenting cells which are then transported to the surface of the cell for presentation to T helper lymphocytes. The basis for all T lymphocyte responses.

histodialysis [*his"to-di-al'ə-sis*] disintegration or breaking down of tissue.

histodifferentiation [*his"to-dif"ər-en"she-a'shən*] the acquisition of tissue characteristics by cell groups during development.

histogenesis [*his"to-jen'ə-sis*] differentiation of cells into the specialized tissues forming the various organs and parts of the body.

histogram [*his'to-gram*] a graph in which values found in a statistical study are represented by lines or symbols placed horizontally or vertically, to indicate frequency distribution.

histoid [*his'toid*] 1. developed from one kind of tissue. 2. resembling one of the tissues of the body.

histoincompatibility [*his"to-in"kəm-pat"ĭ-bil'ĭ-te*] the quality of a cellular or tissue graft preventing its acceptance or functioning when transplanted to another animal; said of the relationship between the genotypes (histocompatibility genes) of donor and recipient in which a graft generally will be rejected because of allogeneic differences in the major histocompatibility antigens.

histokinesis [*his"to-kĭ-ne'sis*] movement in the tissues of the body.

histological [*his"to-loj'ĭ-kəl*] having to do with **histology**.

h. technician a person trained in tissue processing technique (fixation, dehydration, embedding, sectioning, routine and special staining, and mounting of tissue specimens), and also in histology and histochemistry.

h. section routinely stained with hematoxylin and eosin; see **sections**.

histologist [*his-tol'ə-jist*] one who specializes in histology.

histology [*his-tol'ə-je*] microscopic anatomy; utilizes histological sections.

histolysis [*his-tol'ə-sis*] breaking down of tissues.

histoma any tissue tumor.

histomonad a member of the genus *Histomonas*.

Histomonas [*his"to-mo'nəs*] a genus of ameboid, single flagellate protozoa in the family Monocercomonadidae.

H. meleagridis found in many species of birds but of paramount importance in turkeys as a cause of **blackhead**[2] or **histomoniasis**. Transmitted by the nematode *Heterakis gallinarum*. Chickens are resistant carriers.

H. wenrichi see ***Parahistomonas wenrichi***.

histomoniasis [*his"to-mo-ni'ə-sis*] a very widespread disease of gallinaceous birds, especially turkeys, caused by the protozoan parasite *Histomonas meleagridis*. It is characterized by ulceration of the cecal mucosa and necrotic foci in the liver.

histone [*his'tōn*] a simple protein, soluble in water and insoluble in dilute ammonia, found combined as salts with acidic substances, such as in DNA where they have a structural and functional role.

h. acetylase, h. deacylase enzymes responsible for the reversible acylation of four lysine residues near the *N*-terminus of histone H_4.

histonuria [*his-to-nu're-ə*] histone in the urine.

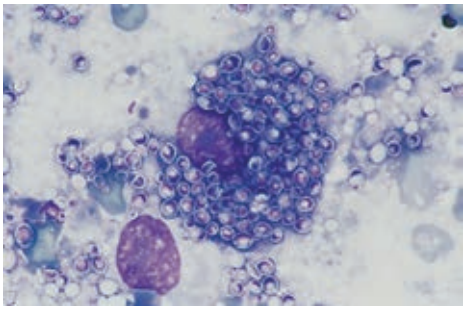
histopathology [*his"to-pə-thol'ə-je*] the study of diseased tissues by microscopic examination of histological sections.

Histophilus a genus of bacteria in the family *Pasteurellaceae*. There is one species, *H. somni*, which includes organisms previously classified as *H. ovis*, *Haemophilus agni* and *Haemophilus somnus*. It has been isolated from cattle, sheep and goats with a number of different pyogenic conditions, including septicemia, polyarthritis, thrombotic meningoencephalitis, general pyemia, pneumonia, metritis, mastitis, abortion, neonatal mortality and epididymitis.

histophysiology [*his"to-fiz"e-ol'ə-je*] the correlation of function with the microscopic structures of cells and tissues.

Histoplasma [*his"to-plaz'mə*] a genus of fungi belonging to the phylum *Ascomycota*.

VetBooks.ir



H-44: Tissue aspirate showing a macrophage filled with numerous *Histoplasma capsulatum* organisms as well as many found loose in the background.
From Raskin RE, Meyer D, Canine and Feline Cytology, 2nd Edition. Saunders 2010.

VetBooks.ir

H. capsulatum a species of pathogenic fungi that cause **histoplasmosis**. The fungi appear in tissues as small, single oval bodies.
H. capsulatum* var. *farciminosum phylogenically diverse fungi within the species *H. capsulatum*. Previously called *H. farciminosum*. Causes **epizootic** lymphangitis of horses.
histoplasmin [*his"to-plaz'min*] a preparation of growth products of *Histoplasma capsulatum*, injected intracutaneously as a test for histoplasmosis.
histoplasmosis [*his"to-plaz-mo'sis*] a disease caused by inhalation of *Histoplasma capsulatum* carried on dust with a primary infection in the lung. Spread to other tissues results in the development of granulomatous enteritis, colitis, osteomyelitis and endophthalmitis. The syndrome includes heptomegaly, lymphadenopathy, anasarca and emaciation. It is particularly common in certain geographical regions, e.g. the Mississippi river system of the USA.
historical controls use of historical information as a comparison group in a study; that is a before and after comparison.
historrhexis [*his"to-rek'sis*] the breaking up of tissue.
history in a clinical examination, the collection of facts about the clinical signs of the patient, its environment including feeding, vaccination status, exposure to infection, recorded and arranged in chronological order and in relation to each other. See also **AMPLE**.
histotechnologist a laboratory technologist that specializes in the preparation of tissue specimens.
histothrombin [*his"to-throm'bin*] thrombin derived from connective tissue.
histotome [*his'to-tōm*] a cutting instrument used in microtomy; microtome.
histotomy [*his-tot'ə-me*] dissection of tissues; microtomy.
histotopy the relationship of the layers, tissues or coats of an organ to each other.
histotoxic [*his'to-tok"sik*] poisonous to tissue.
h. hypoxia lower than normal oxygen content of tissue resulting from toxic effects on oxygen-binding enzyme systems.
histotrophe the sum total of nutritive material derived from maternal tissue other than the blood, utilized by the early embryo. A milky fluid containing the secretions and debris of the endometrial glands plus extravasated maternal blood. Called also uterine milk.
histotrophic [*his"to-tro'fik*] 1. encouraging formation of tissue. 2. pertaining to histotrophe.
histotropic [*his"to-tro'pik*] having affinity for tissue cells.
hitch [*hich*] to fasten by a knot, usually used to describe tying a horse to a post.
hitch up to harness a horse to a vehicle or implement.
Hitching gag a gag shaped like an F. The horizontal bars can be moved apart or together by a screwthread in the column of the F; they consist of hollowed-out plates, into which the incisor teeth fit.
hitching gait see **hiking gait**.
Hitching hobble a hobble used for casting horses. It consists of leather straps with quick-release catches that fit around the pastern. The casting rope passes through a ring on each of the four hobbles and is fastened to the last one. Pulling the rope brings all four feet together and the horse falls.
Hitra disease hemorrhagic disease of Atlantic salmon caused by *Vibrio salmonicida*.
HIV-like viruses lentiviruses that cause disease resembling that caused by human immunodeficiency virus. Included are **feline** immunodeficiency virus, **bovine** immunodeficiency virus, **equine** infectious anemia virus and **caprine** arthritis-encephalitis virus.
hive [*hīv*] a well-defined, elevated, edematous skin lesion associated with an acute hypersensitivity reaction. Called also wheal. See also **urticaria**.
HJ bodies Howell–Jolly bodies.
Hjärre's disease see **coligranuloma**.
HLA (*h*uman *l*eukocyte *a*ntigen) the human major histocompatibility complex of antigens.
HMM heavy meromyosin.
HMWK high-molecular-weight **kininogen**.
hnRNA heterogeneous nuclear RNA (**ribonucleic acid**).
HO hypertrophic osteopathy.
Ho chemical symbol, *holmium*.
Hoareosporidium* syn. *Sarcocystis a genus of coccidia in the family Eimeriidae.
H. pellerdyi found in the tissues of dogs; causes mild inflammation.
hoarseness a rough quality of the voice.
hoary alyssum see ***Berteroa incana***.
hob a male ferret.
hobble leather straps fastened around the pasterns of horses, mules and donkeys. Placed on all four legs and pulled together by a rope, it provides an effective means of casting the horse. Putting them on the two fore pasterns and fastening them by a short chain restricts the horse's movements so that it cannot run away but can still graze. Called also hopple.
breeding h's leather strap hobbles to tie the front feet together; used chiefly in mares to prevent escape from stallion.
crossed h. a rope is used to tie the forearm of the upper limb of a cast horse to the hindlimb above the hock. The hobbles on the pasterns can then be released and surgical work performed on the hoof.
tarsal h's tape applied around the hindlimbs, just above the tarsus, is used in dogs to provide support in walking after pelvic fractures.
hobby farm a property maintained without the expectation of being a primary source of income. Can be a primary residence or used for weekends or vacation.
h. f. malnutrition underfeeding of livestock because of owner's ignorance of animal's needs which a small hobby farm often cannot provide.
hock the ankle joint of quadrupeds; the tarsus.
broken h. fracture of the central tarsal bone in racing Greyhounds.
capped h. see hock **hygroma**.
cow h. one that turns inward from an imaginary vertical line drawn from the tuber ischii to the hindfeet.
dropped h. walking with the hocks close to the ground. Seen in dogs and cats with muscle weakness, injury to the gastrocnemius tendon, and poor conformation.
h. flexion posture in a dystocia caused by a breech presentation with the flexed hocks and pelvis being the first structures presented into the cervix, and the distal extremities of the hindlimbs retained.
h. flexion test see **spavin** test.
point of h. the summit of the calcaneus.
sickle h. a more acute angulation of the hock joint than is normal for the species or breed. Instead of the metatarsals being approximately vertical in a standing position, there is a greater slope.
sore h. see ulcerative **pododermatitis**.
straight h. a greater angle between the tibia and metatarsal bones at the hock joint; the opposite of sickle hock. A feature of some dog breeds, e.g. Chow Chows.
swollen h. syndrome of Shar pei dogs see familial Shar pei **fever**.
turkey h. enlargement hock enlargement with bowed legs appears in young turkey poults on diets low in vitamin E.
HOD hypertrophic osteodystrophy.
Hodgkin's disease [*hoj'kin*] a primary lymph node neoplastic disease of humans. Rarely in animals, mainly dogs, do lymphoid neoplasms satisfy the criteria, e.g. Reed–Sternberg cells, for diagnosis as Hodgkin's lymphoma.
hodoneuromere [*ho"do-noor'o-mēr*] a segment of the embryonic trunk with its pair of nerves and their branches.
Hoeppli's reaction see ***Splendore–Hoeppli material***.

H-45: Pig restrained with a hog holder.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

Hoffa procedure [*haw'fə*] a technique for shortening of tendons in which a suture is placed across the tendon then stitched in and out lengthwise for a distance, then pulled up and tied. It results in a gathering and shortening of that portion of the tendon.
Hoflund syndrome see **vagus** indigestion.
hog[1] see also **swine**, **pig**.
h. cholera see **classical swine fever**.
giant forest h. (*Hylochoerus meinertzhageni*) a large, wild African pig in the family Suidae with a hairy body and small tusks. It is a vector for African swine fever.
Guinea h. see miniature **pig**.
h. holder a flexible wire cable is welded to one end of a strong steel tube, looped on itself and passed up the tube. At its emergence a crossbar handle is fixed. The loop is passed over the hog's upper snout and the cable is pulled tight. The person pulling on the holder pulls one way, the hog pulls the other and complete restraint is achieved, that is provided the hog does not decide to rush forwards.
pygmy h. (*Porcula salvania*; *Sus salvanius*) a small (10–12 inches tall; average 18 lb) wild hog native to India. They are a critically endangered species.
red river h. (*Potamochoerus porcus* and many subspecies) a wild African pig. Called also bush pig.
h.-tied all four feet are tied together so that the animal is unable to rise.
wart h. see **wart hog**.
hog[2] to remove all of the hair in a mane of a horse.
hogg castrated male sheep usually 10–14 months old. Also used to describe an uncastrated male pig.
hogget 1. hogg. 2. butcher's term for sheep between 1 and 2 years of age.
hogging clipping the mane.
Hogness box [*hog'nəs*] see Pribnow **box**.
hogweed see ***Zaleya galericulata***.
giant h. see ***Heracleum mantegazzianum***.
hogwort ***Croton*** *capitatus*, *C. texensis*.
Hohmann retractor a handheld surgical instrument designed for retracting tissues to expose bones during orthopedic surgery.
Hohorstiella lata a pigeon louse.
holandric [*hol-an'drik*] inherited exclusively through the male descent; transmitted through genes located on the Y chromosome in mammals.
Holarctic a distribution including North America, Europe and northern Asia.
Holcus lanatus a grass in the plant family Poaceaeae. A common pasture grass of mediocre value which may contain cyanogenic glycosides. Selectively poor absorption of iodine and may predispose to goiter. Called also Yorkshire fog.
holding area at a milking shed, an area to hold cows prior to entry into the milking parlor. Sometimes called a holding pen. May also include a wash pen or area that jets water up from the floor onto the udder and underline of the cows for cleaning prior to milking.
hole-in-the-head disease a disease of captive fish in which erosions appear on the head and lateral line; these enlarge and become infected, leading to death. Etiology is uncertain, but *Hexamita* spp./*Micronucleus* spp. and *Spironucleus* are reported to be associated with the disease. Called also head and lateral line erosion.
holistic medicine [*ho-lis'tik*] a comprehensive approach to health care and prevention of disease employing conventional and many of the alternative medicine modalities, including **acupuncture**, **chiropractic**, **herbal medicine**, **homeopathy**, **massage**, nutraceuticals and **physical** therapist which integrates the body as a whole, including mind and spirit, rather than separate systems.
holly see ***Ilex***.
California h. *Heteromeles salicifolia*.
holmium (Ho) [*hōl'me-əm*] a chemical element, atomic number 67, atomic weight 164.930. See Table 4.
hol(o)- word element. [Gr.] *entire, whole*.
holoacardius [*hōl"o-ə-kahr'de-əs*] an unequal twin fetus in which the heart is entirely absent.
holoblastic [*hōl"o-blas'tik*] undergoing cleavage in which the entire ovum participates; completely dividing.
Holocalyx glaziovii South American tree in the legume family Fabaceae; contains an unidentified toxin in the regrowth from the stumps of this tree causing hepatic insufficiency and photosensitization. Called also alecrim.
holocrine [*ho'lo-krin*] wholly secretory; that type of glandular secretion in which the entire cell forms the secreted matter of the gland, as in the sebaceous glands; cf. apocrine and merocrine.
holodiastolic [*hōl"o-di"ə-stol'ik*] pertaining to the entire diastole.
holoendemic [*hōl"o-en-dem'ik*] affecting practically all the animals of a particular region.
holoenzyme [*hōl"o-en'zīm*] a complete enzyme including the protein and co-factor components that has full catalytic activity.
hologynic inherited exclusively through the female descent; transmitted through genes located on attached X chromosomes in mammals.
Holomenopon bird lice of the superfamily Amblycera.
H. leucoxanthum parasitizes ducks causing soiling and loss of waterproofing of feathers. Ducks may become chilled and die of pneumonia.
holometabolous characteristic of insects in the family Diptera, consisting of egg, up to three larval stages, pupa and an adult stage which differs markedly from the earlier stages.
holomyarian arrangement of the somatic musculature in a group of trematodes, including *Trichuris* spp., which have their body cavity completely surrounded by longitudinal muscle cells.
holophytic [*hōl"o-fit'ik*] one of the three forms of nutrition in Mastigophora (protozoa). It comprises the synthesis of simple carbohydrates from carbon dioxide and water by chlorophyll contained in chloroplasts.
holoprosencephaly [*hōl"o-pros"ən-sef'ə-le*] developmental failure of cleavage of the prosencephalon with a deficit in midline facial development and with cyclopia in the severe form.
holoprotein a complete protein with its prosthetic group.
holorachischisis [*hōl"o-rə-kis'kĭ-sis*] fissure of the entire vertebral column with prolapse of the spinal cord.
holosystolic [*hōl"o-sis-tol'ik*] pertaining to the entire systole.
h. murmur a heart murmur occurring throughout systole. Called also pansystolic.
holotopy [*ho-lot'ə-pe*] relationship between an organ and the body as a whole.
holozoic [*hōl"o-zo'ik*] one of the forms of nutrition of the Mastigophoran protozoa—comprising the capture and assimilation of organic materials in the environment.
Holstein German heavyweight riding and dressage horse. Initially a carriage horse. Bay, black or brown, 15.3–16.2 hands high. Called also Holsteiner, Warmblut, Warmblood.
Holstein–Friesian a breed of black-and-white dairy cattle bred in Canada and the USA from Friesian cattle from the Netherlands. A red-and-white variety is available. Called also Holstein, Friesian.
Holstein udder plague mastitis caused by **Arcanobacterium** *pyogenes*.
holsteiner see **Holstein**.
Holter monitoring [*hōl'tər*] use of a portable electrocardiograph recording device (Holter harness); attached to the patient to obtain a 24-hour record of cardiac rhythm.
homaluria production and excretion of urine at a normal, even rate.
Homarus a genus of lobsters in the family Nephropsidae, which includes the common *H. americanus* (American lobster) and *H. gammarus* (European lobster; previously *H. vulgaris*).
homatropine [*ho-mat'ro-pēn*] an anticholinergic alkaloid obtained by the condensation of atropine and mandelic acid having

VetBooks.ir

H-46: Holter monitor on a dog.
From Petrie J-P: Practical application of Holter monitoring in dogs and cats. Clinical Techniques in Small Animal Practice 20:173-181, 2005. Elsevier.

VetBooks.ir

anticholinergic effects similar to but weaker than those of atropine; used to produce parasympathetic blockade and as a mydriatic. The hydrobromide salt is used topically in ophthalmic drops and the methylbromide derivative is used orally for intestinal spasms.

home(o)- word element. [Gr.] *similar, same, unchanging*.

homeokinesis [*ho"me-o ki-ne'sis*] achievement of equilibrium in body functions by dynamic processes.

homeomorphous [*ho"me-o-mor'fəs*] of like form and structure.

homeopathy, homoeopathy [*ho"me-op'ə-the*] a system of therapeutics founded by Samuel Hahnemann (1755–1843) in which diseases are treated by drugs that are capable of producing in healthy animals signs like those of the disease to be treated, the drug being administered in minute doses. Called also homoeopathic medicine. See also **law** of Similars.

homeoplasia [*ho"me-o-pla'zhə*] formation of new tissue like that normal to the part.

homeosineatry the intracutaneous or subcutaneous injection of a homeopathic remedy into an acupuncture point in the treatment of disease.

homeostasis [*ho"me-o-sta'sis*] a tendency of biological systems to maintain stability while continually adjusting to conditions that are optimal for survival. Homeostatic mechanisms are necessary for the body to regain its balance when disease or injury occurs and to maintain that balance if it is to remain healthy.

homeostatic [*ho"me-o-stat'ik*] pertaining to homeostasis.

homeotherapy [*ho"me-o-ther'ə-pe*] treatment with a substance similar to the causative agent of the disease. See **homeopathy**.

homeothermal [*ho"me-o-thur'məl*] maintenance of a constant body temperature despite variation in environmental temperature; a warm-blooded animal.

homergic [*hōm-ur'jik*] having the same effect; said of two drugs each of which produces the same overt effect.

Homeria see ***Moraea***.

homidium bromide [*ho-mid'e-əm*] a trypanocide; used as the bromide or chloride salt. May cause transient hepatic insufficiency. Called also ethidium bromide.

homing [*ho'ming*] 1. the differential migration of lymphocyte subsets across venules and into specific lymphoid tissues, resulting in preferential distribution to tissues that are near the location of the original immunogen. Called also trafficking. 2. ability of several species to return to the same area, often a breeding area, from a distance. Examples are salmon and homing pigeons.

hominy a by-product of the milling of corn; contains bran, germ and fragments of starchy material.

Homo [*ho'mo*] the genus of primates containing the single living species *H. sapiens* (humans).

homo- 1. word element. [Gr.] *same, similar*. 2. chemical prefix indicating addition of one CH_2 group to the main compound.

homobiotics a factor affecting growth in biological systems which is normally present in those systems.

homocysteine [*ho"mo-sis'te-ēn*] a compound similar to the sulfur-containing amino acid cysteine but with an additional methylene group. Key intermediate in the pathway of conversion of methionine to propionyl CoA. Increased blood concentrations are a risk factor for coronary heart disease.

homocystine [*ho"mo-sis'tēn*] a compound formed from 2 molecules of homocysteine on oxidation. Excreted in the urine in homocystinuria.

homocytotropic [*ho"mo-si"to-tro'pik*] having an affinity for cells of animals of the same species.

homodimer [*ho"mo-di'mər*] a protein composed of two identical polypeptide chains.

homodont [*ho'mo-dont*] having all teeth of the same form, e.g. dolphin.

homodynamical structures structures found in a craniocaudal succession of similar segments of the body, e.g. the ribs, the vertebrae.

homogametic [*ho"mo-gə-met'ik*] the sex which produces only one kind of sex chromosome, i.e. females in all mammals.

homogenate [*ho-moj'ə-nāt*] material obtained by homogenization.

homogeneity [*ho"mo-jə-ne'i-te*] the state of being homogeneous.

homogeneous [*ho"mo-je'ne-əs*] of uniform quality, composition or structure.

homogenesis [*ho"mo-jen'ə-sis*] reproduction by the same process in each generation.

homogenic [*ho"mo-jə-net'ik*] homozygous.

homogenicity [*ho"mo-jə-nis'i-te*] homogeneity.

homogenize [*ho-moj'ə-nīz*] to convert into material that is of uniform quality or consistency throughout; to render homogeneous.

homograft [*ho'mo-graft*] allograft.

homoi(o)- see *homo(o)-*

homolateral [*ho"mo-lat'ər-əl*] ipsilateral; pertaining to or situated on the same side.

Homologaster a genus of paramphistomes found in the large intestines of ruminants in Asia.

homologous [*ho-mol'ə-gəs*] 1. corresponding in structure, position, origin, etc. 2. derived from an animal of the same species but of different genotype; allogeneic.

homologue [*ho'mo-log*] 1. any homologous organ or part; that is, structures with a common evolutionary origin but not necessarily with a similar function. 2. in chemistry, one of a series of compounds distinguished by addition of a CH_2 group in successive members.

homology [*ho-mol'ə-je*] the state of being homologous. Refers also to homology of base sequences in different DNA molecules and the similarity between antigen and specific antibody.

serial h. craniocaudal succession of similar or homologous segments. See also **metamere**.

homolysin [*ho-mol'ə-sin*] a lysin produced by injection into the body of an antigen derived from an animal of the same species.

homonomous [*ho-mon'ə-məs*] subject to the same laws; in biology, subject to the same laws of growth or developed along the same line.

homonymous [*ho-mon'ə-məs*] 1. having the same or corresponding sound or name. 2. standing in the same relation.

homophilic [*ho"mo-fil'ik*] reacting only with specific antigen.

homoplastic [*ho"mo-plas'tik*] 1. pertaining to homoplasty. 2. denoting organs or parts, as the wings of birds and insects, that resemble one another in structure and function but not in origin or development.

homoplasty [*ho'mo-plas"te*] 1. allogeneic transplantation. 2. similarity between organs or their parts not due to common ancestry.

homopolymeric tailing [*ho'mo pol"e-mer'ik*] see **tailing** (2).

homorganic [*hom"or-gan'ik*] produced by the same or by homologous organs.

homoscedasticity [*ho"mo-skə-das-tis'i-te*] characterized by variances which do not differ greatly between distributions.

homosulfanilamide mafenide.

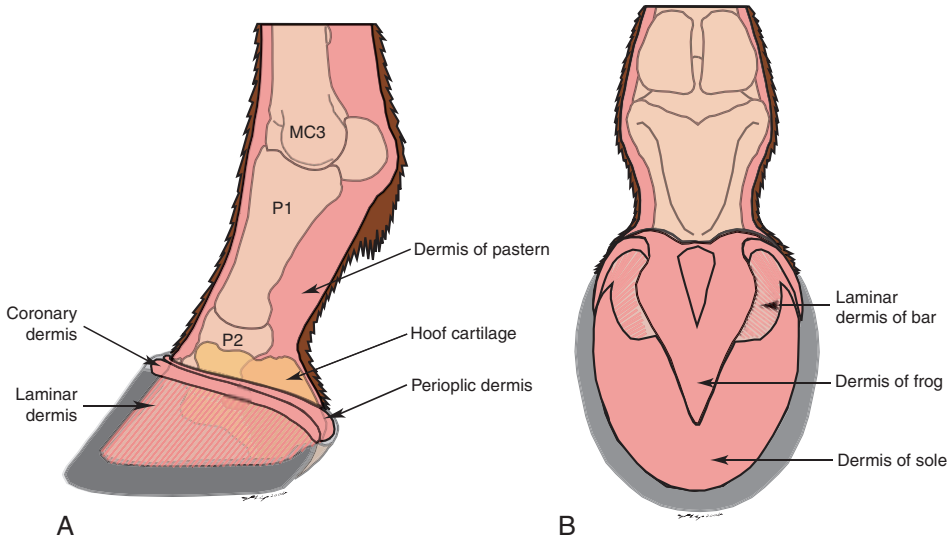
homotherm [*ho'mo-thərm*] homeotherm.

homotopic [*ho"mo-top'ik*] occurring at the same place upon the body.

homotoxicology [*ho'mo tok"si-kol'ə-je*] a medical theory, based on the principle that diseases are caused by exposure to external and internal toxins; treatment utilizes specified combinations of homeopathic remedies. See also **homeopathy**.

H-47: *Apis mellifera* (European honey bee). Courtesy of CDC/Dr Pratt.

homotype [*ho'mo-tīp*] a part having the same structure and function as another, especially for reversed symmetry with its mate, as for example the paw.
homozygosis [*ho"mo-zi-go'sis*] the formation of a zygote by the union of gametes that have one or more identical alleles.
homozygosity [*ho"mo-zi-gos'i-te*] the state of having identical alleles in regard to a given character or characters.
homozygote [*ho"mo-zi'gōt*] an animal exhibiting homozygosity.
homozygous [*ho"mo-zi'gəs*] having the characteristic of homozygosity.
honda a quick release metal eyelet for the end of a lariat. When the restrained animal is no longer required it is not necessary to slacken off the loop and pull it over the head—a very great advantage when working with wild cattle or unbroken horses.
honey bear [*hun'e*] a common name applied to several species, including **kinkajou**, sun **bear**.
honey bee [*hun'e be*] the honey producing members of the family Apidae, in the genus *Apis*; *A. mellifera* (European honey bee) and *A. cerana* (Eastern honey bee) are the species most commonly domesticated. See also **bee sting**.
honey flower [*hun'e flou'ər*] see ***Lambertia formosa***, ***Melianthus***.
honeycomb [*hun'e-kōm*] a mosaic of closely packed units with depressed centers giving a honeycomb appearance.
h. ringworm see **favus**.
h. stomach reticulum.
honeysuckle see ***Lambertia formosa***.
honker syndrome disease of feedlot cattle caused by edema of the tracheal mucosa. Characterized by a loud sound like a goose honking at each inspiration.
hood [*hood*] an item of horse clothing. A cloth cover for the head; with eye and ear holes.
long h. covers the head and neck to the shoulders.
hooding controlling ratite birds with darkness by covering the head with a hood which covers the head and the cranial half of the neck without occluding the nostrils.
hoof [*hoof*] the horny covering of the digit of ungulates. Consists of a wall, a sole and in the horse reflections of the wall (the bars) which enclose a triangular frog. The hoof wall is attached to the underlying soft tissues by lamellae which interdigitate with similar lamellae in the soft tissues. The wall is composed of many minute horn tubes united by intertubular horn produced by a germinative layer at the coronary band where the skin and horn join. A thin, narrow band of soft, light-colored horn called periople forms a flexible union between wall and skin. The wall is that part of the hoof extending from the coronet to the sole. It grows from the coronet and in horses takes about 1 year to reach the sole at the toe and some months fewer at the heel. The wall and the sole join at a visible band called the 'white line' though this is often yellowish. These various parts of the hoof are described in more detail under their individual headings. See also **cleat**.
h. abscess results usually from a nailprick of the sole or from a cracked sole. The cavity of the abscess cannot be large because of the rigid nature of the tissues. Spread from the original site is via the potential space between the sensitive laminae and the hoof and eventually surfaces at the coronet with pus discharging from a sinus there. Causes severe lameness, and tetanus is a common accompaniment.
h. avulsion in cattle and horses it is usually the result of trauma and carries a very poor prognosis.
h. block 1. wooden or plastic hoof-shaped material attached to the claw of a cow, usually by an acrylic glue, to remove pressure on the alternate diseased claw, thus reducing pain and lameness and facilitating healing. Called also slip, cowslip. 2. see digital nerve **block**.
h. congenital absence with all four limbs affected, recorded in calves.
h. cutters pincer-like instruments with one blade sharp and chisel-pointed, the other square and acting as a block for the other to cut against. The good implements have a double-scissor action and detachable blades.
h. erosion occurs in association with interdigital dermatitis in cattle and contributes to lameness.
h. lameness lameness due to pain in the hoof; detected by tapping with a hammer or pinching with a hoof tester.
h. oil a mixture of 20 parts neat's-foot oil and 1 part Stockholm tar; used to prevent a horse's hooves from becoming dry and brittle.
h. overgrowth in old animals kept on very soft pasture or bedding; the hoof wall elongates and will eventually curl under so that the patient is walking on hoof wall instead of sole.
h. pick a pointed appliance in various shapes used to pick dirt and stones out of the grooves in the sole of a horse's hoof.

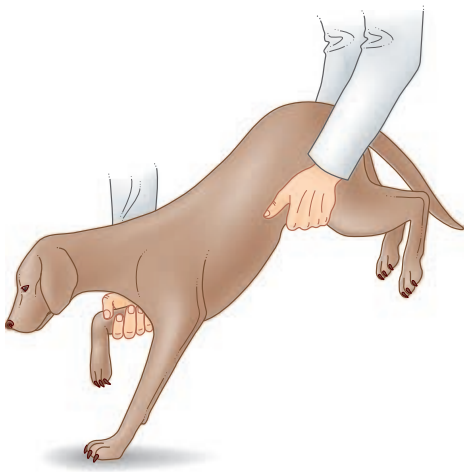


H-48: Structures of equine hoof. (A) Left forefoot, standing, lateral view. (B) Forefoot, ventral view. From Floyd A, Equine Podiatry. Saunders, 2007.

H-49: Hoof block applied to the claw of a cow.

shelly h. extensive separation of the hoof wall from underlying tissue in contagious footrot in sheep.
h. slough the wall and sole are detached from the sensitive laminae and the coronet and falls off. When the detachment is partial, the hoof is retained but is not viable and the patient gives the appearance of wearing slippers.
h. tester shaped like a pair of large pincers. One of the blades is placed on apparently normal hoof and the other on the part to be tested. If there is a flinch response when the handles are squeezed this is taken as an indication of pain at one of the pressure sites.
h. ulcer see **pododermatitis** circumscripta.
worn h. excessive wear, e.g. that which occurs in pastured cows forced to walk twice daily along races floored with recently paved non-slip concrete; may expose sensitive tissue, causing herd level lameness in all four limbs.
hoof-and-mouth disease foot-and-mouth disease.
hoof cracks for single cracks in individual hooves see **sandcrack**, **quarter** crack. Multiple cracks in all hooves represent a response to a systemic state, usually nutritional deficiency, e.g. hypovitaminosis A in all species, hypobiotinosis in pigs.
hook [*hook*] 1. metal instrument turned backwards on itself at one end. 2. the aggressive upward thrusting action of a cattle beast with its horns.
h. bone **tuber** coxae.
obstetric h. see **eyehooks**.
ovariectomy h. see spay hook (below).
spay h. a small 6 inch blunt-pointed hook for exteriorizing a uterine horn during a spay operation in a cat or dog. See also **Covault spay hook** and **Snook hook**.
Hook and Tucker Analyzer automatic analyzer of inhaled or exhaled anesthetic gases.
hooklets the structure by which the distal barbules of bird feathers engage the indentations of the proximal barbules.
hookworm nematodes of the genera ***Ancylostoma***, ***Bunostomum***, ***Gaigeria***, ***Necator***, ***Uncinaria***.
h. dermatitis penetration of the skin by third-stage larvae of the hookworm species causes a pruritic inflammatory reaction. Can occur in many species, but seen particularly in dogs on skin that comes in contact with the ground. See also cutaneous **larva** migrans.
h. disease see **bunostomiasis**, **ancylostomiasis**, **uncinariasis**.
hoop structure a low cost, uninsulated and naturally ventilated hoop-shaped building used for grower-finisher swine. The floor is mostly earthen and typically bedded with straw.
hoose **lungworm** disease.

H-50: Hoof testers.
From Floyd AE, Mansmann, RA, Equine Podiatry. Saunders, 2008.



H-51: Hopping response.
From McCurnin D, Poffenbarger EM, Small Animal Physical Diagnosis and Clinical Procedures. Saunders, 1991.

Hoplodontophorus a nematode found in hyrax.
Hoplopleura a genus of sucking lice in the family Hoplopleuridae.
H. acanthopus, H. capitosa, H. pacifica. sucking lice of rodents.
Hoppengarten cough [Ger.] an upper respiratory tract infection of horses of indefinite etiology. See also **equine** influenza.
hopping moving by quick springy leaps.
h. response a test of postural reactions. The animal is supported and it is made to move forward, backward, and laterally on one leg at a time. Strength and coordination of the hopping movement is assessed.
hopples see **hobble**.
horary points 1. pertaining to an hour. 2. in acupuncture refers to the way in which the five elements travel through the meridians in a circadian rhythm, increasing the sensitivity of the points on each meridian; called also element points.
hordenine toxic alkaloid in *Phalaris* spp.
hordeolum [*hor-de'o-ləm*] acute, suppurative (and usually septic) inflammation of one or more glands of the eyelid.
external h. involves the glands of Zeis and Moll, forming an abscess on the eyelid margin. Called also stye.
internal h. involves the meibomian glands. See also **chalazion**, which is a more chronic lipogranulomatous process.
Hordeum the barley genus of cereals and grasses in the family Poaceae.
H. geniculatum* (syn. *H. hystrix*), *H. jubatum*, *H. leporinum*, *H. murinum some of the grasses which are significant causes of grass seed injury and grass seed **abscess**; heavy seed content may cause feed refusal. Called also barley grass. The seeds are also called foxtails.
H. vulgare cereal barley, one of the cereal grains commonly involved in carbohydrate engorgement. The green crop if grazed may cause hypomagnesemia or nitrite poisoning.
Hormel pigs miniature breed used extensively in biomedical research; subject to congenital melanosis.
hormesis [*hor-me'sis*] stimulation by a subinhibitory concentration of a toxic substance.
Hormodendrum [*hor"mo-den'drəm*] see ***Wangiella***, ***Cladosporium***, and ***Fonsecaea***.
hormonagogue [*hor-mōn'ə-gog*] an agent that increases the production of hormones.
hormonal [*hor-mo'nəl*] emanating from or pertaining to hormones.
h. antibodies hormones can be used as antigens and antibodies produced against them so that reproductive functions can be eliminated or enhanced.
h. dermatoses skin diseases caused by an abnormality of any of the many hormones that influence the skin and adnexa, particularly growth of hair. See also endocrine **alopecia**.
h. hypersensitivity a papulocrustous dermatitis associated with hypersensitivity to endogenous gonadal hormones. Seen most commonly in bitches during stages of the estrus cycle.
h. synergism when their combined effect is greater than the simple addition of each of their individual effects.
hormone [*hor'mōn*] a chemical transmitter substance produced by cells of the body and transported by the bloodstream and other

VetBooks.ir

means to the cells and organs which carry specific receptors for the hormone and on which it has a specific regulatory effect. Hormones act as chemical messengers to body organs, stimulating certain life processes and retarding others. Growth, reproduction, control of metabolic processes, sexual attributes and behavior are dependent on hormones. Hormones are produced by various organs and body tissues, but mainly by the **endocrine** glands, such as the pituitary, thyroid and gonads (testes and ovaries). Each gland apparently manufactures several kinds of hormones; the adrenal glands alone produce more than 25 varieties. The total number of hormones is still unknown, but each has its unique function and structure. After a hormone is discharged by its parent gland into the capillaries or the lymph, it may travel a circuitous path through the bloodstream to exert influence on cells, tissues and organs (target organs) far removed from its site of origin.

adrenomedullary h's substances secreted by the **adrenal** medulla, including epinephrine and norepinephrine.

androgenic h's the masculinizing hormones, androstenedione and testosterone.

calciotropic h. any hormone which is specifically involved in the homeostatic regulation of serum calcium concentrations through their effects on bone and other organs, e.g. parathyroid hormone, calcitonin.

corpus luteum h. progesterone.

cortical h. corticosteroid.

ectopic h's those secreted by tumors of nonendocrine tissues but sharing some physiological effects with their normally produced counterparts. Examples include parathyroid-like hormone produced by apocrine carcinomas of the anal sac in dogs and by some lymphomas in dogs and horses. See also **paraneoplastic** syndrome.

enteric h. hormone secreted by endocrine cells in the wall of the intestine or stomach or in the pancreas. Includes gastrin, cholecystokinin, secretin, gastric inhibitory polypeptide, enteroglucagon, motilin, neurotensin, 5-HT, substance P, pancreatic polypeptide, somatostatin.

estrogenic h's substances capable of producing certain biological effects, the most characteristic of which are the changes which occur in mammals at estrus; the naturally occurring estrogenic hormones are β-estradiol, estrone and estriol.

gonadal h's steroids in birds which affect development of the reproductive tubular system, head decorations, feathers, squawk, behavior.

h. herbicide substances sprayed on plants which exert a lethal hormonal effect on the entire plant. See also hormone weedkiller (below).

lactation h., lactogenic h. prolactin.

luteotropic h. (LTH) see **luteotropin**.

neurohypophyseal h's those stored and released by the neurohypophysis, i.e. oxytocin and vasopressin.

peptide h's peptide molecules which exert their effects only on target cells that carry the hormone-specific receptors.

placental h. one secreted by the placenta, including chorionic gonadotropin, relaxin, and other substances having estrogenic, progestational or adrenocorticoid activity. See also **placental** hormones.

progestational h's substances, including **progesterone**, that are concerned mainly with preparing the endometrium for nidation of the fertilized ovum if conception has occurred. See also **progestational** agent.

h. receptors the presence of hormone-specific receptors on cells is the means of determining which cells respond to the circulating hormones. The number of receptors on each cell is one of the ways of regulating the degree of response.

reproductive h's see **follicle-stimulating hormone**, **follicle-stimulating hormone releasing hormone**, **gonadotropin-releasing hormone**, **LH-RH**, **luteinizing hormone**, **luteotropic** hormone, **estrogen**, **oxytocin**, **pituitrin**, **progesterone**, **prolactin**, **relaxin**, **stilbestrol**, **testosterone**.

sex h's see **sex** hormones.

somatotrophic h., somatotropic h. growth hormone.

somatotropin release inhibiting h. somatostatin.

somatotropin releasing h. (SRH) growth hormone releasing hormone.

thymic h. thymosin.

h. weedkiller includes 2,4-D, 2,4,5-T, MCP, silvex, dalapon. See also **TCDD**, **HCDD** and **dioxin**.

hormone–receptor complex [*hor'mōn- re-sep'tər kom'pleks*] hormone specifically bound to its receptor either on the plasma membrane or intracellularly.

hormone-sensitive triacylglycerol lipase [*hor'mōn-sen'sĭ-tiv tri-a"səl-glis'ə-rol li'pās*] enzyme catalyzing the hydrolytic release of fatty acid from carbon-1 or -3 of the glycerol moiety of triacylglycerols in white adipose tissue in response to epinephrine during stress or glucagon during fasting. Called also hormone sensitive lipase.

hormonogen [*hor'mon-o-jen"*] prohormone.

hormonopoiesis the production of hormones.

hormonopoiesis [*hor-mo"no-poi-e'sis*] the production of hormones.

hormonotherapy [*hor-mo"no-ther'ə-pe*] treatment by the use of hormones; endocrinotherapy.

horn [*horn*] 1. a pointed projection. 2. the processes carried on the foreheads of most ruminants and rhinoceroses including skin-covered bony knobs in giraffes, velvet-covered branched deciduous bony antlers of deer, branched deciduous keratinized processes in pronghorns and the familiar hollow horns of bovids. In these a horny sheath is composed of keratinized epithelial cells borne on a fibrous corium that is carried on a cornual process, an extension of the frontal bone. In mature cattle the cavity of the frontal sinus extends into the cornual process. Called also fighting horns. Cattle and buffalo horns are classed as shorthorn (short, in-curving), lyre (see **lyrate**), crescent or sickle (large, inward curving, downward inclined), long (long, handlebar configuration).

h. aging telling the age of a cattle beast by counting the rings at the base and adding one. Can give a guide but can also mislead. It is also capable of being faked and even obliterated by rasping or by dehorning.

h. amputation see **dehorning**.

h. button immature horn on the frontal bone of very young ruminants. Called also horn **bud**.

h. core cancer, h. cancer is a squamous cell carcinoma of the mucosa of the frontal sinus which invades the horn core usually resulting in dehiscence of the horn. Has a very high prevalence in adult male cattle in India.

cicatricial h. a hard, dry outgrowth from a cicatrix, commonly scaly and rarely osseous.

cutaneous h. single or multiple firm projections ('horns') of parakeratotic keratin on the skin or footpads of dogs and cats. They may originate from papillomas, keratoses or various skin tumors, particularly intracutaneous cornifying epithelioma, or in association with dermatophilosis or feline leukemia virus infection.

dorsal h. of spinal cord the horn-shaped structure seen in transverse section of the spinal cord, formed by the dorsal gray matter column of the cord.

hollow h. a mythical disease of cattle in primitive communities; treated by removal of the horns.

h. nerve block see cornual **block**.

overgrown h. malaligned shorthorn type horns which curve in too far and penetrate the skull, usually into a frontal sinus.

h. paste made of hoof raspings mixed with lard. Packed into the clefts beside the bars of the sole in the horse's foot before the taking of a radiograph; avoids the misleading opacities created by the clefts on radiographs. Now usually replaced by Play-doh.

h. pearls microscopic structures found in some neoplasms of epithelial origin. See keratin **pearls**.

sebaceous h. a hard outgrowth of the contents of a sebaceous cyst.

h. shears devices used for removing horns. Most work as a guillotine and provide great leverage for cutting the horns at the base where a rim of skin can be included.

h. tubule basic structural element in many horny outgrowths; produced by a dermal papilla, it bears some resemblance to a hair and grows approximately vertical to the dermal surface; it is united by intertubular horn to neighboring tubules.

ventral h. cell diseases motor neuron diseases; rare in animals, but hereditary spinal **muscular** atrophy of Brittany spaniels is an example.

ventral h. of spinal cord the horn-shaped structure seen in transverse section of the spinal cord, formed by the ventral gray matter column of the cord.

warty h. a hard, pointed outgrowth of a wart.

horneblende see **asbestos**.

VetBooks.ir

H-52: Horner's syndrome.
From Nelson RW, Couto CG, Small Animal Internal Medicine, 3rd Edition. Mosby, 2003.

VetBooks.ir

Horner's muscle [*hor'nər*] a branch of the orbicularis oculi muscle which passes around the lacrimal sac and contributes to the lacrimal pump responsible for egress of tears from the conjunctival fornix.

Horner's syndrome [*hor'nər*] enophthalmos, ptosis of the upper eyelid, slight elevation of the lower lid, constriction of the pupil, and narrowing of the palpebral fissure caused by paralysis of the sympathetic nerve supply to the eye.

first order (central) H's s. caused by lesions within the parenchyma of the brain or spinal cord, before the synapse of sympathetic fibers within gray matter of thoracic segments T1 to T3.

second order (peripheral) H's s. involves the sympathetic trunk from its origin at T2 to T4 to the cranial cervical ganglion.

third order H's s. involves sympathetic fibers distal to the cranial cervical ganglion. Middle and inner ear disease can affect these fibers, which pass close to the tympanic bulla.

hornet [*hor'nət*] members of the genus *Vespula* of true wasps in the order Hymenoptera. Hornet venom contains histamine, serotonin, acetylcholine, hyaluronidase and phospholipase. Especially in the USA, the name is commonly applied to **yellowjackets**, which are in the genera *Dolichovespula* and *Vespula*.

horror autotoxicus [*hor'ər*] an old term that predicted the occurrence of diseases in which the rules guaranteeing self tolerance are broken.

horse[1] 1. the human race's martial, draft, racing, pleasure and companion animal of antiquity. Called also *Equus caballus*, a species sharing the genus with the ass, zebra and quagga. A member of the family Equidae in the order Perissodactyla, the odd-toed ungulates. 2. the word is also used to mean the entire male—the stallion. Horses are classified in several ways: ancestry—warmblood, coldblood; use—draft, pony, carriage or carthorse, hack, polo pony, mustang, drafting or cutting horse, cowpony, jumper, hunter, standardbred, trotter, pacer, harness horse, eventer, dressage, rodeo, polocrosse, steeplechaser, remount, galloper; breeds—**American saddle horse**, **American trotter**, **Andalusian**, **Anglo-Arab**, **Appaloosa**, **Arab**, **Australian** pony, **Barb**, **Belgian**, **Campolino**, **Cleveland Bay**, **Clydesdale**, **Connemara pony**, **Criollo**, **Dales pony**, **Dartmoor pony**, **Dole pony**, **Exmoor pony**, **Falabella**, **Fell pony**, **Fjord pony**, Fox trotting horse, **Friesian**, **Galiceno**, **Galloway** pony, **Gotland pony**, **Hackney** pony, **Hanover**, **Holstein**, **Highland** pony, **Lipitsa**, **Lusitano**, **Morgan horse**, **New Forest** pony, **Pasos** (Paso fino, Peruvian Paso, American Paso Fino), **Palomino**, **Percheron**, **Quarter horse**, **Shetland pony**, **Shire**, **Standardbred**, **Suffolk horse**, **Tennessee walking horse**, **Thoroughbred**, **Timor pony**, **Trotter**, **Welsh pony**, Ysabella.

h. bots see ***Gasterophilus***.

h. coat colors see individual colors **bay**, **black**, **brown**, **chestnut** (3), gray.

h. dentition see **dental** formula.

h. louse fly see ***Hippobosca***.

h. pox see **horsepox**.

h.-sick said of a field that has had horses grazing on it for too long or at too heavy a stocking rate. The pasture is too rank and clumpy and the population of *Strongyle* spp. and other helminth larvae is likely to be high.

h. sickness **African** horse sickness.

h. sickness fever a clinically inapparent form of African horse sickness; usually a response in a vaccinated animal or one which is reinfected.

horse[2] adjective used to describe a coarse or free-growing weed. Includes *Aesculus hippocastanum* (horse chestnut), *Amoracia rusticana* (horse nettle), *Equisetum arvense* (horse tails), *Mentha longifolia* (horse mint), *Oenanthe aquatica* (horse bane), *Parkinsonia aculeata* (horse bean), *Pennisetum glaucum* (horse millet), *Solanum carolinense* (horse nettle), *Tetradymia spp.* (horse brush).

horsebreaker a person expert at **breaking-in** horses.

horsebrush see ***Tetradymia glabrata***.

littleleaf h. *Tetradymia glabrata*.

spineless h. *Tetradymia canescens*.

horsechestnut see ***Aesculus***.

horsenettle ***Solanum carolinense***.

horsepox [*hors'poks*] a disease caused by a poxvirus in the genus Orthopoxvirus and characterized by typical pox lesions on the lower limbs or around the muzzle. See also **pox**. Called also Jenner's horsepox, contagious pustular stomatitis.

Canadian h. see **Canadian horsepox**.

horseradish [*hors'rad-ish*] see ***Amoracia rusticana***.

horseshoe the metal plate applied to the plantar surface of horse's hoof. See also **horseshoeing**, **branch** (2), **calkins**, **frost** studs, **fullered**, **toe-pieces**.

bar h. a bar connects the two heels of the shoe so as to make a full circle. Designed for use in horses whose heels are likely to be injured by too frequent contact of the heel with the ground surface.

Blenkinsop h. designed to prevent slipping and stumbling. The shoe is very thin and wide, and the toe is turned so that a half of its surface does not bear.

charlier h. fits into a groove taken out of the bearing surface of the hoof wall. There is no toe clip and the shoe is narrow and light in weight. It is not a work shoe but intended to protect the hoof while the horse is resting for a period. Called also periplantar shoe.

concave h. the inner edge thicker is than the outer so that the surface touching the ground is slightly smaller than the surface in contact with the hoof.

donkey-heeled h. the lateral heel is carried out and away from the hoof. Used on a pigeon-toed horse to help keep the feet away from each other and prevent brushing.

Fitzwygram h. has a triangular cross-section so that only a rim acts as a ground surface.

knocked-up h. designed to lift the medial aspect of the hoof and counter the tendency to brush one hoof against the medial aspect of the other leg. The bar of the inner wing of the shoe is higher and narrower than the lateral bar.

periplantar h. see charlier horseshoe (above).

tip h. a half horseshoe used to protect the toe from excessive wear but allows the frog and heels to stay free and not become contracted.

trailer h. the sidebars are carried well back beyond the heel. Useful when the flexor tendons have been damaged.

horseshoe crab amebocyte test a biological test using the amebocytes to test for the presence of endotoxin. Called also limulus test.

horseshoeing that part of the art of blacksmithing to do with making horseshoes, fitting them to hooves, trimming the hooves to fit the shoes. There are two main techniques, hot shoeing and cold shoeing, the former being done beside a forge. The shoes may be mild steel or aluminum in racing plates.

H-53: Bar horseshoe.
From Floyd AE, Mansmann, RA, Equine Podiatry. Saunders, 2008.

corrective h. shoes custom made to correct some defect in the horse's gait or conformation.

horsetail a common name for plants in the genus ***Equisetum***. Includes field horsetail (*E. arvense*), marsh horsetail (*E. palustre*), scouringrush horsetail (*E. hymenale*), water horsetail (*E. fluviatile, E. limosum*), wood horsetail (*E. laevigatum*).

horsing the behavior of a mare which is displaying **estrus**.

Hortega cell [*or-ta'gə*] see **gitter cells**.

hospital [*hos'pĭ-təl*] an institution for the care and treatment of sick and injured animals. In order to meet legal requirements in some countries it is necessary for the building to include ward accommodation for inpatients, a radiology facility and a clinical pathology laboratory.

teaching h. one that conducts formal educational programs or courses of instruction that lead to the granting of recognized certificates, diplomas or degrees or that are required for professional certification or licensure.

hospitalization [*hos"pĭ-təl-ĭ-za'shən*] 1. the placing of a patient in a hospital. 2. the period of confinement in a hospital.

host [*hōst*] 1. an animal or plant that harbors and provides sustenance for another organism (the parasite). Includes paratenic, intermediate etc. 2. the recipient of an organ or other tissue derived from another organism (the donor).

accidental h. one that accidentally harbors an organism that is not ordinarily parasitic in the particular species.

amplifier h. one in which the infectious agent, usually a virus or parasite, multiplies greatly, providing increased infection of vectors and dissemination of the disease.

alternate h. intermediate host.

dead-end h. the disease cannot be transmitted from the infected host to another animal.

definitive h. the host in which the infectious agent in question undergoes the adult and sexual stage of its reproduction. Called also final host.

h. determinants characteristics in the host which determine its susceptibility to a disease, e.g. closeness to parturition and metabolic diseases.

final h. see definitive host (above).

intermediate h. especially in parasitology, a host in which the parasite undergoes a stage, either the larval or nonsexual stage, or the adult sexual stage of its development. The host may be an insect vector which also acts as the transmitting medium, or another insect or animal species which is a passive enhancer, the infection being spread by other means.

h.–parasite reaction the inflammatory reaction that sometimes occurs around a parasite in tissues, e.g. a warble fly larva in the esophageal wall.

paratenic h. an animal acting as a substitute intermediate host of a parasite, usually having acquired the parasite by ingestion of the original host; no development of the parasite takes place but the phenomenon aids in the transmission of infection. Called also transfer or transport host.

predilection h. the host preferred by a parasite.

primary h. see definitive host (above).

reservoir h. an animal (or species) that is infected by a parasite, and which serves as a source of infection for humans or another species.

h. risk factors epidemiological factors contributing to the development of a disease and which are contributed by the host.

secondary h. intermediate host.

h. specificity the characteristic of a parasite that renders it capable of infecting only one or more specific hosts.

transfer h., transport h. one that is used until the appropriate definitive host is reached, but is not necessary to complete the life cycle of the parasite.

h. variable see host determinants (above).

host–agent balance [*hōst- a'jənt bal'əns*] the relationship between the host and the disease agent; determines whether the two live commensally or the host dies or masters the agent.

host–parasite relationship [*hōst- par'ə-sīt*] may be at any one of a series of classified levels in two groups, those of disease and symbiosis. In the disease category there are **velogenic**, **mesogenic** and **lentigenic**.

hot–cold hemolysis [*hot- kōld he-mol'ə-sis*] complete hemolysis of sheep and ox erythrocytes by bacteria in culture media after chilling of the culture. A feature of β-hemolysin of staphylococci.

hot needle used in acupuncture; the needle wrapped in cotton wool, dipped in alcohol and lit, the charred cotton removed and the needle applied to the acupuncture point.

hot packing application of hot packs made by frying oats in vinegar and enclosing them in cloth sacs; used as an adjunct to acupuncture.

hot spots acute moist **dermatitis**.

Hotis test an indirect test carried out on milk to detect the presence of mastitis. Bromcresol is added to a sample which is then incubated. A positive reaction is a change in color of the sample.

hotshot see **prod**.

Hotz–Celsus operation a surgical procedure for correction of entropion involving excision of an approximately crescent-shaped piece of skin from immediately adjacent to the eyelid margin.

hound a hunting dog. There are two types: coursing, gaze or sight hounds (Greyhound, Saluki, Afghan, Whippet) use their speed to hunt by eyesight and therefore need to be faster, while tracking or scent hounds (Bloodhound, Beagle, Foxhound) have a very well developed sense of smell and follow the scent.

hound's tongue see ***Cynoglossum officinale***.

Hounsfield unit (H) [*hounz'fēld*] an arbitrary unit of X-ray attenuation used for CT scans. Each voxel is assigned a value on a scale in which air has a value of −1000; water, 0; and compact bone, +1000.

housebreaking **housetraining**.

household the occupants, contents and the interior of a house; the greater part of the environment of the average companion animal.

h. cluster a grouping of animals or occurrences of disease within a household as occurs with some infectious diseases such as feline leukemia virus-related disorders.

h. product poisoning poisoning by materials that are normal contents in the average person's house, e.g. cleaning fluids, proprietary medicines.

housekeeper contractions intestinal peristalsis that occurs when food is not present.

housesoiling inappropriate defecation or urination by dogs or cats. See also inappropriate **micturition**.

housetraining training of a companion animal to defecate and urinate outside or in specifically designated places such as a litter tray.

housing animal accommodation of all kinds including zoo cages, hen batteries, sow crates, loose housing for cows, dry cow corrals, calf hutches and the like. Animal welfare considerations have made great changes in what is permissible in animal housing and codes of conduct are now available in most countries which specify areas, volumes of space, type of construction, furniture and feeding and watering facilities. See also **all-in-all-out housing**, **continual throughput housing**.

free stall h. see free stall **barn**.

loose h. very common housing for large dairies in temperate, low-rainfall climate regions. With the current expansion in dairy size, many dairies are moving to regions in a country with a climate that allows this type of accommodation. Consists of large open pens in which cattle can move freely or rest, usually on a pack of bedding. Each pen usually has a small covered shade area and each is designated to a group of cattle at different stages of production, for example first, second and third string cattle based on their milk productiion, dry cows, close-up cows, hospital pen cows. This allows the requisite ration to be fed to these different groups. Cattle are fed on one side at feed bunks or a feeding alley through stanchion head locks.

H-54: Loose housing, on this farm in dry lots.

H

h. stress stress imposed on naturally pastoral animals when they are housed; includes the risk factors of overcrowding, incorrect temperature, humidity, ventilation, noise, uncomfortable bedding, infrequent feeding, watering, transportation.

Houttuynia a genus of tapeworms in the family Davaineidae.

H. struthionis found in the intestine of the ostrich and rhea; causes unthriftiness and diarrhea in chicks.

Hovawart a medium-sized, muscular German herding dog with a long black, gold or blond coat.

hoven **ruminal** tympany.

Howell–Jolly bodies small, round or oval bodies, probably nuclear remnants, seen in erythrocytes when stains are added to fresh blood and found in various anemias and after splenectomy or reduced splenic function. Can occur in normal animals, frequently in cats and occasionally in dogs and horses.

Hoya a genus of the plant family Asclepiadaceae; poisoning caused by an unidentified toxin; characterized clinically by staggering, falling, convulsions. Includes *H. australis*, *H. carna.* Called also wax flower.

Hp haptoglobin, a serum protein that binds free hemoglobin.

HPETE hydroperoxyeicosatetraenoic acid.

HPG human pituitary gonadotropin.

HPL human placental lactogen.

HPLC high performance liquid chromatography.

HPO 1. hyperbaric (high-pressure) oxygenation. 2. hypertrophic pulmonary osteodystrophy.

HPP hyperkalemic periodic paralysis.

HPR host parasite reaction.

HR heart rate.

hr hour.

HRF homologous restriction factor.

HS hemorrhagic septicemia.

Hs chemical symbol, *hassium*.

HSUS Humane Society of the United States.

HSVMA Humane Society Veterinary Medical Association.

ht height.

5-HT serotonin (5-hydroxytryptamine).

HTLV-BLV retrovirus group human T-cell lymphotropic virus/bovine leukemia virus group of retroviruses that cause bovine leukemia.

HTST high temperature short-term pasteurization.

huanaco see **guanaco**.

huarizo cross between a male llama and a female alpaca.

huck towel small (16 × 32 inch) cotton surgical towel with typical honeycomb texture.

hucklebones the top of the hip bones; a term used in dog conformation.

huevil *Vestia foetida*.

Hughes nail-hole curette see **nail**-hole curette.

Hug's teat tumor extractor a long thin cylindrical instrument to be inserted into the teat of a cow for the removal, by a guillotine-like action, of a tumor on the interior wall. The instrument is inserted closed, is then opened and the tumor guillotined, and the guillotine closed again before removing the instrument.

Hulet's rod technique an aid to pregnancy diagnosis used in ewes and goats that are 70–100 days pregnant. The animal is fasted and laid on its back. The lubricated rod is passed 14 inches into the rectum and the end moved in an arc from the spine to the abdominal wall. The pregnant uterus can be felt by an external hand as the rod moves it up to the abdominal wall.

Hulse procedure a method of intra-articular surgical reconstruction of a cranial cruciate ligament in which a graft formed by part of the patellar tendon and part of the lateral retinaculum is placed under the intermeniscal ligament and over the top of the lateral femoral condyle.

human see **homo-**.

h. carriers humans who act as active carriers of diseases of animals and infect animals.

h. leukocyte antigen see major **histocompatibility** complex.

humane pertaining to the avoidance of infliction of pain, discomfort and harassment; used especially with regard to animals.

h. considerations subjects which need to be taken into account by persons who have animals in their care, e.g. freedom from disease, from hunger, water deprivation, exploitation while performing.

h. destruction see **euthanasia** (2).

h. killer a firearm for fast euthanasia of animals of all types. The classical instrument, the Greenough humane killer, can be taken apart and stowed in a small space. The instruments are gunmetal tubes with a firing pin and a sloping head to ensure that the projectile enters at the correct angle. The projectile may be a captive bolt that protrudes about 1 inch when the weapon is fired with a blank shell. The alternative is a standard rifle shell which is fired in the normal way.

h. societies voluntary organizations that carry out a valuable public service by watching for abuses of the laws that protect animals against cruelty, and by promoting relevant educational programs.

Humane Society of the United States (HSUS) formed in 1954, now one of the largest animal protection organizations in the USA. Considered by many as moderate and reasoned in its animal advocacy approach.

Humane Society Veterinary Medical Association (HSVMA) a corporate veterinary advocacy organization formed by the Humane Society of the United States and the Association of Veterinarians for Animal Rights with the stated purpose of giving veterinarians, veterinary students and veterinary technicians an opportunity to participate in animal welfare programs, including disaster response; expanded hands-on animal care; spaying and neutering; and advocacy for legislative, corporate and veterinary medical school reforms.

humbles liver, kidney and entrails of a deer obtained at a hunting kill. Made into a pie for the tenants; hence 'humble pie'.

humectant [*hu-mek'tənt*] 1. moistening. 2. a moistening or diluent medicine.

humeral [*hu'mər-əl*] of or pertaining to the humerus.

h. condyle knuckle on the distal end of the humerus.

humeroradial [*hu"mər-o-ra'de-əl*] pertaining to the humerus and radius.

humeroradioulnar pertaining to the humerus, radius and ulna.

h. joint elbow.

humeroscapular [*hu"mər-o-skap'u-lər*] pertaining to the humerus and scapula.

humeroulnar [*hu"mər-o-ul'nər*] pertaining to the humerus and ulna.

humerus [*hu'mər-əs*] the bone of the upper forelimb, extending from shoulder to elbow. It consists of a shaft and two enlarged extremities. The proximal end has a smooth round head that articulates with the scapula to form the shoulder joint. Just below the head are two rounded processes called the greater and lesser tubercles. The distal end of the humerus has a trochlea, which articulates with the ulna, and a capitulum, which articulates with the radius, at the elbow. See also Table 10.

humidifier [*hu-mid'ĭ-fi"ər*] an apparatus for controlling humidity by adding moisture to the air.

humidity [*hu-mid'ĭ-te*] the degree of moisture in the air.

h. therapy the therapeutic use of water to prevent or correct a moisture deficit in the respiratory tract. Under normal conditions the respiratory tract is kept moist by humidifying mechanisms that allow for evaporation of water from the respiratory mucosa. If these mechanisms fail to work, are bypassed as in **endotracheal** intubation, or are inadequate to overcome the drying and irritating effects of therapeutic gases and mucosal crusting, some form of humidification must be provided. Called also humidification therapy.

hummel entire, naturally polled deer.

humor [*hu'mər*] pl. *humores*, *humors* [L.] any fluid or semifluid in the body.

aqueous h. see **aqueous** humor.

ocular h. either of the humors of the eye—aqueous or vitreous.

vitreous h. see **vitreous** humor.

humor- prefix meaning liquid.

humoral [*hu'mər-əl*] effects carried out via the fluids of the body.

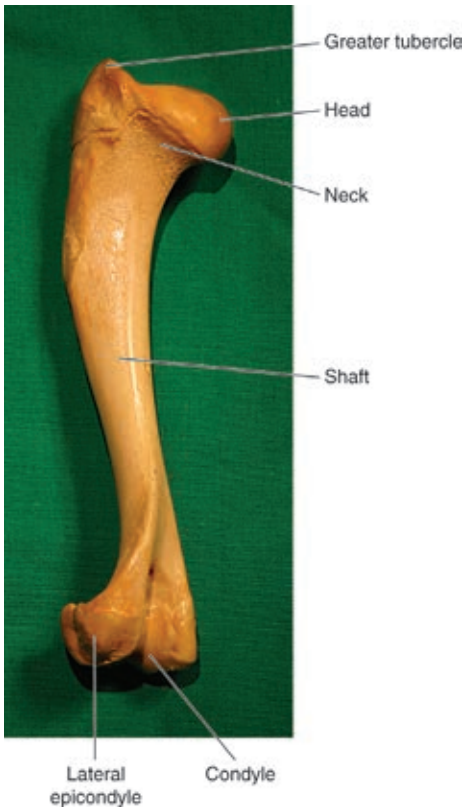
h. acupuncture mechanisms thought to be β-endorphins released by the pituitary.

hump of zebu cattle fleshy mass over the withers due mainly to enlargement of the rhomboideus muscles.

humpback [*hump'bak*] see **hunchback**.

humpsore see **stephanofilarosis**.

humpyback a syndrome affecting full-woolled sheep in summer in Australia; manifested by a hunched stance and poor exercise tolerance, hyperthermia with exercise, and death if driven hard; necropsy lesions include cardiomyopathy and degenerative lesions



H-55: Canine left humerus, lateral view. From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

in the white matter of the spinal cord; etiology uncertain but ingestion of fruits of *Solanum esuriale* or foliage of *Malvastrum americanum* suspected.

hunchback a rounded deformity, or hump, of the back, or an animal with such a deformity. The condition is called also **kyphosis** and is the result of an abnormal upward curvature of the spine.

Hungarian puli see **Puli**.

Hungarian vizsla see **Vizsla**.

Hungarian wirehaired vizsla a dog breed similar to the **Vizsla**, but the coat is harsh, short on the head and legs, and longer on the ears and body.

Hungate roll tube method standard procedure for culture of ruminal organisms.

hunger [*hung'ər*] a craving, as for food. A localized subjective sensation, assumed to occur in animals, caused by emptiness and a resulting hypermotility of the stomach.

h. hollow paralumbar **fossa** in ruminants.

hungry rice see ***Digitaria*** *exilis*.

Huntaway a type of dog found in New Zealand, where they use barking sheepdog breeds or types to round up sheep and return them to the hills; that is the dogs drive sheep away from the shepherd, instead of the customary activity of bringing them to the herder. There is not a recognized breed for the purpose; most are Airedale crossbreds.

hunter [*hun'tər*] a horse used for hunting. A hunter can be any size or shape but is in most cases the product of mating a thoroughbred stallion to a draft mare. Their role is much wider than carrying a rider to a hunt; they are now the mainstay of the jumping and eventing scene.

h. clip the horse's long winter coat is clipped except for the limbs and saddle place.

Hurler's syndrome [*hur'lər*] mucopolysaccharidosis I.

Hürthle cell [*hērt'lə*] large oxyphilic, eosinophilic cells found in the thyroid gland. They are metabolically altered follicular cells which accumulate large numbers of mitochondria. See also Hürthle cell tumor (below).

H. c. tumor a new growth of the thyroid gland composed wholly or predominantly of large cells (Hürthle cells) having abundant granular, eosinophilic cytoplasm. Such tumors are usually benign (Hürthle cell adenoma) but on occasion may be locally invasive or may rarely metastasize (Hürthle cell carcinoma, or malignant Hürthle cell tumor). Called also oxyphilic adenoma of thyroid gland.

HUS hemolytic uremic syndrome. See also **hemoglobinuric** nephrosis.

husbandry careful management of e.g. animals. Implies thrifty, humane, caring. See also **animal husbandry**.

husk [*husk*] see **lungworm** disease.

Husky see **Siberian husky**, **Alaskan husky**.

hutch [*huch*] 1. standard cagelike accommodation for rabbits. 2. light, movable cabin, usually plastic, for calves and the most common method of rearing calves on large dairies. It can be disinfected and moved to clean ground after each occupancy, important in disease control, and provides good ventilation, but also shelter. See also **superhutches**.

h. burn urine scald in rabbits characterized by external inflammation of the external genitalia and the anus; caused by poor hygiene of hutch floors. Can also occur if the rabbit has poor urine control with constant dribbling.

Huxley's layer [*huks'le*] one of the three layers in the internal root sheath of the hair.

HVL **half-value layer**.

Hx abbreviation for history; used in medical records.

H-Y antigen see H-Y **antigen**.

hyacinth see ***Hyacinthus orientalis***.

blue h. ***Scilla*** *natalensis*.

Cape h. see ***Pseudogaltonia clavata***.

wild h. ***Scilla*** *nonscripta*.

Hyacinthoides non-scripta European plant in the family Liliaceae (Hyacinthaceae); contains scillarens, analogous chemically to cardenolide cardiac glycosides, and glucosidase-inhibiting polyhydroxypyrrolidine alkaloids. Poisoned animals have bloated and had diarrnea with blood. Called also *Scilla nutans, S. non-scripta, Endymion non-scriptus*, bluebell, wild hyacinth.

Hyacinthus orientalis European plant of the family Liliaceae. The bulbs are poisonous to cattle. They may contain a cardiac glycoside and cause salivation, diarrhea, collapse and death. Called also hyacinth.

Hyaenanche globosa South African plant in the family Euphorbiaceae. Contains a toxic substance hyaenanchin. Called also hyena poison.

hyaenanchin a toxic substance present in the plant *Hyaenanche globosa*.

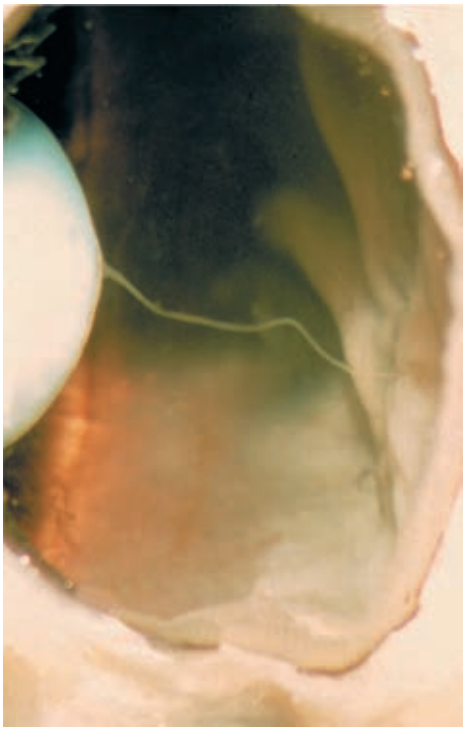
hyalin [*hi'ə-lin*] a translucent albuminoid substance obtainable from the products of amyloid degeneration.

hyaline [*hi'ə-lēn*] glassy; pellucid.

H-56: (A) A set of individual wooden calf hutches with retractable top for heat dissipation in summer. (B) Opaque plastic calf hutch.

VetBooks.ir

h. body see **apoptotic body**.
h. globules composed of fibrin degradation products these contribute to the formation of microthrombi. Called also shock bodies.
h. membrane composed of fibrin and cell debris, this membrane lines the alveoli when there has been severe damage to the alveolar epithelium. See also hyaline **membrane** (3).
h. membrane disease a disorder of aerated lung caused by damage to the alveolar llining, so that it becomes coated with a mixture of fibrin and surfactant. This layer becomes concentrated by evaporation and takes on a dense, hyaline appearance. Seen in conditions such as bovine **atypical interstitial pneumona** and neonatal prematurity in foals. See also **neonatal** maladjustment syndrome.
hyalinization [*hi"ə-lin"ī-za'shən*] conversion into a substance that has a glassy homogeneity in histological sections.
hyalinosis [*hi"ə-lin-o'sis*] hyaline degeneration.
pulmonary h. multifocal accumulations of macrophages and giant cells which contain laminated PAS-positive hyaline material. Some deposits in the lungs of dogs are grossly visible subpleurally at the ventral borders of the lungs.
hyalinuria [*hi"ə-lĭ-nu're-ə*] hyalin in the urine, usually as casts.
hyalitis [*hi"ə-li'tis*] inflammation evident within the vitreous body and reflecting neighboring uveitis and/or retinitis.
h. punctata a form marked by formation of small opacities.
h. suppurativa purulent inflammation of the vitreous body.
hyal(o)- word element. [Gr.] *glassy*.
hyalocentesis diagnostic aspiration of vitreous. See also vitreous **paracentesis** and **vitreocentesis**.
hyalohyphomycosis [*hi"ə-lo-hi"fo-mi-ko'sis*] opportunist infections by nonpigmented fungi. See ***Paecilomyces***, **pseudallescheriosis**, ***Geotrichum***, **aspergillosis**, **penicilliosis**.
hyaloid [*hi'ə-loid*] pellucid; like glass.
h. artery embryonic artery that runs through the Cloquet's canal of the vitreous from the optic disk to the posterior lens capsule. Important for lens development but regresses before or soon after birth.
persistent h. artery developmental defect in which the hyaloid artery persists beyond the normal time of regression within the first 3-6 weeks postnatally.
hyaloidocapsular ligament a condensation of collagenous fibrils between the anterior vitreous face and the posterior lens capsule.
hyalomere [*hi'ə-lo-mēr"*] the pale, homogeneous portion of a blood platelet.



H-57: Persistent hyaloid artery in a dog.
From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

Hyalomma [*hi"ə-lom'ə*] a genus of ticks in the family Ixodidae. The several stages of these ticks transmit *Babesia caballi*, *B. equi*, *Coxiella burnetii*, *Theileria parva*, *T. annulata*, *T. dispar*, *Rickettsia bovis* and *R. conori*. There are significant differences of opinion about the nomenclature of these ticks. A further subdivision creating new genera of *Hyalommina* and *Hyalommosta* is proposed. The currently listed species are: *Hyalomma anatolicum*, *H. detritum mauretanicum*, *H. detritum scupense* (*H. uralense*, *H. volgense*), *H. dromedarii*, *H. excavatum* (*H. anatolicum*), *H. impressum*, *H. plumbeum plumbeum* (*H. marginatum*), *H. truncatum* (*H. transiens*). See also **sweating** sickness.
Hyalommina suggested new genus, subdivision of *Hyalomma* spp.
Hyalommosta suggested new genus, subdivision of *Hyalomma* spp.
hyalonyxis [*hi"ə-lo-nik'sis*] the act of puncturing the vitreous body.
hyaloplasm [*hi'ə-lo-plaz"əm*] see **axoplasm**.
hyaloserositis [*hi"ə-lo-se"ro-si'tis*] inflammation of serous membranes marked by conversion of the serous exudate into a pearly coating of the affected organ.
hyalosis [*hi"ə-lo'sis*] degenerative changes in the vitreous humor.
asteroid h. fixed opacities composed of a calcium-lipid complex and occurring in an otherwise normal vitreous body. Relatively common in older animals. Compare with **syneresis** and **synchysis scintillans**.
hyaluronate [*hi"ə-l'ro-nāt*] hyaluronan.
hyaluranon a sulfate-free glycosaminoglycan, a main component of the extracellular matrix and found in connective, neural and epithelial tissues, particularly skin and cartilage; also isolated from the vitreous humor, synovial fluid, umbilical cord, etc. Used therapeutically in degenerative joint disease and in solution as a tear film replacement.
hyaluronic acid [*hi"ə-l-ron'ik*] hyaluronan.
hyaluronidase [*hi"ə-l-ron'ĭ-dās*] an enzyme that catalyzes the hydrolysis of hyaluronan, the 'cement material' of connective tissues; it is found in leeches, snake and spider venom, in testes, and is produced by various pathogenic bacteria, enabling them to spread through tissue. A preparation from mammalian testes is used to promote absorption and diffusion of solutions injected subcutaneously. When hyaluronidase is mixed with fluids administered subcutaneously, absorption is more rapid and less uncomfortable. Hyaluronidase should not be given in areas where there is infection. Since it hastens absorption, it must be given with caution when administered with toxic drugs, as the toxic reaction can occur very rapidly.
Hybomitra [*hi"bo-mi'trə*] a genus of the fly family Tabanidae. Called also horse fly. Capable of transmitting anthrax, anaplasmosis, tularemia and equine infectious anemia. They also cause significant insect worry and blood loss.
hybrid [*hi'brid*] an offspring of parents of different strains, varieties or species.
h. vigor increased productivity and performance in the first generation of crossbred animals produced by the mating of dissimilar breeds. The gain is lost if the hybrids are interbred. Called also heterosis.
hybridization [*hi"brid-ĭ-za'shən*] the production of hybrids.
in situ nucleic acid h. a fragment of labeled DNA is used as a probe to detect related nucleic acid sequences in cells or tissues. The method requires that both the probe and the cellular nucleic acid sequences be melted to single-stranded forms and then allowed to form either DNA:DNA or DNA:RNA double-stranded forms.
interspecies h. hybrids resulting from two mating parents of different species.
nucleic acid h. double-stranded DNA when heated in aqueous solution separates into two single strands in a process called denaturation or melting. The single strands readily reform a double helix when the solution is allowed to cool in a process called DNA renaturation or hybridization. Hybridization will occur between any two single-stranded nucleic acid molecules (DNA:DNA, RNA:RNA, RNA:DNA) provided they have complementary nucleotide sequences. The degree of homology between any two nucleic acid molecules can be measured by the percentage of base pairing.
hybridoma [*hi"brid-o'mə*] a cell culture consisting of a clone of a hybrid cell formed by fusing cells of different kinds. Hybridomas formed from mouse B lymphocytes following inoculation of a particular antigen and myeloma cells are immortal and produce

VetBooks.ir

monoclonal antibodies to the inoculated antigen. Such antibodies have produced a revolution in the level at which antibody–antigen reactions can be analyzed leading to precise definition of important epitopes, to methods for purifying antigens, improved diagnostic methods and, it is anticipated, to new methods of therapy.

interspecific h. one formed by fusion of cells from two different species, such as mouse and rat or hamster.

hydatid [*hi'də-tid*] 1. a hydatid cyst. 2. any cyst-like structure.

h. cyst the larval stage of the tapeworm *Echinococcus granulosus* or *E. multilocularis*, containing daughter cysts, each of which, if fertile, will have many protoscoleces; it is the cause of hydatid disease. Called also *Echinococcus* cyst and hydatid.

h. disease an infection in humans, sheep, cattle, pigs and horses, and occasionally in many other mammal species. The infection is usually of the liver or lungs (alveolar hydatid disease), caused by larval forms (hydatid cysts) of **tapeworms** of the genus *Echinococcus*, and characterized by the development of expanding cysts. In the infection caused by *E. granulosus*, single or multiple cysts that are unilocular in character are formed, and in that caused by *E. multilocularis*, the host's tissues are invaded and destroyed as the cyst(s) enlarge by peripheral budding. Called also echinococcosis.

false h. see ***Cysticercus tenuicollis***.

Morgagni's h. see **Morgagni's hydatid**.

sessile h. the hydatid of Morgagni connected with a testis.

stalked h. the hydatid of Morgagni connected with an oviduct.

hydatidiform [*hi"də-tid'i-form*] resembling a hydatid.

hydatidocele a tumor of the scrotum containing hydatids.

hydatidoma a tumor containing hydatids.

hydatidosis [*hi"də-ti-do'sis*] hydatid disease. See **echinococcosis**.

hydatiduria [*hi"də-ti-du're-ə*] excretion of hydatid cysts in the urine.

Hydatigera see ***Taenia***.

hydraeroperitoneum water and gas in the peritoneal cavity.

hydragogue [*hi'drə-gog*] 1. increasing the fluid content of the feces. 2. a purgative that causes evacuation of watery stools.

hydralazine [*hy-dral'ə-zēn*] an antihypertensive and vasodilator drug that relaxes arteriolar smooth muscle by direct action. It is used in peripheral vascular disease, thrombophlebitis and congestive heart failure.

hydrallantois a gross accumulation of fluid in the allantoic sac. Occurs in cows, rarely in mares. Causes dystocia, uterine inertia and death or abortion of the fetus. The most common presentation of this disorder is prepartum downer syndrome.

hydramnios [*hi-dram'ne-os*] excess of amniotic fluid. Commonly associated with fetal deformity. A high incidence in cattle–bison hybrids. Occurs in cows and ewes.

hydranencephaly [*hi"dran-ən-sef'ə-le*] absence of the cerebral hemispheres, their normal site being occupied by cerebrospinal fluid.

arthrogryposis and h. occurs as a combined congenital defect in epidemic form in calves, lambs and kids. It may be caused by intrauterine viral infection with the Akabane and Aino viruses, and by inheritance of a conditioning factor. See also **Akabane virus** disease, **Aino virus** disease.

Hydrangea a genus in the plant family Saxifragaceae; poisoning caused by an unidentified toxin characterized by transient diarrhea in animals eating the plants. Includes horticultural, wild hydrangeas. *H. arborescens*, *H. hortensis*, *H. macrophylla*, *H. quercifolia*.

hydrargyria chronic poisoning from mercury.

H-58: Mare with hydrallantois, showing the enlarged abdomen and the distension of the ventral abdomen.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

hydrargyrum (Hg) [L.] *mercury*.

hydrarthrosis [*hi"drahr-thro'sis*] an accumulation of watery fluid in the cavity of a joint.

hydrase, hydratase [*hi'drə-tās*] any enzyme that catalyzes the hydration–dehydration of C–O linkages.

hydrate [*hi'drāt*] 1. a compound of water with a radical. 2. a salt or other compound that contains water of crystallization.

hydration [*hi-dra'shən*] the absorption of or combination with water.

h. status the status of the fluid–electrolyte balance in a patient.

hydraulic fluid [*hi-draw'lik*] toxic because of its high content of industrial triaryl phosphate.

hydraulics [*hi-draw'liks*] the science dealing with the mechanics of liquids.

hydrazine [*hi'drə-zēn*] a gaseous diamine, H_4N_2, or any of its substitution derivatives.

h. sulfate used in alternative medicine as an appetite stimulant.

hydremia [*hi-dre'me-ə*] excess of water in the blood.

hydrencephalocele [*hi"dren-sef'ə-lo-sēl"*] hydroencephalocele.

hydrencephalomeningocele [*hi"drən-sef"ə-lo-mə-ning'o-sēl*] hydroencephalocele.

hydr(o)- word element. [Gr.] *hydrogen, water*.

hydroallantois [*hi"dro ə-lan'to-is*] hydrallantois.

hydrocalycosis [*hi"dro-ka"lī-ko'sis*] a usually asymptomatic cystic dilatation of a major renal calix due to obstruction of the infundibulum.

hydrocarbon [*hi"dro-kahr'bon*] an organic compound that contains carbon and hydrogen only.

alicyclic h. one that has cyclic structure and aliphatic properties.

aliphatic h. one that does not contain an aromatic ring.

aromatic h. one that has cyclic structure with six carbon atoms and a closed conjugated system of double bonds.

hydrocele [*hi'dro-sēl*] a painless swelling of the scrotum caused by a collection of fluid in the tunica vaginalis testis. Called also water seed.

hydrocelectomy [*hi"dro-se-lek'tə-me*] excision of a hydrocele.

hydrocephalocele [*hi"dro-sef'ə-lo-sēl"*] hydroencephalocele.

hydrocephaloid [*hi"dro-sef'ə-loid*] resembling hydrocephalus.

hydrocephalus [*hi"dro-sef'ə-las*] a condition characterized by abnormal accumulation of cerebrospinal fluid within the cerebral ventricular system. As a consequence, the ventricles are enlarged and the brain is diminutive. A related term, ventriculomegaly, describes enlarged ventricles without specifying whether this enlargement is pathological. Called also water on the brain. Although hydrocephalus occurs occasionally in adults, it is usually associated with a congenital defect in offspring. There are two types of hydrocephalus, the distinction being based on whether there is abnormal absorption of the cerebrospinal fluid or an obstruction to its flow. In *communicating hydrocephalus* there is some abnormality in the capacity to absorb fluid from the arachnoid space. There is no obstruction to the flow of fluid between the ventricles. In *noncommunicating hydrocephalus* there is an obstruction at some point in the ventricular system. The cause of noncommunicating hydrocephalus usually is a congenital abnormality, such as stenosis of the aqueduct of Sylvius (the mesencephalic aqueduct), or congenital atresia of the lateral apertures of the fourth ventricle. Infections, intraventricular hemorrhage, trauma and tumors can produce acquired noncommunicating hydrocephalus. There are three forms that occur in cattle: in one there is gross distention of the cranium with normal facial bones; in the second there is a similar enlargement of the cranium with an accompanying achondroplastic dishing of the face and foreshortening of the maxilla and a shortening of the limb bones—these are the classical 'bulldog' calves; in the third the cranium is normal in size but there is internal hydrocephalus and the calves are blind and imbecile. There are a number of inherited hydrocephalitides in cattle. The disease also occurs in pigs but the inheritance is complex in that it is exacerbated by a concurrent hypovitaminosis A. In dogs and cats, hydrocephalus is common in some toy breeds such as the Chihuahua in which a domed cranium is a desirable feature of conformation. It also occurs less often in adults in association with brain tumors and from infections such as toxoplasmosis and feline infectious peritonitis.

compensatory h. cerebrospinal fluid occupies space vacated by brain parenchyma because of malformation or degeneration.

VetBooks.ir

H-59: (A) Hydrocephalus in a calf. (B) Radiograph of a hydrocephalic Chihuahua puppy showing the domed skull with thinning of the cranial bones and open fontanelle. (A) From Noakes DE, Parkinson TJ, England GCW, Arthur's Veterinary Reproduction and Obstetrics, 8th Edition. Saunders, 2001.

Examples are seen in fetal infection by bluetongue virus or bovine virus diarrhea virus, severe polioencephalomalacia in cattle, and cerebral infarction in cats.

h. ex vacuo see compensatory hydrocephalus (above).

external h. the excess fluid is in the arachnoid space; rare in animals.

hypertensive h. accompanied by increased cerebrospinal fluid pressure.

internal h. the excess fluid is within the ventricular system; common in domestic animals and may be congenital or acquired.

normotensive h. accompanied by normal cerebrospinal fluid pressure.

hydrochloric acid [*hi"dro-klor'ik*] HCl; a normal constituent of gastric juice in humans and other animals. The absence of free hydrochloric acid in the stomach, called achlorhydria, may be found with chronic gastritis. Called also gastric anacidity.

hydrochloride [*hi"dro-klor'īd*] an addition salt of hydrochloric acid with an organic base.

hydrochlorothiazide [*hi"dro-klor"o-thi'ə-zīd*] a thiazide diuretic; sometimes used for an antidiuretic effect in the treatment of diabetes insipidus in dogs.

hydrocholecystis distention of gallbladder with watery fluid.

hydrocholeresis [*hi"dro-ko"lə-re'sis*] secretion of bile relatively low in specific gravity, viscosity and total solid content.

hydrocholeretic [*hi"dro-ko"lə-re'tic*] 1. pertaining to or producing hydrocholeresis. 2. an agent that stimulates an increased output of bile of low specific gravity.

hydrocirsocele hydrocele with varicocele.

hydrocodone [*hi"dro-ko'dōn*] a synthetic narcotic analgesic similar to but more active than codeine; used as an antitussive. Called also dihydrocodeinone.

hydrocolloid [*hi"dro-ko'loid*] a colloid in which water is the dispersion medium.

h. wound dressing impermeable to oxygen and carbon dioxide, the colloid interacts with tissue fluid to form a nonadhesive gel.

hydrocolpos [*hi"dro-kol'pos*] collection of watery fluid in the vagina.

hydrocortisone [*hi"dro-kor'tĭ-sōn*] the pharmaceutical term for cortisol, the principal **glucocorticoid** secreted by the adrenal gland; it is used in the treatment of inflammations, allergies, pruritus, collagen diseases, adrenocortical insufficiency, and certain neoplasms. The soluble salts, sodium succinate and sodium phosphate, are used intravenously in the treatment of shock.

hydrocyanic acid [*hi"dro-si-an'ik*] a volatile liquid that is extremely poisonous because it checks the oxidation process in protoplasm. See also **cyanide**.

hydrocyst [*hi'dro-sist*] a cyst with watery contents.

hydroencephalocele [*hi"dro-en-sef'ə-lo-sēl*] hernial protrusion of the brain into a sac distended by cerebrospinal fluid. Called also encephalocystocele.

hydrofluoric acid [*hi"dro-floor'ik*] a glass etching agent; is in the effluent gases from some industrial plants making bricks, pottery, working aluminum. Creates a toxic hazard associated with industry. See also **fluorosis**.

hydrogel [*hi'dro-jəl*] a gel that contains water.

hydrogen (H) [*hi'dro-jən*] a chemical element, atomic number 1, atomic weight 1.00797. See Table 4. It exists as the mass 1 isotope (protium, or light or ordinary hydrogen), mass 2 isotope (deuterium, heavy hydrogen), and mass 3 isotope (tritium).

h. breath test detects hydrogen production as a product of bacterial fermentation of carbohydrates, an indicator of inflammatory bowel disease or carbohydrate malabsorption.

h. cyanide hydrocyanic acid.

heavy h. hydrogen having double the mass of ordinary hydrogen; deuterium.

h. ion the positively charged hydrogen atom (H+), present to excess in acid solutions.

h. ion balance see **acid–base balance**.

h. ion concentration the degree of concentration of hydrogen ions (the acid element) in a solution. Its symbol is pH, and expresses the degree to which a solution is acidic or alkaline. The pH range extends from 0–14, pH 7 being neutral. A pH of less than 7 indicates acidity, above 7 indicates alkalinity. See also **acid–base balance** and **pH**.

h. sulfide an ill-smelling, colorless, poisonous gas, H_2S; much used as a chemical reagent. Hydrogen sulfide is often present in gases from oil wells and from manure vats under slatted floor barns. Poisoning of cattle causes diarrhea, dehydration, dyspnea and death in convulsions. The feces are black and the breath smells of hydrogen sulfide. Called also hydrosulfuric acid. See also **manure** pit gas poisoning.

hydrogenase an enzyme that catalyzes the reduction of various substances by combining them with molecular hydrogen.

hydrogenate [*hi'dro-jən-at"*] to cause to combine with hydrogen; to reduce with hydrogen.

hydrogenation the process or reaction of combining with hydrogen.

hydrokinetic [*hi"dro-kĭ-net'ik*] relating to movement of water or other fluid, as in a whirlpool bath.

hydrokinetics the science dealing with fluids in motion.

hydrolase [*hi'dro-lās*] one of the six main classes of enzymes, comprising those that catalyze the hydrolysis of a compound.

hydro-lyase [*hi"dro-li'ās*] an enzyme that catalyzes the removal of a hydrogen atom and a hydroxyl group from the substrate molecule as water and the formation of a double bond.

hydrolysate [*hi-drol'ə-zāt*] any compound produced by hydrolysis.

protein h. a mixture of amino acids prepared by splitting a protein with acid, alkali or enzyme. Such preparations provide the nutritive equivalent of the original material in the form of its constituent amino acids and are used in special diets or for patients unable to take the ordinary food proteins.

hydrolysis [*hi-drol'ə-sis*] the cleavage of a compound by the addition of water, the hydroxyl group being incorporated in one fragment and the hydrogen atom in the other.

hydrolyze [*hi'dro-līz*] to performance hydrolysis.

hydroma [*hi-dro'mə*] hygroma.

hydromedusa see **medusa**.

hydromeningitis [*hi"dro-men"in-ji'tis*] meningitis with serous effusion.

hydromeningocele [*hi"dro-mə-ning'go-sēl*] protrusion of the meninges, containing fluid, through a defect in the skull or vertebral column.

hydrometer [*hi-drom'ə-tər*] an instrument for determining the specific gravity of a fluid.

hydrometra [*hi"dro-me'trə*] collection of watery or mucoid fluid in the uterus.

hydrometrocolpos [*hi"dro-me"tro-kol'pos*] collection of watery fluid in the uterus and vagina; often associated with vaginal adhesion or congenital abnormalities, such as vaginal aplasia, persistent hymen.

H-60: Hydronephrosis in a dog.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

hydrometry [*hi-drom'ə-tre*] measurement of specific gravity with a hydrometer.
hydromicrocephaly [*hi"dro-mi"kro-sef'ə-le*] smallness of the head with an abnormal amount of cerebrospinal fluid.
hydromorphone [*hi"dro-mor'fōn*] a μ-opioid agonist, similar to oxymorphone; the hydrochloride is used as an analgesic and cough suppressant.
hydromphalus [*hi-drom'fə-ləs*] a cystic accumulation of watery fluid at the umbilicus.
hydromyelia [*hi"dro-mi-e'le-ə*] dilatation of the central canal of the spinal cord with an abnormal accumulation of fluid.
hydromyelomeningocele [*hi"dro-mi"ə-lo-mə-ning'go-sēl*] a defect of the spine marked by protrusion of the membranes and tissue of the spinal cord, forming a fluid-filled sac.
hydromyoma [*hi"dro-mi-o'mə*] a leiomyoma with cystic degeneration.
hydronephrosis [*hi"dro-nə-fro'sis*] distention of the renal pelvis and calices with urine. If it is allowed to progress, the functioning units of the kidney are destroyed. The collecting tubules dilate and the muscular walls of the renal pelvis and calices stretch, are replaced by fibrous tissue, and eventually form a large, fluid-filled, functionless sac. Caused usually by obstruction of a ureter. Unilateral hydronephrosis is likely to go unobserved unless its size becomes apparent during a clinical examination. Bilateral involvement will present a picture of developing uremia.
capsular h. see feline **perirenal** cysts.
hydronium [*hi-dro'ne-əm*] the hydrated proton H_3O+; exists in aqueous solution, a combination of H+ and H_2O.
hydropericarditis [*hi"dro-per"ĭ-kahr-di'tis*] pericarditis with watery effusion.
hydropericardium [*hi"dro-per"ĭ-kahr'de-əm*] an excess of transudate in the pericardial cavity. The cardiac shadow is enlarged and distorted on radiography; its size encroaches on the area over which lung sounds can normally be heard.
h. syndrome sudden death in chickens with hydropericardium and acute hepatocytic necrosis; caused by group I avian adenovirus, possibly in association with chicken anemia virus infection. Called also hydropericardium-hepatitis syndrome, inclusion body hepatitis-hydropericardium syndrome, Angara disease.
hydroperitoneum [*hi"dro-per"ĭ-to-ne'əm*] a collection of fluid in the peritoneal cavity; **ascites**.

H-61: Hydropericardium in a cat.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

hydroperoxyeicosatetraenoic acid (HPETE) [*hi"dro-pər-ok"se-i-ko"sə-tet"rə-e-no'ik*] an intermediate in the formation of leukotriene A4 from arachidonic acid. Precursor of hydroxyeicosatretaenoic acids (HETEs).
hydrophilia [*hi-dro-fil'e-ə*] the property of absorbing water; having a strong affinity for water.
hydrophilic [*hi"dro-fil'ik*] readily absorbing moisture; hygroscopic; having strongly polar groups that readily interact with water.
hydrophilous [*hi-drof'ĭ-ləs*] hydrophilic.
hydrophobia [*hi"dro-fo'be-ə*] 1. fear of water. 2. rabies.
hydrophobic [*hi"dro-fo'bik*] 1. pertaining to hydrophobia (**rabies**). 2. repelling water; insoluble in water; not readily absorbing water.
h. interaction interaction of nonpolar (un-ionizable) hydrocarbon molecules forced together because of stronger water–water interaction.
h. signal peptides 15 to 30 amino acids located at or near the *N*-terminus of a protein that always includes a hydrophobic core of at least eight nonpolar amino acids, found in proteins that are synthesized on membrane bound ribosomes and destined for export from the cell.
hydrophthalmos [*hi"drof-thal'mos*] pathologic enlargement of the globe in glaucoma, especially notable in young animals because of the relative distensibility of their sclera. See also **buophthalmos**, **buophthalmia**.
hydrophysometra [*hi"dro-fi"so-me'trə*] collection of fluid and gas in the uterus.
hydropic [*hi-drop'ik*] affected with dropsy, or hydrops.
h. degeneration a general histopathological finding in which cells absorb excess water and solutes, indicating ischemic or toxic injury or early autolysis.
hydropneumatosis [*hi"dro-noo"mə-to'sis*] collection of fluid and gas in the tissues.
hydropneumogony [*hi"dro-noo-mo'gə-ne*] injection of air into a joint to detect the presence of effusion.
hydropneumopericardium [*hi"dro-noo"mo-per"ĭ-kahr'de-əm*] fluid and gas in the pericardium.
hydropneumoperitoneum [*hi"dro-noo"mo-per"ĭ-to-ne'əm*] fluid and gas in the peritoneal cavity.
hydropneumothorax [*hi"dro-noo"mo-thor'aks*] a collection of fluid and gas within the pleural cavity.
hydroponics a method of cultivating plant growth without soil. Based on use of a solution containing all essential plant nutrients. The plant material is harvested at about 2 weeks of age. The herbivore's equivalent of sprouts or shoots in the human diet. Called also sprouted grain.
hydropropulsion [*hi"dro pro-pul'shən*] using water pressure as a force to move objects; used to dislodge calculi in the urethra.
hydrops [*hi'drops*] [L.] abnormal accumulation of serous fluid in the tissues or in a body cavity; called also dropsy. See also **hydramnios** (hydrops amnii), **hydrallantois** (hydrops allantois).
fetal h., hydrops fetalis gross edema of the entire body of the newborn. See also fetal **anasarca**.
h. uteri see **hydramnios**, **hydrallantois**.
hydropyonephrosis [*hi"dro-pi"o-nə-fro'sis*] urine and pus in the renal pelvis.
hydroquinone [*hi"dro-kwĭ-nōn'*] thought at one time to be the toxic component of *Xanthium* spp., a now discredited view.
hydrorrhea [*hi"dro-re'ə*] a copious watery discharge.
h. gravidarum watery discharge from the gravid uterus.
hydrosalpinx [*hi"dro-sal'pinks*] accumulation of watery fluid in a uterine tube (salpinx or oviduct).
hydrosarcocele [*hi"dro sahr'ko-sēl*] hydrocele and sarcocele together.
hydroscheocele a scrotal hernia containing fluid.
hydrosol [*hi'dro-sol*] a colloid in which the dispersion medium is a liquid.
hydrostatic [*hi"dro-stat'ik*] pertaining to a liquid in a state of equilibrium or the pressure exerted by a stationary fluid.
h. pressure a significant factor in intestinal absorption; the tissue fluid pressure against which osmosis has to achieve a positive gradient if small molecules are to pass the cell membranes and be absorbed.
hydrostatics [*hi"dro-stat'iks*] the science of equilibrium of fluids.
hydrosyringomyelia [*hi"dro-sĭ-ring"go-mi-e'le-ə*] distention of the central canal of the spinal cord, with the formation of cavities and degeneration.

VetBooks.ir

hydrotaxis [*hi"dro-tak'sis*] an orientation movement of motile organisms or cells in response to the influence of water or moisture.

hydrotherapy [*hi"dro-ther'ə-pe*] the external use of water in the treatment of disease and injury. Because of its physical properties related to the conduction of heat, buoyancy and cleansing action, water is an ideal agent for applications of heat **therapy** and therapeutic **hypothermia** to obtain desired physiological effects, débridement of wounds that are extensive and not easily cleansed by other methods, and the implementation of programs of therapeutic **exercise**. See also whirlpool **bath**.

hydrothermal, hydrothermic [*hi-dro-thur'məl, hi"dro-thur'mik*] relating to the temperature effects of water, as in hot baths.

hydrothionemia [*hi"dro-thi"o-ne'me-ə*] hydrogen sulfide in the blood.

hydrothionuria [*hi"dro-thi"o-nu're-ə*] hydrogen sulfide in the urine.

hydrothorax [*hi"dro-thor'aks*] the presence of noninflammatory serous fluid within the pleural cavity. The fluid in the pleural cavity causes compression of lung with resulting dyspnea and ventral absence of lung sounds.

Hydrotoea a genus of head flies in the family Muscidae. Their importance depends on their proclivity for sweat, blood and tears. They cause insect worry in all animal species and in lexicographers.

H. albipuncta, H. meteorica, H. occulta sweat flies of horses and humans.

H. dentipes a dung fly, not recorded as annoying animals.

H. irritans the sheep head fly; causes insect worry, some damage to the skin around the horns and may predispose sheep, and sometimes cattle, to blowfly strike. Implicated in the transmission of summer **mastitis** in cows.

hydrotropism [*hi-drot'ro-piz-əm*] a growth response of a nonmotile organism to the presence of water or moisture.

hydrotympanum a collection of serous fluid in the middle ear.

hydroureter [*hi"dro-u-re'tər*] distention of the ureter with fluid, due to obstruction.

hydrous [*hi'drəs*] containing water.

hydrovarium [*hi"dro-var'e-əm*] a collection of serous fluid in an ovary.

hydroxamic acid an inhibitor of urease and a chelating agent. See also **acetohydroxamic acid**.

hydroxide [*hi-drok'sīd*] the OH^- anion or a compound containing the OH^- ion.

hydroxocobalamin, hydroxycobalamin [*hi-drok"so-ko-bal'ə-min*] an analog of cyanocobalamin (vitamin B_{12}) having exceptionally long-acting hematopoietic activity. Called also vitamin B_{12b}.

hydroxy- a chemical prefix indicating presence of the univalent radical −OH.

17-hydroxy-11-desoxycorticosterone adrenocortical steroid with most effect on electrolyte metabolism (mineralocorticoid).

4-hydroxy-3-nitrophenylarsonic acid see **roxarsone** coccidiostatic drugs.

3-hydroxy-4(1H)-pyridone toxic degradation product of mimosine; found in the rumen. Called also 3-hydroxy-4-pyridone.

hydroxyanisole an antioxidant used in food preservation, usually as the butylated form.

hydroxyapatite [*hi-drok"se-ap'ə-tīt*] the principal inorganic constituent of bone matrix and teeth, imparting rigidity to these structures, and consisting of hydrated calcium phosphate.

2-(4′-hydroxyazobenzene) benzoic acid (HABA) an acid dye used at one time in the colorimetric assay of serum albumin, now superseded by other methods.

hydroxybenzoate [*hi-drok"se ben'zo-āt*] an antioxidant used in food preservation; the butylated product is the standard form of usage. Also used as a preservative in pharmaceutical preparations. Called also parabens.

β-hydroxybutyrate (BHB), 3-hydroxybutyrate 4 carbon carboxylic acid with an hydroxyl group on the beta carbon atom; one of the three compounds known as ketone bodies (although not a ketone) formed by the breakdown of fatty acids; important source of energy for extrahepatic tissues (not the brain in sheep) normally during fasting and during starvation or diabetes mellitus. Contributes to ketoacidosis when produced in excess. Excreted in bovine **ketosis**, ovine and bovine **pregnancy** toxemia and diabetic ketoacidosis.

β-h. dehydrogenase mitochondrial enzyme catalyzing the NADH-linked-reduction of acetoacetate to β-hydroxybutyrate.

3-hydroxybutyric acid, β-hydroxybutyric acid see **β-hydroxybutyrate**.

hydroxycarbamide [*hi-drok"se kahr'bə-mīd*] see **hydroxyurea**.

hydroxychloroquine [*hi-drok"se-klor'o-kwin*] a drug used as the sulfate salt in the treatment of lupus erythematosus, rheumatoid arthritis and giardiasis.

25-hydroxycholecalciferol [*hi-drok"se-ko"lə-kal-sif'ə-rol*] a metabolically activated form of cholecalciferol synthesized in the liver. Converted in the kidneys into calcitriol (1,25-dihydroxycholecalciferol), an active form of vitamin D. Called also calcifediol (INN).

11-hydroxycorticosteroids [*hi-drok"se-kor"tĭ-ko-ster'oid*] corticosteroids with a hydroxyl group in the 11 position, e.g. cortisol, corticosterone.

17-hydroxycorticosteroids (17-OHCS) adrenocorticosteroid hormones with a hydroxyl group at C-17, with or without oxygen at C-11, e.g. cortisol, cortisone and 11-desoxycortisol.

urinary 17-h. determination of urinary 17-hydroxycorticosteroids is an indication of the plasma concentration of cortisol and the functional status of the adrenal cortex.

5-hydroxy-*N*,*N*-dimethyltryptamine a toxic indole alkaloid in *Phalaris aquatica* (*tuberosa*).

hydroxyeicosatetraenoic acids (HETEs) [*hi-drok"se-i-ko"sə-tet"rə-e-no'ik*] products formed by the action of glutathione peroxidase on hydroperoyxeicosatetetraenoic acid (HPETE) which results from the metabolism of arachidonic acid by lipoxygenase; involved in the modulation of ion transport, renal and pulmonary functions, vascular tone and inflammatory responses.

hydroxyethyl starch see **hetastarch**.

ʟ-hydroxyethylamide one of the alkaloids of *Claviceps purpurea*.

5-hydroxyindoleacetic acid (5-HIAA) the principle metabolite of serotonin.

hydroxyl [*hi-drok'səl*] the univalent radical −OH.

hydroxylase [*hi-drok'sə-lās*] any enzyme that brings about the coupled oxidation of two donors, with incorporation of oxygen into one of them.

21-h. a partial deficiency of the enzyme, in Pomeranian dogs, is thought to cause a dermatosis; histopathological lesions are of cutaneous atrophy; clinical signs include bilateral alopecia of the trunk, caudal thighs, ventral neck.

1-α-h. the renal enzyme responsible for the conversion of 25-hydroxycholecalciferol (25-hydroxyvitamin D) into 1,25-dihydroxycholecalciferol and 24,25-dihydroxycholecalciferol, the active and inactive forms of vitamin D, respectively.

hydroxylation addition of −OH groups to a molecule.

hydroxylysine [*hi-drok"se-li'sēn*] hydroxy derivative of the amino acid lysine; occurs naturally as a component of collagen.

hydroxymethylglutaryl-CoA [*hi-drok"se-meth"əl-gloo'tə-rəl*] a regulatory enzyme involved in the maintenance of the concentration of cholesterol in cells; key intermediate in synthesis of cholesterol in cytosol; also produced in mitochondria during ketogenesis.

h.-reductase similarly involved in cholesterol metabolism and the regulation of its contents in tissues.

hydroxyphenobarbital [*hi-drok"se- fe"no-bahr'bĭ-təl*] a metabolic product of phenobarbital produced in the liver; has very little anticonvulsant activity.

hydroxyprogesterone [*hi-drok"se-pro-jes'tər-ōn*] progesterone derivative used in bitches to prevent estrus and to treat pseudopregnancy. Used in camelids to maintain pregnancy.

hydroxyproline (Hyp) [*hi-drok"se-pro'lēn*] hydroxy derivative of the amino acid proline; a major component of collagen.

hydroxypropyl methylcellulose [*hi-drok"se-pro'pəl meth"əl-sel'u-lōs*] a compound used in topically applied lacrimomimetic agents for dry eye or in viscoelastic agents for intraocular surgery.

hydroxyquinolines [*hi-drok"se-kwin'o-lēn*] 8-hydroxyquinoline and 8-hydroxyquinoline sulfate are used as topical antiseptics and disinfectants.

hydroxystilbamidine isethionate a systemic fungicide and antiprotozoal drug.

hydroxytetracycline [*hi-drok"se tet"rə-si'klēn*] oxytetracycline.

hydroxytoluene [*hi-drok"se tol'u-ēn*] an antioxidant used in food preservation; used as the butylated form.

5-hydroxytryptamine [*hi-drok"se-trip'tə-mēn*] serotonin.

hydroxyurea [*hi-drok"se-u-re'ə*] an **antineoplastic** agent that blocks the conversion of ribonucleotides to deoxyribonucleotides, thus

stopping DNA synthesis. Used in the treatment of myeloproliferative disorders. Called also hydroxycarbamide.

γ-hydroxyvinylacrylic acid an acid whose lactone is **protoanemonin**.

hydroxyzine [*hi-drok'sə-zēn*] a piperazine derivative which acts to block histamine H_1-receptors. Used as a sedative and antipruritic.

Hydrozoa [*hi"drə-zo'ə*] a class of aquatic, mainly saltwater, animals related to, but distinct from, jellyfishes. See **Portuguese man-of-war**.

hydruria [*hi-droo're-ə*] excretion of urine of low specific gravity.

hyena member of the family Hyaenidae, native to Africa and Asia. Carnivorous but only for carrion. They have four toes, low hindquarters relative to their strong forequarters, and rough coats consisting mostly of guardhairs. Includes spotted hyena (*Crocuta crocuta*), striped hyena (*Hyaena hyaena*), and brown hyena (*H. brunnea*). The aardwolf is a close relative.

h. disease cattle disease of slow growth, underdevelopment of hindquarters, thick, stiff bristles along the back, aggressive behavior. A chondrodystrophy affecting hindlimb bones and lumbar vertebrae. The overall effect is to create a silhouette like that of a hyena. Cause unknown but similar lesions can be reproduced by the administration of high amounts of vitamin A.

hyena poison see ***Hyaenanche globosa***.

hygiene [*hi'jēn*] 1. the science of health and its preservation. 2. a condition or practice, such as cleanliness, that is conducive to preservation of health.

hygienics [*hi-jen'iks*] a system of principles for promoting health.

hygienist [*hi-jen'ist, hi"je-en'ist*] a specialist in hygiene.

hygr(o)- word element. [Gr.] *moisture*.

hygroma [*hi-gro'mə*] an accumulation of fluid in a sac, cyst or bursa.

carpal h. large fluid-filled subcutaneous sac on the anterior aspect of the carpus caused by trauma.

cystic h., h. cysticum an endothelium-lined, fluid-containing lesion of lymphatic origin.

elbow h. a fluid-filled, painless, subcutaneous swelling over the point of the elbow involving the formation of a false bursa. Occurs mainly in the large breeds of dogs and in horses where it is called shoe boil.

hock h. a swelling of the subcutaneous bursa over the tuber calcis. The initial soft fluctuating swelling is replaced by a firm fibrous capsule to form a hygroma. Called also capped hock.

perirenal h. see feline **perirenal** cysts.

hygrometer [*hi-grom'ə-tər*] an instrument for measuring atmospheric moisture.

hygromycin B an antibiotic produced by *Streptomyces hygroscopicus*; used for the control of ascariasis and esophagostomiasis in sows. The method of use is to feed it to sows over a period of several weeks, or continuously to growing pigs. Overdosing may cause deafness and cataracts. Used also for the control of *Ascaria*, *Capillaria* and *Heterakis* spp. in poultry.

hygroscopic [*hi"gro-skop'ik*] readily absorbing moisture.

hygroscopicity the quality of being hygroscopic.

hymen [*hi'mən*] the membranous fold partly or completely closing the vaginal orifice; usually inconspicuous in domestic animals and when present located as a low ridge at the junction between vagina and vestibule.

imperforate h., persistent hymen white heifer disease associated commonly with cattle with all-white coats but occurs also in cattle of other colors and sporadically in other species. The heifer comes on heat and may breed but with difficulty and with straining afterwards. On rectal examination there is a distended uterus. The membrane may be rupturable and the animal conceive but there may be other tubular defects and the animals are best discarded. Is associated with infertility in alpacas and llamas.

H-62: Carpal hygroma. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

H-63: Hock hygroma (capped hock) in a horse. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

hymenectomy [*hi"mən-ek'tə-me*] excision of the hymen.

hymenitis [*hi"mən-i'tis*] inflammation of the hymen.

hymenolepiasis [*hi"mə-no-lep-i'ə-sis*] infection due to species in the tapeworm genus *Hymenolepis*.

Hymenolepis [*hi"mə-nol'ə-pis*] a genus of cyclophyllidean tapeworms of the family Hymenolepididae; mostly have little pathogenicity.

H. cantaniana found in small intestine of chickens and other birds.

H. carioca occurs in fowls.

H. diminuta occurs in wild rodents and in humans.

H. lanceolata found in ducks and geese.

H. microstoma found in duodenum, gallbladder and bile ducts of rodents.

H. nana occurs in primates, rodents and humans. Called also dwarf tapeworm.

Hymenoptera [*hi"mən-op'tər-ə*] an order of the class Insecta. Includes the ants, wasps, hornets, bees, fireants and sawflies. Characterized by two pairs of shiny, membranous wings.

h. sting a cause of injury and sometimes serious toxic and hypersensitivity reactions, particularly in dogs, which may be local or systemic. See also **bee sting**.

hymenotomy [*hi"mən-ot'ə-me*] incision of the hymen.

hymenovin [*hi"mə-no'vin*] a toxic sesquiterpene lactone in *Hymenoxys odorata*. Called also hymenoxon.

hymenoxon hymenovin.

Hymenoxys [*hi"mə-nok'sis*] a plant genus of the Asteraceae (Compositae) family; contain toxic sesquiterpene lactone; poisoning causes a syndrome called 'spewing sickness' consisting of gastroenteritis manifested by lethargy, salivation, vomiting, abdominal pain and diarrhea plus nervous signs of tremor, incoordination and convulsions in pastured animals which eat the plant. Includes *H. lemmoni*, *H. odorata*, *H. richardsonii* (*H. floribunda*). Called also *Actinea* spp., bitterweed, Colorado rubber weed, pingue.

hyoepiglottidean [*hi"o-ep"i-glŏ-tid'e-ən*] pertaining to the hyoid bone and epiglottis.

hyoglossal [*hi"o-glos'əl*] pertaining to the hyoid bone and tongue or to the hyoglossal muscle (Table 13.1B) or nerve (Table 14).

hyoid [*hi'oid*] 1. shaped like Greek letter upsilon (υ). 2. pertaining to the hyoid bone.

h. apparatus the suspensory mechanism for the tongue and larynx. Consists of the single basihyoid, and the paired thyrohyoid, ceratohyoid, epihyoid and stylohyoid bones and the tympanohyoid cartilages.

VetBooks.ir

h. bone one or more of the bones of the hyoid apparatus, fused in some species (e.g. human) to form a horseshoe-shaped bone situated at the base of the tongue, just below the thyroid cartilage. See also Table 10.

hyoscine [*hi'o-sēn*] scopolamine.

hyoscyamine [*hi"o-si'ə-mēn*] an anticholinergic alkaloid usually obtained from species of the plant *Hyoscyamus* and other solanaceous plants. It is the levorotatory component of atropine with actions and uses similar to those of atropine but with more potent effects.

Hyoscyamus niger [*hi"o-si'ə-məs*] a European plant in the family Solanaceae; contains sufficient hyoscyamine to cause poisoning; signs include restlessness, excitement, muscle tremor and dilatation of the pupils. Called also henbane.

hyostrongylosis disease of pigs caused by infestation with the worm *Hyostrongylus rubidus*. Characterized by loss of condition, anemia, diarrhea. Once cause of thin sow syndrome.

Hyostrongylus [*hi"o-stron'jə-ləs*] a genus of gastric nematodes in the family Trichostrongylidae.

H. rubidus causes hyostrongylosis in pigs. The worms are found in the stomach of the pig.

hyovertebrotomy a surgical approach to the guttural pouch of the horse for the purpose of ligating a leaking internal carotid artery. The approach is between the hyoid apparatus and the vertebral wing of the atlas.

Hyp hydroxyproline.

hyp- see **hypo-**. word element. [Gr.] *abnormally decreased, deficient, beneath, under*.

hypalgesia [*hi"pal-je'ze-ə*] reduced sensitivity to pain.

hypamnios [*hi-pam'ne-os*] deficiency of amniotic fluid.

hypanakinesia [*hi-pan"ə-kĭ-ne'zhə*] hypokinesia.

HYPAR acronym for *hy*sterectomy *p*roduced *a*rtificially *r*eared pigs. See **specific pathogen free**.

hypaxial [*hi-pak'se-əl*] beneath an axis, as the axis of the vertebral column.

hyper- word element. [Gr.] *abnormally increased, excessive*.

hyperabsorption [*hi"pər-ab-sorp'shən*] increased intestinal absorption of a substance.

hyperacid [*hi"pər-as'id*] abnormally or excessively acid.

hyperacidity [*hi"pər-ə-sid'ĭ-te*] excessive acidity.

hyperactive [*hi"pər-ak'tiv*] exhibiting hyperactivity; hyperkinetic.

hyperactivity [*hi"pər-ak-tiv'ĭ-te*] the state of being hyperactive. Seen in early stages of many poisonings causing nervous system excitation, early encephalitides, anoxia, water deprivation; also at weaning or temporary separation from young or herd. Also in canine and sow hysteria.

rumenoreticular h. a diagnostic sign in **vagus** indigestion.

hyperacute [*hi"pər-ə-kūt'*] extremely acute; course of a few hours. Called also peracute.

hyperadenosis [*hi"pər-ad"ə-no'sis*] enlargement of glands.

hyperadiposis [*hi"pər-ad"ĭ-po'sis*] extreme fatness.

hyperadrenalcorticism [*hi"pər-ə-dre"no-kor'tĭ-siz-əm*] hyperadrenocorticism.

hyperadrenalism, hyperadrenia [*hi"pər-ə-dre'nəl-iz-əm*] overactivity of the adrenal glands.

hyperadrenocorticalism [*hi"pər-ə-dre"no-kor'tĭ-siz-əm*] hyperadrenocorticism.

hyperadrenocorticism [*hi"pər-ə-dre"no-kor'tĭ-siz-əm*] disease caused by hyperactivity of the adrenal cortices. May be caused by a corticotropic adenoma of the pituitary or by overtreatment with corticosteroids. In most species, the clinical picture is that of **Cushing's syndrome**.

iatrogenic h. induced by the administration of corticosteroids in the treatment of inflammatory or immune-mediated diseases. Seen with increasing frequency in small animals, particularly dogs.

ferret h. a common occurrence in ferrets, caused by functional neoplasia or hyperplasia of the adrenal glands. In contrast with the excessive secretion of corticosteroids in other species, there is hypersecretion of androgens or estrogens. Plasma concentrations of cortisol are not abnormal. Clinical signs include alopecia, pruritus, enlarged vulva, anemia and in males a prostatic hypertrophy which may cause urethral obstruction.

juvenile h. reported in dogs; likely to result in stunted growth in addition to other clinical signs of Cushing's syndrome.

pituitary-dependent h. (PDH) see **Cushing's syndrome**.

hyperadrenocorticoidism see **hyperadrenocorticism**.

hyperaggression furious aggressiveness, a normal state for some wild cats when captured. A clinical sign in ordinarily mild-mannered animals in furious rabies.

hyperalbuminemia [*hi"pər-al-bu"mĭ-ne'me-ə*] excessive albumin content of the blood; occurs with dehydration and hemoconcentration.

hyperaldosteronemia [*hi"pər-al-dos"tə-ro-ne'me-ə*] excess of aldosterone in the blood.

hyperaldosteronism [*hi"pər-al-dos'tə-ro-niz"əm*] an abnormality of electrolyte metabolism produced by excessive secretion of aldosterone; it may be primary (Conn's syndrome) or occur secondarily in response to continued stimulation of the renin-angiotensin system by extra-adrenal disease such as heart failure, renal disease or hepatocellular diseasae. There may be hypertension, hypokalemia, alkalosis, muscular weakness, polyuria and polydipsia. Called also aldosteronism.

hyperaldosteronuria [*hi"pər-al-dos"tə-ro-nu're-ə*] excess of aldosterone in the urine.

hyperalgesia [*hi"pər-al-je'ze-ə*] a state of abnormally increased sensitivity to pain or nociceptive stimuli, as occurs under the influence of low doses of barbiturate anesthetic drugs or in chronic pain states via activation of NMDA receptors in the dorsal horn of the spinal cord.

hyperalimentation [*hi"pər-al"ĭ-men-ta'shən*] a program of parenteral administration of all nutrients for patients with gastrointestinal dysfunction; called also total parenteral alimentation (TPA) and total parenteral nutrition (TPN). Although the term *hyperalimentation* is commonly used to designate total or supplemental nutrition by intravenous feedings, it is not technically correct inasmuch as the procedure does not involve an abnormally increased or excessive amount of feeding. For more information, see parenteral **nutrition**, **superalimentation**.

enteral h. the use of a gastrointestinal tube.

hyperalkalinity [*hi"pər-al"kə-lin'ĭ-te*] excessive alkalinity.

hyperalphalipoproteinemia [*hi"pər-al"fə-lip"o-pro"te-ne'me-ə*] the presence of abnormally high concentrations of α-lipoproteins in the serum.

hyperammonemia, hyperammoniemia [*hi"pər-am"o-ne'me-ə*] 1. the presence of ammonia in excess of the normal range of concentration of ammonia in the blood. 2. a metabolic disorder marked by elevated concentrations of ammonia or ammonium ion in the blood. One of the effects of severe hepatic dysfunction. May cause hepatic encephalopathy.

hyperammoniuria [*hi"pər-am"o-nu're-ə*] excess of ammonia in the urine.

hyperamylasemia [*hi"pər-am"ə-la-se'me-ə*] abnormally high concentrations of amylase in the blood serum.

hyperanakinesia [*hi"pər-an"ə-kĭ-ne'zhə*] excessive motor activity.

hyperandrogenism [*hi"pər-an'dro-jən-iz-əm*] a cause of perianal gland hyperplasia and tail gland hyperplasia in male dogs; seborrheic skin disease and alopecia may also occur.

hyperazotemia [*hi"pər-az"o-te'me-ə*] excess of nitrogenous matter in the blood.

hyperazoturia [*hi"pər-az"o-tu're-ə*] excess of nitrogenous matter in the urine.

hyperbaric [*hi"pər-bar'ik*] characterized by greater than normal pressure or weight; applied to gases under greater than atmospheric pressure, or to a solution of greater specific gravity than another taken as a standard of reference.

h. chamber an enclosed space in which gas (oxygen) can be raised to greater than atmospheric pressure.

h. oxygenation exposure to oxygen under conditions of greatly increased pressure; abbreviated HPO, for high-pressure oxygenation. This treatment is given to patients who, for various reasons, need more oxygen than they can take in by breathing while in the ordinary atmosphere, or even in an oxygen tent.

hyperbarism [*hi"pər-bar'iz-əm*] a condition due to exposure to ambient gas pressure or atmospheric pressures exceeding the pressure within the body.

hyperbetalipoproteinemia [*hi"pər-ba"tə-lip"o-pro"te-ne'me-ə*] increased accumulation of β-lipoproteins in the blood.

hyperbilirubinemia [*hi"pər-bil"ĭ-roo"bĭ-ne'me-ə*] excess of bilirubin in the blood; classified as conjugated or unconjugated according to the form of bilirubin present. See also **jaundice**.

congenital h. see **Gilbert's syndrome**.

hyperbrachycephalic [*hi"pər-brak"e-sə-fal'ik*] having a very short, wide head.

hyperbradykininemia [*hi"pər-brad"e-ki"nĭ-ne'me-ə*] an excess of bradykinin in the blood.

hypercalcemia [*hi"pər-kal-se'me-ə*] excess of calcium in the blood; calcemia due to overdosing with **hypervitaminosis** D, calcinogenic plants inducing **enzootic** calcinosis in cattle, **pseudohyperparathyroidism**, osteolytic lesions, primary **hyperparathyroidism**, some cases of renal failure, hemoconcentration, hypoadrenocorticism, and disuse osteoporosis.

malignancy-associated h. see **pseudohyperparathyroidism**.

hypercalcemic pertaining to hypercalcemia.

h. nephropathy continuous high blood concentrations of calcium reduce renal efficiency and may cause mineralization of tubules and renal interstitium.

hypercalcitonism a state in which a high blood calcitonin concentration is maintained because of abnormalities in the secretion of calcitonin. May be caused by a chronic overfeeding of calcium or functional medullary (C cell) thyroid neoplasms. Leads to a persistent hypocalcemia, arrested bone resorption and osteosclerosis. See also **C cell** tumors.

nutritional secondary h. caused in ruminants by a prolonged high-calcium diet, of three to five times the recommended intake, and results in a blocking of normal bone resorption and the development of osteopetrosis and ankylosing spondylosis.

hypercalciuria [*hi"pər-kal"se-u're-ə*] excess of calcium in the urine.

absorptive h. caused by increased absorption of calcium from the intestine. Blood calcium concentrations are normal and parathyroid hormone concentrations are normal or low. May be caused by an excess of vitamin D or hypophosphatemia.

renal leak h. decreased renal resorption of calcium.

resorptive h. results from hypercalcemia with excessive calcium filtration and renal tubular resorption.

hypercapemia hypercapnia.

hypercapnia, hypercarbia [*hi"pər-kap'ne-ə*] excess of carbon dioxide in the blood, indicated by an elevated Pco_2 as determined by **blood gas analysis**, and resulting in respiratory **acidosis**.

hypercarbia [*hi"pər-kahr'be-ə*] hypercapnia.

hypercatabolism [*hi"pər-kə-tab'o-liz-əm*] abnormally high rate of catabolism.

hypercatharsis [*hi"pər-kə-thahr'sis*] excessive purgation.

hypercellularity [*hi"pər-sel"u-lar'ĭ-te*] abnormal increase in the number of cells present, as in bone marrow.

hypercementosis [*hi"pər-se"mən-to'sis*] abnormal thickening of the cement of the teeth; may affect a few or most of the teeth; often associated with inflammation of the dental root.

hyperchloremia [*hi"pər-klor-e'me-ə*] excess of chlorides in the blood; occurs as a result of fluid deficit for which the kidney attempts to compensate by reabsorbing large amounts of water and the chloride dissolved in it. The clinical signs of hyperchloremia are those of **acidosis**.

hyperchlorhydria [*hi"pər-klor-hi'dre-ə*] excess of **hydrochloric acid** in the gastric juice.

hyperchloridemia hyperchloremia.

hypercholesterolemia, hypercholesteremia [*hi"pər-kə-les"tər-ol-e'me-ə*] an excess of cholesterol in the blood; a normal finding in lactating cows. Occurs in obstructive jaundice. See also **hyperlipoproteinemia**.

hypercholia [*hi"pər-ko'le-ə*] excessive secretion of bile.

hyperchromatism [*hi"pər-kro'mə-tiz-əm*] 1. excessive pigmentation. 2. degeneration of cell nuclei, which become filled with particles of pigment, or chromatin. 3. increased staining capacity.

hyperchromatosis [*hi"pər-kro"mə-to'sis*] hyperchromatism.

hyperchromia [*hi"pər-kro'me-ə*] 1. hyperchromatism. 2. abnormal increase in the hemoglobin content of erythrocytes.

hyperchylia excessive secretion of gastric juice.

hyperchylomicronemia [*hi"pər-ki"lo-mi"kro-ne'me-ə*] the presence in the blood of an excessive number of particles of fat (chylomicrons).

hypercoagulability [*hi"pər-ko-ag"u-lə-bil'ĭ-te*] abnormally increased coagulability of the blood.

hypercoagulable [*hi"pər-ko-ag'u-lə-bəl*] characterized by increased coagulability.

hypercontracted sarcomeres basis of the eosinophilic bands seen in coagulative myocytolysis in damaged heart muscle.

hypercorticism [*hi"pər-kor'tĭ-siz-əm*] hyperadrenocorticism.

hypercortisolism [*hi"pər-kor'tĭ-sol"iz-əm*] a state of excess production of cortisol; **Cushing's syndrome**.

hypercyanotic [*hi"pər-si"ə-not'ik*] extremely cyanotic.

hypercythemia [*hi"pər-si-the'me-ə*] polycythemia.

hypercytosis an abnormally increased number of cells, especially of leukocytes.

hyperdactylism [*hi"pər-dak'təl-iz-əm*] polydactylism.

hyperdactyly [*hi"pər-dak'tə-le*] polydactylism.

hyperdicrotic [*hi"pər-di-krot'ik*] markedly dicrotic.

hyperdistension [*hi"pər-dis-ten'shən*] excessive distention.

hyperdiuresis [*hi"pər-di"u-re'sis*] excessive secretion of urine.

hyperdontia [*hi"pər-don'shə*] the presence of supernumerary teeth; polyodontia.

hyperdynamia [*hi"pər-di-na'me-ə*] excessive muscular activity.

hyperdynamic endotoxemia [*hi"pər-di-nam'ik*] the early phase of the disease characterized by increased heart rate and cardiac output; followed by a hypodynamic phase.

hyperechoic [*hi"pər-ə-ko'ik*] producing an increased amplitude of waves returned in ultrasonography; characteristic of bone and dense tumor tissue.

hyperelastosis cutis see **hereditary** collagen dysplasia, **hereditary** equine regional dermal asthenia (HERDA).

hyperemesis [*hi"pər-em'ə-sis*] excessive vomiting.

hyperemia [*hi"pər-e'me-ə*] an excess of blood in a part.

active h., arterial h. that due to local or general relaxation of arterioles; occurs when tissue is active, as in exercising muscle. Called also functional hyperemia.

leptomeningeal h. hyperemia of the pia-arachnoid.

passive h. that due to obstruction to flow of blood from the area. More correctly congestion.

pulpal h. hyperemia of the tooth pulp.

reactive h. that due to increase in blood flow after its temporary interruption.

venous h. passive hyperemia.

hyperencephalus [*hi"pər-ən-sef'ə-ləs*] a fetus with the cranial vault absent and the brain exposed.

hypereosinophilia [*hi"pər-e"o-sin"o-fil'e-ə*] an extreme degree of eosinophilia.

hypereosinophilic syndrome a progressively fatal disease of cats in which there is persistent peripheral eosinophilia, mimicking eosinophilic leukemia, and eosinophilic infiltration of bone marrow, gastrointestinal tract, spleen, liver, lymph nodes and other organs.

hyperepinephrinemia [*hi"pər-ep"ĭ-nef"rĭ-ne'me-ə*] excessive epinephrine in the blood.

hypererethism extreme irritability.

hyperergasia excessive functional activity.

hyperergia, hyperergy [*hi"pər-ur'jə*] hypersensitivity to allergens.

hypererythrocythemia [*hi"pər-ə-rith"ro-si-the'me-ə*] excess of erythrocytes in the blood; polycythemia.

hyperesophoria [*hi"pər-es"o-for'e-ə*] deviation of the visual axes upward and inward.

hyperesthesia [*hi"pər-es-the'zhə*] a state of abnormally increased sensitivity to stimuli.

H-64: Hyperemia of oral mucous membranes in a horse.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

h. syndrome used by some to describe a recurring illness with fever, anorexia, reluctance to move and pain on palpation of the abdomen and lumbar spine; of unknown etiology.

idiopathic h. syndrome dogs and especially cats may show an increased sensitivity to being touched or handled, with intense chewing or licking over the sensitive area, which is commonly the back or one or more limbs. No dermatitis is present initially, but it does develop with continuing self-trauma. The cause is usually unknown, but sensory neuropathies, psychogenic factors, arthritis, anal sac disease, tapeworm infestation and psychomotor epilepsy have been suggested. Called also **acral** lick dermatitis, psychogenic **alopecia**, feline hyperesthesia syndrome.

hyperesthetic [*hi"pər-əs-thet'ik*] a state of hyperesthesia.

hyperestrinism hyperestrogenism.

hyperestrogenism [*hi"pər-es'tro-jən-iz-əm*] condition characterized by and caused by excessive secretion or intake of estrogen. Also occurs in female ferrets if not mated because they are induced ovulators and remain in estrus for extended periods of time and are susceptible to the myelotoxic effects of estrogen, including pancytopenia, spontaneous bleeding, weight loss and alopecia. See also **feminizing syndrome**, **estrogenism**.

hyperexcitability excessive mental and physical activity.

hyperexophoria [*hi"pər-ek"so-for'e-ə*] deviation of the visual axes upward and outward.

hyperextensibility see cutaneous **asthenia**.

hyperextension [*hi"pər-ək-sten'shən*] extension of a limb or part beyond the normal limit.

h. injury see dropped **carpus**.

spinal h. injury usually results in damage to the dorsal articular facets and rupture of the ventral anulus fibrosus with escape of the nucleus pulposus.

hyperferremia [*hi"pər-fer-e'me-ə*] excess of iron in the blood.

hyperfibrinogenemia [*hi"pər-fi-brin"o-jə-ne'me-ə*] excessive fibrinogen in the blood; fibrinogenemia.

hyperfibrinolysis excessive **fibrinolysis**.

hyperfiltration theory [*hi"pər-fil-tra'shən*] increased glomerular capillary pressure and glomerular hypertrophy as adaptive mechanisms in response to increased dietary protein; suggested as a causative factor in progressive chronic renal failure.

hyperflexion [*hi"pər-flek'shən*] flexion of a limb or part beyond the normal limit.

hyperfunction [*hi"pər-funk'shən*] excessive functioning of a part or organ.

hypergalactia, hypergalactosis [*hi"pər-gə-lak'she-ə*] excessive secretion of milk.

hypergammaglobulinemia [*hi"pər-gam"ə-glob"u-lĭ-ne'me-ə*] increased gamma globulins in the blood.

mink h. see **Aleutian mink disease**.

monoclonal h. an increased concentration of homogeneous immunoglobulin molecules of a single specificity in the blood following proliferation of a clone of immunoglobulin-producing B lymphocytes. See also **gammopathy**.

hypergastrinemia [*hi"pər-gas'trĭ-ne'me-ə*] an excess of gastrin in the blood. See also **Zollinger–Ellison syndrome**.

hypergenesis [*hi"pər-jen'ə-sis*] excessive development.

hypergenitalism [*hi"pər-jen'ĭ-tal-iz-əm*] hypergonadism.

hypergia diminished sensitivity to allergens. See **hyposensitivity** (2), **anergy**.

hyperglandular [*hi"pər-glan'du-lər*] marked by excessive glandular activity.

hyperglobulia obsolete term for polycythemia.

hyperglobulinemia [*hi"pər-glob"u-lĭ-ne'me-ə*] excess of globulin in the blood.

monoclonal h. see monoclonal **gammopathy**.

polyclonal h. see polyclonal **gammopathy**.

hyperglucagonemia [*hi"pər-gloo"kə-gə-ne'me-ə*] abnormally high concentrations of glucagon in the blood.

hyperglucocorticoidism hyperadrenocorticism.

hyperglycemia [*hi"pər-gli-se'me-ə*] excess of glucose in the blood.

rebound h. see **Somogyi effect**.

hyperglycemic [*hi"pər-gli-se'mik*] characterized by or causing hyperglycemia.

h. hyperosmolar nonketotic coma (HHNK) a metabolic derangement in which there is an abnormally high serum glucose concentration without ketoacidosis. It can occur as a complication of borderline and unrecognized **diabetes** mellitus, in pancreatic disorders that interfere with the production of insulin, and in conditions marked by an excess of steroids, as in steroid therapy or acute stress conditions. Hyperosmolality, resulting from the extremely high concentration of sugar in the blood, causes a shift of water from the intracellular fluid (the less concentrated solution) into the blood (the higher concentrated solution). This results in cellular dehydration. Another symptom of HHNK, polyuria, occurs because the high plasma osmolality prevents the normal osmotic return of water to the blood by the renal tubules, and it is excreted in the urine. This leads to a decreased blood volume, which severely hampers the kidney's excretion of glucose and a vicious cycle is begun.

hyperglycemic factor [*hi"pər-gli-se'mik*] see **glucagon**.

hyperglyceridemia [*hi"pər-glis"ər-i-de'me-ə*] excess of glycerides in the blood.

hyperglycinemia [*hi"pər-gli"sĭ-ne'me-ə*] excessive glycine in the blood.

hyperglycinuria [*hi"pər-gli"sĭ-nu're-ə*] an excess of glycine in the urine.

hyperglycogenolysis [*hi"pər-gli"ko-jən-ol'ə-sis*] excessive breakdown of glycogen (glycogenolysis) to glucose.

hyperglycorrhachia [*hi"pər-gli"ko-ra'ke-ə*] excessive glucose in the cerebrospinal fluid.

hyperglycosuria [*hi"pər-gli"ko-su're-ə*] extreme glycosuria.

hypergonadism [*hi"pər-go'nad-iz-əm*] abnormally increased functional activity of the gonads, with excessive growth and precocious sexual development.

hypergranulosis an increased thickness of the stratum granulosum. Seen in skin diseases with epidermal hyperplasia and orthokeratotic hyperkeratosis.

hyperhemoglobinemia [*hi"pər-he"mo-glo"bĭ-ne'me-ə*] an excess of hemoglobin in the blood.

hyperhidrosis [*hi"pər-hĭ-dro'sis*] excessive sweating.

bovine h. syndrome inherited in Shorthorn cattle and associated with conjunctivitis, pityriasis and digestive disturbances.

hyperhistaminemia an excess of histamine in the blood. See also **Zollinger–Ellison syndrome**.

paraneoplastic h. associated with mast cell tumors which may release histamine spontaneously or in response to manipulation of the tissue. Seen most commonly in dogs.

hyperhydration [*hi"pər-hi-dra'shən*] abnormally increased water content of the body.

hypericin the exogenous photodynamic agent in ***Hypericum perforatum*** —St. John's wort.

hypericism [*hi-per'ĭ-kum*] poisoning by **hypericin**.

Hypericum a genus of the Clusiaceae (syn. Guttiferae) family of plants; contain the photosensitizing agent hypericin causing primary photosensitive dermatitis; includes *H. aethiopicum*, *H. lanceolatum*, *H. leucoptychodes*, *H. perforatum* (amber, goat weed, St. Johns wort, Klamath weed), *H. revolutum* (forest primrose), *H. triquetrifolium* (curled-leaved and wavy-leaf St. Johns wort).

hyperidrosis [*hi"pər-ĭ-dro'sis*] hyperhidrosis.

hyperimmune [*hi"pər-ĭ-mūn'*] possessing very large quantities of specific antibodies in the serum.

h. serum serum especially prepared for temporary passive protection or treatment of animals. Commercial preparation is by repeated injections of the selected antigens.

hyperimmunization [*hi"pər-im"u-nĭ-za'shən*] repeated injections of antigen leading to high concentrations of antibody.

hyperimmunoglobulinemia [*hi"pər-im"u-no-glob"u-lĭ-ne'me-ə*] abnormally high concentrations of immunoglobulins in the serum. Called also hypergammaglobulinemia.

hyperinflation [*hi"pər-in-fla'shən*] excessive inflation or expansion, as of the lungs; overinflation.

hyperinsulinism [*hi"pər-in'sə-lin-iz"əm*] 1. excessive secretion of insulin by the pancreas, resulting in hypoglycemia. See also **insulinoma**. 2. insulin shock from overdosage of insulin.

hyperintense [*hi"pər-in-tens'*] producing an increased radio frequency signal on magnetic resonance imaging; whiter regions on magnetic resonance images.

hyperirritability [*hi"pər-ir"ĭ-tə-bil'ĭ-te*] pathological responsiveness to slight stimuli.

hyperisotonic [*hi"pər-i"so-ton'ik*] denoting a solution containing more than 0.45% salt, in which erythrocytes become crenated as a result of exosmosis. Called also hypertonic.

hyperkalemia [*hi"pər-kə-le'me-ə*] abnormally high potassium concentration in the blood, most often due to defective renal excretion, as in kidney disease, severe and extensive burns, intestinal

obstruction, diabetes mellitus, acute renal failure and hypoadrenocorticism. High blood potassium concentrations can produce electrocardiographic abnormalities evident first as elevated T waves and depressed P waves, and eventually by atrial asystole. Other clinical signs include muscular weakness and a slow irregular pulse. As the amount of serum potassium continues to rise there is potential for respiratory paralysis, asystole or ventricular fibrillation, and cardiac arrest.

hyperkalemic periodic paralysis [*hi"pər-kə-le'mik*] an autosomal dominant trait, due to mutation in the SCN4A gene, occurring primarily in quarter horses, but also American Paint horses, Appaloosas and Quarter horse crossbreds derived from a Quarter horse sire named Impressive, with subsequent selective breeding for muscling; results in alteration of a subunit of the muscle membrane voltage-dependent sodium channel protein. Manifest by episodes of up to one hour of muscle fasciculation and weakness resulting in recumbency, during which there is hyperkalemia and sometimes paresis, or pharyngeal and laryngeal dysfunction. There is an abnormality in the sodium channel and disturbance in flux of sodium and potassium across the muscle wall. Disease is manifest in both heterozygote and homozygous horses, but homozygotes show more severe signs of upper airway obstruction during an episode and show clinical signs in the first few days of life. High potassium diets can precipitate episodes. Severe episodes can be fatal. Called also episodic muscular weakness.

hyperkeratinization [*hi"pər-ker"ə-tin"ĭ-za'shən*] excessive development of keratin in the epidermis.

hyperkeratosis [*hi"pər-ker"ə-to'sis*] 1. hypertrophy of the horny layer (stratum corneum) of the skin, or any disease characterized by it; the hyperkeratoses may have distinctive formats, e.g. annular (ring formations), basket-weave, compact, laminated. 2. hypertrophy of the cornea.

bovine h. **chlorinated naphthalene** poisoning.

epidermolytic h. a form of ichthyosis in humans which is inherited as an autosomal dominant trait; there is severe degeneration of the granular layer of the epidermis.

juvenile h. a crusting dermatosis over bony prominences, face and chin of young dogs. See zinc-responsive **dermatosis**.

nasal h. an abnormal thickening, sometimes with fissures, of the planum nasale of dogs. May occur in association with nasodigital hyperkeratosis (below) as a feature of distemper (hardpad disease). Also seen in **pemphigus** foliaceus and discoid **lupus erythematosus**.

nasodigital h. a disorder of keratinization with increased thickness of the planum nasale and footpads in dogs and rarely cats. There may be adherent keratin crusts and fissuring. Can be associated with aging, in response to trauma or associated with distemper (hardpad disease), or **pemphigus** foliaceus.

H-65: Hyperkeratosis of the skin in a sow with a chronic sarcoptic mange.

H-66: Nasal hyperkeratosis in a dog.

orthokeratotic h. hyperkeratosis with non-nucleated cells present.

parakeratotic h. hyperkeratosis with nucleated cells present; called also **parakeratosis**.

hyperketonemia [*hi"pər-ke"to-ne'me-ə*] abnormally increased concentration of ketone bodies in the blood; ketonemia.

hyperketonuria [*hi"pər-ke"to-nu're-ə*] ketonuria.

hyperketosis [*hi"pər-ke-to'sis*] excessive formation of ketone.

hyperkinemia [*hi"pər-kĭ-ne'me-ə*] abnormally high cardiac output.

hyperkinesia [*hi"pər-kĭ-ne'zhə*] abnormally increased motor function or activity. See also **hyperactivity**.

hyperkinesis [*hi"pər-kĭ-ne'sis*] hyperkinesia.

hyperkinetic [*hi"pər-kĭ-net'ik*] pertaining to or marked by hyperkinesia.

h. episodes see Scottie **cramp**.

h. circulatory disorders cardiovascular disorders characterized by increased cardiac output; includes hyperthyroidism, chronic anemia and arteriovenous fistulas.

hyperlactatemia [*hi"pər-lak"ta-te'me-ə*] increased concentrations of lactic acid in the blood.

hyperlactation [*hi"pər-lak-ta'shən*] lactation in greater than normal amount or for a longer than normal period.

hyperleukocytosis [*hi"pər-loo"ko-si-to'sis*] extreme leukocytosis.

hyperlipasemia [*hi"pər-lip"ās-e'me-ah*] excessive amounts of lipase in the blood; lipasemia.

hyperlipemia [*hi"pər-li-pe'me-ə*] an excess of lipids in the blood.

equine h. a disorder of lipid metabolism, characterized by increase in plasma triglycerides and deposition of fat in organs of pony mares in negative energy balance in late pregnancy or early lactation. The serum has milky opalescence. Clinically there is lethargy progressing to coma, diarrhea and acidosis. Most cases terminate fatally.

hyperlipidemia [*hi"pər-lip"ĭ-de'me-ə*] a general term for elevated concentrations of any or all of the lipids in the plasma and may be primary or secondary. See also **hyperlipoproteinemia**.

postprandial h. a normal increase following ingestion of food.

primary h. an hereditary abnormality of lipoprotein metabolism; it occurs in miniature Schnauzer dogs.

secondary h. may occur in association with diabetes mellitus, hypothyroidism, pancreatitis, hyperadrenocorticism, cholestatic liver disease and nephrotic syndrome.

hyperlipoproteinemia [*hi"pər-lip"o-pro"te-ne'me-ə*] an excess of lipoproteins in the blood, which is due to a disorder of lipoprotein metabolism, and may be acquired or hereditary. The acquired form occurs secondarily to another disorder or as a result of environmental factors (e.g. diet) and occurs most commonly in dogs in association with primary hypothyroidism. The hereditary form in humans is classified into five major phenotypes based on clinical features, enzymatic abnormalities and serum lipoprotein electrophoretic patterns. In animals a familial form may occur in Beagles, miniature Schnauzers and cats. A heritable hyperlipoproteinemia occurs in a certain strain of White Leghorn chickens and a hypercholesterolemic strain of pigeons has been developed.

hyperliposis [*hi"pər-lĭ-po'sis*] excess of fat in the blood or tissues.

VetBooks.ir

hyperlysinemia [*hi"pər-li"se-ne'me-ə*] elevated concentrations of lysine in the blood.

hypermagnesemia [*hi"pər-mag"nə-se'me-ə*] an abnormally high concentration of magnesium in the blood.

hypermastia [*hi"pər-mas'te-ə*] 1. excessive size of mammary glands. 2. the presence of one or more supernumerary mammary glands; polymastia.

hypermelanosis [*hi"pər-mel"ə-no'sis*] hyperpigmentation.

hypermetabolic state [*hi"pər-met"ə-bol'ik*] experiencing **hypermetabolism**.

hypermetabolism [*hi"pər-mə-tab'o-liz-əm*] increased metabolism. Occurs during periods of stress and with many diseases. There is increased peripheral insulin resistance, increased protein catabolism and a negative nitrogen balance.

extrathyroidal h. abnormally elevated basal metabolism unassociated with thyroid disease.

hypermetria [*hi"pər-me'tre-ə*] ataxia in which movements overreach the intended goal.

hypermetropia [*hi"pər-me tro'pe-ə*] condition where the image of distant objects can be focused onto the retina while near objects cannot; called also farsightedness; hyperopia. The opposite of myopia.

hypermineralized primer early, densely mineralized, woven bone.

hypermobility [*hi"pər-mo-bil'ĭ-te*] excessive mobility, as of a joint.

hypermotility [*hi"pər-mo-til'ĭ-te*] excessive or abnormally increased motility.

gut h. decreased transit time for the entire alimentary tract.

intestinal h. is characterized by increase in gut sounds, spasms of pain, e.g. in spasmodic **colic** in horses and, in some cases, diarrhea.

hypermyotonia [*hi"pər-mi"o-to'ne-ə*] excessive muscular tonicity.

hypermyotrophy [*hi"pər-mi-ot'rə-fe*] excessive development of muscular tissue.

hypernatremia [*hi"pər-nə-tre'me-ə*] an excess of sodium in the blood, indicative of water loss exceeding the sodium loss or an excessive intake of sodium (see **sodium** chloride poisoning).

hypernatriuria excessive amounts of sodium in the urine.

hyperneocytosis [*hi"pər-ne"o-si-to'sis*] leukocytosis with an excessive number of immature forms of leukocytes.

hypernutrition [*hi"pər-noo-trish'ən*] overfeeding and its ill effects.

hyperonychia [*hi"pər-o-nik'e-ə*] hypertrophy of the claws.

hyperopia [*hi"pər-o'pe-ə*] hypermetropia.

hyperorchidism [*hi"pər-or'ki-diz-əm*] abnormally increased functional activity of the testes.

hyperorexia [*hi"pər-o-rek'se-ə*] excessive appetite.

hyperorthocytosis [*hi"pər-or"tho-si-to'sis*] leukocytosis with a normal proportion of the various forms of leukocytes.

hyperosmolality [*hi"pər-oz"mo-lal'ĭ-te*] an increase in the osmolality of the body fluids.

hyperosmolar pertaining to or emanating from hyperosmolality.

h. nonketotic coma coma due to hyperosmolality, e.g. hyperglycemia in some diabetic patients. See also **hyperglycemic** hyperosmolar nonketotic coma.

h. nonketotic diabetes diabetes characterized by high blood concentrations of glucose but without significantly increased blood concentrationls of ketone bodies.

hyperosmolarity [*hi"pər-oz"mo-lar'ĭ-te*] abnormally increased osmotic concentration of a solution.

hyperosmotic [*hi"pər-oz-mot'ik*] pertaining to hyperosmolarity.

h. state condition caused by the accumulation in the body of significant quantities of osmotically active solutes, e.g. hypernatremia, hyperglycemia. See also **hyperosmolality**.

hyperostosis [*hi"pər-os-to'sis*] excessive growth of bony tissue.

calvarial h. syndrome a condition in Bullmastiffs similar to craniomandibular **osteopathy**.

craniomandibular h. see craniomandibular **osteopathy**.

diffuse idiopathic skeletal h. (DISH) occurs in dogs and pigs; cause unknown, possibly familial in pigs; extensive bone deposition around joints but articular surfaces not affected.

facial h. in hyperparathyroidism resorption of cancellous bone, particularly maxillae and mandibles, and the formation of poorly mineralized osteoid and excessive fibro-osseous tissue cause deformities of the face and head that are clinically obvious and may prevent closure of the mouth. Occurs in primary and secondary **hyperparathyroidism**.

inherited congenital h. see juvenile hyperostosis (below).

juvenile h. a congenital defect of pigs. The legs of affected newborn pigs are swollen below the elbow. The piglets have difficulty standing and moving around. The bone is thick and the periosteum rough and there is extensive edema. Called also thick forelegs, inherited congenital hyperostosis.

hyperoxaluria [*hi"pər-ok"sə-lu're-ə*] an excess of oxalate in the urine; occurs in dogs in association with oxalate urolith formation.

primary h. inherited metabolic defect in cats. Characterized by heavy deposits of oxalates in renal tubules, leading to oxalate nephrosis and fatal uremia before the patient reaches a year of age. They may also have lower motor neuron weakness due to Wallerian degeneration of peripheral nerves.

hyperoxemia [*hi"pər-ok-se'me-ə*] excessive acidity of the blood.

hyperoxia [*hi"pər-ok'se-ə*] an abnormally increased supply or concentration of oxygen.

hyperparasite [*hi"pər-par'ə-sīt*] a parasite that preys on a parasite.

hyperparathormonemia increased concentration of parathyroid hormone in the blood.

hyperparathyroidism [*hi"pər-par"ə-thi'roid-iz-əm*] abnormally increased activity of the parathyroid gland. *Primary* hyperparathyroidism is associated with either neoplasia (chiefly adenomas) or hyperplasia. An excess of parathyroid hormone leads to resorption of bone, increased resorption of calcium and increased excretion of phosphorus by the renal tubules, and increased absorption of calcium by the gastrointestinal mucosa. It may result in kidney stones and calcium deposits in the renal tubules; in generalized decalcification of bone (osteoporosis), resulting in pain and tenderness of bones and spontaneous fractures; and in hypercalcemia, leading to muscular weakness and gastrointestinal signs. *Secondary* hyperparathyroidism develops as a compensatory mechanism when the serum calcium concentration is persistently below normal or serum phosphorus is elevated, as in chronic renal disease, insufficient calcium or excessive phosphorus in the diet, vitamin D deficiency, low-level soluble oxalate intoxication in horses, and intestinal malabsorption syndromes causing insufficient absorption of calcium and vitamin D. See also **pseudohyperparathyroidism**.

nutritional secondary h. a disease of horses, pigs, goats, dogs, cats, and rarely cattle. It is most commonly caused by an excessive dietary intake of phosphorus in the absence of adequate calcium, which in horses is likely to be the result of a diet mainly of grain and in dogs and cats one predominantly of meat, but it may also result from other dietary causes of secondary hyperparathyroidism. In most species there is swelling of the maxillae and mandibles which is most marked in horses, loosening of teeth, shifting lameness, and particularly in dogs and cats, weight-bearing skeletal deformities (**angel wings**) and folding or compression fractures. Called also miller's disease, bran disease, bighead, Siamese cat disease, paper-bone disease.

renal secondary h. caused by chronic renal dysfunction, mostly in dogs, sometimes in cats, in which there is a secondary hyperparathyroidism, caused by the retention of phosphates. There is demineralization of bones, particularly the maxillae and mandibles, with loosening of teeth and facial swelling. Clinical signs are often overshadowed by the effects of the renal failure. Called also rubber jaw, renal rickets, renal osteitis fibrosa.

hyperpathia [*hi"pər-path'e-ə*] abnormally exaggerated subjective response to painful stimuli.

h. test pressure over the transverse processes or dorsal spinous processes of the lumbar and thoracic vertebrae will cause tensing of the abdominal muscles at the level of a spinal cord lesion.

hyperpepsinia excessive secretion of pepsin in the stomach.

hyperperistalsis [*hi"pər-per"ĭ-stawl'sis*] excessively active peristalsis.

hyperphagia [*hi"pər-fa'jə*] ingestion of more than the normal amount of food.

hyperphalangism [*hi"pər-fə-lan'jiz-əm*] the presence of a supernumerary phalanx on a digit.

hyperphonesis [*hi"pər-fo-ne'sis*] intensification of the sound in auscultation or percussion.

hyperphosphatasemia [*hi"pər-fos"fə-ta-se'me-ə*] high concentration of alkaline phosphatase in the blood.

hyperphosphatemia [*hi"pər-fos"fə-te'me-ə*] an excess of serum phosphorus. Occurs during growth and in hypoparathyroidism, hypervitaminosis D, decreased renal function, muscle and tissue trauma and administration of phosphate-containing enemas.

VetBooks.ir

Clinical effects are usually obscured by the underlying cause, such as renal failure, and any accompanying hypocalcemia.

hyperphosphaturia [*hi"pər-fos"fə-tu're-ə*] an excess of phosphates in the urine.

hyperpigmentation [*hi"pər-pig"mən-ta'shən*] abnormally increased pigmentation. See also **melanoderma**.

post-inflammatory h. commonly occurs in dogs as a dermal response to inflammation associated with underlying skin disease.

hyperpituitarism [*hi"pər-pĭ-too'ĭ-tə-riz"əm*] a condition due to pathologically increased **pituitary** gland activity, especially increased secretion of growth hormone, resulting in acromegaly or gigantism.

hyperplasia [*hi"pər-pla'zhə*] abnormal increase in volume of a tissue or organ caused by the formation and growth of new normal cells. Categorized as irregular, papillated, regular. See also **myofiber** hyperplasia.

fibroadenomatous h. feline **mammary** hyperplasia.

myofiber h. see **myofiber** hyperplasia.

nodular h. a characteristic lesion in nodular regeneration in the liver.

papillated epidermal h. increased thickness of the epidermis with projections above the surface of the skin.

pseudocarcinomatous epidermal h. extreme, irregular thickening of the epidermis with increased mitoses, squamous eddies, and keratin pearls which may mimic squamous cell carcinoma.

psoriasiform h. has clubbed and fused rete ridges seen in epitheliotropic lymphoma, **psoriasiform**-lichenoid dermatosis of English springer spaniel dogs, parapsoriasis and **acral** lick dermatitis.

hyperplasmia [*hi"pər-plaz'me-ə*] 1. excess in the proportion of blood plasma to corpuscles. 2. increase in size of erythrocytes through absorption of plasma.

hyperplasminemia increased concentration of plasmin in the blood.

hyperplastic [*hi"pər-plas'tik*] characterized by a state of hyperplasia, e.g. hyperplastic enteritis, hyperplastic cholangitis, hyperplastic endometritis, hyperplastic gingivitis.

hyperploid [*hi'pər-ploid*] 1. characterized by hyperploidy. 2. a hyperploid individual or cell.

hyperploidy [*hi"pər-ploi'de*] the state of having more than the typical number of chromosomes in unbalanced sets.

hyperpnea [*hi"pər-ne'ə*] abnormal increase in depth and rate of respiration but not to the point of being labored, the critical point for dyspnea.

hyperpnoea see **hyperpnea**.

hyperpolarization [*hi"pər-po"lər-ĭ-za'shən*] an increase in the amount of electrical charge on either side of a cell membrane so that there is an increase in the electric potential across the membrane.

hyperponesis [*hi"pər-po-ne'sis*] excessive action-potential output from the motor and premotor areas of the cerebral cortex.

hyperposia [*hi"pər-po'zhə*] abnormally increased ingestion of fluids for relatively brief periods.

hyperpotassemia [*hi"pər-po"tə-se'me-ə*] excess of potassium in the blood. Occurs in renal failure, adrenocortical insufficiency and gastrointestinal disorders and contributes to reduced cardiac efficiency and muscle weakness. See also **hyperkalemia**.

hyperpragic characterized by excessive activity.

hyperpraxia [*hi"pər-prak'se-ə*] abnormal activity; restlessness.

hyperprogesteronism a state caused by excessive production or intake of progesterone, e.g. in retained corpora lutea or luteoma. Some hyperprogestinic states are cystic glandular hyperplasia of the endometrium in bitches and pseudocyesis.

hyperproinsulinemia [*hi"pər-pro-in"sə-lĭ-ne'me-ə*] the presence of proinsulin in excess of normal concentrations in the blood.

hyperprolactinemia [*hi"pər-pro-lak"tĭ-ne'me-ə*] increased concentration of prolactin in the blood; occurs in severe hypothyroidism, caused by excessive thyrotropin-releasing hormone. Galactorrhea and anestrus results.

hyperproteinemia [*hi"pər-pro"te-ne'me-ə*] an excess of protein in the blood.

hyperproteosis [*hi"pər-pro"te-o'sis*] a condition due to excess of protein in the diet.

hyperptyalism [*hi"pər-ti'əl-iz"əm*] abnormally increased secretion of saliva.

hyperpyrexia [*hi"pər-pi-rek'se-ə*] excessively high fever; hyperthermia. See also **fever** (1).

malignant h. see **porcine** stress syndrome.

hyperreactive [*hi"pər-re-ak'tiv*] showing a greater than normal response to stimuli.

hyperreflexia [*hi"pər-re-flek'se-ə*] exaggeration of reflexes.

detrusor h. involuntary contraction of the detrusor muscle; a cause of urge **incontinence**.

hyperreninemia [*hi"pər-re"nĭ-ne'me-ə*] elevated concentration of renin in the blood.

hyperresonance [*hi"pər-rez'o-nəns*] exaggerated resonance on percussion.

hypersalemia [*hi"pər-sal-e'me-ə*] abnormally increased content of salt in the blood.

hypersalivation [*hi"pər-sal"ĭ-va'shən*] abnormally increased secretion of saliva.

hypersecretion [*hi"pər-se-kre'shən*] excessive secretion, e.g. of hormones.

hypersegmentation [*hi"pər-seg"mən-ta'shən*] excessive subdivision into lobes or segments, e.g. hypersegmented neutrophils.

hypersensitivity [*hi"pər-sen"sĭ-tiv'ĭ-te*] 1. a state of altered reactivity in which the body reacts with an exaggerated immune response to a foreign agent; **allergy** is a synonym for hypersensitivity; **anaphylaxis** is a form of hypersensitivity. There are four basic types of hypersensitivity reactions: *Type I* (called also immediate hypersensitivity) involves cell-fixed antibody, mainly IgE attached to mast cells or basophils. Antigen binding causes the cell to release vasoactive factors. The basis for anaphylaxis and atopy. *Type II* causes cell destruction (cytotoxicity) by the action of immunoglobulin with complement or cytotoxic cells. Seen in red blood cell transfusion reactions and in alloimmune hemolytic anemia. See also **antibody**-dependent cellular cytotoxicity. *Type III* (called also immune-complex or subacute hypersensitivity) tissue damage and inflammation is induced by the deposition of antigen–antibody complexes that activate complement and attract polymorphonuclear cells. *Type IV* (called also delayed hypersensitivity) involves sensitized T lymphocytes that react with cell bound or associated antigen and release lymphokines, causing mononuclear cell accumulation, tissue damage and inflammation, typically manifesting at least 24 hours after exposure to the antigen. 2. a state of increased responsivity to physical stimuli.

h. angiitis variant of polyarteritis nodosa; a disease of small blood vessels in humans; called also leukocytoclastic vasculitis.

antibody-mediated h. types I, II and III hypersensitivity reactions. Called also immediate hypersensitivity.

bacterial h. immune responses to bacteria or bacterial products may contribute to the clinical features of some diseases, e.g. the anemia associated with salmonellosis, arthritis in erysipelas of pigs, intestinal lesions in Johne's disease, or be the principal cause as in staphylococcal hypersensitivity dermatitis in dogs.

contact h. a type IV reaction produced by contact of the skin with a low-molecular-weight chemical substance having the properties of a hapten in a sensitized individual; it includes **allergic** contact dermatitis.

cutaneous basophil h. a delayed inflammatory response characterized by large numbers of basophils.

cytotoxic h. type II hypersensitivity.

delayed h. type IV reaction. A slowly developing cell-mediated immune response in which T helper 1 lymphocytes respond to specific antigen by releasing cytokines, some of which activate macrophages, as occurs in tuberculin reaction, graft rejection, some autoimmune diseases, etc.

drug h. may be either an immediate (antibody mediated) or delayed type (T lymphocyte mediated) reaction. See also **drug** eruption.

flea bite h. see **flea** allergy dermatitis.

food h. hypersensitivity reaction to various dietary constituents has been the suspected cause of allergic dermatitis in most species, but conclusive evidence is often lacking. It may also result in diarrhea.

fungal h. may contribute to the clinical features of cutaneous fungal infections, particularly **kerion** formation. It is also the basis for skin testing for systemic mycoses, e.g. histoplasmin and coccidioidin. Also, may cause respiratory disease in cattle fed moldy hay, but it is unclear how much of this is hypersensitivity and how much is pneumotoxicity. See also hypersensitivity **pneumonitis**.

VetBooks.ir

helminth h. the allergic response of a sensitized animal to a helminth invasion, e.g. of lungs, causes massive pulmonary edema.
immediate h. antibody-mediated hypersensitivity, i.e. types I, II and III, characterized by a response that appears within minutes to hours, resulting either from a release of histamine and other mediators of hypersensitivity from IgE-sensitized mast cells, causing increased vascular permeability, edema and smooth muscle contraction (type I), from antibody-mediated lysis of red blood cells (type II), or from immune complex mediated pathology (type III).
immune complex h. type III hypersensitivity (above).
h. pneumonitis see hypersensitivity **pneumonitis**.
staphylococcal h. see bacterial hypersensitivity (above).
h. threshold a theory that certain levels of allergens may be tolerated by some sensitized individuals without manifestations of disease, but a slight increase in the level precipitates clinical signs.
tuberculin type h. the classical T lymphocyte cell-mediated hypersensitivity associated with mycobacterium infection or immunization with antigens containing Freund's adjuvant.
hypersensitization [*hi"pər-sen"si-ti-za'shən*] the induction of hypersensitivity.
hypersexuality [*hi"pər-sek"shoo-al'i-te*] see mounting **behavior**.
hypersialism hypersialosis.
hypersialosis excessive secretion of the salivary glands; in animals, drooling.
hypersomatotropism [*hi"pər-so-mat"o-trop'iz-əm*] see **acromegaly**.
hypersomnia [*hi"pər-som'ne-ə*] pathologically excessive sleep or drowsiness.
hypersplenism [*hi"pər-splen'iz-əm*] a condition characterized by splenomegaly and exaggeration of the phagocytic function of the spleen, resulting in deficiency of peripheral blood elements, and often by hypercellularity of the bone marrow.
hypersthenia [*hi"pər-sthe'ne-ə*] increased strength or tonicity.
hypersthenuria [*hi"pər-stha-nu're-ə*] excessive osmolality of the urine.
hypertelorism [*hi"pər-te'lor-iz-əm*] abnormally increased distance between two organs or parts.
ocular h., orbital h. increase in the interocular distance.
hypertensinogen angiotensinogen.
hypertension [*hi"pər-ten'shən*] persistently elevated blood pressure. Occurs most commonly in small animals, secondary to advanced renal disease, hyperthyroidism, diabetes mellitus and hyperadrenocorticism. Temporary episodes of hypertension occur in all animals suffering severe pain, and in horses with acute laminitis.
endocrine h. that occurring in association with diseases of the endocrine glands.
essential h. primary hypertension; there is no clinical or biochemical evidence of a disease with which it could be associated.
Goldblatt h. see Goldblatt **kidney**.
idiopathic h. elevation of blood pressure in the absence of any clinically apparent disease known to cause secondary hypertension.
inherited h. see rat hypertension (below).
neurogenic h. produced experimentally in laboratory animals by the imposition of surgical and psychological insults on the central nervous system.
ocular h. elevated intraocular pressure in the absence of any other signs of glaucoma; it may or may not progress to glaucoma.
portal h. abnormally increased pressure in the portal circulation caused by impedance of blood flow through a diseased liver or portal vein.
pulmonary h. an increase in pulmonary arterial pressures greater than 25 mmHg in systole and 15 mmHg in diastole. Results from high-pressure blood flow from the right ventricle or impedance to blood flow through the lungs or through the left heart. Chronic hypertension causes endothelial degeneration and fibroplasia of vessel walls. The end result may be cor pulmonale or pulmonary edema. See also **altitude sickness**, **cor** pulmonale.
rat h. several strains of spontaneously hypertensive rats have been bred.
renal h. secondary hypertension.
secondary h. concurrent with a disease known to cause hypertension or therapeutic agents capable of elevating blood pressure. In dogs and cats, these include chronic renal disease, hyperadrenocorticism, diabetes mellitus and (in cats) hyperthyroidism; therapeutic agents include glucocorticoids, mineralocorticoids, phenylpropanolamine and nonsteroidal anti-inflammatory drugs.
systemic venous h. elevation of systemic venous pressure, usually detected by inspection of the jugular veins.
white-coat h. anxiety-induced, artifactual increase in blood pressure; may be mistakenly interpreted as a diagnosis of hypertension. Can be minimized by careful management of the animal, but an allowance of up to 20 mm Hg increase is recommended for dogs and cats.
hypertensive [*hi"pər-ten'siv*] characterized by or causing increased tension or pressure, as abnormally high blood pressure.
hypertensor [*hi"pər-ten'sər*] a substance that raises the blood pressure.
hypertestosteronemia see **hyperandrogenism**.
hyperthecosis [*hi"pər-the-ko'sis*] hyperplasia and excessive luteinization of the cells of the inner stromal layer of the ovary.
hyperthelia [*hi"pər-the'le-ə*] the presence of supernumerary nipples or teats.
hyperthermalgesia [*hi"pər-thur"məl-je'ze-ə*] abnormal sensitiveness to heat.
hyperthermia [*hi"pər-thur'me-ə*] 1. greatly increased body temperature. May have effect as **teratogen**. 2. heat therapy. Used in the treatment of tumors, often in conjunction with chemotherapy or radiation. Whole body, regional or localized hyperthermia is induced with electromagnetic radiation, radiofrequency current heating or **ultrasonic** heating.
epidemic h. associated with grazing pasture plants containing the symbiont **Neotyphodium** (*Acremonium) coenophialum*.
neurogenic h. elevation of body temperature due to a lesion, e.g. spontaneous hemorrhage, in the hypothalamus.
idiopathic h. term applied in error to the effects of ergotism under conditions of high ambient temperature. See also **ergotism**, **summer slump**, **Neotyphodium** *(Acremonium) coenophialum*.
malignant h. a drug induced stress syndrome of pigs which have been treated with halothane or suxamethonium. Isolated cases have been reported in dogs and cats. The clinical syndrome includes muscle rigidity and hyperthermia. It is fatal and susceptibility to it is inherited. Also occurs as an autosomal dominant mutation in Quarter horses. See also **porcine** stress syndrome.
hyperthrombinemia [*hi"pər-throm"bi-ne'me-ə*] an excess of thrombin in the blood.
hyperthymism [*hi"pər-thi'miz-əm*] excessive thymus activity.
hyperthyroidism [*hi"pər-thi'roid-iz-əm*] excessive functional activity of the thyroid gland. Rare in animals except in aged cats where it is associated with benign adenomatous hyperplasia. In dogs, it is usually due to a functional thyroid carcinoma. Affected animals show increased thirst, weight loss despite an increased appetite, restlessness and cardiac arrhythmias.
apathetic h. a small percentage of hyperthyroidic cats show lethargy, depression and anorexia; may be due to associated dysfunction.
hyperthyroxinemia [*hi"pər-thi-rok"si-ne'me-ə*] an excess of thyroxine in the blood.
hypertonia [*hi"pər-to'ne-ə*] abnormally increased tonicity or strength.
h. oculi high intraocular pressure; glaucoma.
hypertonic [*hi"pər-ton'ik*] 1. pertaining to or characterized by an increased tonicity or tension. 2. having an osmotic pressure greater than that of the solution with which it is compared.
h. dehydration occurs when the body loss or deprivation is of water only, i.e. there is no electrolyte loss.
h. saline test see **Hickey–Hare test**.
hypertonicity [*hi"pər-to-nis'i-te*] the state or quality of being hypertonic.
hypertrichiasis, hypertrichosis [*hi"pər-tri-ko'sis*] excessive hairiness; hirsutism.
hypertriglyceridemia [*hi"pər-tri-glis'ə-ri-de'me-ə*] an excess of triglycerides in the blood; independent risk factor for atherosclerosis; seen in fatty liver syndrome in cats.
hypertrophic [*hi"pər-tro'fik*] characterized by a state of hypertrophy.
h. pulmonary osteoarthropathy see hypertrophic **osteopathy**.
h. osteodystrophy see hypertorphic **osteodystrophy**.

h. scar a protruding scar resembling a fibroma or collagen nevus.

hypertrophy [*hi-pur'trə-fe*] increase in volume of a tissue or organ produced entirely by enlargement of existing cells.

brown h. of cere see **cere** hypertrophy.

ventricular h. hypertrophy of the myocardium of a ventricle, causing abnormal deviation of the axis of the electrocardiogram.

hypertropia [*hi"pər-tro'pe-ə*] **strabismus** in which there is permanent upward deviation of the visual axis of one eye.

hyperuricemia [*hi"pər-u"rĭ-se'me-ə*] an excess of uric acid in the blood; found in Dalmatian dogs and selected strains of chickens.

hyperuricosuria [*hi"pər-u"rĭ-ko-su're-ə*] an excess of uric acid in the urine. An inherited trait, in dogs it is caused by a mutation in exon 5 of the gene *Solute carrier family 2, member 9 (SLC2A9)*; seen in Dalmations, Bulldogs and Black Russian terriers. Affected dogs have two copies of the mutation and are susceptible to the development of urolithiasis.

hypervariable region regions present on light and heavy chains of immunoglobulins where most of the variation in amino acid sequences occurs. These are also sites of antigen binding.

hypervascular [*hi"pər-vas'ku-lər*] extremely vascular.

hyperventilation [*hi"pər-ven"tĭ-la'shən*] 1. increase of air in the lungs above the normal amount. 2. abnormally prolonged and deep breathing, usually associated with acute anxiety or emotional tension. A transient, respiratory **alkalosis** commonly results from hyperventilation. More prolonged hyperventilation may be caused by disorders of the central nervous system, or by drugs.

h. syndrome nervous or hyperexcitable dogs may hyperventilate to the point of syncope.

hyperviscosity [*hi"pər-vis-kos'ĭ-te*] excessive viscosity, as of the blood.

h. syndrome increased viscosity of the blood occurs with IgM and IgA myelomas because of the high concentrations of macroglobulins; causes increased resistance to blood, hypoxia, organ failure, retinal lesions, abnormalities in platelet function, coagulation defects and cardiac failure.

hypervitaminosis [*hi"pər-vi"tə-mĭ-no'sis*] a condition produced by ingestion or injection of excessive amounts of vitamins; symptom complexes are associated with excessive intake of vitamins A and D.

h. A occurs mainly in cats, and is caused by a long-term diet consisting almost entirely of liver. Affected cats show neck pain and stiffness caused by a deforming cervical spondylosis. Other joints may be similarly affected. There is also hyperesthesia, irritability, anorexia, weight loss, and sometimes neurological deficits. Premature loss of teeth has also been reported.

h. D caused by overdosing with vitamin D preparations as in bovine parturient hypocalcemia (milk fever) prophylaxis and inappropriate treatment of disorders of dietary calcium and phosphorus; by errors in a diet mix; by oversupplementation of small puppies and kittens; and from ingestion of cholecalciferol rodenticides. Causes dystrophic soft tissue calcification, particularly nephrocalcinosis with subsequent renal failure. See also **enzootic** calcinosis.

hypervolemia [*hi"pər-vo-le'me-ə*] abnormal increase in the volume of circulating fluid (plasma) in the body. Can occur in acute renal failure and with hypoosmolar hyponatremia. See also **fluid** volume excess.

hypesthesia [*hīp"es-the'zhə*] abnormally diminished sensitiveness; hypoesthesia.

hypha [*hi'fə*] pl. *hyphae* [L.] one of the filaments composing the mycelium of a fungus.

H-67: Radiograph showing confluent exostosis of cervical vertebrae of a cat caused by hypervitaminosis A.

H-68: Hyphema. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

spiral h. hyphae which end in a coil; typical of *Trichophyton* spp.

hyphema [*hi-fe'mə*] red blood cells in the anterior chamber of the eye.

hyphemia [*hi-fe'me-ə*] hyphema.

hyphidrosis [*hīp"hĭ-dro'sis*] scanty sweating.

Hyphomyces destruens now called *Pythium insidiosum*.

Hyphomycetes [*hi"fo-mi-se'tēz*] the mycelial (hyphal) fungi, i.e. the molds.

hyphomycosis [*hi"fo-mi-ko'sis*] 1. infection with *Pithium insidiosa*, once considered a member of the genus *Hyphomyces*. A skin disease of horses and mules it is marked by the formation of subcutaneous abscesses which ulcerate leaving large, raw surfaces. See also **swamp cancer**. 2. infection with hyphomycetes (imperfect fungi).

hypnagogic [*hip"nə-goj'ik*] producing sleep.

hypnagogue [*hip'nə-gog*] 1. hypnotic; inducing sleep. 2. an agent that produces sleep.

hypn(o)- word element. [Gr.] *sleep, hypnosis*.

hypnolepsy narcolepsy.

hypnosis [*hip-no'sis*] an artificially induced state of passivity. In animals an immobility reflex can be induced with varying ease in the different species. It has some similarity to the hypnotic state in humans.

animal h. can be induced by dopamine-receptor blockers or by restraint or visual fixation; guinea pigs, rabbits and chickens are most susceptible.

hypnotic [*hip-not'ik*] 1. pertaining to or inducing hypnosis or sleep. 2. an agent that induces sleep.

hypo 1. a colloquial abbreviation of hypodermic. 2. sodium thiosulfate, used as a photographic fixing agent.

hyp(o)- word element. [Gr.] *abnormally decreased, deficient, beneath, under*.

hypoacidity [*hi"po-ə-sid'ĭ-te*] decreased acidity.

hypoadrenal corticalism [*hi"po ə-dre'nəl*] negative hormonal state in premature foals; conducive to early demise.

hypoadrenalism [*hi"po-ə-dre'nəl-iz-əm*] deficiency of adrenal activity, as in Addison's disease.

hypoadrenocorticism [*hi"po-ə-dre"no-kor'tĭ-siz-əm*] diminished hormone production from the cortex of the adrenal gland. In all species, injury to the gland may occur from hemorrhage, mineralization, amyloid deposition, or invasion by infectious agents but clinical signs of insufficiency rarely occur except in the dog.

immune-mediated h. see primary hypoadrenocorticism (below).

primary h. occurs most often in dogs, usually the result of an idiopathic atrophy of the adrenal glands involving all layers of the cortex. Immune-mediated mechanisms are suspected. The clinical effects are related to insufficient production of mineralocorticoids causing hyponatremia, hypochloremia and hyperkalemia. Hypovolemia, prerenal azotemia and cardiac conduction abnormalities lead to weakness, vomiting, diarrhea and bradycardia. Deficiency of glucocorticoids may also cause hypoglycemia. Called also Addison's disease, immune-mediated hypoadrenocorticism.

secondary h. lesions of the pituitary and, more commonly in dogs, the long-term administration of corticosteroids which causes a reduced secretion of ACTH and leads to reduced synthesis and low blood concentrations of glucocorticoids. Mineralocorticoid concentrations remain normal.

hypoalbuminemia [*hi"po-al-bu"min-e'me-ə*] abnormally low concentration of albumin in the blood.

VetBooks.ir

hypoalbuminosis [*hi"po-al-bu"mĭ-no'sis*] hypoalbuminemia.
hypoaldosteronism [*hi"po-al-dos'tə-ro-niz"əm*] deficiency of aldosterone in the body. See **hypoadrenocorticism**.
hypoalimentation [*hi"po-al"ĭ-mən-ta'shən*] insufficient nourishment.
hypoandrogenism [*hi"po-an-dro'jən-iz-əm*] a deficiency of androgens in the body leading to a lack of virility and sexual potency. See also **feminizing syndrome**, **testosterone**-responsive dermatosis.
hypoazoturia [*hi"po-az"o-tu're-ə*] diminished nitrogenous material in the urine.
hypobaric [*hi"po-bar'ik*] characterized by less than normal pressure or weight; applied to gases under less than atmospheric pressure, or to solutions of lower specific gravity than another taken as a standard of reference.
hypobaropathy [*hi"po-bar-op'ə-the*] the disturbances experienced at high altitudes due to reduced air pressure and lack of oxygen; altitude sickness.
hypobasemia [*hi"po-bil"ĭ-roo"bĭ-ne'me-ə*] a low blood concentration of buffer bases.
hypobilirubinemia abnormally low concentration of bilirubin in the blood.
hypobiosis arrested stage of development, as of nematode larvae in the gut mucosa of the definitive host. See also **diapause**.
hypobiotinosis experimental nutritional deficiency of biotin causes posterior paralysis in calves; natural deficiency causes lameness due to poor hoof horn in gilts and sows.
hypoblast [*hi'po-blast*] the endoderm.
hypocalcemia [*hi"po-kal-se'me-ə*] total serum calcium concentrations are lower than normal; both ionized calcium (physiologically active form) and nonionized calcium are depressed.
acute puerperal h. bovine parturient hypocalcemia (below).
nonparetic parturient h. hypocalcemia without recumbency in recently calved cows; inappetence, drop in milk production, alimentary tract stasis, reduced rumination; responds to treatment with parenteral injections of calcium solution.
non-parturient h. hypocalcemia, with or without clinical signs of staggery gait, recumbency, ruminal response which responds to treatment with parenteral calcium, occurring as incidents detached from parturient ruminants. A standard experience as mare eclampsia. In ruminants occurs as part of acute oxalate poisoning, sudden change to lush feed in heavily milking cows.
nutritional h. occurs most commonly in dogs and cats fed all-meat diets. See also **all-meat syndrome**.
ovine h. occurs with a high attack rate in lactating ewes subjected to bad weather or any other cause of reduced feed intake. The syndrome is similar to that in parturient hypocalcemia in cows, but occurs also in young sheep on meager rations, those grazing lush green cereal crops or pastures heavily contaminated by oxalate-bearing plants. Called also moss-ill.
parturient h. a metabolic disease of mature dairy cows occurring just before or soon after calving; signs are muscular weakness, peripheral circulatory failure with cool skin, small amplitude pulse, soft heart sounds, recumbency and drowsiness. Definitive clinical pathology is hypocalcemia. Called also milk fever. The same syndrome occurs in ewes; called also moss-ill. In bitches and mares, hypocalcemia occurs most commonly later in lactation. See also **lactation tetany** (3), puerperal **tetany**
renal h. chronic hypocalcemia due to chronic renal disease.
hypocalcemic [*hi"po-kal-se'mik*] emanating from hypocalcemia; state of decreased blood calcium concentration.

H-69: Frog-leg position characteristic of ewes with hypocalcemia.

h. factor see **calcitonin**.
hypocalciuria [*hi"po-kal"se-u're-ə*] an abnormally diminished amount of calcium in the urine.
hypocapemia hypocapnia.
hypocapnia [*hi"po-kap'ne-ə*] diminished carbon dioxide in the blood.
hypocarbia [*hi"po-kahr'be-ə*] hypocapnia.
hypocellularity [*hi"po-sel"u-lar'ĭ-te*] abnormal decrease in the number of cells present, as in bone marrow.
Hypochaeris radicata toxic plant in the family Asteraceae; contains an unidentified toxin; probably causes Australian stringhalt. Called also flatweed, cat's ear, false dandelion.
hypochloremia [*hi"po-klor-e'me-ə*] an abnormally low concentration of chloride in the blood; clinical signs are those of **alkalosis**. Occurs most commonly in enteritis, acute intestinal obstruction and continued vomiting and, in ruminants with abomasal dilatation, impaction and torsion. The hydrogen chloride and potassium ions normally absorbed by the small intestine are lost to the animal. A hypochloremic, hypokalemic alkalosis results.
hypochlorhydria [*hi"po-klor-hi'dre-ə*] deficiency of hydrochloric acid in the gastric juice.
hypochloridemia [*hi"po-klor"i-de'me-ə*] hypochloremia.
hypochlorite [*hi"po-klor'ĭt*] any salt of hydrochlorous acid. The sodium salt is used as a germicidal agent when mixed in dilute solution. See also **sodium** hypochlorite.
hypochlorization [*hi"po-klor"ĭ-za'shən*] reduction of sodium chloride in the diet.
hypochlorous acid [*hi"po-klor'əs*] an unstable compound used as a disinfectant and bleaching agent.
hypochloruria [*hi"po-klor-u're-ə*] diminished chloride content in the urine.
hypocholesterolemia, hypocholesteremia [*hi"po-kə-les"tər-ol-e'me-ə*] low concentration of cholesterol in the blood; most commonly associated with portosystemic shunts.
hypocholinosis see **choline** nutritional deficiency.
hypochondrium [*hi"po-kon'dre-əm*] the cranial abdominal region on either side of the costal arch.
hypochondrodysplasia [*hi"po-kon"dro-pla'zhə*] abnormal (deficient) cartilage growth. See also **chondrodysplasia**.
hypochondroplasia chondrodysplasia.
hypochromasia [*hi"po-kro-ma'zhə*] 1. staining less intensely than normal. 2. decrease of hemoglobin in erythrocytes so that they are abnormally pale; measured in calculation of the **mean** corpuscular hemoglobin concentration (MCHC). Seen in iron deficiency anemias, usually in association with microcytosis, and sometimes in dogs with congenital portosystemic shunts.
hypochromatism [*hi"po-kro'mə-tiz-əm*] abnormally deficient pigmentation, especially deficiency of chromatin in a cell nucleus.
hypochromatosis the gradual fading and disappearance of the nucleus (the chromatin) of a cell.
hypochromia [*hi"po-kro'me-ə*] 1. hypochromatism. 2. decrease of hemoglobin in the erythrocytes so that they are abnormally pale.
hypochromic effect [*hi"po-kro'mik*] the decrease in the absorbance of UV (~260 nm) that accompanies the denaturation (melting) of DNA and used to monitor the process.
hypochylia deficiency of chyle.
hypocitruria [*hi"po-sĭ-troo're-ə*] abnormally low concentration of citric acid in urine; observed in dogs in association with calcium oxalate uroliths.
hypocleidium the flattened plate in birds interposed between the clavicles at their ventral extremities, and connected to the sternum.
hypocomplementemia [*hi"po-kom"plə-men-te'me-ə*] diminution of complement concentration in the blood. An inherited defect in Finnish-Landrace sheep.
hypocorticism [*hi"po-kor'ti-siz-əm*] hypoadrenocorticism.
hypocortisolemia [*hi"po-ku-pre'me-ə*] abnormally low concentration of cortisol in the blood.
hypocrinism a state due to deficient secretion of an endocrine gland.
hypocupremia abnormally diminished concentration of copper in the blood.
hypocuprosis disease state caused by abnormally low concentration of copper.
hypocyanocobalaminosis see **vitamin B_{12}**.

hypocythemia deficiency in the number of erythrocytes in the blood.

hypodactyly [*hi"po-dak'tə-le*] less than the usual number of digits on the limb extremity.

Hypoderaerum a genus of the family Echinostomatidae of flukes.

H. conoideum found in the terminal portion of the small intestine of pigeon, fowl and most aquatic birds. It causes localized enteritis in ducks.

Hypoderma [*hi"po-dur'mə*] a genus of flies, whose larvae invade tissues causing damage to tissue, and to the skin as they emerge through it. Members of the family Oestridae.

H. actaeon a central European fly.

H. aeratum found in sheep and goats.

***H. bovis*, *H. lineatum* (syn. *H. lineata*)** hairy flies about 0.5 inch long, which parasitize cattle, bison and rarely horses. The larvae cause warbles under the skin and an emission puncture to mar the hide of the animal.

H. capreola found in roe deer.

H. crossi found in goats and sheep.

H. diana found in red deer and roe deer.

H. moschiferi found in musk deer.

H. silenus attacks horses and goats.

hypodermiasis [*hi"po-dər-mi'ə-sis*] a creeping eruption of the skin in humans and cattle caused by the larvae of *Hypoderma* spp.

hypodermic [*hi"po-dur'mik*] 1. beneath the skin; injected into subcutaneous tissues. 2. a hypodermic, or subcutaneous, injection; a hypodermic syringe.

hypodermis [*hi"po-dur'mis*] subcutis.

hypodermoclysis [*hi"po-dər-mok'lĭ-sis*] the introduction into the subcutaneous tissues of fluids, especially physiological sodium chloride solution, in large quantity. The most common sites for insertion of the needles for hypodermoclysis are over the sides of the rib cages and the loose tissue in each upper flank. This method of introducing fluids into the body is contraindicated in cases of edema, and it may be complicated by abscess formation, puncture of a large blood vessel, and necrosis and sloughing of the tissues due to poor absorption. The enzyme hyaluronidase may be injected into the tubing at each injection site at the start of clysis, and sometimes an additional 1 mL is added to the solution to facilitate absorption. Called also subcutaneous infusion.

hypodipsia [*hi"po-dip'se-ə*] abnormally diminished thirst; hypernatremia can result.

hypodontia [*hi"po-don'shə*] partial anodontia.

hypodynamia [*hi"po-di-na'me-ə*] abnormally diminished power.

hypodynamic shock [*hi"po-di-nam'ik*] the second phase of shock, after the hyperdynamic phase, manifested by systemic hypotension, reduced cardiac output, hypothermia, rapid irregular pulse, prolonged capillary refill time and pale mucosae.

hypoeccrisia abnormally diminished excretion.

hypoechoic producing a decreased amplitude of waves returned in ultrasonography; characteristic of fluid.

hypoendocrinism insufficiency of endocrine gland activity.

hypoergasia abnormally decreased functional activity.

hypoergia [*hi"po-ur'jə*] 1. hypoergasia. 2. hyposensitivity to allergens.

hypoergic [*hi"po-ur'jik*] 1. less energetic than normal. 2. pertaining to or characterized by hypoergy.

hypoergy [*hi"po-ur'je*] abnormally diminished reactivity; hyposensitivity.

hypoesophoria [*hi"po-es"o-for'e-ə*] deviation of the visual axes downward and inward.

hypoesthesia [*hi"po-es-the'zhə*] a state of abnormally decreased sensitivity to stimuli; is only assumed in animals when there is an inadequate response to the application of a touch or pain stimulus which is a test of reflex arc integrity. An expression of pain by an animal in response to stimulation is accepted as evidence of central perception.

hypoestrinism hypoestrogenism.

hypoestrogenism a lower concentration than normal of estrogens in the body, e.g. in the spayed female. Normal estral activity is absent; in bitches there may be a socially distressing urinary incontinence.

hypoexophoria [*hi"po-ek"so-for'e-ə*] deviation of the visual axes downward and outward.

hypoferremia [*hi"po-fə-re'me-ə*] deficiency of iron in the blood.

hypofertility [*hi"po-fər-til'ĭ-te*] diminished reproductive capacity.

hypofibrinogenemia [*hi"po-fi-brin"o-jə-ne'me-ə*] deficiency of fibrinogen in the blood. Has been reported as an inherited defect in Saint Bernard dogs; is acquired in liver disease and as a sequel of disseminated intravascular **coagulation**.

hypoflexion [*hi"po- flek'shən*] reduced ability to flex a limb.

hypofolicosis see **folic acid**.

hypofunction [*hi"po-funk'shən*] diminished functioning.

hypogalactia [*hi"po-gə-lak'she-ə*] deficiency of milk secretion.

hypogammaglobulinemia [*hi"po-gam"ə-glob"u-lĭ-ne'me-ə*] an immunological deficiency state marked by abnormally low concentrations of generally all classes of immunoglobulins, with increased susceptibility to infectious diseases. It may be primary (inherited), or secondary (acquired), or it may be physiological. The latter occurs in normal neonates. See also **agammaglobulinemia**. The young of most animal species are born hypogammaglobulinemic and remain so until they ingest maternal colostrum which has a high content of immunoglobulins. The ingestion must occur during the first 12–36 hours of life because the globulins are absorbed only during this period. Inadequate supply, or inadequate ingestion or absorption of the immunoglobulins results in prolonged hypogammaglobulinemia and puts the neonate at grave risk of life-threatening infections. This failure of passive antibody transfer is the most common immunodeficiency disease encountered in domestic animal species, especially foals and dairy calves. This syndrome is called 'failure of passive transfer of immunoglobulins'. See maternal **immunity**.

transient h. occurs in some foals at 3–4 months of age because of a delayed onset of immunoglobulin synthesis.

hypogangliosis, hypoganglionosis [*hi"po-gang"le-o-no'sis*] deficiency in the number of myenteric ganglion cells, usually in the colon leading to the development of megacolon. See also aganglionosis.

Clydesdale myenteric h. megacolon develops at about 4–9 months old. Possibly an inherited trait.

hypogastric [*hi"po-gas'trik*] pertaining to the hypogastrium.

h. nerve see Table 14.

hypogastrium [*hi"po-gas'tre-əm*] the most caudal middle abdominal region.

hypogenesis [*hi"po-jen'ə-sis*] defective embryonic development.

hypogenitalism [*hi"po-jen'ĭ-təl-iz"əm*] lack of sexual development because of deficient activity of the gonads; hypogonadism.

hypoglobulinemia lower than normal concentration of globulin in the blood.

hypoglossal [*hi"po-glos'əl*] situated beneath the tongue, as the hypoglossal nerve.

h. cord the large aggregation of myogenic cells which migrates from somites 3–5 to a location ventral to the pharynx, and forms the tongue.

h. nerve paralysis causes difficulty in prehension, deglutition and mastication. Unilateral lesions cause deviation of the protruded tongue toward the side of the lesion.

hypoglottis [*hi"po glot'is*] 1. the underside of the tongue. 2. ranula.

hypoglucagonemia [*hi"po-gloo"kə-gon-e'me-ə*] abnormally reduced concentration of glucagon in the blood.

hypoglycemia [*hi"po-gli-se'me-ə*] an abnormally low concentration of sugar (glucose) in the blood. The condition may result from an excessive rate of removal of glucose from the blood or from decreased secretion of glucose into the blood. Overproduction of insulin from the islets of Langerhans or an overdose of exogenous insulin can lead to increased utilization of glucose, so that glucose is removed from the blood at an accelerated rate. Tumors of the islands of Langerhans can increase the production of insulin and result in rapid removal of glucose from the blood. Because the liver is the source of most of the glucose entering the blood while an animal is fasting, damage to the liver cells can result in impaired ability to convert glycogen into glucose. If secretion of the adrenocortical hormones, especially the **glucocorticoids**, is deficient, the protein precursors of glucose are not available and the blood glucose concentration drops as the liver's glycogen supply is depleted. In animals the clinical picture of hypoglycemia includes muscle weakness, lethargy and recumbency. Ketosis and acetonuria are usual. Profound hypoglycemia or a very rapid fall in blood sugar causes convulsions and final coma.

hunting dog h. a stress-related syndrome seen in dogs that are fasted before a hunt, later experiencing exhaustion and hypoglycemic seizures.

VetBooks.ir

juvenile h. occurs in young puppies, mainly of toy breeds, causing weakness, muscle tremors, ataxia and seizures. Often precipitated by excitement, anorexia, hypothermia or gastrointestinal disorders. The cause is unclear, but believed to be incomplete development of metabolic pathways for glucose production. Affected puppies usually become normal with maturity.
leucine-induced h. orally administered leucine causes a significant further hypoglycemia in patients with an existing hyperinsulinism due to islet cell tumor.
neonatal h. see **neonatal** hypoglycemia.
h. unresponsiveness the hypoglycemia induced by insulin fails to return to the normal concentration in the required time, usually because of hyperinsulinism, or hypopituitarism or hypoadrenalism.

hypoglycemic [*hi"po-gli-se'mik*] pertaining to, characterized by, or producing hypoglycemia.
h. crisis profound weakness and seizures may be caused by very low blood glucose concentrations. Untreated hyperinsulinism and overdosing with insulin in the treatment of diabetes mellitus are common causes.
h. encephalopathy degenerative lesions in brain tissue caused by prolonged hypoglycemia, as in pregnancy toxemia of ewes.
oral h. agents synthetic drugs that lower the blood sugar concentration. These drugs stimulate the synthesis and release of **insulin** from the beta cells of the islets of Langerhans in the pancreas, and are used to treat human patients with non-insulin-dependent **diabetes** mellitus. They have limited use in dogs and cats with diabetes mellitus as they have nonfunctional beta cells that cannot produce insulin.
h. factor see **insulin**.
h. seizures see hypoglycemic crisis (above).

hypoglycogenolysis [*hi"po-gli"ko-jən-ol'ə-sis*] defective breakdown of glycogen to glucose in the body.
hypoglycorrhachia [*hi"po-gli"ko-ra'ke-ə*] abnormally low glucose content in the cerebrospinal fluid.
hypogonadism [*hi"po-go'nad-iz-əm*] decreased functional activity of the gonads, with reduced production of germ cells and/or hormones; may be associated with retardation of growth and sexual development.
hypogonadotropic [*hi"po-go"nə-do-tro'pik*] relating to or caused by deficiency of gonadotropin.
hypogranulosis decreased thickness of the epidermal stratum granulosum.
hypohidrosis [*hi"po-hĭ-dro'sis*] abnormally diminished secretion of sweat. See also **anhidrosis**.
hypoinsulinism [*hi"po-in'su-lin-iz"əm*] deficient secretion of insulin by the pancreas resulting in hyperglycemia.
hypointense [*hi"po-in-tens'*] relatively less radio frequency signal on magnetic resonance imaging, producing darker regions on magnetic resonance images.
hypokalemia [*hi"po-kə-le'me-ə*] abnormally low potassium concentration in the blood; it may result from potassium loss by renal secretion or via the gastrointestinal tract, as in vomiting and diarrhea. Other causes include uncontrolled diabetes mellitus and attendant polyuria, increased adrenocortical secretion, steroid therapy, diuretic therapy, and burns or other injuries that result in loss of potassium. A special circumstance in which hypokalemia occurs is dilatation and displacement of the abomasum in which large quantities of potassium accumulate. The clinical syndrome of hypokalemia includes muscle weakness, lethargy, recumbency and terminal coma. Called also hypopotassemia.
hypokalemic [*hi"po-kə-le'mik*] 1. pertaining to or characterized by hypokalemia. 2. an agent that lowers blood potassium concentration.
feline h. polymyopathy seen in cats with severe potassium depletion, usually caused by renal dysfunction and excessive urinary potassium losses. There is generalized muscle weakness, characterized by ventroflexion of the neck; other signs include weight loss, chronic vomiting and constipation.
h. nephropathy chronic loss of potassium due to alimentary tract disease can cause vacuolar degeneration of renal tubular epithelium.
hypokeratosis a decreased thickness of the stratum corneum of the skin.
hypokinesia [*hi"po-kĭ-ne'zhə*] abnormally diminished motor activity.

H-70: Cervical ventroflexion in a cat with hypokalemic polymyopathy. From Ettinger SJ, Feldman E, Textbook of Veterinary Internal Medicine, 6th Edition. Saunders, 2004.

hypolactasia [*hi"po-lak-ta'zhə*] deficiency of lactase activity in the intestines.
hypoleydigism [*hi"po-li'dig-iz-əm*] abnormally diminished secretion of androgens by Leydig's cells.
hypolipidemic [*hi"po-lip"i-de'mik*] promoting the reduction of lipid concentrations in the serum.
hypolipoproteinemia [*hi"po-lip"o-pro"te-ne'me-ə*] lower than normal lipoprotein concentrations in the blood.
hypoluteoidism deficient progesterone production, a state incompatible with continued pregnancy.
hypomagnesemia [*hi"po-mag"nə-se'me-ə*] abnormally low magnesium content of the blood, manifested clinically by neuromuscular excitability. See also hypomagnesemic **tetany**, **lactation tetany**.
hypomagnesemic emanating from or pertaining to hypomagnesemia.
h. tetany see **lactation tetany**.
hypomania [*hi"po-ma'ne-ə*] mania of a mild type.
hypomastia [*hi"po-mas'te-ə*] abnormal smallness of mammary glands.
hypomelanosis [*hi"po-mel"ə-no'sis*] hypopigmentation.
hypomere [*hi'po-mēr*] 1. the ventrolateral portion of a myotome, forming muscles innervated by the ventral rami of the spinal nerves. 2. the lateral plate of mesoderm that develops into the walls of the body cavities.
hypometabolism [*hi"po-mə-tab'o-liz-əm*] decreased metabolism; low metabolic rate.
hypometria [*hi"po-me'tre-ə*] ataxia in which movements fall short of the intended goal.
hypomochlion center of rotation of a joint.
hypomotility [*hi"po-mo-til'i-te*] deficient power of movement in any part.
gut h. prolonged transit time of ingesta through the gut.
hypomyelination [*hi"po-mi"ə-lin-a'shən*] abnormally reduced amount of myelin in nervous tissue.
hypomyelinogenesis [*hi"po- mi"ə-lin"o-jen'ə-sis*] inadequate synthesis of myelin; includes failure of formation of myelin, plus incomplete and delayed myelination of axons. It occurs in several species and may be caused by simple nutritional deficiency, by viral infection, or inherited defect. Occurs in several breeds of dogs including Samoyeds, Dalmatians, Chow Chows, Weimaraners, Bernese mountain dogs, English springer spaniels, in all of which it is inherited as an X-linked trait. See also **hypomyelinogenesis congenita** (calves) and **congenital tremor syndrome** (piglets).
hypomyelinogenesis congenita [*hi"po- mi"ə-lin"o-jen'ə-sis*] a congenital disease of calves manifested by inability to rise, and severe muscle tremor with periods of spasticity. At postmortem examination there is a myelin deficiency especially in the cerebellum and brainstem. Bovine virus diarrhea virus infection during early pregnancy is a likely cause.
hypomyotonia deficient muscular tonicity.
hypomyxia [*hi"po-mik'se-ə*] decreased secretion of mucus.
hyponatremia [*hi"po-nə-tre'me-ə*] deficiency of **sodium** in the blood; salt depletion. The common cause is loss of sodium from the intestinal tract due to diarrhea. Clinically there is muscle weakness, hypothermia and dehydration.
hyponeocytosis [*hi"po-ne"o-si-to'sis*] leukopenia with the presence of immature leukocytes in the blood.
hyponiacinosis see **niacin** nutritional deficiency.
hyponychium [*hi"po-nik'e-əm*] the thickened epidermis beneath the free distal end of the claw of a digit.

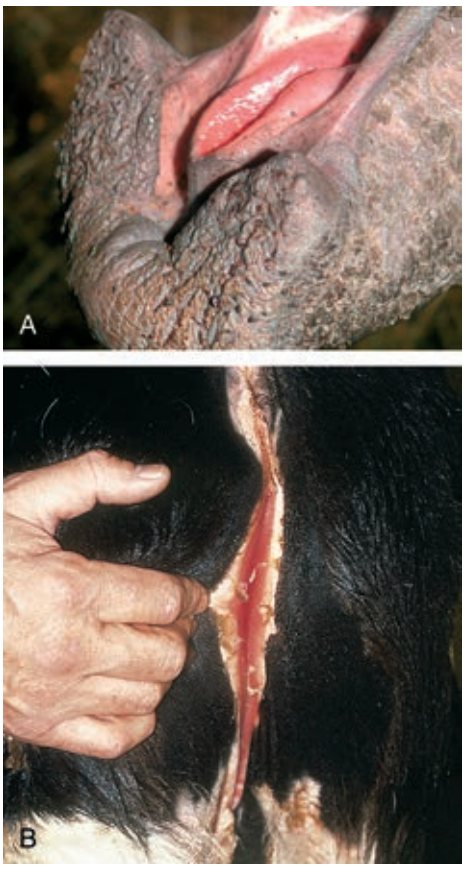
VetBooks.ir

hypo-orchidism [*hi"po-or'kĭ-diz-əm*] defective activity of the testes. See also **testicular** agenesis.
hypo-orthocytosis [*hi"po-or"tho-si-to'sis*] leukopenia with a normal proportion of the various forms of leukocytes.
hypo-osmolality [*hi"po-oz"mo-lal'ĭ-te*] a decrease in the osmolality of the body fluids.
hypo-osmotic [*hi"po-oz-mot'ik*] pertaining to hypo-osmolality.
hypopancreatism [*hi"po-pan'kre-ə-tiz"əm*] diminished activity of the pancreas.
hypopantothenosis **pantothenic acid** nutritional deficiency.
hypoparathyroidism [*hi"po-par"ə-thi'roid-iz-əm*] the condition produced by greatly reduced function of the parathyroid glands or by the removal of these bodies. The lack of parathyroid hormone leads to a fall in serum calcium concentration, which may result in increased neuromuscular excitability and, ultimately, in tetany. There is also a rise in the plasma phosphate concentration, which results in a decrease in bone resorption and an increased density of bone.
iatrogenic h. usually due to accidental removal of the glands during thyroidectomy.
idiopathic h. recorded in dogs due usually to an immune-mediated diffuse lymphocytic parathyroiditis.
hypoperfusion [*hi"po-pər-fu'zhən*] decreased blood flood through an organ, as in circulatory shock; if prolonged, it may result in permanent cellular dysfunction and death.
hypophagia [*hi"po-fa'jə*] reduced food intake.
hypophalangism [*hi"po-fə-lan'jiz-əm*] absence of a phalanx on a digit.
hypopharynx [*hi"po-far'inks*] laryngopharynx.
hypophonesis [*hi"po-fo-ne'sis*] diminution of the sound in auscultation or percussion.
hypophonia [*hi"po-fo'ne-ə*] a weak voice due to incoordination of the vocal muscles.
hypophoria [*hi"po-for'e-ə*] permanent downward deviation of the visual axis of an eye in the absence of visual fusional stimuli. A form of heterophoria.
hypophosphatemia [*hi"po-fos"fə-te'me-ə*] a lower than normal concentration of inorganic phosphorus, present as phosphates, in the blood. May be due to nutritional deficiency, several different malignant neoplasms, and primary hyperparathyroidism or pseudohyperparathyroidism associated with hypercalcemia. See also **rickets**, **osteomalacia**, **postparturient** hemoglobinuria.
hypophosphaturia [*hi"po-fos"fə-tu're-ə*] abnormally decreased concentration of urinary phosphate.
hypophosphites [*hi"po-fos'fīt*] any salt of hypophosphorous acid; have been incorporated in patent medicine tonics for many years in the belief that they provide replacement materials for damaged nervous tissue.
hypophrenic [*hi"po-fren'ik*] caudal to the diaphragm.
Hypophthalmichthys genus of farmed finfish in the family Cyprinidae; includes *H. molitrix* (silver carp), *H. nobilis* (bighead carp).
hypophyseal [*hi"po-fiz'e-əl*] hypophysial.
hypophysectomy [*hi-pof"ə-sek'tə-me*] excision of the hypophysis, or pituitary gland. Surgical removal is a form of treatment for pituitary-dependent Cushing's syndrome in dogs.
hypophyseoportal system [*hi"po-fiz"e-o-por'təl*] the portal system of the pituitary gland, in which hypothalamic venules connect with the sinusoidal capillaries of the anterior pituitary. See **hypophysial** portal system.
hypophysial [*hi"po-fiz'e-əl*] pertaining to the hypophysis (**pituitary**).
h. base the pars tuberalis and the infundibular stalk of the pituitary gland.
h. portal system the peculiar vascular anatomy of the pituitary gland in which veins draining the hypothalamus provide a route for hypothalamic regulating hormones to enter and control the secretion of the adenohypophyseal hormones.
h. system the hypothalamus, the pituitary gland and the hypophyseoportal circulation.
hypophysioprivic [*hi"po-fiz"e-o-priv'ik*] due to deficiency of hormonal secretion of the hypophysis.
hypophysis [*hi-pof'ə-sis*] pl. *hypophyses* [Gr.] see **pituitary**.
h. cerebri hypophysis.
h. sicca posterior pituitary.
hypopiesis [*hi-po-pi-e'shə*] abnormally low pressure, in particular, low blood pressure.
hypopigmentation [*hi"po-pig"mən-ta'shən*] abnormally decreased pigmentation.
acquired h. following skin injury in horses; hyperpigmentation the rule in other species. In dogs depigmentation, due to damage of basal keratinocytes, due usually to immune-mediated diseases, e.g. lupus erythematosus. Skin depigmentation, such as occurs in human vitiligo, is recorded in dogs and horses.
congenital h. see **albinism**.
epidermal h. due to defective melanization as a result of defective melanocytes in the skin or to their damage or destruction after birth.
hair h. leukotrichia.
hereditary h. see **albinism**; **piebaldism**.
skin h. leukoderma.
hypopituitarism [*hi"po-pĭ-too'ĭ-tə-riz"əm*] the condition resulting from diminution or cessation of hormonal secretion by the pituitary gland, especially the anterior pituitary. Signs vary with the degree of dysfunction; proportionate dwarfism in German shepherd dogs is one of the best-known syndromes.
hypoplasia [*hi"po-pla'zhə*] incomplete development or underdevelopment of an organ or tissue, e.g. cerebellar hypoplasia, bone marrow hypoplasia, gonadal hypoplasia, small intestinal mucosal hypoplasia.
hypoplastic [*hi"po-plas'tik*] characterized by hypoplasia, e.g. hypoplastic anemia.
h. left heart syndrome a congenital anomaly seen in cats in which there is mitral atresia and incomplete development of the left ventricle and aortic valve.
hypoplasty [*hi'po-plas"te*] hypoplasia.
hypopnea [*hi-pop'ne-ə*] abnormal decrease in depth and rate of respiration.
hypopolarization [*hi"po po"lər-ĭ-za'shən*] in neurochemical transmission of nerve impulses this is decreased polarity of the postsynaptic membrane, e.g. that caused by excitation from receptor stimulation.
hypoporosis [*hi"po-po-ro'sis*] deficient callus formation after bone fracture.
hypoposia [*hi"po-po'zhə*] abnormally diminished ingestion of fluids.
hypopotassemia [*hi"po-po"tə-se'me-ə*] hypokalemia.
hypopraxia [*hi"po-prak'se-ə*] abnormally diminished activity.
hypoproconvertinemia reduced concentration of **proconvertin** (clotting factor VII) in the blood.
hypoprogesteronism the state of being deficient in progesterone; incompatible with sustained pregnancy.
hypoproteinemia [*hi"po-pro"te-ne'me-ə*] deficiency of protein in the blood caused by inadequate intake or synthesis due to liver damage or to loss in protein losing enteropathy, renal disease or intestinal parasite infestation. Clinically represented by edema and emaciation. See also **hypogammaglobulinemia**.
hypoprothrombinemia [*hi"po-pro-throm"bĭ-ne'me-ə*] deficiency of **prothrombin** in the blood.
hypoptyalism [*hi"po-ti'əl-iz"əm*] abnormally decreased secretion of saliva.
hypopyon [*hi-po'pe-on*] white blood cells in the anterior chamber of the eye.
hypopyridoxinosis **pyridoxine** (vitamin B_6) deficiency.
hyporeactive [*hi"po-re-ak'tiv*] showing less than normal response to stimuli.
hyporeflexia [*hi"po-re-flek'se-ə*] diminution or weakening of reflexes.
hyporeninemia [*hi"po-re"nĭ-ne'me-ə*] low concentration of renin in the blood.
hyporiboflavinosis see **riboflavin** nutritional deficiency.
hyposalemia [*hi"po-sə-le'me-ə*] diminution of salt levels in the blood.

H-71: Hypopyon in a calf.

VetBooks.ir

hyposalivation [*hi"po-sal"ĭ-va'shən*] hypoptyalism.
hyposcleral [*hi"po-skler'əl*] beneath the sclera.
hyposecretion [*hi"po-se-kre'shən*] diminished secretion.
hyposensitivity [*hi"po-sen"sĭ-tiv'ĭ-te*] 1. abnormally decreased sensitivity. 2. the state of being less sensitive to a specific allergen after repeated and gradually increasing doses of the particular allergen. This is believed to be due to an increase in circulating antibodies, particularly IgG to the allergen. The antibodies form complexes with the incoming allergen and prevent it from binding to IgE bound to mast cells.
hyposensitization [*hi"po-sen"sĭ-tĭ-za'shən*] decreasing the hypersensitivity response to allergens by exposure, usually as intradermal injections, to minute but increasing doses of the allergens. A treatment modality for atopic dermatitis, most commonly in dogs, cats and horses. Called also desensitization. See also **immunotherapy**.
hyposmolarity [*hi-poz"mo-lar'i-te*] abnormally decreased osmolar concentration of a solution.
hyposomatotropism [*hi"po-so-mat"o-tro'piz-əm*] deficient secretion of somatotropin (growth hormone) or secretion of inactive somatotropin, resulting in dwarfism.
hyposomia [*hi"po-so'me-ə*] subnormal body development.
hypospadia [*hi"po-spa'de-ə*] a developmental anomaly in the male in which the urethra opens on the underside of the penis or on the perineum.
hypospadiac [*hi"po-spa'de-ak*] 1. pertaining to hypospadias. 2. an animal affected with hypospadias.
hyposplenism [*hi"po-splen'iz-əm*] diminished functioning of the spleen, resulting in an increase in peripheral blood elements.
hypostasis [*hi-pos'tə-sis*] poor or stagnant circulation in a dependent part of the body or an organ.
hypostatic [*hi"po-stat'ik*] 1. pertaining to, due to, or associated with hypostasis. 2. abnormally static; said of certain inherited traits that are liable to be suppressed by other traits.
hyposthenia [*hi"pos-the'ne-ə*] diminished strength or tonicity.
hyposthenuria [*hi"pos-thə-nu're-ə*] excretion of urine of low specific gravity; osmolality is less than that of the plasma.
hypostome [*hi'po-stōm*] an appendage on the ventral aspect of the oral opening of some insects and arachnids.



H-72: (A) Hypospadias of the glans penis in a stallion. The urethral orifice is slit-like and only partially surrounded by the fossa glandis and glans penis. (B) Perineal hypospadia in a calf. (A) From Bleul B, Theiss F, Rütten M, Kähn W: Clinical, cytogenetic and hormonal findings in a stallion with hypospadias - A case report. Vet J 173:679-682, 2007. Elsevier. (B) From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

hypostomia [*hi"po-sto'me-ə*] a developmental anomaly characterized by abnormal smallness of the mouth.
hypostypsis [*hip"os-to'sis*] moderate astringency.
hyposynergia [*hi"po-sĭ-nur'jə*] defective coordination.
hypotelorism [*hi"po-tel'ə-riz-əm*] abnormally decreased distance between two organs or parts.
hypotension [*hi"po-ten'shən*] diminished tension; lowered blood pressure, which in dogs and cats would be a systemic arterial pressure less than 60 mm Hg, which results in poor perfusion. Causes include traumatic, toxemic or anaphylactic shock, fluid loss, hypoglycemia, hypoxemia, cardiac dysfunction, prolonged hypothermia, electrolyte imbalances, and brain stem disease.
postural h. a slight fall in systolic blood pressure is normal upon rising. Abnormal postural hypotension involves a decrease in both systolic and diastolic pressures with changes in heart rate. Blood pressure in standing animals varies with head height in horses and other long-necked animals.
hypotensive [*hi"po-ten'siv*] 1. characterized by or causing diminished tension or pressure, as abnormally low blood pressure. 2. an animal with abnormally low blood pressure.
h. shock see hypovolemic **shock**.
hypotensor [*hi"po-ten'sər*] a substance that lowers the blood pressure.
hypothalamic [*hi"po-thə-lam'ik*] pertaining to the hypothalamus.
h. hormones see **hypothalamus**.
h.–ovarian axis the operating relationship between the hypothalamus and the ovaries; optic and olfactory stimuli modulate the axis' activity.
h.–pituitary–adrenocortical axis the complex system of interaction between the hypothalamus, pituitary gland and adrenal cortex that involves stimulation of synthesis and release by corticotropin-releasing factor and adrenocorticotropic hormone, and the negative feedback effect of cortisol.
h. secretory neurons are located in nuclei of the hypothalmus; they receive information from higher centers to regulate hormone secretion.
h. thermoregulatory mechanism receptive to stimulation by pyrogens to elevate the body temperature in fever.
hypothalamohypophysial pertaining to the hypothalamus and pituitary complex.
h. portal system see **hypophysial** portal system.
h. syndrome disorder of pituitary and hypothalamus functions caused by an enlarging pituitary tumor compressing or infiltrating the overlying hypothalamus.
h. tract a tract of unmyelinated nerves connecting the hypothalamus and the hypophysis; their cell bodies are located in the supraoptic and paraventricular nuclei of the hypothalamus.
hypothalamus [*hi"po-thal'ə-məs*] the portion of the diencephalon lying beneath the thalamus at the base of the cerebrum, and forming the floor and part of the lateral wall of the third ventricle. It includes the optic chiasm, mammillary bodies, tuber cinereum, infundibulum and hypophysis (pituitary gland), but for physiological purposes, the hypophysis is considered a distinct structure. The hypothalamic nuclei activate, control and integrate many of the involuntary functions necessary for living. The various hypothalamic centers influence peripheral autonomic mechanisms, endocrine activity and many somatic functions, e.g. a general regulation of water balance, body temperature, sleep, thirst and hunger, and the development of secondary sex characteristics. Because of its influence on the release and inhibition of pituitary hormones, the hypothalamus indirectly plays an important role in the regulation of protein, fat and carbohydrate metabolism, body fluid volume and electrolyte content, and internal secretion of endocrine hormones. The hormones synthesized and secreted by the special neurons of the hypothalamus are called hypothalamic releasing and inhibiting hormones or factors. They act directly on the tissues of the pituitary gland. Some of the major hypothalamic factors are: *thyroid-stimulating hormone releasing hormone* (TRH), which activates the release of the thyroid-stimulating hormone (TSH) from the anterior lobe of the pituitary gland; *corticotropin-releasing factor* (CRF); *growth hormone releasing factor* (GHRF); *gonadotropin releasing hormone* (GnRH); and *prolactin-inhibiting factor* (PIF). In addition, there are other stimulating and inhibiting factors that influence the release and retention of other anterior pituitary hormones. The hypothalamic hormones or factors are secreted directly into the veins in the lower part of the hypothalamus and are transported

directly to the tissues of the pituitary gland. This transportation network is called the hypothalamic–hypophysial portal system. The secretion of the hypothalamic hormones is a part of a regulatory negative **feedback** system that continuously operates to maintain homeostasis.

hypothermia [*hi"po-thur'me-ə*] low body temperature. Hypothermia may be symptomatic of a disease or disorder of the temperature-regulating mechanism of the body, may be due to exposure to cold, or may be induced for certain surgical procedures or as a therapeutic measure. Exposure to cold is well tolerated by animals except those that have poor control of peripheral circulation, e.g. cows with parturient hypocalcemia (milk fever) and animals under anesthesia. Newborn piglets are particularly susceptible, because they are born with little insulating subcutaneous fat and proportionately less brown fat than other domestic animals, but high mortalities may also occur in lambs during inclement weather and puppies deprived of warmth from the bitch. Even adult sheep may die of hypothermia if they are exposed to cold, wet, windy weather immediately after shearing.

induced h. deliberate reduction of the temperature of all or part of the body; sometimes used as an adjunct to anesthesia in surgical procedures involving a limb, and as a protective measure in cardiac and neurological surgery. The hypothermia may be continued only for the duration of the operation or it may be prolonged depending on the reason for its use.

neonatal h. a significant cause of loss especially in lambs born outdoors in changeable weather with a high chill factor combining low temperature, rain and wind and no shelter from the wind. Piglets are the neonates most susceptible to cold and in most climates require supplemental heat either from the sow or from heat lamps.

symptomatic h. pathological reduction of body temperature as a result of decreased heat production or increased heat loss. Hypothyroidism, severe blood loss with circulatory failure, and damage to the heat-producing cells of the hypothalamus can lead to decreased heat production.

therapeutic h. the application of cold to acute injuries induces vasoconstriction and limits edema and muscle spasm.

hypothesis [*hi-poth'ə-sis*] a supposition that appears to explain a group of phenomena and is assumed as a basis of reasoning and experimentation.

h. testing a standard practice using statistical methods, usually analytical observational studies, to test a hypothesis. For example, the user assumes that vaccination against a particular disease reduces the prevalence of the disease, then tests that hypothesis.

h. testing sampling sampling of material or data for the purpose of testing a hypothesis.

hypothetico-deductive diagnosis method a method of building up diagnostic hypotheses suggested by the answers to questions to the client, then testing each hypothesis as it arises by further questions or by clinical examination or laboratory test until a single diagnosis or a short list of diagnostic possibilities remains.

hypothiaminosis see **thiamine** nutritional deficiency.

hypothrombinemia [*hi"po-throm"bĭ-ne'me-ə*] deficiency of thrombin in the blood, resulting in a tendency to bleed.

hypothymism [*hi"po-thi'miz-əm*] diminished thymus activity.

hypothyroidism [*hi"po-thi'roid-iz-əm*] deficiency of **thyroid** gland activity, with underproduction of thyroxine, or the condition resulting from it. Common in adult dogs, particularly certain breeds, as a result of an idiopathic atrophy of the thyroid or a lymphocytic thyroiditis. Occurs rarely in cats. Alopecia, weight gain, mental dullness, fatigue, cold intolerance, infertility and neurological deficits are seen. In food animals the syndrome is classical neonatal colloid goiter. See also **goiter**.

autoimmune h. see lymphocytic **thyroiditis**.

congenital h. results from congenital thyroid dysgenesis, defective hormone synthesis or severe iodine deficiency. There is dwarfism, macroglossia and mental dullness.

iatrogenic h. may follow treatment for hyperparathyroidism in cats.

juvenile h. congenital hypothyroidism (above).

primary h. that resulting from disease of the thyroid glands; in dogs particularly idiopathic thyroid atrophy and lymphocytic thyroiditis.

secondary h. caused by a deficiency of thyroid-stimulating hormone, usually as a result of a lesion in the pituitary gland.

tertiary h. caused by a lack of synthesis or release of thyrotropin releasing hormone.

hypotonia [*hi"po-to'ne-ə*] abnormally decreased tonicity or strength.

ocular h. low intraocular pressure.

hypotonic [*hi-po-ton'ik*] 1. having an abnormally reduced tonicity or tension. 2. having an osmotic pressure lower than that of the solution with which it is compared.

h. dehydration occurs when there is secretory loss of sodium from the intestinal epithelium, e.g. salmonellosis, in osmolar excess of the concurrent fluid loss. See also **dehydration**.

hypotony hypotonia.

hypotoxicity [*hi"po-tok-sis"ĭ-te*] abnormally reduced toxic quality.

hypotransferrinemia [*hi"po-trans-fer"ĭ-ne'me-ah*] deficiency of transferrin in the blood.

hypotrichosis [*hi"po-trĭ-ko'sis*] presence of less than the normal amount of hair. Called also alopecia.

canine hereditary h. see black hair **follicle** dysplasia.

congenital h. absence of hair at birth. Occurs as an inherited trait in the hairless breeds of dogs and cats, Mexican hairless, Chinese crested and Sphinx, and sporadically in other breeds; has also been reported as an inherited condition in several breeds of cattle.

congenital h. universalis see **alopecia** universalis.

congenital h. with anodontia see anhidrotic **ectodermal** dysplasia.

inherited congenital h. partial or complete absence of haircoat at birth. Some may have had a partial haircoat and lost it subsequently. Tactile hairs and eyelashes are present. There may be other defects including absence of thyroid tissue, teeth and sweat glands. The affected animals may or may not be viable. Occurs in all species but most common in cattle and in some breeds of dogs. See also inherited symmetrical **alopecia**.

lethal h. occurs in Holstein–Friesian cattle; affected calves die within hours.

regional h. a congenital hypotrichosis over particular areas, usually symmetrical, of skin recorded in many dog and some dog breeds; hair follicles may be absent.

streaked h. see **streaked hairlessness**.

tardive h. reported as a sex-linked trait in Holstein–Friesian cattle; affected females are normal until a few months of age when a progressive loss of hair occurs. They are otherwise normal.

viable h. an autosomal recessive trait in Guernsey, Jersey and Holstein–Friesian cattle. Affected calves are nearly hairless at birth, but later some hair grows on the thorax and abdomen.

hypotrophy [*hi-pot'rə-fe*] abiotrophy.

hypotropia [*hi"po-tro'pe-ə*] **strabismus** in which there is permanent downward deviation of the visual axis of one eye.

hypotympanotomy [*hi"po-tim"pə-not'ə-me*] surgical opening of the hypotympanum.

hypotympanum [*hi"po-tim'pə-nəm*] the lower part of the cavity of the middle ear, in the temporal bone.

hypouricemia [*hi"po-u"rĭ-se'me-ə*] deficiency of uric acid in the blood, along with xanthinuria, due to deficiency of xanthine oxidase, the enzyme required for conversion of hypoxanthine to xanthine and of xanthine to uric acid.

hypoventilation [*hi"po-ven"tĭ-la'shən*] reduction in the amount of air entering the pulmonary alveoli; can result in increased blood concentration of carbon dioxide.

hypovitaminosis [*hi"po-vi"tə-min-o'sis*] a condition produced by lack of an essential vitamin. See under the name of each vitamin.

hypovolemia [*hi"po-vo-le'me-ə*] abnormally decreased volume of circulating fluid (plasma) in the body. Estimation of the degree of hypovolemia, the severity of dehydration, is a vital assessment in many diseases of animals. See **packed cell volume**, **dehydration**.

hypovolemic [*hi"po-vo-le'mik*] pertaining to hypovolemia. See also hypovolemic **shock**.

h. circulatory failure see **circulatory** failure.

hypovolia [*hi"po-vo'le-ə*] diminished water content or volume, as of extracellular fluid.

hypoxanthine [*hi"po-zan'thēn*] an intermediate product of uric acid synthesis, formed from adenylic acid and itself a precursor of xanthine.

hypoxemia [*hi"pok-se'me-ə*] deficient oxygenation of the blood. The degree of hypoxemia is measured by **blood gas analysis** to determine the partial pressure of oxygen in the arterial blood (PaO_2) or

VetBooks.ir

by pulse **oximetry**, which measures peripheral hemoglobin oxygen saturation (SpO_2). Decreased oxygenation of the blood eventually leads to **hypoxia**.

hypoxia [*hi-pok'se-ə*] a broad term meaning diminished availability of oxygen to the body tissues. Its causes are many and varied. There may be a deficiency of oxygen in the atmosphere, as in **altitude sickness**, or a pulmonary disorder that interferes with adequate ventilation of the lungs. Anemia or circulatory deficiencies can lead to inadequate transport and delivery of oxygen to the tissues. Finally, edema or other abnormal conditions of the tissues themselves may impair the exchange of oxygen and carbon dioxide between the capillaries and the tissues. The effect of hypoxia is to reduce the functional activity of tissues. The initial response may be one of temporarily increased activity. Terminally the tissue may be irreparably damaged.

anemic h. due to inadequate supply of hemoglobin in the blood.

cerebral h. may be acute or chronic causing either a tremor–convulsion syndrome or one of longer term weakness, ataxia, apparent blindness and lethargy.

fetal h. occurs as a result of deprivation of the fetus of oxygen during parturition, because it is delayed or the umbilical cord pinched off. Clinically there is weakness, imbecility, disinclination to suck, possibly hypothermia. Foals experience a much more violent, convulsive or dummy syndrome. See also **neonatal** maladjustment syndrome. Called also intrapartum hypoxia.

intrapartum h. see fetal hypoxia (above).

ischemic h. insufficient oxygen in tissues because of an inadequate blood supply.

stagnant h. inadequate supply of oxygen to tissues because of slow rate of passage of the blood through the tissues.

hypoxic [*hi-pok'sik*] a state of hypoxia.

h. cell sensitizers compounds that selectively sensitize hypoxic tumor cells to the effects of radiation.

h. vasoconstriction reduced oxygen supply to tissues causes local vasoconstriction and diversion of the blood to other tissues.

hyps(o)- word element. [Gr.] *height*.

hypsodont [*hip'so-dont*] a form of dentition, seen in horses and many ruminants; the crown is high (deep), the root is short.

Hyptiasmus a genus of flukes (digenetic trematodes) in the family Cyclocoelidae.

H. tumidus causes rhinitis and sinusitis in ducks and geese.

hyracoid resembling the rodent hyrax; members of the order Hyracoidea.

Hyraconema see ***Setaria***[1].

Hyracotherium the oldest known ancestor of the horse. A short, 25–50 cm high, rodent-like animal with four toes on each forefoot and three on each hind. Each toe had a hoof. It survived by its speed. Called also Eohippus. See also **Mesohippus**.

hyrax small, herbivorous animal in the family Procaviidae, native to Africa and the Middle East. It has five toes on the forefeet and three on the hind with blunt nails. Called also dassie.

hysteratresia [*his"tər-ə-tre'zhə*] atresia of the uterus.

hysterectomy [*his"tər-ek'tə-me*] surgical removal of the **uterus**.

abdominal h. that performed through the abdominal wall.

cesarean h. cesarean section followed by removal of the uterus.

radical h. excision of the uterus, upper vagina, and parametrium.

subtotal h. that in which the cervix is left in place.

total h. that in which the uterus and cervix are completely excised.

hysterectomy produced artificially reared pigs (HYPAR) see **specific pathogen free**.

hysteresis [*his"tə-re'sis*] the failure of coincidence of two associated phenomena, such as that exhibited in the differing temperatures of gelation and of liquefaction of a reversible colloid.

hystereurynter an instrument for dilating the ostium uteri.

hystereurysis [*his"tər-u'rə-sis*] dilatation of the ostium uteri.

hysteria [*his-ter'e-ə*] a state of excitement or tension in which there is a temporary loss of control over the emotions. The term is probably an inappropriate one for use in animals. It has common usage for conditions in which animals are assumed to have lost control of their emotions because of their atypical, excessively active behavior, e.g. a sow savaging her piglets at parturition. See also **farrowing** hysteria.

bovine h. see **ammoniated forage poisoning**.

canine h. a disease characterized by fits of frantic running, terminating in convulsions. Reported in dogs fed biscuits made of flour whitened by the **agene process**. The process is no longer used and the disease has disappeared.

hyster(o)- word element. [Gr.] *uterus, hysteria*.

hysterocatalepsy hysteria with cataleptic signs.

hysterocele [*his'tər-o-sēl"*] hernia of the uterus.

hysterocleisis surgical closure of the ostium uteri.

hysteroepilepsy [*his"tər-o-ep'ĭ-lep"se*] severe hysteria with epileptic convulsions.

hysterography [*his"tər-og'rə-fe*] 1. the graphic recording of the strength of uterine contractions in labor. 2. radiography of the uterus after instillation of a contrast medium.

hysteroid [*his'tər-oid*] resembling hysteria.

hysterolith [*his'tər-o-lith"*] a uterine calculus.

hysterolysis [*his"tər-ol'ə-sis*] freeing of the uterus from adhesions.

hysterometer an instrument for measuring the uterus.

hysterometry [*his"tə-rom'ə-tre*] measurement of the uterus.

hysteromyoma [*his"tər-o-mi-o'mə*] leiomyoma of the uterus.

hysteromyomectomy [*his"tər-o-mi"o-mek'tə-me*] local excision of a leiomyoma of the uterus.

hysteromyotomy [*his"tər-o-mi-ot'ə-me*] incision of the uterus for removal of a solid tumor.

hysteropathy [*his"tə-rop'ə-the*] any uterine disease; metropathy.

hysteropexy [*his'tər-o-pek"se*] fixation of a displaced uterus by surgery.

hysteroptosis [*his"tər-op-to'sis, his"tər-o-to'sis*] prolapse of the uterus.

hysterorrhaphy [*his"tər-or'ə-fe*] 1. suture of the uterus. 2. hysteropexy.

hysterorrhexis [*his"tər-o-rek'sis*] rupture of the uterus.

hysterosalpingography [*his"tər-o-sal"ping-gog'rə-f*] in animals, contrast radiography of the body and horns of the uterus; used in bitches to diagnose pyometritis.

hysterosalpingo-oophorectomy [*his"tər-o-sal-ping"go-o-of"ə-rek'tə-me*] excision of the uterus, uterine tubes and ovaries; the common spay procedure in dogs and cats. See also **ovariohysterectomy**.

hysteroscope [*his'tər-o-skōp"*] an endoscope used in direct visual examination of the canal of the uterine cervix and the cavity of the uterus.

hysteroscopy [*his"tər-os'kə-pe*] the visuaql examination of the canal of the uterine cervix and the cavity of the uterus using a rigid or flexible endoscope (hysteroscope).

hysterospasm [*his'tər-o-spaz"əm*] spasm of the uterus.

hysterotomy [*his"tər-ot'ə-me*] incision of the uterus. See also **cesarean section**.

hysterotrachelorrhaphy [*his'tər-o tra"kə-lor'ə-fe*] suture of the uterus and uterine cervix.

hysterotrachelotomy [*his'tər-o-tra"kə-lot'ə-me*] incision of the uterus and uterine cervix.

hysterotubography [*his'tər-o-too-bog'rə-fe*] hysterosalpingography.

Hystrichis a genus of nematodes of the family Dioctophymatidae occurring in aquatic birds.

H. tricolor causes nodules and some destruction of tissue in the proventriculus of ducks.

hystricomorph resembling or of the rodent family Hystricidae; includes Old World porcupines, agoutis, cavies, tuco-tucos, nutria and chinchillas.

Hz hertz; cycles per second.

I

I chemical symbol, *iodine* (L. *iodum*).
I_a antigen MHC class II histocompatibility antigens found primarily on B lymphocytes but also on some macrophages, T lymphocytes and skin.
I band the lighter colored cross-striation of muscle fibers; composed of filaments of actin.
I-cell disease see **mucolipidosis** II.
-ia word element, *state; condition.*
-iasis word element. [Gr.] *condition, state.*
IATA International Air Transport Association; administers the Live Animals Regulations, which is the global standard for transporting live animals by commercial airlines, ensuring safe and humane transport.
iatric [*i-at'rik*] pertaining to medicine or to a physician. Also loosely construed to include veterinary medicine and veterinary physicians, e.g. buiatrics.
iatr(o)- word element. [Gr.] *medicine, physician.*
iatrogenic [*i-at"ro-jen'ik*] resulting from the activity of a veterinarian; said of any adverse condition in a patient resulting from treatment by a veterinarian, for instance, death after injection of an inappropriate solution or of an appropriate solution in an inappropriate manner, e.g. rapid injections of solutions of magnesium salts, unbuffered solutions of high alkalinity or acidity, or of a substance to which the animal is allergic. See also iatrogenic **hyperadrenocorticism**.
IACUC Institutional Animal Care and Use Committee.
Ibaraki disease see ***Ibaraki virus***.
Ibaraki virus an orbivirus which causes a disease of cattle in Japan characterized by fever, anorexia and difficulty swalowing. See also **epizootic** hemorrhagic fever.
IBD 1. infectious bursal disease of chickens. 2. inflammatory bowel disease.
ibex wild goats of the genus *Capra*; males have a sizeable beard and long, thick, curved horns with transverse ridges or rings. They are hunted for trophy horns and some species are endangered.
Ibizan hound a medium-sized (22–27 inches tall), very lean, muscular dog with a short or wire-haired coat of white, chestnut or lion (light yellowish-red). The ears are very large, thin, erect and highly mobile, the head long and flat, and the tail long and thin. Overall, there is a deer-like appearance. The breed was an ancient Egyptian hunting dog but in recent times, considered to orginate in Spain.
IBK see **infectious** bovine keratoconjunctivitis.
ibotenic acid [*i"bo-ten'ik*] the insecticidal agent in the mushroom ***Amanita muscaria.***
IBR see **infectious** bovine rhinotracheitis.
IBR/IPV see **infectious** bovine rhinotracheitis/infectious pustular **vulvovaginitis**.
ibuprofen [*i"bu-pro'fən*] a nonsteroidal anti-inflammatory agent that possesses analgesic and antipyretic activities; used for symptomatic relief of rheumatoid arthritis and osteoarthritis in humans, but its use in dogs is limited by the occurrence of severe side-effects such as gastrointestinal hemorrhage.
IC inspiratory capacity.
i.c. medical record abbreviation for intracardiac.
-ic suffix meaning pertaining to.
iCa ionized (blood) calcium.
-ical suffix meaning pertaining to.
ICAMs intercellular adhesion molecules.
ICD 1. International Classification of Diseases (of the World Health Organization). 2. intrauterine contraceptive device. 3. isocitrate dehydrogenase.
ice plant [*is*] see ***Mesembryanthemum***.
Icelandic cattle usually polled, mostly red or red and white dairy cattle.
Icelandic pneumonia see **maedi**.
Icelandic horse, pony a sturdy horse, averaging 13–14 hands high in many colors; derived from North British ponies brought by the Vikings. They typically have five gaits: walk, trot, gallop, **toelt**, and pace.
Icelandic sheep multipurpose, usually white with light brown head and legs; sometimes black, gray or pied; horned.
Icelandic sheepdog a medium-sized, spitz-type dog with erect ears, thick double coat of either medium or long length that is predominantly tan, brown, gray or black with white markings. The tail curled over the back. Called also Iceland spitz.
ICG indocyanine green.
ICH infectious canine hepatitis.
Ich [*ik*] see ***Ichthyophthirius multifiliis*** and ***Cryptocaryon irritans***.
ichor a watery discharge from wounds or sores.
ichorrhea copious discharge of ichor.
Ictadenovirus a genus in the family *Adenoviridae* that contains a virus isolated from sturgeon.
ichthammol [*ik'thəm-ol*] an ammoniated coal tar product, used as an ointment in the treatment of acute, septic lesions such as cellulitis and abscesses, and for a variety of skin conditions.
ichthyismus ichthyotoxism.
Ichthyoboda a genus of small, flagellate protozoan parasites of the skin of freshwater and marine fish. Cause a steel-gray discoloration of the skin and often respiratory distress.
ichthyoid [*ik'the-oid*] fishlike.
ichthyology [*ik"the-ol'ə-je*] the study of fishes.
ichthyophagous [*ik"the-of'ə-gəs*] eating or subsisting on fish.
ichthyophoniasis see ***Ichthyophonus***.
Ichthyophonus a genus in the class *Mesomycetozoea* causing ichthyophoniasis, cutaneous ulcers and cysts in most body organs, of aged aquarium and wild fish.
Ichthyophthirius [*ik"the-o-thi're-əs*] a genus of protozoan parasites in the phylum Ciliophora.
I. multifiliis causes white spot disease or Ich in freshwater fish in aquariums and hatcheries. Characterized by white nodules on the skin; these may coalesce and cause sloughing of the skin and many affected fish die. Affects also the gills leading to respiratory distress.
ichthyosarcotoxin [*ik"the-o-sahr'ko-tok"sin*] a toxin found in the flesh of poisonous fish.
ichthyosarcotoxism [*ik"the-o-sahr-ko-tok'siz-əm*] poisoning due to ingestion of poisonous fish, marked by various gastrointestinal and neurological disturbances.
ichthyosis [*ik"the-o'sis*] a rare congenital disorder of keratinization in dogs, cats, calves and swine, characterized by adherant scales covering the body. Hyperpigmentation, alopecia, lichenification, fissures and secondary infection may occur. Called also fish scale disease.
inherited congenital i. alopecia and plates of horny epidermis over the entire skin surface. Seen in calves at birth and they are not viable. Also occurs in dogs. Called also fish scale disease.

I-1: Icelandic pony.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

Ichthyosporidium obligate, intracellular protozoan parasites in the class Microsporea.

I. giganteum found in the connective tissue of the body wall of fish, causing large ventral swellings full of cysts.

ichthyotoxin [*ik'the-o-tok"sin*] any toxic substance derived from fish. See also **ichthyosarcotoxin**.

ichthyotoxism [*ik"the-o-tok'siz-əm*] any intoxication due to an ichthyotoxin.

icosahedral [*i"ko-sə-he'drəl*] a regular polyhedron with 20 triangular faces, 12 corners and 30 sides, having cubic symmetry with 5:3:2-fold axes. A common structural form for the capsid of many viruses including herpesviruses, adenoviruses, parvoviruses, reoviruses, picornaviruses and retroviruses.

ICP intracranial pressure.

ICSH interstitial cell-stimulating hormone. See **luteinizing hormone**.

ICSI intracytoplasmic sperm injection. The process of fertilization in vitro by microinjection of a single spermatozoa into the matured oocyte.

ictal [*ik'təl*] pertaining to or characterized by a seizure.

Ictalurus a genus of catfish in the family Ictaluridae. Includes *I. punctatus* (channel catfish) and *I. furcatus* (blue catfish).

icteric [*ik-ter'ik*] pertaining to or affected with jaundice.

icteroanemia [*ik"tər-o-ə-ne'me-ə*] jaundice with mucosal pallor as in hemolytic anemia; see also **eperythrozoonosis**.

icterogenic [*ik"tər-o-jen'ik*] causing jaundice, e.g. icterogenic hepatopathy.

icterogenins pentacyclic triterpene acid hepatoxins present in the plant ***Lippia*** *rehmanni*. Cause cholestasis and photosensitization.

icterohepatitis [*ik"tər-o-hep"ə-ti'tis*] inflammation of the liver with marked jaundice.

icteroid [*ik'tər-oid*] resembling jaundice.

icterus [*ik'tər-əs*] see **jaundice**.

i. index is the density of color of the serum of an icteric patient compared to the standard solution. A rough measure of severity of hepatic insufficiency.

ictus [*ik'təs*] a seizure, stroke, blow, or sudden attack.

ICU see **intensive** care unit.

ID 1. infective dose. 2. L-iditol dehydrogenase.

ID_{50} median infective **dose**; the dose that will infect 50% of the experimental group.

Id idiotype.

id see **dermatophytid**.

-id [Gr.] a suffix meaning having the shape of, or resembling.

idarubicin [*i"də-roo'bĭ-sin*] an anthracycline antibiotic used as an antineoplastic agent; similar to doxorubicin.

idazoxan an α_2-adrenoceptor antagonist used to reverse xylazine.

IDDM insulin-dependent diabetes mellitus.

-ide suffix indicating a binary compound.

identical twins see monozygotic **twins**.

identification [*i-den"tĭ-fĭ-ka'shən*] a description of an animal sufficient to distinguish it from others. The means of identification include a written description, earmark, paint brand or paper or fabric applied by special adhesive, **freeze branding** and fire branding (see **brand**), **tattooing**, neckbands, ankle bands, **ear** tagging, **tail** tagging and **tail** painting, and electronic identification systems including activated responders or transponders carried on the animal, often subcutaneously. See also **microchip**.

electronic i. electronic devices, such as transponders, carried by animals that allow their identification; used widely in domestic animal control programs to permanently record ownership and facilitate recovery of lost animals. See also **microchip**. In agricultural animals, they permit identification and farm origin from a distance, such as sale yards. They can also be used on-farm to trigger off sensitometers, thus recording the animal's feed consumption, milk yield and identity.

intraruminal i. bolus contain passive radiofrequency responders for individual animal identification. Used in sheep and cattle.

patient i. an adequate identification includes species and breed, sex, color and markings, brands and other distinguishing marks or attachments, whether horned or polled where appropriate, age, name or number used by the owner, and name and address of the owner or custodian.

national farm animal i. national programs that allow identification and traceability to enhance animal disease monitoring, surveillance of disease, and control and eradication of animal and zoonotic disease.

identity [*i-den'tĭ-te*] the aggregate of characteristics by which an individual is recognized.

idio- word element. [Gr.] *self, peculiar to a substance or organism*.

idiocy a state of severe mental retardation, difficult to determine in an animal but typical examples are calves with hydranencephaly, yearling cattle with polioencephalomalacia.

juvenile amaurotic familial i. see **amaurotic** familial idiocy.

Idiogenes a genus of tapeworms of bustards belonging to the family Paruterinidae.

idiogram [*id'e-o-gram"*] a drawing or photograph of the chromosomes of a particular cell.

idiopathic [*id"e-o-path'ik*] self-originated; occurring without known cause.

idiopathy [*id"e-op'ə-the*] an undiagnosed morbid state arising without known cause.

Idiospermum australiense Australian rainforest tree in the family Idiospermaceae; fruit contains the toxic pyrrolidinoindoline (indole) alkaloid, idiospermuline; eating the fruit causes a syndrome of tetanic convulsions, hypersensitivity; called also idiot fruit.

idiosyncrasy [*id"e-o-sin'krə-se*] 1. a habit or quality of body or behavior peculiar to any individual animal. 2. an abnormal susceptibility to an agent (e.g. a drug) that is peculiar to the individual animal.

idiot fruit see ***Idiospermum australiense***.

idiotope [*id'ĭ-o-tōp"*] an antigenic determinant on the variable region of an antibody.

idiotrophic [*id"e-o-tro'fik*] capable of selecting its own nourishment.

idiotype (Id) [*id'e-o-tip'*] the antigenic characteristics of the variable region of an antibody. A set of idiotopes.

cross-reacting i. (IdX) one that is present on other anibodies produced in response to the same antigen, permitting a cross reaction. See also **cross-reaction**.

idioventricular pertaining to the cardiac ventricle alone.

L-iditol dehydrogenase see L-iditol **dehydrogenase**.

IDL intermediate density lipoprotein formed during the metabolism of very low density lipoprotein (VLDL) to low density lipoprotein (LDL).

idopsin a visual pigment in the cone membranous lamellae of the eye.

idoxuridine [*i-doks-ūr'ĭ-dēn*] a pyrimidine analog that prevents replication of DNA viruses; used topically in infection by herpesviruses.

IDR insect development inhibitor; idiosyncratic drug reaction.

IDST intradermal skin test.

IDU see **idoxuridine**.

iduronic acid [*i"du-ron'ik*] major uronic acid component of the dermatan sulfate and heparin molecules; also present in heparan sulfate.

iduronidase deficiency [*i"du-ron'ĭ-dās*] see **mucopolysaccharidosis** I.

α-L-iduronidase enzyme involved in the breakdown of dermatan sulfate and heparan sulfate; deficiency is considered to be counterpart of mucopolysaccharidosis in cats and dogs; a neuronal storage disease.

IDV intermittent demand ventilation.

IEWG International Elbow Working Group.

IF intermediate filaments.

IFA test indirect fluorescent antibody test.

IFLUTD idiopathic feline lower urinary tract disease

IFN interferon.

iforrestine heterocyclic nephrotoxin in *Isotropis* spp.

ifosfamide [*i-fos'fə-mīd*] a nitrogen mustard alkylating agent used in cancer chemotherapy. It is given combination with the thiol drug mesna to avoid the development of sterile hemorrhagic cystitis. Used in dogs and cats for the treatment of sarcomas, including feline vaccine-associated sarcoma.

Ig immunoglobulin of any of the five classes: IgA, IgD, IgE, IgG and IgM.

IgA immunoglobulin A. See **immunoglobulin**.

IgD immunoglobulin D. See **immunoglobulin**.

IgE immunoglobulin E. See **immunoglobulin**.

IGF-I insulin-like growth factor I. See **somatomedin** C.

IgG immunoglobulin G. See **immunoglobulin**.

IgM immunoglobulin M. See **immunoglobulin**.

IgM deficiency occurs as an inherited defect and as part of the primary severe combined immunodeficiency in Quarter horses and Arabian horses.

ignipuncture [*ig'nĭ-punk"chər*] therapeutic puncture with hot needles.

Ignis sacer [*ig'nis*] see rye **ergot**[1].

IGR insect growth regulator.

iguana lizards in several genera in the family Iguanidae; characterized by the a long, whiplike tail with row of prominent spines down the back. They have an extendible dewlap and a photosensitive organ on the head, which is sometimes called a 'third eye', or 'parietal eye' (seen also in the tuatara). The green iguana (*Iguana iguana*) is common and popular as a pet.

IgY immunoglobulin Y, the avian equivalent of IgG; found in chicken yolk.

IHA isoimmune hemolytic anemia. See **alloimmune** hemolytic anemia of the newborn.

IHA indirect hemagglutination.

IK immunoconglutinins.

IL interleukin.

IL-1 interleukin-1.

IL-I catabolin.

Ile isoleucine.

ileac [*il'e-ak*] 1. of the nature of ileus. 2. pertaining to the ileum.

ileal, ileac [*il'e-əl*] pertaining to the ileum.

i. atresia see inherited alimentary tract segmental **atresia**.

i. conduit use of a segment of the ileum for the diversion of urinary flow from the ureters.

i. muscular hypertrophy a cause of chronic or intermittent colic of horses characterized by loud ileocecal gut sounds and a palpably enlarged terminal ileum on rectal examination. Hypertrophy of the circular and longitudinal muscular layers results in narrowing of the intestinal lumen and partial or complete obstruction. Also recorded as occurring in the duodenum of horses. See also **intussusception**.

transmissible i. hypertrophy see **wet tail**.

ileitis [*il"e-i'tis*] inflammation of the ileum or distal portion of small intestine, manifested by chronic or intermittent diarrhea and weight loss.

granulomatous i. see granulomatous **enteritis**.

proliferative i. 1. see porcine proliferative **enteropathy**. 2. see **wet tail** of hamsters.

regional i. see terminal ileitis (below).

terminal i. a disease of young animals including pigs, lambs and horses characterized by illthrift and sometimes diarrhea.

transmissible i. see **wet tail**.

ile(o)- word element. [L.] *ileum*.

ileocecal [*il"e-o-se'kəl*] pertaining to the ileum and cecum.

i. valve the valve, or ileal papilla guards the opening between the ileum and cecum. In most species, the position, or papilla, where the ileum joins the large intestine marks an arbitrary T-shaped junction beetween cecum and colon, where the stem of the T indicates the ileum and the two arms of the T the cecum and colon. In horses, the entrance of the ileum is directly into the cecum. Called also ostium ilealis, ileocolic valve.

i. valve frenulum a fold of the large intestine mucosa attached to the ileal papilla; see **retinaculum** morgagni.

i. valve impaction is common in horses as result of feeding on finely chopped indigestible roughage. Causes mild colic initially, followed by evidence of acute intestinal obstruction. Fatal without surgical correction. See also intestinal obstruction **colic**.

ileocecocolic, ileocaecocolic pertaining to the combined ileum, cecum and colon.

ileocecostomy [*il"e-o-se-kos'tə-me*] surgical anastomosis of the ileum to the cecum.

ileocolic [*il"e-o-kol'ik*] pertaining to the ileum and colon.

i. intussusception intussusception of the ileum through the ileocecal valve into the colon. May extend through the rectum, appearing as a rectal prolapse.

i. valve ileocecal valve.

ileocolitis [*il"e-o-ko-li'tis*] inflammation of the ileum and colon.

ileocolostomy [*il"e-o-kə-los'tə-me*] surgical anastomosis of the ileum to the colon.

ileocolotomy [*il"e-o-ko-lot'ə-me*] incision of the ileum and colon.

ileocystoplasty [*il"e-o-sis'to-plas"te*] repair of the wall of the urinary bladder with an isolated segment of the wall of the ileum.

ileocystostomy [*il"e-o-sis-tos'tə-me*] use of an isolated segment of ileum to create a passage from the urinary bladder to an opening in the abdominal wall.

ileoileostomy [*il"e-o-il"e-os'tə-me*] surgical anastomosis between two parts of the ileum.

ileorectal [*il"e-o-rek'təl*] pertaining to or communicating with the ileum and rectum.

ileorrhaphy [*il"e-or'ə-fe*] suture of the ileum.

ileoscope inspection of the lumen of the ileum, usually with a flexible endoscope.

ileoscopy inspection of the lumen of the ileum with an endoscope.

ileostomy [*il"e-os'tə-me*] an artificial opening (stoma) created in the small intestine (ileum) and brought to the surface of the abdomen for the purpose of evacuating feces.

urinary i. use of a segment of the ileum as a stoma for the diversion of urinary flow from the ureters. See also ileal **conduit**.

ileotomy [*il"e-ot'ə-me*] incision of the ileum.

ileum [*il'e-əm*] the distal portion of the small intestine, extending from the jejunum to the cecum. See also **ileal**.

duplex i. congenital duplication of the ileum.

i.–umbilicus fistula a persistent and patent Meckel's diverticulum.

ileus [*il'e-əs*] functional obstruction or failure of peristalsis. It frequently accompanies peritonitis, and usually results from disturbances in neural stimulation of the bowel. In the horse it is a major problem in the recovery period after surgical treatment for colic.

adynamic i. paralytic ileus.

dynamic i. spastic ileus.

functional i. paralytic ileus.

paralytic i. loss of all intestinal tone and motility as a result of reflex inhibition in acute peritonitis, from excessive handling during bowel surgery, prolonged and severe distention due to intestinal obstruction and in grass sickness of horses. The effect is the same as that of an acute intestinal obstruction. Called also ileus, adynamic ileus.

mechanical i. obstructive ileus.

obstructive i. a physical lesion accounts for the intestinal distention.

sentinel loop i. a distended intestinal loop caused by localized paralytic ileus, usually resulting from local infection or pain.

spastic i. persistent contraction of a segment of ileum, effectively causing an obstruction.

Ilex [*i'leks*] a plant genus in the family Aquifoliaceae; includes *I. aquifolium* (holly); berries contain saponins and cause vomiting and diarrhea.

iliac [*il'e-ak*] pertaining to the ilium.

i. artery thrombosis in horses an acute onset is characterized by severe pain, even recumbency, and marked reduction of the amplitude of the digital arterial pulse. The affected limb is cold and is not used. The chronic disease is characterized by increasing weakness of the affected limb as exercise progresses. In both forms there is a unilateral abnormality of the iliac artery palpable per rectum. Dogs and, more commonly, cats are affected by thrombosis of the aorta (saddle thrombus) or an iliac artery, usually in association with cardiac disease, particularly cardiomyopathy. Depending on the rate of development, the affected limb becomes weak, cold and painful, the pulse is weak, and the animal becomes distressed. See also **aortic** embolism.

iliadelphus [*il"e-ə-del'fəs*] iliopagus.

ilial iliac.

ili(o)- word element. [L.] *ilium*.

iliocaudal muscle [*il"e-o kaw'dəl mus'əl*] the more cranial of the two of the levator ani muscles; it originates on the medial surface of the body of the ilium and inserts on the ventral aspect of the tail.

iliofemoral [*il"e-o-fem'or-əl*] pertaining to the ilium and femur.

ilioinguinal [*il"e-o-in'gwĭ-nəl*] pertaining to the iliac and inguinal regions.

iliolumbar [*il"e-o-lum'bər*] pertaining to the iliac and lumbar regions.

iliopagus [*il"e-op'ə-gəs*] symmetrical conjoined twins united in the iliac region.

iliopectineal [*il"e-o-pek-tin'e-əl*] pertaining to the ilium and pubes.

iliotrochanteric [*il"e-o-tro-kan-ter'ik*] pertaining to the ilium and femoral trochanters.

ilium [*il'e-əm*] pl. *ilia* [L.] the cranial portion of the hip bone. See also Table 10.

Ilizarov external ring skeletal fixation a device for stabilization of fractures using an external circular frame and a series of wires, nuts, bolts and rods.

illacrimation [ĭ-lak"rĭ"ma'shən] see **epiphora**.

Illawarra cattle Australian red or red roan dairy cattle. Called also Australian milking shorthorn, Australian Illawarra shorthorn, AIS.

Illinois semen diluent used in the storage of boar semen; saturated with CO_2 it will store semen for 3 days. Called also Illinois Variable Temperature Semen Diluent.

Illinois sternal needle a needle with a screw-in stylet, large hub and guard used for aspiration of bone marrow.

illness [il'nis] a subjective state in a human marked by feelings of deviation from the normal healthy state; a term not thought to be applicable to animals.

illthrift [il thrift] failure to grow, increase in weight or maintain weight in the presence of apparently adequate food supplies and in the absence of recognizable disease. See also **weaner** illthrift.

illumination [ĭ-loo"mĭ-na'shən] the lighting up of a part, cavity, organ or object for inspection.
darkfield i., dark-ground i. the casting of peripheral light rays upon a microscopic object from the side with the object becoming visible as a result of its refraction of the light; the object appears bright on a dark background.

illuminator [ĭ-loo"mĭ-na'tər] the source of light for viewing an object; the light source used to aid visualization through an endoscope, usually using a Xenon or Halogen lamp.

ILT infectious laryngotracheitis.

IM intramuscularly.

im- a prefix, replacing *in-* before words beginning *b*, *m* and *p*.

image [im'aj] the picture reproduced on the X-ray film or by other radioimaging methods such as ultrasonography.
i. amplifier system includes amplifer and viewer or television camera and tape player.
digital i. see **digital image**.
i. display modes see **ultrasonography**, A-mode, B-mode and M-mode.
i. formation exposure of the film to the X-ray beam ionizing radiation or to other radiant energy forms causes ionic changes in the silver bromide crystals in the film emulsion so that it acquires a silver atom. It is the deposition of reduced silver atoms in particles or zones that causes the black zones or foci on the film. The amount of silver deposited depends on the intensity of the initial radiation X-ray exposure.
i. intensification a technique used to increase the brightness of the image while maintaining its sharpness. Used particularly in fluoroscopy and viewing directly or indirectly through a television camera and monitor, cineradiography, videotape or split-film device.
latent i. the invisible picture on the film after it has been exposed to the X-ray beam. It requires exposure to a developer and fixer before the image is visible and permanent.
i. level the mid-point brightness value of a computer display; the image level is adjusted to whiten or darken the image on a computer monitor.
weak i. said of X-ray films which lack density due to underexposure, too brief period of development, insufficient developer or developer temperature too low.
i. window determines the range of pixel values about which the image level will be displayed so controlling the image contrast.

imaging [im'ə-jing] the production of diagnostic images, e.g. **radiography**, **ultrasonography**, computed **tomography**, **magnetic resonance imaging** or **scintigraphy**.
digital i. a computer graphic file made up of a matrix of picture elements (pixels).
electrostatic i. a method of visualizing deep structures of the body, in which an electron beam is passed through the patient and the emerging beam strikes an electrostatically charged plate, dissipating the charge according to the strength of the beam. A film is then made from the plate.
gray-scale i. see gray scale **ultrasonography**.
nuclear i. see **scintigraphy**.
organ i. outlining the size and location of organs by the injection of nuclides into the animal and observing their location by the use of a rectilinear scanner or a scintillation camera. See also **scintigraphy**.

imago [ĭ-ma'go] pl. *imagoes, imagines* [L.] the adult or definitive form of an insect.

imbalance [im-bal'əns] lack of balance; especially lack of balance between muscles, as in insufficiency of ocular muscles.
autonomic i. defective coordination between the sympathetic and parasympathetic nervous systems, especially with respect to vasomotor activities.
sympathetic i. vagotonia.
vasomotor i. autonomic imbalance.

imbecile an animal in a continuous state of **imbecility**.

imbecility a state of mind in which an animal does feeble, weak, absurd things and does not respond to usual environmental stimuli. Usually congenital. See also **hydranencephaly**, **encephalopathy**.

imbibition [im"bĭ-bish'ən] absorption of a liquid.

imbricated [im'brĭ-kāt"əd] overlapping like shingles or roof slates or tiles.

imbrication [im"brĭ-ka'shən] surgical pleating and folding of tissue to realign organs and provide extra support, e.g. chronically stretched joint capsule.
Flo i. a method for repair of cranial cruciate repair in the dog in which sutures are placed around the patellar tendon and the fabellae.

IMHA immune mediated hemolytic anemia.

imidacloprid a neonicotinoid used topically on dogs and cats for its sustained adulticidal activity against fleas.

imidazoles [im"id-az'ōl] a class of synthetic antifungal agents with a five-ring heterocyclic ring structure; includes **clotrimazole**, **miconazole**, **econazole** and **ketoconazole**.

imidazothiazoles a group of broad-spectrum anthelmintics including **butamisole** and **levamisole**.

imide [im'id] any compound containing the bivalent group −CONHCO−.

imidocarb [im'ĭ-do-kahrb] an antiprotozoal agent, used as the hydrochloride or dipropionate, in the treatment of babesiosis and ehrlichiosis.

imino acid [im'ə-no] proline or hydroxyproline, the two amino acids in which the amino group is part of a closed ring.

imipenem [im"ĭ-pen'əm] one of the carbapenem class of antibiotics which are β-lactamase resistant. It has a very wide spectrum, but is inactivated by renal tubular enzymes and is given in association with cilastatin, which inhibits renal metabolism.

imipramine [ĭ-mip'rə-mēn] a tricyclic antidepressant used in the treatment of behavior disorders and urinary incontinence in dogs.

imiquimod [im"ĭ-kwim'od] a topical immune response modifier with antiviral and antineoplasia effects. Used in veterinary medicine to treat squamous cell carcinomas, viral papillomas, feline cutaneous herpesvirus infection, and sarcoid and aural plaques in horses.

immature [im"ə-ch r'] unripe or not fully developed.

immediate [ĭ-me'de-ət] direct, precipitating or primary; having no intermediate stage or mechanism, e.g. direct cause, immediate variant.

immersion [ĭ-mur'zhən] 1. the plunging of a body into a liquid. 2. the use of the microscope with the air between specimen and front objective lens replaced by a liquid, either immersion oil or water.
i. chilling method used for chilling poultry carcasses with iced water to ensure rapid cooling immediately after slaughter.
i. foot a condition similar to immersion foot in humans has been reported in cattle standing in cold water for days. There was erythema, edema and pain, followed by necrosis and sloughing of tissue.
i. syndrome vagal reflex, induced by contact with very cold water, causes cardiac arrest and death.

immiscible [ĭ-mis'ĭ-bəl] not susceptible to being mixed.

immobility [ĭ"mo-bil'ĭ-te] standing still and disinclined to move, as in an animal suddenly blinded; responds to other stimuli unless immobility is part of a dummy syndrome when all stimuli are ignored.

immobilization [ĭ-mo"bil-ĭ-za'shən] the rendering of a part incapable of being moved.
i. band see **compression** band.
electrical i. pulses of low voltage current are passed through the skin and through the body. It causes a tetanic immobilization but does not decrease pain perception.

immobilize [ĭ-mo'bil-īz] to render incapable of being moved, as by a cast.

immobilizing drugs see **muscle relaxant**.

Immobilon trade name for a muscle relaxant composed of a mixture of **etorphine** and a phenothioazine tranquilizer such as **acepromazine** or **methotrimeprazine**. Comes in two strengths, one for small animals and one for large animals.

immortality said of cell lines which are capable of undergoing an unlimited number of cell divisions.

immotile cilia syndrome congenital defect of ciliary movement recorded in dogs. See also primary **ciliary** dyskinesia, **Kartagener's syndrome**.

immune [*ĭ-mūn'*] 1. being highly resistant to a disease because of the formation of humoral antibodies or the development of immunologically competent cells, or both, or as a result of some innate immune mechanism, such as interferon activities in viral infections. 2. characterized by the development of antibodies or cellular **immunity**, or both, following exposure to antigen. 3. produced in response to antigen, such as immune serum globulin. The essential feature of antibody and cell-mediated immunity is that they are highly antigen specific.

i. adherence the binding of antibody–antigen–complement complexes to complement receptors found on red blood cells, the result of which leads to clearance of immune complexes from the blood circulation.

i. competent an individual with a fully functional immune system.

i. complex see antibody–antigen **complex**.

i. complex disease disease induced by the deposition of or association with antigen–antibody–complement complexes in the microvasculature of tissues. Fixation of complement component C3 by the complexes initiates inflammation. See also **serum** sickness, **hypersensitivity**.

i. complex reaction type III **hypersensitivity** (1).

i. deficiency disease one in which animals have inadequate immune responses and so are more susceptible to infectious disease. The defect may be primary (inherited), or secondary (acquired) which usually develops after birth because of toxins or infectious agents. See also **combined immune deficiency syndrome**, **hypogammaglobulinemia**, **agammaglobulinemia**, inherited **parakeratosis**, **Chediak–Higashi syndrome** and canine **granulocytopathy** syndrome.

i. hemolysis see immune-mediated hemolytic **anemia**.

i. interferon see **interferon**.

i. modulator see **immunomodulation**.

i. reaction immune response.

i. reaction fever aseptic fever occurring in anaphylaxis, angioedema.

i. response the specific response to substances interpreted by the body as not-self, the result being humoral and cellular **immunity**. The immune response depends on a functioning **thymus** and the conversion of stem cells to B and T lymphocytes. These B and T lymphocytes contribute to **antibody** production, cellular immunity and immunological memory. See also humoral **immunity**.

i. response (Ir) genes see immune response **genes**.

secondary i. response see **anamnestic** response.

i. surveillance the detection by lymphocytes, especially T lymphocytes, of new antigens, particularly on tumor cells.

i. system consists of the primary lymphoid organs (thymus and Bursa of Fabricius or its equivalent (bone marrow) in mammals) and secondary lymphoid organs (lymph nodes, spleen and other lymphoid tissue).

i. tolerance see immunological **tolerance**.

immune-mediated caused by an unspecified immune reaction.

i.-m. contact hypersensitivity see **allergic** contact dermatitis.

i.-m. hemolytic anemia (IMHA) occurs in many species in which autoantibodies directed against red blood cells are produced. The most common immune-mediated disease of dogs; Cocker spaniels and English springer spaniels are predisposed. Different classes of immunoglobulins may be involved giving rise to differing clinical syndromes. Signs include pallor, lethargy, splenomegaly, and sometimes icterus, bilirubinuria and hemoglobinuria. There may also be an accompanying thrombocytopenia with bleeding tendencies. Diagnosis is supported by a positive Coombs test. Called also autoimmune hemolytic anemia.

immunifacient producing immunity; said of diseases, such as strangles and salmonellosis, that produce immunity against reinfection, which lasts for some time after an infection.

immunity [*ĭ-mu'nĭ-te*] 1. the condition of being immune; security against a particular disease; nonsusceptibility to the invasive or pathogenic effects of microorganisms or helminth parasites or to the toxic effect of antigenic substances. Called also functional or protective immunity. 2. responsiveness to antigen that leads to more rapid binding or elimination of antigen than in the nonimmune state; it includes both humoral and cell-mediated immunity (below). 3. the capacity to distinguish foreign material from *self*, and to neutralize, eliminate or metabolize that which is foreign (*non-self*) by the physiological mechanisms of the **immune** response. The mechanisms of immunity are essentially concerned with the body's ability to recognize and dispose of substances which it interprets as foreign and sometimes harmful to its well-being. When such a substance enters the body, complex chemical and mechanical activities are set into motion to defend and protect the body's cells and tissues. The foreign substance, usually a protein, is called an **antigen**, that is, one which generates the production of an antagonist. The most readily recognized response to the antigen is the production of **antibody**. The antigen–antibody reaction is an essential component of the overall immune response. Of equal or greater importance to antibody, particularly for some antigens, is the development of so-called cell-mediated immune response, which involves clonal expansion of specifically reactive T lymphocytes including cytotoxic T lymphocytes (T_c lymphocytes) which play a major role in eliminating the foreign antigens that are cell associated. Immunological responses in animals can be divided into two broad categories: humoral immunity, which refers to the production of antibody which becomes part of the body fluids (humors), especially serum, and cell-mediated or cellular immunity, which involves a variety of activities designed to destroy or at least contain cells that are recognized by the body as expressing foreign antigens on their cell surface, e.g. viral antigens. Both types of response are mediated by lymphocytes that originate in the bone marrow as stem cells and later are converted into mature cells having specific properties and functions.

acquired i. antigen specific immunity attributable to the production of antibody and of specific immune T lymphocytes (responsible for cell-mediated immunity), following exposure to an antigen, or passive transfer of antibody or immune lymphoid cells (adoptive immunity).

active i. that which follows exposure to an antigen; acquired immunity attributable to the presence of antibody or of immune lymphoid cells formed in response to antigenic stimulus. Called also adaptive immunity.

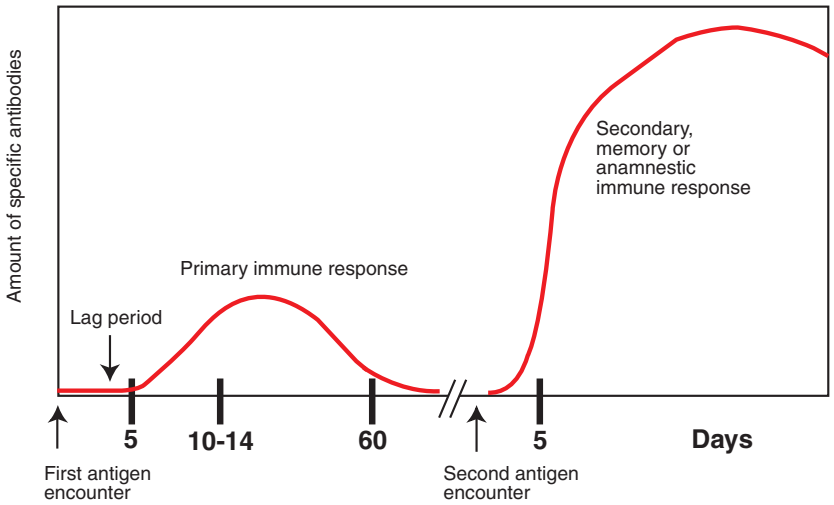
adoptive i. passive immunity of the cell-mediated type conferred by the administration of sensitized lymphocytes from an immune donor to a naive recipient.

artificial i. includes acquired (active) immunity produced by deliberate exposure to an antigen, such as a vaccine or the administration of antibody (passive).

cellular i. dependent upon T lymphocytes which are sensitized by first exposure to a specific antigen. Subsequent exposure stimulates the release of a group of substances known as lymphokines, such as interferon, and interleukins as well as direct killing by cytotoxic T lymphocytes.

functional i. see immunity (above).

humoral i. mediated by antibodies formed by antigen-specific B lymphocytes. Each B lymphocyte has monomeric IgM receptors which capture specific antigen, initiating production of the specific immunoglobulins. B lymphocytes activated by the presence of their specific antigen undergo transformation, lymphocyte blastogenesis, whereby they become metabolically active, divide, and some mature to plasma cells, which are major producers of antibodies. Some cells revert to small lymphocytes, 'memory' cells, and the expanded clone of these cells, on re-exposure to the antigen, undergo further lymphocyte blastogenesis, leading to further increased antibody production and numbers of memory cells. There are two types of humoral immune response: primary and secondary. The *primary* response begins immediately after the inital contact with an antigen; the resulting antibody, predominantly IgM, appears 48–72 hours later. The *secondary* response



I-2: General dynamics and characteristics of the primary and secondary antibody responses.
From Cunningham JG, Klein BG. Textbook of Veterinary Physiology, 4th Edition. Saunders, 2007.

VetBooks.ir

I

occurs within 24–48 hours and produces large quantities of predominantly IgG. The secondary response persists much longer than the primary response and is the result of repeated contact with the antigens.

herd i. a level of resistance in a herd or flock which is sufficient to prevent the entry of a particular disease into, or its spread within, the herd. The resistance may be innate, a genetically based resistance, or acquired as a result of previous exposure to the particular agent or of vaccination. The general usage of the term relates to the prevention of spread of infection at an epidemic level. So that in a herd in which there are 70–80% of immune animals there may be sporadic cases but the prevalence is unlikely to be significant. The same comments apply to larger populations, e.g. a wild animal or companion animal population which is really not managed as a herd.

'herd' i. the same principles that apply in herds or groups of animals (see herd immunity above), also apply to human populations. The extra protection that exists when a disease cannot find enough unprotected hosts to infect, preventing outbreaks from taking hold.

innate i., native i., natural i. natural immunity resulting from the genetic makeup of the host, before exposure to an antigen.

lactogenic i. intestinal immunity associated with the presence of immunoglobulins in milk, particularly IgA and, of the agricultrual animals, most important in pigs. See also **colostrum**.

maternal i. that acquired by the neonate by transplacental transfer of immunoglobulins (primates) or from ingestion of colostrum (most other mammals) or via the yolk sac (birds). The placentation of all agricultural animals precludes trans-placental transfer of immunoglobulin and only 5–10% is transferred in dogs and cats. Passive transfer of maternal immunity is effected by the transfer of immunoglobulilns present in high concentration in the first milk, colostrum, through the intestine of the newborn. The success of this transfer is dependent upon the time after birth that colostrum is ingested (physiologically 24–36 hours, but effectively for adequate transfer, 8 hours after birth) and on the mass of immunoglobulin ingested which is determined by the concentration of immunoglobulin in colostrum and the amount of colostrum ingested. *Failure of passive transfer* results in a significant increase in risk for neonatal disease. Neonates that fail to acquire serum concentrations of IgG_1 greater than 10 mg/mL are at significantly higher risk of septicemic, enteric and respiratory disease. Failure of passive transfer occurs as a result of neonates sucking the dam or acquiring colostrum by artificial feeding too late in the absorptive process, or by receiving too little colostrum or receiving colostrum with low immunoglobulin concentration. See also passive immunity (below) and colostral **immunoglobulin**.

natural i. see innate immunity (above).

passive i. the transfer of antibodies from a donor in which they were produced to a recipient for temporary immunity. Can be in the form of serum or colostrum or yolk. Significant transplacental transfer of antibodies is found in primates, but does not occur in domestic animals. Passive immunity in domestic mammals comes via the colostrum, with its high concentration of antibodies, and the more than normally pervious epithelium of the neonate's intestinal epithelium. In birds maternal antibody is transferred to the yolk, from where the developing chick embryo absorbs it from about day 11 of incubation. See also passive **immunization**.

protective i. see immunity (above).

transplacental i. see passive immunity (above).

immunization [*im"u-nī-za'shən*] the process of rendering a subject immune, or of becoming immune. See also **vaccination**.

active i. stimulation with a specific antigen to promote an immune response. In the context of infectious diseases, the antigenic substances may include: (1) inactivated bacteria, as in **botulism** immunization; (2) inactivated viruses, as in the canine **parvovirus** vaccination; (3) live attenuated viruses, e.g. **rabies** virus; and (4) toxoids, chemically treated toxins produced by bacteria, as in immunization against **tetanus** and **pasteurellosis**. Any of a vast number of foreign substances may induce an active immune response. Since active immunization induces the body to produce its own antibodies and specifically reactive cells and to go on producing them, protection against disease may last several years, in some cases for life.

antihormone i. immunization against hormones, e.g. against androstenedione for the stimulation of multiple ovulations in ewes. See also immunological **contraception**.

deliberate i. the administration of an immunogen, usually by injection but sometimes orally or by inhalation, for the purpose of producing immunity.

natural i. stimulation of the immune system through exposure to antigens that have not been deliberately administered.

passive i. transient immunization produced by the introduction into the system of pre-formed antibody or specifically reactive lymphoid cells. The animal immunized is protected only as long as these antibodies or cells remain in the blood and are active—usually from 4–6 weeks. The immunity may be natural, as in the transfer of maternal antibody to offspring, or artificial, passive immunity following inoculation of antibodies or immune cells.

immunize [*im'u-nīz*] to render immune.

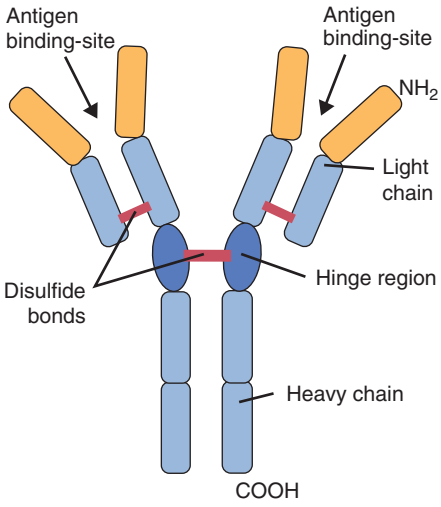
immunoabsorbent [*im"u-no ab-sor'bənt*] a preparation of antigen attached to a solid support or antigen in an insoluble form, which absorbs homologous antibodies from a mixture of immunoglobulins. See **immunosorbent**, **ELISA**.

immunoadjuvant [*im"u-no-aj'ə-vənt*] see **adjuvant**.

immunoassay [*im"u-no-as'a*] the quantitative determination of either antibody or antigen, e.g. hormones, drugs, vitamins, and specific proteins, by means of antigen–antibody interaction, as by agglutination, precipitation, ELISA, radioimmunoassay, etc.

immunoaugmentation [*im"u-no awg"men-ta'shən*] to enhance immune response in a nonantigen specific manner by stimulating macrophage and reticuloendothelial function.
i. agents include BCG, mixed bacterial vaccine (MBV), and *Corynebacterium parvum*.
immunobiology [*im"u-no-bi-ol'ə-je*] that branch of biology dealing with immunological effects on such phenomena as infectious disease, growth and development, recognition phenomena, hypersensitivity, heredity, aging, cancer and transplantation.
immunoblast [*im"u-no-blast"*] lymphoblast. See also **B immunoblasts**.
immunoblastic [*im"u-no-blas'tik*] pertaining to or involving the stem cells (immunoblasts) of lymphoid tissue.
immunoblot [*im'u-no-blot"*] see **Western blot**.
immunochemistry [*im"u-no-kem'is-tre*] the study of the chemical basis of immune phenomena and their interactions.
immunochemotherapy [*im"u-no-ke"mo-ther'ə-pe*] a combination of immunotherapy and chemotherapy.
immunocompetence [*im"u-no-kom'pə-təns*] the capacity to develop an immune response following exposure to antigen.
immunocomplex [*im"u-no-kom'pleks*] immune complex.
immunocompromised [*im"u-no-kom'prə-mīzd*] having reduced immune responsiveness as a result of inherited defects or infection, particularly by retroviruses and herpesviruses or by administration of immunosuppressive drugs, including antilymphocyte serum, by irradiation, by malnutrition, and by certain disease processes, e.g. cancer.
immunoconglutinin [*im"u-no-kən-gloo'tĭ-nin*] antibody formed against complement components that are part of an antibody–antigen complex, especially C3.
immunoconjugates [*im"u-no-kon'ja-gāt*] monoclonal antibodies which are target-specific carriers for specific compounds such as plant or bacterial toxins, radionuclides, photoactive agents and chemotherapeutic drugs.
immunocyte [*im'u-no-sīt"*] any cell of the lymphoid series which can react with antigen to produce antibody or to participate in cell-mediated immunity; called also immunologically competent cell.
immunocytoadherence [*im"u-no-si"to-ad-hēr'əns*] the aggregation of red cells to form rosettes around lymphocytes with surface immunoglobulins.
immunocytochemical staining [*im"u-no-si"to kem'ĭ-kəl*] see **immunohistochemical**.
immunocytochemistry [*im"u-no-si"to-kem'is-tre*] see **immunohistochemical**.
immunodeficiency [*im"u-no-də-fish'ən-se*] a deficiency in the immune system, either that mediated by antibody or T lymphocytes, or both. See also **agammaglobulinemia**, **hypogammaglobulinemia**, **feline** immunodeficiency virus, **bovine** immunodeficiency virus.
acquired i. see **immune** deficiency disease.
cancer-associated i. in general, associated with cachexia and debilitation, and also related to the type of neoplasia. Tumor-related effects on the immune system include impaired function of lymphocytes, altered cytokine production and activation of suppressor cell functions.
combined i. see **combined immune deficiency syndrome (disease)**.
common variable i. a term encompassing a heterogeneous group of syndromes, which may be inherited or acquired, characterized by recurring persistent infections and deficiencies of some of the immunoglobulin classes.
congenital i. see **immune** deficiency disease.
i. disease see **immune** deficiency disease, **combined immune deficiency syndrome (disease)**.
iatrogenic i. see secondary **immune** deficiency disease.
severe combined i. see **combined immune deficiency syndrome (disease)**.
X-linked i. an inherited form of severe combined immunodeficiency that has been reported in dogs. Puppies fail to grow and die from overwhelming infections at an early age.
immunodepression [*im"u-no-də-presh'ən*] see **agammaglobulinemia**, **hypogammaglobulinemia**, **immunodeficiency**.
immunodermatology [*im"u-no-dur"mə-tol'ə-je*] the study of immunological phenomena as they affect skin disorders and their treatment or prophylaxis.
immunodiagnostic [*im"u-no- di"əg-nos'tik*] pertaining to diagnosis by immune reactions.
immunodiffusion [*im"u-no-dĭ-fu'zhən*] *in vitro* assays that involve the diffusion of antigen and antibody through a gel matrix such as agarose. For example, double immunodiffusion assays where antigen and antibody are placed in separate wells, cut in agar, such that precipitation lines form in the agar between the wells.
radial i. (Mancini technique) antigen diffuses into the agar which contains specific antibody and a ring of precipitate is formed, the diameter of which is directly proportional to the concentration of the antigen and can thereby be used to quantitate the amount of antigen. A reverse radial immunodiffusion test, in which antigen is incorporated in the agar, can be used to quantitate the amount of antibody in a sample.
i. tests include double immunodiffusion (Ouchterloney technique) which is used in the **Coggins test** for equine infectious anemia and single immunodiffusion (Oudin technique), as well as radial immunodiffusion.
immunodominance [*im"u-no-dom'ĭ-nəns*] the property of an antigenic determinant that causes it to be responsible for the major immune response in a host.
immunoelectrophoresis [*im"u-no-e-lek"tro-fə-re'sis*] electrophoretic separation, usually in an agar gel, of complex mixtures of antigens which, following immunodiffusion, combine with antibody to forming precipitation lines for each separated antigen.
counter i. antigen and antibody are placed in separate wells, close together and oriented so that the electric field drives them together. When they migrate and meet, a line of precipitin is formed.
rocket i. electrophoresis in which antigen migrates from a well through agar gel containing antiserum, forming cone-shaped (rocket) precipitin bands; the area under the cone is used to calculate the amount of antigen.
immunofiltration [*im"u-no-fil-tra'shən*] purification of antibodies by their binding to specific antigen immobilized on a solid phase; the antibody is eluted by denaturing treatments that interfere with antigen antibody binding. Called also affinity purification of antibodies.
immunofluorescence [*im"u-no-fl-res'əns*] a method of determining the location of antigen (or antibody) in a tissue section or smear using a specific antibody (or antigen) labeled with a fluorochrome. In the direct methods, the fluorochome is chemically linked to the specific antibody. In indirect methods, a labeled anti-immunoglobulin that binds to the specific antibody is used. See also fluorescence **microscopy**.
i. testing see fluorescence **microscopy**.
immunofluorescent see **immunofluorescence**.
i. antibody test see fluorescence **microscopy**.
i. microscopy see fluorescence **microscopy**.
immunogen [*im'u-no-jən*] substance that elicits an immune response.
immunogenetics [*im"u-no-jə-net'iks*] the study of the genetic factors controlling the animal's immune response and the transmission of those factors from generation to generation.
immunogenic [*im"u-no-jen'ik*] producing immunity; evoking an immune response.
immunogenicity [*im"u-no-jə-nis'ĭ-te*] the ability of a substance to provoke an immune response or the degree to which it provokes a response.
immunoglobulin [*im"u-no-glob'u-lin*] a specialized class of serum proteins, which may occur naturally in serum, but are usually produced in response to exposure to foreign antigens. Called also antibody. Immunoglobulins combine only with the antigen (or one closely related to it) that elicited their production. Immunoglobulins are major components of what is called the humoral **immune** response system. They are synthesized by B lymphocytes and their derivative plasma cells, and are found in the serum and in other body fluids and tissues, including the urine, spinal fluid, lymph nodes and spleen. See also **immunity**. Immunoglobulin molecules consist of two kinds of polypeptide chains: heavy chains (H-chains) and light chains (L-chains). There are five antigenically different kinds of H-chains, designated γ, μ, α, δ and ε, and this difference is the basis for the classification of immunoglobulins. Classes vary in their chemical structure and in the number of antigen-binding sites. The five classes of immunoglobulins (Ig) are: IgG, IgM, IgA, IgD and IgE. Only IgG, IgM and IgA are found in all species of domestic animals. *IgA* is present in low concentrations in the serum, but it is the

VetBooks.ir



I-3: Structure of an immunoglobulin molecule. From Tizard IR, Veterinary Immunology. An Introduction, 6th Edition. Saunders, 2001.

major immunoglobulin of secretions and has a major first-line defense role in infections that enter via mucosal surfaces. Two IgA molecules are linked by a polypeptide called the secretory piece and by a J chain. Secretory IgA is present in nonvascular fluids, such as saliva, bile, synovial fluid, and intestinal and respiratory tract secretions. Both secreted and circulating IgA types are known to have antiviral properties; their production is preferentially stimulated by local administration of antigens such as oral and aerosol immunizations. *IgD* is found in trace quantities in the serum in humans and chickens. It is found on the surface of immature B lymphocytes, often simultaneously with IGM. Its function is uncertain. *IgE*, once called reaginic antibody, is present in very low concentrations in serum and is generally present in increased concentrations in individuals with allergy. It has not been found in the chicken. IgE binds to Fc receptors on the surface of cells particularly mast cells and basophils, via the Fc part of the molecule. Following exposure to antigen (allergen), and its binding to the Fab of two adjacent IgE molecules, perturbations of the cell membrane are produced, leading to the release of vasoactive amines, particularly histamine and serotonin, which are the mediators of anaphylaxis and atopic reactions, including urticaria, asthma, hayfever and gastroenteritis. It is recognized in humans and dogs that there is an inherited (familial) predisposition for certain individuals to produce IgE. *IgG* is the most abundant of the five classes of immunoglobulins, representing about 80% of serum immunoglobulin protein. It is the major antibody in the secondary humoral response of immunity, serves to activate the complement system, and is frequently involved in opsonization. IgG is the only immunoglobulin that crosses the placenta and is the major component of passive maternal antibody transfer via colostrum and yolk. The avian equivalent of IgG is termed IgY. *IgM* is the first antibody produced in the primary immune response. It represents about 20% of serum antibodies. Like the IgG, IgM bound to antigen activates the complement system, and together these two classes of immunoglobulins serve as specific antitoxins to neutralize diphtheria, tetanus, botulism and anthrax toxins and play a major role in defense against most infectious diseases.

colostral i's. colostrum contains a high concentration of IgG for several days after parturition. Following ingestion, colostral IgG molecules are absorbed unchanged across the intestinal mucosa for the first 1–2 days in cattle, dog, pig and horse and for up to 4 days in the sheep and goat and they provide circulating antibody to the newborn. A proportion is resecreted back into the intestinal lumen to provide some immunity against enteric disease. IgA is also present in colostrum, particularly in sows, but is not translocated to the circulation of the suckling animal to any extent. It provides some local gut immunity. See also **colostrum**.

i. deficiency see **immunodeficiency**.

i. genes genes that code for the light and heavy chains of immunoglobulins.

secretory i. IgA.

i. superfamily immunoglobulins and a number of other proteins including T cell receptor, major histocompatibility molecules, T cell accessory proteins and some adhesion molecules that are structurally related to immunoglobulins.

immunogold a labeling technique for the detection and localization of particular antigens in a specimen. See also immunoelectron **microscopy**.

immunohistochemical [*im"u-no-his"to-kem'ĭ-kəl*] denoting the application of antibody–antigen interactions to histochemical techniques, as in the use of immunoperoxidase or immunofluorescence staining to detect infectious agents or localize cytochemical markers.

immunoincompetent [*im"u-no-in-kom'pə-tent*] lacking the ability or capacity to develop an immune response to antigenic challenge.

immunologic, immunological [*im"u-no-loj'ik*] emanating from or pertaining to immunology.

i. competence see **immunocompetence**.

i. domains in cell receptor biology, the structure of receptors is conveniently considered in terms of three functional domains: transmembrane, ligand binding and immunological; the latter contain primary antigenic regions.

i. fertility control antihormone **immunization**.

i. incompetence immunoincompetence.

i. injury see **immunopathy**.

i. reactions see **immune** response, **immunity**.

i. status a reference to **immunocompetence** of a host.

i. tolerance see immunological **tolerance**.

immunologist [*im"u-nol'o-jist*] a specialist in immunology.

immunology [*im"u-nol'ə-je*] the scientific study of all aspects of immunity, including allergy, hypersensitivity, etc.

immunomodulating having the capacity for and used for **immunomodulation**.

immunomodulation [*im"u-no-mod"u-la'shən*] adjustment of the immune response to a desired level, as in immunopotentiation, immunosuppression, or induction of immunological tolerance.

immunomodulator [*im"u-no-mod'u-la"tər*] agents that alter the immune response by suppression (**immunosuppressive**) or enhancement (**immunostimulant**).

immunopathogenesis [*im"u-no-path"o-jen'ə-sis*] the process of development of a disease in which an immune response or the products of an immune reaction are involved.

immunopathological [*im"u-no-path"o-loj'ĭ-kəl*] emanating from or pertaining to immunopathogenesis.

immunopathology [*im"u-no-pə-thol'ə-je*] 1. disease processes due to immunologic reactions. 2. the structural and functional manifestations of the immune response involved in a disease.

immunopathy any abnormal immune response. Includes: 1. deficient or absent response. See **combined immune deficiency syndrome (disease)**. 2. excess production of gamma globulins **(hypergammaglobulinemia)**, e.g. in the excessive proliferation of plasma cells in a multiple myeloma. 3. over-reaction to extrinsic antigens as in immediate and delayed type **hypersensitivity**. 4. over-reaction to intrinsic antigens, abnormal response of the body to its own tissues, e.g. the **autoimmune** diseases such as lupus erythematosus and thyroiditis.

immunoperoxidase staining [*im"u-no-pər-ok'sĭ-das*] a technique of histological staining that provides morphological details and immunological identification. Analogous to immunofluorescence techniques, but uses peroxidase conjugated to immunoglobulin instead of fluorescent dyes.

immunophysiology [*im"u-no-fiz"e-ol'ə-je*] the physiology of immunological processes.

immunopotency [*im"u-no-po'tən-se*] the capacity of an individual antigenic determinant of an antigen molecule to initiate an immune response.

immunopotentiation accentuation of the response to an immunogen by administration of another substance, e.g. adjuvant, interleukin 2.

immunoprecipitation [*im"u-no-po-ten"she-a'shən*] precipitation resulting from interaction of antibody and soluble antigen.

immunoproliferative [*im"u-no-pro-lif'ər-ə-tiv*] characterized by the proliferation of the lymphoid cells producing immunoglobulins, as in the gammopathies.

i. disease see **gammopathy**, **hypergammaglobulinemia**.

immunoprophylaxis [*im"u-no-pro"fə-lak'sis*] prevention of disease by the administration of vaccines or hyperimmune sera.

immunoradiometry [*im"u-no-ra"de-om'ə-tre*] the use of radiolabeled antibody (in the place of radiolabeled antigen) in radioimmunoassay techniques.
immunoreactant [*im"u-no-re-ak'tənt*] a substance exhibiting immunoreactivity.
immunoreactive [*im"u-no-re-ak'tiv*] exhibiting immunoreactivity.
immunoregulation [*im"u-no-reg"u-la'shən*] the control of specific immune responses and interactions between B and T lymphocytes and macrophages.
immunoresponsiveness [*im"u-no-re-spon'siv-nis*] the capacity to react immunologically.
immunosorbent [*im"u-no-sor'bənt*] the binding of antigen or antibody to a solid support, usually a plastic surface at the bottom of a well in a microtiter plate or a latex particle. See also **ELISA**.
immunostimulant [*im"u-no-stim'u-lənt*] 1. stimulating an immune response. 2. an agent that stimulates an immune response.
immunostimulation [*im"u-no-stim"u-la'shən*] a vague term that can variously refer to what are basically adjuvant effects (BCG vaccine) and mostly discredited or poorly supported theories of non-specific immune system boosting (levamisole, thiabendazole).
immunosuppressant [*im"u-no-sə-pres'ənt*] immunosuppressive.
immunosuppression [*im"u-no-sə-presh'an*] diminished immune responsiveness; may occur following certain infections, notably viral infections such as retroviruses or herpesviruses (cytamegaloviruses), exposure to x-irradiation or toxic chemicals or be deliberately produced in transplantation patients by drugs or antilymphocyte serum.
therapeutic i. treatment which suppresses immune function where it is contributing to the disease process. Includes immune-mediated diseases of the eye, hemopoietic system, skin, kidney and central nervous system.
immunosuppressive [*im"u-no-sə-pres'iv*] 1. pertaining to or inducing immunosuppression. 2. an agent that induces immunosuppression.
immunosurveillance [*im"u-no-sər-va'lans*] the monitoring function of the immune system whereby it recognizes and reacts against aberrant cells arising within the body.
immunotherapy [*im"u-no-ther'ə-pe*] passive immunization of an animal by administration of preformed antibodies (serum or gamma globulin) actively produced in another individual; by extension, the term has come to include the use of immunopotentiators, replacement of immunocompetent lymphoid tissue (e.g. bone marrow or thymus), etc. Because the immune response is a process of surveillance, recognition and attack of foreign cells, immunotherapy has emerged as a promising mode of treatment for cancer. Nonspecific immunotherapy relies on general immune stimulants to activate the whole immune system. In the past decade, immunotherapy against cancer has involved the use of the bacille Calmette–Guérin (BCG) vaccine (see **BCG** vaccine), which is evolved from strains of *Mycobacterium tuberculosis*, and is used to provide some immunity to tuberculosis. Recently, **interferon** has been considered as a good prospect for converting inactive immune cells into active 'natural killers' that attack tumor cells directly. See also **hyposensitization**.
immunotolerance [*im'u-no- tol'ər-əns*] see immunological **tolerance**.
immunotoxin [*im'u-no-tok"sin*] an antitoxin.
immunotransfusion [*im"u-no-trans-fu'zhən*] transfusion of blood from a donor previously rendered immune to the disease affecting the recipient.
IMP inosine 5-monophosphate.
impacted [*im-pak'təd*] being wedged in firmly. In obstetrics, denoting twins so situated during delivery that the pressure of one against the other prevents complete engagement of either. In gastroenterology denotes the formation of a mass of food or fecal material that cannot be moved caudally unless it is softened and reformed or broken up. Used also in relation to an impacted **tooth** or to describe a fracture.
impaction [*im-pak'shən*] the condition of being impacted. Most commonly a condition in the alimentary tract of herbivores fed on roughage of poor digestibility. See also impactions of **anal sacs** of dogs, **oviduct** of birds, **scent** glands of ruminants.
i. colic see impaction **colic**.
fecal i. a syndrome of moderate toxemia, an absence of fecal movements and straining in some cases. There is a collection of putty-like or hardened feces in the rectum or sigmoid. In horses fed on roughage of poor digestibility, the syndrome is one of colic due to impaction in the colon or cecum or both, or of the ileocecal valve. In cattle the syndrome is one of indigestion and ruminal stasis, less commonly abomasal impaction. In both syndromes there is a delayed passage of feces and palpably distended, firm viscera in appropriate locations. Each of these specific impactions is discussed under **colic**, **abomasal** impaction, **ruminal** impaction, **omasal** impaction, **crop**-bound and **oviduct** impaction of birds.
i. large intestine see impaction **colic**.
small colon i. subacute colic in horses characterized by a palpable mass in the midlevel right abdomen.
teeth i. see impacted **teeth**.
impala (*Aepyceros melampus*) an extraordinarily agile antelope about 3 ft high, with long, lyre-shaped horns on the male.
impalpable [*im-pal'pə-bəl*] not detectable by touch.
impar [*im'pahr*] not even; unequal; unpaired.
impatent [*im-pa'tənt*] not open; closed.
impedance [*im-pēd'əns*] obstruction or opposition to passage or flow, as of an electric current or other form of energy.
acoustic i. an expression of the opposition to passage of sound waves, being the product of the density of a substance and the velocity of sound in it; the basis for differentiation of tissues in ultrasonography.
airway i. a measure of airway resistance to air flow; the ratio of peak pressure that produces a peak airflow.
bioelectrical i. analysis a noninvasive method of estimating body composition by measuring the rate of electrical conductance through body fluids with electrodes placed on the body.
imperfect state [*im-pur'fəkt*] the asexual stage in the life cycle of fungi.
imperforate [*im-pur'fə-rāt*] not open; abnormally closed. Common sites for atresia are anus, hymen, teat sphincter, lacrimal puncta.
impermeable [*im-pur'me-ə-bəl*] not permitting passage, as for fluid.
impetigo [*im"pə-ti'go*] usually a staphylococcal skin infection marked by vesicles or bullae that become pustular, rupture, and form yellow crusts. In animals a superficial infection of the face of newborn piglets, the abdominal skin of puppies, and one of the teats of cows, go under the name of impetigo. See also **udder** impetigo, **contagious** porcine pyoderma, superficial pustular **dermatitis** of puppies and kittens.
i. contagiosa see **exudative** epidermitis.
implant [*im-plant', im'plant*] 1. to insert or to graft (tissue or radioactive material) into intact tissues or a body cavity. 2. any material inserted or grafted into the body, e.g. carbon fiber, metal or plastic prostheses, hormone, electronic signal, growth promoter. Pellets or pastes containing low concentrations of hormones are implanted under the skin on the posterior aspect of the ear of growing ruminants. They release low concentrations of hormones that improve growth rate, muscle deposition and food conversion efficiency. Hormones in implants include estradiol benzoate, progesterone, trenbolone acetate, testosterone and zeranol, a fermentation product having estrogenic properties, either singly or in combinations. Individual implant products are approved for specific types and ages of growing cattle and sheep.
biological i. foreign materials placed in the body tissues for purposes of assisting in some function, either temporarily or permanently. May be made of soft tissues, synthetics, metals, or ceramics that are relatively inert and compatible with body tissues.
carbon fiber i's. implants used to strengthen tendons damaged due to sprain or transection. The implantation is done surgically.
ceramic i. see biological implant (above).
titanium i. used for orthopedic implants, often in alloys, because of its good mechanical properties and resistance to corrosion.
implantation [*im"plan-ta'shən*] 1. the insertion of an organ or tissue in a new site in the body. 2. the attachment and embedding of the fertilized ovum in the endometrium. 3. the insertion or grafting into the body of biological, living, inert or radioactive material. Includes the planting of needles, staples or beads for prolonged stimulation of acupuncture points for a long term effect.
embryo i. attachment of the trophoblast to the uterine lining. The form of attachment varies widely from superficial apposition to varying degrees of endometrial invasion.
implantology [*im"plan-tol'ə-je*] the science dealing with implants.
implied contract a contract assumed to have been drawn in spite of there being no written record nor any actual verbal agreement.

An implied contract exists when a veterinarian examines and treats an animal. It is implied that the veterinarian will do his/her best and that the client will pay the fee charged.

importin a protein that binds to a 'cargo' protein in the cytoplasm and transports the cargo through the nuclear pore complex into the nucleus. See also **exportin**.

impotence [*im'pə-təns*] inability of the male to achieve or maintain an erection of sufficient rigidity to perform sexual intercourse successfully.

impotentia coeundi [L.] inability of the male animal to perform sexual intercourse.

impotentia generandi [L.] inability of the male animal to impregnate females.

impregnation [*im"prəg-na'shən*] 1. the act of fertilizing or rendering pregnant. 2. saturation.

impressio [*im-pres'e-o*] pl. *impressiones* [L.] impression (1).

impression [*im-presh'ən*] 1. a slight indentation or depression, as one produced in the surface of one organ by pressure exerted by another. 2. a negative imprint of an object made in some plastic material that later solidifies. 3. an effect produced upon the mind, body or senses by some external stimulus or agent.

i. plate a plastic plate with a central well filled with agar that has a convex surface. The agar is pressed against the tissue to be examined bacteriologically.

dental i. (2) a mold taken of the teeth or jaw and used in the fabrication of dental appliances to be used in restorative dentistry or orthodontics.

imprinting [*im-print'ing*] a kind of learning in the very young based mainly on maternal attachment and acquisition of basic behavior patterns.

improvement lag the time delay between improved performance in one tier of a breeding program until it appears in the next tier.

impulse [*im'pəls*] 1. a sudden pushing force. 2. a sudden uncontrollable act. 3. a nerve impulse.

cardiac i. movement of the chest wall caused by the heartbeat. Called also **apex** beat.

nerve i. the electrochemical process propagated along nerve fibers.

IMT immune-mediated thrombocytopenia.

IMV intermittent mandatory ventilation.

In chemical symbol, *indium*.

in- 1. a prefix, *in*, *within* or *into*. 2. an intensive prefix. 3. a negative or privative prefix.

in extremis [L.] *at the point of death*.

in-hand being led; a show class of led horses.

in-pup pregnant; similarly with in-lamb, in-calf, in-foal.

in situ [L.] *in its normal place;* confined to the site of origin.

i. s. hybridization see in situ **hybridization** of nucleic acid.

in tela [L.] *in tissue;* relating especially to stained histological preparations.

in utero [L.] *within the uterus*.

in vitro [L.] literally *within a glass,* i.e. outside the living body; observable in a test tube; in an artificial environment.

i. v. fertilization (IVF) see in vitro **fertilization**.

i. v. maturation (IVM) see in vitro **maturation**.

i. v. production (IVP) of embryos any process resulting in the production of an embryo in the laboratory; techniques used include in vitro **fertilization** (IVF), intracytoplasmic sperm injection (**ICSI**), **cloning** (somatic cell nuclear transfer, SCNT).

in vivo [L.] *within the living body*.

inability to rise see **recumbency**.

inactin a quick-acting barbiturate, used as an induction agent.

inactivated rendered inactive; the activity is destroyed.

i. viruses treated so that they are no longer able to produce evidence of growth or damaging effect on tissue. Inactivation may be by physical means including heat, ultraviolet light, ultrasonic vibration, or by chemical treatment. Used in inactivated viral vaccines.

inactivation [*in-ak"tĭ-va'shən*] the destruction of activity, as of a virus, by the action of heat, chemical or other agent.

inanimate [*in-an'ĭ-mət*] 1. without life. 2. lacking in animation.

inanition [*in"ə-nish'ən*] the exhausted state due to prolonged undernutrition; starvation.

inapparent not clearly seen.

i. infection infection without clinical signs.

inappetence [*in-ap'ə-təns*] partial lack of appetite or desire contrasted to **anorexia**. Presence is inferred in animals which have depressed food intake.

inarticulate [*in"ahr-tik'u-lət*] not having joints; disjointed.

inassimilable [*in"ə-sim'ĭ-lə-bəl*] not susceptible of being utilized as nutriment.

inborn [*in'born*] congenital; inherited or acquired before birth.

i. error of metabolism congenital disorders of metabolism. Includes cystinuria, fucosidosis, citrullinemia, mannosidosis, tyrosinemia and glycogenosis.

inbred [*in'bred*] said of offspring produced by **inbreeding**.

i. lines succeeding generations of animals all derived by breeding from the same group of closely related individuals.

inbreeding [*in'brēd-ing*] the mating of closely related organisms or of organisms having closely similar genetic constitutions.

i. coefficient the probability that the two genes present at a locus in that individual are identical by descent.

i. depression depression of performance caused by inbreeding.

incarceration [*in-kahr"sər-a'shən*] unnatural retention or confinement of a part, e.g. of an intestinal loop.

incidence [*in'sĭ-dəns*] the rate at which a certain event occurs, as the number of new cases of a specific disease occurring during a certain period.

cumulative i. proportion of a fixed population that become affected within a stated time period.

i. reporting schemes prospective gathering of epidemiological data on incidence of nominated diseases.

incident [*in'sĭ-dənt*] impinging upon, as incident radiation.

incineration [*in-sin"ə-ra'shən*] the act of burning to ashes.

incipient [*in-sip'e-ənt*] beginning to exist; coming into existence.

incisal [*in-si'zəl*] the cutting edge of an incisor or canine tooth.

incision [*in-sizh'ən*] 1. a cut or a wound made by a sharp instrument. 2. the act of cutting.

bold i. one described as firm and free in action so as to cut through the skin in a minimum of motions, rather than multiple short, light strokes.

grid i. a surgical approach through a flank incision in horses and cattle in which the several muscle layers are separated in the direction of their fibers, each of which is different, and the peritoneum is incised in a vertical direction. Called also a modified McBurney incision.

modified McBurney i. see grid incision (above).

paramedian i. one located near the midplane, most commonly parallel and close to the linea alba.

relaxing i. one made to allow movement of skin for closure of a wound or parallel incision.

stab i. made with the point of a scalpel.

incisive [*in-si'siv*] 1. having the power of cutting; sharp. 2. pertaining to the incisor teeth.

i. bone the bone bearing the incisors. Called also premaxilla. See Table 10.

incisor [*in-si'zər*] 1. adapted for cutting. 2. any one of the two to eight front teeth of either jaw (eight in ruminants but only in the lower jaw). See also **teeth**.

incisure [*in-si'zhər*] a cut, notch or incision.

inclusion [*in-kloo'zhən*] 1. the act of enclosing or the condition of being enclosed. 2. anything that is enclosed; a cell inclusion.

cell i. a usually lifeless, often temporary, constituent in the cytoplasm of a cell. See **inclusion body**.

chlamydial i. see elementary **body**.

dental i. a tooth so surrounded with bony material that it is unable to erupt.

epithelial i. probably endothelial displacements during embryonic development; epithelial cells in acinar or ductal structure enclosed in a layer of epithelial cells on a basement membrane.

fetal i. a partially developed embryo enclosed within the body of its twin.

nutritive i's glycogen inclusions, visible only with electron microscope, include α-particles (rosettes) and β-particles (single particles).

inclusion body round, oval or irregular-shaped bodies in the cytoplasm and nucleus of cells, as in diseases due to viral infection, such as rabies, inclusion body rhinitis. May be acid-fast as in lead poisoning. See also **Bollinger bodies**, **Borrel bodies**, elementary **body**, **Guarnieri bodies**, **Joest bodies**, Negri **body**, **Paschen bodies** and type A, type B inclusion bodies (below).

falcon i. b. disease caused by a herpesvirus, the clinical signs include weakness, anorexia, diarrhea, leukopenia and a mortality rate of 100%.

i. b. hepatitis a disease of young chickens caused by an adenovirus and characterized by jaundice and anemia. The mortality rate is about 25%. Called also chicken hemorrhagic syndrome.
i. b. rhinitis a disease of the upper respiratory tract of young pigs caused by a cytomegalovirus. Clinically there is paroxysmal sneezing, a serous, ocular and nasal discharge, and a benign course. It may be a precursor to atrophic rhinitis.
snake i. b. disease caused by a retrovirus; observed in many boid snakes (boas and pythons); characterized by high mortality after progressive neurological signs, including 'star-gazing', ataxia, tremors and paralysis. The disease is more aggressive in pythons.
type A i. b. found in chromatically disrupted nuclei with margination of the chromatin fragments and the inclusion body is amorphous or granular and acid-staining; characteristic of cells infected with, for example, herpesvirus and adenovirus.
type B i. b. the nucleus is still well organized, there is no margination of chromatin and the inclusion bodies are well defined; seen in cells infected with, for example, distemper virus.

incoagulability [*in"ko-ag"u-lə-bil'ĭ-te*] the state of being incapable of coagulation.

income financial return from a project or for help provided.
net i. gross income less costs.
i. over feed cost a rough indicator of the profitability of an animal enterprise based principally on fattening of young livestock, e.g. in a feedlot. The fixed costs are the depreciation on the installation and labor, the variable costs are the price of cattle and the feed.

incompatibility [*in"kəm-pat"ĭ-bil'ĭ-te*] the quality of being incompatible.
drug i. may be *chemical*, i.e. the drugs react with each other and precipitate, produce gas or similar effect, or *pharmacological* in that the effects of the two on tissues are opposite, or *pharmaceutical*, e.g. immiscibility, insolubility.

incompatible [*in"kəm-pat'ĭ-bəl*] not suitable for combination, simultaneous administration, or transplantation; mutually repellent.

incompetence [*in-kom'pə-təns*] inability to function properly. See **valvular** incompetence.

incomplete base-pairing see **mismatch** (2).

incontinence [*in-kon'tĭ-nəns*] 1. inability to control excretory functions. Food animals are not easy to classify with respect to their continence. Companion animals who suddenly lose their house training manners may be diagnosed as incontinent. See also **urinary** incontinence. 2. immoderation or excess.
fecal i. the inability to retain feces until a coordinated and appropriate act of defecation. Characterized by a relaxed anal sphincter and fecal material dropping out at intervals. Can be caused by injury to the anal sphincter or its nerve supply, particularly spinal nerves S1 to S3. A feature of sacral agensis.
hormone responsive i. a common disorder in spayed, adult bitches, occasionally when unspayed and rarely in males; there is completely passive leakage of urine mainly when there is pressure on the abdomen while lying down or sitting. Believed to be due to loss of sphincter or urethral tone associated with decreased sex hormones. Females are usually responsive to treatment with estrogens or α-adrenergic agonists; males are less consistently responsive to testosterone.
neurogenic i. see neurogenic **urinary bladder**.
retention-overflow i. see atonic neurogenic **urinary bladder**.
stress i. 1. involuntary urination when stressed; common in young puppies. 2. see **urethral** incompetence.
urge i. frequent urination of small amounts; detrusor **hyperreflexia**.
urinary i. see **urinary** incontinence.

incoordination [*in"ko-or"dĭ-na'shən*] a lack of normal adjustment of muscular action so that the intended movement of the limb or other part is not made smoothly and harmoniously, and does not accurately achieve its objective. If the abnormality is hypermetric, the condition is referred to as ataxia. If it is inclined to weakness, e.g. knuckling at the turn, stumbling, failure to flex limbs properly, or to misdirection as in a proprioceptive deficit, it is called incoordination. The judgment is best made with the animal going at a good pace, preferably unrestrained, and on level going. A number of sophisticated techniques are available for the examination of the gaits of racing horses. As affecting sphincters, especially of the alimentary tract, the term is used alternatively to achalasia.
enzootic equine i. see **enzootic** equine incoordination.

incorporation [*in-kor"por-a'shən*] 1. the union of one substance with another, or with others, in a composite mass. 2. a legal procedure by which a veterinary practice is turned into a company. Unless the company is run entirely by veterinarians there is the risk that the professional ethic that the good of the patient is paramount may be overcome by a more profit-conscious set of rules. There are many advantages to incorporation in terms of financial security and adequacy of financial return to the veterinarian.

increment [*in'krə-mənt*] 1. an increase or addition; the amount by which a value or quantity is increased. 2. the early stage of fever, where the temperature is rising; clinically there is shivering, coldness of the skin, and absence of sweating.

incremental lines see **Ebner's** lines.

incrustation [*in"krəs-ta'shən*] encrustation.

incubate [*in'ku-bāt*] 1. to subject to or to undergo incubation. 2. material that has undergone incubation.

incubation [*in"ku-ba'shən*] 1. the provision of proper conditions for growth and development, as for bacterial or tissue cultures. 2. development of a disease by multiplication of an infectious agent within the host. 3. the development of the embryo in the eggs of oviparous animals. See also **avian** incubation periods. 4. the maintenance of an artificial environment for a neonate, especially a premature one.
artificial i. use of a machine which warms, turns, humidifies bird eggs to incubate and eventually hatch them.
extrinsic i. period the period between infection of the arthropod insect vector and the vector's ability to infect the next vertebrate host.
i. behavior see **broodines**; almost non-existent in egg-laying birds; persists in meat strains and turkeys.
i. period the interval between effective exposure to a pathogenic infectious agent, leading to the invasion of the body and the establishment of the infection, and the appearance of the first clinical signs of the disease in question. Incubation periods vary from a few days to several years, depending on the causative organism and type of disease. See also extrinsic incubation period (above).

incubator [*in'ku-ba-tər*] an apparatus for maintaining optimal conditions (temperature, humidity, atmosphere) for growth and development, especially one used for cultures, and for hatching eggs.

incudal [*ing'ku-dəl*] pertaining to the **incus**.

incudiform [*ing-ku'dĭ-form*] anvil-shaped.

incudomalleal [*ing"ku-do-mal'e-əl*] pertaining to the incus and malleus.

incudostapedial [*ing"ku-do-mal"e-o'lər*] pertaining to the incus and stapes.

incurable [*in-kūr'ə-bəl*] 1. not susceptible of being cured. 2. an animal with a disease that cannot be cured.

incus [*ing'kəs*] the middle of the three ossicles of the ear; called also anvil. See also Table 10.

indandione [*in"dān-dī'ōn*] any of a group of synthetic anticoagulants derived from 1,3-indandione, including pindone and diphacinone, which impair the hepatic synthesis of the vitamin K-dependent coagulation factors (prothrombin, factors VII, IX and X). Used in human medicine as an anticoagulant and as a rodenticide in a manner similar to that of warfarin.

independence in statistical terms two variables are independent if the expected distribution of one variable is the same for each and every value of the other. Independence implies zero correlation, but the reverse is not necessarily true.

index [*in'deks*] pl. *indexes, indices* [L.] the numerical ratio of measurement of any part in comparison with a fixed standard.
erythrocyte i's see **erythrocyte** indices.
body i. see **body condition score**.
chemotherapeutic i. see therapeutic index (below).
icterus i. see **icterus** index.
nuclear i. see **Schilling count**.
opsonic i. a measure of opsonic activity determined by the ratio of the number of microorganisms phagocytized by normal leukocytes in the presence of serum from an animal infected by the microorganism, to the number phagocytized in serum from a normal animal.
phagocytic i. the average number of bacteria ingested per leukocyte of the patient's blood.
production i. a method of expressing production compared with a potential or target.
refractive i. the refractive power of a medium compared with that of air (assumed to be 1).

therapeutic i. originally, the ratio of the maximum tolerated dose to the minimum curative dose; now defined as the ratio of the median lethal dose (LD_{50}) to the median effective dose (ED_{50}). It is used in assessing the safety of a drug. Called also chemotherapeutic index.
vital i. the ratio of births to deaths within a given time in a population.
Index Medicus until 2004, a monthly publication of the National Library of Medicine, in which the world's leading biomedical literature was indexed by author and subject. Now replaced by online resources, especially PubMed.
Index Veterinarius a periodical listing of all publications in the veterinary and related literature by CAB International (CABI).
Indian antelope see **blackbuck**.
Indian bulrush ***Pennisetum*** *glaucum*.
Indian hemp see ***Cannabis*** *sativa*.
Indian liquorice see ***Abrus*** *precatorius*.
Indian poke see ***Veratrum*** *viride*.
Indian runner an egg-laying duck which originated in Malaysia and China. There are five color varieties: fawn, white, fawn and white, black, and chocolate. The duck has an almost vertical stance and a characteristic running gait.
Indian walnut ***Aleurites*** *moluccana*.
indican [*in'dĭ-kən*] 1. 3-hydroxy indole, a substance formed by decomposition of tryptophan in the intestines and excreted in the urine. 2. a yellow indoxyl glycoside from indigo plants, a precursor of indigo dye.
indicant [*in'dĭ-kənt*] an indicator or signal. A clinical indicant is a clinical sign, an item of history, epidemiology or environmental peculiarity that suggests a particular diagnosis for inclusion in the list of possibles.
indicanuria [*in"dĭ-kə-nu're-ə*] an excess of indican in the urine. High concentrations are indicative of prolonged alimentary tract sojourn and increased absorption of this detoxification product of indole.
indication [*in"dĭ-ka'shən*] a sign or circumstance that points to or shows the cause, treatment, etc. of a disease. See also **indicant**.
indicator [*in'dĭ-ka"tər*] 1. a piece of information that suggests a suitable line of action, in diagnosis, treatment or control. 2. any substance that indicates the appearance or disappearance of a chemical by a color change or attainment of a certain pH.
i. plants plants (e.g. *Astragalus* and *Xylorrhiza* spp.) that prefer a higher than normal soil content of a particular element, e.g. selenium, copper. Their presence indicates a potentially poisonous pasture. Called also obligate **accumulator plants**.
indigestible fiber/roughage [*in"dĭ-jes'tĭ-bəl*] includes feeds such as straw, mature meadow hay, cereal stubble, browse comprising mostly woody shrubs; conducive to impaction (rumenoreticular in ruminants, large intestine in equidae).
indigestion [*in"dĭ-jes'chən*] lack or failure of digestive function; commonly used to denote vague abdominal discomfort after eating. In animals the use of the term is restricted to cattle. Manifested by ruminal stasis, anorexia, reduced fecal output. Usually due to dietary error. See also **vagus** indigestion.
indigitation [*in-dij"ĭ-ta'shən*] intussusception (1).
indigo [*in'dĭ-go*] common name for leguminous plants in several genera, but mainly **Indigofera** and ***Baptisia***. Includes Australian or native indigo (*I. australis*), Birdsville indigo (*I. linnaei*), false or wild indigo (*B. leucantha*).
i. carmine see **indigotindisulfonate sodium**.
Indigofera a genus of legumes in the Fabaceae family of plants; some species contain a hepatoxin, indospicine, a toxic amino acid; *I. australis* (native indigo), *I. linnaei*, *I. spicata* (*I. endecaphylla*, creeping indigo), *I. teysmannii*, *I. truxillensis*.
***I. linnaei* (*I. dominii*, *I. enneaphylla*)** a prostrate Australian herb which causes Birdsville horse disease, characterized by marked incoordination, frequent falling, emaciation and terminal convulsions. May be prevented by dietary supplementation with protein. There are no lesions specific to the disease. A nitrotoxin is suspected as the cause. Called also Birdsville indigo.
I. hochstetteri contains an unidentified toxin, causes incoordination, dyspnea, diarrhea.
indigotindisulfonate sodium [*in"dĭ-go"tin-di-sul'fo-nāt*] a dye used as a diagnostic aid in renal function testing and as a reagent for the detection of nitrates and chlorates and in the testing of milk. Called also indigo blue, indigo carmine.
indirect [*in"di-rekt'*] done through an intermediate animal or function.
i. comparisons comparisons made between individuals or groups in different locations.
i. fluorescent antibody see fluorescence **microscopy**.
i. repeat see **inverted repeat**.
i. selection improving one character while selecting on another.
i. social distance social distance is distance between contacts in an infectious disease; indirect social distance is distance between indirect contacts.
indium (In) [*in'de-əm*] a chemical element, atomic number 49, atomic weight 114.82. See Table 4.
individual a unit member of a population; peculiar to an individual animal.
i. animal productivity production record of an individual animal.
i. cow lifetime record a cow's record of production or health or both kept as a continuing separate record.
i. distance the distance that a bird assumes as its private domain and inside which it will attack any intruder.
i. times e.g. cow-years at risk, dog-months of protection.
individuation [*in"dĭ-vid"u-a'shən*] 1. the process of developing individual characteristics. 2. differential regional activity in the embryo occurring in response to organizer influence.
indocyanine green a dye used intravenously as a diagnostic aid in the determination of blood volume, cardiac output and hepatic function.
Indofilaria a genus of filaroid nematodes in the family Filariidae.
I. patabiramani causes dermatitis in elephants.
indole [*in'dōl*] a compound obtained from coal tar and indigo and produced by decomposition of tryptophan in the intestine, where it contributes to the peculiar odor of feces. It is excreted in the urine in the form of indican. 3-methyl-indole and L-tryptophan are implicated in causing acute interstitial pneumonia in cattle.
i. alkaloids compounds derived from the amino acid tryptophan; includes tryptamine and tryptamine derivatives such as the neurotransmitter serotonin, the hormone melatonin and the hallucinogen psilocybin, as well as β-carbolines and alstonines.
i. test a biochemical test for the identification of bacteria, based on the production of indole from tryptophan in the medium provided.
indolent [*in'do-lənt*] causing little pain; slow growing.
i. ulcer see **eosinophilic** ulcer, refractory **ulcer**.
indolizidine alkaloid e.g. swainsonine (occurs in plants such as *Astragalus*, *Swainsonia* and *Oxytropis* spp.) and castanospermine (occurs in *Castanospermum* spp.). Inhibit α-mannosidase.
indometacin [*in"do-meth'ə-sin*] see **indomethacin**.
indomethacin an anti-inflammatory, analgesic and antipyretic agent, used in arthritic disorders and degenerative joint disease in humans, but is capable of causing serious gastrointestinal side-effects, particularly hemorrhage, in dogs and cats. Called also indometacin (INN).
indoor strictly in a human dwelling; more widely includes an animal dwelling.
indospicine a hepatoxic and teratogenic amino acid found in *Indigofera* spp. which competes with arginine in metabolic pathways.
indoxyl [*in-dok'səl*] an oxidation product of indole formed in tryptophan decomposition, and excreted in the urine as indican.
indoxyluria [*in-dok"sə-lu're-ə*] an excess of indoxyl in the urine.
induced [*in-d st'*] induction.
inducer [*in-din s'ər*] 1. in biosynthesis, a compound that induces synthesis of a specific enzyme or sequence of enzymes, by antagonizing the corresponding repressor, or by some other mechanism. 2. a substance that stimulates the production of interferon by a cell.
induction [*in-duk'shən*] 1. the process or act of inducing, or causing to occur, especially the production of a specific morphogenetic effect in the embryo through evocators or organizers, or the production of anesthesia or unconsciousness or parturition by use of appropriate agents. 2. the generation of an electric current or magnetic properties in a body because of its proximity to an electrified or magnetized object.
i. period the time from exposure to a non-infectious agent to the first appearance of the disease. Analogous to the **incubation** period but for non-infectious pathogenic agents.

inductor [*in-duk'tər*] a tissue elaborating a chemical substance that acts to determine the growth and differentiation of embryonic parts.

inductotherm [*in-duk'to-thərm*] an electrical instrument used in the treatment of sprained tendons in horses; produces high tissue temperatures by induction.

indurated [*in'du-rāt"əd*] hardened; abnormally hard.

induration [*in"du-ra'shən*] the quality of being hard; the process of hardening; an abnormally hard spot or place.

black i. the hardening and pigmentation of the lung tissue, as in pneumonia.

brown i. 1. a deposit of altered blood pigment in the lung in pneumonia. 2. an increase of the pulmonary connective tissue and excessive pigmentation, due to chronic congestion from valvular heart disease, or to anthracosis.

cyanotic i. hardening of an organ from chronic venous congestion.

granular i. cirrhosis.

gray i. induration of lung tissue in or after pneumonia, without pigmentation.

red i. interstitial pneumonia in which the lung is red and congested.

indurative mastitis [*in'du-ra"tiv*] see **caprine** arthritis–encephalitis; called also hard udder.

indusium griseum [*in-doo'ze-əm gris'e-əm*] [L.] a thin layer of gray matter on the dorsal surface of the corpus callosum.

indwelling [*in'dwel-ing*] to occupy a space; in surgery, left in position; said particularly of catheters. See also indwelling **catheter**.

inelastic [*in"e-las'tik*] tissue lacking in elasticity.

Inermicapsifer [*in-ur"mĭ-kap'sĭ-fər*] a genus of tapeworms in the family Anoplocephalidae.

I. cubensis, I. madagascariensis found in rodents and hyracoids and occasionally in humans.

inert [*in-ərt'*] inactive.

inertia [*in-ur'shə*] inactivity, inability to move spontaneously.

colonic i. weak muscular activity of the colon, leading to distention of the organ and constipation.

i. time the time required to overcome the inertia of a muscle after reception of a stimulus from a nerve.

uterine i. see **uterine** inertia.

INF interferon.

infamous conduct a phrase used in legislation governing the rules of professions. It is the most serious level of misconduct and defined as notoriously evil, vile and abominable.

infanticide [*in-fan'tĭ-sīd'*] see **infantophagia**.

infantilism [*in'fən-tĭ-liz"əm, in-fan'tĭ-liz"əm*] reduced size, poor sexual development, poor mental development in adult companion animals.

infantophagia a form of pica manifested by the mother eating her newborn. In many cases in companion animals, particularly in rabbits, and possibly in pigs, the behavior is due to anxiety by the mother about a too close attendance by humans.

infarct [*in'fahrkt*] a localized area of ischemic necrosis produced by occlusion of the arterial supply or (much less commonly) the venous drainage of the part. Clinical signs depend on the size of the devitalized tissue and the organ affected.

anemic i. one immediately after sudden interruption of flow of arterial blood to the area (before the development of the hemorrhagic infarct), or one in which the resolution phase after erythrocytes have been removed from the hemorrhagic infarct.

hemorrhagic i. one that is red owing to oozing of erythrocytes from necrotic blood vessels in the injured area.

infarctectomy [*in"fahrk-tek'tə-me*] surgical removal of an infarct.

infarction [*in-fahrk'shən*] 1. the formation of an infarct. 2. an infarct.

cardiac i. see myocardial infarction (below) and also myocardial infarction.

cerebral i. an ischemic condition of the cerebral hemispheres, causing a persistent focal neurological deficit related to the area affected.

i. fever an aseptic fever caused by liberation of pyrogens from damaged tissue.

intestinal i. due to extensive occlusion of intestinal arteries, e.g. by larvae of *Strongylus vulgaris* in horses; untreated inevitably leads to perforation, peritonitis and death. May also result from torsion or strangulation. See also thromboembolic **colic**.

multifocal intramural myocardial i. (MIMI) a result of hyalinization of small, intramural, coronary arteries in old dogs.

myocardial i. gross necrosis of the myocardium, due to interruption of the blood supply to the area. See also **myocardial** infarction.

pulmonary i. localized necrosis of lung tissue, due to obstruction of the arterial blood supply.

renal i. is usually segmental and may heal leaving a narrow scar. It is usually clinically inapparent unless the obstructing material is infected. See also septic infarction (below).

septic i. infarction caused by lodgement of a bacterially-infected embolus in a tissue. This will lead ot inflammatory changes such as abscess formation.

spinal cord i. caused sometimes by fibrocartilaginous emboli or other emboli, causing sudden loss of function of sections of the spinal cord, leading to paresis or paralysis of one or more limbs with either upper motor neuron or lower motor neuron signs, depending on the site of the infarct.

splenic i. usually hemorrhagic; may be difficult to differentiate from subcapsular hematoma.

venous i. venous obstruction will much more likely lead to congestion than to ischemic necrosis, hence venous infarction is much less likely than infarction caused by arterial occlusion, although a thrombus in a vein may cause infarction in the thigh muscles of downer cow, recumbent for long periods.

infection [*in-fek'shən*] 1. invasion and multiplication of microorganisms in body tissues, especially that causing local cellular injury due to competitive metabolism, toxins, intracellular replication or antigen–antibody response. 2. an infectious disease.

acute i. short duration, of the order of several days.

airborne i. infection by inhalation of organisms suspended in air in water droplets or on dust particles.

arrested i. restrained in its development by a capsule or adhesion but still containing infective material.

chronic i. long duration, of the order of weeks or months.

i. control the utilization of procedures and techniques to reduce the spread of infection, particularly nosocomial infections.

cross i. infection transmitted between patients infected with different pathogenic microorganisms.

droplet i. infection due to inhalation of respiratory pathogens suspended in liquid particles exhaled by an animal that is already infected.

dustborne i. infection by inhalation of pathogens that have become affixed to particles of dust.

endogenous i. that due to reactivation of organisms present in a dormant focus, as occurs in tuberculosis or due to invasion by members of the normal flora of an animal.

exogenous i. that caused by organisms not normally present in the body but which have gained entrance from the environment.

general i. see systemic infection (below).

latent i. the animal is infected but there are no clinical signs nor infectious agent detectable in discharges.

local i. restricted to a specific tissue or organ. May vary in degree, depending on the site and acuteness of the lesion and the type of microorganisms present, with signs including fever, toxemia and leukocytosis with a left shift. The specific individual signs also depend on the location of the lesion and the pressure it exerts on nearby organs. See also **abscess**, **cellulitis**, **phlegmon**, **osteomyelitis**, **omphalophlebitis**, **empyema**, **adenitis**, **metritis**, **mastitis**, **periphlebitis**.

masked i. an infection is known to occur but the infectious agent cannot be demonstrated, e.g. the sheep-associated **malignant catarrhal fever** virus.

mixed i. infection with more than one kind of organism at the same time.

multiple i. simultaneous infection with more than one virus or a combination of virus and bacteria may be caused by one agent lowering resistance to the other. There may be synergism between the agents.

nosocomial i. pertaining to or acquired in hospital.

opportunistic i. infection with organisms which are normally harmless but become pathogenic when the body's defense mechanisms are compromised.

patent i. one in which the infectious agent can be demonstrated in discharges of the patient.

persistent i. long-lasting or life-long infections, often latent. There may be no clinical signs, asymptomatic periods and recurring acute episodes of clinical disease, or eventually onset of severe clinical disease.
pyogenic i. infection by pus-inducing organisms.
secondary i. infection by a pathogen following an infection by a primary pathogen of another kind.
self-limiting i. infection that will resolve without intervention, often due to the exhaustion of the capacity of the niche in which the organism replicates to support further growth (e.g. enteric viruses that only grow in mature epithelial cells, which are replaced by immature cells as they are killed by the virus).
i. stones see struvite **urolith**.
subclinical i. infection associated with no detectable signs but caused by microorganisms capable of producing easily recognizable diseases, such as mastitis or brucellosis; often detected by the production of antibody, or by delayed hypersensitivity exhibited in a skin test reaction to such antigens as tuberculoprotein.
super i. 1. an infection of a cell that is already infected with a second virus. 2. a second infection in an animal which is already experiencing an infection with another agent. Commonly a result of overgrowth of a member of the normal flora facilitated by antimicrobial therapy directed at the initial pathogen.
systemic i. infection is widespread throughout the body and must be assumed to be in most, if not all, organs.
terminal i. an acute infection occurring near the end of a disease and often causing death.
transmissible i. an infection capable of being transmitted from one animal to another. Called also contagious.
waterborne i. infection by microorganisms transmitted in water.

infectious [*in-fek'shəs*] caused by or capable of being communicated by infection.
i. avian nephritis caused by a picornavirus this disease of young chickens; causes a transient unremarkable disease with lesions appearing in the kidney.
i. bovine cervicovaginitis thought to be due to a herpesvirus-4 infection, transmitted by coitus, causing sterility in a high percentage of cows and some bulls. Recorded only in Africa. Called also epivag.
i. bovine keratoconjunctivitis the common infectious keratitis of cattle caused by *Moraxella bovis* with solar radiation, dust and face flies as contributing factors. It occurs as outbreaks, characterized by ocular discharge, blepharospasm and pain. Called also pinkeye, blight, New Forest disease.
i. bovine meningoencephalomyelitis see **hemophilosis**.
i. bovine rhinotracheitis (IBR) a highly infectious disease of cattle, particularly when crowded together as in feedlots, caused by bovine herpesvirus 1 and characterized by nasal discharge, rhinitis, tracheitis, conjunctivitis, fever and a short course unless complicated by other infections, particularly those leading to pneumonia. Less common forms of the disease include encephalitis in calves and a systemic infection in neonates, manifested by oral erosions and diarrhea. Infectious pustular vulvovaginitis is also caused by this virus. A disease notifiable to the OIE (see Table 22). Called also rednose.
i. bulbar paralysis see **Aujeszky's disease**.
i. caprine keratoconjunctivitis contagious ophthalmia caused by *Mycoplasma conjunctivae*.
i. coryza see **fowl** coryza.

I-4: Infectious bovine keratoconjunctivitis (pink eye) in a heifer.

i. equine anemia see **equine** infectious anemia.
i. equine bronchitis see **equine** influenza.
i. equine cough see **equine** influenza.
i. equine encephalomyelitis see equine viral **encephalomyelitis**.
i. hematopoietic necrosis of fish an important infection of salmonid fish, especially steelhead (anadromous rainbow trout) caused by *Novirhabdovirus*. There is necrosis of hematopoietic tissues of the spleen and kidney; affected fish show abdominal distention, exophthalmus, and hemorrhages around the fins, mouth and elsewhere. There is a high mortality rate, particularly in young fish. Surviving fish often have a scoliosis. A disease notifiable to the OIE (see Table 22).
i. hypodermal and hematopoietic necrosis parvovirus infection causing high mortalities in juvenile *Penaeus stylirostris* and runt deformity syndrome in *P. vanname*.
i. labial dermatitis see contagious **ecthyma**.
i. laryngotracheitis (ILT) a highly infectious disease of birds of all ages caused by avian herpesvirus 1 and characterized by a very rapid spread of respiratory distress, the signs including gasping, respiratory gurgling and rattling, and death often from asphyxiation because of massive pseudomembrane formation in the trachea. The mortality rate may be as high as 70%. A disease notifiable to the OIE (see Table 22).
i. necrotic hepatitis an acute toxemia of cattle, sheep and pigs caused by *Clostridium novyi* which elaborates a toxin in necrotic infarcts in the liver. These infarcts are caused usually by larvae of *Fasciola hepatica*. Many affected animals are found dead. Clinical findings include severe depression, hypothermia and muffling of heart sounds. Called also black disease.
i. pancreatic necrosis of fish a disease of salmonids caused by a group of related birnaviruses. It is characterized by a dark body color, pin-point hemorrhages in the skin, exophthalmus, enlarged abdomen and spiral swimming. The highest mortality is in fry and fingerlings.
i. porcine dermatitis see **contagious** porcine pyoderma.
i. porcine polyarthritis see **Glässer's disease**.
i. pustular vulvovaginitis see infectious pustular **vulvovaginitis**.
i. salmon anemia severe disease of Atlantic salmon; characterized by liver necrosis caused by an orthomyxovirus. A disease notifiable to the OIE (see Table 22).
i. serositis a septicemic disease of young ducks caused by **Riemerella** *anatipestifer* and characterized by torticollis, head tremor, loss of balance and a high mortality rate.
i. sinusitis a contagious disease of turkeys caused by *Mycoplasma gallisepticum*. The same infection also causes **chronic** respiratory disease of chickens. The disease in turkeys is characterized by swelling of the infraorbital sinuses, which are filled with thick exudate. The course is chronic and the death rate low but there is severe loss of condition and damage to the respiratory tract.
i. stunting syndrome caused by an entero-like virus this disease causes serious losses in the broiler industry; it is characterized by severe growth depression commencing at 1 week of age or earlier. Called also helicopter disease.
i. synovitis see infectious avian **synovitis**.

infective [*in-fek'tiv*] infectious, capable of producing infection; pertaining to or characterized by the presence of pathogens.
infectivity [*in"fek-tiv'ĭ-te*] ability of an agent to infect.
inference a conclusion about a population derived from a sample of the population.
inferential statistics see inferential **statistics**.
inferior [*in-fēr'e-ər*] situated below, or directed downward; the lower surface of a structure, or the lower of two (or more) similar structures. In bipeds, it is usually synonymous with caudal, in quadrupeds with ventral.
infertility [*in"fər-til'ĭ-te*] the inability to conceive and produce viable offspring. In agricultural animals there are requirements that the animals reproduce prolifically and at a particular time chosen to best suit the availability of feed. A decision as to when infertility can be said to be present varies with the species and with the mating pair, and also with the state of the environment. For example, a dairy cow mated three times without conceiving to proven fertile semen by artificial insemination or by natural breeding to a known fertile bull is judged to require treatment for infertility. Infertility is a diagnosis about a mating rather than an individual

animal; the error may be with the male or the female and it may be permanent or temporary. As a herd problem it provides a major brake on production in all species. In many instances the problem is man-made and in many of those there is in fact nothing wrong with the animals but there is with the management program, especially the nutritional regimen, which affects a mating at a time when fertility is marginal.

winter i. infertility caused by reduction in or absence of estrous periods during winter months in females of all species.

infestation [*in-fes-ta'shən*] parasitic attack or subsistence on the skin and/or its appendages, as by insects, mites or ticks; sometimes used to denote parasitic invasion of the organs and tissues, as by helminths.

infiltrate [*in-fil'trāt*] 1. to penetrate the interstices of a tissue or substance. 2. material deposited by infiltration.

interstitial i. cellular infiltrate scattered evenly throughout the thickness of the dermis.

nodular i. cells aggregated in one site.

infiltration [*in"fil-tra'shən*] the diffusion or accumulation in a tissue or cells of substances not normal to it or in amounts in excess of the normal; also, the material so accumulated.

adipose i. fatty infiltration.

i. anesthesia the injection of a number of small amounts into the tissue around the operation site.

calcareous i. deposit of lime and magnesium salts in the tissues.

cellular i. the migration and accumulation of cells within the tissues.

fatty i. 1. a deposit of fat in tissues, especially between cells. 2. the presence of fat vacuoles in the cell cytoplasm.

urinous i. the extravasation of urine into a tissue.

infiltrative [*in'fil-tra"tiv*] relating to or characterized by infiltration.

i. lipoma the tissue in the growth resembles normal fat but infiltrates and destroys muscle and connective tissue. Occurs in dogs.

infinite number a number so large as to be uncountable. Represented by ∞, frequently obtained by 'dividing' by zero.

infirm [*in-firm'*] weak; feeble, as from disease or old age.

inflammasome the entire set of cells and molecules that are activated by infection, injury, stress; a primary component of the innate immune response.

inflammation [*in"flə-ma'shən*] a localized protective response elicited by injury or destruction of tissues, which serves to destroy, dilute, or wall off both the injurious agent and the injured tissue. The inflammatory response can be provoked by physical, chemical and biological agents, including mechanical trauma, exposure to radiation, irritant chemicals, extremes of heat and cold, and infectious agents. Although infectious agents can produce inflammation, infection and inflammation are not synonymous. The classic signs of inflammation are *heat*, *redness*, *swelling*, *pain* and *loss of function*. These are caused by increased capillary permeability, combined with hyperemia and infiltration of leukocytes; these changes are induced by a series of cytokines produced locally by the action of any of the inducers of inflammation.

acute i. inflammation, usually of sudden and recent onset, marked by the classic signs of heat, redness, swelling, pain and loss of function, and in which vascular and exudative processes predominate; before development of more chronic changes such as fibrosis and lymphocytic infiltration.

adhesive i. promotes adhesion of adjacent surfaces.

atrophic i. chronic inflammation that leads to atrophy and deformity.

catarrhal i. a form affecting mainly a mucous surface, marked by a copious discharge of mucus, leukocytes and epithelial debris.

chronic i. prolonged inflammation marked chiefly by new connective tissue formation and infiltration by immunocytes. If it is a continuation of an acute form, it is designated chronic active inflammation.

croupous i. a homogeneous layer of exudate lying close to but detached from the underlying inflamed tissue, which is comparatively unharmed; may form a fibrinous cast. May be seen after diptheritic inflammation.

diphtheritic i. manifested by the development of a fibrinous exudate which is firmly attached to the underlying tissue, such that it cannot be removed except by tearing off a superficial layer to expose a raw surface.

exudative i. one in which the prominent feature is an exudate.

fibrinous i. one marked by an exudate of coagulated fibrin.

fibrous i. chronic inflammation leading to the development of fibrous tissue.

granulomatous i. a form, usually chronic, attended by formation of granulomas.

hyperplastic i. leads to the development of new connective tissue. See also **granulation** tissue, proliferative inflammation (below).

hypertrophic i. leading to the enlargement of the affected tissues.

interstitial i. inflammation affecting chiefly the stroma of an organ.

obliterative i. inflammation within a vessel or viscus leading to occlusion of the lumen.

parenchymatous i. inflammation affecting chiefly the essential tissue elements of an organ.

productive i., proliferative i. hyperplastic inflammation.

pseudomembranous i. see diphtheritic inflammation (above), purulent inflammation (below).

purulent i. suppurative inflammation.

serous i. one producing a serous exudate.

specific i. one due to a particular microorganism.

toxic i. one due to a poison, e.g. a bacterial product.

traumatic i. one that follows a wound or injury.

ulcerative i. that in which necrosis on or near the surface leads to loss of surface epithelium and creation of a local defect or ulcer.

inflammatory [*in-flam'ə-tor"e*] pertaining to or emanating from inflammation.

i. bowel disease an idiopathic disease of cats, principally, and dogs characterized by cyclic bouts of vomiting and or diarrhea which may continue over periods of years; see also lymphocytic–plasmacytic **enteritis**.

chronic i. bowel disease of sheep a syndrome of unknown etiology but possibly related to pestivirus infection; associated with wasting, ill thrift and mortality or culling for poor production. Reported in England and Canada. Characterized by lymphocytic enteritis with gross thickening of segments or the entire or distal part of the small intestine. There is no evidence for Johne's disease or parasitic gastroenteritis or *Lawsonia* spp. infection although the syndrome has similarities to the proliferative enteropathies of swine and horses.

i. edema increase in tissue fluid as a result of increased capillary permeability induced by acute inflammation.

systemic i. response syndrome (SIRS) a generalized inflammatory response with vasodilation of capillaries and postcapillary venules, increased permeability of capillaries, and hypovolemia. Depressed cardiac function and decreased organ perfusion follow. The various initiating stimuli include sepsis and septic shock, hyperthermia, pancreatitis, trauma, snake bite and immune-mediated diseases. See also compensatory **anti-inflammatory** response syndrome.

inflation [*in-fla'shən*] see **teat cup liner**.

carcass i. pumping of air under the skin of a carcass of sheep or cattle to facilitate skinning. Universally discouraged, mostly forbidden for meat for human consumption.

inflection, inflexion [*in-flek'shən*] the act of bending inward, or the state of being bent inward.

inflow–outflow method a technique for postmortem examination of the heart that preserves the atrioventricular valves.

influenza [*in"floo-en'zə*] an acute viral infection of the respiratory tract, occurring usually in epidemics, and pandemics. Influenza viruses are single-stranded RNA viruses belonging to the family *Orthomyxoviridae*, which contains three genera termed A, B and C. All of the viruses of interest to veterinarians are influenza type A viruses and include those causing **equine** influenza, **swine** influenza, **avian** influenza (fowl plague) and **canine** influenza. Common usage is to diagnose influenza or 'flu' in many nonspecific respiratory infections in animals or those caused by other viruses, but this is etiologically incorrect. Typical examples are cat flu and goose influenza.

informatics information management; the technology of information storage, retrieval and transmission. Includes on-line access to and editing of data bases, facsimile transmission, optical

VetBooks.ir

reading and word processing. The application of electronics to information management has greatly expanded the opportunities for dealing with large amounts of data for research, clinical records, herd health programs and accounting for veterinarians.

information changes occurring in central neurons as a result of stimuli received from sensory neurons. The signals received are coded, selected, with some being discarded and some stored, analyzed and compared with similar data stored in memory, after packing and merging.

i. evaluation an essential step to avoid unnecessary storage and the utilization of erroneous information in drawing conclusions. The rating will depend on whether the information is experimentally derived, obtained by clinical experience, or procedures in between. It is necessary in many situations to utilize information with a low rating because of a lack of availability of better information. There must necessarily be a lower level of certainty in the conclusions based on such material.

INFOSAN International Food Safety Authorities Network.

infra- word element. [L.] *beneath*.

infra-axillary [*in"frə-ak'sĭ-lar"e*] below the axilla.

infraclusion [*in"frə-kloo'zhən*] a condition in which the occluding surface of a tooth does not reach the normal occlusal plane and is out of contact with the opposing tooth.

infracostal [*in"frə-kos'təl*] ventral or caudal to a rib, or below or caudal to all the ribs.

infraction [*in-frak'shən*] incomplete bone fracture without displacement.

infrahyoid [*in"frə-hi'oid*] behind (caudal to) the hyoid bone.

inframaxillary [*in"frə-mak'sĭ-lar"e*] beneath the maxilla.

infranuclear [*in"frə-noo'kle-ər*] below a nucleus.

infraorbital [*in"frə-or'bĭ-təl*] lying under or on the floor of the orbit.

i. nerve block see infraorbital **block**.

infrapatellar [*in"frə-pə-tel'ər*] beneath (distal to) the patella.

infrared [*in-frə-red'*] denoting electromagnetic radiation of wavelength greater than that of the red end of the spectrum, having wavelengths of 0.75–1000 μm. Infrared rays are sometimes subdivided into long-wave or far infrared (about 3.0–1000 μm) and short-wave or near infrared (about 0.75–3.0 μm). They are capable of penetrating body tissues to a depth of 10 mm. Sources of infrared rays include heat lamps, hot water bottles, steam radiators and incandescent light bulbs. Infrared rays are used therapeutically to promote muscle relaxation, to speed up the inflammatory process, and to increase circulation to a part of the body. See also **hyperthermia** (2).

infrascapular [*in"frə-skap'u-lər*] ventral to the scapula.

infrasonic [*in"frə-son'ik*] below the frequency range of sound waves.

infraspinatus infraspinous.

i. muscle see Table 13.3.

infraspinous [*in"frə-spi'nəs*] beneath or caudal to the spine of the scapula.

infrasternal [*in"frə-spi'nəs*] ventral to the sternum.

infratentorial [*in"frə-ten-tor'e-əl*] caudal to the tentorium of the cerebellum.

infratrochlear [*in"frə-trok'le-ər*] inferior to the trochlea or pulley of the superior oblique muscle.

infraversion [*in"frə-vur'zhən*] 1. downward deviation of the eye. 2. infraclusion.

infundibular [*in"fən-dib'u-lər*] pertaining to any of the body's infundibula. See also **infundibulum**.

i. cyst see **epidermal** cyst.

i. necrosis tooth necrosis, commencing in the tooth infundibulum, common in old horses.

i. process the central part of the posterior pituitary gland; called also pars nervosa or neurohypophysis.

i. recess the diverticulum off the third ventricle that occupies the infundibulum of the hypophysis.

i. stalk the stalk of the hypophysis; with the pars tuberalis comprises the hypophysial base.

i. stenosis narrowing of the pulmonary artery just below the pulmonic valves; the stenosis is produced by a ring of connective tissue around the outflow tract of the right ventricle.

infundibuliform [*in"fən-dib'u-lĭ-form*] shaped like a funnel.

infundibuloma [*in"fən-dib"u-lo'mə*] glioma of the infundibular stalk (of the pituitary).

infundibulum [*in"fən-dib'u-ləm*] pl. *infundibula* [L.] 1. any funnel-shaped passage. 2. conus arteriosus of the heart.

cardiac i. **conus** arteriosus.

hypothalamic i. a hollow, funnel-shaped mass in front of the tuber cinereum, extending to the posterior lobe of the pituitary gland.

oviduct i. 1. cranial end of the avian oviduct; captures the oocyte released from the ovary and, during a 15 minute sojourn, invests it with its chalaziferous layer and the thin layer of albumen around the yolk. 2. the proximal (abdominal) end of the mammalian uterine tube.

tooth i. an invagination of the enamel from the wearing service of a tooth, as found in ruminant cheek teeth and the incisive and upper grinder teeth of horses.

i. of uterine tube the free cranial extremity of the uterine tube; it is a thin-walled funnel placed close to the cranial pole of the ovary; the free edge of the funnel is ragged and its tags (fimbriae) may contact or even adhere to the ovary; a small abdominal orifice in the depths of the funnel leads to the longer, tubular ampulla; the infundibulum serves to capture the ova shed from the ovary and begin conveying them towards the uterus.

infusion [*in-fu'zhən*] 1. the steeping of a substance in water to obtain its soluble principles. 2. the product obtained by this process, usually leaves, young stems, or petals to produce a tea for oral administration. See also **decoction**. 3. the slow therapeutic introduction of fluid other than blood into a vein. See also **intravenous** infusion. note: An *infusion* flows in by gravity, an *injection* is forced in by a syringe, an *instillation* is dropped in, an *insufflation* is blown in, and an *infection* slips in unnoticed.

constant-rate i. (CRI) the continuous intravenous administration of medication usually through an electronic delivery device, in order to maintain constant blood concentrations. Most suitable for use with rapid onset of action and short half-life.

intramammary i. material used to introduce medicaments, especially antibiotics, into the teat and udder sinuses for the treatment or prevention of mastitis. May be in liquid or thin paste form and usually prepackaged in tubes for the treatment of individual quarters. Contain antibiotics and adjuvants in a slow or fast-release base depending on objective, e.g. dry period or lactation period treatment. May contain dye to warn that milk may contain antibiotics. Specially prepared watery infusions of escharotic agents, e.g. silver nitrate, copper sulfate, may be used to dry off permanently a quarter that is chronically affected.

intrauterine i. administration of fluids for irrigative purposes.

subcutaneous i. administration of fluids directly into subcutaneous tissues for the purpose of providing hydration. See also **hypodermoclysis**.

infusoria [*in"fu-sor'e-ə*] protozoa of the class Infusoria; microscopic, aquatic, with vibratile cilia. Found in the forestomachs of ruminants.

ingesta [*in-jes'tə*] material taken into the body by mouth.

ingestant [*in-jes'tənt*] a substance that is or may be taken into the body by mouth or through the digestive system.

ingestion [*in-jes'chən*] the taking of food, drugs, etc. into the body by mouth.

ingluvies [*in-gloo've-ēz*] the crop of a bird. Called also craw. Used also as a name for rumen.

ingluviotomy surgical incision into the crop (ingluvies); most commonly indicated for removal of a foreign body.

ingluvitis inflammation of the ingluvies.

ingravescent [*in"grə-ves'ənt*] gradually becoming more severe.

inguen [*ing'gwən*] pl. *inguina* [L.] the groin.

inguina [*ing'gwĭ-nə*] the inguinal region.

inguinal [*ing'gwĭ-nəl*] pertaining to the groin.

i. abscess characterized by a history of prior castration and a syndrome of unilateral edema, pain and swelling in the inguinal region, possibly confirmable by per-rectal palpation.

i. canal the oblique passage in the ventral abdominal wall, through which passes the round ligament of the uterus in the female, and the spermatic cord in the male.

i. hernia hernia occurring in the groin, or inguen, where the abdominal folds of flesh meet the thighs. Protrusion of intestine, omentum and occasionally a gravid uterus, either directly through a weak point in the abdominal wall (direct inguinal

hernia) or downward into the inguinal canal (indirect inguinal hernia; called also scrotal hernia in the male). A serious complication is incarceration with or without strangulation of the herniated viscus. Most commonly seen in bitches; occasionally a heritable trait in dogs and may be inherited in pigs and cattle.

i. ring there are two rings, one at the entrance and one at the exit of the inguinal canal. See also abdominal **ring**.

i. strangulation see **inguinal** hernia.

inhalant [*in-ha'lənt*] a substance that is or may be taken into the body by way of the nose and trachea, that is through the respiratory system, e.g. gaseous anesthetics.

canine i. dermatitis see **atopy**.

inhalation [*in"hə-la'shən*] 1. the drawing of air or other substances into the lungs. 2. any drug or solution of drugs administered (as by means of nebulizers or aerosols) by the nasal or oral respiratory route.

i. injury bronchiolitis and pulmonary edema result from the inhalation of smoke.

i. pneumonia see **aspiration** pneumonia.

inhaler [*in-hāl'ər*] an apparatus for administering vaporized or volatilized agents by inhalation, or for protecting the lungs from harmful substances in the air.

metered-dose i. a device that delivers a prescribed dose of aerosolized medication for inhalation. More efficient delivery of medication than nebulizers or other aerosolization methods.

inherent [*in-her'ənt*] existing as an inseparable part, congenital, innate, inherited, inborn, inbuilt, intrinsic.

inheritance [*in-her'ĭ-təns*] 1. the acquisition of characters or qualities by transmission from parent to offspring. 2. that which is transmitted from parent to offspring. See also **gene**, **deoxyribonucleic acid** and **heredity**. Mendelian inheritance is the basis of all genetic practice, but it has limitations in explaining the small differences that occur in a range of offspring of similar and related matings. Galtonian genetics deals specifically with this problem and is better fitted as a tool in population genetics and in dealing with characters that are dependent on a number of chromosomal loci rather than on a single locus.

autosomal i. controlled by genes located on autosomes.

intermediate i. inheritance in which the phenotype of the heterozygote falls between that of either homozygote.

maternal i. the transmission of characters that are dependent on peculiarities of the egg cytoplasm produced, in turn, by nuclear genes.

X-linked i. see **X-linked**.

inherited received by inheritance.

i. achondroplastic dwarfism see achondroplastic **dwarfism**.

i. combined immunodeficiency see **combined immune deficiency syndrome (disease)**.

i. congenital defects inherited defects visible at birth.

i. defects conditions caused by genes which condition the structure or function of an organ or tissue.

i. diseases see **inherited** defects.

i. metabolic defects errors of metabolism conditioned by genes.

i. trait a distinguishing characteristic or quality received by inheritance.

inhibin [*in-hib'in*] a peptide hormone secreted by ovarian follicles and Sertoli cells; inhibits secretion of FHS. A good indicator of the presence of granulosa-theca cell tumor.

inhibited larval development see **hypobiosis**.

inhibiting factors inhibiting hormones secreted by hypothalamic neurosecretory cells.

inhibition [*in"hĭ-bish'ən*] arrest or restraint of a process.

competitive i. down regulation of enzyme activity by an inhibitor (often a substrate analog) that competes with the substrate for binding sites on the enzyme.

contact i. inhibition of cell division and cell motility in normal animal cells when in close contact with each other.

end-product i. see feedback inhibition (below).

feedback i. a common way of regulating enzyme activity in which the reaction product (or in the case of a biosynthetic pathway, the product of the reaction sequence) inhibits the enzyme activity. Called also end-product inhibition.

neurological i. the intermittency of transmission of nervous impulses depends on variations in the balance between excitation and inhibition, the latter being either pre- or postsynaptic.

noncompetitive i. inhibition of enzyme activity by substances that combine with the enzyme at a site other than that utilized by the substrate.

inhibitor [*in-hib'ĭ-tər*] 1. any substance that interferes with a chemical reaction, growth or other biological activity. 2. a chemical substance that inhibits or checks the action of a tissue organizer or the growth of microorganisms. 3. an effector that reduces the catalytic activity of an enzyme.

coagulation i's **clotting** factors.

fibrinolytic i's **clotting** factors.

phosphodiesterase i. inhibits phosphodiesterase enzymes preventing the inactivation of the second messengers cyclic adenosine monophosphate and cyclic guanosine monophosphate. The drug Sildenafil, used to treat erectile dysfunction and sold under the brand name Viagra, is an inhibitor of phosphodiesterase 5. Other phosphodiesterase inhibitors are used to treat cardiovascular and pulmonary diseases.

reversible i's pharmaceutical inhibitors which have only a temporary effect, e.g. the cholinesterase inhibitors neostigmine, physostigmine.

inhibitory [*in-hib'ĭ-tor"e*] emanating from or pertaining to inhibition.

i. factor growth hormone a hypothalamic hormone released into the hypophysial portal system.

inion [*in'e-on*] the most prominent point on the external occipital protuberance.

iniopagus [*in"e-op'ə-gəs*] conjoined twins joined at the occiput.

initial [*ĭ-nish'əl*] at the beginning; the first stage.

i. segment the first 50–100 μm of the axon; point of cell body emergence to point of myelin initiation.

initiation [*ĭ-ni"she-a'shən*] the beginning or introduction rites. In cell biology, the first stage of transcription.

i. codon the codon AUG which specifies the first amino acid, methionine, in protein synthesis. Called also initiator.

i. complex is formed at the initiation of protein synthesis and includes initiation factors, tRNA, mRNA and the ribosomal subunit.

i. factors (IF) a group of proteins required for initiation of protein synthesis to occur.

initiator [*ĭ-nish'e-a"tər*] see **initiation**.

initis [*in-i'tis*] inflammation of the substance of a muscle.

injected [*in-jek'təd*] 1. introduced by injection. 2. congested.

injection [*in-jek'shən*] 1. the forcing of a liquid into a part, as into the subcutaneous tissues, the vascular tree, or an organ. 2. a substance so forced or administered; in pharmacy, a solution of a medicament suitable for injection. 3. congestion. 4. immunizing substances, or inoculations, are generally given by injection. When a patient is unconscious, injection may be the only means of administering medication, and in some cases nourishment. Some medicines cannot be given by mouth because chemical action of the digestive juices or of hepatic enzymes would change or reduce their effectiveness, or because they would be removed from the body too quickly to have any effect. A medication may be injected so that it will act more quickly. In addition to the most common types of injections described below, injections are sometimes made under the conjunctiva, into arteries, bone marrow, the spine, the sternum, the pleural space of the chest region, the peritoneal cavity and joint spaces.

i. collar a collar carrying an injection device which can be triggered from a remote site.

depot i. the active compound, usually in an oil base, is released and absorbed slowly over a long period of time.

epidural i. see epidural **anesthesia**.

hypodermic i. subcutaneous injection.

intradermal i., intracutaneous i. injection of small amounts of material into the corium or substance of the skin. This method is used in diagnostic procedures and in administration of regional anesthetics, as well as in treatment procedures. In certain allergy tests, the allergen is injected intracutaneously. These injections are given in an area where the skin and hair are sparse, usually on the inner part of the thigh in dogs or the caudal fold in cows. A small-gauge needle is recommended and it is inserted at a 10–15-degree angle to the skin.

intramuscular i. injection into the substance of a muscle, usually the thigh or pectoral muscle, or the muscle of the neck or rump. Intramuscular injections are given when the substance is to be absorbed quickly. They should be given with extreme care,

especially in the thigh, because the sciatic nerve may be injured or a large blood vessel may be entered if the injection is made without drawing back on the syringe first.

intraperitoneal i. liquid injection, usually of antibacterial agent, rarely anesthetic or euthanatizing agents, administered to obtain systemic blood concentrations of the agent; faster than subcutaneous or intramuscular injection and used when veins not accessible. The needle is introduced into the upper flank and the syringe plunger withdrawn to ensure that intestine has not been penetrated. The injected solution should run freely.

intratesticular i. a method of administering a general anesthetic agent to boars for castration.

intravenous i. an injection made into a vein. Intravenous injections are used when rapid absorption is called for, when fluid cannot be taken by mouth, or when the substance to be administered is too irritating to be injected into the skin or muscles. In certain diagnostic tests and X-ray examinations, a drug or dye may be administered intravenously. Blood transfusions also are given by this route. See also **intravenous** infusion.

subarachnoid i. injection into the CSF via penetration of the dura; the risk of injection is greatest at the atlanto-occipital space where the vertebral venous plexus is most likely to be lacerated.

subcutaneous i. injection made into the subcutaneous tissues; called also hypodermic injection. Although usually fluid medications are injected, occasionally solid materials, such as steroid hormones, are administered subcutaneously in small, slowly absorbed pellets to prolong their effect. Subcutaneous injections may be given wherever there is subcutaneous tissue, usually in the loose skin on the side of the chest or in the flank. The amount injected should not exceed 2 mL for cats and small dogs, 5 mL for large dogs and 20 mL for horses. Cows are often given 200 mL because of their very loose skin. The needle is held at a 45-degree angle to the skin.

injection-site management [*in-jek'shən*] avoidance of injection site lesions and abscesses and broken needles in livestock. Since most animals are treated by lay people, this requires educational programs. Injections are recommended in the neck to avoid risk of lesions in higher value cuts of meat.

injection-site reactions [*in-jek'shən*] apart from those caused by infection at the site there is a characteristic reaction in dogs and cats which is a germinal center created by the strong antigenic stimulus provided by the injection. In cattle, lesions in muscle can occur, particularly with intramuscular injection of multivalent colostridial vaccines and must be trimmed from the carcass at slaughter. See also feline vaccine-associated **sarcoma**.

injury [*in'jə-re*] harm or hurt; a wound or maim; usually applied to damage inflicted on the body by an external force. See also **burn**, **electrical** injuries, **frostbite**, **hypothermia**, **radiation** injury.

Injury Severity Score (ISS) a scoring system for assessing trauma; used in humans. Each injury is assigned a numerical value, based on severity and body region. The ISS is a sum of the scores squared, from the three regions with the highest scores.

inkanga ***Senecio*** *isatideus*.

inkberry *Phytolacca americana, P. octandra,* ***Cestrum*** *laevigatum*.

inkweed ***Drymaria***, ***Phytolacca*** *octandra*.

inlet [*in'lət*] a means or route of entrance.

pelvic i. see **pelvic** inlet.

INN International Nonproprietary Name.

International Air Transport Association (IATA) see **IATA**.

I-5: Necrosis at the site of a previous injection with copper glycinate.

innate [*ĭ-nāt'*] inborn; hereditary; congenital.

inner ear see **ear**.

innervation [*in"ər-va'shən*] 1. the distribution or supply of nerves to a part. 2. the supply of nervous energy or of nerve stimulation sent to a part.

reciprocal i. the innervation of antagonistic muscles such that when one muscle is excited its antagonist is inhibited.

innidiation [*ĭ-nid"e-a'shən*] development of cells in a part to which they have been carried by metastasis.

innocent [*in'o-sənt*] not malignant; benign.

i. bystander reaction when antibody attaches to antigen bound to erythrocytes, the erythrocytes are marked for complement mediated lysis and phagocytosis by reticuloendothelial cells; the erythrocytes are innocent bystanders that are destroyed by the complement activation.

innocuous [*ĭ-nok'u-əs*] harmless.

innovators people who will try new things.

early i. important figures in the farming or client community because they are the leaders in the introduction of new techniques and management systems.

inochondritis [*in"o-kon-dri'tis*] inflammation of a fibrocartilage.

inoculability the state of being inoculable.

inoculable [*ĭ-nok'u-lə-bəl*] 1. susceptible of being inoculated; transmissible by inoculation. 2. not immune against a transmissible disease.

inoculation [*ĭ-nok"u-la'shən*] introduction of pathogenic microorganisms, infective material, serum, or other substances into tissues of living organisms or into culture media; introduction of a disease agent into a healthy animal to produce a mild form of the disease, followed by **immunity**.

inoculum [*ĭ-nok'u-ləm*] material used in inoculation.

Inocybe [*i-nosĭ-be*] a genus of macrofungus (i.e. mushroom/toadstool), in the order *Cortinariaceae*. Contains muscarine, causes vomiting and diarrhea. Includes *I. patouilliardii*, *I. phaecomis*.

inodilation the combined effects of positive inotropic and vasodilation therapy, as in the treatment of congestive heart failure.

inodilator [*in"o-di'la-tər*] a therapeutic agent with inotropic and vasodilatory effects.

inogenous [*in-oj'ə-nəs*] produced from or forming fibrous tissue.

inoperable [*in-op'ər-ə-bəl*] not susceptible to treatment by surgery.

inorganic [*in"or-gan'ik*] 1. having no organs. 2. not of organic origin.

i. chemistry that branch of chemistry which deals with inorganic compounds, those not containing carbon and also carbides, oxides of carbon, and carbonates.

inoscopy [*in-os'ko-pe*] the diagnosis of disease by artificial digestion and examination of the fibers or fibrinous matter of the sputum, blood, effusions, etc. Called also fibrinoscopy.

inosculation [*in-os"ku-la'shən*] establishment of communication channels between blood vessels or tubular organs that lie next to one another. In skin grafts, the process of revascularization by proliferation of vascular buds which grow from the graft bed and anastomose with those of the skin graft.

inosemia [*in"o-se'me-ə*] 1. the presence of inositol in the blood. 2. an excess of fibrin in the blood.

inosine (I) [*in'o-sēn*] a purine nucleoside containing the base hypoxanthine and the sugar ribose, which occurs in transfer RNAs.

i. monophosphate (IMP) a nucleotide; the 5′-phosphate of inosine, produced by the deamination of adenosine monophosphate (AMP) in the metabolism of purine nucleotides.

inosinic acid [*in"o-sin'ik*] see **inosine** 5-monophosphate.

inositol [*ĭ-no'sĭ-tol*] a cyclic sugar alcohol, $C_6H_{12}O_6$; usually referring to the most abundant isomer, *myo*-inositol, which is found in many plant and animal tissues.

i. 1,4,5-trisphosphate intracellular second messenger released from phosphatidylinositol 4,5-bisphosphate in response to agonist-dependent, GTP-G protein-activated phospholipase C. Called also triphosphoinositol IP_3. Causes release of Ca^{2}+ from intracellular stores, thereby activating calmodulin.

inosituria [*in"o-sĭ-tu're-ə*] the presence of inositol in the urine.

inotrope a drug with positive **inotropic** effects, e.g. dobutamine, digitalis, milrinone.

inotropic [*in"o-tro'pik*] affecting the force of muscular contractions; commonly applied to drugs that increase contractility of cardiac muscle, e.g. digitalis glycosides.

VetBooks.ir

inpatient [*in'pa-shənt*] a patient that is admitted to a hospital facility for treatment or further investigation.

input voltage regulation a voltage compensator on an X-ray machine that ensures consistent voltage input and therefore consistent beam output and radiographic images.

INRA cattle special strain of French double-muscled Charolais beef cattle.

inscriptio [*in-skrip'she-o*] pl. *inscriptiones* [L.] inscription.

i. tendinea pl. *intersectio tendinea* [L.] three to six sheets of fibrous tissue placed transversely across the rectus abdominis muscle that partially subdivide the muscle into segments and which are thought to prevent splitting of the muscle into parallel longitudinal strips during straining or tenesmus. The human homologue creates the familiar 'six-pack' of the trained athlete.

inscription [*in-skrip'shən*] 1. a mark or line. 2. that part of a prescription containing the names and amounts of the ingredients.

insect [*in'sekt*] any individual of the class Insecta.

i. bites and stings injuries caused by the mouth parts and venom of insects and of certain related creatures, known as arachnids—spiders, scorpions, ticks—but popularly classified with insects. Bites and stings can be the cause of much discomfort. Usually there is no real danger, although a local infection can develop from scratching. Some insects, however, establish themselves on the skin as parasites, others inject poison, and still others transmit disease. See also **bee sting**.

i. growth regulators (IGRs) substances found naturally in insects which regulate morphogenesis and reproduction; synthetic chemicals with similar activity are used topically and in the environment to control ectoparasites, particularly fleas, as a larvicide and ovicide. Called also juvenoids. See also **methoprene**, **fenoxycarb**.

i. larva the second stage in the standard insect life cycle, the maggot or caterpillar.

i. pupa stage 3 in the insect life cycle. Inert, dormant stage from which the adult emerges.

i. vector insects may carry infection mechanically on feet or mouthparts, by passage through the digestive tract but without the insect being infected, or by becoming an intermediate host with some part of the parasite's life cycle taking place in insect tissues.

i. worry swarms of biting insects cause sufficient worry to interfere with grazing and the animals lose weight.

Insecta [*in-sek'tə*] a class of arthropods whose members are characterized by division of the body into three distinct regions: head, thorax, and abdomen, and have three pairs of legs.

insecticide [*in-sek'tĭ-sīd*] an agent that kills insects. May be applied by **pour-on** technique, **dipping**, **spraydip**, **jetting**, **dusting powders**. Insecticides come in a wide variety of chemical compounds. See also **pyrethroids**, **rotenone**, **derris**, **chlorinated hydrocarbons**, **organophosphorus compound**, **arsenical**, **carbamates**, **triazines**. The toxicity of an insecticidal preparation may be greatly altered by the agents used as emulsifiers and solvents. Called also pesticide.

i. resistance insects exposed to one insecticide for long periods may develop a resistance to it and suffer no ill-effects when it is applied.

insectivorous [*in"sek-tiv'ə-rəs*] eating insects to the extent that they are significant as a contributor to the patient's diet.

inseminate 1. the act of **insemination**. 2. the product being inseminated.

insemination [*in-sem"ĭ-na'shən*] the deposit of semen fluid (semen) within the vagina, cervix or uterus.

artificial i. that done by artificial means, e.g. by pipette or insemination gun through the cervix. See also **artificial insemination**.

i. gun see **Cassou artificial insemination gun**.

surgical i. the semen is deposited in the uterus by injection through its wall, having first exposed the uterus by a laparotomy or laparoscopy.

transcervical i. (TCI) the use of an endoscope to visualize the external cervical os and guide the insemination pipette through the cervix; practiced extensively in bitches.

inseminator person employed to inseminate animals with live semen; restricted largely to work with cattle; in most countries inseminators are licensed as having been trained in the techniques and tested for proficiency.

i. efficiency efficiency as determined by the conceptions/insemination index derived from the insemination data and pregnancy diagnosis; inefficiency should be observed on more than one farm; poor results on one farm more likely to indicate an infertility problem.

insensible [*in-sen'sĭ-bəl*] 1. devoid of sensibility or consciousness. 2. not perceptible to the senses.

i. sweating water lost by evaporation from the skin without the skin or hair becoming obviously wet.

i. water loss mainly the water lost from the body through the respiratory tract.

insert [*in-sərt', in'sərt*] a segment of DNA that has been spliced into a cloning vector.

insertion [*in-sur'shən*] 1. the act of implanting, or condition of being implanted. 2. the site of attachment, as of a muscle to the bone that it moves.

i. sequence (IS) see transposable **genetic** elements.

velamentous i. attachment to a membrane, such as the umbilical cord to the fetal membranes.

insertional pertaining to 1. surgical or reproductive manipulation 2. molecular biological manipulation.

i. activity the electrical tracing produced in electromyography as a result of the insertion of the needle electrode.

i. inactivation inactivation of a selectable marker expressed by a bacterial host by the insertion of foreign DNA, enabling identification of those cells with the insertion.

insidious [*in-sid'e-əs*] coming on stealthily; a gradual and subtle development.

insoluble [*in-sol'u-bəl*] not susceptible to being dissolved.

insonate [*in-so'nāt*] to expose to ultrasound waves.

insorption [*in-sorp'shən*] movement of a substance into the blood, especially from the gastrointestinal tract into the circulating blood.

inspection visual examination for detection of features or qualities perceptible to the eye. May be a regulatory or licsense requirement, such as antemortem and postmortem inspection of meat carcasses, inspection of dairies or veterinary businesses for compliance with drug labeling, and visitation and inspection of companion animal hospitals for accreditation.

inspersion [*in-spur'zhən*] sprinkling, as with powder.

inspirate the air inhaled at a single inspiration.

inspiration [*in"spĭ-ra'shən*] the drawing of air into the lungs.

inspiratory [*in-spi'rə-tor"e*] pertaining to or used in the inspiration of air into the lungs.

i. center one of the four respiratory centers in the reticular formation of the brainstem.

i.-inhibitory reflex see **Hering–Breuer reflexes**.

i. reserve volume the volume of air which the patient can still inhale after the completion of inhalation of the tidal volume.

inspissated [*in-spis'āt-əd*] being thickened, dried usually by resorption of moisture; particularly in relation to exudates and secretions.

instar [*in'stahr*] a stage between molts in the development of an insect in which it undergoes a metamorphosis and changes its shape to a degree away from the first instar and towards the final one. The number of instars in an insect's metamorphosis varies widely between species from 5 up to 20 or more.

instillation [*in"stĭ-la'shən*] administration of a liquid drop by drop.

instinct [*in'stinkt*] a complex of unlearned responses characteristic of a species. Examples would be the herding and retrieving instincts in certain breeds of dogs, differences in social distance between breeds of sheep.

Institutional Animal Care and Use Committee a committee required of any institution in the USA that conducts animal research. It is minimally comprised of a practicing scientist experienced in research involving animals, a veterinarian experienced in laboratory animal science or medicine, and a member not affiliated with the institution, but most committees have several of these types of representatives. Its primary functions are to review and inspect all aspects of an institution's animal care and use program, including all animal facilities and animal care records, review animal-use protocols, review and investigate complaints about animal use. Specific criteria that must be met before the committee may grant approval to new research proposals or changes in existing protocols include the scientific rationale for using animals, the reasons for using the requested species and the number of animals, a complete description of the procedures involving animals and procedures that avoid or minimize pain or distress to the anmals.

VetBooks.ir

instrument [in'strə-mənt] a delicate tool.
i. milk an emulsion used as an instrument lubricant.
i. ties ties for knots in sutures made with instruments.
instrumentarium [in"strə-mən-tar'e-əm] the equipment or instruments required for any particular operation or purpose; the physical adjuncts with which a veterinarian combats disease.
instrumentation [in"strə-mən-ta'shən] work performed with instruments.
insudation [in"soo-da'shən] 1. the accumulation, as in the kidney, of a substance derived from the blood. 2. the substance so accumulated.
insufficiency [in"sə-fish'ən-se] inability to perform properly an allotted function.
adrenal i. hypoadrenalism.
cardiac i. inability of the heart to perform its function properly; heart failure.
coronary i. decreased supply of blood to the myocardium resulting from constriction or obstruction of the coronary arteries, but not accompanied by necrosis of the myocardial cells. Called also ischemic myocardial necrosis.
hepatic i. inadequate liver function, short of hepatic failure.
ileocecal i. inability of the ileocecal valve to prevent backflow of contents from the cecum into the ileum.
pulmonary i. insufficiency of the pulmonary valve, permitting blood to flow into the right ventricle of the heart and causing volume overload and eccentric hypertrophy of the right ventricle.
respiratory i. a condition in which respiratory function is inadequate to meet the body's needs when increased physical activity places extra demands on it. See also **respiratory** insufficiency.
thyroid i. hypothyroidism.
valvular i. failure of a cardiac valve to close perfectly, causing the blood to flow back through the orifice (valvular regurgitation); named, according to the valve affected, aortic, mitral, pulmonary or tricuspid insufficiency.
velopharyngeal i. failure of velopharyngeal closure due to cleft palate, muscular dysfunction, etc., resulting in defective swallowing with regurgitation through the nose.
venous i. inadequacy of the venous valves with impairment of venous drainage, resulting in edema.
insufflation [in"sə-fla'shən] 1. the blowing of a powder, vapor, or gas into a body cavity. 2. a drug administered by this method, especially a powder or aerosol carried into the respiratory passages. 3. the creation of a space between the distal end of an endoscope and the tissues into which it is placed in order to obtain a clear image. Insufflation is achieved with a gas (carbon dioxide) for example laparoscopy, air for example gastroscopy, or fluid (saline) for arthroscopy.
tubal i. insufflation of carbon dioxide gas through the uterus into the uterine tubes as a test of their patency.
insufflator [in'sə-fla"tər] a device which delivers a gas or fluid into a tissue space to provide a clear image for an endoscope. Frequently automatically regulates the flow of gas or fluid to maintain constant insufflation.
insula [in'sə-lə] pl. *insulae* [L.] a triangular area of the cerebral cortex that forms the floor of the lateral cerebral fossa.
insular [in'sə-lər] pertaining to the insula or to an island, as the islands of Langerhans.
insulating oil oil used to insulate the high tension transformer in an X-ray unit.
insulation [in"sə-la'shən] 1. the surrounding of a space or body with material designed to prevent the entrance or escape of radiant energy. 2. the material so used.
insulin [in'sə-lin] a double-chain peptide hormone formed from proinsulin in the beta cells of the pancreatic islets of Langerhans. Insulin promotes the storage of glucose and the uptake of amino acids, increases protein and lipid synthesis, and inhibits lipolysis and gluconeogenesis. The secretion of endogenous insulin is a response of the beta cells to a stimulus. The primary stimulus is glucose; others are amino acids, particularly leucine, and the 'gut hormones', such as secretin, pancreozymin and gastrin. These chemicals play an important role in maintaining normal blood glucose concentrations by triggering the release of insulin after ingestion of a meal. Commercially prepared insulin is available in various types, which differ in the speed with which they act and in the duration of their effectiveness. There are three main groups: *rapid acting* (regular or semilente, insulin lispro), *intermediate acting* (isophane suspension or NPH, zinc suspension or lente), and *long acting* (protamine zinc suspension or PZI, ultralente, insulin glargine or insulin detemir). Mixtures are also marketed.
i. deficiency diabetes mellitus.
i. detemir a long acting insulin analog; used in the treatment of diabetic cats.
i.-dextrose therapy a combination used in emergencies to lower blood potassium concentrations in acute hypoadrenocorticism.
i. glargine a synthetic insulin analog with longer duration of activity than PZI or ultralente.; particularly effective in treatment of diabetic cats.
i.:glucagon ratio ratio of insulin to glucagon; thought to determine the predominance of the action of one hormone over the other.
i.:glucose ratio assesses the physiologic relationship between insulin and glucose by comparing simultaneously obtained blood concentrations of immunoreactive insulin and plasma glucose. An increased ratio suggests an insulin-secreting tumor of the pancreas. A modification is the amended insulin:glucose ratio, based on the calculation:

$$\frac{\text{serum insulin}(\mu\text{U/mL}) \times 100}{\text{plasma glucose}(\text{mg/dL}) - 30}$$

i. lispro a soluble insulin analog with a rapid onset of action and which can be given intravenously.
immunoreactive i. radioimmunoassay methods are used in determining blood concentrations of insulin. Increased concentrations are found with hypoglycemia caused by functional islet cell tumors.
i. sensitivity test, i. response test used to differentiate diabetes mellitus from pituitary and adrenal diabetes. A test dose of exogenous insulin will produce a rapid and marked decrease in blood glucose if the pancreas is not secreting sufficient insulin. A much less dramatic response is produced if hyperglycemia is due to excessive secretion of either pituitary or adrenocortical hormones rather than insufficient insulin production.
i. syringe disposable syringe with a capacity of 1 mL or less and a fine gauge needle (27–29G) attached, and graduation markings corresponding to insulin units in standard preparations. Needles may also be treated to minimize pain on injection.
insulin-like growth factor (IGF) one of the twenty or so substances, additional to the classic bone-regulating hormones, which exert an effect on bone cell metabolism. See also **somatomedin** C.
insulinase an enzymatic activity in body tissues that destroys or inactivates insulin; this effect is probably due to several nonspecific proteases.
insulinemia [in"sə-lĭ-ne'me-ə] the presence of insulin in the blood.
insulinogenesis [in"sə-lin-o-jen'ə-sis] the formation and release of insulin by the islets of Langerhans.
insulinogenic [in"sə-lin"o-jen'ik] relating to insulinogenesis.
insulinoma [in"sə-lin-o'mə] a tumor of the beta cells of the islets of Langerhans; often malignant, it is one of the commonest causes of hypoglycemia; a common tumor in ferrets.
insulitis [in"sə-li'tis] cellular infiltration of the islets of Langerhans, possibly as part of an autoimmune response.
insuloma [in"sə-lo'mə] insulinoma.
insulopenic diminishing, or pertaining to a decrease in, the concentration of circulating insulin.
insult [in'səlt] in the medical context, injury or attack.
physical i's. physical agencies that cause disease. These include trauma, stress (physical as in stress fracture of long bones in horses), hyperthermia (as a cause of congenital defects), persistent wetting, high altitude, lightning stroke, electrocution, bushfire and fire injury, volcanic eruption and exposure to radiation.
insurance animals may be insured for loss of production, for loss of life and for medical and surgical care. Before insured animals are euthanatized or submitted to surgery or a course of medical treatment it is important that the insurer be consulted to ensure that the contract is not breached and that his or her equity in the asset is not put at unnecessary risk.
insusceptibility [in"sə-sep"tĭ-bil'ĭ-te] the state of being unaffected or uninfluenced; may result from genetic resistance or from immunity.
intact-nephron hypothesis the concept that each nephron is either a fully functional unit or does not function. Surviving nephrons can increase their functional capacity by undergoing hypertrophy.

VetBooks.ir

As further nephrons are destroyed in progressive renal disease the kidney's capacity to accommodate to emergencies diminishes and renal insufficiency begins to develop.

integral essential component, part of a whole.
i. membrane protein see **membrane** proteins.
i. proteins membrane proteins essential to the structure and function of membranes. See **membrane** proteins.

integrase an enzyme involved in the integration of some viruses, such as bacteriophage lambda, and some transposons into host cell chromosomal DNA.

integration [*in"tə-gra'shən*] 1. assimilation; anabolic action or activity. 2. the combining of different acts so that they cooperate toward a common end; coordination. 3. in bacterial genetics, assimilation of genetic material from one bacterium (donor) into the chromosome of another (recipient).
industrial i. integration of the various levels of an industry so that they are all working in unison, usually under the same ownership. Thus in the poultry industry it is commonplace for the same company to grow the feed, hatch the chickens, franchise feeders, slaughter the broiler output in their own plant and wholesale the dressed birds to retailers.

integrative medicine combines conventional medicine with complementary and alternative therapies.

integrins [*in-teg'rin*] a group of receptors that promote cell adhesion.

integument [*in-teg'u-mənt*] a covering or investment; the skin.
avian i. consists of a thin dry skin (dermis and epidermis) plus appendages (feathers, uropygial gland, comb, wattles, beak, leg scales, spurs, toepads).
common i. the skin and skin derivatives such as horn, hooves, nails, hair, glands and feathers.
mammalian i. consists of epidermis, derived from ectoderm, and dermis and hypodermis, derived from mesoderm; specializations of the epidermis produce glands, hair, hooves, horn, callosities, pads.

integumentary [*in-teg-u-men'tə-re*] 1. pertaining to or composed of skin. 2. serving as a covering.
i. system **skin** and its appendages.

integumentum [*in-teg"u-men'təm*] [L.] *integument*.

intellect [*in'tə-lekt*] the mind, thinking faculty, or understanding. Not a highly developed function in animals.

intelligence [*in-tel'ĭ-jəns*] 1. the ability to comprehend or understand. 2. information gathered about the state of affairs in a farming system, a disease occurrence study, a public health survey or a veterinary service.

intensification factor [*in-ten"sĭ-fĭ-ka'shən*] stated about an intensifying screen used in X-ray cassettes. The ratio of exposure required for a film to produce a given density when exposed to direct X-rays, and the exposure required to produce the same density when using intensifying screens.

intensifying screen calcium tungstate screens which fluoresce and transform the invisible X-ray image to a fluorescent blue or ultraviolet one. This reduces the exposure time a great deal. The image is intensified. Rare-earth intensifying screens are more modern and produce more intensification. They also produce different colored light, depending on the rare earth used.
rare-earth i. s. faster than the standard calcium tungstate screens but much more usable at high kV range. They require the use of special film and safelights.

intensimeter see **intensionometer**.

intensionometer [*in-ten"se-o-nom'ə-tər*] an ionometric instrument for measuring the intensity of X-rays. Two series of plates, separated by an air gap that serves as the dielectric, are connected to opposite terminals in a closed chamber. An electric circuit is completed when the air becomes ionized by the X-rays, and the difference in electric potential is registered by deflection of a galvanometer needle.

intensity [*in-ten'sĭ-te*] the dose-rate (milliampere-seconds, mA·s) of the beam of X-rays; the further the film is from the source of X-rays the less intense is the beam.

intensive [*in-ten'siv*] of great force or intensity or concentration.
i. care unit (ICU) a hospital unit in which is concentrated special equipment and specially trained personnel for the care of seriously ill patients requiring immediate and continuous attention. Called also critical care unit (CCU).
i. livestock production production on small acreage with a high stocking rate, e.g. on irrigated pasture, in feedlots, fattening barns, chicken battery houses, Californian drylots.
i. husbandry systems see intensive livestock production (above).

intention [*in-ten'shən*] a manner of **healing**, e.g. first intention when a surgical incision heals immediately, second intention when a gaping wound fills with granulation tissue and is then covered from the sides with epithelium.

inter- word element. [L.] *between*.

inter-generational interval see **generation** interval.

interaction [*in"tər-ak'shən*] 1. the quality, state or process of (two or more things) acting on each other. 2. in statistical terms, the response to one factor at any particular level, which differs according to the level of the other factor. 3. see **effect** modifier.
drug i. the action of one drug upon the effectiveness or toxicity of another (or others).

interactome [*in"tər-ak'tōm*] a catalog of all interactions between macromolecules in a cell.

interatrial [*in"tər-a'tre-əl*] between the atria of the heart.
i. foramen see **foramen** ovale.
i. septal defects includes patent foramen ovale, persistent foramen primum, persistent foramen secundum.
i. septum primum one of the two membranous sheets which help to partition the two atria during development of the embryo.
i. septum secundum the second of the two membranous sheets which partially separate the two atrial chambers in the developing embryo.

interbrain [*in'tər-brān"*] 1. thalamencephalon. 2. diencephalon.

interbreed to breed between animal or plant species, breeds, families.

interbreeding crossbreeding, as between half-breds.

intercalary [*in-tur'kə-lar"e*] inserted between; interposed.

intercalated [*in-tur'kə-lāt"əd*] inserted between.
i. disk dark staining, transversely oriented bands scattered through cardiac muscle fibers; points of end-to-end contact between contiguous myocardial fibers.
i. duct small tubules connecting alveoli of salivary glands to intralobular striated ducts and finally to excretory duct.

intercalation the insertion of certain organic compounds such as aridines and ethidium bromide that possess a planar aromatic ring structure of appropriate size and geometry so as to insert between base pairs in double-stranded DNA.

intercalving interval period between successive calves, a target of 1 year in many cattle enterprises. Calculated as an index for the herd but may not provide a full picture of reproductive efficiency if significant numbers of cows do not calve for a second time and are not included in the calculation.

intercapital ligament ligament connecting the pair of rib heads of the one thoracic segment by crossing the intervertebral space just dorsal to the intervertebral disk.

intercartilaginous [*in"tər-kahr"tĭ-laj'ĭ-nəs*] between, or connecting, cartilages.

intercellular [*in"tər-sel'u-lər*] between the cells.
i. coupling regions of special and high ionic permeability at points of junction between closely apposed cells. These regions offer lower resistance to the passage of electric current and large molecules. This phenomenon is most apparent in the skin.
epidermal i. edema see **spongiosis**.
i. infection of ducks a disease principally of Muscovy ducks caused by an unidentified bacteria and accompanied by hyperemia and edema of the lungs.
i. substance extracellular material occurring in large amounts in connective tissue; includes the intercellular matrix composed of fibrous and amorphous (glycosaminoglycans, proteoglycans) components.

intercept in mathematical terms the points at which a curve cuts the two axes of a graph.

interchondral [*in"tər-kon'drəl*] intercartilaginous.

intercondylar [*in"tər-kon'də-lər*] between two condyles.
i. eminences see intercondylar **tubercle**.
i. fossa the deep fossa between the condyles on the caudal aspect of the distal end of the femur.

intercostal [*in"tər-kos'təl*] between two adjacent ribs.

intercourse [*in'tər-kors*] mutual exchange.
sexual i. coitus.

intercricothyrotomy [*in"tər-kri"ko-thi-rot'o-me*] incision of the larynx through the lower part of the fibroelastic membrane of the larynx (cricothyroid membrane); inferior laryngotomy.

VetBooks.ir

intercritical [*in"tər-krit'ĭ-kəl*] denoting the period between attacks or bouts of a recurrent disease, e.g. equine infectious anemia.

intercurrent [*in"tər-kur'ənt*] occurring during the course of.

i. disease a disease occurring during the course of another disease with which it has no connection.

interdental space [*in"tər-den'təl*] see **diastema**.

interdigital [*in"tər-dij'ĭ-təl*] between the digits.

i. cysts see interdigital **pyoderma**, **pododermatitis**.

i. dermatitis 1. the early lesion in the development of infectious footrot in sheep; called also sheep scald. 2. inflammatory, usually moist, skin disease between the toes and toe pads of dogs and infrequently cats. May be due to any cause, but often associated with the pruritus of atopy and the dog's persistent licking, allergic contact dermatitis, or hookworm penetration.

i. fibroma a wart-like mass of fibrous tissue which develops in the anterior part of the interdigital cleft of cattle causing chronic lameness. Called also corn.

i. fibropapillomata are typical wart structures located at the posterior end of the interdigital cleft of cattle just above the heel bulbs, causing chronic lameness.

i. necrobacillosis bovine **footrot**.

i. papillomatosis slowly spreading lameness in a large number of animals in a herd of cattle characterized by an erythematous, annular lesion in the midline on the back of the pastern, usually on one hindlimb of a cow. Described as caused by an invasive spirochete; probably **digital** dermatitis.

interdigitation [*in"tər-dij"ĭ-ta'shən*] an interlocking of parts by finger-like processes.

dental i. in mesocephalic dogs and cats, the normal position of upper and lower canines when the jaw is closed; the tip of the lower canine rests in a notch between the upper third lateral incisor and upper canine, permitting a normal incisor scissors bite. Relative positioning alters in brachycephalic and, less often, dolicocephalic skulls, as well as in abnormal eruption of permanent teeth (see **dental** interlock).

interestrous between estral periods.

i. cycle the cycle of proestrus, estrus, metestrus, diestrus. See also Table 17.

i. interval the interval, in days, between estrus periods. See Table 17. An important figure in the differential diagnosis of infertility.

interface [*in'tər-fās*] the point where two systems or structures meet.

chemical i. the boundary between two chemical systems or phases.

ecological i. the boundary between ecosystems.

hydropic i. a type of interface dermatitis in which the main change is hydropic degeneration at the dermoepidermal junction.

lichenoid i. a type of interface dermatitis in which the main lesion at the dermoepidermal junction is like lichen.

interfascicular [*in"tər-fə-sik'u-lər*] between adjacent fascicles.

interfemoral [*in"tər-fem'o-rəl*] between the thighs.

interference [*in"tər-fēr'əns*] in virology, the inhibition of viral replication by the presence of other viruses. Most instances of viral interference are mediated by **interferon (INF)**.

I-6: Interdigital fibroma (corn) between the toes of a bull's foot.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

ultrasound i. lines in ultrasonography, white lines across the image, usually caused by poor contact between the skin and transducer.

interferon (INF) [*in"tər-fēr'on*] a natural glycoprotein cytokine released by cells invaded by viruses. Interferon is not itself an antiviral agent but rather acts as a stimulant to noninfected cells, causing them to synthesize another protein with antiviral characteristics, probably by initiating DNA-directed RNA synthesis and, thus, protein synthesis. The natural production of interferon is not restricted to viral infections; it can be released in response to a wide variety of inducers, including certain nonviral and infectious agents such as rickettsiae, bacteria and synthetic double-strand RNA polymers. Interferon acts as a regulator of cell growth and has a variety of effects on the immune system by either activating or suppressing selected components of the immune system. For example, interferon can activate macrophages and thereby increase phagocytosis, enhance some primary antibody responses and inhibit others, enhance the expression of major histocompatibility antigens, and affect the specific cytotoxicity of lymphocytes. In regard to cell growth, interferon has the ability to inhibit the proliferation of certain cells. There are three major classes of interferon depending on the cell of origin: INF-α, which is produced by fibroblasts; INF-β, which is produced by nonlymphocyte leukocytes; and INF-γ, which is a lymphokine produced by T lymphocytes and also called immune interferon.

interfibrillar [*in"tər-fi'bril-ər*] between fibrils.

interfilar [*in"tər-fi'lər*] between or among the fibrils of a reticulum.

interfirm comparison a technique for assessing the financial profitability of a veterinary practice by comparing it on the basis of a number of criteria with other practices in similar situations. The practices are rated according to their performance in each area, e.g. percentage of potential income written off as bad debts, accounts receivable and their durations, percentage of annual income on the sundry debtors ledger.

interictal [*in"tər-ik'təl*] occurring between attacks, fits or paroxysms.

interkinesis [*in"tər-kĭ-ne'sis*] the period between the first and second divisions in meiosis.

interleukins (IL) [*in"tər-loo'kin*] a group of polypeptide cytokines that carry signals between cells in the immune system. The molecules are produced by the cells and bind to specific receptors on the surface of appropriate target cells. Among the interleukins so far characterized are: IL1, which is released from macrophages, hence also called **monokine**, and affects T lymphocytes; IL2, produced by T lymphocytes and affects T lymphocytes, also known as T lymphocyte growth factor; IL3, produced by B lymphocytes and affects B lymphocytes, also known as B lymphocyte growth factor; IL4, produced by helper T lymphocytes and acts on B lymphocytes; IL5, produced by T lymphocytes and acts on eosinophils; IL6, produced by mononuclear phagocytes and acts on hepatocytes and B lymphocytes; IL7, secreted by bone marrow and thymic stromal cells and induces stem cells to differentiate into progenitor T and B lymphocytes; IL8, secreted by macrophages and endothelial cells and chemotactically attracts neutrophils and induces their adherence to vascular endothelium and extravasation; IL9, secreted by T helper lymphocytes and acts as a mitogen for these cells; IL10, secreted by T helper 2 lymphocytes and acts on macrophages to suppress cytokine production and thus indirectly reduce cytokine production by T helper 1 lymphocytes; IL11, secreted by bone marrow stromal cells and promotes differentiation of progenitor B lymphocytes and megakaryocytes; induces hepatocytes to synthesize acute phase proteins and supports growth of plasmacytomas; IL12, produced by macrophages and B lymphocytes and acts synergistically with IL2 to induce cytotoxic T lymphocytes; also stimulates proliferation of natural killer (NK), lymphokine activated killer (LAK), and T helper 1 cells; IL13, produced by T helper lymphocytes and inhibits activation and release of inflammatory cytokines by macrophages; an important regulator of the inflammatory response. Interferons α, β, γ are also interleukins. At least 35 interleukins are currently recognized.

interlobar [*in"tər-lo'bər*] between lobes.

interlobular [*in"tər-lob'u-lər*] between lobules.

intermandibular between the rami of the mandible.

i. cellulitis see **pharyngeal** phlegmon.

i. edema floppy, soft swelling, which pits on pressure, between the mandibles. Not to be confused with the normal floppiness

I-7: Intermandibular swelling and lymphadenitis in cow with actinobacillosis (wooden tongue).

of tissues in this region in most breeds of dairy cattle. See also **bottle jaw**.

intermaxillary [*in"tər-mak'sĭ-lar"e*] between the maxillae.

intermediate [*in"tər-me'de-ət*] 1. between; intervening; resembling, in part, each of two extremes. 2. a substance formed in one step of a chemical process that involves two or more steps to produce the final product; an intermediate is generated in one step and used in the next.

i. cell mass see **nephrotome**.

i. filaments intracellular protein fibers which are part of the cytoskeleton in eukaryotic cells.

i. junction see **zonula** adherens.

intermedin [*in"tər-me'din*] melanocyte-stimulating hormone.

intermediolateral [*in"tər-me"de-o-lat'ər-əl*] between the medial and lateral aspects of an organ or anatomical structure.

intermedius [*in"tər-me'de-əs*] [L.] *intermediate*; denoting a structure lying between a lateral and a medial structure, etc.

intermeningeal [*in"tər-mə-nin'je-əl*] between the meninges.

intermittent [*in"tər-mit'ənt*] marked by alternating periods of activity and inactivity.

i. mandatory ventilation (IMV) see intermittent mandatory **ventilation**.

i. positive-pressure breathing (IPPB) a form of respiratory therapy utilizing a **ventilator** for the treatment of patients with inadequate breathing. As the name implies, the treatment involves application of pressure only during the inspiratory phase, its purpose being to assist the patient to breathe more deeply. See also intermittent positive-pressure **ventilation**.

intermural [*in-tər-mu'rəl*] between the walls of an organ or organs.

intermuscular [*in"tər-mus'ku-lər*] between muscles.

intern [*in'tərn*] a recent veterinary graduate serving and often residing in a hospital, with the objective of getting concentrated, supervised, postgraduate, in-service training in a particular field of veterinary science. Completion of a one- or two-year program and assignments is usually rewarded with a certificate of performance or a diploma.

internal [*in-tur'nəl*] situated or occurring within or on the inside; in anatomy, many structures formerly called internal are now termed medial.

i. carotid artery arteritis mycotic arteritis of the internal carotid artery as it courses around the edge of the guttural pouch may lead to copious nasal bleeding in horses when the artery ruptures.

i. elastic membrane a condensation of elastic fibers separating the tunica intima from the tunica media.

i. environment within the animal; includes blood pressure, circulating blood volume, tissue fluid volume, blood sugar concentration, tidal air volume, glomerular filtration rate.

i. inguinal ring see abdominal **ring** (internal).

i. limiting membrane the innermost layer of the retina formed by fusion of the terminations of the retinal Müller cells. Some condensed fibrils of the vitreous insert into and become confluent with its inner aspect. Called also inner limiting membrane.

i. repeat repetitive base sequences within DNA which may be inverted (indirect) or non-inverted (direct).

turkey i. hemorrhage see dissecting **aneurysm**.

International Committee on Veterinary Anatomical Nomenclature publisher of *Nomina Anatomica Veterinaria* (NAV), the internationally accepted list of veterinary anatomical terms. For most of its life this nomenclature has followed the human anatomy equivalent, *Nomina Anatomica*, as far as possible. More recently, the *Nomina Anatomica* has taken a more radical change to become *Terminologia Anatomica* that is available both as a book and as a CD-ROM. Although its use is generally adopted by human anatomy texts and the major dictionaries, it is still unable to incorporate the specialist demands of the veterinary disciplines.

International Elbow Working Group (IEWG) an international organization of veterinary radiologists, clinicians, geneticists and dog breeders interested in causes of canine elbow diseases. Guidelines for diagnosis and screening programs have been developed and adopted as international standards.

International Federation of Associations of Anatomists this body, through its Federative Committee on Anatomical Terminology (FCATT) publishes *Terminologia Anatomica*, the internationally accepted terminology for human gross or topographical anatomy. The list supersedes all previous lists including former editions of *Nomina Anatomica*, the publication on which the veterinary equivalent, *Nomina Anatomica Veterinaria*, is based. *Terminologia Anatomica* departs from the earlier nomenclatures by including English terms in common use, too. See **Terminologia Anatomica**, **Nomina Anatomica Veterinaria**, **International Committee on Veterinary Anatomical Nomenclature**.

International Food Safety Authorities Network (INFOSAN) global network of national food safety authorities, inaugurated in 2004 and developed and managed by WHO in cooperation with FAO.

International Nonproprietary Name (INN) the globally recognized designations recommended by the World Health Organization for identification of pharmaceutical substances or active pharmaceutical ingredients.

International Pharmacopoeia an international reference publication prepared by the World Health Organization containing quality specifications for pharmaceutical substances and dosage forms to be used by member states in maintaining quality control, safety and efficacy of medicines.

International Species Information System (ISIS) a computer-based information system containing information on wild animal species held in captivity throughout the world.

International System of Units see **SI units**.

International two-digit system see **Fédération Dentaire International system**.

International Union for the Conservation of Nature and Natural Resources (IUCN) the world's largest conservation network, based in Switzerland. It brings together government and non-government agencies, scientists and experts from around the world to assist in conservation and ecologically sustainable management of resources. It publishes the reference source, IUCN Red List of Threatened Species. Originally founded as the World Conservation Union and that name is still often used.

International Union of Directors of Zoological Gardens (IUDZG) see **World Association of Zoos and Aquariums (WAZA)**.

interneship internship.

interneuron [*in"tər-noor'on*] a neuron between the primary afferent neuron and the final motor neuron (motoneuron). Also any neuron whose processes lie entirely within a specific area, such as the olfactory lobe.

internist [*in-tur'nist*] a specialist in internal medicine.

i. program a postgraduate training program suitable for an internist.

internode [*in'tər-nōd*] a space between two nodes.

internship [*in'tərn-ship*] the position held by an **intern**. See also **Veterinary Internship and Residency Matching Program**.

internuclear [*in"tər-noo'kle-ər*] 1. situated between the nuclear layers of the retina. 2. situated between nuclei.

internuncial [*in"tər-nun'she-əl*] transmitting impulses between two different parts.
internus [*in-tur'nəs*] [L.] *internal*; denoting a structure nearer to the center of an organ or part.
interoceptor [*in"tər-o-sep'tər*] a sensory nerve terminal located in and transmitting impulses from the viscera.
interofective affecting the interior of the organism—a term applied to the autonomic nervous system.
interolivary [*in"tər-ol'ĭ-var"e*] between the olivary bodies.
interorbital [*in"tər-or'bĭ-təl*] between the orbits.
interosseous [*in"tər-os'e-əs*] between two bones.
i. tendon see **suspensory** ligament (1).
interpalpebral [*in"tər-pal'pə-brəl*] between the eyelids; usually used to define the interpalpabral fissure.
interparietal [*in"tər-pə-rī'ə-təl*] 1. intermural. 2. between the parietal bones.
interparoxysmal [*in"tər-par"ok-siz'məl*] between paroxysms.
interpeduncular [*in"tər-pə-dunk'u-lər*] between two peduncles, e.g. cerebellar peduncles.
interphalangeal [*in"tər-fə-lan'je-əl*] situated between two contiguous phalanges.
proximal i. joint pastern joint of ungulates.
interphase [*in'tər-fāz*] the interval between two successive cell divisions, during which the chromosomes are not individually distinguishable. The long stage in the cell cycle between successive meioses.
interpolation [*in-tur"po-la'shən*] 1. surgical transplantation of tissue. 2. use a range of values in order to determine the value of a function at a point within the range. See also **extrapolation**.
interpretation [*in-tur"prə-ta'shən*] the veterinarian's explanation of how the disease process is causing the observed signs and how the laboratory findings are caused by the causative agent.
clinical i. explaining all of the clinical signs observed in terms of the lesions thought to be present.
interproximal [*in"tər-prok'sĭ-məl*] between two adjoining surfaces.
interpubic [*in"tər-pu'bik*] between the pubic bones.
interpupillary [*in"tər-pu'pĭ-lar"e*] between the pupils; usually used to define the interpupillary distance for settings on binocular magnification devices (microscopes, etc.).
interrod matrix formless material between the rods of enamel produced on the developing tooth.
interscapular [*in"tər-skap'u lər*] between the scapulae.
intersectio [*in"tər-sek'she-o*] pl. *intersectiones* [L.] intersection.
i. clavicularis see **clavicular intersection**.
i. tendinea a fibrous band traversing the belly of a muscle, dividing it into two parts. See also **inscriptio** tendinea.
intersection [*in"tər-sek'shən*] a site at which one structure crosses another.
i. tendinous irregular transverse septa divide the rectus abdominis muscle into a number of segments. See **inscriptio** tendinea.
intersex [*in'tər-seks*] 1. intersexuality. 2. an animal which exhibits intersexuality.
chromosomal i. includes all patients whose sexual abnormalities are due to sex chromosome abnormalities.
i. condition where there is ambiguity in the structure of the gonads, reproductive tract or external genitalia.
gonadal i. patients who have a normal male or female karyotype but whose gonads do not correspond to their chromosomal sex.
phenotypic i. patients with normal gonadal and chromosomal sex but their sex organs in whole or in part are abnormal; their other sexual characteristics may also be abnormal.
true i. a true **hermaphrodite**.
intersexuality [*in"tər-sek"shoo-al'ĭ-te*] an intermingling, in varying degrees, of the characters of each sex, including physical form, reproductive tissue and sexual behavior, in one animal, as a result of some flaw in embryonic development. See also **hermaphroditism** and **pseudohermaphroditism**.
interspace [*in'tər-spās*] a space between similar structures.
interspecific hybridization [*in'tər-spə-sif'ik hi"brid-ĭ-za'shən*] the results of matings between members of different animal species.
interspersion pattern a form of repetitive DNA consisting of alternating blocks of single copy sequence and moderately reiterated sequences.
intersphenoidal synchondrosis [*in'tər-sfe-noi'dəl sin"kon-dro'sis*] the cartilage joint, present during skull growth, between the presphenoid and basisphenoid bones. In some achondroplastic conditions the presence of this synchondrosis contributes to the abnormal growth of the skull creating a brachycephalic deformity such as occurs in **bulldog calves**.
interspinal [*in"tər-spi'nəl*] between two spinous processes.
interstice [*in-tur'stis*] an interval, space or gap in a tissue or structure.
interstitial [*in"tər-stish'əl*] pertaining to or situated between parts or in the interspaces of a tissue.
atypical i. pneumonia see **atypical interstitial pneumonia**.
i. cell adenoma see interstitial cell tumor (below).
i. cell-stimulating hormone (ICSH) luteinizing hormone.
i. cell the cells of the connective tissue of the ovary or the testis (Leydig's cells), which furnish the internal secretion of those structures.
i. cell tumor a common testicular tumor in old dogs. Most are benign and not associated with any major clinical disturbances but there may be concurrent perianal gland neoplasms, infertility and rarely feminization or viciousness. Called also Leydig cell tumor or interstitial cell adenoma.
i. edema edema of the interstitial stroma in the lung.
i. emphysema pulmonary emphysema with air accumulated in the interlobular connective tissue and lymphatics; characteristic of emphysema in cattle.
i. fluid the extracellular fluid bathing cells in most tissues, excluding the fluid within the lymph and blood vessels.
i. gland of the ovary, consisting of polyhedral epithelioid cells in the stroma of the ovary and have characteristics of cells which produce steroids.
i. nephritis see **nephritis**.
i. fluid pressure pressure exerted by the free interstitial fluid; if the pressure is negative this tends to draw water from the vascular system into the tissue space; if the pressure is greater than the intravascular pressure fluid tends to move in the reverse direction.
i. pneumonia see **pneumonia**.
i. space tissue space.
i. tissue connective tissue between the cellular elements of a structure.
interstitial–lymphatic flow system [*in"tər-stish'əl-lim-fat'ik*] the system of drainage from the gel-like matrix of the tissue interstitium to the terminal lymphatics.
interstitium [*in"tər-stish'e-əm*] 1. interstice. 2. interstitial tissue.
intersucking a vice in calves and even in adult cattle of sucking one another's teats, and drinking the milk if it is available.
intertarsal [*in"tər-tahr'səl*] between the rows of tarsal bones.
distal i. joint see **centrodistal joint**.
proximal i. joint talocalcaneal-centroquartal joint; see **talocalcaneal joint**.
interthalamic adhesion [*in"tər-thə-lam'ik*] the joining of the two thalami in the center of the third ventricle. Called also thalamic intermediate mass.
intertragic notch a small but palpable notch in the dorsal and more exposed edge of the auricular cartilage between the antitragus caudally and the tragus anteriorly.
intertransverse [*in"tər-trans-vərs'*] situated between or connecting the transverse processes of the vertebrae.
intertrigo [*in"tər-tri'go*] an erythematous skin eruption occurring on apposed surfaces of the skin, as the creases of the neck, folds of the groin and axilla, and between pendulous mammary glands. It is caused by moisture, warmth, friction, sweat retention and infectious agents. Signs include moistness, redness, maceration, and sometimes erosions, fissures and exudations. It occurs in recently calved cows in good condition. See also fold **dermatitis**, ulcerative **mammary** dermatitis.
axillary i. lesions confined to the axilla.
intertrochanteric [*in"tər-tro"kan-ter'ik*] between the greater and lesser trochanters of the femur.
intertubular [*in"tər-too'bu-lər*] between tubules.
interureteral, interureteric [*in"tər-u-re'tər-əl*] between the ureters.
intervaginal [*in"tər-vaj'ĭ-nəl*] between sheaths.
interval [*in'tər-vəl*] the space between two objects or parts; the lapse of time between two events. In statistical terms, the numerical distance between two values.
atrioventricular i., A-V i. see P–R interval (below).
cardioarterial i. the time between the apex beat and arterial pulsation.

P–R i. in electrocardiography, the time between the onset of the P wave (atrial activity) and the QRS complex (ventricular activity).
QRST i., Q–T i. the duration of ventricular depolarizing electrical activity.
intervalvular [*in"tər-val'vu-lər*] between valves.
intervascular [*in"tər-vas'ku-lər*] between blood vessels.
intervening sequence see **intron**.
intervention [*in"tər-ven'shən*] the act of intervening in a disease or epidemiological sequence.
i. strategy in the sequence of examination, diagnosis, treatment and control it is necessary, especially in herd problems, to design a strategy for intervening, either to test the hypothesis or to plan the treatment and control sequence which may require a change in the environment, the feeding regime or the breeding practices; for most efficient use of resources the intervention may need detailed planning.
i. study testing an hypothesized epidemiological cause–effect relationship by intervening in a population and modifying a supposed causal factor and measuring the effect of the change.
interventricular [*in"tər-vən-trik'u-lər*] between the ventricles of the heart.
i. foramina communication openings between the third ventricle and the two lateral ventricles of the brain.
i. septal defect see **ventricular** septal defect.
intervertebral [*in"tər-vur'tə-brəl*] between two vertebrae.
i. disk the pad of fibrocartilage between the bodies of adjoining vertebrae made up of a pulpy center, the nucleus pulposus, surrounded by a series of concentric fibrous rings, the anulus fibrosus. It is subject to degeneration, extrusion, protrusion and herniation resulting in the development of intervertebral disk disease (see below) known colloquially in humans as slipped **disk**.
i. disk disease the syndrome of pain and neurological deficits, sometimes complete paralysis, resulting from displacement of part or all of the nucleus of an intervertebral disk. Seen most often in dogs, particularly those of chondrodystrophoid breeds such as Dachshund, Basset hound and Beagle, in which chondroid metaplasia occurs. The most frequently involved disks are in the thoracolumbar region from T11 to L2, but those in the cervical and lumber spine are also commonly affected. See also **Hansen's classification**.
i. disk extrusion extrusion of the nucleus pulposus dorsally through the anulus fibrosus into the extradural space under the spinal cord. This is most commonly seen in chondrodystrophoid breeds of dogs and frequently causes acute spinal cord complression. See also **Hansen's classification**.
i. disk protrusion bulging of the intervertebral disk dorsally as a result of tearing of the inner fibers of the anulus fibrosus and dorsal displacement of the nucleus pulposus within the disk. However, the nucleus does not extrude through the anulus. See also **Hansen's classification**.
i. disk space the space between vertebrae occupied by an intervertebral disk as seen on radiographs.
i. foramen see intervertebral **foramen**.
intervillous [*in"tər-vil'əs*] between or among villi.
interwound turns in supercoiled DNA a structure produced by unfolding a toroidal turn along an axis which is distinct from the supercoil axis.
intestinal [*in-tes'tĭ-nəl*] pertaining to the intestine.
i. accident sudden change in normal intestinal structure or disposition, e.g. intestinal **volvulus**.
i. adenomatosis see porcine proliferative **enteropathy**.
i. aganglionosis see colonic **aganglionosis**.
i. amphistomiasis see **paramphistomiasis**.
i. arterial thromboembolism see **verminous** mesenteric arteritis.
i. atony occurs reflexly as a result of peritonitis, of severe inflammation or distention in other parts of the alimentary tract and abdominal viscera, or directly as a result of severe inflammation, as distinct from the early excitation or movement that occurs with mild or early inflammation. See also paralytic **ileus**.
i. compression by a tissue mass, e.g. tumor, organ enlargement, causing partial or complete obstruction.
i. constriction by adhesion, neoplam, etc, causing partial or complete obstruction.
i. crypts simple, branched, tubular invaginations of mucosa at the base of the villi.
i. dilatation the causes of the dilatation are fluid, feces or flatus (gas). All cause pain of varying degree, and initially an increase in motility, followed by atony. In distention of long duration, e.g. with feces, the distended bowels are easily palpable and are usually the cause of some abdominal distention. In acute dilatation the distention and palpability of the loops of intestine are less obvious and later in their appearance than other signs.
i. displacement causing partial or complete obstruction, e.g. displacement of the colon in horses.
i. diverticulum may cause intestinal compression and obstruction, e.g. Meckel's diverticulum.
i. fibrinous casts gelatinous, sausage-shaped masses, like casts of the intestinal lumen, resulting from severe inflammation and protein loss from the bowel wall.
i. fluids fluids in the lumen of the intestine; the balance between intake and absorption of these fluids determines the form of the feces; disruption can cause diarrhea or constipation.
i. foreign body has most importance as a cause of intestinal obstruction. It may also cause laceration and intestinal hemorrhage or penetration of the intestinal wall and the development of peritonitis.
i. granuloma resulting from chronic local inflammation; may cause constriction of the intestinal lumen.
i. hemorrhage into the small intestine causes the appearance of red-black feces (melena); from the large intestine the appearance is typical of whole blood, which may be mixed homogeneously with feces or be scattered through them as clots.
i. hemorrhage syndrome name that has been used for both of the diseases proliferative hemorrhagic **enteropathy** and the hemorrhagic **bowel** syndrome.
i. hypermotility causes abdominal pain, increased gut sounds, diarrhea and decreased opportunity for the absorption of nutrients. It occurs as a result of irritation to the intestinal lining, as in enteritis, to stimulation of the parasympathetic nervous system by the use of parasympathomimetic drugs, or to changes in the composition of the gut contents such as occurs when there is a malabsorption problem.
i. hypersecretion occurs as a result of distention and as a major part of the response to enterotoxic *Escherichia coli* toxin. The effect is to increase the fluidity of the gut contents; diarrhea results.
i. hypomotility see **atonia**.
i. idiopathic muscular hypertrophy **ileal** muscular hypertrophy.
i. incarceration passage of a loop of intestine through a small orifice, e.g. inguinal canal, with resulting swelling, obstruction and occlusion of blood supply.
i. infarction may be nonstrangulating, presenting a clinical picture of subacute but still fatal colic, or strangulating, e.g. when torsion precedes the development of the infarct, a much more acute and potentially fatal situation; see thromboembolic **colic**, intestinal **infarction**.
i. inflammation see **enteritis**.
i. intramural hematoma causes a swelling in the bowel wall and partial obstruction of the lumen.
i. linear foreign body see linear **foreign body**.
i. obstruction any hindrance to the passage of the intestinal contents. Causes may be *acute*, such as those caused by foreign body, phytobezoar, intussusception, volvulus and strangulation. There is sudden onset of abdominal pain, cessation of feces evacuation, vomiting in dogs and cats, gastric distention in horses, rumen distention in ruminants, loops of intestine distended with fluid and gas palpable per rectum or visible radiographically, shock and dehydration. Obstruction may also be *chronic* and manifested by intermittent vomiting and abdominal pain, chronic intestinal distention, loud intestinal sounds, and palpable distended loops of intestine. See also intestinal obstruction **colic**.
i. parasitism infestation of the intestinal lumen and wall by nematodes, cestodes and immature trematodes.
i. polyp see **polyp**; may cause intermittent bowel obstruction or erratic passage of feces.
i. portals openings to the closed foregut and hindgut of the embryo.
i. pseudo-obstruction the patient presents a clinical picture of intestinal obstruction with no surgically correctable lesion, e.g. paralytic ileus.
i. reflux is part of the reaction to increased gut motility resulting in gastric dilatation and the vomiting of intestinal contents, even feces.

VetBooks.ir

i. rupture can occur as a result of extreme distention. More commonly it follows compromise to a section of gut, e.g. strangulation, in which a necrotic section of gut wall collapses. The effects of perforation of the gut wall through a deep ulcer are similar but not so sudden. The result of a rupture is sudden death due to shock and endotoxemia. With a slower leak the result is an initial stage of acute peritonitis accompanied by fever and abdominal pain.

i. sclerosis mild to obvious bowel dilation with mononuclear inflammatory infiltrate in the smooth muscle fibers plus interstitial fibrosis and atrophy of smooth muscle cells.

i. secretory-absorptive imbalance includes excessive absorptive function, e.g. thrifty bowel syndrome, or over-secretion, the classical malabsorption syndrome, e.g. in enteric colibacillosis.

i. segmental ischemic necrosis of mares occurs spontaneously in the small colon of pregnant or postpartum mares; intestinal rupture and death follow quickly.

i. smooth muscle intrinsic disease see intestinal sclerosis (above).

i. spasm see **hypermotility**.

i. stenosis constriction of the bowel lumen, as a result of incomplete aplasia, cicatricial contraction after injury or infection, leads to a syndrome of chronic or intermittent subacute abdominal pain.

i. strangulation occurs in an incarcerated hernia, umbilical, inguinal, mesenteric tear, uterine ligament, or a volvulus. There may be a double problem of acute intestinal obstruction plus an intestinal infarction characterized by profound shock and toxemia, paralytic ileus and a blood-stained paracentesis specimen. Less severe but still lethal strangulations occur as a result of tightening of a lipoma pedicle, displacement of dorsal colon in the horse over the gastrosplenic ligament.

i. torsion is a common cause of acute intestinal obstruction. There is an obstruction to the movements of contents and compromise to the circulation of the twisted segment.

i. tract the small and large intestines in continuity. The long, coiled tube of the intestine is the part of the digestive system where most of the digestion of food takes place. The small intestine has three parts: the duodenum, jejunum and ileum; the large intestine, the cecum, colon and rectum.

i. tympany is part of most cases of intestinal obstruction. Primary cases of intestinal tympany are rare and confined in their occurrence to the horse. See also flatulent **colic**.

intestine [*in-tes'tin*] the part of the alimentary tract extending from the pyloric opening of the stomach to the anus. It is a musculomembranous tube lined with a secretory and/or absorptive mucosa, comprising the small intestine and large intestine; called also bowel and gut. See also **intestinal** tract.

large i. see **cecum** (1), **colon**, **rectum**.

small i. includes all of the intestine between the pylorus and the ileocecal valve; composed of the **duodenum**, **jejunum** and **ileum**. See also **intestinal**.

intestinum [*in"tes-ti'nəm*] pl. *intestina* [L.] intestine.

i. crassum large intestine.

i. tenue small intestine.

intima [*in'tĭ-mə*] the innermost coat of a blood vessel; called also tunica intima.

intimal [*in'tĭ-məl*] pertaining to or emanating from tunica intima vasorum.

i. bodies irregular mineralized masses covered by endothelium and protruding into the lumen of small arteries and arterioles of horses, especially in the intestinal submucosa.

i. tracks aggregations of cellular debris, fibrin and inflammatory cells, especially eosinophils, in the form of tortuous tracks in the intima of arteries in horses; caused by migrating larvae of *Strongylus vulgaris*.

intimitis [*in"tĭ-mi'tis*] endarteritis; inflammation of the innermost coat of an artery.

intolerance [*in-tol'ər-ans*] inability to withstand or consume; inability to absorb or metabolize nutrients.

drug i. the state of reacting to the normal pharmacological doses of a drug with the signs of overdosage.

intoxication [*in-tok"sĭ-ka'shən*] poisoning; the state of being poisoned.

intra- word element. [L.] *inside of, within*.

intra vitam [L.] *during life*.

intra-abdominal [*in"trə-ab-dom'ĭ-nəl*] within the abdomen. While this is mostly obvious, there has been debate about whether the testes within their vaginal tunics should be regarded as residing within or outside the abdominal cavity.

intra-aortic [*in"trə-a-or'tik*] within the aorta.

i. balloon pump a mechanical aid to the circulatory function of the heart that acts to provide internal counterpulsation.

intra-arterial [*in"trə-ahr-tēr'e-əl*] within an artery.

i. injection used as an intentional procedure in radiology; can occur accidentally during attempts at intravenous injection.

intra-articular [*in"trə-ahr-tik'u-lər*] within a joint.

intracameral literally 'into a chamber' but used specifically in ophthalmology to describe manipulations (especially injections) into the anterior chamber.

intracanalicular [*in"trə-kan"ə-lik'u-lər*] within a canaliculus.

intracapsular [*in"trə-kap'su-lər*] within a capsule.

i. lens extraction removal of the entire lens, together with the capsule. In animals, usually reserved for removal of luxated or subluxated lenses.

intracardiac [*in"trə-kahr'de-ak*] within the heart.

intracartilaginous [*in"trə-kahr"tĭ-laj'ĭ-nəs*] within a cartilage.

intracellular [*in"trə-sel'u-lər*] within a cell or cells.

i. fluid fluid within cells.

intracervical [*in"trə-sur'vĭ-kəl*] within the canal of the cervix uteri.

intracisternal [*in"trə-sis-tur'nəl*] within a subarachnoid cistern.

intracornual within the horns of the uterus.

i. frenulum the division between the two horns visible internally through a fiberscope. Called also intercornual septum, velum uteri.

intracranial [*in"trə-kra'ne-əl*] within the cranium.

i. abscess abscess within the cranium. Signs will vary depending on which parts of the brain are affected and the nature of the abscess. Common signs include circling, rotation of the head and mental dullness. The CSF may contain inflammatory cells.

i. pressure (ICP) the pressure within the subarachnoidal fluid, which is present in the space between the skull and the brain. Intracranial pressure, like arterial blood pressure, can fluctuate markedly and quickly during Valsalva maneuvers (forced expiration against a closed glottis such as occurs when straining to defecate), and with raised intra-abdominal or intrathoracic pressure (such as when coughing and vomiting). While sustained increased intracranial pressure can be detrimental, momentary increases in intracranial pressure, even if very large, can be accommodated by cerebrovascular compensatory mechanisms.

i. tumors cause an increase in intracranial pressure and localizing signs, depending on the location of the tumor and the structures that are compressed.

intractable [*in-trak'tə-bəl*] unmanageable, intolerable.

intracutaneous [*in"trə-ku-ta'ne-əs*] within the substance of the skin.

i. injection see intradermal **injection**.

i. test intradermal test. See **skin** test.

intracystic [*in"trə-sis'tik*] within a bladder or a cyst.

intradermal [*in"trə-dur'məl*] within the dermis.

i. test see **skin** test.

single i. test a test used in the field diagnosis of bovine tuberculosis. A small volume of tuberculin is injected intradermally, commonly in a tail fold, and observed at 72–96 hours for a significant increase in thickness of the skin. The tuberculin elicits a cell-mediated immune reaction at the site of injection in infected animals and the increased thickness of the skin is the consequence of infiltration into the site of T lymphocytes and activated macrophages.

intradermopalpebral test the intradermal injection of a test reagent into the skin of the eyelid. A positive reaction is a swollen eyelid with a conjunctival reaction and an ocular discharge. Used in horses for the mallein test for glanders and in tuberculin testing of nonhuman primates.

intraductal [*in"trə-duk'təl*] within a duct.

intradural [*in"trə-doo'rəl*] within or beneath the dura mater.

intraepidermal [*in"trə-ep"ĭ-dur'məl*] within the epidermis.

intraepithelial [*in"trə-ep"ĭ-the'le-əl*] within epithelial cells.

i. lumina, i. cysts intracellular vacuoles associated with epithelial hyperplasia; seen in the epididymis of mammals and tracheal mucosa of birds; indicative of regeneration after previous damage.

intrafetal within the fetus.

I-8: Single intradermal test for tuberculosis in cattle. Injection of tuberculin intradermally in a caudal fold of the tail.

i. fetotomy see subcutaneous **fetotomy**.

intrafollicular [*in"trə-fo-lik'u-lər*] within (1) hair follicles or (2) follicles of the spleen.

i. hyalinosis the degenerating germinal centers in the spleen are replaced by a transudate of plasma proteins.

intrafusal [*in"trə-fu'zəl*] pertaining to the striated fibers within a muscle spindle.

intragastric cooling [*in"trə-gas'trik*] a method for inducing hypothermia in preparation for cardiac surgery. Cold water is circulated through a balloon placed in the stomach.

intrahepatic [*in"trə-hə-pat'ik*] within the liver.

i. primary cholestasis any obstruction of bile flow by pathological changes in the liver parenchyma, including fibrosis, that causes cholestasis.

intralesional [*in"trə-le'zhən-əl*] occurring in or introduced directly into a localized lesion.

intralobar [*in"trə-lo'bər*] within a lobe.

intralocular [*in"trə-lok'u-lər*] within the loculi of a structure.

intraluminal [*in"trə-loo'mĭ-nəl*] within the lumen of a tubular structure.

intramammary [*in"trə-mam'ə-re*] within or into the mammary gland.

i. devices plastic devices inserted in the teat cistern to cause an inflammatory reaction and restrict invasion of the quarter by bacteria; no great benefit recorded plus some disadvantages.

i. infusion intramammary **infusion**.

intramedullary [*in"trə-med'u-lar"e*] within the spinal cord, medulla oblongata, or the marrow cavity of a bone.

i. administration see **intraosseous** catheterization.

i. pinning see internal skeletal **fixation**.

intramembranous [*in"trə-mem'brə-nəs*] within a membrane.

i. ossification see intramembranous **ossification**.

intramolecular base pairing [*in"trə-mo-lek'u-lər*] the secondary structure founding single-stranded RNA produced by hydrogen bonded base pairing interspersed with unpaired 'loop' and 'hairpin' structures.

intramural [*in"trə-mu'rəl*] within the wall of an organ.

intramuscular [*in"trə-mus'ku-lər*] within the substance of a muscle.

i. injection see intramuscular **injection**.

intranasal neuroblastoma [*in"trə-na'zəl*] see **olfactory** neuroblastoma.

intraocular [*in"trə-ok'u-lər*] within the eye.

i. pressure see intraocular **pressure**, **glaucoma**.

intraoperative [*in"trə-op'ər-ə-tiv*] occurring during a surgical operation.

intraoral [*in"trə-or'əl*] within the mouth.

intraorbital [*in"trə-or'bĭ-təl*] within the orbit.

i. prosthesis see ocular **prosthesis**.

intraosseous [*in"trə-os'e-əs*] within a bone; sometimes used to refer to the bone marrow cavity in place of intramedullary.

i. catheterization percutaneous placement of an intravenous catheter into a marrow cavity provides an alternative route for the administration of fluids and medication when peripheral blood vessels are collapsed or inaccessible. In small animals, the femur is most often used.

intraparenchymal [*in"trə-pə-reng'kĭ-məl*] within the parenchyma of an organ.

i. mastitis treatment injection of an antibiotic preparation into a quarter via a long hypodermic needle inserted percutaneously into the glandular tissue.

intraparietal [*in"trə-pə-ri'ə-təl*] 1. intramural. 2. within the parietal region of the brain.

intrapartum [*in"trə-pahr'təm*] occurring during parturition.

i. death stillbirth.

intraperiod lines [*in"trə- pe're-əd*] the fused outer leaflets of contiguous plasma membranes produce the intraperiod lines in the neuronal myelin sheath.

intraperitoneal [*in"trə-per"ĭ-to-ne'əl*] within the peritoneal cavity.

i. injection see intraperitoneal **injection**.

intrapharyngeal [*in"trə-fə-rin'je-əl*] within the pharynx.

i. ostium the aperture marking the division between the three parts of the pharynx, nasopharynx above and rostrally, laryngopharynx below and caudally and the oropharynx below and rostrally. The margins of the ostium are formed by the palatopharyngeal arches. In many mammals the epiglottis protrudes through the ostium except during swallowing.

intrapleural [*in"trə-ploor'əl*] within the pleura.

i. pressure the pressure in the pleural cavity; called also intrathoracic pressure.

intrapulmonary [*in"trə-pool'mo-nar"e*] within the substance of the lung.

intrapulmonic pressure [*in"trə-pəl-mon'ik presh'ər*] the pressure in the lung tissue and passages.

intrarenal urine reflux [*in"trə-re'nəl*] reflux of urine during urination which extends as far as the glomerulus.

intraretinal space [*in"trə-ret'ĭ-nəl*] space between the outer retinal pigment epithelium and the inner neurosensory retina. Present during embryologic development of the eye, but becomes a virtual space at completion of eye development. However, it is the site at which retinal detachment (better called retinal separation) occurs.

intraruminal pellets [*in"trə-roo'mĭ-nəl*] see slow release **bolus**.

intrascleral [*in"trə-skler'əl*] within or bounded by the sclera.

i. prosthesis see ocular **prosthesis**.

intraspinal [*in"trə-spi'nəl*] within the spinal column.

intrasternal [*in"trə-stur'nəl*] within the sternum.

intrathecal [*in"trə-the'kəl*] within a sheath; through the theca of the spinal cord into the subarachnoid space.

intrathoracic [*in"trə-thə-ras'ik*] within the thorax.

i. pressure see **intrapleural** pressure.

intratracheal [*in"trə-tra'ke-əl*] endotracheal.

i. therapy through an endotracheal tube or by percutaneous injection into the trachea for the delivery of antibiotics into the lungs.

intratubal [*in"trə-too'bəl*] within a tube.

intratympanic [*in"trə-tim-pan'ik*] within the tympanic cavity.

intrauterine [*in"trə-u'tər-in*] within the uterus.

i. contraceptive device a mechanical device inserted into the uterine cavity for the purpose of contraception. These devices, used in human gynecology, have been used in draft cattle in Asia for many years. Used occasionally also in dogs. Called also IUD.

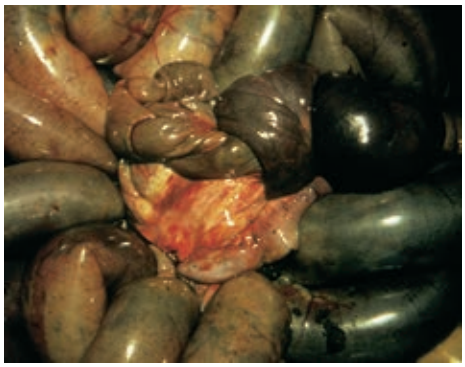
i. growth retardation failure to grow properly in utero in stature, as measured by crown to rump measurement. Pituitary dwarfism in cattle and runting in piglets and puppies are typical examples.

i. medication medication applied to the uterus via a cervical catheter, or manually in the recently birthed mare, sow or cow.

i. therapy is a common practice in food animals. Infusion of fluid material or manual placement of solid materials are the usual methods employed. The method has the advantage of achieving maximum concentration of the medicament at the endometrium but only low concentrations are achieved in the deeper layers. See also **infusion**.

intravasation [*in-trav"ə-sa'shən*] the entrance of foreign material into vessels.

intravascular [*in"trə-vas'ku-lər*] within a vessel or vessels.
disseminated i. coagulation see disseminated intravascular **coagulation**.
i. fluid that part of the total body fluid that is within the vascular system.
i. space the space occupied by the blood.
intravenous [*in"trə-ve'nəs*] within a vein.
i. feeding see intravenous infusion (below).
i. infusion administration of fluids through a vein; called also phleboclysis, venoclysis and intravenous feeding. This method of feeding is used most often when a patient is suffering from severe dehydration and does not drink fluids because it is unconscious, recovering from an operation, unable to swallow normally, or vomiting persistently. Prolonged feeding of patients with chronic intestinal dysfunction can be accomplished by total parenteral **nutrition**.
i. push injection directly into a vein versus administration via fluid in an infusion bag.
intraventricular [*in"trə-ven-trik'u-lər*] within a ventricle.
intravital [*in"trə-vi'təl*] occurring during life.
intrinsic [*in-trin'sik*] situated entirely within, or pertaining exclusively to, a part.
i. factor a glycoprotein secreted by the parietal cells of the gastric glands, necessary for the absorption of **vitamin B_{12}** (cyanocobalamin, extrinsic factor). Its absence in humans results in pernicious anemia. Porcine stomach is a very rich source.
i. host determinants characteristics peculiar to the host that affect the spread and occurrence of a disease.
i. pathway, i. system see **coagulation** pathways.
i. protein see **membrane** proteins.
introducer [*in"trə-doo'sər*] a heavy metal fist-sized instrument to which a wire saw can be attached to be introduced into the uterus of a cow or mare and dropped over the part to be sawn. The weight and shape of the introducer ensure that it is easily found and pulled out with the wire attached, so that the fetotome can then be threaded.
intromission [*in"tro-mish'ən*] the entrance of one part or object into another as occurs in coitus.
intron [*in'tron*] untranslated, intervening sequences that are interspersed between coding sequences of a particular gene of almost all eukaryocytic genes and which are excised from the primary RNA transcript to yield mRNA.
i.–exon junction introns are removed by the catalytic action of small nuclear riboproteins (snRNPs) which bind to special recognition sequences at the 5,(donor junction) and 3,(receptor junction) to form a complex called a **spliceosome**.
introsusception [*in"tro-sə-sep'shən*] intussusception.
introversion [*in"tro-vur'zhən*] the turning outside in, more or less completely, of an organ.
intrusion [*in-troo'zhən*] displacement of a tooth in which it is pushed further (apically) into the alveolus; due to either an orthodontic procedure or trauma.
intubate [*in'too-bāt*] to perform intubation.
intubation [*in"too-ba'shən*] the insertion of a tube, as into the larynx. The purpose of intubation varies with the location and type of tube inserted; generally the procedure is done to allow for drainage, to maintain an open airway, or for the administration of anesthetics or **oxygen**. Intubation into the stomach or intestine is done to remove gastric or intestinal contents for the relief or prevention of distention, or to obtain a specimen for analysis, or to introduce drugs, medication, food or nutrients. A rubber or plastic nasogastric tube is introduced through the mouth or nose and into the stomach.
nasogastric i. the flexible tube with a rounded end is passed through the nasal cavity to the stomach; the technique requires expert knowledge and care to avoid damage to the nasal conchae and mucosa and to avoid passing medicines or feed into the lungs. The intubation may be therapeutic to relieve the stomach of a large volume of regurgitated fluid, or to pass a purgative fluid to the intestines, or the passing may be diagnostic in cases of colic to determine if there is fluid being recycled from the intestine back to the stomach. In small animals also used for enteral feeding.
intumescence [*in-too-mes'əns*] 1. a swelling, normal or abnormal. 2. the process of swelling.
brachial i. cervical enlargement of the spinal cord at C6 to T1.
cervical i. see brachial intumescence (above).



I-9: Distended and congested loops of intestine in a cow with intussusception.
From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

lumbar i. enlargement of the lumbar spinal cord at L4–S2.
intumescentiae thickenings, intumescences.
spinal cord i. spinal cord thickenings at regions providing nerve supply to fore- and hindlimbs and to the *conus medullaris*.
intussusception [*in"tə-sə-sep'shən*] 1. prolapse of one part of the intestine into the lumen of an immediately adjacent part, causing **intestinal** obstruction. 2. the reception into an organism of matter, such as food, and its transformation into new protoplasm. Intestinal obstruction due to intussusception occurs sporadically in all species, and in series in cattle associated with intestinal polyposis and in sheep with esophagostomiasis. The intussusception may be of the small intestine into itself or into the colon through the ileocecal valve, and in cattle into the spiral colon.
cecocolic i. cecal inversion occurs uncommonly in dogs, with clinical signs of blood-stained feces and sometimes vomiting and weight loss. With a barium enema, radiographs may show a filling defect and 'accordion pleating' of the proximal colon.
gastroesophageal i. inversion of the stomach, and occasionally spleen and pancreas, into the esophagus. Occurs most commonly with megaesophagus.
intussusceptum [*in"tə-sə-sep'təm*] the portion of intestine that has prolapsed in intussusception.
intussuscipiens [*in"tə-sə-sip'e-ənz*] the portion of the intestine containing the intussusceptum.
Inula [*in'u-lə*] plant genus in the family Asteraceae; contains an irritant, toxic oil, and carries physically injurious awns and spines.
I. conyza causes gastrointestinal disturbance and hepatic centrilobular necrosis. Called also fleawort, plowman's spikenard.
I. graveolens see ***Dittrichia graveolens***.
inulin [*in'u-lin*] a starch occurring in the rhizome of certain plants, which on hydrolysis yields fructose. It is used to measure glomerular function in tests of renal function.
i. clearance see inulin **clearance**.
inunction [*in-ungk'shən*] 1. the act of anointing or applying an ointment by friction. 2. an ointment made with lanolin as a menstruum.
invaginate [*in-vaj'ĭ-nāt*] to infold one portion of a structure within another portion.
invagination [*in-vaj"ĭ-na'shən*] 1. the infolding of one part within another part of a structure, as of the blastula during gastrulation. 2. intussusception.
invasive [*in-va'siv*] 1. having the quality of invasiveness. 2. involving puncture or incision of the skin or insertion of an instrument or foreign material into the body; said of diagnostic techniques.
invasiveness [*in-va'siv-nis*] 1. the ability of microorganisms to enter the body and spread in the tissues. 2. the ability to infiltrate and actively destroy surrounding tissue, a property of malignant tumors.
inverse square law [*in'vərs*] for a given exposure the amount of radiation falling on a given area of radiographic film varies inversely as the square of the distance of that area from the source of irradiation in the focal spot.
inversion [*in-vur'zhən*] 1. a turning inward, inside out, or other reversal of the normal relation of a part. 2. a chromosomal aberration due to the inverted reunion of the middle segment after breakage of a chromosome at two points, resulting in a change in sequence of genes or nucleotides.
paracentric i. the inverted segment does not include the chromosome's centromere; has exactly the same size and shape as a normal chromosome but will have different banding patterns.

VetBooks.ir

pericentric i. an inversion in a chromosome in which the centromere is included in the inverted segment.
teat i. the tip is invaginated so that the orifice is closed by the act of sucking. Causes a problem to sucking pigs. Affected sows should be culled.
invertebrate [*in-vur'tə-brāt*] 1. having no vertebral column. 2. any animal that has no vertebral column.
inverted reverse in position, direction or order.
inverted repeat blocks of nucleotide sequence that are present in more than one copy, but in a reverse order; they may be terminal or internal. Called also indirect repeat. See also **palindrome**.
invertose see invert **sugar**.
inveterate [*in-vet'ər-ət*] confirmed and chronic; long-established and difficult to cure.
IVNTA International Veterinary Nurses and Technicians Association.
involucrin a structural protein synthesized in the stratum spinosum of the epidermis.
involucrum [*in"vo-loo'krəm*] pl. *involucra* [L.] a covering or sheath, as in encapsulation of a sequestrum.
involuntary [*in-vol'ən-tar"e*] performed independently of the will.
i. nervous system see autonomic **nervous** system.
involution [*in"vo-loo'shən*] 1. a rolling or turning inward. 2. one of the movements involved in the gastrulation of many animals. 3. a retrograde change of the entire body or in a particular organ, as the retrograde changes in the female genital organs that result in normal size after delivery. 4. the progressive degeneration occurring naturally with advancing age, resulting in shriveling of organs or tissues.
uterine i. reduction in size of the uterus in the period immediately after parturition.
inwintering housing animals for the winter.
Io chemical symbol, *ionium*.
iocetamic acid [*i-o-se-tam'ik*] a water-soluble, iodinated, radiopaque, X-ray contrast medium.
iodamide [*i-o'də-mide*] a water-soluble, radiopaque, iodinated radiographic contrast medium; used for intravenous excretory urography.
Iodamoeba [*i-o"də-me'bə*] a genus of amebae in the family Endamoebidae.
I. buetschlii parasitic and may cause intestinal ulceration in humans. Found also in pigs.
I. suis found in pigs.
iodide [*i'o-dīd*] a binary compound of iodine or the I^- anion. Iodide inhibits the release of thyroxine from the thyroid gland. See also **goiter**.
iodinated a compound into which iodine has been incorporated.
i. casein is used as a feed additive to increase milk production in dairy cows but can cause poisoning manifested by hyperpnea, cardiac arrhythmia, nervousness and diarrhea.
i. protein used as a feed additive to increase milk production in cows and growth rate in pigs.
iodination [*i"o-din-a'shən*] the incorporation or addition of iodine in a compound.
iodine (I) [*i'o-dīn*] a chemical element, atomic number 53, atomic weight 126.904. See Table 4. Iodine is essential in nutrition, being especially prevalent in the colloid of the **thyroid** gland. It is used in the treatment of **hypothyroidism** and as a topical antiseptic. Iodine is a frequent cause of poisoning. See also **iodism**.
i.-123 (^{123}I) a radioisotope which concentrates in chromaffin cells; used in diagnostic scintigraphy, e.g. in cases of pheochromocytoma.
i.-125 (^{125}I) a radioisotope of iodine having a half-life of 60 days and a principal gamma-ray photon energy of 28 keV; used as a label in radioimmunoassays and other in vitro tests, and also for thyroid imaging.
i.-131 (^{131}I) a radioisotope of iodine having a half-life of 8.1 days and a principal gamma-ray photon energy of 364 keV; used in treatment of hyperthyroidism and carcinoma of the thyroid, in thyroid function testing, and in imaging of the thyroid gland and other organs.
butanol-extractable i. a method of estimating thyroid function by estimating the amount of protein-bound iodine in the plasma.
i. deficiency may occur in all species under certain conditions; in dogs and cats, a factor in all-meat diets; in caged budgerigars, caused by iodine deficient, seed-based dites. See also **goiter**.
i. contrast agents iodine salts are opaque to X-rays; therefore they can be combined with other compounds and used as contrast media in diagnostic X-ray examinations.
i. nutritional deficiency is characterized by goiter, neonatal mortality and alopecia.
i. poisoning occurs usually due to accidental overdosing. It causes lacrimation, anorexia, coughing due to bronchopneumonia, and a heavy dandruff. Paradoxically, iodine excess may result in thyroid hyperplasia and goiter, especially in the young.
protein-bound i. a test of thyroid function. See also **protein-bound** iodine (PBI) test.
radioactive i. see iodine-125, iodine-131 (above).
i. residues in milk careless use of iodine-based teat dips results in unacceptable residues of iodine in milk.
i. solution a transparent, reddish brown liquid, each 100 mL of which contains 1.8–2.2 g of iodine and 2.1–2.6 g of sodium iodide; a local anti-infective.
i. solution (strong) **Lugol's solution**.
tamed i. see **iodophor**.
i. trapping the selective absorption of iodine from the circulation by the thyroid gland.
iodinophilous [*i"o-din-of'i-ləs*] easily stainable with iodine.
iodipamide [*i"o-dip'ə-mīd*] a radiopaque medium used in the form of its meglumine and sodium salts in intravenous cholecystography.
iodism [*i'o-diz-əm*] chronic poisoning by iodine or iodides, manifested by coryza, ptyalism, emaciation, weakness and skin eruptions.
iodized salt contains 200 mg potassium iodate per kg of salt.
iodo-casein **iodinated** casein.
iodochlorhydroxyquin [*i-o"do-klor"hi-drok'sə-kwin*] clioquinol.
iododerma [*i-o"do-dur'mə*] any skin lesion resulting from iodism.
iodoform [*i-o'do-form*] a topical anti-infective containing 97% iodine, used as a skin disinfectant and stimulant for wound healing.
iodohippurate [*i-o"do-hip'u-rāt*] an iodine-containing compound administered as a radiopaque medium in pyelography. When labeled with radioactive iodine, it may be used as a diagnostic aid in determination of renal function.
iodophilia [*i-o"do-fil'e-ə*] a reaction shown by leukocytes in certain pathological conditions, as in toxemia and severe anemia, in which the polymorphonuclears show diffuse brownish coloration when treated with iodine or iodides.
iodophor [*i-o'do-for*] name given to any product in which surface-acting agents, such as nonoxynol, act as carriers and solubilizing agents for iodine. Used as skin disinfectants, especially as teat dips in mastitis control. Called also tamed iodine.
iodophthalein [*i-o"do-thal'ēn*] see **tetraiodophenolphthalein**.
iodopsin [*i"o-dop'sin*] a visual pigment found in the retinal cones of animals that functions in color perception in daylight vision.
iodoquinol [*i-o"do-kwin'ol*] an amebicide and antibiotic, used in the treatment of intestinal amebiasis and topically in shampoos for the treatment of seborrheic skin conditions in dogs.
iodotherapy [*i-o"do-ther'ə-pe*] treatment with iodine or iodides.
iodothyronine [*i-o"do-thi'ro-nēn*] group name for the thyroid hormones triiodothyronine and tetraiodothyronine.
i. deiodinase selenium-dependent enzyme that catalyzes the conversion of thyroxin (T4) to triiodothyronine (T3).
iodum [L.] *iodine*.
iohexol [*i"o-hek'sol*] a non-ionic iodinated positive contrast agent used in contrast radiography.
i. clearance test measuring the rate that an intravenous dose of iohexol is removed from circulation at hourly intervals can be an indicator of glomerular filtration rate
ion [*i'on*] an atom or group of atoms having a positive (cation) or negative (anion) electric charge by virtue of having gained or lost one or more electrons. Substances forming ions are **electrolytes**.
i. channel see **channel**.
dipolar i. **zwitterion**
i. pair the pair of ions created when an atom has had an electron removed by ionizing radiation.
strong i. strong cations Na^+, K^+, Ca^{2+}, Mg^{2+}; strong anions Cl^-, L-lactate$^-$. See **acid-base balance**.
strong i. difference strong ions are dissociated in a solution. In plasma, as well as in interstitial fluids, and the sum of positively charged ions (primarily Na^+, K^+, Ca^{2+} and Mg^{2+}) exceeds the sum of the negatively charged strong ions (primarily Cl^- and

lactate⁻) by about 42 mEq/L. This difference is called the SID. See also **acid-base balance,anion gap**.

i. trapping a strategy for treatment of poisonings based on the principle that cell membranes are less permeable to ionized compounds. With knowledge of the characteristics of the toxin, treatment can be given to alter the acid–base balance in favor of ionization.

ion-exchange resin a high-molecular-weight, insoluble polymer of simple organic compounds with the ability to exchange its attached ions for other ions in the surrounding medium. They are classified as cation- or anion-exchange resins, depending on which ions the resin exchanges. Cation-exchange resins are used to restrict sodium absorption in edematous states; anion-exchange resins are used as antacids in the treatment of ulcers. Ion-exchange resins may also be classified as carboxylic, sulfonic, etc., depending on the nature of the active groups. Used in biochemical extractions and purifications.

ionic [*i-on'ik*] pertaining to an ion or ions.

i. medication see **iontophoresis**.

ionizable side-chain groups side-chains predominantly of amino acids capable of ionization in aqueous solution depending on pH. Lysine, arginine and histidine have basic ionizable side-chains and aspartate and glutamate have acidic ionizable side-chains.

ionization [*i"on-ĭ-za'shən*] 1. the dissociation of a substance in solution into ions. 2. iontophoresis.

i. chamber an enclosure containing two or more electrodes between which an electric current may be passed when the enclosed gas is ionized by radiation; used for determining the intensity of X-rays and other rays.

ionize [*i'on-īz*] to convert into ions.

ionophore [*i-on'ə-for"*] any molecule, as of a drug, that increases the permeability of cell membranes to a specific ion.

i. antibiotic monocarboxylic polyether antibiotics. They may be monovalent (e.g. monensin, salinomycin) or divalent (e.g. lasolocid). They facilitate transport of ions across biological membranes by forming lipid-soluble complexes with mono or divalent cations; latter day additions to the list include narasin, maduramycin.

i. poisoning see **monensin**.

iontophoresis the introduction of ions of soluble salts into the body by an electric current as a form of transdermal drug delivery.

IOP intraocular pressure.

iopamidol [*i"o-pam'ĭ-dol*] a non-ionic iodinated positive contrast agent used in contrast radiography.

iopanoic acid [*i"o-pə-no'ik*] an iodinated contrast agent that has been used in the treatment of hyperthyroidism in cats.

iophendylate [*i"o-fen'də-lāt*] a fat-soluble radiopaque contrast medium used in myelography.

iota [*i-o'tə*] ninth letter in the Greek alphabet, I or ι.

iothalamate [*i"o-thal'ə-māt*] a radiopaque contrast medium used in angiography and urography.

IP intraperitoneal.

IP_3 see **inositol** 1,4,5-trisphosphate.

ipecac [*ip'ə-kak*] the dried rhizome and roots of *Psychotria (Cephaelis) ipecacuanha* or *P. (C.) acuminata*; used as an emetic or expectorant. Called also ipecacuanha; the common preparation is syrup of ipecac.

ipecacuanha see **ipecac**.

Iphiona aucheri Asian plant in the family Asteraceae; contains a sesquiterpene lactone; causes hepatic necrosis.

ipodate [*i'po-dāt*] a radiopaque contrast medium.

4-ipomeanol a furanoterpene produced in sweet potatoes (*Ipomoea batatus*) by the fungus *Fusarium solani* (*F. javanicum*) which has the effect of damaging pulmonary epithelium and producing lesions characteristic of atypical interstitial pneumonia in cattle which consume moldy sweet potatoes. The toxin is produced from furanosesquiterpenoid **phytoallexins**.

Ipomoea [*i"po-me'ə*] widespread genus of poisonous vines of the family Convolvulaceae; may contain various toxins including the indole alkaloid lysergic acid, furanoterpenes, indolizidine alkaloids (swainsonine). Includes *I. asarifolia* (salsa), *I. batatas* (commercial sweet potato) if infested with fungi *Fusarium solani*, *I. polpha* subsp. *weirana* (*I.* spp. aff. *calobra*, weir vine), *I. carnea*, *I. fistulosa* (canudo), *I. muelleri* (native morning glory), *I. plebeia* (bell-vine), *I. purpurea* (purple-flowered morning glory).

IPPV intermittent positive-pressure ventilation.

ipratropium [*ip"rə-tro'pe-əm*] a smuscarinic antagonist used as a bronchodilator; similar to atropine but with fewer side-effects.

ipronidazole [*i-pro-nīd'ə-zōl*] a nitroimidazole derivative, similar to metronidazole, used in the treatment of histomoniasis in turkeys.

ipsi- word element. [L.] *same, self*.

ipsilateral [*ip"sĭ-lat'ər-əl*] on the same side.

IPSP inhibitory postsynaptic potential.

iPTH immunoreactive parathyroid hormone.

IPV see infectious pustular **vulvovaginitis**.

Ir chemical symbol, *iridium*.

Ir gene immune response gene.

IRC inspiratory reserve capacity.

iridal [*i'rĭ-dəl*] pertaining to the iris. Called also iridial, iridic.

i. angle see iridocorneal **angle**.

i. angle meshwork see **iridocorneal** meshwork.

i. granule see **corpora** nigra.

i. stroma loose connective tissue, blood vessels, chromatophores, smooth muscle in the uveal tract of the eye.

iridauxesis [*ir"id-awk-se'sis*] thickening of the iris.

iridectomesodialysis [*ir"ĭ-dek"to-me"so-di-al'ə-sis*] excision and separation of adhesions around the inner edge of the iris.

iridectomy [*ir"ĭ-dek'tə-me*] excision of part of the iris.

peripheral i. part of the peripheral iris (or iris root) is removed.

sector i. a sector, from pupillary margin to iris root, is removed.

iridectropium [*ir"ĭ-dek-tro'pe-əm*] eversion of the iris; ectropion uvea.

iridemia [*ir"ĭ-de'me-ə*] hemorrhage from the iris.

iridencleisis [*ir"ĭ-dən-kli'sis*] surgical incarceration of a slip of the iris within a corneal or limbal incision to act as a wick for aqueous drainage in glaucoma. Not done in veterinary glaucomas.

i.–cyclodialysis a surgical procedure used in the treatment of glaucoma. Combines a posterior sclerectomy, **cyclodialysis** and trans-scleral iridencleisis. Not done in veterinary glaucomas.

irideremia [*ir"ĭ-də-re'me-ə*] congenital absence of the iris.

inherited i. historically recorded in Jersey calves in association with other ocular defects.

irides [*i'rĭ-dēz*] plural of *iris*.

iridescence [*ir"ĭ-des'əns*] the condition of gleaming with bright and changing colors.

iridesis [*i-rid'ə-sis*] repositioning of the pupil by fixation of a sector of iris in a corneal or limbal incision. Not done in veterinary medicine.

iridial [*i-rid'e-əl*] iridal.

iridic [*i-rid'ik*] iridal.

iridin a cardiac glycoside found in the leaves of plants in the iris family (*Iris* spp.) and the roots of plants in the *Violaceae* family, the violets. Causes severe, often bloody, diarrhea.

iridium (Ir) [*ĭ-rid'e-əm*] a chemical element, atomic number 77, atomic weight 192.2. See Table 4.

irid(o)- word element. [Gr.] *iris of the eye*.

iridoavulsion [*ir"ĭ-do-ə-vul'shən*] complete tearing away of the iris from its periphery.

iridocapsular emanating from or pertaining to the iris and the lens capsule.

iridocele [*i-rid'o-sēl*] hernial protrusion of part of the iris through the cornea. Called also staphyloma.

iridociliospasm spasm of the smooth muscle of the iris and ciliary body, seen with anterior uveitis and producing miosis and pain, respectively.

iridocoloboma [*ir"ĭ-do-kol"o-bo'mə*] congenital fissure or coloboma of the iris.

iridoconstrictor [*ir"ĭ-do-kən-strik'tər*] a muscle or agent that constricts the pupil of the eye.

iridocorneal [*ir"ĭ-do-kor'ne-əl*] pertaining to the iris and the cornea.

i. angle the angle between the iris and cornea at the periphery of the anterior chamber of the eye, through which the aqueous humor exits the eye. Called also anterior chamber, drainge, or filtration angle.

i. meshwork solid trabeculae and interspersed spaces within the iridocorneal angle and through which the aqueous humor exits the eye. Called also trabecular meshwork.

iridocyclectomy [*ir"ĭ-do-sə-klek'tə-me*] excision of part of the iris and ciliary body.

iridocyclitis [*ir"ĭ-do-sə-kli'tis*] inflammation of the iris and ciliary body. Called also anterior **uveitis**.

heterochromic i. a unilateral low-grade form leading to depigmentation of the iris of the affected eye; called also heterochromic uveitis.

recurrent i. see equine recurrent **uveitis**.
iridocyclochoroiditis [*ir"ĭ-do-si"klo-ko"roi-di'tis*] inflammation of the iris, ciliary body and choroid; better called panuveitis.
iridocyclodialysis [*ir"ĭ-do-si"klo-di-al'ə-sis*] separation or loosening of the iris root and ciliary body from their attachment to the sclera; can be surgical or follow blunt trauma.
iridocystectomy [*ir"ĭ-do-sis-tek'tə-me*] excision of part of the iris and lens capsule to which it is adherent to form an artificial pupil.
iridodesis [*ir"ĭ-dod'ə-sis*] iridesis.
iridodialysis [*ir"ĭ-do-di-al'ə-sis*] separation or loosening of the iris root from its attachment to the ciliary body lying immediately caudal to it; typically follows blunt trauma.
iridodiastasis [*ir"ĭ-do-di-as'tə-sis*] a coloboma of the iris creating the appearance of more than one pupil.
iridodilator [*ir"ĭ-do-di'la-tər -di-la'tər*] a muscle or agent that dilates the pupil of the eye.
iridodonesis [*ir"ĭ-do-do-ne'sis*] tremulousness of the iris on movement of the eye, occurring with lens dislocation (luxation or subluxation). See also **phacodonesis**.
iridokeratitis [*ir"ĭ-do-ker"ə-ti'tis*] inflammation of the iris and cornea; more commonly termed **keratouveitis**.
iridokinesia, iridokinesis [*ir"ĭ-do-kĭ-ne'zhə*] contraction and expansion of the iris.
iridoleptynsis [*ir"ĭ-do-ləp-tin'sis*] thinning or atrophy of the iris.
iridology [*ir"ĭ-dol'ə-je*] an alternative medicine technique for the diagnosis of systemic disease, based on characteristics detected in the patient's iris. The theory is that certain zones of the iris correspond with different parts of the body and that details of color and structure in the iris reflect what is happening in those distant tissues. Of limited use in veterinary medicine, but is being practiced on horses.
iridomalacia [*ir"ĭ-do-mə-la'shə*] softening of the iris.
iridomesodialysis [*ir"ĭ-do-me"so-di-al'ə-sis*] surgical loosening of adhesions around the inner edge of the iris.
iridomotor [*ir"ĭ-do-mo'tər*] pertaining to movements of the iris.
iridoncus [*ir"ĭ-dong'kəs*] tumor or swelling of the iris.
iridoparalysis [*ir"ĭ-do-pə-ral'ə-sis*] iridoplegia.
iridoperiphakitis [*ir"ĭ-do-per"e-fa-ki'tis*] inflammation of the lens capsule.
iridoplegia [*ir"ĭ-do-ple'jə*] paralysis of the sphincter of the iris leading to wide dilation of the pupil with lack of contraction; called also iridoparalysis.
iridoptosis [*ir"ĭ-dop-to'sis*] prolapse of the iris.
iridopupillary [*ir"ĭ-do-pu'pĭ-lar"e*] pertaining to the iris and pupil.
iridorhexis [*ir"ĭ-do-rek'sis*] 1. rupture of iris. 2. the tearing away of the iris.
iridoschisis [*ir"ĭ-dos'kĭ-sis*] splitting of the mesodermal stroma of the iris into two layers, with fibrils of the anterior layer floating in the aqueous humor.
iridosclerotomy [*ir"ĭ-do-skle-rot'ə-me*] incision of the sclera and of the edge of the iris in the treatment of glaucoma. Not done in veterinary ophthalmology.
iridosteresis [*ir"ĭ-do-stə-re'sis*] removal of all or part of the iris.
iridotasis [*ir"ĭ-dot'ə-sis*] stretching of the iris in treatment of glaucoma. Not done in veterinary ophthalmology.
iridotomy [*ir"ĭ-dot'ə-me*] incision of the iris.
Iridoviridae [*ir"ĭ-do-vir'ĭ-de*] a family of large double stranded DNA viruses that replicate in the cytoplasm and have been associated with diseases in fish and amphibians; includes lymphocystis virus.
iridovirus [*ir"ĭ-do-vi'rəs*] a virus in the family ***Iridoviridae***.
IRIS International Renal Interest Society.
IRIS staging system a system that attempts to classify the progressive development of chronic renal disease, initially based on fasting plasma creatinine concentration. Stage 1 is equivalent to early renal disease with no biochemical evidence; Stage 2 is early renal failure with mild azotemia; Stage 3 is uremic renal failure; and Stage 4 is end-stage renal failure.
Iris [*i'ris*] a European plant genus of the Iridaceae family; contain cardiac glycosides. Cause sudden death, diarrhea. Includes *I. foetidissima* (wild iris), *I. germanica* (cultivated iris), *I. missouriensis*, *I. pseudacorus* (yellow flag), *I. versicolor*. See also **flag**[1].
iris[1] pl. *irides* [Gr.] the disk-like, centrally perforated, typically pigmented membrane forming the pupil; the most anterior portion of the uveal or vascular tunic of the eye, it is made up of a loose fibrovascular stroma, with a flat band of circular muscular fibers surrounding the pupil (iris sphincter muscle) and bordered posteriorly by an inner myoepithelium (the dilator muscle) and the outer posterior iris epithelium. See also **iridal**, **pupil**.
angle of i. see iridocorneal **angle**.
i. anulus the inner, smooth, narrow section of iris is the *minor* iridal anulus; the wider, outer, plicated zone, the *major* iridal anulus.
Basenji mesodermal i. defect see persistent **pupillary** membrane.
i. bombé bowing forward of the iris as a result of extensive posterior synechia due to anterior uveitis. Accumulation of aqueous humor and increased pressure in the posterior chamber bows the iris forward with narrowing of the anterior chamber, iridocorneal angle and potentially peripheral anterior synechia. Collectively, this cascade of changes leads to usually intractable glaucoma.
i. collarette the central region of the iris between the iris root or ciliary zone and the pupillary zone near the pupillary border. Site of origin for persistent **pupillary** membranes.
i. cyst cystic dilation of the posterior iris epithelium; may be congenital or acquired, attached at the pupillary margin or free-floating in the anterior or posterior chamber. Usually benign but part of a familial syndrome in Golden retriever dogs with associated uveitis and sometimes secondary glaucoma.
i. freckle a non-raised hypermalanotic area (nevus) on the iris face without hyperplasia of the melanocytes.
i. heterochromia see **heterochromia** iridis.
i. hypopigmentation relative lack of pigmentation within the iris; may be unilateral or focal within one or both irides (see **heterochromia**). Usually not associated with functional changes unless there is coincident iris hypoplasia (see below).
i. hypoplasia a poorly developed iris; usually without other ocular abnormalities. Typically seen in blue or lightly colored irides; may cause pupil abnormalities (anisocoria, reduced pupil excursions, polycoria, dyscoria, corectopia, etc.).
i. inflammation see **iritis**.
i. nevus a benign non-raised melanotic freckle of the iris consisting of melanocytes.
i. prolapse protrusion of part of the iris through a perforation in the cornea or the sclera.
i. root the outermost region of the iris (called also the ciliary zone). See also **pupillary** zone and iris collarette (above).
iris[2] common name for plants in the genus **Iris**. Includes stinking or wild iris (*I. foetidissima*), yellow iris (*I. pseudacorus*).
white i. ***Diplarrhena moraea***.
Irish blue see **Kerry blue terrier**.
Irish red and white setter although they are related, this is regarded as a breed distinct from the (red) Irish setter. The dog is slightly more athletic than the Irish setter and has a domed head without an occipital protuberance. The coat is white with solid red patches.
Irish setter a medium to large, slim dog with a long head, pendulous ears and silky, chestnut to mahogany colored haircoat that is longest under the neck, body and tail, and behind the legs (feathering). Called also Red setter. The breed is predisposed to

I-10: Iris bombé with vascularization of the anterior lens capsule in a cat.
From Dziezyc J, Millchamp N, Color Atlas of Canine and Feline Ophthalmology. Saunders, 2005.

I-11: Irish water spaniel.

hypothyroidism, progressive retinal atrophy, rod-cone dysplasia, hemophilia A, ambylopia, epilepsy and canine leukocyte adhesion disease.

Irish terrier a small to medium sized, active dog with a long head, erect, folded ears, docked tail, and a hard, wiry coat in shades of red or wheaten. The breed is affected by cystinuria and congenital myotonia.

Irish water spaniel a medium to large, compact gun dog with long pendulous ears, somewhat domed head with prominent occiput, and a short, straight, tapered tail. The dark liver-colored coat is a breed characteristic, consisting of dense, tight, crisp ringlets or 'curls' with a natural oiliness. It covers the legs and body, forming a well-defined topknot that comes down in a peak on the forehead. The tail has only short, straight hairs and is often referred to as a 'rat-tail'. The breed is used as a retriever and is reportedly very tolerant of cold water.

Irish wolfhound a very large (at least 100 lb in weight and 30–34 inches tall), muscular dog with a long head, small ears, long neck, long tail, and very deep chest. One of the giant breeds. The coat is medium length, rough, and wiry, in beige, fawn, gray, brindle and other solid colors. The breed is affected by elbow hygromas, portacaval shunts and hypothyroidism.

iritis [*i-ri'tis*] inflammation of the iris. The condition may be acute, occurring suddenly with pronounced signs, or chronic, with less severe but longer-lasting signs.

serous i. iritis with a serous exudate.

iritoectomy [*ir"i-to-ek'tə-me*] surgical excision of 'after-cataract' (lens material) on the iris, together with iridectomy, to form an artificial pupil following cataract surgery.

iritomy [*i-rit'ə-me*] iridotomy.

iron (Fe) [*i'ərn*] a chemical element, atomic number 26, atomic weight 55.847. See Table 4. Iron is chiefly important to the animal body because it is the main constituent of hemoglobin, cytochrome, and other components of respiratory enzyme systems. A constant although small intake of iron in food is needed to replace erythrocytes that are destroyed in the body processes.

i.-59 a radioisotope of iron having a half-life of 45 days; used in ferrokinetics tests to determine the rate at which iron is cleared from the plasma and incorporated in red cells. Symbol ^{59}Fe.

i. binding absorbed iron is rapidly and tightly bound to a specific transport protein, transferrin or siderophilin, from which it is discharged at iron receptor sites in the bone marrow.

i. dextran an injectable form of iron used in the prevention of iron deficiency. See iron poisoning (below).

i. galactan used as an injection vehicle for iron in young piglets.

i. nutritional deficiency is most common in piglets raised on sows kept indoors under artificial conditions. Clinical signs are pallor, dyspnea, edema of the head and a secondary diarrhea.

organic i. poisoning see iron poisoning (below).

i. overload storage of excessive iron in body tissues such as occurs in human idiopathic hemochromatosis is not recorded in animals, but overload may occur as a result of excessive therapy.

i. poisoning overdosing piglets with iron compounds by mouth causes diarrhea and death. Organic iron preparations, usually dextrans, injected in piglets can cause deaths acutely, especially in animals deficient in vitamin E and selenium. Acute myonecrosis releases potassium in amounts sufficient to cause acute cardiotoxicity. Sudden death due to massive liver damage is also recorded in newborn foals dosed orally with ferrous fumarate with or without yeast in a paste. Asymmetry of the hindquarters in pigs is also recorded as a sequel of intramuscular injections of iron. See also **asymmetric hind quarter syndrome**. Bore water often contains significant concentrations of iron and when used for fish culture in dams may cause mortalities.

i. pool a source of readily available iron for metabolic emergencies, probably located in the bone marrow.

i. ring see **siderocalcinosis**.

i. storage disease hemochromatosis.

i.-sulfur proteins polypeptides that are linked by cysteine SH groups to iron-sulfur centers with Fe_2S_2 or Fe_4S_4 stoichiometry; found in Complexes I,II and III of the respiratory chain and take part in single electron transfer reactions in which one Fe atom undergoes oxidoreduction between Fe^{2-} and Fe^{3-}. In Rieske proteins, found in Complex III, one of the Fe atoms in the Fe-S is linked to two histidine groups in the polypeptide instead of two cysteine groups. Also take part in electron transfer reactions in photosynthesis and nitrogen fixation.

total i.-binding capacity a measure of all iron binding serum proteins, the majority of which is transferrin.

i. turnover see iron **turnover**.

unbound i.-binding capacity that portion of the plasma transferrin molecule that is not bound to Fe^{3+}.

i.-yeast paste highly hepatoxic in some newborn foals when fed as a dietary supplement.

ironbark common name given to some trees in the genus *Eucalyptus* and occasionally others.

scrub i. ***Bridelia*** *exalta, B. leichhardtii*.

silver-leaf i. *Eucalyptus melanophloia*.

iron grass see ***Lomandra longifolia***.

iron-poor diet reconstituted liquid milk replacer the common one; used to feed veal calves as a sole diet.

ironstone a natural ore which may contain significant amounts of fluorine and cause fluorosis in cattle grazing pastures in the vicinity of a factory which calcines the ore.

ironweed see ***Amsinckia***, ***Sideranthus***.

irotomy [*i-rot'o-me*] iridotomy.

irradiate [*ĭ-ra'de-āt*] 1. to treat with X-rays or other form of radioactivity. 2. to expose to rays such as ultraviolet light. See also **irradiation**.

irradiated yeast has been exposed to ultraviolet light to increase its vitamin D content.

irradiation [*ĭ-ra"de-a'shən*] exposure to radiant energy (heat, X-rays, etc.) for therapeutic or diagnostic purposes. See also **radiation** (3). Irradiation of certain foods, including milk, kills harmful bacteria and prevents spoilage. X-ray photography is used in industrial research and in diagnosis of disorders within the body.

i. teratogen irradiation at the time of organogenesis which is capable of causing congenital defects such as ankylosis of limb joints and cleft palate.

irreducible [*ir"e-d s ĭ-bəl*] not susceptible to reduction, as a fracture, hernia or chemical substance.

irrigant fluid used to irrigate cavities.

irrigation [*ir"ĭ-ga'shən*] 1. washing of a body cavity or wound by a stream of water or other fluid. 2. artificial watering of agricultural crops and pasture by flood, furrow, drip or sprinkler system. This has a significant implication for animals both nutritionally and in terms of health because of the great change in the soil microclimate and the reaction of this on parasite larvae and fungi.

irritability [*ir"ĭ-tə-bil'ĭ-te*] 1. ability of an organism or a specific tissue to react to the environment. 2. the state of being abnormally responsive to slight stimuli, or unduly sensitive.

myotatic i. the ability of a muscle to contract in response to stretching.

irritable [*ir'ĭ-tə-bəl*] 1. capable of reacting to a stimulus. 2. abnormally sensitive to stimuli.

i. bowel syndrome see irritable **colon** syndrome.

irritant 1. causing irritation. 2. an agent that causes irritation.

i. contact dermatitis see **contact** dermatitis.

irritation [*ir"ĭ-ta'shən*] 1. the act of stimulating. 2. a state of overexcitation and undue sensitivity.

i. therapy local application of an irritant substance with the purpose of destroying tissue, e.g. podophyllum-tincture benzoini composita painted on warts or sarcoids to remove them. The treatment needs to be repeated on a number of occasions.

IRV inspiratory reserve volume.

IS in DNA, an insertion sequence.

Isabella a light fawn coat color in dogs, the effect of a dilution gene acting on a red coat color; seen in dilute red Doberman pinschers.
isabelline having a light brown, sandy color. A common coloration in desert animals.
ischemia [*is-ke'me-ə*] deficiency of blood in a part, due to functional constriction or actual obstruction of a blood vessel.
cerebral i. **brain** anoxia.
myocardial i. deficiency of blood supply to the heart muscle, due to obstruction or constriction of the coronary arteries.
renal i. severe or prolonged ischemia causes irreversible renal failure and death from uremia. Called also ischemic nephrosis.
ischemic [*is-kem'ik*] emanating from or pertaining to ischemia.
ischiadic, ischial [*is"ke-ad'ik*] ischiatic or sciatic.
ischial callosity [*is'ke-əl*] leathery patches on the buttocks of Old World primates.
ischialgia [*is"ke-al'jə*] pain in the ischium.
ischiatic [*is"ke-at'ik*] pertaining to the ischium.
ischidrosis anhidrosis.
ischi(o)- word element. [Gr.] *ischium*.
ischiobulbar [*is"ke-o-bul'bər*] pertaining to the ischium and the bulb of the urethra.
ischiocapsular [*is"ke-o-kap'su-lər*] pertaining to the ischium and the capsular ligament of the hip joint.
ischiocavernosus muscle one of the principal muscles involved in the erection of the penis. See also Table 13.2.
ischiocele [*is'ke-o-sēl"*] hernia through the sacrosciatic notch.
ischiococcygeal [*is"ke-o-kok-sij'e-əl*] pertaining to the ischium and coccyx.
ischiodidymus [*is"ke-o-did'ĭ-məs*] conjoined twins united at the pelvis.
ischiodynia [*is"ke-o-din'e-ə*] pain in the ischium.
ischiofemoral [*is"ke-o-fem'o-rəl*] pertaining to the ischium and femur.
ischiohebotomy surgical division of the ischiopubic ramus and the cranial ramus of the pubis.
ischioneuralgia pain along the path of the sciatic nerve; sciatica.
ischiopagus [*is-ke-op'ə-gəs*] conjoined twins fused at the ischial region.
ischiopubic [*is"ke-o-pu'bik*] pertaining to the ischium and pubis.
ischiorectal [*is"ke-o-rek'təl*] pertaining to the ischium and rectum.
ischiourethral pertaining to the ischium and the urethra.
i. muscle a slip of muscle arising on the ischium which, through venous compression, assists in the erection of the penis of the dog. See also Table 13.2.
ischium [*is'ke-əm*] the caudal, dorsal portion of the hip bone. See Table 10. See also **os**[2] coxae.
ischuria [*is-ku're-ə*] retention or suppression of the urine.
ISCOM immune-stimulating complex.
isepamicin an aminoglycoside antibiotic derived from gentamicin and with similar activity.
iset color marking in Shetland sheep; dark colored with many white fibers giving a bluish hue from a distance.
isethionate [*i"sə-thi'ə-nāt*] USAN contraction for 2-hydroxyethanesulfonate.
Isfahan an unclassified vesiculovirus usually bracketed with vesicular stomatitis virus but much less virulent.
ISIS International Species Information System.
island [*i'lənd*] a cluster of cells or an isolated piece of tissue.
blood i's aggregations of mesenchymal cells in the angioblast of the embryo, developing into vascular endothelium and blood cells.
i. of Calleja discrete group of very small nerve cells in the olfactory tubercle of the forebrain.
i's of Langerhans see **islet** of Langerhans.
i. outbreak outbreak limited to a specific population, usually a herd, caused often by a localized lack of immunity in a closed herd.
islet [*i'let*] an island.
i. cell one of the cells making up the islet of Langerhans.
i. cell neoplasia occur mostly in old dogs and morphologically they occur as adenomas or adenocarcinomas. Functionally they appear only in the form of hyperinsulinism and hypoglycemia. Rarely there are gastrin-secreting tumors causing a **Zollinger–Ellison syndrome**.
i's of Langerhans irregular microscopic structures scattered throughout the pancreas and comprising its endocrine portion. They contain the *alpha cells*, which secrete the hyperglycemic factor glucagon; the *beta cells*, which secrete insulin, and whose degeneration is one of the causes of **diabetes mellitus**; and the *delta cells*, which secrete somatostatin.
pancreatic i. see islets of Langerhans (above).
-ism suffix meaning a state, process or condition.
iso- word element. [Gr.] *equal, alike, same.*
isoagglutinin [*i"so-ə-gloo'tĭ-nin*] an agglutinin that acts on cells of individuals of the same species.
isoallele [*i"so-ə-lēl'*] an allelic gene that is considered as being normal but can be distinguished from another allele by its differing phenotypic expression when in combination with a dominant mutant allele.
isoamylase [*i"so am'ə-lās*] 1. any of the several isoenzymes of α-amylase. 2. a hydrolase that catalyzes the hydrolysis of 1,6-α-glycosidic branch linkages in glycogen and amylopectin.
isoanaphylaxis [*i-so-an"ə-fə-lak'sis*] anaphylaxis produced by serum from an individual of the same species. See also passive **anaphylaxis**.
isoantibody [*i-so-an'tĭ-bod"e*] alloantibody.
isoantigen [*i"so-an'tĭ-jən*] alloantigen.
isobar [*i'so-bahr*] 1. one of two or more chemical species with the same atomic weight but different atomic numbers. 2. a line on a map or chart depicting the boundaries of an area of constant atmospheric pressure.
isobutrazine trimeprazine.
isocarb a carbamate pesticide.
isocellular [*i"so-sel'u-lər*] made up of identical cells.
isochromatic [*i"so-kro-mat'ik*] of the same color throughout.
isochromatophil [*i"so-kro-mat'o-fil*] staining equally with the same stain.
isochromosome [*i"so-kro'mə-sōm*] an abnormal chromosome having a median centromere and two identical arms, formed by transverse, rather than normal longitudinal, splitting of a replicating chromosome.
isochronic, isochronous [*i"so-kron'ik*] performed in equal times; said of motions and vibrations occurring at the same time and being equal in duration.
isocil one of the methyluracil herbicides; access to recently sprayed pasture causes bloat, incoordination, anorexia in sheep.
isocitrate dehydrogenase [*i"so-sī'trāt*] see isocitrate **dehydrogenase**.
isocitric acid [*i"so-sit'rik*] an intermediate in the tricarboxylic acid cycle, formed from citric acid and is itself converted to 2-oxoglutaric acid (α-ketoglutaric acid).
Isocoma wrightii ***Haplopappus*** *heterophyllus*.
isocoria [*i"so-kor'e-ə*] equality of pupil in the two eyes.
isocortex [*i"so-kor'teks*] see **neopallium**.
isocupressic acid toxin in *Pinus*, *Cupressocyparis*, *Juniperus*, *Cupressus* spp.; causes abortion in livestock; called also pine needle **abortion**.
Isocyamus delphini an ectoparasitic copepod that parasitizes the skin of whales. Called also whale lice.
isocytosis [*i"so-si-to'sis*] equality in size of cells, especially of erythrocytes.
isodemic said of maps constructed so that land areas are distorted to represent the area's population density.
isodiametric [*i"so-di"ə-met'rik*] measuring the same in all diameters.
isodontic [*i"so-don'tik*] having all the teeth alike.
isodose [*i'so-dōs*] in radiotherapy a radiation dose of equal intensity to more than one body area.
i. chart a diagram of depth dose measurement at various positions within an X-ray beam in which points of equal dose throughout the beam are joined to give isodose lines.
isodrin an insecticide containing **chlorinated hydrocarbons**; it may cause poisoning.
isoechoic returning waves of normal amplitude in ultrasonography.
isoelectric [*i"so-e-lek'trik*] showing no variation in electric potential.
i. focusing an electrophoretic method for separating proteins in gels which depends on the fact that the net charge on the protein varies with the pH of the surrounding medium. At the isoelectric point the protein has no net charge and will not therefore migrate further in an electric field. The polyacrylamide gel is cast in a narrow tube that provides a pH gradient from top to bottom.
i. period the moment in muscular contraction when no deflection of the galvanometer is produced.

isoenzyme [*i"so-en'zīm*] any of the several forms of an enzyme, all of which catalyze the same reaction, but have minor differences in their amino acid sequence; may differ in tissue distribution, stage of development when they are present, reaction rate, inhibition by various substances, electrophoretic mobility or immunological properties. Several enzymes, particularly alkaline phosphatase, lactate dehydrogenase and creatine kinase, have clinically important isoenzymes. Isoenzymes are separated by electrophoresis, and the pattern indicates which damaged organ has released the enzymes.

isoerythrolysis outdated term for alloimmune hemolytic anemia; the paradigm of Rh disease of humans.

neonatal i. **alloimmune** hemolytic anemia of the newborn.

isoetharine [*i-so-eth'ə-rēn*] a sympathomimetic amine having more effect on the β_2-adrenergic receptors of the bronchi and vascular smooth muscle than the β_1-adrenergic receptors of the heart; used as a bronchodilator in bronchial disease and for relief of bronchospasm in chronic obstructive pulmonary disease.

isoferritins [*i-so-fer'ĭ-tin*] the several forms in which ferritin occurs.

isoflavan estrogenic substance in plants. Called also equol.

isoflavone 3-phenyl-4H-1-benzopyran-4-one; many of the naturally occurring estrogenic substances in pasture plants are isoflavones.

isoflurane [*i"so-floo'rān*] a chlorofluorocarbon used as an inhalation anesthetic.

isoflurophate an anticholinesterase inhibitor producing miosis and increased aqueous humor outflow; used rarely now in the treatment of glaucoma.

isoflurophosphate an organophosphorus insecticide which has the usual toxic effect of all of these compounds, that of being an anticholinesterase. It also causes demyelination of the peripheral nerves and the spinal cord.

isoforms [*i'so-form"*] isomeric forms of the same protein, with slightly different amino acid sequences, but with the same activity.

isogamety [*i"so-gam'ə-te*] production by an individual of one sex of gametes identical with respect to the sex chromosome.

isogamy [*i-sog'ə-me*] reproduction resulting from union of two gametes identical in size and structure, as in protozoa.

isogeneic [*i"so-jə-ne'ik*] having the same genetic constitution; syngeneic.

isogeneric [*i"so-jə-ner'ik*] of the same kind; belonging to the same species.

isogenesis [*i"so-jen'ə-sis*] similarity in the processes of development.

isogenous groups [*i-soj'ə-nəs*] groups of cells developed from the same cell, e.g. clusters of chondrocytes. Called also cell nests.

isograft [*i'so-graft*] a graft between individuals of the same species that are genetically identical. Called also syngraft.

isohemagglutination [*i"so-he"mə-gloo"-na'shən*] agglutination of erythrocytes caused by an isohemagglutinin.

isohemagglutinin [*i"so-he"mə-gloo'tĭ-nin*] an isoantibody that agglutinates erythrocytes.

isohemolysin [*i"so-he-mol'ə-sin*] an isoantibody that causes hemolysis.

isohemolysis [*i"so-he-mol'ə-sis*] hemolysis produced by isohemolysin.

isohydric [*i"so-hi'drik*] the principle underlying the series of reactions that occurs in erythrocytes and makes it possible for them to take up carbon dioxide and release oxygen without the production of excess hydrogen.

isoimmune possessing antibodies to isoantigens.

i. hemolytic anemia see **alloimmune** hemolytic anemia of the newborn.

i. hemorrhagic anemia see **purpura** hemorrhagica.

i. neonatal leukopenia recorded as a cause of immune deficiency in foals; antibodies to the sire's lymphocytes in the mare's serum.

i. thrombocytopenia see immune-mediated **thrombocytopenia**.

isoimmunization [*i"so-im"u-nĭ-za'shən*] alloimmunization.

i. of pregnancy see **alloimmunization** of pregnancy.

isolate [*i'so-lāt*] 1. to separate from others, or set apart. 2. a group of individuals prevented by geographic, genetic, ecological or social barriers from interbreeding with others of their kind. 3. a population of microorganisms that has been obtained in pure culture from a field case or location.

isolation [*i"so-la'shən*] the act of isolating or state of being isolated, such as (1) the physiological separation of a part, as by tissue culture or by interposition of inert material; (2) the segregation of patients with a communicable disease; (3) the successive propagation of a growth of microorganisms until a pure culture is obtained; (4) the chemical extraction of an unknown substance in pure form from a tissue.

p. isolation designed to prevent contact between potentially pathogenic microorganisms and uninfected animals which have seriously impaired resistance. It is recommended for patients suffering from agranulocytosis, severe and extensive dermatitis, certain types of lymphomas and leukemias, and those who are receiving immunosuppressive therapy. Called also reverse isolation.

reverse i. see protective isolation (above).

i. technique special precautionary measures and procedures used in the care of a patient with a communicable **disease**.

isoleucine (Ile) [*i"so-loo'sēn*] an amino acid produced by hydrolysis of fibrin and other proteins; essential amino acid for optimal growth of the young and for nitrogen equilibrium in adults.

isologous [*i-sol'ə-gəs*] characterized by an identical genotype.

isolysin [*i-sol'ə-sin*] a lysin, usually antibody, acting on cells of animals of the same species as that from which it is derived.

isolysis [*i-sol'ə-sis*] lysis of cells by isolysins.

isomaltase [*i"so-mawl'tās*] an intestinal mucosal enzyme that hydrolyzes isomaltose.

isomaltose [*i"so-mawl'tōs*] a disaccharide consisting of two linked glucose molecules, similar to maltose, but with an α-1-6 link instead of an α-1-4 link. Found in beer, honey and other natural substances. Called also dextrinose.

isomer [*i'so-mər*] any compound with the same molecular formula, but differing in structure from another compound or compounds.

isomerase [*i-som'ər-ās*] a major class of enzymes comprising those that catalyze the process of isomerization, such as the interconversion of aldoses and ketoses.

1,5 disulfide i. an enzyme that catalyzes disulfide bond formation by cross-linking certain cystine residues of polypeptides; occurs as a post-translational modification.

isomerism [*i-som'ə-riz-əm*] the possession by two or more distinct compounds of the same molecular formula, each molecule having the same number of atoms of each element, but in different arrangement.

isomerization [*i-som"ər-ĭ-za'shən*] the process whereby any isomer is converted into another isomer, usually requiring special conditions of temperature, pressure, or catalysts.

isometheptene [*i"so-mə-thep'tēn*] a sympathomimetic drug, used parenterally as the hydrochloride or orally as the mucate, as a smooth muscle relaxant.

isometric [*i"so-met'rik*] maintaining, or pertaining to, the same length; of equal dimensions.

i. contraction muscle contraction without appreciable shortening or change in distance between its origin and insertion.

i. exercise active exercise performed against stable resistance, without change in the length of the muscle.

isomorbs lines on a map which join geographical points at which the morbidity rate for a particular disease is the same.

isomorphism [*i"so-mor'fiz-əm*] identical in form; in genetics, referring to genotypes of polypoid organisms that produce similar gametes even though containing genes in different combinations on homologous chromosomes.

isomorts lines on a map which join geographical points at which the mortality rate for a particular disease is the same.

isoniazid [*i"so-ni'ə-zid*] an antibacterial compound used in treatment of tuberculosis and opportunistic mycobacterial infections.

isopathy [*i-sop'ə-the*] the treatment of disease by means of products of the disease or with material from the affected organ.

isopleth lines on a map that join geographical points which have the same value for a particular continuous variable.

isopod member of the order Isopoda. Includes water slaters, woodlice. Suborders include Flabellifera (aquatic parasites in marine fish).

isoprecipitin [*i"so-pre-sip'ĭ-tin*] an isoantibody that acts as a precipitin.

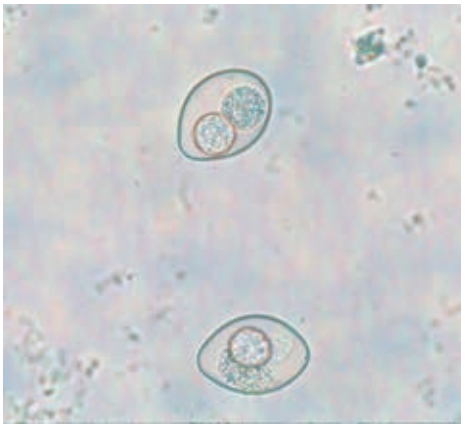
isoprenaline [*i"so-pren'ə-lēn*] see **isoproterenol**.

isoprene [*i'so-prēn*] hydrocarbon 2-methyl-1,3-butadiene; building block for many lipids including cholesterol, steroids and bile acids, the lipid-soluble vitamins, dolichol, coenzyme Q and many more terpenoid biomolecules.

isoprinosine an antiviral agent containing a mixture of inosine, dimethylaminoisopropanol and paracetamidobenzoic acid.

VetBooks.ir

isopropamide [*i"so-pro'pə-mīd*] a long-acting anticholinergic drug used in to suppress gastric and pancreatic secretion.
isopropanol [*i"so-pro'pə-nol*] isopropyl alcohol.
isopropyl [*i"so-pro'pəl*] denotes the 1-methylethyl group, $-CH(CH_3)_2$.
i. alcohol rubbing alcohol, used as a solvent and rubefacient. Formed naturally in the rumen of the cow by microbial metabolism of acetone and concentrations in blood and milk are elevated in ketotic cows.
i. isothiocyanate a cyanogenetic compound found in plants of *Brassica* spp. May cause acute deaths due to cyanide poisoning and also act as a goitrogen.
i. methanesulfonate an alkalizing agent that causes testicular degeneration.
isopropylarterenol [*i"so-pro"pəl-ahr"tə-re'nol*] see **isoproterenol**.
isoproterenol [*i"so-pro-ter'ə-nol*] a synthetic cathecholamine and potent β-receptor agonist; it causes vasodilation and positive inotropic and chronotropic effects in the heart. Called also isoprenaline.
isopyknosis the quality of showing uniform density throughout, especially the uniformity of condensation observed in comparison of different chromosomes or in different areas of the same chromosome.
isoquinoline alkaloid includes berberine, bulbocaprine, chelidonine, corydaline.
isorrhea an equilibrium between the intake and output, by the body, of water and/or solutes.
isoschizomers restriction enzymes that have the same recognition sequence as another enzyme, known as the prototype, which was the first enzyme discovered with that particular recognition sequence.
isosensitization [*i"so-sen"si-ti-za'shən*] allosensitization.
isosexual [*i"so-sek'shoo-əl*] pertaining to or characteristic of the same sex.
isosmotic [*i"soz-mot'ik*] having the same osmotic pressure.
isosorbide [*i"so-sor'bid*] an osmotic diuretic used as a coronary vasodilator.
Isospora [*i-sos'pə-rə*] a genus of apicomplexan parasites in the family Eimeriidae found mainly in dogs and cats. These protozoa develop intracellularly in the cells of the intestinal epithelium and some of them are associated with attacks of diarrhea. Includes *I. almaataensis* (pigs), *I. bahiensis* (dogs), *I. bigemina* (*Cystoisospora burrowsi*), *I. burrowsi* (*C. burrowsi*), *I. buteonis* (raptor birds), *I. canis* (*C. canis*), *I. felis* (*C. felis*), *I. heydoni* (*C. heydoni*), *I. neorivolta* (dog), *I. ohioensis* (*C. ohioensis*), *I. ratti* (rats), *I. rivolta* (*C. rivolta*), *I. suis* (pigs), *I. wallacei* (*Besnoitia wallacei*).
isospore [*i'so-spor*] 1. an isogamete of organisms that reproduce by spores. 2. an asexual spore produced by a homosporous organism.
isosthenuria [*i"sos-thə-nu're-ə*] urine with an osmolality the same as that of the plasma, i.e. there has been no concentration of the glomerular filtrate in the renal tubules. This usually means urine with a specific gravity close to 1.010.
isotherm a line on a map or chart depicting the boundaries of an area in which the temperature is the same.
isothermal, isothermic having the same temperature.
isothiocyanate [*i"so-thi"o-si'ə-nāt*] see **allyl** isothiocyanate, **isopropyl** isothiocyanate.



I-12: Sporulated *Isospora felis* oocysts.
From August JR, Consultations in Feline Internal Medicine, Volume 6, 6th Edition. Saunders, 2009.

isotone [*i'so-tōn*] one of several nuclides having the same number of neutrons, but differing in number of protons in their nuclei.
isotonia [*i"so-to'ne-ə*] 1. a condition of equal tone, tension or activity. 2. equality of osmotic pressure between two elements of a solution or between two different solutions.
isotonic [*i"so-ton'ik*] 1. of equal tension. 2. denoting a solution in which body cells can be bathed without net flow of water across the semipermeable cell membrane; also, denoting a solution having the same tonicity as another solution with which it is compared.
i. contraction muscle contraction without appreciable change in the force of contraction; the distance between the muscle's origin and insertion becomes lessened.
i. dehydration occurs when the fluid lost is isotonic with serum, as in sweating, simple enteritis, nephrosis. There are therefore no errors of electrolyte balance likely to result.
i. saline see **normal** saline.
isotope [*i'so-tōp*] a chemical element having the same atomic number as another (i.e. the same number of nuclear protons), but having a different atomic mass (i.e. a different number of nuclear neutrons).
radioactive i. one having an unstable nucleus and which emits characteristic radiation during its decay to a stable form. See also **radioisotope**.
stable i. one that does not transmute into another element with emission of corpuscular or electromagnetic radiations.
isotretinoin [*i"so-tret'i-no-in*] a synthetic form of retinoic acid (13-*cis*-retinoic acid), used in dermatology for the treatment of disorders of keratinization. It is a potent teratogen.
isotropic [*i"so-tro'pik*] 1. having the same value of a property, such as refractive index, in all directions, as in a cubic crystal or a piece of glass. 2. being singly refractive.
Isotropis a genus of Australian legumes in the family Fabaceae. They may contain a heterocyclic nephrotoxin, iforrestine. Many cases are characterized by sudden death with no lesions. Include *I. atropurpurea* (poison sage), *I. cuneifolia* (lamb poison, granny bonnets), *I. drummondii* (lamb poison), *I. foliosa*, *I. forrestii*, *I. juncea*, *I. wheeleri*.
isotropy [*i-sot'ro-pe*] the quality or condition of being isotropic.
isotype [*i'so-tīp*] antigenic variability between related proteins, e.g. between immunoglobulin classes as determined by heavy chain constant region amino acid sequences.
isotypical [*i"so-tip'i-kəl*] of the same kind.
isoxsuprine [*i-sok'su-prēn*] a beta-adrenergic receptor agonist; the hydrochloride is used as a uterine relaxant and as a vasodilator.
isozyme [*i'so-zīm*] isoenzyme.
Israel turkey encephalomyelitis see Israeli turkey **encephalomyelitis**.
Israeli Friesian Israeli version of black and white Dutch Friesian dairy cattle.
ISS injury severity score.
issue [*ish'oo*] a discharge of pus, blood, or other matter; a suppurating lesion emitting such a discharge.
IST infectious sinusitis of turkeys.
-ist suffix meaning one who specializes in.
isthmectomy [*is-mek'tə-me*] excision of an isthmus, especially of the isthmus of the thyroid.
Isthmiophora a genus of intestinal digenetic trematodes in the family Echinostomatidae.
I. melis found in the intestine of cat, fox and many other small wild mammals, including mink. It is nonpathogenic except in mink, in which it causes a severe hemorrhagic enteritis.
isthmoparalysis, isthmoplegia [*is"mo-pə-ral'ə-sis*] paralysis of the isthmus faucium.
isthmus [*is'məs*] a narrow connection between two larger bodies or parts.
aortic i. that part of the aorta between the origin of the brachiocephalic trunk, or the left subclavian artery, and that of the ductus arteriosus which is partly constricted in the fetus; it marks the partial separation of fetal blood flow derived from right and left ventricles, and is most conspicuous in the newborn calf.
i. of auditory tube the narrowest part of the auditory tube at the junction of its bony and cartilaginous parts. Called also isthmus of pharyngotympanic tube.
i. of fauces, i. faucium the constricted aperture between the cavity of the mouth and the pharynx.
oviduct i. the short slightly narrower section of the oviduct of the bird between the magnum and the uterus, where the shell membranes are laid down.

pharyngeal i. the aperture between the dorsal and ventral parts of the pharynx and separated by the free edge of the soft palate and the palatopharyngeal arch.
i. of pharyngotympanic tube see isthmus of auditory tube (above).
i. of rhombencephalon the narrow segment of the fetal brain, forming the plane of separation between the rhombencephalon and cerebrum.
i. of thyroid the band of tissue joining the lobes of the thyroid. It is fibrous in sheep and horses and glandular in dogs and cattle.
i. of uterine tube the narrower, thicker-walled portion of the uterine tube closest to the uterus.
isthmus-catagen cyst [*is'məs-kat'ə-jən*] see **trichilemmal** cyst.
isuria excretion of urine at a uniform rate.
i.t. medical record abbreviation for intratracheal.
Italian brown cattle Italian version of Brown Swiss dairy cattle.
Italian greyhound a small, very slender, shorthaired dog with deep chest and thin waist with the appearance of a miniature Greyhound. It has a characteristic high-stepping gait.
Italian red pied cattle red, spotted dual-purpose cattle from Italy, originated from Simmental.
Italian spinone see **Spinoni Italiani**.
itch [*ich*] a skin disease attended with itching.
girth i. dermatitis behind the elbow in the horse. Due usually to ringworm, the infection being transmitted by the girth strap.
grain i. pruritic dermatitis due to a mite, *Pyemotes ventricosus*, which preys on certain insect larvae which live on straw, grain and other plants.
ground i. the pruritic eruption caused by the entrance into the skin of the hookworm larvae. See also **bunostomiasis**, **ancylostomiasis**, **uncinariasis**.
jockey i. see **ringworm**.
mad i. see **Aujeszky's disease**.
muck i. see equine **allergic** dermatitis.
Newmarket itch see **ringworm**.
Queensland i. see equine **allergic** dermatitis.
summer i. sweet itch.
sweet i. see equine **allergic** dermatitis.
itchiness pruritus.
itching [*ich'ing*] pruritus; an unpleasant cutaneous sensation, provoking the desire to scratch or rub the skin.
itchy leg see ***Chorioptes***.
item in statistical terms a single observation.
-itis pl. *-itides;* word element. [Gr.] *inflammation*.
ito cell see **lipocyte**.
ITP 1. idiopathic thrombocytopenic purpura. 2. inosine triphosphate.
itraconazole [*it"rə-kon'ə-zōl*] a triazole antifungal agent, used parenterally in the treatment of systemic fungal infections and dermatophytosis.
IU International Unit.
IUCD intrauterine contraceptive device.
IUCN International Union for the Conservation of Nature and Natural Resources.
IUD **intrauterine** contraceptive device.
IUDZG International Union of Directors of Zoological Gardens.
IV, i.v. intravenous, intravenously.
Iva angustifolia North American member of the plant family Asteraceae; contains an unidentified toxin; causes abortion in cattle. Called also narrow-leaved sumpweed.
-ive suffix meaning pertaining to.
ivermectin [*i"vər-mek'tin*] an avermectin with broad activity against many helminths and arthropods. A broad-spectrum anthelmintic, acaricide and insecticide, used orally, subcutaneously and as a pour-on. It has found use in the treatment of generalized demodecosis in dogs with a variety of treatment protocols. Because of an inherited defect of the **MDR1 gene**, Collies and related breeds are particularly susceptible to the side effects, which include lethargy, ataxia and mydriasis, and which precludes use in those breeds.
IVF in vitro fertilization.
IVIS International Veterinary Information Service; a non-profit organization that provides free access to veterinary publications and a calendar of veterinary events using internet technology.
IVM in vitro maturation.
ivory [*i'vo-re*] exceptionally hard dentin which forms the tusks of elephants, walruses, hippopotami and some other animals.

I-13: Six-legged *Ixodes* larva.
From Bowman, Dwight D. Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

IVP 1. intravenous pyelography; intravenous pyelogram. 2. in vitro production (of embryos).
ivy [*i've*] *Hedera helix*; called also English ivy.
ivy loop technique a method of stabilizing fractures of the mandible or maxilla by wiring around two adjacent teeth.
ivybush ***Kalmia*** *latifolia*.
Ixiolaena brevicompta see ***Leiocarpa brevicompta***.
Ixodes [*iks-o'dez*] a genus of hard-bodied ticks in the family Ixodidae. Some species are vectors of disease.
I. angustus a dog tick.
I. canisuga a dog tick found also on foxes and occasionally other species in Europe.
I. cookei found on a variety of species.
I. cornuatus found on dogs and other species in Australia; may cause paralysis.
I. dammini a three-host tick, important transmitter of *Borrelia burgdorferi* in the USA.
I. hexagonus the hedgehog tick, found also on dogs and other species in Europe.
I. holocyclus a tick of bandicoots in Australia; found also on other species. Transmits *Coxiella burnetii* and causes tick paralysis by a toxin secreted by its salivary glands. It also produces a cardiovascular component which causes intense vasoconstriction, high blood pressure and death.
I. kingi the rotund tick of dogs.
I. loricatus a very rare infestation in New World primates.
I. muris the mouse tick, found on dogs.
I. ornithorhynchi the platypus tick.
I. pacificus the California or Western black-legged tick, found on most species. May transmit Lyme disease to humans.
I. persulcatus transmits *Babesia* spp.
I. pilosus bush, sour-veld or russet tick found on most species. Does not cause paralysis.
I. ricinus the castor-bean tick, found on many species of mammals and birds in Europe. Transmits *Babesia divergens*, *B. bovis*, *Anaplasma*, tick pyemia, *Coxiella burnetii*, several human encephalitides and also causes paralysis.
I. rubicundus infests most species but not cat, horse or bird. Causes paralysis.
I. rugosus found on dogs.
I. scapularis shoulder or black-legged tick; found on most species. May transmit anaplasmosis, tularemia and Lyme disease to humans.
I. sculptus found on dogs.
I. texanus found on dogs.
ixodiasis [*ik"so-di'ə-sis*] any disease or lesion due to tick bites; infestation with ticks.
ixodic [*ik-sod'ik*] pertaining to, or caused by, ticks.
ixodid [*ik'so-did*] a tick of the family Ixodidae.
Ixodidae [*ik-sod'i-de*] a family of ticks comprising the hard-bodied ticks.

VetBooks.ir

J

J symbol for *joule*.

J antigen the basis of the J **blood** group system in cattle.

J chain a small polypeptide that links (joins) monomeric components of IgM and IgA molecules; may be responsible for maintaining the polymeric form.

J genes genes coding for the J chain of IgM and IgA molecules. Also, gene segments present in multiple divergent copies, assembled with V and D gene segments in the process of immunoglobulin and T-cell receptor assembly, contribute to the diversity of these receptors.

J receptor see **juxtacapillary** receptor.

jaagsiekte [*yahg-sēk'tə*] [Af.] 1. see ovine **pulmonary** adenomatosis. 2. respiratory insufficiency syndrome in horses caused by bronchiolar hyperplasia induced by pyrrolizidine alkaloids from *Crotalaria* spp. in southern Africa; also reported from Australia; may or may not be associated with hepatic pyrrolzidine alkaloidosis. Term means 'panting sickness' with reference to prominent lung lesions.

jaagsiektebossie *Crotalaria dura*, *C. globifera*.

jabot see **frilled**.

jack 1. male donkey; called a stallion in Great Britain. 2. see **track leg**.

j. colt male donkey less than 3 years of age.

mule j. one bred to mares for the production of mules.

Jack Dempsey (*Rocio octofasciata*) a brightly colored, popular aquarium fish named after an American boxer of the 1920s. A territorial and aggressive fish.

jack-in-the-pulpit see ***Arisaema***.

Jack Russell terrier a small, very active dog, usually with a docked tail, and with a white coat with brown, lemon or black patches. In many countries, it is not a breed recognized by this name and there is considerable variation between the many types of dogs called Jack Russell or **Parson Russell terriers**, particularly in body size, length of legs, and texture and length of coat. In the UK, where they are recognized as separate breeds, the Jack Russell terrier is smaller than the Parson Russell terrier. The 'breed' is affected by an inherited form of myasthenia gravis and a progressive ataxia.

jack sores see cutaneous **habronemiasis**.

jackal member of the family Canidae, standing midway between the fox and the wolf in size and habits. It is slender, long-legged with a pointed muzzle, has a disagreeable yapping voice, is nocturnal and hunts in packs. It is a predator and a scavenger. Includes *Canis aureus*, the oriental jackal, and *C. mesomelas*, the black-backed jackal.

jackrabbit see **hare**.

jacks see bone **spavin**.

Jackson Rees T-piece a modification of a T-piece anesthesia circuit in which the breathing bag is attached to the end of the expiratory limb.

Jackson technique [*Jack'son*] a method of ligating a patent ductus arteriosus that eliminates dissection around the medial side of the ductus.

jacksonian seizures [*jak-so'ne-ən*] a form of seizures marked by clonic movements that start in one muscle group and spread systematically to adjacent groups. Called also marching seizures.

jackstones see silica **urolith**.

Jacobaea see ***Senecio***.

jacobine [*ja'ko-bin*] a pyrrolizidine alkaloid found in the weed *Senecio jacobea*.

Jacob sheep [*zhah-kōb'*] an ornamental four-horned British sheep, which originally served a dual purpose. Spotted, dark brown on face.

Jacobson's organ [*ja'kəb-səns*] vomeronasal organ.

Jafarabadi, Jaffarabadi a domestic Indian buffalo breed, used for dairying; usually black, with large drooping horns.

Jaffe reaction, Jaffe test [*yah'fə*] see alkaline **picrate** test

jaguar (*Panthera onca*) a large, powerful cat in the family Felidae, native to Central and South America. It has a tawny yellow coat with black spots of irregular size and shape; occasionally, they may be all black.

jaguarundi (*Puma yagouaroundi*) a member of the family Felidae, native to southern US, Central and South America. They are slender, otter-like, with gray, black or reddish coat and no spots, except when very young. They are a protected species in the US.

Jakta slaughter see **Sikh slaughter**.

jalap [*jal'ap*] the dried root of *Exogonium purga*. A violent cathartic long since purged from the pages of pharmacology textbooks.

Jamaica black a breed of polled, black beef cattle bred in Jamaica from Aberdeen Angus and Zebu cattle.

Jamaica Brahman cattle bred up from Ongole, Hissar and Mysore zebus.

Jamaica hope a dairy breed produced in Jamaica from Jersey and Zebu breeds.

Jamaica red a red beef breed produced in Jamaica from Zebu, Red Poll and Devon cattle.

James fibers conduction fibers that originate in the atrial internodal tracts and pass to the ventriculum but bypass the AV node. Called also James accessory conduction.

Jamestown Canyon virus serotype of California group of viruses capable of causing equine encephalitis in horses.

Jamestown weed, Jamestown lily ***Datura*** *stramonium*; derived from Jamestown, Virginia.

Jamshidi biopsy needle a tubular needle with a cone-shaped tip with cutting edge used for obtaining a bone-marrow core.

janet [*zhah-na'*] a female mule.

janiceps [*jan'ĭ-seps*] a conjoined twin with one head and two opposite faces.

Jansen retractor [*Jan'sen*] a handheld retractor used in abdominal surgery.

januariebos ***Gnidia*** *polycephala*.

January disease version of East Coast Fever, occurring in Central Africa, caused by *Theileria parva bovis* transmitted by *Rhipicephalus appendiculatus*.

Japanese Akita Inu a breed recognized outside the US and Canada as separate from the American **Akita**. It is somewhat smaller and the breed standard is more restrictive in coloration. It is said to represent the traditional Japanese standards.

Japanese amberjack ***Seriola*** *quinqueradiata*.

Japanese black breed of cattle developed by crossing one of the indigenous breeds of Japanese cattle with European cattle. Black,

J-1: Jacob sheep.

J-2: Jamshidi bone marrow biopsy needle. From Taylor SM, Small Animal Clinical Techniques. Saunders, 2010.

J-3: Jaundice in a horse's oral mucosa. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

VetBooks.ir

horned (some polled), small, fine-boned; used principally for meat, some draft, occasionally milk. Similar breeds are Japanese brown, Japanese polled.

Japanese bobtail a breed of cats with a very short tail which has a pompon or fluffy appearance. The coat is medium-length and comes in many colors.

Japanese brown cattle light grown to red-brown beef cattle bred from local cattle and Simmental and Devon.

Japanese chin a very small lively dog with a large, rounded head, very short muzzle, large eyes, profuse, long silky coat in black and white or red and white and a plumed tail carried over the back. Called also Japanese spaniel.

Japanese encephalitis (JE) see **encephalitis**.

Japanese encephalitis virus a member of the family *Flaviviridae* and transmitted by mosquitoes from asymptomatic avian reservoir hosts. A major cause of morbidity in humans and domestic animal species, particularly pigs, in which it causes abortion. See also Japanese **encephalitis**.

Japanese killifish see **medaka**.

Japanese pieris ***Pieris japonicum***.

Japanese poll cattle polled black meat cattle formed by crossing native cattle with Angus.

Japanese river fever see **scrub** typhus.

Japanese Shiba inu a small, spitz-type dog with small eyes, erect ears and a dense, straight coat.

Japanese spaniel see **Japanese chin**.

Japanese spitz a small (13 lb), lively dog with a pointed muzzle, triangular-shaped, erect ears and a pure white coat, particularly thick on the neck, shoulders and tail.

jasmine ***Cestrum diurnum***.

Jatropha [*jat'ro-fə*] a genus of the plant family Euphorbiaceae; some plants contain irritant diterpenoid purgatives and cause diarrhea. Includes *J. curcas* (physic or purging nut), *J. gossypifolia* (bellyache bush), *J. multifida* (umbrella tree, coral bush), *J. podagrica* (coral plant), *J. stimulosa* (spurge nettle); some cause cyanide poisoning, e.g. *J. multifida* (umbrella tree, coral bush).

jaundice [*jawn'dis*] yellowness of skin, sclerae, mucous membranes, and excretions due to hyperbilirubinemia and deposition of **bile** pigments. Called also icterus. It is usually first noticeable in the sclera. The pigment causing jaundice is called **bilirubin**. It is derived from hemoglobin that is released when erythrocytes are hemolyzed and therefore is constantly being formed and introduced into the blood as worn-out or defective erythrocytes are destroyed by the body. Normally the liver cells absorb the bilirubin and secrete it along with other bile constituents. If the liver is diseased, or if the flow of bile is obstructed, or if destruction of erythrocytes is excessive, the bilirubin accumulates in the blood and eventually will produce jaundice. Determination of the concentration of bilirubin in the blood is of value in detecting elevated bilirubin concentrations at the earliest stages before jaundice appears, when liver disease or hemolytic anemia is suspected.

acholuric j. jaundice without bilirubinemia, associated with elevated unconjugated bilirubin that is not excreted by the kidney.

cholestatic j. that resulting from abnormality of bile flow in the liver.

hematogenous j. hemolytic jaundice.

hemolytic j. jaundice associated with hemolytic **anemia** in which most of the bilirubin is unconjugated. Called also retention jaundice, prehepatic jaundice.

hemorrhagic j. leptospirosis.

hepatocellular j. jaundice caused by injury to or disease of the liver cells.

j. index see **icterus** index.

nonhemolytic j. that due to an abnormality in bilirubin metabolism.

obstructive j. that due to blockage of the flow of bile, resulting in conjugated hyperbilirubinemia. Called also regurgitation jaundice.

overproduction j. see hemolytic jaundice (above).

regurgitation j. obstructive jaundice (above).

toxic j. see hepatocellular jaundice (above).

Javanese a long-haired breed of cat almost identical to the **Balinese** (a near neighbor), but with wider variety of colored points.

jaw [*jaw*] either of the two opposing bony structures (maxilla and mandible) of the mouth of vertebrates; they bear the teeth and are used for seizing prey, for biting, or for masticating food.

j. bone the mandible or maxilla, especially the mandible.

acute j. drop syndrome see **mandibular** neuritis.

j. champing involuntary, rapid, repetitive clenching of the teeth; accompanied by frothing of saliva; frequently accompanies clonic convulsions.

j. chattering involuntary, rapid clicking together of the teeth without salivation and usually accompanied by generalized shivering; in animals, may be a sign of painful teeth.

dropped j. see **mandibular** neuritis.

j. locking a dislocation of the jaw, usually following wide opening, in which the mouth cannot be closed. See also **temporomandibular** dysplasia.

lumpy j. see **actinomycosis**. The etiology in captive macropods is unclear but is probably *Fusobacterium* spp.

j. malapposition see **malocclusion**.

overshot j. see **brachygnathism**.

pig j. see **brachygnathism**.

j. retractor a dental gag used to keep the jaws of an animal as open as possible.

rubber j. see renal secondary **hyperparathyroidism**.

undershot j. see **undershot**.

JE Japanese encephalitis.

jejunal [*jə-joo'nəl*] pertaining to the jejunum.

j. hemorrhage syndrome a sporadic disease with high case fatality that occurs in dairy cattle and to a lesser extent beef

cattle. Cows may be found dead or present in shock with severe pain and an acute abdomen, a 'ping' and fluid-splashing sounds over the right abdomen, melena, and distended loops of intestine on per-rectal palpation. Associated with segmental intramural hemorrhage in the proximal small intestine. In these areas there is hemorrhage with immediate clotting, forming a functional occlusion of the small intestinal lumen. The cause is not known but a variant of *Clostridium perfringens* has been suggested.

jejunectomy [*jĕ"joo-nek'tə-me*] excision of the jejunum.

jejunitis [*jĕ"joo-ni'tis*] inflammation of the jejunum.

jejunocecostomy [*jə-joo"no-kə-los'tə-me*] anastomosis of the jejunum to the cecum.

jejunocolostomy anastomosis of the jejunum to the colon.

jejunoileal [*jə-joo"no-il'e-əl*] pertaining to the jejunum and ileum; connecting the proximal jejunum with the distal ileum.

jejunoileitis [*jə-joo"no-il"e-i'tis*] inflammation of the jejunum and ileum.

jejunoileostomy [*jə-joo"no-il"e-os'tə-me*] surgical creation of an anastomosis between the proximal jejunum and the terminal ileum; anastomosis of the jejunum to the ileum.

jejunoileum the jejunum and the ileum considered as a single organ.

jejunojejunostomy [*jə-joo"no-jə"joo-nos'tə-me*] surgical anastomosis between two portions of the jejunum.

jejunorrhaphy [*jĕ"joo-nor'ə-fe*] operative repair of the jejunum.

jejunoscopy inspection of the lumen of the jejunum with an endoscope.

jejunostomy [*jĕ"joo-nos'tə-me*] surgical creation of a permanent opening between the jejunum and the surface of the abdominal wall.

j. tube a surgically positioned tube in the jejunum, protruding through the skin; it is used for enteral feeding when it is necessary to bypass the upper gastrointestinal tract.

jejunotomy [*jĕ"joo-not'ə-me*] incision of the jejunum.

jejunum [*jə-joo'nəm*] that part of the small intestine extending from the duodenum to the ileum.

jelly [*jel'e*] a soft, coherent, resilient substance; generally, a colloidal semisolid mass.

cardiac j. a gelatinous substance present between the endothelium and myocardium of the embryonic heart that transforms into the connective tissue of the endocardium.

Wharton's j. the soft, jelly-like intracellular substance of the umbilical cord.

jellyfish members of the class of aquatic animals the Scyphozoa, the true jellyfishes, in the phylum Cnidaria. All possess cnidia or stings and are capable of causing stings to animals and can be especially damaging when invading fish farms.

box j. distinct from other jellyfish, they are in the order Cubomedusae; one of the most venomous creatures in the world, a massive dose of their neurotoxic venom is capable of causing death in an adult human within minutes. Called also sea wasp.

Jembrana disease acute, sometimes fatal infection of the immune system of Bali cattle in Indonesia and transmitted via hematophagous arthropods. The major clinical signs are high fever, lethargy, anorexia and enlargement of the superficial lymph nodes with severe leucopenia. The cause is a lentivirus. The severity of the disease can be reduced by vaccination.

jennerian [*jen-e're-ən*] relating to Edward Jenner, who developed vaccination in England in 1796.

Jenner's horsepox [*jen'ər*] see **horsepox**.

jennet jenny.

jenny female donkey, called also jennet; called a mare in Great Britain.

j. filly one less than 3 years of age.

jequirity bean see ***Abrus*** *precatorius*.

jerboa mouse-sized rodents in the family Dipodidae, native to Asia and North Africa; they have very long hindlegs adapted for jumping and a long, tufted tail. There are many species.

jerk [*jurk*] a sudden reflex or involuntary movement.

ankle j. see **gastrocnemius reflex**.

biceps j. called also elbow jerk; see **biceps** reflex.

elbow j. see biceps jerk (above).

j. nystagmus see vestibular **nystagmus**.

J-4: Jersey dairy cow. From Sambraus HH, Livestock Breeds. Mosby, 1992.

patellar j. see **patellar** reflex.

tendon j. see tendon **reflex**.

Jersey a Channel Island breed; fawn, mulberry or gray, dairy cattle often with black pigmentation of the skin. Has a lower milk production but a higher fat concentration in milk than Holstein cattle.

Jersian a crossbreed produced by a Jersey bull on a Friesian cow. Called also F–J hybrid.

Jerusalem thorn see ***Parkinsonia aculeata***.

jervine a steroidal alkaloid contained in the root of ***Veratrum*** *album*.

jessamine common name for plants in the genera *Jasminum*, ***Cestrum*** and **Gelsemium sempervirens** (Carolina or yellow jessamine). Includes day-blooming jessamine (*C. diurnum*), willow-leafed jessamine (*C. parqui*).

jesse, jess a leather strap placed around each shank of a hawk used for hunting, for the attachment of a leash.

jet lesion [*jet*] localized areas of subendocardial fibrosis, usually in the atria, thought to be due to abnormal jets of blood caused by valvular lesions.

jetting application of insecticide to sheep by use of a high-pressure spraying machine. The jets at the head of the handheld appliance are combed through the wool so that the jetted fluid penetrates to the skin. See also **dip**, **dipping**.

jeukbol ***Urginea*** *altissima*.

Jeweler's forceps a range of microvascular instruments, numbered according to size with the highest number being the smallest, used for working with small vessels.

Jewish slaughter an abattoir technique of killing in which the animal must be conscious; in some countries it is required to use a rotating casting pen to restrain the animals. The throat and its vessels must be severed with one thrust of a very sharp knife whose length is about twice as long as the width of the neck. Only cattle, calves, sheep, goats, deer, and poultry are allowed to be killed for Jewish consumption. Called also shechita.

jibbing a vice in which the horse refuses to move forwards and may run backwards when in harness. Called also balking.

jigger [*jig'ər*] see ***Tunga*** *penetrans*. Called also chigoe or jigger flea.

jill a female ferret.

jimmies fits of trembling and convulsions suffered by sheep, cattle and goats which have eaten jimmy ferns, ***Cheilanthes*** *sinnata*.

jimmy weed ***Haplopappus*** *heterophyllus*.

Jimson weed [*jim'sən wēd*] corruption of the name 'Jamestown weed', ***Datura*** *stramonium*.

Jindo a medium-sized, spitz-type hunting dog from the Korean island of Jindo. The tick coat can be any color, but is often all white. Called also Korean Jindo.

jird *Meriones unguiculatus*; see Mongolian **gerbil**.

jitter [*jit'ər*] see **neuromuscular** jitter.

Job's tears see **Coix lachryma-jobi**.

Joest bodies, Joest–Degen bodies [*yerst*] intranuclear bodies, sometimes intracytoplasmic, found in neurons in the brains of animals with Borna disease.

johanneskruid ***Hypericum*** *aethiopicum*.

Johne's disease [*yō'nəz*] a specific infectious disease of cattle, sheep, camelids and goats caused by ***Mycobacterium*** *avium* subspecies *paratuberculosis*. In cattle it is characterized by chronic diarrhea and thickening and corrugation of the intestinal wall. In all species there is progressive wasting. The subject of regional and national control programs in many countries. Called also paratuberculosis. A disease notifiable to the OIE (see Table 22).

J

J-5: Thick, transverse rugae in the ileum of a cow with Johne's disease (right), compared with normal ileum (left). From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

johnin [*yo'nin*] an extract of the culture of ***Mycobacterium*** *avium* subspecies *paratuberculosis* used in a cutaneous delayed hypersensitivity test for Johne's disease. A positive test is a thickening and edema at the site of injection 48 hours later.

johnny hairy-legs the house centipede (*Scutigera* spp.), which can inflict a painful bite. It is light brown, 2 inches long with 15 pairs of legs and runs like a spider with the body off the ground.

Johnson grass ***Sorghum*** *halepense*.

joining mating, usually one male with a group of females.

first j. age a critical point in the economy of a herd or flock. In seasonal animal production systems unnecessary delay may cause loss of a year's productivity for each female. Starting too early may cause losses due to difficult parturition in small dams and a poor conception rate.

j. programs include special arrangements for the percentage of males used, periods males left in, a succession of males, use of teasers beforehand.

joint [*joint*] the site of the junction or union of two or more bones of the body. See also **arthritis**. The primary functions of joints are to provide motion and flexibility to the skeletal frame, or to allow growth. Some joints are immovable, such as certain fixed joints where segments of bone are fused together, as in the skull. Other joints, such as those between the vertebrae, have limited motion. However, most joints allow considerable motion. Many joints have a complex internal structure. They are composed not merely of ends of bones but also of ligaments, which are tough whitish fibers binding the bones together; cartilage, which is connective tissue, covering and cushioning the bone ends; the articular capsule, a fibrous tissue that encloses the ends of the bones; and the synovial membrane, which lines the capsule and secretes a lubricating fluid (synovia). Joints are classified by variations in structure that make different kinds of movement possible. The movable joints are mostly synovial joints that are usually subdivided into hinge, pivot, gliding, ball-and-socket, condyloid and saddle joints. The other joints are either fibrous joints (sutures and syndesmoses) or cartilaginous joints (synchondroses or symphyses). For a complete named list of joints in the body see Table 11.

arthrodial j. gliding joint.

ball-and-socket j. a synovial joint in which the rounded or spheroidal surface of one bone ('ball') moves within a cup-shaped depression ('socket') on another bone, allowing greater freedom of movement than any other type of joint. Called also spheroidal joint.

biaxial j. permits movement around two axes.

cartilaginous j. one in which the bones are united by cartilage, permitting either slight movement (**symphysis**) or allowing growth (**synchondrosis**).

condyloid j. one in which an ovoid head of one bone moves in an elliptical cavity of another, permitting all movements except axial rotation. Called also condylar joint.

congenital j. disease see **articular** rigidity, **joint** hypermobility, **arthrogryposis**, **contracture**.

j. contracture see **contracture**.

degenerative j. disease can occur in the joints of all species and at all ages, but especially evident in **coxofemoral** arthropathy in bulls and **hip** dysplasia in dogs. See also **osteoarthritis**.

diarthrodial j. former name for any synovial joint.

j. disease see **arthritis**, **arthropathy**, **joint-ill**, **ankylosis**, **articular** rigidity.

ellipsoid j. circumference of the joint is an ellipse with the articular surfaces longer in one direction than the other.

j. enlargement includes arthritis, arthropathy, rickets.

facet j's the synovial joints of the vertebral column between the neural arches. Called also zygapophyseal joints.

false j. a fracture in a long bone that does not heal; the ends callus over and there is mobility at the point.

fibrocartilaginous j. a combination of fibrous and cartilaginous joints; they have limited and variable movement.

fibrous j. one in which the bones are connected by fibrous tissue; it includes sutures whose presence permits growth, syndesmoses whose presence allows modest, if limited movement, and gomphoses in which a tooth is anchored in its socket and can allow a small amounts of give.

j. fixation includes ankylosis, tendon contracture, arthrogryposis.

fixed j. a former classification that included the fibrous joints (above); see also **synarthrosis**.

flail j. an unusually mobile joint.

fleshy j. see **sarcoarthrosis**.

j. fusion arthrodesis.

ginglymus j. see hinge joint (below).

gliding j. a synovial joint in which the opposed surfaces are flat or only slightly curved, so that the bones slide against each other in a simple and limited way. The synovial intervertebral joints are gliding joints, and many of the small bones of the carpus and tarsus meet in gliding joints. Called also arthrodial joint and plane joint.

hinge j. a synovial joint that allows movement in only one plane, through the presence of a pair of collateral ligaments that run on either side of the joint. Examples are the elbow and the interphalangeal joints of the digits. The jaw is primarily a hinge joint, but it can also move somewhat from side to side. The carpal and tarsal joints are hinge joints that also allow some rotary movement. Called also ginglymus.

hip j. the ball-and-socket joint between the head of the femur and the acetabulum of the hip bone; loosely called hip.

hyaline cartilage j. see cartilaginous joint (above).

j. hyperextension joint can be extended beyond the normal position.

j. hypermobility usually a congenital defect with all joints affected. Degree varies from extreme, in which limbs can be tied in knots and animal unable to stand, to mild, in which the patient is able to walk but the gait is abnormal. There may be additional defects such as pink teeth lacking enamel and dermatosparaxis (hyperelastosis cutis). See also **hereditary** collagen dysplasia.

knee j. 1. the compound joint between the femur and tibia, fibula and patella. 2. in large ungulates the compound joint between the radius, ulna, carpus and metacarpus.

j. laxity unusual movement of joints due to muscle weakness and laxity of the flexor and extensor tendons. A sign of prematurity or dysmaturity in newborn foals.

j. mouse fragments of cartilage or bone that lie free in the joint space. See also joint **mouse**.

osseous j. inflexible joint composed of bone; called also synostosis.

pivot j. a joint in which one bone pivots within a bony or an osseoligamentous ring, allowing only rotary movement; an example is the joint between the first and second cervical vertebrae (the atlas and axis).

plane j. see gliding joint (above).

j. receptors sensory nerve endings capable of detecting the position or angle of the joint.

saddle j. the articulating surfaces are reciprocally saddle-shaped and permit movement of all kinds, though not rotation, e.g. interphalangeal joints in the dog.

spheroidal j. see ball-and-socket joint (above).

synarthrodial j. a fixed joint where the uniting medium is either fibrous tissue, cartilage or bone.

synovial j. a specialized form of articulation permitting more or less free movement, the union of the bony elements being surrounded by an articular capsule enclosing a cavity lined by synovial membrane. Formerly called also diarthrosis and diarthrodial joint.

trochoid j. see pivot joint (above).

uniaxial j. permits movement in one direction only.

VetBooks.ir

J-6: Tendon and joint laxity in a premature foal. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders. 2008.

zygapophyseal j. see facet joints (above).

joint-ill [*joint- il*] a nonspecific, usually purulent and bacterial, arthritis of the newborn resulting from an omphalitis which is usually still in evidence. There is fever, toxemia and severe lameness. In many cases there are other, similar lesions in other organs.

JOINTEX Joint Exercise in Animal Health and Productivity; a 3-year survey of the effects of combined management and health advice to dairy farmers conducted in the UK in the late seventies.

jojoba *Simmondsia chinensis*.

Jonas splint a popular intramedullary fracture maintenance splint for dogs and cats which was excellent in principle but caused too many cases of latent osteomyelitis and is no longer in use.

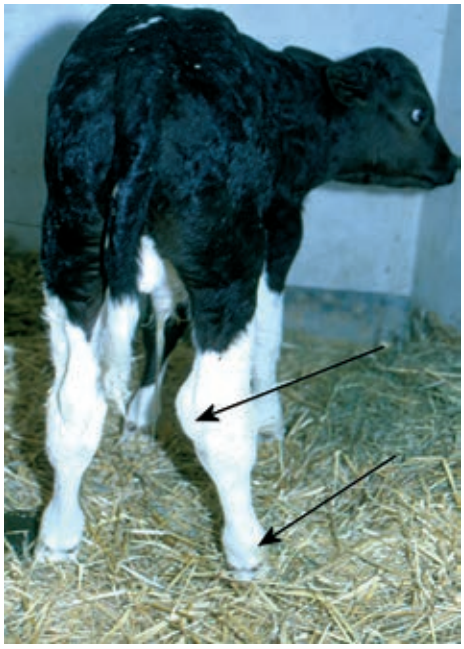
Jones clamp [*jōnz*] a towel clamp with a crossover action, thumb operated and with sharp single teeth at the end of narrow blades.

Jones terrier [*jōnz*] an early name for the Norwich terrier.

Jones test [*jōnz*] see **fluorescein** passage test.

jonquil see ***Narcissus***.

josamycin [*jo"sə-mi'sin*] a macrolide antibiotic similar in effect to erythromycin.



J-7: Joint-ill.

joule (J) [*jōōl*] the SI unit of energy, being the work done by a force of 1 newton acting over a distance of 1 meter.

Joule–Thomson effect [*jōōl*] the principle of rapid gas expansion to achieve ultracold in cryoprobes used in cryosurgery.

jowl external throat or upper neck, especially if fat or loose skin is present. Anterior to the **dewlap**.

j. abscess see **cervical abscess of pigs**.

Joyeuxiella a genus of tapeworms of dogs and cats of the family Dipylidiidae.

JPS juvenile pubic **symphysiodesis**.

juba mane, e.g. of the horse.

jugal [*joo'gəl*] pertaining to the cheek or zygomatic (cheek) bone.

j. arch avian homolog of the mammalian zygomatic arch.

j. point the point at the angle formed by the masseteric and maxillary edges of the zygomatic bone.

jugale [*joo-ga'le*] **jugal** point.

Juglans nigra [*joo'gləns*] shavings of the wood of this North American tree in the family Juglandaceae contain a toxin juglone; used as bedding, have caused edema of the lower limbs and laminitis in horses. Called also black walnut.

juglone naphthoquinone resinoid from *Juglans nigra*.

jugular [*jug'u-lər*] 1. pertaining to the neck. 2. one of the jugular veins.

j. furrow the groove on each side of the neck in which the external jugular vein can be located; lies dorsal to the trachea between the sternocephalic muscle ventrally and the brachiocephalic muscle dorsally. Called also *sulcus jugularis*.

j. inlet the depression at the base of the neck where the jugular vein passes medial to the first rib. Examination of the inlet is valuable because it is possible to determine the activity and efficiency of the right atrium and the patency of the jugular vein by observing the movements of the vein's wall.

j. vein distention see jugular vein engorgement (below).

j. vein engorgement is a clinical indicator of obstruction to the return of blood to the right atrium, e.g. because of congestive heart failure or space-occupying lesion in the anterior thorax.

j. veins two pairs of large veins, internal and external, that return blood to the heart from the head and neck. The common site for venepuncture in horses and cattle, useful but less often used in dogs and cats, and the preferred site in psittacine birds.

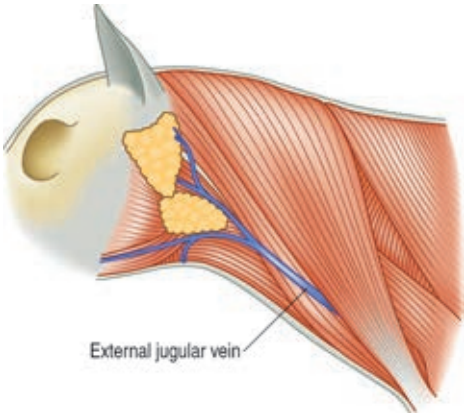
jugum [*joo'gəm*] pl. *juga* [L.] a depression or ridge connecting two structures.

j. alveolaris a ridge in the jawbone over the site of impending eruption of a tooth.

juice [*jōōs*] any fluid from animal or plant tissue.

J-8: A three-month-old calf with swelling of the ventral neck due to a hematoma. The left jugular vein is markedly engorged.

VetBooks.ir



J-9: External jugular vein in the dog.
From McCurnin D, Poffenbarger EM, Small Animal Physical Diagnosis and Clinical Procedures. Saunders, 1991.

gastric j. the liquid secretion of the gastric glands. See also **gastric** juice.
intestinal j. the liquid secretion of glands in the intestinal lining.
pancreatic j. the enzyme-containing secretion of the pancreas, conducted through its ducts to the duodenum.
prostatic j. the liquid secretion of the prostate, which contributes to semen formation. See **prostatic** fluid.

jumbey the name given in the West Indies to the disease caused in animals by the ingestion of ***Leucaena leucocephala***.

jump-down syndrome traumatic fragmented medial **coronoid process**.

Junco pox a disease of *Junco hyemalis* (slate-colored junco of the west coast of USA and Canada) caused by an avian poxvirus similar to fowlpox virus.

junction [*junk'shən*] the place of meeting or coming together.
cell j. specialized regions of the cell surface where adjacent eukaryotic cell membranes are joined. Functionally, there are three types: **tight junctions** (impermeable), **gap junctions** (communicating) and adhering junctions (**desmosomes**).
corneoscleral j. see **corneoscleral** junction.
costochondral j. the joint between the bony dorsal part of a rib and the ventral cartilaginous part.
ileocecocolic j. the T-junction between the ileum and the large intestine; in the cat the ileum and the colon merge end to end, the cecum enters from the side; in the horse the ileocecal and the cecocolic junctions are separated from each other.
mucocutaneous j. see **mucocutaneous** margin.
neuromuscular j. see **neuromuscular** junction.
sclerocorneal j. see **corneoscleral** junction.

junctional [*junk'shən-əl*] pertaining to a junction or join.
j. complex an attachment point between epithelial cells composed of a number of complex structures, including **desmosomes** and **gap junctions**.
j. diversity the diversity in the amino acid sequence of antibodies is, in part, due to the different amino acid sequences generated at the junctions of the variable and constant regions in the process of VJD assembly.
j. mechanobullous disease inherited defect of skin in Belgian foals, Angus and Simmental calves, Suffolk and South Dorset lambs. See **epidermolysis** bullosa.

junctional premature beats see **premature** heartbeats.

junctionopathy a disorder of the neuromuscular junction, e.g. botulism, tick paralysis, myasthenia gravis.

junctura [*junk-too'rə*] pl. *juncturae* [L.] see **junction**, **joint**.
j. cranii articulations of the skull.
j. zygapophyseales synovial intervertebral joints.

Juncus a genus of plants in the rush family Juncaceae. Perennial herbaceous plants found in marshes, swamps and other poorly drained sites. Contain cyanogenetic glycosides and rarely cause poisoning. Includes *J. effusus*, *J. inflexus* (blue or hard rush), *J. glaucus* (*J. inflexus*), *J. holoschoenus*, *J. pauciflorus*, *J. prismatocarpus*.

juneberry see ***Amelanchier alnifolia***.

junglefowl see ***Gallus gallus***.

juniper [*joo'nĭ-pər*] see ***Juniperus***.

juniperene an alkaloid found in *Juniperus* spp.

Juniperus [*joo-nip'ər-əs*] a genus of coniferous trees in the plant family Cupressaceae; includes *J. communis*, *J. osteosperma*, *J. sabina*, *J. virginiana*; the leaves are reported to cause abortion in cows and ewes. Called also juniper.

jurisprudence [*jōōr"is-proo'dəns*] the science of the law.
medical j. the science of the law as applied to the practice of medicine.

Jussiaea ***Ludwigia***.

jute see ***Corchorus olitorius***.

juvenile [*joo'və-nīl*] 1. pertaining to young animals; young or immature. 2. a cell, tissue, disease or organism intermediate between the immature and mature forms.
j. aponeurotic fibroma see **multilobular** chondroma and osteoma.
j. bovine leukosis see **bovine** viral leukosis.
j. hormone juvenile hormone insect growth hormone; regulates larval development and metamorphosis. It acts to maintain the larval stage and retard maturation to the adult stage. See also **insect** growth regulators.
j. osteoporosis see **osteogenesis** imperfecta.
j. pancreatic atrophy see **pancreatic** acinar atrophy.

juvenoids see **insect** growth regulators.

juxta- word element. [L.] *situated near, adjoining*.

juxta-articular [*juks"tə-ahr-tik'u-lər*] near or in the region of a joint.

juxtacapillary [*juks"tə-kap'ĭ-lar"e*] close to a capillary.
j. receptor located in the lung, reportedly stimulated by lung congestion and edema. Called also J receptor.

juxtacortical [*juks"tə-kor'tĭ-kəl*] next to the cortex of the bone. Called also parosteal.
j. osteosarcoma periosteal osteosarcoma.

juxtaglomerular [*juks"tə-glo-mer'u-lər*] near to or adjoining a glomerulus of the kidney.
j. apparatus, j. complex a group of structures adjoining a renal glomerulus and which includes afferent and efferent arterioles, macula densa, extraglomerula mesangium and the juxtaglomerular cells (modified afferent arteriolar smooth muscle cells).

juxtamedullary [*juks"tə-med'u-lar"e*] on the edge of or close to the renal medulla.

juxtaposition [*juks"tə-pə-zish'ən*] apposition; a placing side by side or close together; the condition of being side by side or close together.

juxtapyloric [*juks"tə-pi-lor'ik*] near the pylorus.

juxtaspinal [*juks"tə-spi'nəl*] near the vertebral column.

juxtavesical [*juks"tə-ves'ĭ-kəl*] situated near or adjoining the urinary bladder.

VetBooks.ir

K

K 1. chemical symbol, *potassium* (L. *kalium*); symbol for *kelvin*. 2. equilibrium constant.
k symbol, *kilo-*.
κ kappa, small letter; tenth letter in the Greek alphabet.
K antigen see K **antigen**.
K cell killer cell.
K chain kappa chain.
K88 antigen a pilus antigen of *Escherichia coli*; provides adhesion of the bacteria to the epithelial lining of the intestine of piglets. Important in both neonatal and postweaning diarrhea. Called also F4.
K88 *Escherichia coli* scours the K88 antigen confers a potent pathogenicity on the serotypes of *E. coli* which carry it; the disease is an unusual form of neonatal scours in that some strains of *E. coli* lack the K88 antigen and that some families of pigs are not susceptible to the antigen.
K99 antigen pilus antigen of enterotoxigenic *Escherichia coli* of calves and piglets, responsible for adhesion of the bacterium to intestinal cells, which is essential for them to be pathogenic. Vaccines based on purified K99 antigen are used for the control of the disease. Called also F5 fimbriae.
kaalmelkbos ***Euphorbia*** *mauritanica*.
kaalsiekte [Af.] alopecia caused by *Chrysocoma tenuifolia* in lambs and kids; characterized by alopecia, pruritis, oculonasal discharge, alimentary tract obstruction by phytobezoar.
Kaeshi disease Ibaraki disease.
kaffir one of the types of grain **sorghum**.
kakiebos see ***Tagetes minuta***.
kakosmia [*kak-oz'me-ə*] cacosmia.
kala-azar [*kah'lah-ah-zahr'*] see **leishmaniasis**.
Kalanchoe genus of African and Madagascan plants in family Crassulaceae. Classified also as *Bryophyllum* spp. Includes *K. daigremontiana*, *K. delagoensis* (*tubiflora*), *K. integra*, *K. lanceolata*, *K. luerbitiana*, *K. paniculata*, *K. pentheri*, *K. pinnata*, *K. rotundifolia*, *K. K. spathulata*, *K. thyrsiflora*. Contain bufadienolide cardiac glycosides; some may cause **krimpsiekte**.
kale see ***Brassica*** *oleracea*.
marrowstem k. *Brassica oleraceae* var. *acephala*.
kalemia [*kə-le'me-ə*] the presence of potassium in the blood. See also **hyperkalemia**.
Kalicephalus a genus of hookworm of the family Diaphanocephalidae, found in snakes.
kaliemia [*ka"le-e'me-ə*] kalemia.
kaliopenia [*ka"le-o-pe'ne-ə*] hypokalemia.
kalium [L.] *potassium* (symbol K).
kaliuresis [*ka"le-u-re'sis*] excretion of potassium in the urine.
kaliuretic [*ka"le-u-ret'ik*] 1. pertaining to or promoting kaliuresis. 2. an agent that promotes kaliuresis.
kallidin [*kal'ĭ-din*] kinin liberated by the action of kallikrein on a globulin of blood plasma. Kallidin I is the same as bradykinin; kallidin II is composed of bradykinin with a lysine added at the *N*-terminal.
kallikrein [*kal"ĭ-kre'in*] any of a group of proteolytic enzymes present in various glands, lymph, urine, blood plasma, etc., or produced directly from mast cells or basophils, or indirectly from activated platelets. The major action of kallikreins is the liberation of kinins from α-2-globulins (kininogens), and they hence have vasodilator and whealing actions.
k.–kinin system an enzyme system which causes dilation of blood vessels and increases vascular permeability.
kallikreinogen [*kal"ĭ-kre-in'ə-jən*] the inactive precursor of kallikrein which is normally present in blood.
Kallstroemia unidentified toxin in North American plants of this genus in the family Zygophyllaceae causes incoordination, weakness, convulsions. Includes *K. hirsutissima* (hairy caltrop), *K. parviflora* (warty caltrop).
Kalmia [*kal'me-ə*] genus of North American trees in the family Ericaceae; contains the poisonous tetracyclic polyol, grayanotoxin (andromedotoxin); causes vomiting, incoordination, paralysis and hyperexcitability. Includes *K. angustifolia* (dwarf laurel), *K. latifolia* (mountain laurel), *K. polifolia* var. *microphylla* (hog laurel).
kamala [*kah'mə-lə*] derived from the plant *Mallotus philippinensis*; previously used as an anticestodal agent, but now replaced by better and safer compounds. Used in herbal medicine as a purgative and externally to treat ringworm and scabies..
Kamer grip applied to the head of the foal or calf fetus for the purpose of rotating it. The palm is placed on the calf's forehead with the thumb and the little finger each in an eye socket. It is then possible to pull, repulse and rotate the head.
kanamycin [*kan"ə-mi'sin*] an aminoglycoside antibiotic active against many gram-negative and acid-fast bacteria; a high potential for nephrotoxicity. Similar to amikacin.
kangaroo a large jumping marsupial (*Macropus* spp.) in the family Macropodidae, native to Australia and New Guinea. Characterized by a very large tail, very powerful hindlegs and relatively underdeveloped forequarters. Large male kangaroos can stand 6 ft tall and may weigh up to 220 lb. The predominent species are the Eastern gray kangaroo (*M. giganteus*), the red kangaroo (*M. rufus*), Western gray kangaroo (*M. fuliginosus*), and the Antilopine kangaroo (*M. antilopinus*).
k. apples ***Solanum*** *aviculare*, *S. laciniatum*, *S. simile*, *S. symonii*, *S. vescum*, *S. capsiciforme*.
k. posture see kangaroo **posture**.
k. rat see kangaroo **rat**.
kangaroo gait a syndrome observed in lactating sheep in Australia, New Zealand and England consisting of a polyneuropathy which selectively affects the radial nerves. It is manifested by an inability to advance the front feet in a coordinated way, resulting in a bounding gait similar to that of a kangaroo. Affected ewes recover at the end of lactation.
Kansas horse plague see equine viral **encephalomyelitis**.
Kantrowitz forceps a curved clamp with serrations at the end designed for thoracic surgery.
kaolin [*ka'o-lin*] native hydrated aluminum silicate; used externally as an adsorbent and protective and internally as a gastrointestinal adsorbent and demulcent in mild diarrhea. The basis of the antiphlogistine poultice. Called also China clay.
Kapp–Beck clamp a ratchet-handled, scissor-type forcep used as a coronary sinus clamp. Has delicate, curved, claw-like blades.
Kapp–Beck–Thomson clamp used as a bronchus clamp; ratchet-handled, scissor-type forceps with heavy blades, set at an angle to the handles and with grooved faces on the blades.
kappa [*kap'ə*] the tenth letter of the Greek alphabet, K or κ.
Karai virus a probable arbovirus isolated from Kenyan sheep which experience an unexplained mortality. *Rhipicephalus evertsi* ticks are suspected vectors.
karaka see ***Corynocarpus laevigatus***.
karakin toxic nitrocompound in *Corynocarpus laevigatus*.
Karakul an originally Russian breed of wool and milk sheep that produces the curly coated fleece so desired by hat and garment makers in Asia. There are many sub-breeds producing a variety of colored wools, varying from traditional black, through gray, brown, to rose, and occasionally spotted. The desirable wool is obtained only from the pelts of full-term, newborn lambs. Survival for a few days or prolongation of pregnancy seriously reduces the financial worth of the pelt. Called also caracul, Astrakhan.
karanja see ***Pongamia glabra***.
Karelian bear dog a Finnish dog breed used for hunting elk; named after a territory (Karelia) on the Russian–Finnish border. It is a large dog with a short, harsh black coat and white markings

K-1: Karakul sheep. From Sambraus HH, Livestock Breeds. Mosby, 1992.

on the face, throat, chest, feet and tail tip. The tail is carried over the back and the ears are erect.

Kartagener's syndrome [*kahr-tag'ə-nər*] a hereditary syndrome of humans consisting of dextrocardia, bronchiectasis and sinusitis. Cases of a similar disease are reported in dogs. The disease is primarily a defect in cilia motility. See primary **ciliary** dyskinesia.

Karwinskia humboldtiana [*kahr-win'skē-ə*] North American plant in the family Rhamnaceae; contains an unidentified toxin; causes degeneration of skeletal muscles and axonal dystrophy in the cerebellum and spinal cord. The clinical picture includes hypersensitivity, tremor, ataxia, recumbency and absence of tendon reflexes. Called also coyotillo, buckthorn, tullidora.

kary(o)- word element. [Gr.] *nucleus*.

karyocyte a nucleated cell.

karyogenesis the formation of a cell nucleus.

karyogram [*kar'e-o-gram"*] a graphic representation of a **karyotype**.

karyokinesis [*kar"e-o-kī-ne'sis*] division of the nucleus, usually an early stage in the process of cell division, or mitosis.

karyolymph the fluid portion of the nucleus of a cell, in which the other elements are dispersed.

karyolysis [*kar"e-ol'ə-sis*] dissolution of the cell nucleus.

karyomorphism [*kar"e-o-mor'fiz-əm*] the shape of a cell nucleus.

karyon [*kar'e-on*] the nucleus of a cell.

karyophage [*kar'e-o-fāj"*] a protozoan that phagocytizes the nucleus of the cell it infects.

karyoplasm [*kar'e-o-plaz"əm*] nucleoplasm.

karyopyknosis [*kar"e-o-pik-no'sis*] shrinkage of a cell nucleus, with condensation of the chromatin.

karyorrhexis [*kar"e-o-rek'sis*] rupture of the cell nucleus in which the chromatin disintegrates into formless granules that are extruded from the cell.

karyosome any aggregation of chromatin within a cell.

karyotheca [*kar"e-o-thē'kə*] the nuclear membrane.

karyotype [*kar'e-o-tīp*] the chromosomal constitution of the cell nucleus; by extension, the photomicrograph of chromosomes arranged in numerical order.

karyotyping 1. preparation of a **karyotype**. 2. test to examine chromosomes in a sample of cells in terms of size, shape and number. It is used to identify problems that may result in reproductive disorders.

Kasen disease see equine **allergic** dermatitis. Also sometimes attributed to *Onchocerca* spp. infestation.

Kashmiri a goat; see **Central Asiatic Pashmina**.

Kaswan technique a method for repair of prolapse of the third eyelid gland ('cherry eye') in which the gland is sutured to the orbital rim.

kat katal.

kata [*kah'tə*] see **peste des petits ruminants**.

kat(a)- word element. [Gr.] *down, against*. See also words beginning *cat(a)-*.

katal (kat) [*kat'əl*] the SI unit of measurement to express activities of all catalysts, including enzymes, being that amount of a catalyst that catalyzes a reaction rate of 1 mole of substrate per second.

katathermometer [*kat"ə-thər-mom'ə-tər*] a thermometer with a wet bulb and a dry bulb, for detecting cooling rates.

Katayama's disease [*kah-tah-yah'mah*] schistosomiasis.

katipo see ***Latrodectus*** *mactans*.

kava [*kah'və*] *Piper methysticum* a plant of the western Pacific region and beverage prepared from it; sometimes marketed as a herbal supplement. Leaves and stems are ssociated with liver toxicity in dogs

kb kilobase; a thousand bases or nucleotides in a nucleic acid molecule. See also **kbp**.

kbp kilobase pair; for double-stranded nucleotides, a thousand nucleotide base pairs.

kcal kilocalorie.

KCS keratoconjunctivitis sicca.

44-kDa phosphoprotein see **osteopontin**.

Ke cycle within the **Five element theory** of traditional Chinese medicine, this is the restraining or controlling cycle which operates in the reverse direction to the **Sheng cycle** and together they maintain balance in the body.

kebbing see **enzootic** abortion of ewes.

ked [*ked*] see ***Melophagus*** *ovinus*.

keel 1. the ventrally directed large surface of the bird's sternum, the site of attachment of the major muscles of flight. Called also carina. 2. the prominent area over the sternum in Dachshunds.

keeling the marking of ewes by the ram when they are mated by the marking on the ewe of paint or chalk from the sternum of the ram.

keep 1. to feed, e.g. long-keep steer. 2. pasturage.

Keeshond a medium-sized, short-coupled dog with very thick, medium length, ash gray haircoat that forms a characteristic ruff around the neck and is profuse on a tail that curls tightly over the back. The ears are small and erect and the face is fox-like. Black markings around the eyes ('spectacles') give a fox-like expression. The breed is predisposed to atopy, epilepsy and heart defects. Called also Dutch barge dog.

keet a young guinea fowl.

Keith's bundle a bundle of fibers in the wall of the right atrium between the openings of the venae cavae; see also **sinoatrial** node. Called also sinoatrial bundle, Keith's node, Keith–Flack node.

Keith–Flack node [*kēth' flak'*] see **Keith's bundle**.

KELA test kinetics-based, enzyme-linked immunosorbent assay.

Kjeldahl method method for determining organic nitrogen by quantification of the amount of ammonia liberated from a sample that undergoes sulfuric acid digestion followed by alkali distillation. Used for the calculation of crude protein in feedstuffs and other materials.

Keller spatula [*kel'ər*] an obstetrical spatula; a long-handled (3 ft) rod with a blunt spatulate tip, introduced into the uterus and manipulated from outside the cow or mare. Used to remove the skin of the fetus by blunt dissection.

Kelly–Murphy forceps conventional small hemostats with ratcheted handles and straight or curved blades with fine grooves running crossways inside the tip.

kelp see **seaweed**.

kelvin (K) [*kel'vin*] the SI unit of absolute temperature, equal to 1/273.16 of the absolute temperature of the triplepoint of water.

K. scale an absolute scale on which the unit of measurement corresponds to that of the Celsius (Centigrade) scale but the icepoint is at 273.16°C (273.16K).

kemps coarse hair fibers, found in a wool fleece; a cause for severe downgrading of value. The fibers are hard, brittle, opaque and medullated. They are shed after a short growing period and lie loose in the wool fibers; they will not take dye and will not spin together.

Kennel Club the principal body for maintaining stud books and registering purebred dogs in Great Britain.

kennel cough a highly contagious, acute respiratory disease of dogs, commonly consisting of laryngitis, tracheitis and bronchitis. It may be caused by any one or a combination of several viruses, bacteria and mycoplasmas, but predominantly canine parainfluenza virus (CPIV), canine adenovirus (CAV-1), and *Bordetella*

K-2: Kemp hair in the fleece of a young lamb with border disease (hairy shaker disease).

VetBooks.ir

bronchiseptica. Affected dogs usually have a harsh, dry (hacking) cough, and occasionally fever, serous nasal discharge and lymphadenopathy. Particularly in puppies, more severe illness sometimes occurs. Called also canine infectious tracheobronchitis, rhinotracheitis, canine cough.

kennelitis social maladjustment toward humans, seen in young dogs raised in a kennel rather than with humans.

Kent accessory bundle, Kent's bundle [*kent*] the right- and left-sided myocardial conduction tissue bridge between the atria and the ventricles.

Kent Marsh [*kent*] see **Romney Marsh**.

Kenya Boran cattle an improved Kenyan version of Boran cattle.

Kenya SGPV Kenya sheep and goat poxvirus.

Kenya sheep/goat pox highly infectious disease of sheep and goats spread by contact; highly fatal in lambs; in adults a benign disease characterized by typical cutaneous pox lesions.

keraphyllocele [*ker"ə-fil'o-sēl*] keratoma.

kerasin a cerebroside from brain tissue, yielding galactose, sphingosine and the 24C saturated fatty acid, lignoceric acid, on hydrolysis.

keratalgia [*ker"ə-tal'jə*] corneal pain.

keratan sulfate [*ker'ə-tan*] a glycosaminoglycan which exists as either of two sulfated mucopolysaccharides (I and II). Keratan sulfate is an important component of the proteoglycan of cartilage, and occurs in the cornea and the nucleus pulposus.

keratectasia [*ker"ə-tek-ta'zhə*] corneal ectasia; protrusion of a thin, scarred cornea.

keratectomy excision of a portion of the cornea; kerectomy.

superficial k. removal of the corneal epithelium and anterior stroma on either a specified portion or the whole cornea.

keratic [*kə-rat'ik*] 1. pertaining to keratin. 2. pertaining to the cornea.

k. precipitates (KPs) multifocal aggregations of white blood cells and fibrin on the posterior (endothelial) surface of the cornea, especially ventrally. Pathognomonic for anterior uveitis.

keratin [*ker'ə-tin*] a scleroprotein (fibrous structural protein) which is the principal constituent of epidermis, hair, nails, horny tissues, and the organic matrix of the enamel of the teeth. Its solution is sometimes used in coating pills when the latter are desired to pass through the stomach unchanged.

k. cyst see horn **cyst**.

k. pearl see keratin **pearl**.

k. tag see fibrovascular **papilloma**.

keratinase [*ker'ə-tī-nās*] a proteolytic enzyme that hydrolyzes keratin.

keratinization [*ker"ə-tin"ī-za'shən*] the development of or conversion into keratin.

k. defects include hyperkeratosis, hypokeratosis, dyskeratosis. Diseases in which abnormal keratinization is an important feature include **seborrhea**, **vitamin A** responsive dermatosis, nasodigital **hyperkeratosis**, **acne**, **parapsoriasis**.

keratinocyte the cell of the epidermis that synthesizes keratin, known in its successive stages in the various layers of the skin as basal cell, prickle cell and granular cell.

k. transit time the time required for a keratinocyte to move from its origin in the actively dividing cells of the stratum basale to the surface of the epidermis where it is shed. Called also epidermal renewal time. In the normal dog, this is approximately 22 days.

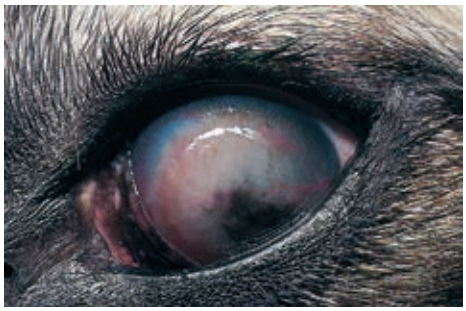
Keratinomyces see ***Trichophyton***.

keratinosome [*kə-rat'ī-no-sōm"*] small organelle in the intercellular space of the epidermis; it has a role in retaining water and in cell cohesion. Called also Odland's body; cementasome.

keratinous [*kə-rat'ī-nəs*] containing or of the nature of keratin.

keratitis [*ker"ə-ti'tis*] inflammation of the cornea. Keratitis may be deep (stromal) or superficial (epithelial); ulcerative or non-ulcerative, and due to trauma, bacterial, fungal, or viral infection, immune-mediated infiltration, etc.; or seen in association with a number of other ocular diseases such as blepharitis, entropion, ectropion, lagophthalmos, reduced tear quantity or quality, uveitis, or glaucoma. Typical clinical signs include blepharospasm, serous to mucoid ocular discharge, corneal opacity and conjunctival or episcleral hyperemia.

chronic superficial k. as a descriptive term can be any long-term corneal inflammation centered on the epithelial surface or anterior stroma. By common usage has become synonymous with 'pannus', an immune-mediated, progressive keratitis in dogs, particularly German shepherd dogs. Characterized by lymphoplasmacytic infiltration, vascularization, melanosis, edema and sometimes lipid/mineral deposition that usually commences at the temporal (lateral) quadrant and advances towards the center. The whole cornea may become involved. The cause is unknown, but exposure to ultraviolet light may be a factor. Called also CSK, pannus, Überreiter's syndrome.



K-3: Chronic superficial keratitis in a German shepherd dog. From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th Edition. Saunders, 2009.

eosinophilic k. a superficial keratitis seen in horses and cats characterized by eosinophilic infiltration of the cornea typically resulting in a raised plaque. Usually begins at the temporal limbus. Can also affect the conjunctiva and/or eyelids. Scrapings of the affected tissue are diagnostic. The cause is unknown, but it has been associated with feline herpesvirus-1 in cats.

exposure k. keratitis resulting from ineffective or incomplete closure of the eyelids with subsequent drying of the precorneal tear film. Occurs due to dysfunction of cranial nerve V or VII, brachycephalic dogs with prominent globes and macropalpebral fissure (see **lagophthalmos**), and any animal during anesthesia.

herpetic k. inflammation of the cornea due to herpesvirus infections. Known in all domestic species for which a herpesvirus has been identified. Often seen in conjunction with conjunctivitis.

infectious k. corneal inflammation due to an infectious cause such as herpesvirus or *Moraxella bovis*.

interstitial k. inflammation of the corneal stroma, causing dense corneal opacification.

mycotic k. see **keratomycosis**.

neurogenic k. corneal inflammation as a result of dysfunction of cranial nerve V (see neurotrophic keratitis below) or VII (see neuroparalytic keratitis below).

neuroparalytic k. corneal inflammation resulting from impairment of the motor innervation (cranial nerve VII) of the eyelids protecting the cornea.

neurotrophic k. corneal inflammation resulting from impairment of the sensory (trigeminal) innervation of the cornea.

k. nigrum see **corneal** sequestrum.

pigmentary k. see **corneal** pigmentation and corneal melanosis.

k. sicca see **keratoconjunctivitis** sicca.

(superficial) pigmentary k. melanosis of the corneal epithelium and superficial stroma resulting from chronic keratitis from a variety of causes. Seen most commonly in brachycephalic dogs in which the contributing factors are exposure keratitis (due to lagophthalmos), distichiasis, lower medial entropion, nasal fold trichiasis and sometimes keratoconjunctivitis sicca.

superficial punctate k. ulcerative or non-ulcerative, bilateral corneal inflammation characterized by discrete superficial multifocal circular opacities. Cause unknown but altered tear film quality, dystrophy or immune-mediated disease have been implicated. Most common in the long-haired Dachshund.

ulcerative k. see **corneal** ulcer.

kerat(o)- word element. [Gr.] *horny tissue, cornea*.

keratoacanthoma [*ker"ə-to-ak"an-tho'mə*] see intracutaneous cornifying **epithelioma**.

keratocele [*ker'ə-to-sēl"*] hernial protrusion of Descemet's membrane.

keratocentesis [*ker"ə-to-sen-te'sis*] aqueocentesis.

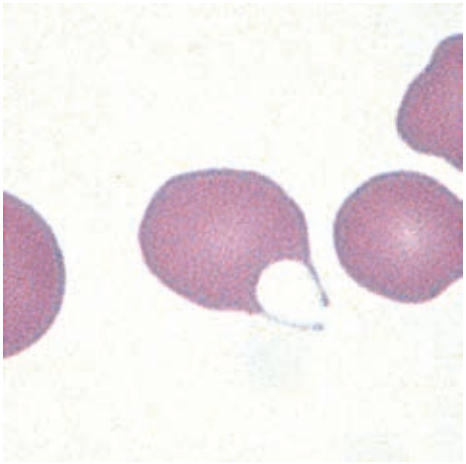
keratoconjunctivitis [*ker"ə-to-kən-junk"tī-vi'tis*] inflammation of the cornea and conjunctiva.

chronic immune-mediated k. syndrome see chronic superficial **keratitis**.

infectious k. one caused by a primary corneoconjunctival pathogen, such as the herpesviruses, *Moraxella bovis*, and (in ruminants) *Chlamydiae* and *Mycoplasma* spp. See also **infectious** bovine keratoconjunctivitis (IBK).

VetBooks.ir

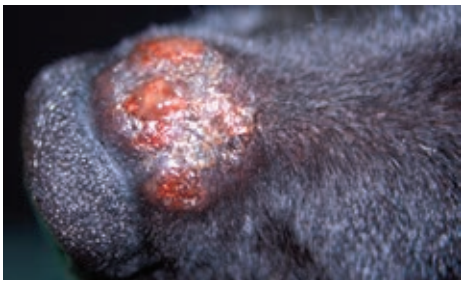
proliferative k. one associated with a plaque-like mass, especially eosinophilic keratitis or nodular granulomatous **episcleritis**.
k. sicca corneoconjunctival inflammation due to reduced aqueous content of the precorneal tear film; marked by tenacious, adherent, stringy mucoid discharge, hyperemia of the conjunctiva, blepharospasm without epiphora, and a lack lust corneal appearance. With chronicity, thickening and melanosis of the corneal and conjunctival epithelium occur, in association with corneal neovascularization. Corneal ulceration accompanies acute onset. Called also 'dry eye'.
keratoconus [*ker"ə-to-ko'nəs*] conical protrusion of the central part of the cornea.
keratocyte [*ker'ə-to-sīt"*] 1. a flattened cell lying between the collagenous corneal lamellae which constitute the corneal stroma. The keratocyte has branching processes that communicate with those of other keratocytes and is considered to be a resting fibroblast, which can be stimulated during wound healing to synthesize collagen. 2. a red blood cell with notches that results in projections that look like horns. Keratocytes occur when fibrin is being deposited within blood vessels as in disseminated intravascular coagulation.
keratoderma [*ker"ə-to-dur'mə*] hypertrophy of the horny layer of the skin.
keratodermia [*ker"ə-to-dur'me-ə*] keratoderma.
keratogenesis [*ker"ə-to-jen'ə-sis*] the production of keratin; a function of keratinocytes in the epidermis.
keratogenous [*ker"ə-toj'ə-nəs*] giving rise to a growth of horny material.
keratoglobus [*ker"ə-to-glo'bəs*] an anomaly in which the cornea is enlarged and globular in shape.
keratohelcosis [*ker"ə-to-həl-ko'sis*] ulceration of the cornea.
keratohemia [*ker"ə-to-he'me-ə*] deposition of blood in the cornea.
keratohyalin [*ker"ə-to-hi'ə-lin*] the substance in the granules in the stratum granulosum of the epidermis.
keratoid [*ker'ə-toid*] resembling horn or corneal tissue.
keratoiridoscope [*ker"ə-to-ī-rid'ə-skōp*] a compound microscope for examining the eye.
keratoiritis [*ker"ə-to-i-ri'tis*] inflammation of the cornea and iris. More commonly called keratouveitis because of the almost inevitable but often unobserved coincident inflammation of the ciliary body.
keratoleptynsis [*ker"ə-to-lep-tin'sis*] removal of the anterior portion of the cornea and replacement with bulbar conjunctiva.
keratoleukoma [*ker"ə-to-loo-ko'mə*] a white opacity of the cornea.
keratolysis [*ker"ə-tol'ə-sis*] loosening or separation of the horny layer of the epidermis.
keratolytic [*ker"ə-to-lit'ik*] 1. pertaining to or promoting keratolysis. 2. an agent that promotes keratolysis.
keratoma [*ker"ə-to'mə*] keratosis.
digital k. see corn (1).
keratomalacia [*ker"ə-to-mə-la'shə*] softening or 'melting' of the cornea associated with collagenase production by host corneal or white blood cells and microbial pathogens, especially gram-negative bacteria.



K-4: A keratocyte, exhibiting what appears to be a ruptured 'vesicle' in blood from a cat with hepatic lipidosis. From McGavin MD, Zachary J, Pathologic Basis of Veterinary Disease, 4th Edition. Mosby, 2006.

keratome [*ker'ə-tōm*] a knife for incising the cornea.
keratometer [*ker"ə-tom'ə-tər*] an instrument for measuring the curvature of the cornea.
keratometry [*ker"ə-tom'ə-tre*] measurement of corneal curvature.
keratomycosis [*ker"ə-to-mi-ko'sis*] fungal infection of the cornea with resultant keratitis. Occurs mainly in horses.
keratonyxis [*ker"ə-to-nik'sis*] aqueocentesis.
keratopathy [*ker"ə-top'ə-the*] non-specific descriptor for non-inflammatory corneal disease.
acid-fast k. see **Florida spots**.
band k. subcorneal calcification associated with local ocular disease or systemic abnormalities of calcium or phosphorus metabolism.
bullous k. a nonspecific response of the cornea to inflammation in which edematous vesicles and bullae occur.
lipid k. deposition of lipid in the stroma of the cornea. In the primary disease, there is no association with abnormalities of lipid metabolism or elevated blood lipid concentrations. In secondary disease, lipids are deposited in scars and previous corneal lesions, or in association with abnormalities of systemic lipid metabolism.
keratoplastic [*ker'ə-to-plas'tik*] 1. pertaining to plastic surgery of the cornea. 2. promoting the production of keratin.
keratoplasty [*ker'ə-to-plas"te*] plastic surgery of the cornea; corneal grafting.
lamellar k. a partial thickness graft of the cornea as distinct from penetrating or full-thickness grafting.
optic k. transplantation of corneal material to replace scar tissue that interferes with vision.
penetrating k. a full thickness of the cornea is removed and replaced with donor tissue.
tectonic k. transplantation of corneal material to replace tissue that has been lost.
keratoprosthesis [*ker"ə-to-pros-the'sis*] replacement of part of the cornea with a prosthesis; not commonly performed in animals.
keratorhexis, keratorrhexis [*ker"ə-to-rek'sis*] rupture of the cornea.
keratoscleritis [*ker"ə-to-sklə-ri'tis*] inflammation of cornea and sclera.
keratoscope [*ker'ə-to-skōp"*] an instrument for examining the cornea.
keratoscopy [*ker"ə-tos'kə-pe*] inspection of the cornea, especially corneal reflections.
keratosis [*ker"ə-to'sis*] any horny growth on the skin, such as a wart or callosity; a firm, elevated, circumscribed area of excessive keratin production. Common in humans but uncommon in animals.
actinic k. lesions resulting from excessive exposure to ultraviolet light; vary from a sharply outlined verrucous or keratotic growth to poorly defined areas of erythema; may be premalignant lesions. See also **solar** dermatitis.
equine cannon k. see **cannon keratosis**.
linear k. see **equine** linear keratosis.
k. pilaris hyperkeratosis limited to the hair follicles.
seborrheic k., k. seborrheica single or multiple elevated plaques and nodules often hyperpigmented with a hyperkeratotic greasy surface. They are benign, of unknown etiology, but have no connection with seborrhea. Occur in dogs and humans.
solar k. see actinic keratosis (above).
keratotomy [*ker"ə-tot'ə-me*] incision of the cornea.
grid k. multiple microincisions into the anterior stroma of the cornea, performed across the bed of an indolent corneal ulcer to stimulate healing. Called also multiple striate keratotomy.
multiple punctate k. multiple, non-penetrating punctures of the anterior corneal stroma to stimulate healing of refractory (indolent) corneal ulcers.
keratouveitis [*ker'ə-to-u"ve-i'tis*] inflammation of the cornea and anterior uvea (iris and ciliary body).
Kerckring folds circular mucosal folds in the small intestine which greatly increase the absorptive surface area of the organ. Called also circular folds, *plicae circulares*.
kerectasia loss of substance or thinning of the cornea resulting in a notable bulge from the corneal surface.
kerectomy [*kə-rek'tə-me*] keratectomy.
kerion [*kēr'e-on*] a boggy, exudative tumefaction covered with pustules, as may occur in dermatophyte infections.
Kern forceps [*kurn*] heavyweight forceps with bowed jaws to encircle a bone and a crutch on the end of one of the handles to enable traction to be employed with the forceps.
kernel whole grains and the meats of nuts and stone fruit pips or pits.

VetBooks.ir



K-5: Dermatophytosis showing the intense inflammatory reaction typical of a kerion. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

kernicterus [kər-nik'tər-əs] bilirubin toxicity; may occur with severe hyperbilirubinemia. Rarely observed in dogs and cats.

kerosene, kerosine [ker'o-sēn] a saturated hydrocarbon used as a fuel oil. Poisoning causes gastroenteritis and aspiration pneumonia, the latter being secondary to vomiting. Called also alkane, kerosene, lamp oil.

kerosene grass [ker'o-sēn] ***Aristida*** *contorta*.

Kerrison rongeur a double action instrument used in neurosurgery.

Kerry blue terrier a medium-sized (33–40 lb) dog with a wavy haircoat that is black at birth but 'clears' to a gray blue by 18 months of age. The head is narrow and long, the ears erect and folded forward, and the docked tail is carried upright. Called also Irish blue terrier. The breed is predisposed to a cerebellar neuronal abiotrophy.

Kerry cattle see **Dexter**.

kersey coarse, narrow cloth used for leg bandages in horses.

kestrel a number of species in the genus *Falco* with a special hovering flight and a high-pitched call; reddish-brown with dark spots on the dorsal parts. Includes the American kestral (*F. sparverius*), which is called also sparrow hawk. One of the species permitted in falconry in the USA.

ketamine [ke'tə-mēn] a nonbarbiturate anesthetic related to phencyclidine (PCP), which is administered intravenously or intramuscularly to produce dissociative anesthesia. It is used routinely in horses, dogs, cats and nonhuman primates, in combination with other agents and for short-term procedures.

ket(o)- word element, *ketone group*.

keto acids [ke'to] compounds containing both of the groups CO (carbonyl) and COOH (carboxyl).

ketoacidosis [ke"to-as"ĭ-do'sis] the accumulation of ketone bodies in the blood which results in metabolic acidosis. Occurs in diabetes mellitus and starvation, and is a common disorder in cattle and other ruminants, particularly at the onset of lactation. See also **ketosis**.

diabetic k. an overproduction and underutilization of ketone bodies in the diabetic results in ketosis. Ketonemia and ketonuria with accompanying loss of Na+ and K+, leads to a base deficit and acidosis. Occurs in advanced, untreated diabetes mellitus in dogs and cats. Clinical signs include anorexia, vomiting, and dehydration, all of which accentuate the effects of the diabetes mellitus. Hyperviscosity, thromboembolism, severe metabolic acidosis, and renal failure lead to death.

ketoaciduria [ke"to-as"ĭ-du're-ə] the presence of keto acids in the urine.

ketoconazole [ke"to-kon'ə-zōl] an imidazole antifungal agent, used orally and topically in the treatment of cutaneous and systemic fungal infections. It also inhibits steroidogenesis and has been used in the treatment of canine hyperadrenocorticism; infertility and teratogenicity may occur.

ketogenesis [ke"to-jen'ə-sis] the production of ketone bodies.

ketogenic [ke"to-jen'ik] forming or capable of being converted into ketone bodies.

k. diet 1. one containing large amounts of fat, with minimal amounts of protein and carbohydrate. The object of such a diet is to produce **ketosis**. 2. ruminant diet poorly formulated such that it has increased risk of producing ketosis.

k. silage silage with a high content of butyric acid.

17-ketogenic steroid a marker used in the measurement of androgen excretion in the urine.

α-ketoglutarate a salt or anion of α-ketoglutaric acid.

α-k. dehydrogenase multienzyme complex catalyzing the oxidative decarboxylation of α-ketoglutarate to succinyl CoA in the TCA cycle.

α-ketoglutaric acid 2-oxoglutaric acid; intermediate of TCA cycle.

ketolysis [ke-tol'ə-sis] the splitting up of ketone bodies.

ketone [ke'tōn] any compound containing the carbonyl group, CO, and having hydrocarbon groups attached to the carbonyl carbon, i.e. the carbonyl group is within a chain of carbon atoms.

k. bodies the substances acetone, acetoacetic acid and β-hydroxybutyrate; except for acetone (which may arise spontaneously from acetoacetic acid), they are normal metabolic products usually derived from excess acetyl CoA from fatty acids within the liver, and are oxidized by the extrahepatic tissues to obtain energy; excessive production leads to urinary excretion of these bodies, as in diabetes mellitus. Called also acetone bodies. See also **ketosis**, **ketoacidosis**, **pregnancy** toxemia.

ketonemia [ke"to-ne'me-ə] elevation in blood concentrations of acetoacetate, β-hydroxybutyrate and their decarboxylation products, acetone and isopropanol.

ketonuria [ke"to-nu're-ə] an excess of ketone bodies in the urine. Occurs when there is incomplete resorption by the proximal renal tubules. Seen most commonly in ketosis and diabetic ketoacidosis.

ketoprofen [ke"to-pro'fən] a propionic acid, nonsteroidal anti-inflammatory agent; used also as an analgesic and antipyretic.

ketorolac [ke"to-ro'lak] propionic acid derivative, nonsteroidal anti-inflammatory used for postoperative pain control in dogs and topically in ophthalmic conditions.

ketose [ke'tōs] any sugar that contains a ketone group.

ketosis [ke-to'sis] 1. accumulation in the blood and tissues of large quantities of the **ketone** bodies: β-hydroxybutyrate, acetoacetic acid and acetone. Because the first two are acids, this results in metabolic acidosis. Thus, the condition is often referred to as ketoacidosis. 2. the common name for a multifactorial disorder of energy metabolism in ruminants that results in hypoglycemia, ketonemia and ketonuria. Primary ketosis and sub-clinical ketosis are common and important metabolic diseases of dairy cattle. Diagnosis is by cow side monitoring of the content of acetoacetate or acetone in urine or milk based on the color reaction with sodium nitroprusside. Several products are available commercially as test powders or strips with a color chart that allows a classification in grades based on the intensity of the color of the reraction. Conventional wisdom is that milk powder tests are not sensitive for detection of subclinical ketosis and urine tests are not sufficiently specific. See types of ketosis below. See also **pregnancy** toxemia, **fat** cow syndrome.

alimentary k. caused by excessive amounts of butyrate in silage and possibly also due to decreased food intake resulting from poor palatability of high butyrate silage. Usually sub-clinical.

nervous k. occurs occasionally in cows that have primary ketosis. Clinical signs are quite variable, usually bizarre, begin quite suddenly, occur in short episodes and may include aimless movement, circling, constant licking and chewing, apparent blindness and somnolence.

primary k. a disease of well-conditioned, recently-calved cows with high milk production potential, caused by a negative energy balance when the dry matter intake in early lactation does not meet the requirements of production. Characterized by rapid weight loss, fall in milk production, indifferent appetite, ketonemia, ketonuria and elevated ketones in milk. Responds well to treatment with parenteral glucose or glucocorticoids. Called also wasting ketosis.

secondary k. ketosis secondary to the occurrence of disease that results in a decreased food intake. Examples are the ketosis that occurs with displacement of the abomasum, or metritis.

starvation k. occurs in cattle that are in poor body condition and that are fed poor-quality feedstuffs.

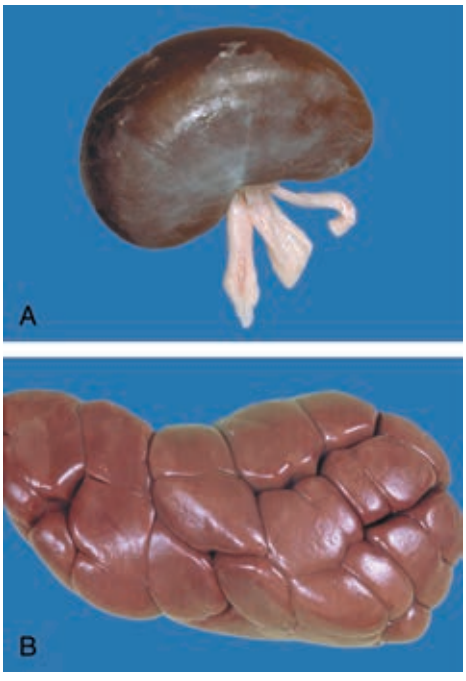
sub-clinical k. cows in negative energy balance in early pregnancy have ketonuria without showing clinical signs, but will have diminished productivity including depression of milk yield and a reduction in fertility. Detected by measuring concentrations of β-hydroxybutyrate in plasma or serum or the concentrations of β-hytdroxybutyrate or acetoacetate in urine or milk. Most common manifestation of ketosis.

wasting k. see primary ketosis (above).

ketosteroid [ke"to-ster'oid] a steroid having ketone groups on functional carbon atoms.

17-k's steroids found in normal urine and in excess in certain tumors, which have a ketone group on the 17th carbon atom, and include certain androgenic and adrenocortical hormones.

Kety curves a mathematical description of the uptake of anesthetic gas under certain conditions.
keV kilo (1000) electron volts (3.82×10^{-17} calorie, or 1.6×10^{-9} erg).
Kew gardens spotted fever [*ku gahr'dənz*] see **rickettsialpox**.
Key–Gaskell syndrome see **dysautonomia**.
key signs [*ke*] the important signs on which a diagnosis can be based. Equivalent to key words in literature searches.
Keyes punch a skin biopsy instrument similar to and used like a cork borer by pushing down on the palm-held handle and rotating the instrument so that its sharp, circular cutting edge cuts through the skin.
kg kilogram.
17-KGS 17-ketosteroids.
Khaki Campbell English egg-laying duck. Khaki in color, head and neck green in the drake, with a dark green bill and deep orange legs. Bred by mating Rouen and a white Indian Runner.
khaki weed see ***Dittrichia graveolens***.
Cape k. w. *Dittrichia graveolens*.
soft khaki weed see ***Gomphrena celosioides***.
Khalilia a genus of strongyles in the family Strongylidae.
K. buta, K. pileata, K. sameera found in the large intestine of elephants.
khat see ***Catha edulis***.
Khawia a genus of tapeworms in the family Caryophyllaeidae.
K. sinensis causes hemorrhagic enteritis in carp.
kHz kilohertz.
kibble baked dough that is crushed or cracked. Prepared usually by extruding and then heating–drying the dough. Used as dry food for dogs and cats.
kicking lashing out behind with the hindfeet. 1. a normal defense reaction in horses and cattle that are unused to human attendants. 2. a vice in some cattle and horses. 3. part of the normal behavior of trained mules and to a lesser extent donkeys.
k. at belly part of the syndrome of acute abdominal pain in horses, and to a lesser extent in ruminants; usually accompanied by crouching and other signs; not to be confused with **treading**.
kid young goat or roe deer up to about 4 months of age.
kidding term for parturition in goats.
kidney [*kid'ne*] either of the two organs in the lumbar region that filter the blood, excreting the end-products of body metabolism in the form of urine, and regulating the concentrations of hydrogen, sodium, potassium, phosphate and other ions in the extracellular fluid. Bean-shaped in the dog, cat, sheep and laboratory animals, lobed in the ox and some fetal animals such as the horse; irregularly lobed in birds. See also **renal**.



K-6: (A) Canine kidney. (B) Bovine kidney. From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

artificial k. an extracorporeal device used as a substitute for nonfunctioning kidneys to remove endogenous metabolites from the blood, or as an emergency measure to remove exogenous poisons such as barbiturates. Called also hemodialyzer.
balloon k. meat hygiene term for cystic kidney.
basal lamina k. part of the filtration barrier of the kidney; is much thicker than most basal laminae.
cake k. a solid, irregularly lobed organ of bizarre shape, formed by fusion of the two renal anlagen. Called also lump kidney.
cicatricial k. a shriveled, irregular and scarred kidney due to suppurative pyelonephritis.
contracted k. an atrophic kidney that may be scarred and granular.
duplicate k. occurs in most species, without apparent increase in total renal mass.
enlarged k. may be due to polycystic kidney disease, hydronephrosis, pyelonephritis or congenital absence of one kidney resulting in hypertrophy of the other.
k. failure see **renal** failure.
fatty k. one affected with fatty degeneration.
floating k. one that is freely movable, especially a human kidney (normally more firmly fixed than those in quadrupeds); called also hypermobile kidney. Sometimes used to describe cat kidneys which are quite loosely attached. See also **nephroptosis**, which refers to dropping of the kidney from its normal position.
fused k. a single anomalous organ developed as a result of fusion of the renal anlagen.
giant k. worm ***Dioctophyme*** *renale*.
Goldblatt k. one with obstruction of its blood flow, resulting in renal hypertension. Produced experimentally in dogs.
horseshoe k. an anomalous organ resulting from fusion of the corresponding cranial or caudal poles of the right and left renal anlagen. One configuration of a fused kidney.
hypermobile k. one that is freely movable; called also floating kidney. See also **nephroptosis**.
lump k. cake kidney (above).
pelvic k. a kidney which has failed to ascend from its primordial site to the roof of the abdomen and is abnormally located within the pelvic canal, either as a congenital anomaly or following transplantation.
polycystic k. disease (PKD) the most common congenital renal defect but most cases are sporadic and do not cause clinical illness because there is still sufficient renal mass to avoid uremia. In some cases the enlarged kidney is detected incidentally during a clinical examination. Rarely both kidneys are extensively involved and the animal is dead at birth or dies soon afterwards. In some cases, there are signs of progressive renal failure, perhaps not until later in life. The defect is inherited in Persian cats, Cairn terriers and pigs. *PKD1* is the form inherited as an autosomal dominant trait in Perisan and related breeds of cats. The condition may be detected by ultrasound screening or DNA testing. In Cairn terriers, cysts may also occur in the liver. See also feline **perirenal** cysts.
pulpy k. disease see *Clostridium perfringens* **enterotoxemia**.
k. scan radioimaging of a kidney by the use of a rectilinear scanner after the intravenous administration of a radiopaque material.
k. stones see **urolithiasis**.
supernumerary k. additional kidneys which develop as a consequence of two ureteric buds arising from one mesonephric duct so that two kidneys develop on the one side.
k. transplant commonly and successfully performed in experimental dogs. Increasingly used as a therapeutic procedure in clinical veterinary medicine for renal failure in cats and dogs.
turkey egg k. a pale kidney covered with a large number of petechiae to give it the appearance of a turkey's egg; occurs in many septicemic diseases, particularly classical swine fever (hog cholera), African swine fever and salmonellosis.
wandering k. floating or hypermobile kidney. See also **nephroptosis**.
waxy k. amyloid kidney.
white-spotted k. focal nonsuppurative interstitial nephritis, seen most commonly in calves.
k. worm *Stephanurus dentatus*; see also **stephanuriasis**.
Kienböck's unit (X) [*kēn'bərk*] a unit of X-ray exposure equal to 0.1 erythema dose.
Kikuth's disease see **canarypox**.
kikuyu grass see ***Pennisetum*** *clandestinum*.

K-7: Turkey egg kidney. Courtesy of JT Done.

kill term used to describe heavy mortalities in fish or fauna, especially those in the wild, or at extensive range, and usually where the deaths are unexpected and generally not easily explained.
killed vaccine see dead **vaccine**.
killer cell see K **cells**.
killing-out percentage see **carcass** yield.
kilo- (k) [Gr.] *thousand*; a prefix used in the metric system of measurement to designate an amount 10^3 times the size of the unit to which it is joined.
kilobase (kb) [*kil'o-bās*] a unit of size for nucleic acids, being 1000 nucleotide bases for single-stranded nucleic acids or 1000 nucleotide base pairs in the case of double-stranded nucleic acids.
kilocalorie (kcal or Cal) [*kil'o-kal"o-re*] a unit of heat equal to 1000 calories.
kilogram (kg) [*kil'o-gram*] a unit of mass (weight) of the metric system, 1000 grams; equivalent to 15 432 grains, or 2.205 pounds (avoirdupois) or 2.679 pounds (apothecaries' weight). See Table 2.1.
k.-calorie large calorie. See also **kilocalorie**.
kilohertz (kHz) [*kil'o-hərtz*] one thousand (10^3) hertz.
kilojoule (kJ) 1000 joules. An SI unit of energy.
kilometer (km) [*kĭ-lom'ə-tər kil'o-me"tər*] one thousand (10^3) meters; 3280.83 feet; five-eighths of a mile.
kilopascal (kPa) one thousand (10^3) pascals; the metric unit of pressure; equal to 7 pounds per square inch.
kilotex (ktex) unit of measurement expressing thickness, e.g. of a staple of wool expressed as grams per meter; used as an indication of the strength of the staple.
kilovolt (kV) [*kil'o-vōlt*] one thousand (10^3) volts.
k. peak (kVp) the maximal amount of voltage that an X-ray machine is using.
kilovoltage [*kil'o-vōl'təj*] in radiography, the X-ray tube peak voltage during an exposure, measured in kilovolts.
Kiluluma a genus of nematode parasite of the family Strongylidae, found in the intestine of rhinoceros.
Kimberley horse disease [*kim'bər-le*] see **walkabout**.
K. horse poison see ***Crotalaria*** *crispata*, *C. ramosissima*.
Kimberling–Rupp spaying device a guillotine-type device within a hollow tube for insertion into the abdominal cavity and trapping each ovary in turn. The cutting mechanism is operated from outside the abdomen.
Kimmelstiel–Wilson syndrome [*kim'əl-stēl wil'sən*] a degenerative complication of **diabetes mellitus** in humans, with albuminuria, edema, hypertension, renal insufficiency and retinopathy. A small proportion of diabetic dogs have roughly similar lesions of diffuse or nodular hyaline deposits in glomeruli. The characteristic nodules are referred to as Kimmelstiel–Wilson nodules. Called also intercapillary glomerulosclerosis.
kinase [*ki'nās*] 1. a subclass of the transferases, comprising the enzymes that catalyze the transfer of a high-energy group from a donor (usually ATP) to an acceptor, and named, according to the acceptor, as creatine kinase, fructokinase, etc. 2. an enzyme that activates a zymogen, and named, according to its source, as enterokinase, streptokinase, etc.
protein k's cellular enzymes which utilize ATP to phosphorylate proteins, usually at a selected OH group of serine, threonine or tyrosine residue in the protein, so as to increase or decrease the activity of the protein.
protein k. C (PKC) a membrane bound protein kinase family. Divided into three groups termed conventional, novel and atypical. Conventional PKCs (isoforms α, β_I, β_{II}, and γ) are activated by sn-1,2-diacylglycerol (DAG) produced from phosphatidyl inositol 4,5-bisphosphate, Ca^{2+} and phospholipid; novel PKCs (isoforms δ, ε, η, and θ) are activated by DAG, but do not require Ca^{2+}; atypical PKCs (protein kinase Mζ and ι/λ isoforms) require neither DAG nor Ca^{2+} for activation. Phosphorylates target proteins such as the insulin receptor, β-adrenergic receptor, glucose transporter, HMG-CoA reductase, cytochrome P-450 and tyrosine hydroxylase.
kindle parturition in the doe rabbit.
kindling [*kind'ling*] a process in which repeated stimuli sensitize the brain to react when the stimulus is re-applied. Used in explaining increased frequency of seizures in epilepsy and progression of bipolar disorder in humans.
kingsnake any of several species of non-venomous colubrid snakes in the genus *Lampropeltis* with very colorful patterns on their skin. They are popular as pets because of their docile nature and they are easy to maintain in captivity.
kine- word element. [Gr.] *movement*. See also words beginning *cine-*.
kinematics [*kin"ə-mat'iks*] that phase of mechanics which deals with the possible motions of a material body.
kinesalgia [*kin"ə-sal'jə*] pain on muscular exertion.
kinesia [*kĭ-ne'zhə*] motion sickness.
kinesialgia [*kĭ-ne"se-al'jə*] kinesalgia.
kinesiatrics [*kĭ-ne"se-at'riks*] kinesitherapy.
kinesimeter [*kin"ə-sim'ə-tər*] 1. an instrument for quantitative measurement of motions. 2. an instrument for exploring the body surface to test cutaneous sensibility.
kinesin [*ki-ne'sin*] one of three mechanochemical proteins (the other two are myosin and dynesin) associated with the cytoskeleton that converts chemical energy into mechanical energy and is the driving force for the movement of vesicles and organelles along the microtubule.
kinesi(o)- word element. [Gr.] *movement*.
kinesiology [*kĭ-ne"se-ol'ə-je*] scientific study of movement of body parts.
kinesis [*ki-ne'sis*] [Gr.] *movement*, e.g. the activity of an organism in response to a stimulus; the direction of the response is not controlled by the direction of the stimulus (in contrast to a taxis).
-kinesis word element. [Gr.] *movement, motion* (e.g. cytokinesis).
kinesitherapy [*kĭ-ne"sĭ-ther'ə-pe*] treatment of disease by movements or exercise.
kinesthesia [*kin"es-the'zhə*] the sense by which position, weight and movement are perceived.
kinesthesis [*kin"əs-the'sis*] kinesthesia.
kinesthetic sensation [*kin"əs-thet'ik*] sensory inputs which recognize the orientation of the different parts of the body in relation to other parts as well as the rates of movements of the body parts.
kinetic [*kĭ-net'ik*] pertaining to or producing motion.
k. energy the energy of motion.
kinetics [*kĭ-net'iks*] the scientific study of the turnover, or rate of change, of a specific factor in, or position of the body, commonly expressed as units of amount per unit time.
chemical k. the scientific study of the rates and mechanisms of chemical reactions.
locomotion k. study of the rates and mechanisms of the movement or progression of animals.
kinetocardiogram [*kĭ-ne"to-kahr'de-o-gram"*] the record produced by kinetocardiography.
kinetocardiography [*kĭ-ne"to-kahr"de-og'rə-fe*] the graphic recording of the slow vibrations of the cranial chest wall in the region of the heart, representing the absolute motion at a given point on the chest.
kinetochore [*ki-ne'to-kor*] a centromere.
kinetogenic [*kĭ-ne"to-jen'ik*] causing or producing movement.
kinetoplast [*kĭ-ne'to-plast*] an accessory body found in many protozoa, primarily the Mastigophora; it contains DNA and replicates independently.
kinetosis [*kĭ"nə-to'sis*] any disorder due to unaccustomed motion. See also **motion sickness**.
kinetotherapy [*kĭ-ne"to-ther'ə-pe*] kinesitherapy.
kinety [*ki-ne'te*] a row of granules, each of them situated at the base of a cilium.
King–Armstrong unit [*king*] a unit of measurement of phosphatase; one unit equals 1 mg phenol liberated in 30 min at 100°F (37.5°C) and pH 9. Now largely replaced by International Units.
King Charles spaniel see **English toy spaniel**.
king cup see ***Caltha palustris***.

kingdom [*king'dəm*] one of the three major categories into which natural objects are usually classified: the animal (including all animals), plant (including all plants), and mineral (including all substances and objects without life). A fourth, the Protista, includes all single-celled organisms.

Kingman forceps alligator forceps in which the jaws are opened by a system of levers so that there is no increase in diameter of the long, thin stem. Only the blades open, and that by one lying flat and the other angling away from it, like an alligator jaw movement.

king's crown see ***Calotropis procera***.

kinin [*ki'nin*] any of a group of endogenous peptides that increase vascular permeability, elevate blood pressure, and induce smooth muscle contraction.

venom k. a peptide found in the venom of insects.

kininase [*ki'nin-ās*] an enzyme that rapidly inactivates kinin found in tissues and plasma. There are two types: kininase I, which is a carboxypeptidase; and kininase II, which is an angiotensin-converting enzyme.

kininogen [*ki-nin'o-jen"*] an α_2-globulin of plasma that is a precursor of the kinins.

kininogenases see **kallikrein**.

kinkajou (*Potos flavus*) a member of the Procyonidae family, native to Central and South America. It has a short, dense coat and a long prehensile tail. Hunted for fur and the pet trade. Called also night monkey, honey bear.

kinked tail a deformity in dogs and commonly Siamese cats. Caused by multiple coccygeal hemivertebrae. Occasional cases in calves, usually associated with other skeletal deformities.

kinky back a developmental deformity of chickens. See **spondylolisthesis**.

kino the juice of certain plants, some tropical and some Australian eucalypts, used in medicine as an astringent.

kinocilium [*ki"no-sil'e-əm*] pl. *kinocilia*; a motile, protoplasmic filament on the free surface of a cell.

kinship [*kin'ship*] a group of animals of varying degrees of descent from a common ancestor.

Kinyoun's carbol fuchsin stain acid-fast stain useful in microbiology for assistance in the diagnosis of diseases caused by mycobacteria and actinomycetes, and for the detection of some protozoa, such as *Cryptosporidium*.

Kirby-Bauer method a method for testing the antimicrobial susceptibility of bacteria based on the size of zones of inhibition of growth of a lawn culture around disks impregnated with the antimicrobial drug.

Kiricephalus a genus of pentastomid parasites of colubrid snakes.

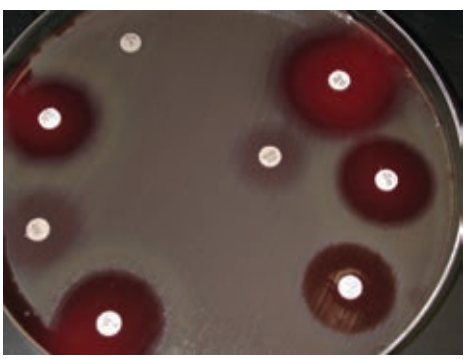
Kirschner [*kursh'nər*] named after Martin Kirschner (1879–1942), a German surgeon, a name commonly associated with surgical equipment.

K. apparatus a system of stainless steel threaded fixation pins, interconnecting rods, clamps and nuts for external fixation of fractures.

K.–Ehmer splint an external splinting device based on transfixation pinning.

K. wire a steel wire for skeletal transfixture of fractured bones and for obtaining skeletal traction in fractures.

Kisenyi sheep disease a highly fatal virus disease of sheep in Africa transmitted by ticks and characterized by fever, listlessness, inappetence, diarrhea and necrosis of the mucosae of the abomasum, small intestine and cecum. Probably **Nairobi sheep disease**.



K-8: Kirby-Bauer plate, illustrating the disk diffusion antimicrobial susceptibility test method.
From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, 2004.

K-9: Kissing calves.

kiss marks in dogs, tan marks over the eyes and on the cheeks.

kissing bugs see ***Triatoma***.

kissing calves mouth-to-mouth contact with licking between milk-fed housed calves; believed to facilitate the calf-to-calf spread of infectious agents in calf sheds.

kissing spot see **lozenge** (3).

kit a newborn fox or mink.

kitasamycin [*kit"ə-sə-mi'sin*] a macrolide antibiotic, produced by *Streptomyces kitasatoensis*, with activity similar to erythromycin. Called also leucomycin.

kitchen deaths see **polytetrafluoroethylene**.

kite raptor in the family Accipitridae. They are slim, with long narrow wings and an elongated tail.

kitten newborn or young cat or ferret.

k. mortality complex a general term applied to a syndrome involving death of young kittens, particularly in breeding establishments. It is etiologically nonspecific, but generally applies to infectious causes and has occasionally been specifically applied to feline infectious peritonitis virus.

kiwi rare ratite bird (*Apteryx* spp.), peculiar to New Zealand. They are brown, tailless, virtually wingless and have plumage resembling hairs rather than feathers. They are nocturnal, about the size of a domestic fowl and have a distinctive cry from which its name derives.

kJ kilojoule.

klaaslouwboss see ***Athanasia trifurcata***.

Klamath weed ***Hypericum*** *perforatum*.

klapperbos ***Crotalaria*** *burkeana*.

Klebsiella [*kleb"se-el'ə*] a genus of gram-negative bacteria in the tribe Klebsiellae, family *Enterobacteriaceae*. Includes *K. mobilis* (syn. *Enterobacter aerogenes*).

K. pneumoniae carried in the vestibule of the vagina, urethra and clitoridal fossa of the mare as normal flora, but invasion of the cervix and uterus does occur, causing metritis and infertility. Can cause a high incidence of mastitis in dairy cattle associated with its presence in sawdust and wood product beddings. An occasional cause of hematogenous osteomyelitis originating from pulmonary lesions in cattle, bronchopneumonia in dogs, and pyothorax in horses.

Kleiner Munsterlander see **Small Munsterlander**.

kleingrass see ***Panicum*** *coloratum*.

Klein's disease see **fowl** typhoid.

Kleinshmidt preparation a method for observing nucleic acid molecules in the electron microscope. Molecules are first spread on the surface of a solution from which they are picked up on a grid and then shadowcast with a heavy metal.

Klenow fragment treatment of the enzyme DNA polymerase 1 with subtilism produces two cleavage products, a small fragment which is unstable and a large fragment, called the Klenow fragment, which retains both the 5′-3′ polymerase and the 3′ exonuclease activities, but not the 5′ exonuclease activity, of the intact enzyme, together with the pyrophosphorolysis and pyrophosphate exchange activities. Used to synthesize DNA complementary to single-stranded DNA template by adding nucleotides to the free 3′-hydroxyl end of an annealed DNA primer.

klimp ***Cynanchum*** *africanum*, *C. ellipticum*, *C. obtusifolium*.

Klinefelter's syndrome [*klīn'fel-tər*] a condition in humans characterized by the presence of small testes, with fibrosis and hyalinization of the seminiferous tubules, impairment of function and clumping of Leydig cells, and an increase in urinary gonadotropins, associated with an abnormality of the sex chromosomes.

VetBooks.ir

It is associated typically with an XXY chromosome complement. A similar condition is seen in male tortoiseshell and white cats, and has been recorded rarely in stallions, bulls, rams and dogs.

Klossiella a genus of coccidians in the family Eimeriidae.

K. boae found in the intestine of the boa constrictor. It may cause anorexia, restlessness, hemorrhagic enteritis and intussusception.

K. cobayae found in guinea pigs.

K. equi found in the kidneys of horses, donkeys, zebra and burro.

K. muris causes renal coccidiosis in mice.

km kilometer.

K_M constant Michaelis-Menten constant, the substrate concentration at which the initial velocity (v_i) of an enzyme reaction is half the maximal velocity achievable at a particular concentration of the enzyme. Measure of the affinity of enzyme for the substrate; the higher the K_M, the lower the affinity. Called also Michaelis constant.

KMC kitten mortality complex.

knacker operator of a **knackery**.

knackered slang for being so exhausted or decrepit that a horse is suitable only for the knacker's yard.

knackery an industrial establishment which converts animal remains into animal feed supplements and fertilizer. Accept living derelict, unwanted and recently dead animals for disposal. A favorite source of postmortem information on animals that have been under surveillance.

knapweed common name for plants in the genus ***Centaurea***.

Russian k. *Rhaponticum repens*. See also ***Centaurea***.

knee [*ne*] in large animals, the carpus; in small animals, the stifle. See Table 11.

bench k. conformation defect in which the metacarpus is not centered symmetrically to the carpus.

blemished k. scarred or otherwise imperfect appearance.

broken k. used to mean that a horse has fallen and broken the skin over the carpus.

k. gall see knee thoroughpin (below).

k. jerk see **patellar** reflex.

popped k. see **carpitis**.

k. strap a short strap used to strap up a horse's leg in a flexed position so that it is as immobile as a three-legged horse. A good form of restraint for a horse that is rearing.

k. thoroughpin distention of the carpal sheath in the horse. Visible as a fluid-filled distention at the back of the knee.

knee-cap [*ne'kap*] an item of horse clothing; made of canvas or basil, it is wrapped around and strapped over the carpus for protection during traveling.

kneecap see **patella**.

Knemidocoptes [*ne"mĭ-do-kop'tēz*] see ***Cnemidocoptes***.

knife [*nīf*] a single-bladed cutting instrument other than a scalpel and usually designed for a special purpose.

castrating k. there are many straight bladed instruments available. A special hooked knife is popular for use with calves and lambs. It has a cutting edge which is bent down at right angles to form a shallow hook. The instrument is drawn towards the operator and provides much less risk to him/her. See also Newberry castrating knife (below).

drawing k. see hoof knife (below).

finger k. used in bovine obstetrics to cut the skin of a dead fetus. It consists of a flat palm-piece that lies flat against the palm of the hand and from which the hooked knife protrudes. The knife has a single finger ring on its spine, through which a finger is passed and over the front of the knife. The knife is passed into the uterus, and hooked into appropriate skin, which is cut by pulling backwards. Some knives have an eyelet to which a cord can be attached to facilitate this part of the task.

Gage k. an instrument similar to the **Gage excavator** except that the blade is straight and has a cutting edge.

hoof k. a strong, slightly curved knife with its tip turned laterally on itself to form a tunnel. The flat part of the blade is used to trim the bottom of the hoof wall and the curved part to make grooves or cut holes. The standard knife is the Hauptner. The blade in some knives is sharpened on both edges. Called also hoof parer, drawing knife. The Swiss hoof knife is a large, flattened loop turned down at right angles to the handle. It is for paring the sole and is drawn towards the operator with the lower front-edge sharpened. Special grooving knives are also available. See also Hughes hoof **groover**.

Lichty's teat k. a narrow, 0.1 inch wide blade about 0.4 inch long, sharpened on one edge and with a rounded blunt point, which is inserted into the teat canal. A cut is made laterally through the overtight sphincter or scar tissue.

Newberry castrating k. a pincer-like instrument with a block at the end of one blade and a chisel-pointed knife on the other. When the sharp blade is closed on the exposed spermatic cord, it compresses the cord against the block.

palm k. a small version of the Stanley hobby knife, which can be carried into the uterus in the palm of the hand and the concealed blade opened. Cuts are made in the fetal skin in a normal cutting manner.

tenotome k. see tenotomy **knife**.

tenotomy k. has a blunt, rounded tip on the blade, which is curved slightly forward so that the knife can be inserted under the tendon without damage to local nerves and blood vessels and so that a cut can be made outwards without the tendon slipping off the knife. Called also a tenotome.

Wamberg spavin k. used for transecting the cunean tendon in a horse affected by spavin. Has a 1.5 inch blade on a curved neck so that the blade can be inserted under the tendon without being obstructed by the knuckles of the hand holding the handle.

knizocyte a red blood cell with two or more concavities (triconcave erythrocyte); associated with hemolytic anemia.

knock-in see knock-in **gene**.

knock-knee [*nok'ne*] the knees approximate and the fetlocks are wide apart. Called also genu valgum.

knocked-down hip fracture of the wing of the ilium. A common problem in cows due to injury during estrus. Also occurs in racing Greyhounds, significantly altering its conformation but not altering the gait.

knocked-up toe see kicked-up **toe**.

knockout [*nok'out*] see knockout **gene**.

knopvelsiekte [Af.] see **lumpy skin disease**.

knot [*not*] 1. an intertwining of the ends or parts of one or more threads, sutures, or strips of cloth. See **square knot**, **granny knot**, **half-hitch knot**, **packet knot**, **Miller's suture tie** and **surgeon's knot**. 2. in anatomy, a knob-like swelling or protuberance.

primitive k. see **Hensen's node**.

knotgrass ***Polygonum*** *persicaria*.

knothead **myelocytomatosis** of poultry.

Knott's test a technique for the detection of microfilariae, most often for the diagnosis of heartworm (*Dirofilaria immitis*) infection in dogs. The blood is hemolyzed and concentrated, then examined microscopically for the presence of microfilaria, which must be identified as either *D. immitis* (heartworm) or *Acanthocheilonema reconditum* (*Dipetalonema reconitum*). False negatives can occur because of low numbers, immune-mediated removal of microfilariae, or unisex or sterile adult infections.

knotweed ***Polygonum*** *aviculare*.

Knowles scissors bandage scissors with a knob on the end of the longer blade.

knuckle [*nuk'əl*] 1. the dorsal aspect of any human interphalangeal or metacarpophalangeal joint, or any similarly bent structure. 2. the swollen end of any long bone.

knuckled over see **knuckling**.

knuckling [*nuk'ling*] a forward bending at the fetlock joint. May be a feature of the conformation or a sign of neurological deficit. Called also overshot fetlock.

k. over sometimes used synonymously with knuckling. Also refers to weightbearing on the dorsal surface of a flexed foot or paw; often a sign of deficit in normal proprioception that would reflexly cause a repositioning to the normal position.

ko cycle the cycle of control or destruction in acupuncture theory; a mechanism which ensures that no single element becomes too powerful.

koa haole [Hawaiian] see ***Leucaena leucocephala***.

koala a small to medium sized tree-climbing marsupial (*Phascolarctos cinereus*) in the Family Phascolarctidae, found in eastern and southern Australia. Koalas are mainly nocturnal and feed almost exclusively on the leaves of certain *Eucalyptus* spp. which have a very high fiber content. They have the largest cecum relative to body size of any mammal. The newborn koala is less than 1 inch long. After birth, it migrates rapidly to the abdominal pouch where it feeds on milk from a teat.

VetBooks.ir

K-10: Knuckling over. From Fossum TW, Small Animal Surgery, 3rd Edition. Mosby, 2007.

kob (*Kobus kob*) a medium-sized antelope with S-shaped horns on the male that lives near permanent water sources; hunted for bushmeat.

Kobuvirus a genus of viruses in the family *Picornaviridae* members of which infect cattle and pigs.

Koch [*kawk*] named after Robert Koch (1843–1910), a German bacteriologist.

K. blue spot, K. blue body see **theileriosis**.

K. OT Koch's old tuberculin, used in the tuberculin test.

K. phenomenon the role of delayed type hypersensitivity in the pathogenesis of tuberculosis.

K's postulates a statement of the kind of experimental evidence required to establish the causative relationship between a microorganism and a given disease. The conditions are: (1) the microorganism must be present in every case of the disease; (2) it must be isolated and cultivated in pure culture; (3) inoculation of such culture must produce the disease in susceptible animals; (4) it must be observed in, and recovered from, the experimentally diseased animal.

Kocher forceps [*ko'kər*] ratchet-handled, scissor-type, artery forceps with curved blades with cross-grooved faces. The tips of the blades have one pair of interlocking, sharp teeth.

Kochia scoparia [*ko'ke-ə*] North American small shrub of the family Chenopodiaceae; may cause polioencephalomalacia and hepatogenous photosensitization. Called also summer cypress, Mexican fireweed, burning bush.

Kodiak island disease congenital defects in calves caused by ***Lupinus*** *sericeus*. See lupine-induced **arthrogryposis**.

Koeppe's criterion a phenomenon which occurs in the determination of hematocrit by centrifugation. With complete packing of red blood cells the column becomes translucent.

KOH potassium hydroxide.

KOH-cleared specimens specimens of external parasites cleared of epithelial debris by potassium hydroxide solution.

kohlrabi ***Brassica*** *oleracea* var. *acephala*.

koi domesticated common carp (*Cyprinus carpio*); popular as decorative pond fish.

k. herpesvirus (CyHV-3) the cause of a highly contagious disease of *Cyprinus carpio* (koi and common carp). Infected fish have severe lesions of the gills and may exhibit respiratory distress. There is a high mortality. The disease is notifiable to the OIE (see Table 22).

koilin cuticle see **cuticle** of koilin.

koil(o)- word element. [Gr.] *hollowed, concave*.

koilocyte [*koi'lo-sīt"*] squamous epithelial cell showing a peculiar type of ballooning degeneration of cytoplasm and nucleus as a result of papillomavirus infection.

koilocytosis [*koi"lo-si-to'sis*] ballooning degeneration of the type seen in **koilocytes**.

kolp- for words beginning thus, see those beginning *colp-*.

kolypeptic hindering or checking digestion.

Komodo dragon a large, venomous lizard (*Varanus komodoensis*), native to a small area of the Indonesian archipelago; the largest of lizards. Called also Komodo Island monitor.

Komondor a very large (80–100 lb), muscular dog with a distinctive curly white coat that forms long tassel-like cords by 2 years of age, completely obscuring any details of conformation. The Hungarian breed is a shepherding and guard dog of Asiatic origin.

Konratice virus a strain of porcine enterovirus isolated in Czechoslovakia from pigs with porcine viral **encephalomyelitis** (Teschen disease).

Kooikerhondje an old Dutch working breed, known also as a Dutch decoy dog, supposedly because it can act as a decoy to lure ducks into a trap with its feathered tail. A small (14–16 inches tall) dog with moderately long, wavy haircoat with feathering on the chest, legs and tail in white with patches of red. Called also Kooiker hound.

K. d. myelopathy a degenerative myelopathy, similar to Afghan hound myelopathy, inherited as an autosomal recessive trait.

kookaburra an arboreal, insectivorous and carnivorous bird of the kingfisher family (Alcedinidae) with an identifying, laugh-type call. Called also laughing jackass. Includes *Dacelo novaeguineae* (laughing kookaburra) and *D. leachii* (blue-winged kookaburra).

koolganna see ***Salsola*** *tuberculatiformis*.

Korat a breed of cats originating in Thailand. It has a short, silver-blue coat and large, green eyes. GM_1 gangliosidosis is reported to occur in the breed.

Korean lespedeza see ***Kummerowia stipulacea***.

Korean Native cattle yellow-brown meat and draft cattle.

koronivia grass ***Brachiaria*** *humidicola*.

Korotkoff's sounds [*kə-rot'kof*] sounds heard during auscultatory determination of **blood pressure** in humans, thought to be produced by vibratory motion of the arterial wall as the compressed artery suddenly distends during decompression of the pneumatic blood pressure cuff. Origin of the sound may be within the blood passing through the vessel or within the wall itself.

Korthals griffon in the UK, the name for **Wirehaired pointing griffon**

kosher slaughter see **Jewish slaughter**.

Kotonkan virus a rabies-like virus of African origin.

Kovac's reagent a reagent used to detect the presence of indole. Used in the identification of bacteria.

kowari a small carnivorous marsupial (*Dasycercus byrnei*), native to the deserts of central Australia and listed as a threatened species. Called also marsupial rat.

kPa kilopascal.

KPs keratic precipitates.

Kr chemical symbol, *krypton*.

kraalbos [Af.] ***Galenia*** *africana*.

Krabbe's disease [*krah'bə*] see globoid cell **leukodystrophy**.

kraurosis [*kraw-ro'sis*] a dried, shriveled condition.

Krause [*krou'zə*] named after W.J.F. Krause, a German anatomist (1833–1910).

K's bulb, K's corpuscle, K's endbulb see **bulboid corpuscle**.

K. glands mucous glands in the conjunctiva.

Krebs cycle [*krebz*] see **tricarboxylic acid cycle**.

kregda a severe pneumonia caused by *Mycoplasma ovipneumoniae* in sheep in Iceland and Switzerland.

Krey–Schottler hook a multiple jointed obstetric implement which approximates its two opposing hooks when these have been anchored in eye-sockets and the end ring is pulled. Excellent for applying traction to the head of a calf.

krimpsiekte [*krimp-zēk'te*] [Af.] 'shrinking disease'; caused by poisoning by *Cotyledon* and *Tylecodon* spp. plants. See **cotyledonosis**.

kryo-ichthyozoosis a disease of aquarium fish caused by a virus that survives only in cold water. The disease is manifested by awkward swimming action and death in 5 to 6 hours.

krypton (Kr) [*krip'ton*] a chemical element, atomic number 36, atomic weight 83.80. See Table 4.

Kryptopterus a genus of Southest Asian catfish with transparent or translucent bodies.

K. bicirrhis glass catfish.

K. minor ghost catfish; popular as an aquarium fish.

KSGPV Kenya sheeppox and goatpox virus, genomically identical with lumpy skin disease virus.

ktex kilotex.

kudu (*Tragelaphus* spp.) a large, striking-looking antelope with very long, spiral horns, gray or tawny color with vertical white stripes on the body and a fringe of long hair under the throat, neck and brisket. Hunted for meat and the trophy horns. Includes greater kudu (*T. strepsiceros*) and lesser kudu (*T. imberbis*).
kudzu see ***Pueraria lobata***.
Kühn's crutch an obstetric instrument for use in large animals. It has a 3 feet long handle and a U-shaped endpiece with an eyelet for cord in the end of each arm. Suitable for trapping a limb and repelling or rotating all or part of a fetus.
Kuhnt–Szymanowski operation a technique for repair of ectropion caused by an elongated lower eyelid.
kulchitsky cell tumor [*kool-chit'ske*] see **carcinoid**, **apudoma**.
kumara ***Ipomoea batatas***.
Kummerowia (Lespedeza) stipulacea a legume in family Fabaceae, similar to alfalfa or lucerne in nutritional content but with the advantage that it will produce on relatively poor soil. There are annual and perennial varieties. Contains the toxin coumarin and moldy hay made from the crop causes a hemorrhagic disease. Called also Korean lespedeza, Korean clover.
kumri see **cerebrospinal** nematodiasis.
Kundi a domestic Pakistani breed of Murrah-type Indian buffalo. Black or brown in color, often with white on the head, tail and feet.
kundur laut see ***Sarcolobus globusus***.
KuneKune pig indigenous, tasseled, fat pig of the Maori people; any color.
Kunjin virus a strain of West Nile virus, generally considered apathogenic but has been isolated from horses with encephalomyelitis. See also **encephalitis**.
kunka caseous granules found in granulomatous lesions of habronemiasis.
kunkur, kunker see **swamp cancer**.
Kuntscher nail [*kēnt'shər*] an intramedullary splint with a hollow, slightly clover-leaf cross-section.
Kupffer's cells [*koop'fər*] large, stellate or pyramidal, intensely phagocytic cells lining the walls of the hepatic sinusoids and forming part of the reticuloendothelial system.
kurdee see **safflower meal**.
Kurdi a carpetwool, polled, fat-tailed, black sheep from the Middle East, with many ethnic varieties.
Kurloff body [*koor'lof*] large, slightly granular cytoplasmic inclusion seen in the large mononuclear leukocytes (Kurloff cells) of normal guinea pigs and capabaras. Their origin is uncertain.
kurrajong ***Brachychiton populneum***.
Kursteiner's cyst see **parathyroid** cyst.
kurtosis [*kər-to'sis*] the quality of peakedness in a unimodal distribution. Abnormalities are leptokurtosis where values are clustered about the mean and the tails of the curve, and platykurtosis where the clustering produces a plateau-shaped curve.
kuru [*koo'roo*] a chronic, progressive, uniformly fatal central nervous system prion disease of humans probably resembling the scrapie agent of sheep, and transmissible to nonhuman primates; seen only in the Fore and neighboring peoples of New Guinea. Believed to be transmitted by cannibalism.
kush the position in which a camelid rests in sternal recumbency on the ground; achieved by bending the front legs, dropping to the knees one at a time, then flexing and folding the hind legs. Camelids sleep and chew cud in a kushed position; the normal position for mating. Also spelled cush.
Kussmaul's respiration [*koos'moul*] a distressing dyspnea occurring in paroxysms, characteristic of diabetic acidosis and coma. Called also air hunger.
Kuvasz a large, sturdy Hungarian dog breed used for guarding livestock. It has a thick, pure white or ivory coat, dark eyes, small, pendulous ears and a moderately long tail. Called also Hungarian Kuvasz.
kV kilovolt.
kVp **kilovolt** peak.
kwashiorkor [*kwahsh"e-or'kor*] protein-caloric malnutrition; a human condition.
Kyasanur Forest disease [*ki-as'ə-noor*] a highly fatal flavivirus disease of monkeys in the Kyasanur Forest of India, communicable to humans, in whom it produces hemorrhagic symptoms. See also **encephalitis**.
kymatism [*ki'mə-tiz"əm*] **myokymia**; quivering of muscles.
kymogram [*ki-mo-gram*] the graphic record (tracing or film) produced by the kymograph.
kymograph [*ki-mo- graf*] an instrument for recording variations or undulations, arterial or other.
kymography [*ki-mog'rə-fe*] the use of the kymograph.
kynurenine [*kin-u'rə-nēn"*] a metabolite of tryptophan found in microorganisms and in the urine of normal animals; it is a precursor of kynurenic acid and an intermediate in the conversion of tryptophan to niacin.
kyphos [*ki'fos*] the hump in the spine in kyphosis.
kyphoscoliosis [*ki"fo-sko"le-o'sis*] upward (kyphosis) and lateral (scoliosis) curvature of the spine.
kyphosis [*ki-fo'sis*] abnormally increased convexity in the curvature of the thoracic spine as viewed from the side.
kyrtorrhachic [*kir"to-rak'ik*] having a vertebral column in which the lumbar curvature is ventrally convex.
kyto- for words beginning thus, see those beginning *cyto-*.

L

L Latin; left; length; [L.] *libra* (pound, balance); licentiate; light sense; [L.] *limen* (boundary); liter; lumbar; coefficient of induction.
L_0 Ehrlich's symbol for a toxin–antitoxin mixture that is completely neutralized and will not kill an animal.
L+ Ehrlich's symbol for a toxin–antitoxin mixture that contains one fatal dose in excess and will kill the experimental animal.
L- chemical prefix (written as small capital L) that specifies that the substance corresponds in chemical configuration to the standard substance L-glyceraldehyde. Carbohydrates are named by this method to distinguish them by their chemical composition. The opposite prefix is D-.
l former symbol for liter.
l- chemical abbreviation, *levo-* (i.e. left or counterclockwise). Applied to the enantiomeric form of compound which rotates a plane of linearly polarized light to the left. The mirror image enantiomer is termed *dextro-*.
λ lambda, small letter; eleventh letter in the Greek alphabet.
L antigen see L **antigen**.
L chain see light **chain**.
L-form see L-form **bacteria**.
L genes class I MHC genes in mice.
L-plasty a technique for suturing a crescent-shaped skin defect by starting at one end, removing the excess that develops on the longer side by cutting a V, then closing as a right angle. A L-shaped incision results.

l-region that part of the major histocompatibility complex where immune response genes are present.
L-shaped rumen a chronically distended rumen which extends from the left abdomen to fill the right half as well.
La chemical symbol, *lanthanum*.
la bouhite [Fr.] see **maedi**.
La Pieded Michoacan virus cause of **blue eye** disease of pigs; now called porcine rubulavirus.
LA test latex agglutination test.
la tremblante [Fr.] see **scrapie**.
lab laboratory.
label [*la'bəl*] something that identifies; an identifying mark, tag, etc.
drug l. including, but not restricted to the label on a drug container that refers to documentation that contains a statement of ingredients and the approved uses, the approved doses and the approved methods of administration for treatment of the diseases for which the drug is labeled.
pesticide l. legal document located on a pesticide container that provides information concerning the safe and effective use of the pesticide. It is a violation to use any pesticide in a manner inconsistent with its labeling.
radioactive l. radioactive tracer.
labeling to attach a label.
pulse-chase l. a method for following metabolic processes by tagging molecules using radioisotopes or fluorescent probes. Typically a labeled precursor substance is present for a brief period (pulse) followed by a period in which it is present only in an unlabeled form (chase).
labellum mouthparts of insects; carry tubes for the passage of aspirated fluids.
labia [*la'be-ə*] [L.] plural of *labium*.
oral l. lips of the mouth; musculomembranous folds that surround the mouth. Called also *labia oris*.
pudendal l. lips of the vulva. Called also *labium pudendi vulvae*.
vulvar l. see **vulva**.
labial [*la'be-əl*] pertaining to a lip, or labium.
l. ulcer see **eosinophilic** ulcer.
labile [*la'bəl*] 1. gliding; moving from point to point over the surface; unstable; fluctuating. 2. chemically unstable.
lability [*lə-bil'ə-te*] the quality of being labile.
labio- word element. [L.] *lip*.
labiogingival lamina [*la"be-o-jin'jī-vəl*] a thickening of the embryonal stomodeal ectoderm eventually forming the oral vestibule.
labioglossolaryngeal [*la"be-o-glos"o-lə-rin'je-əl*] pertaining to the lips, tongue and larynx.
labioglossopharyngeal [*la"be-o-glos"o-fə-rin'je-əl*] pertaining to the lips, tongue and pharynx.
labiogram [*la"be-o-gram*] imprint pattern taken from the muzzle of an animal; suggested as a means of identification. Called also nasolabiogram, nose print.
labiomental [*la"be-o-men'təl*] pertaining to the lips and chin.
labionasal [*la"be-o-na'zəl*] pertaining to the lip and nose.
labiopalatine [*la"be-o-pal'ə-tin*] pertaining to the lips and palate.
labioplasty [*la'be-o-plas"te*] plastic repair of a lip; cheiloplasty.
labioscrotal swellings [*la'be-o-skro'təl*] paired swellings flanking the developing genital tubercle and urogenital orifice prior to sex differentiation; destined to form the labia or scrotum.
Labiostrongylus the largest of the common nematodes in the stomach of macropods.
labium pl. *labia* [L.] a fleshy border or edge; a lip.
labor [*la'bər*] the function of the female organism by which the product of conception is expelled from the uterus through the vagina to the outside world. Labor may be divided into three stages. The first stage (*dilatation* and fetal orientation) begins with the onset of regular uterine contractions and ends when the cervical os is completely dilated and flush with the vagina, thus completing the birth canal. The second stage (*expulsion*) extends from the end of the first stage until the expulsion of the neonate is completed. The third stage (*placental*) extends from the expulsion of the neonate until the placenta and membrane are expelled and contraction of the uterus is completed. Called also parturition.
difficult l. see **dystocia**.
induced l. that which is brought on by extraneous means, e.g. by the use of drugs that cause uterine contractions; called also artificial labor.
laboratory [*lab'rə-tor"e*] a place equipped for making tests or doing experimental work.
l. animals the group of animals constantly used in laboratories for general research in all subjects. Includes rats, mice, rabbits and guinea pigs. In special-use laboratories additional animal species can be added, e.g. hamsters, nonhuman primates, amphibians, fowl, sheep and pigs.
clinical l. one for examination of materials derived from the animal body for the purpose of providing information on diagnosis, prevention or treatment of disease.
l. findings the results of laboratory examinations, usually with analyses and judgments.
maximum containment l. one designed and equipped to provide the highest level of security in the handling of infectious agents that are serious pathogens for humans and/or animals. See **biosafety**.
labour labor.
Labradoodle a hybrid name applied to dogs resulting from crossing Labrador retrievers and standard Poodles. Conformation and coat characteristics vary widely between those of the parents.
Labrador retriever a medium-sized, strongly built gun dog with broad head, drop ears, thick tapered tail, and short, very dense coat in black, yellow or chocolate. The medium length tail has a thick base and is covered in the thick coat, but not feathered; sometimes called an 'otter' tail. The breed is predisposed to inherited cataracts, progressive retinal atrophy, cystinuria, hemophilia A, osteochondrosis and hip dysplasia.
labrum [*la'brəm*] pl. *labra* [L.] an edge, rim or lip, e.g. upper lip of insects.
acetabular l. the ring of fibrocartilage that is attached to and deepens the acetabulum; large and thick in the horse and cow. Called also acetabular labrum, *labrum acetabuli*.
acetabular glenoidal l. see acetabular labrum (above).
articular l. a fibrocartilaginous rim around the edge of some joint sockets such as the acetabulum and the glenoid.
laburnum *Laburnum anagyroides*.
Laburnum anagyroides [*lə-bur'nəm*] plant member of the legume family Fabaceae; popular but very poisonous tree; the pods and seeds contain the quinolizidine alkaloid cytisine, which causes incoordination, excitement, sweating, convulsions and death. Vomiting also occurs in dogs. Called also laburnum, *Cytisus laburnum*, golden chain, golden rain.
labyrinth [*lab'ə-rinth*] the system of interconnecting cavities or canals of the internal ear, consisting of the vestibule, cochlea and **semicircular** canals. The cochlea is concerned with hearing, and the vestibule and semicircular canals with equilibrium.
bony l. the bony or osseous labyrinth is composed of a series of dense bony canals within and tunneled out of the petrous part of the temporal bone. It houses the membranous labyrinth.
ethmoid l., ethmoidal l. either of the paired lateral masses of the ethmoid bone, consisting of numerous thin-walled cellular cavities, the ethmoidal cells.
membranous l. delicate tubes inside the osseous labyrinth; the membranous labyrinth, which conforms to the general shape of the osseous labyrinth but is smaller. A fluid called perilymph fills the space between the osseous and membranous labyrinths. Fluid inside the membranous labyrinth is called endolymph. These fluids play an important role in the transmission of sound waves and the maintenance of body balance.
osseous l. see bony labyrinth (above).
labyrinthectomy [*lab"ə-rin-thek'tə-me*] excision of the labyrinth.
labyrinthine [*lab"ə-rin'thēn*] pertaining to or emanating from a labyrinth.
l. responses include righting and placing reflexes and nystagmus.
l. righting reflex the reflex which coordinates body movements so that a cat dropped from a height with its belly uppermost will rotate in flight so that its belly is closest to the ground.
labyrinthitis [*lab"ə-rin-thi'tis*] inflammation of the labyrinth; **otitis interna**.
labyrinthotomy [*lab"ə-rin-thot'ə-me*] incision of the labyrinth.
lac [*lak*] pl. *lacta* [L.] milk.
***lac* operon** [*lak op'ər-on*] the lactose operon, a nucleotide sequence in *Escherichia coli* that controls the synthesis of the enzyme β-galactosidase comprising binding sequence motifs for the cap protein, which activates transcription, the repressor protein, which inhibits transcription, and a region with which RNA

VetBooks.ir

polymerase interacts. The first, best studied and best understood model for gene regulation.

***lac* repressor** see *lac* **repressor**.

Lacazia loboi a fungus that causes **lobomycosis** in dolphins and keloidal blastomycosis in humans.

laceration [*las″ər-a′shən*] 1. the act of tearing. 2. a wound produced by the tearing of body tissue, as distinguished from a cut or incision.

Lacerta a genus of lizards in the family Lacertidae (true lizards). Agile, very fast moving four-legged reptiles with long pointed tails. Can inflict unpleasant bites but are not venomous.

lacertilian generally, like a lizard; specifically, a member of the suborder of lizards, Lacertilia.

lacertus [*lə-sur′təs*] pl. *lacerti* [L.] a name given to certain fibrous attachments of muscles, such as the 'lacertus fibrosus', the fibrous insertion of the biceps brachii muscle on the medial surface of the extensor carpi radialis muscles. It is especially well-developed in horses where it forms an integral part of the **stay apparatus**.

l. fibrosus part of the antebrachial fascia extending from the biceps to the radial carpal extensor muscles and a significant part of the horse's **stay apparatus**.

laces a term describing white marking on the legs in cats.

Lachnagrostis a genus of grasses in the plant family Poaceae.

L. filiformis blowaway, blown, fairy or oat grass. Previously *Agrostis avenacea*. The cause of flood plain staggers in Australia when seed heads are infested with a nematode (*Anguina* spp.) that produce galls containing the bacterium *Clavibacter toxicus* which produces a toxin tunicamyluracil (corynetoxin).

Lachnanthes tinctoria a North American plant in the family Haemodoraceae. Reputed to cause dermatitis in white-skinned pigs and pink discoloration of their bones. Called also *L. caroliniana*, *Gyrotheca tinctoria*, redleg, redroot.

Lachnospira multiparus [*lak″no-spi′rə*] a bacterial species resident in rumens and involved in ruminant digestion.

lachry- for words beginning thus see words beginning *lacri-*.

Lacombe a lop-eared bacon pig produced in Canada by crossing Landrace, Chester White and Berkshire pigs.

lacrim- prefix meaning tears.

lacrimal [*lak′rĭ-məl*] pertaining to tears.

l. apparatus a group of structures concerned with the production, secretion and drainage of tears. Includes tear-producing (lacrimal, accessory lacrimal and third eyelid glands) as well as the tear drainage (lacrimal puncta, canaliculus, sac, and duct) structures.

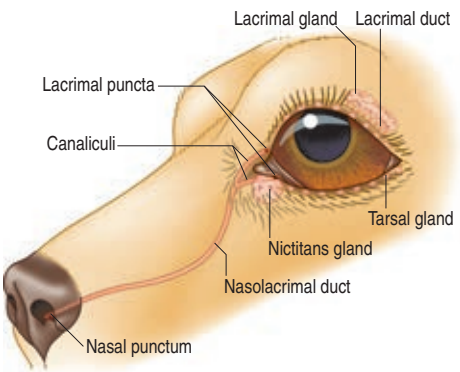
l. canaliculus see lacrimal **canaliculus**.

l. caruncle small rounded piece of modified skin at the medial canthus of the eye from which hairs often protrude; sometmes called the medial caruncle.

l. cyst displacement of lacrimal tissue resulting in subconjunctival or periocular cysts. Cause unknown.

l. drainage system the structures concerned with tear drainage from the eye; includes lacrimal lake, puncta, canaliculi, sac and nasolacrimal duct.

l. duct single duct draining tears from the lacrimal sac to (in most species) the nose (nasolacrimal duct) but in some species such as reptiles into the mouth.



L-1: Nasolacrimal apparatus in the dog. From McCurnin D, Poffenbarger EM, Small Animal Physical Diagnosis and Clinical Procedures. Saunders, 1991.

l. duct irrigator blunt-pointed, straight or curved cannula of various gauges with a Leur lock so that it can be attached directly to a syringe for irrigation of the nasolacrimal apparatus.

l. fossa fossa in the medial wall of the orbital rim which houses the lacrimal sac.

l. gland gland that produces tears. Most species have at least two: the major orbital lacrimal gland in the dorsolateral part of the orbital cavity and which secretes tears into the conjunctival sac via many excretory ducts, and the gland of the third eyelid. In some species there are accessory lacrimal glands. See also **Harderian gland**.

l. gland atrophy the result of chronic dacryoadenitis in keratoconjunctivitis sicca.

imperforate l. punctum see imperforate **punctum**.

l. lake recess where tears collect between the lids and the cornea joining at the medial canthus of the eye. Called also *lacus lacrimalis*.

l. pump physiologic method by which tear draingae is facilitated by contraction of the orbicularus oculi muscle which creates a compressive pressure on proximal components of the lacrimal apparatus.

l. punctum opening of the lacrimal canaliculus in the conjunctival fornix close to the medial canthus. Most species have one on each lid. Pigs have only the superior, rabbits only the inferior and tortoises have none. See also **punctum**.

l. reflex tear production caused by irritation of the cornea and conjunctiva.

l. sac a distended portion of the lacrimal apparatus lying within the lacrimal fossa and joining the lacrimal duct with the lacrimal canaliculus/canaliculi.

l. sinus the paranasal sinus that excavates the lacrimal bone which communicates with the maxillary sinus in some species.

l. system see lacrimal apparatus (above).

lacrimation [*lak″rĭ-ma′shən*] secretion and discharge of tears.

lacrimator [*lak′rĭ-ma″tər*] an agent, such as a gas, that induces the flow of tears.

lacrimatory [*lak′rĭ-mə-tor″e*] causing a flow of tears.

lacrimomimetic a tear substitute; artificial tears.

lacrimonasal [*lak″rĭ-mo-na′zəl*] pertaining to the lacrimal sac and nose; more commonly called nasolacrimal.

lacrimotomy [*lak″rĭ-mot′ə-me*] incision of the lacrimal duct or sac.

Lacroix operation a surgical procedure used to establish drainage of the external ear canal in dogs by the removal of a V-shaped segment of the lateral cartilaginous wall. See also **Zepp operation**.

lactacidemia [*lak-tas″ĭ-de′me-ə*] an excess of lactic acid in the blood; lacticemia; lactic acidemia.

lactacidosis see lactic **acidosis**.

lactaciduria [*lak-tas″ĭ-du′re-ə*] lactic acid in the urine.

lactagogue [*lak′tə-gog*] an agent that promotes the flow of milk; galactagogue.

lactam [*lak′tam*] a cyclic amide formed from aminocarboxylic acids by elimination of water; lactams are isomeric with lactims, which are enol forms of lactams.

β-l. antibiotics includes the penicillins, cephalosporins, carbapenems and penems. See also β-lactam ring (below).

β-l. ring an integral part of the formula of β-lactam antibiotics. Disruption of the ring by β-lactamase produced by some bacteria, e.g. *Escherichia coli*, destroy the antimicrobial activity of the compound.

β-lactamase either of two enzymes: β-lactamase I is penicillinase; β-lactamase II is cephalosporinase.

lactase [*lak′tās*] D-galactosidase; an enzyme in the intestinal mucosa that hydrolyzes lactose, producing glucose and galactose.

l. deficiency a deficiency of intestinal lactase, which causes abdominal distention and cramping and often diarrhea when milk is drunk.

lactate [*lak′tāt*] 1. any salt of lactic acid or the anion of lactic acid. 2. to secrete milk.

compound sodium l. see **Hartmann's solution**.

exercise blood l. exercise by a horse begins aerobically without any elevation of blood lactate concentration; exercise at faster levels is eventually performed anaerobically and blood lactate concentrations rise steeply.

l. shuttle the production of lactate in resting muscle where adequate oxygenation is available; represents a mechanism for

conserving glucose absorbed from the gut by allowing it to be converted to lactate by skeletal muscle and later used for work or transferred to the liver for glycogen synthesis.

l. T_m maximal tubular concentration of lactate.

lactated potassium saline see **Darrows solution**.

lactated Ringer's solution isotonic, balanced electrolyte solution for intravenous or subcutaneous (veterinary) administration with major electrolytes in the same concentration as in blood. Contains sodium chloride, sodium lactate, calcium chloride, and potassium chloride. Very similar in composition to **Hartmann's solution**. Called also Ringer's lactate.

lactating cows cows actually in milk; contrast with milking cows.

lactation [*lak-ta'shən*] 1. the secretion of milk by the mammary glands. 2. the period of weeks or months during which the dam lactates.

artificial l. see lactation induction (below).

current l. listing a list of all the cows in a herd which are currently being milked.

l. curves daily milk yield plotted along one abscissa of a graph, days along the other. Used to monitor peak **milk** output and **milk** persistency, especially to assess nutritional management.

early l. drop an unexpected downturn in the lactation curve of a dairy cow in early lactation.

l. failure see **agalactia**.

l. hormone lactogenic hormone, or prolactin.

inappropriate l. see **galactorrhea**.

l. induction in nonpregnant cows by the administration of hormones, usually a combination of estradiol and progesterone.

l. ketosis see primary **ketosis**.

l. number the number of times the cow has calved at the start of the current lactation. Used in the USA and elsewhere by dairy herd improvement associations to divide cows in a dairy herd into groups for analysis. Highest milk production occurs in lactation three or four.

l.–pregnancy cycle in dairy cows the cycle of the cow's year, commencing with calving and lactation onset, followed by conception, then drying off followed by calving again, all with impeccable timing, when aiming at a 365 day cycle.

premature l. early production and secretion of milk with udder enlargement. A sign of placentitis in the mare.

l. record the total milk and components produced by a cow beginning on the day of calving and ending on the day the cow goes dry. For purposes of genetic comparision, 10-month (305-day) lactation records are the standard of the industry.

projected 305-day l. a calculation for predicting a cow's total yield in 305 days based on the information from a lactation in progress.

lactation tetany [*lak-ta'shən tet'ə-ne*] 1. lactation tetany of ruminants is a highly fatal disease of recently calved, lactating cows and recently lambed ewes. The disease reaches serious levels of prevalence in animals grazing grass dominated pastures and cereal crops. It is characterized by hypomagnesemia and usually an accompanying hypocalcemia. Clinical highlights include tonic and clonic muscular spasms, and convulsions and death due to respiratory failure. The disease in cattle is called also hypomagnesemic tetany, grass tetany, grass staggers. 2. lactation tetany of mares is a similar disease clinically but occurs at the foaling heat or just after the foal is weaned. It is primarily a hypocalcemia, with hypomagnesemia an uncommon finding. 3. lactation tetany of dogs and cats, see puerperal **tetany**.

L-2: Premature lactation in a mare with ascending placentitis.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

lactational osteoporosis [*lak-ta'shən-əl*] may facilitate fracture of the femur, vertebrae and phalanges in lactating sows fed diets deficient in calcium and normal to high phosphorus.

lacteal [*lak'te-əl*] 1. pertaining to milk. 2. any of the intestinal lymphatics that transport chyle.

lactenin [*lak'tə-nin*] a bacteriostatic substance in milk.

lactescence [*lak-tes'əns*] resemblance to milk.

lactic [*lak'tik*] pertaining to milk.

l. acidemia lactacidemia.

lactic acid [*lak'tik*] a compound formed in the body in the anerobic metabolism of carbohydrate, by fermentation of carbohydrates in the rumen and by bacterial action on milk. The sodium salt of racemic or inactive lactic (sodium lactate) acid is used as an electrolyte and fluid replenisher.

l. a. cycle the metabolic system by which lactic acid produced by glycolysis in muscles is converted in the liver to glucose which is then returned to the muscle for conversion back to lactic acid. Helps to prevent lactic acidosis in the muscle and provides the muscle with energy during exercise. Called also the Cori cycle.

l. a. indigestion see **carbohydrate engorgement**.

ruminal l. a. the concentration is high in **carbohydrate engorgement**.

lactic acidemia [*lak"tik-as"i-de'me-ə*] lactacidemia.

lactic acidosis [*lak"tik as"i-do'sis*] see lactic **acidosis**.

lacticemia [*lak"ti-se'me-ə*] lactacidemia.

lactiferous [*lak-tif'ər-əs*] conveying milk.

l. ducts appearing first as epithelial diverticula which invade the mammary mesenchyme from the mammary buds, the precursors of the teats, these solid cords of cells later cavitate to produce lactiferous ducts.

l. sinus large cavity, continuous with the lactiferous ducts in mammary tissue, which serves as a reservoir for accumulated milk in the mammary gland until it is released at milking or suckling via the teat sinus and teat canal; is a combination of gland and teat sinuses.

lactifuge [*lak'ti-fūj*] checking or stopping milk secretion; an agent that so acts.

lactigenous [*lak-tij'ə-nəs*] producing milk.

lactigerous [*lak-tij'ər-əs*] see **lactiferous**.

lactim [*lak'tim*] see **lactam**.

lactivorous [*lak-tiv'ə-rəs*] feeding or subsisting upon milk.

lact(o)- word element. [L.] *milk*.

Lactobacillus [*lak"to-bə-sil'əs*] a genus of gram-positive, rod-shaped bacteria, all of which are generally considered to be nonpathogenic, although they have been isolated from abscesses in cats. They produce lactic acid by fermentation and play a part in the development of lactic acidosis in ruminants fed too much carbohydrate. See also **yogurt**.

lactobacillus pl. *lactobacilli;* any individual organism of the genus *Lactobacillus*.

lactocele [*lak'to-sēl*] see **galactocele**.

Lactococcus parviae [*lak"to-kok'əs*] see ***Enterococcus seriolicida***.

lactoferrin [*lak'to-fer"in*] an iron-binding protein found in neutrophils and bodily secretions (milk, tears, saliva, bile, etc.), having bactericidal activity, and acting as an inhibitor of colony formation by granulocytes and macrophages.

lactoflavin see **riboflavin**.

lactogen [*lak'to-jən*] any substance that enhances lactation.

lactogenesis [*lak'to-jen'ə-sis*] the process of differentiation of cells of the mammary alveoli, as a consequence of which the alveolar cells develop the capacity to secrete milk. Called also galactopoiesis.

lactogenic [*lak"to-jen'ik*] stimulating the production of milk.

l. hormone one of the gonadotropic hormones of the anterior pituitary; it stimulates and sustains lactation in postpartum animals, and shows luteotropic activity in certain mammals. Called also prolactin.

lactoglobulin [*lak"to-glob'u-lin*] a globulin occurring in milk.

immune l's antibodies (immunoglobulins) occurring in the colostrum of mammals.

lactolith see **milk** stone.

lactone [*lak'tōn*] 1. an aromatic liquid from lactic acid. 2. a cyclic organic compound in which the chain is closed by ester formation between a carboxyl and a hydroxyl group in the same molecule forming a ring. Examples are vitamin C and the antibiotic erythromycin.

VetBooks.ir

lactoperoxidase [*lak"to-pər-ok'sĭ-dās*] an enzyme found in milk that oxidizes thiocyanate to bacteriostatic products.
lactophenol cotton blue [*lak"to fe'nol*] a preparation of phenol, lactic acid, glycerin, distilled water, and cotton blue dye, used to stain fungi in wet preparations.
lactorrhea [*lak"to-re'ə*] excessive or spontaneous milk flow; persistent secretion of milk irrespective of nursing; galactorrhea.
lactose [*lak'tōs*] a sugar derived from milk, which on hydrolysis yields glucose and galactose.
l. digestion test see lactose tolerance test (below).
l. intolerance inability to digest lactose in the diet because of the lack of the enzyme lactase in the small intestine. Clinical consequences are intestinal discomfort and diarrhea.
l. tolerance test a monitor of intestinal epithelial damage, similar to the starch digestion test. The test measures the rise in blood glucose at timed intervals after oral administration of lactose; essentially a test of disaccharidase efficiency of the gut.
lactoside [*lak'to-sīd*] glycoside in which the sugar constituent is lactose.
lactosuria [*lak"to-su're-ə*] lactose in the urine.
lactotherapy treatment by milk diet.
lactotroph, lactotrope [*lak'to-trōf*] an acidophilic cell of the anterior pituitary that secretes prolactin.
lactotrophin, lactotropin [*lak'to-tro"fin*] see **prolactin**.
Lactuca genus in the plant family Asteraceae; includes *L. sativa, L. seriola*. Called also lettuce.
L. sativa toxin unidentified; large intakes reputed to cause narcosis. Called also lettuce.
L. serriola toxin unidentified; young plants cause pulmonary emphysema manifested by dyspnea, weakness and death. Called also prickly lettuce.
lactulose [*lak'tu-lōs*] a synthetic disaccharide used as a cathartic and to enhance the excretion of ammonia in the treatment of hepatic encephalopathy.
lacuna [*lə-ku'nə*] pl. *lacunae* [L.] 1. a small pit or hollow cavity. 2. a defect or gap, as in the field of vision (scotoma).
absorption l. a pit or groove in developing bone that is undergoing resorption; frequently found to contain osteoclasts.
bone l. a small cavity within the bone matrix, containing an osteocyte, and from which slender canaliculi radiate and penetrate the adjacent lamellae to anastomose with the canaliculi of neighboring lacunae, thus forming a system of cavities interconnected by minute canals.
cartilage l. any of the small cavities within the cartilage matrix, containing a chondrocyte.
Howship's l. the concave cavities which are formed by osteoclasts in the process of bone resorption.
osseous l. bone lacuna.
osteocytic l. bone lacuna.
urethral l. numerous small depressions or pits in the mucous membrane of the urethra.
vascular l. a breach in any membrane or other tissue which is traversed by blood vessels.
lacunule [*lə-ku'nūl*] a minute lacuna.
lacus [*la'kəs*] pl. *lacus* [L.] lake.
l. lacrimalis see **lacrimal** lake.
Lady Campbell weed ***Echium*** *plantagineum*.
Laekenois see **Belgian** Laekenois.
Laelaptidae a family of mites, found as occasional infestations on chickens and pigeons.
laev(o)- see words commencing with *levo-*.
Lafora bodies [*lah-fo'rah*] large, cytoplasmic inclusion bodies in central neurons rarely in normal dogs and in larger numbers in cases of neurological disease in young dogs. See also **glycoproteinosis**.
Lafora's disease see **glycoproteinosis**.
lag [*lag*] 1. the time elapsing between application of a stimulus and the resulting reaction. 2. the early period after inoculation of bacteria into a culture medium before cell division commences.
l. screw a screw used in compression plating of bone fractures; it has U-shaped threads.
lagena [*lə-je'nə*] 1. the curved, flask-shaped organ of hearing in vertebrates more primitive than mammals, corresponding to the cochlear duct. 2. the upper extremity of the cochlear duct.
lagenidiosis a cutaneous and systemic disease in dogs from the southeastern USA, caused by *Lagenidium* spp.; similar in appearance to **pythiosis**. Characterized by multiple, firm cutaneous or subcutaneous nodules, sometimes ulcerated, and draining tracts, with regional lymphadenopathy. Dissemination may occur to internal organs and great vessels.
Lagenidium a genus of Oomycota; a parasite of mosquito larvae. Causes lagenidiosis.
lageniform [*lə-jen'ĭ-form*] flask-shaped.
Lagochilascaris [*lag"o-kĭ-la'kə-ris*] a genus of nematodes in the family Ascarididae.
L. minor found in wild felines and didelphoids (American opossums).
lagomorphs [*lag'ə-morfs*] members of the order Lagomorpha; hares, rabbits and pikas. Often mistakenly regarded as rodents, they differ in that all species are terrestrial and herbivorous with four upper incisors; in the male, the scrotum is located cranial to the penis.
lagophthalmos [*lag"of-thal'məs*] incomplete or defective closure of the eyelids typically due to inherited macropalpebral fissure and shallow orbits in brachycephalic animals, but also may occur due to marked ectropion, dysfunction of cranial nerve VII, proptosis, or exophthalmos. Typically leads to exposure **keratitis**.
Lagos virus [*la'go-vi"rəs*] a rhabdovirus found in bats that has serological similarities to, but significant differences from, the rabies virus.
Lagotto Romagnolo a medium-sized (24–35 lb) Italian breed with a very thick and curly coat in brown, off-white or white, sometimes with patches, that covers the body. Bred as a gundog and retriever; sometimes trained for hunting truffles. Called also Romagna water dog.
Lagovirus a genus in the family *Caliciviridae*; causes **rabbit hemorrhagic disease** and **European** brown hare syndrome.
Lahey forceps surgical forceps of several kinds.
L. hemostat forceps standard, straight or curved hemostats with ratcheted handles and cross-grooved blade faces.
L. traction forceps scissor-type forceps with ratcheted handles and in-turning, three-pronged blades that look like bent dinner forks.
lahiet el tis [Ar.] see ***Perralderia coronopifolia***.
Lahore canine fever canine **ehrlichiosis**.
Laikipia disease a chronic, progressive pneumonia that causes high mortality of sheep on the Laikipia plain of Kenya. Affected sheep have both maedi and jaagsiekte.
lairage animal handling facilities at saleyards or abattoirs. Includes loading ramps, laneways, branding and injection chutes, weigh-scales, holding pens, drafting races, covered housing, waterpoints and feed bunkers.
LAK cells lymphokine-activated killer cells.
lake 1. to undergo separation of hemoglobin from erythrocytes. 2. a lacuna; a circumscribed collection of fluid in a hollow or depressed cavity.
lacrimal l. see **lacrimal** lake.
Lakeland terrier a small (17 lb) active dog with short, harsh coat in blue and tan or black and tan. The ears are small and folded over, the tail is docked to a medium length. Called also Fell terrier or Patterdale terrier, although those names are not specific to dogs of this breed.
lakseersiekte [Af.] 'purging sickness' caused by ingestion of *Chrysocoma tenuifolia*; characterized by dysentery and rapid death.
lalobe see ***Balanites aegyptica***.
Lama genus containing llamas, alpacas, guanacos and vicuñas.
Lamarck's theory [*lah-mahrks'*] a discredited theory that acquired characteristics may be transmitted.
lamb young sheep still with its dam or up to 5 months of age. Qualified as ram or ewe lamb. In commercial usage may include much older animals, e.g in Europe.
l. bed uterus.
bummer l. an American term for an orphan lamb that has to be fed artificially with milk replacer.
l. dysentery a severe, highly fatal enteritis with diarrhea and dysentery in young lambs caused by *Clostridium perfringens* type B.
goat l. name for a lamb with **border disease**; not commonly used.
l. industry includes stud flocks which produce rams of fat lamb breeds, e.g. Dorset Down, commercial farms breeding crossbred fat lamb mothers and fattening the lambs. The latter may be undertaken in feedlots or on special pasture fattening farms.

Saleyards and sale rings, lamb abattoirs and wholesale outlets comprise the marketing side of the industry.
l. marking earmarking, castration and tail docking.
l. marking rate the percentage of lambs born which reach the stage of lamb marking. An index of lamb mortality rate.
l. poison see ***Isotropis***.
l's quarter ***Chenopodium*** *album*.
sucker l. a lamb still sucking the ewe and ready for slaughter. The most succulent lamb of all.
l's tongue *Scleroblitum* (***Chenopodium***) *atriplicinum, Plantago varia*.
lambda 1. the eleventh letter of the Greek alphabet, Λ or λ. 2. the point of union of the lambdoid and sagittal sutures of the cranium.
lambdoid [*lam'doid*] shaped like the Greek letter lambda, Λ or λ.
lambert crazyweed [*lam'bərt*] ***Oxytropis*** *lambertii*.
Lambertia Australian genus of shrubs in the family Proteaceae.
L. formosa contains cyanogenic glycosides. Called also honeysuckle, honeyflower, mountain devil.
lambing parturition in the ewe.
batch l. arranging for ewes to lamb in groups preselected on the basis of their breeding date. Maximizes use of labor in intensive lambing management aimed at minimizing losses of lambs at lambing.
drift l. as ewes in a big flock lamb they are moved off into other groups so that management can be intensified with the residue.
extensive l. the ewes are left to lamb unattended on extensive range. There is the least possible harassment, suitable for the timid merinos usually maintained in these conditions, but no opportunity to assist a ewe in trouble, an uncommon occurrence in this kind of sheep.
indoor l. see **shed** lambing.
intensive l. see **shed** lambing.
l. out the act of supervising and caring for the ewes in a flock during parturition.
l. paralysis see maternal obstetric **paralysis**.
pen l. the ewes are brought in from the pastures and those close to lambing are brought into pens where they can be kept under close observation to ensure carefree lambing and maximum lamb survival. The pens may be indoors or outside.
l. rate numbers of lambs born per hundred ewes mated.
l. sickness see ovine **hypocalcemia**.
l. stain a yellow-to-brown stain of the escutcheon and backs of the legs caused by placental fluids, an indication that the ewe has recently lambed. A valuable guide in the culling technique of wet-drying the ewes.
lambkill ***Kalmia*** *angustifolia*.
Lamblia [*lam'ble-ə*] see ***Giardia***.
lambliasis [*lam-bli'ə-sis*] giardiasis.
lambs' tail see ***Anredera cordifolia***.
lame [*lām*] incapable of normal locomotion; deviation from the normal gait. The commonest cause of lameness in animals is pain in a limb or its supporting structures, but contractures of joints, and deformities and shortness of limbs are also causes.
lamella [*lə-mel'ə*] pl. *lamellae* [L.] a thin scale or plate, as of bone.
circumferential l. one of the bony plates that underlie the periosteum and endosteum.
concentric l. haversian lamella (see below).
endosteal l. one of the bony plates lying deep to the endosteum.
epidermal l. one of the many fine projections ('leaves') arising from the inner hoof wall to which connective tissue associated with the distal phalanx anchors. Important in the pathogenesis of **laminitis**. In the horse, the surface area of *primary* epidermal lamellae is increased by numerous *secondary* epidermal lamellae, which are absent in the bovine.
ground l. intermediate lamella (see below).
haversian l. one of the concentric bony plates surrounding a haversian canal.
intermediate l. one of the bony plates that fill in between the haversian systems; called also interstitial lamella.
interstitial l. see intermediate lamella (above).
intrasinual l. partitions which divide certain paranasal sinuses into diverticula that sometimes communicate with each other. Intrasinual lamellae are often incomplete, are most abundant in the frontal sinuses, and especially well represented in cattle and pigs. Called also *lamellae intrasinuales*.
lamellar [*lə-mel'ər*] pertaining to or emanating from lamella.
l. phagosomes common degradation product in pigment epithelium.
l. suppuration pyogenic infection between the horn of the hoof and the sensitive laminae. See also **hoof** abscess.
lamellibranch see **bivalve**.
lamellipodium [*lə-mel"ĭ-po'de-əm*] pl. *lamellipodia* [L., Gr.] delicate sheetlike extension of cytoplasm that forms transient adhesions with the cell substrate and waves gently, enabling the cell to move along the substrate.
lameness [*lām'nis*] the state of being lame.
complementary l. redistribution of weight from one painful leg can cause lameness in another, previously normal, leg.
fescue l. see ***Festuca***.
regional l. lameness in a particular part of a limb, e.g. stifle lameness.
supporting leg l. discomfort is evident when the animal is standing or bearing weight on the leg.
swinging leg l. abnormality of movement, such as hitching or failure to flex a joint, is evident when the leg is in motion.
three-legged l. the animal does not put weight on one of its limbs.
weightbearing l. the lameness is not caused by movement of the limb but by putting weight on it.
whirlbone l. see trochanteric **bursitis**.
lamina [*lam'ĭ-nə*] pl. *laminae* [L.] a thin, flat plate or layer; a layer of a composite structure. Often used alone to mean a vertebral lamina.
l. basilaris the connective tissue component of the tympanic part of the cochlear duct, separating it from the scala tympani.
l. choroidocapillaris the inner layer of the choroid, composed of a single-layered network of small capillaries.
l. cribrosa 1. fascia cribrosa. 2. (of ethmoid bone) the sieve-like transverse plate of ethmoid bone forming the boundary between the olfactory bulb of the brain within the rostral cranial fossa and the caudal limit of the nasal cavity, and perforated by many foramina for passage of olfactory nerves. 3. (of sclera) the perforated part of the sclera near the posterior pole of the globe through which pass the axons of the retinal ganglion cells to become the optic nerve.
l. densa, l. dura a layer of dental alveolar bone containing more than usual amounts of highly calcified cementing substance, associated with periodontal fibers in the bone; causes lines of increased radiodensity in dental radiographs—hence the name.
epithelial l. the layer of ependymal cells covering the choroid plexus and facing the ventricle.
l. epithelialis mucosae the layer of epithelial cells on the surface of the mucosa.
l. femoralis that part of the aponeurosis of the external abdominal oblique muscle which continues the lateral lip of the superficial inguinal ring onto the medial surface of the thigh in some species such as the horse.
l. fibroreticularis a layer of collagenous fibers projecting into the connective tissue space underlying the basement membrane.
l. fusca the lightly melanotic innermost layer of the sclera composed of loose connective tissue; visible ophthalmoscopically in some (especially subalbinotic) animals.
horny l. the laminae on the inside of the hoof which interdigitate with the sensitive laminae attached to the hoof corium.
l. limitans the layer of unmineralized matrix covering a bone surface that is not undergoing metabolic or structural change.
l. lucida the modified cell coat, appearing as a clear zone separating the basal lamina from the cell membrane.
l. mucosae includes laminae epithelialis mucosae (above), muscularis mucosae, propria mucosae (see below).
l. muscularis mucosae one or more smooth muscle layers, that provide local mobility to the mucous membrane of organs; variable in occurrence.
omasal l. flat, parallel leaves of mucous membrane which line the internal aspect of the omasal wall and extend from the curvature to the sulcus omasi; they account for the colloquial name for the organ—bible; large and short leaves tend to alternate with each other.
l. propria, l. propria mucosae the connective tissue layer of mucous membrane.
sensitive l. the laminae which interdigitate with the horny laminae of the hoof and which are made up of laminar corium plus a coat of not yet cornified epidermis.

VetBooks.ir

spiral l., l. spiralis 1. a double plate of bone winding spirally around the modiolus, dividing the spiral canal of the cochlea into the scala tympani and scali vestibuli. 2. a bony projection on the outer wall of the cochlea in the lower part of the first turn.
terminal l. of hypothalamus the thin plate derived from the telencephalon, forming the anterior wall of the third ventricle of the cerebrum.
l. terminalis grisea thin plate forming the rostral wall of the third ventricle.
transverse l. separates the caudal part of the nasal cavity of the pig and dog into a ventral respiratory part and a dorsal olfactory part.
udder suspensory l. see **udder** suspensory apparatus.
vertebral l. either of the pair of broad plates of bone flaring out from the pedicles of the vertebral arches and fusing together at the midline to complete the dorsal part of the arch and provide a base for the spinous process.
laminagraphy [*lam"ĭ-nag'rə-fe*] see **tomography**.
laminar [*lam'ĭ-nər*] made up of laminae or layers; pertaining to a lamina.
l. cortical necrosis necrosis of the superficial layers of the cerebral cortex. See also **polioencephalomalacia**.
l. dermis the sensitive laminae in the horse's hoof; interdigitate with the insensitive laminae on the inner aspect of the horn of the hoof.
l. flow the flow of liquid through a tube so that the fluid passes along in concentric layers which slide over each other. See also laminar **blood flow**.
laminated [*lam'ĭ-nāt"ed*] made up of laminae or thin layers.
lamination a laminar structure or arrangement.
laminectomy [*lam"ĭ-nek'tə-me*] surgical excision of the dorsal arch of a vertebra. The procedure is most often performed to relieve the signs caused by a ruptured intervertebral disk or a space-occupying lesion that is compressing the spinal cord.
continuous l. the procedure is carried out on all cervical vertebrae for multiple lesions.
Funquist l. modifications of the procedure which include in type A, bilateral excision of both cranial and caudal articular processes and partial removal of the peduncles. In type B, these structures are preserved.
selected l. for single lesions, bone is removed from only the adjacent vertebrae.
laminin [*lam'ĭ-nin*] a glycoprotein found in basement membrane (extracellular matrix).
laminitis [*lam"ĭ-ni'tis*] a disease of horses and housed dairy cattle, characterized by damage to the sensitive laminae of the hooves, and clinically by severe lameness, especially in the front hooves. There is heat and pain at the coronets and in bad cases protrusion of the third phalanx through the sole of the hoof. Hypoxia at the corium results in defective keratinization and the production of a laminitic ring with the occurrence of multiple rings in the hooves of animals with chronic laminitis. Most cases are caused by severe toxemia, as in engorgement on grain or metritis in the mare, and are called metabolic laminitis. Sporadic cases in heavily pregnant, overfat mares are referred to as puerperal laminitis. Some are caused by trauma, such as in pawing due to boredom or in horses transported over long distances without rest, and are called traumatic laminitis. Called also founder.
laminography [*lam"ĭ-nog'rə-fe*] a special technique of body-section radiography. See **tomography**.
Laminosioptes [*lam"ĭ-no-se-op'tēz*] a genus of mites in the family Laminosioptidae.

L-3: Typical rings and abnormal hoof growth of chronic laminitis in a horse.
From Pascoe R, Knottenbelt DC, Manual of Equine Dermatology. Saunders, 1999.

L. cysticola cause small, flat, oval nodules in the subcutaneous tissue of fowls. Called also cyst mites.
laminotomy [*lam"ĭ-not'ə-me*] transection of a vertebral lamina.
lamins fibrous proteins found in the polymeric network underlying the nuclear membrane.
Lamium amplexicaule toxic plant in family Lamiaceae; toxin unidentified; signs include hypersensitivity, tremor, incoordination, recumbency, sudden death. Called also henbit, dead nettle.
lamkruis [Af.] see **swayback**.
lamoid the South American camelids, including llama, alpaca, vicuña and guanaco.
lamp [*lamp*] an apparatus for furnishing heat or light.
l. oil see **kerosene** (2).
slit l. one embodying binocular magnification and a diaphragm containing a slit-like opening of changeable size by means of which a slit of intense light may be projected into the eye so that microscopic study may be made of the ocular structures, especially those that are transparent or translucent and through which an optical section can be made.
ultraviolet l. an electric light bulb that transmits ultraviolet rays; used as a therapeutic device. See also **ultraviolet** therapy.
lampas [*lam'pəs*] inflammation of the mucosa of the hard palate, just posterior to the upper incisors. It may interfere with mastication and prehension. Called also palatitis.
lamtoro [Indonesian] the name given to the disease caused by the ingestion of *Leucaena leucocephala*.
lamziekte [*lam'zēk-te*] [Af.] *lame sickness;* botulism in cattle and sheep.
LANA test L-alanine-4-nitroanilide. A test for identification of gram-negative bacteria.
lanatoside C [*lə-nat'o-sid*] a glycoside originally obtained from *Digitalis lanata*, used as a cardiotonic like digitalis.
Lancashire an older British breed of canaries; it comes in crested (Coppies) and Plainhead varieties.
Lancashire heeler a small, low set cattle working dog which also hunts rabbits and rats like a terrier. A smooth coat with a slight mane; the color is black or liver with tan markings. Called also Ormskirk terrier or heeler.
lance [*lans*] 1. lancet. 2. to cut or incise with a lancet.
Lancefield classification the classification of streptococci into groups on the basis of cell wall antigens. Each group is indicated by a letter from A to V. Some species are antigenically heterogeneous.
lancet [*lan'sət*] a small, pointed, two-edged surgical knife.
land-grant colleges educational institutions established in every state, principally under the Morrill Acts of 1862 and 1890 to provide higher education and research in agriculture, general science, veterinary science and engineering. Subsequently, the Smith-Lever Act of 1914 established federal funding for Cooperative Extension, a program to allow dissemination of the research findings of the land-grant universities to the community, which employed extension veterinarians as a component of the extension team to agriculture. In states that later established Colleges of Veterinary Medicine, they were usually affiliated with these institutions (now titled universities). States that have no College of Veterinary Medicine generally have Departments of Veterinary Science, and a state diagnostic laboratory, affiliated with the College of Agriculture of that land-grant university.
Landrace a large white pig with ears pitched forwards and top edge level with topline of snout. There are many ethnic varieties. Originated in Denmark.
Landry's paralysis [*lah-dre'*] see **Guillain–Barré syndrome**.
Landseer a black and white **Newfoundland** dog, recognized as a separate breed in Europe.
Lane forceps [*lān*] designed for holding bones, these heavyweight forceps have long ratcheted handles and a curled-up handle end to facilitate traction. The blades enclose a diamond-shaped aperture when closed and have deep spikes.
Langat virus a tick-borne flavivirus isolated in Malaysia, closely related to other viruses in the tick-borne encephalitis group such as louping ill virus.
Langenbeck retractor [*lahng'ən-bek*] a simple handheld instrument with a flat blade bent down at right angles to the handle. Useful for temporary retraction of soft tissue.
Langerhans' cell [*lahng'hahnz*] dendritic cell in the skin that functions in the processing of antigen. See also dendritic **cell**.

L-4: Landrace pig.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

L-6: *Lantana camara.*
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

Langerhans' islets see **islets of Langerhans**.
Langer's line [*lahng'ər*] tension line
Langhans' giant cell [*lahng'hahnz*] a multinucleated giant cell in which the nuclei form a circle or semicircle at the periphery of the cell.
langouste see ***Panulirus***.
Langshan black dual-purpose poultry breed. There are two types: a smaller, egg-laying Chinese type; and a larger, Croad type used for meat production. All black in color, but with a bright green iridescence on the hackle, wing and tail feathers. Single comb, and feathers on legs.
Lankesterella a genus of protozoan parasites of lymphocytes and monocytes of birds.
lanolin [*lan'o-lin*] wool fat or wool grease that is refined and incorporated into many commercial preparations. Lanolin is a by-product of the process that accompanies the removal of sheep's wool from the pelt. In its crude form it is a greasy yellow wax of unpleasant odor which disappears when the lanolin is emulsified and made into salves, creams, ointments and cosmetics. Although lanolin is slightly antiseptic, it has no other medicinal benefits and is valuable principally because of the ease with which it penetrates the skin, and because it does not become rancid.
anhydrous l. the principal animal fat used in the preparation of ointments for animals. Now competes with synthetic materials such as polyethylene glycols.
l. bush ***Zieria*** *smithii*.
lanosterol [*lə-nos'tər-ol*] a sterol found in lanolin, a wax obtained from sheep's wool; the first cyclic intermediate in the synthesis of cholesterol; the compound from which all steroids are derived.
lansoprazole [*lan-so'prə-zōl*] a proton pump inhibitor, used to inhibit gastric acid production in uremic gastritis and other causes of ulceration of the stomach and duodenum.
lantadene lantadene A and B are triterpene cholestatic toxins in ***Lantana*** *camara*.
Lantana genus of South American plants in the family Verbenaceae; some contain toxic triterpenes, lantadenes, potent hepatoxins; cause severe jaundice and photosensitization in ruminants. Sloughing skin of the muzzle leaves a raw pink surface giving rise to the name 'pink nose'. Include *L. achyranthifolia*, *L. aculeata*, *L. camara*, *L. montevidensis* (*L. sellowiana*, creeping lantana), *L. ovatifolia*, *L. vetulina*; of these only *L. camara* is well recognized as being pathogenic. *L. montevidensis* is suspected of causing a syndrome of dermatitis and incoordination (scrub ataxia) in suckling calves of cows eating the plant.
lanthanum (La) [*lan'thə-nəm*] a chemical element, atomic number 57, atomic weight 138.91. See Table 4.

L-5: Lane forceps.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide, 2nd Edition. Mosby, 2011.

lanuda long-haired llama.
lanugo [*lə-noo'go*] see lanugo **hair**.
lapar(o)- word element. [Gr.] *loin* or *flank, abdomen*.
laparocystidotomy incision of the urinary bladder through the abdominal wall.
laparohysterotomy [*lap"ə-ro-his"tər-ot'ə-me*] see **cesarean section**.
laparorrhaphy [*lap"ə-ror'ə-fe*] suture of the abdominal wall.
laparoscope [*lap'ə-ro-skōp"*] an endoscope for examining the peritoneal cavity and its contents.
laparoscopic examination [*lap"ə-ro-skop'ik*] examination of the peritoneal cavity and its contents using a laparoscope.
laparoscopy [*lap"ə-ros'kə-pe*] examination of the peritoneal cavity by means of the laparoscope.
laparotomy [*lap"ə-rot'ə-me*] incision through the flank, but more commonly used for those incisions through any part of the abdominal wall.
exploratory l. for the purpose of physically examining the contents of the peritoneal cavity.
l. grid see grid **incision**.
LaPerm a recently recognized breed of cats arising from a dominant mutation responsible for the curly, long or short coat in any color or pattern and with any eye color.
lapinization [*lap"in-ĭ-za'shən*] serial passage of a virus through rabbits to modify its characteristics. e.g. rinderpest virus.
lapinize [*lap'in-īz*] to attenuate (as a virus for use as a vaccine) by serial passage through rabbits.
Laplace's law [*`lah-plahs'əz*] a law that, like the **bernoulli principle**, accounts for the higher wall tension in an arterial aneurysm.
Laportea moroides ***Dendrocnide*** *moroides*.
lappets lobe-like structures, e.g. the wattles of a fowl.
lard [*lahrd*] commercially retrieved pig fat.
larder beetle (*Dermestes* spp.) destroys stored grain, meat, hides and accumulated droppings of pigeons. The larvae may attack pigeon fledglings.
Large black a breed of black, lop-eared pig. Called also British black.
Large Munsterlander a medium to large sized, muscular gun dog with a medium length white coat with black patches, flecks or speckles. The tail may be long or docked and the ears are pendulous, lying close to the head. A smaller variety is recognized as a separate breed in Europe.
large-scale farms the modern trend to enlarge farms to reach optimal size as a business enterprise rather than as a unit size suited to single family management.
Large white a breed of white, prick-eared pig, with a long face and straight nose. Called also Large white Yorkshire.
Large white Ulster extinct meat and lard, lop-eared pig, from Northern Ireland.
Large white Yorkshire see **Large white pig**.
lariat lasso.
larkspur [*lahrk'spər*] see ***Delphinium***.
duncecap l. *Delphinium occidentale*.
low l. *Delphinium*.
tall l. *Delphinium barbeyi*, *D. brownii*, *D. occidentale*.
larva [*lahr'və*] an independent, immature stage in a life cycle in which the stage is unlike the parent and must undergo changes in form and size to reach the adult stage. There may be one or several, commonly three, larval stages in the one life cycle. In fish larvae are also called fry.
l. currens a variant of larva migrans caused by *Strongyloides stercoralis*, in which the linear progress of the lesions is much more rapid.

VetBooks.ir

cutaneous l. migrans creeping eruption; a convoluted, thread-like skin eruption in humans and other species which appears to migrate; caused by the burrowing beneath the skin of roundworm larvae, particularly *Ancylostoma*, *Strongyloides* and *Gnathostoma* spp., *A. braziliense*, *A. caninum*, *Bunostomum phlebotomum* can cause the disease.
ocular l. migrans infection of the eye with the larvae of the roundworm *Toxocara canis* or *T. cati*, which may lodge in the choroid or retina or migrate to the vitreous; on the death of the larvae, a granulomatous inflammation occurs, the lesion varying from a translucent elevation of the retina to massive retinal detachment and pseudoglioma.
visceral l. migrans a condition due to prolonged migration of larvae of animal nematodes in human tissues other than skin, commonly caused by larvae of the roundworms *Toxocara canis* and *T. cati*.
larval [*lahr'vəl*] 1. pertaining to larvae. 2. larvate.
l. migrans see cutaneous and visceral **larva** migrans.
larval mycosis [*lahr'vəl mi-ko'sis*] opportunistic infections in larval crustaceans by marine water molds *Lagenidium* and *Sirolpidium* spp.
larvate [*lahr'vāt*] masked; concealed: said of a disease or of a clinical sign of a disease.
larvicide [*lahr'vĭ-sīd*] an agent that kills insect larvae.
laryngalgia [*lar"in-gal'jə*] pain in the larynx.
laryngeal [*lə-rin'je-əl*] pertaining to the larynx.
l. adductory reflex, adduction test slapping of the saddle region of a horse just behind the withers causes a flickering, adductory movement of the contralateral arytenoid cartilage in normal horses. The movement of the cartilage can be viewed endoscopically. The reflex is abolished by damage to the adductory component of the recurrent laryngeal nerve, by lesions in the spinal cord in the anterior thoracic region and by excitement. Called also slap test.
l. airsacculitis inflammation of the large air sacs found attached to the larynx in great apes.
l. cartilage includes **epiglottis**, **thyroid**, **cricoid**, and the paired **arytenoid** cartilages.
l. chondritis necrosis and ulceration of laryngeal mucosa caudal to the vocal cords; seen in calves and especially in Texel and Southdown sheep.
l. chondroma can cause laryngeal obstruction in horses.
l. collapse a component of the **brachycephalic** obstructive syndrome resulting from catrilage fatigue and degeneration.
l. congenital anomalies epiglottal hypoplasia (horse, pig) is a rare anomaly.
l. contact ulcers are ulcerative lesions which develop at the site of minor abrasions caused by frequent contact and rubbing of the epiglottis and arytenoid cartilages.
l. edema a part of acute inflammation of the laryngeal mucosa due to infection, allergy or inhalation of irritant materials. It causes obstruction to air flow, stertor, dyspnea and potentially asphyxia.
everted l. saccules the laryngeal saccules protrude into the lumen of the larynx, become edematous and cause upper airway obstruction with increased inspiratory effort.
l. fremitus a vibration palpable at the throat with partial obstruction of the larynx.
l. hemiplegia unilateral paralysis, called also roaring, is a common condition in horses, causing a reduction in exercise tolerance and a loud stertor at exercise. Bilateral paralysis causes a more severe but similar syndrome. Horses treated with laryngoplasty and unilateral ventriculectomy have a good prognosis for return to racing.
l. mound a conspicuous mound in the throat of birds; carries the entrance to the larynx.
l. necrobacillosis the principal lesion in calf diphtheria.
l. necrosis occurs in outbreaks in feedlot steers at the site of contact ulcers on the larynx. The common bacteria in the lesions is *Fusobacterium necrophorum*.
l. neoplasm includes chondroma, papilloma.
l. neuropathy dysfunction, most commonly unilateral hemiplegia, of the recurrent laryngeal nerve; see **roaring**.
l. obstruction may be acute or chronic, with signs varying to match. Stertor, inspiratory dyspnea and local signs, such as pain, swelling and the presence of foreign bodies, constitute the clinical syndrome.
l. papilloma occurs in feedlot steers at the site of contact ulcers on the larynx.
l. paralysis can result from lesions of the vagus or recurrent laryngeal nerves resulting in failure of the arytenoid cartilages to abduct during inspiration; may be acquired or congenital. May be seen in association with hypothyroidism in dogs. An inherited laryngeal paralysis occurs in the Bouvier des Flandres breed of dogs, causing varying degrees of noisy respirations and upper airway obstruction from several months of age. In immature Dalmatian dogs it is seen as part of a more widespread polyneuropathy with megaesophagus, neurologic deficits. See also laryngeal hemiplegia (above).
l. piriform recesses channels that run on either side of the epiglottis, the aryepiglottic folds and arytenoid cartilages and allow communication between the oropharynx and esophagus without closure of the larynx, thereby by-passing the normal swallowing mechanism; they permit the grazing ruminant to breathe, and to sniff the air, while eating and ruminating. Called also *recessus piriformis*.
l. polyp recorded in horses in association with *Besnoitia* spp. infection.
recurrent l. nerve paralysis see **roaring**, laryngeal hemiplegia (above).
l. saccule a former name for the laryngeal ventricle. Called also *ventriculus laryngis*.
l. sounds the normal sounds of air going in and out past the larynx, as heard with a stethoscope. When there is stenosis the sounds are loud and harsh, also called stertor; with catarrhal inflammation they are gurgling.
l. spasm a reflex constriction of the larynx because of contact with foreign material being inhaled or during administration of a gaseous anesthetic, especially in cats. May cause asphyxiation.
l. sphincteric girdle the muscles that constrict the laryngeal opening, made up of the cricoarytenoid, transverse arytenoid and thyroarytenoid muscles.
l. stenosis may follow laryngeal surgery, injury (particularly prolonged intubation), or infection; granulation tissue and cartilage degeneration and collapse can cause a progressive reduction in the airway.
l. stertor loud breath sounds caused by a narrowing of the laryngeal lumen.
l. ulceration common subclinical lesion in feedlot cattle; lesions are at points of apposition of vocal processes and medial angles of arytenoid processes.
l. ventricle a bilateral outpocketing of the laryngeal mucosa in the dog, pig and horse. In the dog and the horse each lies between the vocal and vestibular folds in the lateral walls of the laryngeal vestibule. In the pig they are in the lateral wall of the glottis.
l. ventriculectomy removal of the mucosa lining the relevant laryngeal ventricle as a treatment of laryngeal hemiplegia in horses.
l. vestibule the space between the entrance to the larynx (*aditus laryngis*) and the rima glottidis.
laryngectomy [*lar"in-jek'tə-me*] partial or total removal of the larynx by surgery.
laryngemphraxis obstruction or closure of the larynx.
laryngeoplasty plastic procedure on the larynx such as cricoarytenoid fixation with an elastic prosthesis for roaring in horses. See also **Lycra**.
laryngismus [*lar"in-jiz'məs*] spasm of the larynx.
l. stridulus sudden laryngeal spasm with crowing inspiration.
laryngitis [*lar"in-ji'tis*] inflammation of the mucous membrane of the larynx, characterized by cough, pain on palpation over the larynx, dysphagia, and possibly regurgitation through the nose; usually there are other signs of inflammation of the upper respiratory tract.
necrotic l. see calf **diphtheria**.
laryng(o)- word element. [Gr.] *larynx*.
laryngocele [*lə-ring'go-sēl*] a congenital anomalous air sac communicating with a cavity of the larynx; it may produce a tumor-like lesion visible on the outside of the neck.
laryngocentesis [*lə-ring"go-sen-te'sis*] surgical puncture of the larynx, with aspiration.
laryngoenteritis [*lə-ring"go-en"tər-i'tis*] see **feline** panleukopenia.
laryngofissure [*lə-ring"go-fish'ər*] median laryngotomy.
laryngogram [*lə-ring'go-gram*] a radiograph of the larynx.
laryngography [*lar"ing-gog'rə-fe*] radiography of the larynx.

laryngology [*lar"ing-gol'ə-je*] that branch of the clinical sciences that has to do with the throat, pharynx, larynx, nasopharynx and tracheobronchial tree.
laryngopathy [*lar-ing-gop'ə-the*] any disorder of the larynx.
laryngopharyngeal [*lə-ring"go-fə-rin'je-əl*] pertaining to the larynx and pharynx.
laryngopharyngitis [*lə-ring"go-far"ən-ji'tis*] inflammation of the larynx and pharynx.
laryngopharynx [*lə-ring"go-far'ənks*] the caudal portion of the pharynx opening into the larynx and esophagus.
laryngophony [*lar"ing-gof'ə-ne*] the vocal sound heard in auscultating the larynx.
laryngoplegia [*lə-ring"go-ple'jə*] paralysis of the larynx.
laryngorhinology [*lə-ring"go-ri-nol'ə-je*] the branch of the clinical sciences that deals with the larynx and nose.
laryngorrhaphy [*lar"ing-gor'ə-fe*] suture of the larynx.
laryngoscleroma [*lə-ring"go-sklər-o'mə*] scleroma of the larynx.
laryngoscope [*lə-ring'gə-skōp*] 1. an endoscope equipped with a blade to depress the tongue, and light and mirrors for illumination and examination of the larynx and aid the placement of an endotracheal tube. 2. a flexible or rigid endoscope for examining the structure and function of the larynx.
Rowson l. one with a blade designed for use in large animals.
laryngoscopy [*lar"ing-gos'kə-pe*] direct visual examination of the larynx with a laryngoscope.
laryngospasm [*lə-ring'go-spaz"əm*] spasmodic closure of the larynx.
laryngostenosis [*lə-ring"go-stə-no'sis*] narrowing or stricture of the larynx.
laryngostomy [*lar"in-gos'tə-me*] surgical creation of an artificial opening into the larynx.
laryngotomy [*lar"ing-got'ə-me*] incision of the larynx.
laryngotracheal [*lə-ring"go-tra'ke-əl*] pertaining to the larynx and trachea.
l. aspiration inhalation of oral, pharyngeal or gastric contents.
laryngotracheitis [*lə-ring"go-tra"ke-i'tis*] inflammation of the larynx and trachea.
infectious avian l. see **infectious** laryngotracheitis (ILT).
laryngotracheobronchitis [*lə-ring"go-tra"ke-o-brong-ki'tis*] see **equine** influenza.
laryngotracheotomy [*lə-ring"go-tra"ke-ot'o-me*] incision of the larynx and trachea.
laryngoxerosis [*lə-ring"go-zēr-o'sis*] dryness of the larynx.
larynx [*lar'inks*] pl. *larynges* [Gr.] the muscular and cartilaginous structure, lined with mucous membrane, situated at the cranial end of the trachea and behind the root of the tongue and the hyoid bone. The larynx contains the vocal cords (folds), and is responsible for vocalization and protecting the airway from inhalation of food or foreign bodies; it is called also the voice box. It is part of the respiratory system, and air passes through the larynx as it travels from the pharynx to the trachea and back again on its way to and from the lungs. The larynx is composed of nine cartilages (thyroid, cricoid and epiglottis, and the paired arytenoid, corniculate and cuneiform) held together by muscles and ligaments. It is critically involved in protecting the airway at the cross roads between oropharynx and esophagus, and the nasopharynx and trachea. It supports two specialized valves: the rima glottidis that prevents inhalation of foreign material into the lungs, and the epiglottis that forms a lid over the opening to the larynx (the aditus laryngis) that closes during swallowing. Judicious alternate placing of the epiglottis firstly over the soft palate and secondly upon the root of the tongue enables the panting dog to breathe in firstly through the nose and secondly out through the mouth thereby facilitating cooling.
lasalocid [*lə-sal'o-sid*] a polyether ionophore related chemically to monensin, used as a growth promotant and coccidiostat in several animal species. It is relatively nontoxic to target species, but gross overdosage of cattle causes acute heart failure. Horses and dogs are very susceptible and the use of the compound in them is prohibited. The target organs are heart and/or skeletal muscles. Some animals may be found dead or show dyspnea, mucosal congestion, diarrhea and cardiac irregularity and tachycardia. Others will show paresis to paralysis with death due to respiratory failure.
laser [*la'zər*] a device which generates an extremely intense, small and nearly nondivergent beam of monochromatic radiation in the visible region, with all the waves in phase; capable of mobilizing immense heat and power when focused at close range, it is used as a tool in surgery, in diagnosis, and in physiological studies. Laser is an acronym for *l*ight *a*mplification by *s*timulated *e*mission of *r*adiation.
l. acupuncture a modern version of acupuncture and considered to be the biggest breakthrough in that technology for 5000 years. It provides a quick, painless and noninvasive method of point stimulation.
argon l. used in ophthalmic surgery and in photodynamic surgery of the skin. Delivers laser energy to the tissues with a wavelength of 524 nm. Frequently used for removal of lesions from the oropharynx.
l. camera computer controlled device using a laser light beam to expose sheets of film, generating images sourced from computer imaging systems.
carbon dioxide l. used in microsurgery and ophthalmic procedures.
low-energy l. therapy used for wound healing and pain relief; includes visible red helium-neon lasers, invisible infrared gallium-arsenide lasers and gallium-aluminum-arsenid lasers.
neodymium:yttrium-aluminum-garnet (Nd:YAG) l. a type of continuous wave laser used for hemostasis, coagulation and in ophthalmic surgery for ablation of specific structures.
l. therapy in acupuncture the application of low intensity laser to acupuncture points.
laserpuncture see **laser** acupuncture.
lash the horsehair or thin leather tag attached to the end of a stockwhip and which is responsible for the pistol shot-like report produced by the expert whip crackers.
lasiocarpine one of the potent pyrrolizidine alkaloid hepatoxins in the plant *Heliotropum europaeum.*
Lasiosiphon see ***Gnidia***.
Lasiospermum bipinnatum South African plant in the family Asteraceae. It contains a furanosesquiterpene and causes photosensitization. Called also ganskweek.
Lassa fever virus [*lah'sə*] a highly fatal, hemorrhagic disease of humans caused by an arenavirus transmitted from certain rodents.
lassitude [*las'i-t d*] weakness; exhaustion.
lasso stiff manila, cotton or rawhide rope suitable for making a noose at the end. Called also lariat. The loop is thrown around the animal's neck or one or more legs while working the cattle on the range or in stockyards. Usually used from horseback and exerting a strong pull by locking the rope around the horn on the pommel of the saddle, or by using a harness when working in yards. A quick-release used to make the loop is an advantage when loosing a wild animal. The lasso is used while on foot by a horsebreaker wanting to reach the first hands-on step in the breaking-in process.
LAT Laboratory Animal Technician. A designation of certification by the American Association for Laboratory Animal Science.
latamoxef moxalactam.
latanoprost [*lə-tan'o-prost"*] a synthetic prostaglandin $F_{2\alpha}$ analog used topically to reduce intraocular pressure in the treatment of glaucoma in dogs.
latebra [*lat'ə-brə*] part of a bird's egg. Includes a ball of white yolk in the center of the yellow yolk, connected by a neck to the latebral disk, an inverted cone of white yolk, lying under the blastodisk at the surface of the yellow yolk.
latency [*la'tən-se*] a state of being hidden.
latent [*la'tənt*] dormant or concealed; not manifest; potential. See also latent **image**, **infection**.
l. period a seemingly inactive period, as that between exposure of tissue to an injurious agent and the manifestations of response, or that between the instant of stimulation and the beginning of

L-7: Laryngoscope. From Taylor SM, Small Animal Clinical Techniques. Saunders, 2010.

VetBooks.ir

response. The latent period in virus replication defines the period from adsorption, penetration and uncoating of the virus until the first progeny virus are released from the cell.

laterad [*lat'ər-ad*] toward the lateral aspect.

lateral [*lat'ər-əl*] 1. denoting a position farther from the median plane or midline of the body or a structure; the side or outside. 2. pertaining to a side.

l. aids used by the rider to move a horse sideways; pressure by the neck rein and the thigh and calf on the same side at the same time.

standing l. the positioning technique for a lateral projection of the X-ray beam through a standing animal to a vertically positioned cassette; useful for the assessment of fluid levels.

lateralis [*lat"ər-a'lis*] [L.] *lateral*.

lateroduction [*lat"ər-o-duk'shən*] movement of an eye to either side.

lateroflexion [*lat"ər-o-flek'shən*] flexion to one side.

laterotorsion [*lat"ər-o-tor'shən*] twisting of the vertical meridian of the eye to either side.

lateroversion [*lat"ər-o-vur'zhən*] abnormal turning to one side.

Lates calcarifer farmed finfish in the family Latidae. Called also barramundi, giant sea perch.

LATG Laboratory Animal Technologist. A designation of certification by the American Association for Laboratory Animal Science.

latherin a detergent-like protein present in horse sweat.

lathyrism [*lath'ə-riz-əm*] a morbid condition of humans marked by spastic paraplegia, pain, hyperesthesia and paresthesia, due to ingestion of the seeds of leguminous plants of the genus *Lathyrus*, which includes many kinds of peas; caused by the neurotoxic non-protein amino acid β-*N*-oxalyl-L-α-β-diaminopropionic acid (ODAP), also called acid β-*N*-oxalylamino-L-alanine (BOAA). In animals there are reports of two basic groups of disease, *neurolathyrism*, including transient laryngeal paralysis in horses associated with degenerative changes in the vagus and recurrent laryngeal nerves, and *osteolathyrism* manifested by a variety of skeletal changes and seen only in laboratory animals. Hepatitis, splenitis and dissecting aortic aneurysm are also recorded.

lathyrogen [*lath'ə-ro-jən*] plant toxin in *Lathyrus* spp. causing lathyrism; includes 3-aminopropionitrile.

lathyrogenic [*lath"ə-ro-jen'ik*] pertaining to or emanating from lathyrogen.

Lathyrus [*lath'ə-rəs*] genus of plants in legume family Fabaceae; toxin is 3-aminopropionitrile; causes neurological disease, including excitability, convulsions and death without skeletal lesions; includes *L. angulatus*, *L. aphaca*, *L. cicera*, *L. clymenum*, *L. hookeri*, *L. latifolius*, *L. nissolia* (grass vetchling), *L. polymorphus* subsp. *incanus*, *L. pusillus* (singletary pea), *L. sativus* (chickling vetch, grass pea), *L. splendens* (Pride of California), *L. sylvestris*, *L. tingitatus* (Tangier pea).

L. hirsutus causes poisoning in cattle, the main sign being lameness due to pain in the feet. Called also Kaley pea, wild winter pea, Indian pea.

L. odoratus the ornamental sweetpea, of which the seeds cause skeletal abnormality when fed experimentally; may cause equine **stringhalt**.

Latin terminology used originally as the international language of scholars, and persisted with in some areas, e.g. pharmacy. Its universal usage in botanical, bacteriological and parasitological nomenclature ensures its continuation.

latissimus [*lə-tis'ĭ-məs*] [L.] *widest, a broad structure*.

l. dorsi the broad muscle of the back that serves to retract the forelimb.

latrodectism [*lat"ro-dek'tiz-əm*] intoxication due to venom of spiders of the genus *Latrodectus*.

Latrodectus [*lat"ro-dek'təs*] a genus of poisonous spiders belonging to the dipneumomorph family Theridiidae.

L. hasseltii the Australian redback spider, an ecological variant of *L. mactans* and with the same toxicity.

L. mactans a species found in the USA; commonly known as the black widow. In New Zealand called katipo. Satiny black with a broad sagittal red stripe in the female, which is venomous. Its bite may cause severe local pain and general paralysis.

LATS long-acting thyroid stimulator.

lattice theory [*lat'is*] the interaction of multivalent antigen with multivalent antibody will, at optimum proportions of each (zone of equivalence), result in the formation of a lattice and a precipitate. In the zone of equivalence all antibody and antigen are bound in the lattice. With an excess of either antigen or antibody, the lattice is incomplete or disassembled so that the amount of precipitate is reduced; the basis for precipitin tests.

L-8: Female black widow spider (*Latrodectus mactans*).
Courtesy of CDC/Paula Smith; Photo: James Gathany.

latus [*la'təs*] [L.] 1. broad, wide. 2. the side or flank.

Latvian brown cattle brown to dark red meat and draft cattle.

laudanum [*law'də-nəm*] tincture of opium.

laughing gas nitrous oxide.

laughing jackass see **kookaburra**.

laurel plants in the family Lauraceae; most are trees or shrubs in many genera and species. Includes American cherry laural (*Prunus caroliniana*), black laurel (*Leucothoe davsiae*), bog laurel (*Kalmia polifolia* var. *microphylla*), cherry laurel (*P. laurocerasus*), copse laurel (*Daphne laureola*), dwarf laurel (*K. angustifolia*), great laurel (*Rhododendron maximum*), mountain laurel (*Kalmia*), pale laurel (*K. polifolia* var. *microphylla*), sierra laurel (*L. davisiae*), spurge laurel (*Daphne* spp.), wood laurel (*D. laureola*).

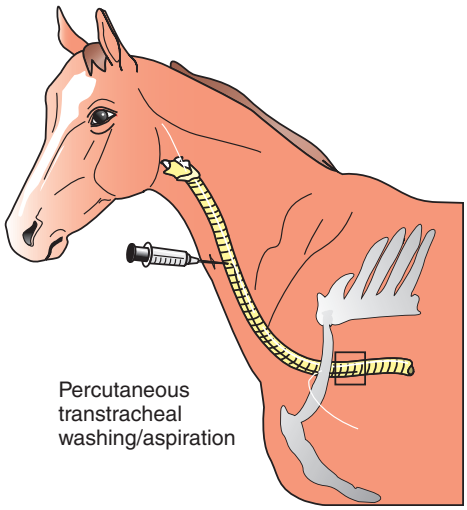
Laurelia novae-zealandiae New Zealand plant of the family Monimiaceae; contains an unidentified toxin; causes tremor, sudden death. Called also pukatea.

lavage [*lah-vahzh'*] 1. irrigation or washing out of an organ or cavity, as of the stomach or intestine. 2. to wash out, or irrigate. See also **wash**.

abdominal l. the infusion of saline into the peritoneal cavity, usually through a catheter inserted through the abdominal wall, for diagnostic purposes. The fluid returned may be examined for red blood cells, bacteria, enzymes, etc. Called also peritoneal lavage.

bronchoalveolar l. collection of cells and fluid from smaller airways and alveoli by several infusions of a small amount of sterile saline through a lavage catheter followed by aspiration. Access is usually via a bronchoscope or endotracheal tube. The sample is then submitted to microbiological and cytological examination.

colonic l. irrigation of the colon, usually to remove ingested toxins.



L-9: Percutaneous technique for transtracheal wash and bronchoalveolar lavage.
From Holtgrew-Bohling K, Large Animal Clinical Procedures for Veterinary Technicians, 2nd Edition. Mosby, 2012.

VetBooks.ir

gastric l. gastric lavage, or irrigation of the stomach, is usually done to remove ingested poisons. The solutions used for gastric lavage are physiological saline, 1% sodium bicarbonate, plain water or a specific antidote for the poison. A gastric tube is passed and then the irrigating fluid is funneled into the tube. It is allowed to flow into the stomach by gravity. The solution is removed by siphonage; when the funnel is lowered, the fluid flows out, bringing with it the contents of the stomach. Called also gavage.
ice water l. administration of ice water through a stomach tube is used in the treatment of acute upper gastrointestinal hemorrhage. There is a risk of inducing hypothermia.
ruminal l. used in the treatment of carbohydrate engorgement. Serial gavages are performed until the fluid comes back clear. A 2.5 inch (6 cm) diameter Kingman tube is necessary if any bulk of material is to be retrieved and a hose from a tap is the only practical irrigating mechanism.
subpalpebral l. a method of medicating the eye, particularly useful in horses. Tubing is inserted from the conjunctival sac through the upper or lower eyelid and extended over the head and retained at the mane. Medication can then be delivered to the eye continuously or intermittently through a port at the distal end without risk of injury to the eye.
thoracic l. irrigation of a pleural sac via a paracentesis cannula.
tracheal l. see tracheal **wash**.

lavender foal [*lav'ən-dər*] see lavender **foal** syndrome.

laventelbos ***Lippia rhemannii***.

law [*law*] a uniform or constant fact or principle in nature.
l. of the circle the radiographic principle on which localization of a radiopaque foreign body can be specified exactly. It depends on taking the X-rays at right angles to each other, a ventrodorsal and a lateral.
Hardy-Weinberg l. see **Hardy-Weinberg law**.
l. independent assortment the members of gene pairs segregate independently during meiosis. See also **Mendel's laws**.
l. of mass action the rate of a reversible reaction, in either direction, is proportional to the concentrations of the reacting substances.
l. of segregation in each generation the ratio of (1) pure dominants, (2) dominants giving descendants in the proportion of three dominants to one recessive, and (3) pure recessives is 1:2:1. This ratio follows from the fact that the two alleles of a gene cannot be a part of a single gamete, but must segregate to different gametes. See also **Mendel's laws**.
l. of Similars the defining principle of **homeopathy**; substances that produce symptoms in disease can be used to treat diseases with those symptoms.

lawrencium (Lw) [*law-ren'se-əm*] a chemical element, atomic number 103, atomic weight 257. See Table 4.

Lawsonia intracellularis [*law-so'ne-ə*] the bacterial cause of porcine proliferative enteropathy and of proliferative enteritis in foals. An obligately intracellular gram-negative, curved rod; may also cause proliferative enteropathy in white-tailed deer and has been isolated from birds. Culture is extremely difficult but the infection can be detected serologically and the organism can be detected in the feces by PCR and in tissues by PCR and immunohistochemical staining of infected tissues.

laxative [*lak'sə-tiv*] a medicine that loosens the bowel contents and encourages evacuation. A laxative with a mild or gentle effect on the bowels is also known as an aperient; one with a strong effect is referred to as a **cathartic** or a **purgative**.

L-10: Subpalpebral lavage system in a horse. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

bulk l. hydrophilic, indigestible substances that absorb water and swell to form an emollient gel. The distention of the intestine stimulates defecation.
contact l. see stimulant laxative (below).
emollient l. the fecal softeners; act without being changed and simply aid expulsion by softening and lubricating. Called also lubricant laxative.
lubricant l. see emollient laxative (above).
stimulant l. stimulate accumulation of water and electrolytes in the colon, increasing intestinal motility. Called also contact laxative.

laxator that which slackens or relaxes.

laxity [*lak'sĭ-te*] looseness. Used to describe the hyperextensibility of skin, and sometimes joints, in cutaneous **asthenia** and **Ehlers–Danlos syndrome**.

layer [*la'ər*] 1. stratum; a sheetlike mass of tissue of nearly uniform thickness, several of which may be superimposed, one above the other, as in the epidermis. 2. a commercial fowl which is laying eggs, i.e. a female of more than about 5 months of age, up to the stage of being a 'spent hen' suitable only for slaughter.
basal l. 1. the deepest layer of the epidermis. See also **stratum** basale. 2. the deepest layer of the uterine mucosa.
blastodermic l. germ layer (see below).
clear l. stratum lucidum; the clear translucent layer of the epidermis, just beneath the horny layer.
columnar l. 1. layer of rods and cones. 2. mantle layer.
compact l. the layer of the endometrium nearest the surface, containing the necks of the uterine glands.
false l. a hen with all the appearances and the behavior of a laying hen but which does not lay any eggs. There is a defect in ovum entrapment and the eggs are discharged into the peritoneal cavity although egg peritonitis is not apparent.
functional l. the compact and spongy layers of the endometrium considered together.
cerebellar ganglionic l. the thin middle gray layer of the cortex of the cerebellum, consisting of a single layer of Purkinje cells.
germ l. any of the three primary layers of cells formed in the early development of the embryo (ectoderm, endoderm and mesoderm), from which the organs and tissues develop.
germinative l. any proliferative layer such as the basal layer of the epidermis or the lower layer of the claw, from which the claw grows.
granular l. 1. the layer of epidermis between the clear and prickle-cell layers; called also stratum granulosum. 2. the deep layer of the cortex of the cerebellum. 3. the layer of follicle cells lining the theca of the vesicular ovarian follicle.
horny l. 1. stratum corneum; the outermost layer of the epidermis, consisting of dead and desquamating cells. 2. the outer, compact layer of the claw, etc.
keratohyaline l. granular layer (1).
malpighian l. the stratum basale (basal layer) and the stratum spinosum (prickle-cell layer) of the epidermis considered together.
mantle l. the middle layer of the wall of the primitive neural tube, containing primitive nerve cells and later forming the gray matter of the central nervous system.
molecular l. layers of cells in both cerebellar and cerebral cortices.
nervous l. all of the retina except the pigment layer; the inner layer of the optic cup.
prickle-cell l. stratum spinosum; the layer of the epidermis between the granular and basal layers, marked by the presence of prickle cells.
l. of rods and cones a layer of the retina immediately beneath the pigment epithelium, between it and the external limiting membrane, containing the rods and cones.
spinous l. prickle-cell layer.
spongy l. the middle layer of the endometrium, containing the tortuous portions of the uterine glands.
subendocardial l. the layer of loose fibrous tissue uniting the endocardium and myocardium.
zonal l. of thalamus a layer of myelinated fibers covering the dorsal surface of the thalamus.

laying in chickens, the production of eggs.
internal l. unshelled eggs are free in the peritoneal cavity, thought to have been delivered there by reverse peristalsis in the oviduct.

VetBooks.ir

lazy leukocyte syndrome decreased responsiveness of leukocytes in chemotactic assays.
lb [L.] *libra* (pound); pound weight avoirdupois.
LCAT latex cryptococcal antigen test; antibody coated latex beads used to detect polysaccharide antigens of *Cryptococcus neoformans* in body fluids.
LCL bodies a collection of elementary bodies and other replicative forms observed particularly in hepatocytes prepared as impression smears; characteristic of psittacosis, caused by members of the *Chlamydiales*.
LCM lymphocytic choriomeningitis.
LCR ligase chain reaction. See also **PCR**[1].
LD 1. lethal dose. 2. lactate dehydrogenase.
LD_{50} median lethal dose; the dose that will kill 50% of the tested group.
LDA left displacement of the abomasum.
LDDT low-dose dexamethasone suppresion test.
LDH lactic acid dehydrogenase; see lactate **dehydrogenase**.
LDL low-density lipoprotein. Carries cholesterol originating from the liver to the extraheptaic tissues. Often called 'bad cholesterol' because of the link between high plasma LDL cholesterol concentrations and the risk of the development of atherosclerosis in humans.
oxidized LDL formed when LDL reacts with free radicals, which may occur within the artery wall; much more potent than LDL in initiating atherosclerosis development.
LDL receptor-related protein a multifunctional endocytotic receptor; member of the LDL receptor gene family; also known as the LRP or α2-macroglobulin receptor. Involved in the clearance of amyloid β-peptide at the blood brain barrier; suppression of expression is implicated in Alzheimer's disease.
LDL receptors specialized receptor proteins which bind low-density lipoproteins via apolipoprotein B and remnant lipoproteins via apolipoprotein E and mediate their internalization by cells; clustered on the plasma membrane in a structure called a coated pit, an invagination containing the protein clathrin. On binding with LDL or remnant lipoproteins, the plasma membrane fuses near the receptor–lipoprotein complex and the coated pit becomes an endocytotic vesicle which is transported into the cell, fuses with the lysosomes enabling contact between the LDL–receptor complex and hydrolytic enzymes of the lysosomes.
LE lupus erythematosus.
LE cell test see **lupus erythematosus** phenomenon.
lead[1] **(Pb)** [*led*] a chemical element, atomic number 82, atomic weight 207.19. See Table 4.
l. acetate sugar of lead, formed on lead paint surfaces after much weathering; it is palatable and attracts animals to lick the surface, causing lead poisoning.
l. acetate paper strips detect hydrogen sulfide gas formation and used as a test for *Brucella* spp.
l. carbonate white lead used in paints.
l. chromate used in paints as a hardener and coloring agent.
l. equivalent measurement of the protective efficiency of clothing and other materials against X-rays, in terms based on comparison with lead sheeting of specific thickness.
l. letters used as markers on X-ray films.
l. poisoning a form of poisoning caused by the presence of lead or lead salts in the body. Lead poisoning affects the brain, nervous system, blood and digestive system. It can be either chronic or acute and is common in cattle with access to batteries and in urban dogs because of the frequent presence of lead in the environment in lead paints, and the sweet taste of the paint when it is weathered. Adult cattle show a subacute syndrome of severe depression, aimless walking, blindness, complete ruminal stasis and a black diarrhea in small amounts. Calves show violent convulsions and death within a few hours. Poisoning in dogs (only rarely cats) can result from swallowing paint flakes or chewing surfaces covered with lead-based paints, golf balls, newsprint, linoleum, fishing sinkers, or numerous other household objects containing lead. Clinical signs usually include abdominal pain, vomiting, diarrhea and seizures. Basophilic stippling of red blood cells, nucleated red blood cells, and a moderate anemia may be observed. Sources for pet birds include painted surfaces, mirror backing, and some ceramic dishes. Birds show depression, hemorrhagic gastroenteritis, crop stasis, regurgitation, hemoglobinuria, and neurological signs. Chelation therapy can be successful.
l. protective clothing aprons, gloves, and thyroid collars, typically containing lead and worn as protection against scattered x-irradiation.
red l. tri-plumbic tetroxide.
l. shot shot gun pellets are a source of lead for water birds; use banned in some countries. See lead poisoning (above).
l. sulfide form of lead found in the ore galena.
l. weights made of metallic lead, used in window sashes, can cause poisoning.
lead[2] [*lēd*] 1. in electrocardiography, a specific array (pair) of electrodes used in recording changes in electric potential, created by the activity of an organ, such as the heart (electrocardiography) or brain (electroencephalography); applied also to the particular segment of the tracing produced by the potential registered through the specific electrodes; in electrocardiography, lead I records the potential differences between the two forelimbs, lead II between the right forelimb and left hindlimb, and lead III between the left forelimb and left hindlimb, and a fourth lead from various sites over the chest. 2. attachment to a collar to facilitate walking a dog.
bipolar l. an array involving two electrodes placed at different body sites. For example, in a base-apex bipolar lead, a typical system used in horses and cattle, a negative electrode is attached to the skin in the right jugular furrow and the positive electrode is attached to the skin on the ventral medline, beneath the apex of the heart.
esophageal l. one attached to an electrode inserted in the esophagus.
l. feeding see challenge **feeding**.
invasive l's those placed within the body, e.g. esophageal and intracardiac leads. They may be more useful in identification of certain arrhythmias and in pacing the heart for diagnostic and therapeutic purposes.
orthogonal l's measures three axes, left to right, head to tail, and vertebral column to sternum.
precordial l's leads recording electric potential from various sites over the heart, designated V with a subscript numeral indicating the exact site.
unipolar l. an array of two electrodes, only one of which transmits potential variations.
lead tree see ***Leucaena leucocephala***.
leader sequence the nontranslated section of mRNA before the coding region.
leading leg the last hoof to reach the ground in the three-beat cadence. The first is one of the hinds, then the other hind and its diagonal fore together, then the leading fore; the hoof that reaches out the furthest in front in the foot pattern.
leaf [*lēf*] terminal outgrowths of plant foliage, usually flat green blades that conduct the plants' photosynthesis. Of the foliage it is much the most nutritious part and is often incorporated into special feeds, e.g. lucerne leaf meal.
l. intestinal impaction impaction of the cecum and colon in horses with access to indigestible tree leaves.
leafing separation, collapse and rounding of lung lobes caused by the presence of pleural effusion. Lung lobes appear as small, relatively radiolucent 'leaves' against a homogeneous background of pleural fluid.
lean tissue muscle tissue without fat.
leaning leaning against fixed objects, associated with frequent falling; an indication of loss of balance and of a lesion of the vestibular apparatus.
learning [*lur'ning*] learning is remembering associations, a relatively enduring change in behavior due to experience. A memory is essential to learning and animals have both a memory and the ability to learn in variable degrees. There are a number of ways in which learning can be achieved or facilitated: imprinting, especially of the neonate; conditioning, including simple association and instrumental and avoidance conditioning; operant conditioning; visceral learning; discriminative learning; generalization of stimuli; and habituation.
discriminative l. the basis of Pavlovian research; teaching animals to choose the correct behavioral response by a positively reinforcing reward when they do.
social l. learning from the experience of others in the group. An extremely strong force of what animals eat. They tend to sample plants or foods they see others eating. Foraging behavior of females can transmit to their offspring and occurs across generations in livestock.

VetBooks.ir

least cost ration the ration that fulfils all of the nutritional requirements of the particular group of animals but uses the mix of ingredients from the list of those available that costs the least.

least squares a method of regression analysis. The line on a graph that best summarizes the relationship between two variables is the one that ensures that there is the least value of the sum of the squares of the deviation between the fitted curve and each of the original data points.

leather 1. the ear flap; pinna. 2. a product made by tanning the dermal layer of ox hide, sheep pelt, pig skin, horse hide and other more exotic skins, including emu, ostrich, alligator and the like.

l. chewing common form of pica in horses kept indoors.

leather bottle lesion see **linitis** plastica.

lecheguilla [*la-choo-ge'ya*] see ***Agave lecheguilla***.

lechiguana Brazilian disease of cattle characterized by multiple subcutaneous granuloma populated by ***Mannheimia granulomatis***.

lecithin [*les'ĭ-thin*] any of a group of phospholipids found in animal tissues, especially nerve tissue, the liver, semen and egg yolk, consisting of esters of glycerol with two molecules of long-chain aliphatic acids and one of phosphoric acid, the latter being esterified with the alcohol group of choline. Called also phosphatidylcholine.

lecithinase an enzyme that splits lecithin. Called also phospholipase.

lecith(o)- word element. [Gr.] *the yolk of an egg, ovum*.

lecithoblast [*les"ĭ-tho-blast"*] the primitive endoderm of a two-layered blastodisc.

lecithoprotein [*les"ĭ-tho-pro'tēn*] a combination of protein and lecithin; found in all cells of animal tissues.

lectin [*lek'tin*] 1. proteinaceous hemagglutinating substances present in saline extracts of certain plant seeds, which agglutinate erythrocytes of certain blood groups or stimulate lymphocyte proliferation due to specific binding of carbohydrate ligands. 2. antinutritive factors in legume seeds; interfere with protein digestion in monogastric livestock.

LED light emitting diode.

Ledum genus of North American plants in family Ericaceae; toxin is granotoxin (andromedotoxin); causes sudden death, abdominal pain, vomiting, dullness, tremor, tenesmus, diarrhea, salivation; includes *L. columbianum* (Pacific labrador tea), *L. glandulosum* (Western labrador tea).

Lee biopsy needle [*le*] a needle designed for cutting and aspiration of tissue for biopsy, particularly of aerated lung tissue.

lee waves [*le*] waves on the sheltered side, away from the wind, of an obstruction; a meteorological wind phenomenon thought to play a part in abnormal down-wind transmission of foot-and-mouth disease.

Lee–White clotting time see **clotting** time.

leech [*lēch*] 1. any of the annelids of the class Hirudinea, especially *Hirudo medicinalis*; some species are bloodsuckers, and used for drawing blood. 2. one of the granular bodies in swamp cancer. Called also grains.

equine l. see **swamp cancer**.

Florida horse l. see **swamp cancer**.

lefluomide an immunosuppressive drug used in dogs with immune-mediated disease.

leg [*leg*] strictly, the part of the limb supported by the tibia; generally, see **limb** (1), **forelimb**, **hindlimb**. Called also crus.

l. band plastic band worn around the pastern in cows. Makes identification easy in pit-type milking sheds, but a band is needed on each hindlimb and muddy lanes make the numbers difficult to read. Metal bands or rings are also placed on the legs of caged birds for identification purposes.

bow l. genu varum.

l. mange occurs in horses, cattle and sheep; caused by ***Chorioptes bovis***.

milk l. severe lameness in senior dairy cows due to degenerative arthritis of the femorotibial joint. Presumed due to long-term negative calcium balance in heavy milking cows.

leg weakness difficulty in rising, staggery gait.

l. w. of pigs a locomotor disability of pigs unassociated with infectious arthritis. It is a combination of noninfectious arthropathy and osteopathy, and is a significant cause of mandatory culling in pig herds. Included as causes of the syndrome are defects of conformation, osteochondrosis and arthrosis, epiphyseolysis, lumbar intervertebral disk degeneration, and spondylosis. The clinical syndrome varies from lameness to difficulty in rising, to recumbency. Characteristic signs are carrying of a hindleg, sitting on the haunches for long periods, and a shuffling gait.

l. w. of turkeys swelling of the hock and deformity of the tarsometatarsal bone in turkeys; it is of unknown etiology.

legal proper under the law.

l. consent a consent agreement signed by the owner or custodian, consent being to surgery, euthanasia, necropsy, or raising of fees. To be legal, the document needs to be dated, have an accurate description of the animal, an exact description of what is being agreed to, and must not deny the owner the right to proceed in litigation about the matter.

l. medicine see forensic **veterinary medicine**.

Legg–Calvé–Perthes disease [*leg' kahl-va' per'təz*] an idiopathic necrosis and lysis of the femoral head; occurs in young, small-breed dogs. Lameness of varying severity occurs and a degenerative arthropathy follows. Surgical removal of the femoral head is the usual treatment. Called also Legg's disease, Legg–Calvé disease, Perthes disease.

Legg's disease [*legs*] see **Legg–Calvé–Perthes disease**.

leggy said of animals that appear to have legs longer than normal for the species, breed and age.

Leghorn see **White leghorn**.

legislative action group see **political action committee**.

legume [*leg'ūm*] 1. the pod or fruit of a leguminous plant, such as peas and beans. 2. a leguminous plant, i.e. a member of the family Leguminosae.

l. bloat frothy ruminal tympany in cattle grazing clover or lucerne.

Leicester an English longwool breed of polled, meat sheep, with wool 32–38 microns. It has been used to produce many subsidiary breeds, e.g. **Corriedale**.

Leighton pin a metal pin used as an internal splint in the reduction of fractures of long bones. It is V-shaped in cross-section and has a shuttle device to assist in advancing the pin further into the bone.

Leiocarpa brevicompta Australian plant in the family Asteraceae; toxin is crepenynic acid that causes dystrophy of skeletal and heart muscle and death. Affected sheep may fall dead when made to run. Others have low exercise tolerance and cardiac irregularity. Called also *Ixiolaena brevicompta*, button weed, plains plover-daisy, flat billy-buttons.

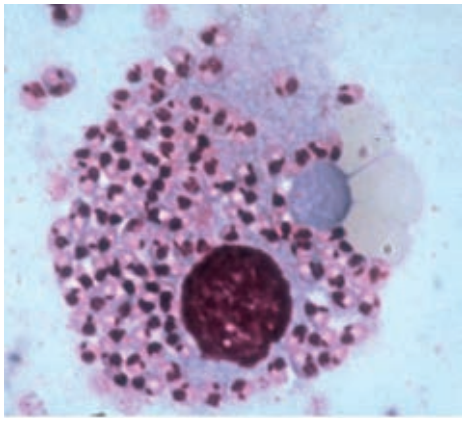
leiodermia [*li"o-dur'me-ə*] abnormal smoothness and glossiness of the skin.

L-11: Radiograph of Legg-Calve-Perthés disease in an 8-month-old Pekingese.

VetBooks.ir

L-12: Pedunculated leiomyoma in the vagina of a dog.

leiomyoma [*li"o-mi-o'mə*] a benign tumor derived from smooth muscle, most often of the uterus (leiomyoma uteri) but can occur in urinary bladder, lower alimentary tract and esophagus.
l. uteri leiomyoma of the **uterus**; called also colloquially, fibroids.
leiomyometaplasts gray to brown granules in the gut wall causing a poorly defined lesion known as brown gut.
leiomyosarcoma [*li"o-mi"o-sahr-ko'mə*] a sarcoma arising in smooth muscle.
Leiperia a genus of parasites in the class Pentastomida found in crocodiles.
Leipernema a genus of worms of the family Kathlaniidae.
L. galebi found in the intestine of Indian elephants.
L. leiperi found in the intestine of the African elephant and hippopotamus.
Leishman–Donovan bodies [*lēsh'mən don'ə-vən*] round or oval bodies found in reticuloendothelial cells, especially those of the spleen and liver, in visceral leishmaniasis; they are amastigote intracellular stages of *Leishmania donovani*. The term is also used to designate similar forms of *L. tropica* found in macrophages in lesions of cutaneous leishmaniasis.
Leishmania [*lēsh-ma'ne-ə*] a complex genus of protozoan parasites transmitted by sandflies, which also act as intermediate hosts.
L. adleri found in lizards and other mammals.
L. aethiopica reservoir hosts are hyraxes.
L. brasiliensis brasiliensis reservoir hosts are forest rodents. Causes mucocutaneous leishmaniasis in humans.
L. brasiliensis guyanensis dogs are infected; in humans the disease is the cutaneous form in most cases.
L. brasiliensis panamensis reservoirs are sloths, kinkajous and many other forest animals.
L. chagasi causes visceral leishmaniasis in humans and dogs.
L. donovani causes visceral leishmaniasis in humans and in carnivores.
L. enriettii causes cutaneous leishmaniasis in guinea pigs.
L. infantum causes visceral leishmaniasis in dogs and other carnivores. In humans it is children who are most commonly affected.



L-13: Macrophage from bone marrow of an infected dog containing large numbers of *Leishmania infantum* amastigotes.
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

L. major dogs and bush mammals are reservoir hosts. In humans this is the cause of oriental sore, the important cutaneous form of the disease.
L. mexicana amazonensis causes cutaneous leishmaniasis in humans. Rodents and bush animals are reservoir hosts.
L. mexicana mexicana reservoir hosts are rodents; causes cutaneous leishmaniasis in humans.
L. mexicana pifanoi causes chronic cutaneous leishmaniasis in humans.
L. peruviana causes cutaneous leishmaniasis in humans; probably infests dogs.
L. tropica causes cutaneous leishmaniasis in humans and dogs.
leishmaniasis, leishmaniosis [*lēsh"mə-ni'ə-sis*] infection by *Leishmania* spp.; occurs in humans, domestic Canidae and rodents, and is an important zoonosis throughout the world, except Australia. Three forms occur: (1) visceral (kala-azar, black fever, dumdum fever), caused by *L. donovani*; (2) cutaneous (Oriental sore, Bagdad boil, Aleppo button), caused by *L. tropica*; and (3) mucocutaneous, caused by *L. brasiliensis*. Visceral leishmaniasis in the dog, caused by *L. infantum* is a chronic, debilitating disease with weight loss, enlargement of the liver and spleen, and polyarthritis. Chronic ulcerations of the skin occur in the cutaneous form. A disease notifiable to the OIE (see Table 22).
recidiva l. cutaneous leishmaniasis.
leishmanoid [*lēsh'mə-noid*] like *Leishmania*.
lek communal mating ground used by birds where males establish and defend mating territories.
lekkerruikpeul see ***Acacia*** *nilotica* subsp. *kraussiana*.
Lelystad virus an arterivirus that causes porcine reproductive and respiratory syndrome.
Lembert rongeur [*lahm-bār' raw-zhur'*] fine-pointed, single-action instrument for breaking off segments of bone. When lying flat the blades have a distinct curve to one side.
Lembert suture pattern [*lahm-bār'*] the classical suture pattern for closing gut. The needle is directed to cross the incision, penetrating the serosa and muscularis but not the mucosa, then back out through the serosa, across the incision to repeat the maneuver on the other side. When the suture is tightened it is serosa that approximates. Can be continuous or interrupted.
lemming small, nocturnal rodent in a large number of species in the subfamily Arvicolinae, native to Arctic or sub-Arctic regions. Known for their mass migrations every few years.
l. fever see **tularemia**.
lemmoblastic [*lem"o-blas'tik*] forming or developing into a neurolemma cell.
lemmocyte [*lem'o-sīt*] a cell from the neural crest that develops into a neurolemma cell.
lemniscal system one of the major sensory pathways ascending the spinal cord and into consciousness; conducts sensitive impulses relating to touch, pressure, vibration and joint proprioception via the dorsal funiculus and the medial lemniscus and thalamus before reaching the cortex.
lemniscus [*lem-nis'kəs*] pl. *lemnisci* [L.] a ribbon or band; a band or bundle of nerve fibers in the central nervous system.
lateral l. partially crossed fibers connecting the cochlear nuclei to the caudal colliculus and the medial geniculate body. Called also lemniscus lateralis.
medial l. an ascending tract of second order sensory nerve fibers in the medulla oblongata en route to the thalamus. Called also lemniscus medialis.
Lempert rongeur a surgical forcep for cutting bone with tapered jaws and sharp points. Used in neurosurgery.
lemur [*lem'ər*] arboreal primates in the family Lemuridae, native to Madagascar and the Comoro Islands. They have pointed snouts and fur-covered faces, and long tails. Includes the mouse lemur (*Microcebus* spp.), woolly lemur (*Avahi* spp.), and ring-tailed lemur (*Lemur catta*).
length [*length*] an expression of the longest dimension of an object, or of the measurement between its two ends.
crown–heel l. the distance from the crown of the head to the heel in embryos, fetuses and neonates.
crown–rump l. a measure of fetal size used to estimate its age and equal to the distance from the crown of the head to the point of attachment of the tail. Sometimes this measure is made on the crudely flexed body of a fetus, in which the crown of the head is

the most 'cranial' of its components and the muscles of the rump over the sciatic tubers are the most caudal.

lenperone an antipsychotic with some α-adrenergic blocking action and antiemetic activity.

Lens a genus of plants in the family Fabaceae; includes *L. culinaris*, *L. esculenta*. Called also lentil. See ***Vicia emilia***.

lens [*lenz*] 1. a piece of glass or other transparent material so shaped as to converge or scatter light rays. 2. the transparent, biconvex body separating the posterior chamber and the vitreous body of the eye that refracts (bends) light rays so that objects at a range of distances may be focused on the **retina**. Sometimes called crystalline lens. See also **accommodation**, **lenticular**.

apochromatic l. one corrected for chromatic and spherical aberration.

biconcave l. one concave on both faces.

biconvex l. one convex on both faces.

concave l. lens with one or both (biconvex) faces curved like a section of the interior of a hollow sphere; it disperses light rays. Called also dispersing lens.

contact l's thin synthetic membrane that fits directly onto the corneal surface under the eyelids. Used in humans for correction of refractive errors and as a therapeutic (protective) barrier in veterinary species. They can be saturated with medications (typically antibiotic solutions) to deliver high drug concentrations to the eye. Known also as *therapeutic soft contact lens (TSCL)*.

converging l. one curved like the exterior of a hollow sphere; it brings light to a focus. Called also convex lens.

convex l. see converging lens (above).

convexoconcave l. one that has one convex and one concave face.

crystalline l. lens of the eye; see lens (2) (above).

dispersing l. concave lens.

l. dislocation displacement of the crystalline lens away from its usual site of attachment to the ciliary body via the lens zonules. Called *luxation* if complete and *subluxation* if incomplete (see below). May be inherited as a primary disease (most commonly in terrier dogs) or result from chronic uveitis, glaucoma, intraocular neoplasia or resorbing cataract. Lens dislocation can in turn predispose to glaucoma, uveitis, retinal detachment and cataract.

ectopic l. see **ectopia** lentis.

l. epithelial cells a single layer of cuboidal to squamous epithelium immediately beneath the capsule on the anterior lens surface; the only nucleated cells in the lens of the adult.

l. fibers modified lens epithelial cells that during maturation from the anterior subcapsular region have lost their nuclei and organelles such that they become elongated, membrane-bound collections of proteins meridianally oriented in concentric layers and interlocked with each other via ball and socket interdigitations. They form the bulk of the crystallline lens.

l.-induced uveitis see lens-induced **uveitis**, phacolytic **uveitis**, phacoclastic **uveitis**.

intraocular l. synthetic (typically plastic or silicone) lens placed within the lens capsule after cataract surgery to maintain the normal refractive state.

intumescent l. see intumescent **cataract**.

l. luxation complete separation of the lens from its zonular attachments through 360 degrees, allowing displacement and freedom to move within the posterior chamber, or into the anterior chamber or vitreous body.

l. opacity cataract.

l. sclerosis see nuclear **sclerosis**.

l. subluxation partial separation of the lens from its zonular attachments, allowing some alteration in position but not movement into another chamber of the eye.

l. sutures structures formed by the junction between lens fibers that do not run completely circumferentially within the lens, but rather meet at the posterior and anterior regions of the lens. Typically resulting in a Y-shaped minor zone of discontinuity within the lens with no effect on vision but may be the site of cataract formation. Called also suture lines.

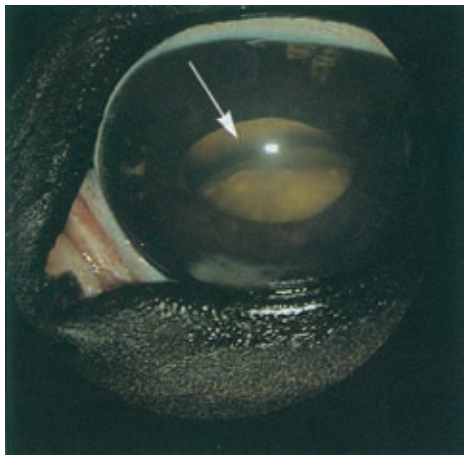
lensectomy surgical removal of the lens of the eye.

lent rose ***Helleborus*** *niger*.

lentectomy lensectomy.

lenten rose ***Helleborus*** *orientalis*.

lenticonus [*len"ti-ko'nəs*] a congenital bulging of the lens of the eye to create a conical distortion from the anterior or posterior surface.



L-14: Lens luxation in a horse's eye.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

lenticular [*len-tik'u-lər*] 1. pertaining to or shaped like a lens. 2. pertaining to the lens of the eye. 3. pertaining to the lenticular nucleus. See also **lens**.

lenticulostriate [*len-tik"u-lo-stri'āt*] pertaining to the lenticular nucleus and corpus striatum.

lenticulothalamic [*len-tik"u-lo-thə-lam'ik*] relating to the lenticular nucleus and the thalamus.

lentiform [*len'ti-form*] lens-shaped.

lentigenic a host–parasite relationship in which the host shows little or no disease, the relationship persists for a very long time, and the host often survives or dies of intercurrent disease.

lentiginosis profusa [*len-tij"i-no'sis*] characterized by black pigmented, slightly raised macules, called lentigines, mostly along the back, but generalized; occurs in young dogs, especially pugs.

lentiglobus [*len"ti-glo'bəs*] exaggerated curvature of the lens of the eye, producing an anterior or posterior spherical bulging.

lentigo [*len-ti'go*] pl. *lentigines* [L.] a flat, brownish pigmented spot on the skin due to increased deposition of melanin and an increased number of melanocytes; a freckle.

orange cat l. see lentigo simplex (below).

l. simplex pigmented macules develop in orange cats from about 1 year of age, mainly on the lips. They are of no significance. Called also orange cat lentigo.

lentil see ***Vicia***.

lentinan a polysaccharide extracted from mushrooms that is a potent immunomodulator used as an anti-cancer drug.

Lentivirinae [*len"ti-vir-i'ne*] a subfamily of viruses in the family ***Retroviridae***. It contains the viruses of **maedi–visna**, **caprine** arthritis–encephalitis, **equine** infectious anemia, and human immunodeficiency/AIDS.

Lentivirus [*len'ti-vi"rəs*] a genus of the family *Retroviridae*. Five serogroups of lentiviruses are recognized, correlated with the hosts they infect, which are primates, sheep and goats, horses, cats, and cattle. The primate lentiviruses, such as human immunodeficiency virus, are distinguished by the use of CD4 protein as receptor and the absence of dUTPase. Some serogroups have cross-reactive *gag* antigens, e.g. the ovine, caprine and feline lentiviruses.

lentivirus [*len'ti-vi"rəs*] a member of the genus *Lentivirus*.

l. encephalitis see **visna**, **caprine** arthritis–encephalitis.

feline T-lymphotropic l. see **feline** immunodeficiency virus.

ovine l. see **maedi**.

lentogenic only marginally virulent. See also **Newcastle disease**.

Leon-Zamora ass a longhaired, black Spanish donkey, with paler underline and muzzle.

Leonberger a very large (110–150 lb) muscular dog with a light yellow, golden or red-brown wavy coat which forms a (lionesque) mane at the throat and chest, and with a black mask. It is web-footed.

leopard (*Panthera pardus*)a big, graceful, yellow cat in the family Felidae, native to Africa and Asia; it has brown to black spots and a long, thin tail. It is spread widely through the world.

l. cat *Felis bengalensis* a small cat in the family Felidae, native to Southeast Asia with markings similar to the leopard. Crossed with the domestic cat, it has produced the **Bengal** cat.

VetBooks.ir

clouded l. (*Neofelis nebulosa*) a medium-sized cat in the family Felidae, native to Southeast Asia; distinguished by the striking coat pattern with large, ellipsoid blotches, outlined in black on the posterior edges.

snow l. (*Panthera uncia*) a medium-sized cat in the subfamily Pantherinae, native to central Asia. Adapted to life at high altitudes, it has large furry paws, a thickly haired tail and a light colored coat with markings of rings and spots. An endangered species.

LEP low egg passage, with reference to virus attenuation usually for vaccine production.

Lepeophtherius salmonis the salmon louse, a crustacean parasite.

lepidic [*lə-pid'ik*] pertaining to scales.

Lepidium sativum member of the plant family Brassicaceae. Called also cress, the salad vegetable; contains toxic amounts of mustard oil glucosinolates; causes unpalatability, diarrhea, milk taint.

lepidosis a scaly eruption.

Lepidozamia peroffskyana Australian cycad plant in the family Zamiaceae; contains cycad glycosides which cause hepatic necrosis and possibly ***Zamia*** staggers; called also *Macrozamia denisonii*.

Leporipoxvirus [*lep"ə-rĭ-poks'vī-rəs*] a genus in the order *Poxvirales*, family *Poxviridae* that contains myxoma virus, the cause of **myxomatosis** in rabbits.

Lepotrombidium see harvest **mite**.

lepra cells [*lep'rə*] enlarged cells with foamy cytoplasm and containing many acid-fast bacilli; characteristic of murine leprosy.

leproid pertaining to or resembling leprosy.

canine l. granuloma a syndrome of firm, painless, often quite sizeable and ulcerated nodules primarily on the head, neck and pinnae of short-coated dogs caused by an unidentified, acid-fast bacillus believed to be a *Mycobacteria* spp. Dogs are generally otherwise normal. Regression usually occurs after several months. Treatment with rifampin combined with clarithromycin or doxycycline is sometimes effective.

leprosy [*lep'rə-se*] a disease of humans caused by *Mycobacterium leprae* and manifested by granulomatous lesions of the peripheral nerves, skin and mucosae.

buffalo l. an ulcerative lymphangitis caused by acid-fast bacilli.

feline l. a granulomatous skin infection associated with *Mycobacterium lepraemurium*. Infection is commonly believed to be the result of a rat bite. Single or multiple, painless, sometimes ulcerated nodular lesions are usually located around the head or on limbs. The organisms can be seen with acid-fast stains on direct smears or in biopsy material. Where possible, surgical excision is usually curative. Medical treatment includes dapsone, clofazimine and rifampin.

rat l. see **rat** leprosy.

LEPT low-energy photon therapy. See also **laser**.

leptazol a convulsant analeptic. Called also pentylenetetrazol.

Lepte autumnale see ***Trombicula*** *autumnalis*.

leptin a protein produced primarily by adipose tissue, it is an indicator of energy balance and has a role in energy expenditure and appetite control.

lept(o)- word element. [Gr.] *slender, delicate*.

leptocurare one of the two groups of neuromuscular blocking agents, based on chemical structure. The other group is the pachycurares.

L-15: A solitary lesion on the face of a cat with feline leprosy.

leptocyte [*lep'to-sīt*] a thin, flattened hypochromic erythrocyte with a normal diameter and decreased MCV; the result of incomplete hemoglobin synthesis.

leptocytosis [*lep"to-si-to'sis*] leptocytes in the blood.

leptokurtosis see **kurtosis**.

leptomeninges [*lep"to-mə-nin'jēz*] plural of *leptomeninx;* the two more delicate components of the meninges: the pia mater and arachnoid considered together; the pia-arachnoid.

leptomeningitis [*lep"to-men"in-ji'tis*] inflammation of the leptomeninges.

leptomeningopathy [*lep"to-men"in-gop'ə-the*] any disease of the leptomeninges.

leptomeninx [*lep"to-men'inks*] see **leptomeninges**.

Leptomonas [*lep"to-mo'nəs*] a genus of protozoa in the family Trypanosomatidae, the members of which are found in invertebrates.

leptopellic [*lep"to-pel'ik*] having a narrow pelvis.

leptophonia [*lep"to-fo'ne-ə*] weakness or feebleness of the voice.

Leptopsylla segnis [*lep"to-sil'ə*] a flea found on house mice, rats and field rodents.

Leptopus decaisnei Australian plant in family Euphorbiaceae; causes cyanide poisoning; called also *Andrachne decaisnei*, andrachne.

Leptospira [*lep"to-spi'rə*] a genus of thin, coiled, motile bacteria that cannot be visualized with conventional bacteriological staining methods. They are usually observed by dark-field microscopy or detected in tissue sections by special (silver) stains. There are 16 species, of which *L. borgpetersenii, L. inadai, L. interrogans, L. kirschneri, L. noguchii, L. santaroseii and L. weilii*. are significant animal pathogens. Each species contains many serovars and different species may contain antigenically related serovars. Significant serovars include *L. interrogans* sv *canicola, grippotyphosa, hardjoprajitno, icterohaemorrhagiae, pomona* and *zanoni, L. borgpetersenii* sv *hardjobovis, L. kirschneri* sv *grippotyphosa*. Isolates can also be grouped on the basis of serogroups, which include Grippotyphosa, Pomona, Icterohaemorrhagiae, Canicola, Sejroe and Tarassovi. Serovars vary in their host specificity, their preferred host and their pathogenicity. Two of the bacteria's characteristics, which are important in the epidemiology of the diseases that they cause, are their ability to survive in the environment in warm, moist and slightly alkaline conditions, and their survival in kidneys for long periods, with frequent and often long-term shedding in the urine. Although the disease caused by each of the leptospirae have some differences in clinical and epidemiological manifestations, there is still sufficient similarity for the diseases to be dealt with as **leptospirosis**.

leptospiremia the presence of leptospirae in the blood.

leptospires [*lep'to-spīr*] organisms in the genus ***Leptospira***.

leptospirosis [*lep"to-spi-ro'sis*] an infectious disease of all species. The common causes are *Leptospira interrogans* serovars *pomona, hardjo, hyos, tarassovi, icterohaemorrhagiae, canicola* and many other less important varieties (see ***Leptospira***). In adult cattle the common syndromes are an abortion storm or a subacute febrile illness. In calves it is an acute hemolytic anemia with jaundice and hemoglobinuria and an interstitial nephritis. In sheep and goats there may be acute septicemia sometimes accompanied by abortion. In pigs it is usually a syndrome of abortion and stillbirths, although fatal septicemia may occur in piglets. In horses there is possibly an etiological relationship with equine recurrent uveitis and with abortion. In dogs there may be peracute illness, which is frequently fatal, or acute illness with jaundice or acute nephritis. Vaccines are available for prevention of disease associated with infection. In humans, symptoms vary, ranging from flu-like to meningitis, hepatitis and renal failure. Called also autumnal fever, Bushy Creek fever, canecutter's disease, European swamp fever, field fever, hemorrhagic jaundice, spirochetsis, swamp fever, Stuttgart disease, Weil's disease.

leptospiruria [*lep"to-spir-u're-ə*] leptospires are present in the urine.

leptotene [*lep'to-tēn*] the stage of meiosis in which the chromosomes are threadlike in shape.

Leptotrombidium [*lep"to-trom-bid'e-əm*] genus of the family Trombiculidae. The mites act as vectors of the human scrub typhus agent.

Lernaea a genus of crustaceans in the class Crustacea which attach themselves to the skin of freshwater fish causing ulceration. Affected fish swim sluggishly and grow poorly, and the mortality

VetBooks.ir

may be heavy. *L. ciprinacea* is the common species. Called also anchor worms.

LES lower esophageal sphincter. See **cardia**.

lesion [*le'zhən*] any pathological or traumatic discontinuity of tissue or loss of function of a part. Lesion is a broad term, including wounds, sores, ulcers, tumors, cataracts and any other tissue damage. They include developmental anomalies (congenital or otherwise).

target l. see **target** lesion.

lespedeza see ***Kummerowia stipulacea***.

lesser loosestrife see ***Lythrium hyssopifolia***.

letdown [*let'doun*] 1. the sudden flush of milk flow that occurs when the calf begins to suck or when milking commences in a properly prepared cow. Depends for its occurrence on the release of oxytocin from the pituitary gland in response to massage of the teats and udder. Environmental stimuli such as free electricity and fear or excitement can block the response. Is also sometimes absent in freshly calved cows but the cycle can be triggered by an injection of oxytocin. 2. a horse in overfat condition is said to be letdown; the converse of tucked up.

milk l. failure occurs sporadically in all species. May be due to painful conditions of the teat or sharp teeth of sucker. Anxiety, as in maiden heifers, can be a cause. Other cases occur without obvious reason and respond dramatically to a single injection of oxytocin.

lethal [*le'thəl*] deadly; fatal.

l. trait an inherited characteristic that ensures the early death of the inheritor. See also inherited **parakeratosis**, and canine **cyclic** neutropenia.

l. trait A46 see inherited **parakeratosis**.

l. white foal syndrome see lethal white **foal** syndrome.

lethargy [*leth'ar-je*] a condition of drowsiness or indifference.

lettuce best known as a leaf vegetable ***Lactuca sativa***, but used as a common name for a number of other plants, including miners lettuce (*Montia perfoliata*), prickly lettuce (*L. serriola*), wild lettuce (*L. serriola*).

Leu leucine.

leu-enkephalin (Leu-ENK) leucine **enkephalin**; abbreviated Leu-ENK.

Leucaena leucocephala tree in the legume family Mimosaceae; contains the toxic amino acid **mimosine**; causes hair loss, goiter, infertility and weight loss. Called also *L. glauca*, lead tree. The disease is called also ekoa, jumbey, koa haole, lamtoro.

leucenosis intoxication by plants of the genus *Leucaena*.

leucine (Leu) [*loo'sēn*] a naturally occurring amino acid, essential for growth in the young and for nitrogen equilibrium in adults.

l. aminopeptidase a digestive enzyme of small intestine enterocytes (brush border).

DL-l. synthetic form of leucine.

l. enkephalin leu-enkephalin; see **enkephalin**.

L-l. natural form of leucine.

l. zipper a structured motif found in some DNA binding regulatory proteins formed from a region of α-helix containing at least four leucines, each separated by six amino acids from one another; the leucines align along one edge of the α-helix with one leucine at every second turn of the helix such that the leucine of one protein can interdigitate with the leucines of another protein in a zipper manner.

leuc(o)- for words beginning thus, see also those beginning *leuk(o)-*.

Leucochloridiomorpha a genus of intestinal flukes (digenetic trematodes).

L. constantiae found in the intestine of raccoons and the bursa of Fabricius in ducks.

leucocyte [*loo'ko-sīt*] leukocyte.

Leucocytozoon [*loo"ko-si"to-zo'on*] a protozoan parasite of avian erythrocytes transmitted by the 'blackfly' *Simulium* spp. Infection causes the disease **leucocytozoonosis**.

L. andrewsi see *L. caulleryi* (below).

L. bonasae found in grouse and ptarmigan.

***L. caulleryi* (*L. andrewsi*)** found in chickens; causes leucocytozoonosis.

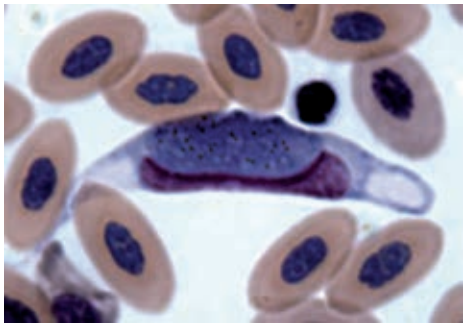
L. grusi found in cranes.

L. mansoni found in grouse.

L. marchouxi found in doves and pigeons.

L. sabrazesi found in fowl.

L. sakharoffi found in crow and other wild birds.



L-16: *Leucocytozoon* spp. in a blood smear from a red-tailed hawk.
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

L. schoutedeni chickens only in east Africa.

***L. simondi* (*L. anseris, L. anatis*)** found in ducks and geese.

L. smithi found in turkeys.

leucocytozoonosis [*loo"ko-si"to-zo"o-no'sis*] an acute disease in young birds caused by infection with *Leucocytozoon* spp. and characterized by emaciation, weakness and debility. Death is usual within a few days and the mortality rate may be very high. In adult birds the course is longer and the signs may include dyspnea.

leucoencephalomalacia leukoencephalomalacia.

leucomycin [*loo"ko-mi'sin*] kitasamycin.

Leuconostoc [*loo"ko-nos'tok*] a genus of gram-positive, nonpathogenic, facultatively anaerobic bacteria spherical to lenticular in shape. They are of food hygiene importance because they cause slime on high sugar foods, cause taints and are salt-tolerant.

L. mesenteroides* subsp. *dextranicum*, subsp. *mesenteroides produce dextran which is the major component of the slime on foods.

Leucothoe a genus of plants in the family Ericaceae that contain the tetracyclic polyol granotoxin (andromedotoxin), which causes abdominal pain, vomiting and aspiration pneumonia, and sudden death due to respiratory failure. Include *L. davisiae*, *L. grayana*. Called also sierra or black laurel.

leucovorin [*loo"ko-vo'rin*] 5-formyltetrahydrofolic acid, a metabolically active derivative of folic acid used to treat folic acid deficiency and as an antidote to folic acid antagonists. Called also citrovorum factor, CF, folinic acid (INN), 5-formyltetrahydropteroylglutamic acid.

leukapheresis [*loo"kə-fə-re'sis*] the selective removal of leukocytes from withdrawn blood, which are then retransfused into the donor. See also **pheresis**.

leukemia [*loo-ke'me-ə*] the presence in the circulating blood of malignant cells produced by malignant neoplasia of the blood-forming organs. Several schemes, together with modified versions, exist for the classification of leukemias, largely based on the type of abnormal cells that predominate in the blood (or bone marrow). They are further classified as acute or chronic. In *acute leukemias* there is a rapid proliferation of less differentiated cells with many blast forms found in the blood, while *chronic leukemias* are characterized by a slower accumulation of more differentiated cells and a longer survival time for the patient. See also **leukosis**, **erythroleukemia**. The persistent lymphocytosis that occurs in some cattle is a response to infection with the bovine viral leukosis virus. Similarly, leukemia may occur in the lymphoproliferative and myeloproliferative diseases caused by feline leukemia virus in cats.

acute lymphoblastic l. (ALL) abnormal proliferation of immature lymphoblasts in the marrow or blood. Generally rapidly progressive and responds poorly to treatment.

acute myeloid l's. involve nonlymphoid leukocytes (includes granulocytic, myelomonocytic, and monocytic leukemias), erythroid (includes erythroleukemia and erythremic myelosis), megakarocyte (megakaryoblastic leukemia) or undiffrentiated precursors.

aleukemic l. leukemia in which neoplastic cells are in the bone marrow, but not present in the peripheral blood.

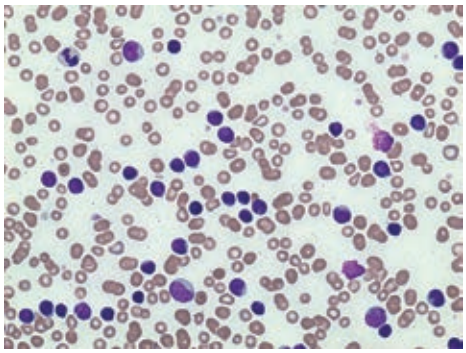
avian l. see avian **leukosis**.

basophilic l., basophilocytic l. leukemia in which basophilic granulocytes predominate.

B-cell l. leukemia arising from B lymphocytes.

bovine l. see **bovine** viral leukosis.

VetBooks.ir



L-17: Peripheral blood smear from a dog with chronic lymphocytic leukemia showing increased number of mature lymphocytes. From Henry CJ, Cancer Management in Small Animal Practice. Saunders, 2009.

chronic lymphocytic l. (CLL) abnormal proliferation of mature lymphocytes in the marrow or blood. Affected dogs may also have a nonregenerative anemia, thrombocytopenia and a monoclonal gammopathy. Generally responsive to chemotherapy.
l. cutis skin lesions associated with dissemination of systemic leukemia; they may be neoplastic or nonspecific.
embryonal l. stem cell leukemia.
eosinophilic l. occurs rarely in cats. There are large numbers of eosinophils with infiltration of spleen, liver, lymph nodes and bone marrow.
feline l. complex the array of diseases associated with infection of cats by the feline leukemia virus; includes lymphoreticular neoplasms, myelodysplastic disorders and abnormalities of the immune system.
feline l. virus (FeLV) see **feline** leukemia virus.
granulocytic l. myelocytic leukemia.
hairy cell l. a condition of humans, of which a counterpart is seen in cats. Previous name was leukemic **reticuloendotheliosis**.
leukopenic l. aleukemic leukemia.
lymphatic l., lymphoblastic l., lymphocytic l., lymphogenous l., lymphoid l. leukemia associated with abnormal proliferation, usually neoplastic, of lymphoid cells. See acute lymphoblastic leukemia and chronic lymphocytic leukemia (above).
lymphosarcoma cell l. a form marked by large numbers of lymphosarcoma cells in the peripheral blood; depending on the degree of bone marrow involvement, it may be a variant of lymphosarcoma.
mast cell l. a form marked by overwhelming numbers of tissue mast cells in the peripheral blood. See also **mastocytosis**.
megakaryoblastic l. characterized by a preponderance of megakaryoblasts in the blood; there may also be increased numbers of megakaryocytes. There may be a pancytopenia and marked thrombocytopenia.
megakaryocytic l. a form with numerous megakaryocytes in the spleen, bone marrow, and other tissues, but decreased numbers or abnormal thrombocytes in the peripheral blood, and anemia. Reported in dogs and cats. Called also megakaryocytic myelosis.
monocytic l. characterized by a preponderance of monoblasts and promonocytes with varying numbers of more differentiated cells in the blood.
myeloblastic l. characterized by a predominance of myeloblasts with varying numbers of differentiated granulocytes in the blood.
myelocytic l., myelogenous l., myeloid l. a form arising from myeloid tissue in which the granular polymorphonuclear leukocytes and their precursors predominate.
myelomonocytic l. characterized by a preponderance of myeloblasts and monoblasts in the blood.
plasma cell l., plasmacyte l. a form in which the predominating cell in the peripheral blood is the plasma cell.
premyelocytic l. a form in which the predominant cells are premyeloblasts, rather than myeloblasts, often associated with abnormal bleeding secondary to thrombocytopenia, hypofibrinogenemia and decreased concentrations of clotting factor V.
promyelocytic l. characterized by a predominance of promyelocytes in peripheral blood and in the bone marrow. A disease of dogs and cats with bleeding tendencies, anemia and a susceptibility to septicemia with a fatal outcome within a few weeks.
smoldering l. occult myeloproliferative neoplasia.
stem cell l. leukemia in which the predominating cell is so immature and primitive that its classification is difficult.
subleukemic l. aleukemic leukemia.
undifferentiated l. an acute myeloproliferative disorder in which the cells involved cannot be identified.
leukemogen [*loo-ke'mo-jən*] any substance that produces leukemia.
leukemogenesis [*loo-ke"mo-jen'ə-sis*] the process of generation of myeloid cell lines in bone marrow and extramedullary sites; a critical feature in myeloproliferative disease; i.e. the induction or development of leukemia.
leukemoid [*loo-ke'moid*] exhibiting blood counts, particularly leukocytosis, and sometimes other clinical findings resembling those of leukemia, but not due to uncontrolled proliferation of leukocytes; it can be extremely difficult to differentiate from leukemia. Usually associated with severe inflammation such as pyometra, hepatic abscesses, etc.
leukergy clumping of leukocytes seen in associatin with burns and severe infections.
leukin [*loo'kin*] a lytic substance extractable from polymorphonuclear lymphocytes that attacks spore-bearing aerobic bacteria, especially *Bacillus anthracis*.
leuk(o)- word element. [Gr.] *white, leukocyte*. For words beginning thus see also those beginning *leuc(o)-*.
leukoagglutinin [*loo"ko-ə-gloo'tĭ-nin*] an agglutinin that acts upon leukocytes.
leukoblast an immature granular leukocyte; myeloblast.
granular l. promyelocyte.
leukoblastosis [*loo"ko-blas-to'sis*] a general term for proliferation of leukocytes.
leukocidin [*loo"ko-si'din*] a substance produced by some pathogenic bacteria that is toxic to polymorphonuclear leukocytes (neutrophils).
leukocoria [*loo"ko-kor'e-ə*] a white pupil, as produced by a cataract.
leukocrit [*loo'ko-krit*] the volume percentage of leukocytes in whole blood.
leukocyte [*loo'ko-sīt*] a white blood cell capable of ameboid movement, whose chief function is to protect the body against microorganisms causing disease and which comprise: granulocytes (basophils, eosinophils, neutrophils), nongranulocytes (lymphocytes, monocytes) and thrombocytes (platelets).
bovine l. adhesion deficiency (BLAD) lethal hematological defect inherited as a recessive trait in Holstein cattle; characterized by poor growth, recurrent infection and poor responsivity to standard treatments. Initially observed in calves from 2–8 weeks of age manifest with severe periodontitis, loss of teeth, chronic pneumonia and recurrent or chronic diarrhea. Profound neutrophilia. Death supervenes before two years of age. The molecular basis is a single point mutation on the CD18 gene, which causes an aspartic acid to glycine substitution at amino acid 128 (D128G) in the adhesion molecule CD18.
canine l. adhesion deficiency (CLAD) a rare, inherited fatal immunodeficiency disease of Irish setters and Irish red and white setters; an autosomal recessive trait, similar to the disease that occurs in cattle and humans. Neutrophils lack CD11/CD18 adhesion proteins. From an early age, affected dogs have a marked neutrophilia and recurrent bacterial infections, most commonly omphalophlebitis, gingivitis and lymphadenopathy, which respond poorly to treatment with antibiotics.
l. count tabulation of the numbers and kinds of leukocytes in a blood sample.
endothelial l. see **endotheliocyte**.
l. functional antigens a group of cell surface antigens involved in intracellular adhesion.
granular l's granulocytes; leukocytes containing abundant granules (lysosomes) in their cytoplasm, including neutrophils, eosinophils and basophils.
l. migration-inhibition factor a lymphokine elaborated by activated T or B lymphocytes that inhibits polymorphonuclear leukocyte migration.
polymorphonuclear l. any of the fully developed, segmented cells of the granulocyte series, especially a neutrophil, whose nuclei contain three or more lobes joined by filamentous connections.
leukocythemia leukemia.
leukocytic [*loo"ko-sit'ik*] pertaining to or emanating from leukocytes.
l. pyrogen protein substances, e.g. interleukin-1, which stimulate the thermoregulator center of the hypothalamus via prostaglandins; produced by bone-marrow derived phagocytes.

VetBooks.ir

leukocytoblast myeloblast.
leukocytogenesis [*loo"ko-si"to-jen'ə-sis*] the formation of leukocytes.
leukocytolysin [*loo"ko-si-tol'ə-sin*] a lysin that leads to disruption of leukocytes.
leukocytolysis [*loo"ko-si-tol'ə-sis*] disintegration of leukocytes.
leukocytoma [*loo"ko-si-to'mə*] a tumor-like mass of leukocytes.
leukocytopenia [*loo"ko-si"to-pe'ne-ə*] leukopenia.
leukocytoplania [*loo"ko-si"to-pla'ne-ə*] wandering of leukocytes; passage of leukocytes through a membrane.
leukocytopoiesis [*loo"ko-si"to-poi-e'sis*] the production of leukocytes; leukopoiesis.
leukocytosis [*loo"ko-si-to'sis*] a transient increase in the number of leukocytes in the blood, due to various causes.
basophilic l. see **basophilia** (2).
eosinophilic l. see **eosinophilia** (2).
l.-inducing factor a factor which causes an increase in release of immature neutrophils into the circulation; an increased concentration of the factor in the circulation caused by endotoxin; called also neutrophil-releasing activity.
mononuclear l. mononucleosis.
pathological l. that due to some morbid reaction, e.g. infection or trauma.
leukocytotaxis [*loo"ko-si"to-tak'sis*] see **leukotaxis**.
leukocytotoxin [*loo"ko- si'to-tok"sin*] a toxin that destroys leukocytes.
leukocytozoonosis see **leucocytozoonosis**.
leukocyturia [*loo"ko-si-tu're-ə*] leukocytes in the urine.
leukoderma [*loo"ko-dur'mə*] loss of pigmentation of the skin.
leukodystrophic diseases [*loo"ko- dis-tro'fik*] diseases characterized by non-inflammatory degeneration and loss of myelin.
leukodystrophy [*loo"ko-dis'trə-fe*] disorders or metabolic defects in the system required for the maintenance and degradation of normally formed myelin in newborn and young animals, leading to degeneration of the white matter of the brain. Clinical signs begin some time after birth. See also **leukoencephalopathy**.
Afghan l. see hereditary **myelopathy** of Afghan hounds.
cavitating l. a familial, probably inherited, disease of Dalmatian dogs in which there is blindness and progressive motor dysfunction from a few months of age.
fibrinoid l. a familial disease of astrocytes causing ataxia, paresis and behavioral changes from an early age; reported in Labrador retrievers. Similar to Alexander's disease in humans.
globoid cell l. an inherited lysosomal storage disease of polled Dorset sheep, cats, and dogs, particularly Cairn terriers and West Highland white terriers, caused by a deficiency of the enzyme beta-galactocerebrosidase. From a young age, there is weakness that progresses to paralysis. Called also galactocerebrosidosis and Krabbe's disease.
metachromatic l. a leukoencephalopathy reported in cats, caused by a deficiency of the enzyme arylsulfatase A. There is accumulation of a sphingolipid (sulfatide) in tissues, with diffuse loss of myelin in the central nervous system and progressive neurological dysfunction.
leuko-edema [*loo"ko-ə-de'mə*] an abnormality of the buccal mucosa, consisting of an increase in thickness of the epithelium, with intracellular edema of the malpighian layer.
leukoencephalitis [*loo"ko-ən-sef"ə-li'tis*] inflammation of the white substance of the brain.
necrotizing l. see necrotizing **meningoencephalitis**.
leukoencephalomalacia [*loo"ko-en-sef"ə-lo-mə-la'shə*] **encephalomalacia** affecting especially the white matter. Occurs in carbon monoxide poisoning, mulberry heart disease of pigs and mycotoxic leukoencephalomalacia.
mycotoxic l. a syndrome of ataxia, tremor, circling, depressed consciousness, recumbency and death in horses and donkeys; caused by poisoning by fumonisins from the fungus *Fusarium moniliforme*, usually ingested with moldy corn.
leukoencephalomyelitis [*loo"ko- en-sef"ə-lo-mi"ə-li'tis*] **encephalomyelitis** affecting particularly the white matter of the brain and spinal cord. See also **caprine** arthritis–encephalitis.
leukoencephalomyelopathy [*loo"ko- en-sef"ə-lo-mi"əl-op'ə-the*] a disease of white matter of the brain and spinal cord; a syndrome of progressive ataxia and weakness with forelimb hypermetria, quadriparesis, and conscious proprioceptive deficits, seen in young adult Rottweiler dogs and which is slowly progressive.
leukoencephalopathy [*loo"ko-ən-sef"ə-lop'ə-the*] any of a group of diseases affecting the white substance of the brain.

L-18: Leukoma.

leukoerythroblastic [*loo"ko-ə-rith"ro-blas'tik*] pertaining to or emanating from the production of erythrocytes.
l. reaction a bone marrow response in which nucleated red blood cells and immature leukocytes are released. Seen in all species, most commonly in dogs and cats.
leukoerythroblastosis [*loo"ko-ə-rith"ro-blas-to'sis*] an anemic condition associated with space-occupying lesions of the bone marrow, marked by a variable number of immature erythroid and myeloid cells in the circulation. Called also myelophthisic **anemia**.
leukogram [*loo"ko-gram*] a tabulation of the leukocytes present in a blood sample.
steroid l. caused by the effects of endogenous or exogenous corticosteroids; characterized by a mature neutrophilia, lymphopenia, monocytosis and eosinpoenia.
stress l. see steroid leukogram (above).
leukokinin [*loo"ko-ki'nin*] see **tuftsin**.
leukolysin [*loo-kol'ə-sin*] see **leukocytolysin**.
leukolysis [*loo-kol'ə-sis*] see **leukocytolysis**.
leukoma [*loo-ko'mə*] a large and dense corneal opacity. See also **nebula** (1) and **macula** (4).
adherent l. one caused by adhesion of the iris to the region of corneal opacity suggesting prior rupture and anterior synechia formation or a persistent pupillary membrane.
leukomyelitis [*loo"ko-mi"ə-li'tis*] inflammation of the white matter of the spinal cord.
leukomyelopathy [*loo"ko-mi"ə-lop'ə-the*] disease of the white matter of the spinal cord.
leukon [*loo'kon*] the circulating leukocytes and the cells that produce them.
leukonychia [*loo"ko-nik'e-ə*] loss of pigmentation in a nail, claw or hoof.
leukopathia [*loo"ko-path'e-ə*] 1. leukoderma. 2. any disease of the leukocytes.
l. unguium leukonychia.
leukopedesis [*loo"ko-pə-de'sis*] diapedesis of leukocytes through blood vessel walls.
leukopenia [*loo"ko-pe'ne-ə*] reduction of the number of leukocytes in the blood. It is a common manifestation of a number of diseases, especially those caused by viruses, by a severe inflammatory lesion that draws off large numbers of leukocytes, a consumption leukopenia, and by toxins which depress bone marrow function. See also **radiation** injury, ***Pteridium*** spp. and ***Stachybotrys atra***.
malignant l., pernicious l. agranulocytosis.
leukopoiesis [*loo"ko-poi-e'sis*] the production of leukocytes; leukocytopoiesis.
leukopoietin [*loo"ko-poi-e'tin*] a hypothetical substance presumed to be the humoral means of regulating leukopoiesis.
leukorrhagia [*loo"ko-ra'jə*] profuse leukorrhea.
leukorrhea [*loo"ko-re'ə*] a whitish or yellowish, viscid discharge (purulent or mucopurulent) from the vagina or uterine cavity, which may be a sign of a disorder either in the reproductive organs or elsewhere in the body.
leukosarcoma [*loo"ko-sahr-ko'mə*] the development of leukemia following a well-differentiated, lymphocytic type of malignant lymphoma.
leukosis [*loo-ko'sis*] proliferation of leukocyte-forming tissue; the basis of leukemia.
avian l. a complex of related diseases caused by retroviruses (oncornaviruses). **lymphoid** leukosis, **erythroblastosis**, **myelocytomatosis** and **myeloblastosis** are the principal component

VetBooks.ir

diseases. There are in addition a series of tumors of connective tissue, epithelium, endothelium and other miscellaneous related tumors.

cutaneous bovine l. see **bovine** viral leukosis.

enzootic bovine l. see **bovine** viral leukosis.

l.-sarcoma neoplastic diseases includes lymphoid leukosis, erythroblastosis, myeloblastosis, myelocytomatosis, connective tissue tumors, nephroma, nephroblastoma, miscellaneous epithelial and endothelial tumors, osteopetrosis of birds caused by avian type C oncoviruses.

thymic bovine l. see thymic **lymphoma**.

leukosis/sarcoma see avian **leukosis**, **Rous sarcoma**.

leukotaxine [*loo"ko-tak'sēn*] a polypeptide that appears in injured tissue and inflammatory exudates; it promotes leukocytosis and leukotaxis and increases capillary permeability.

leukotaxis [*loo"ko-tak'sis*] cytotaxis of leukocytes; the tendency of leukocytes to collect in regions of injury and inflammation.

leukotoxic [*loo'ko-tok"sik*] destructive to leukocytes.

leukotoxin [*loo'ko-tok"sin*] a toxin that destroys leukocytes.

leukotrichia [*loo"ko-trik'e-ə*] whiteness of the hair.

hyperesthetic l. painful, crusted skin lesions on the dorsal midline of horses. White hairs emerge after several weeks.

periocular l. loss of pigmentation around the eyes; seen in Siamese cats, mainly females. It is usually transient and may be precipitated by estrus, pregnancy and systemic illness. Called also goggles.

reticulated l. seen in Quarter horses, Thoroughbreds and Standardbreds; linear crusts, which appear in a cross-hatched pattern over the back, are followed by loss of hair and regrowth of white hairs. Called also tiger stripe, variegated leukotrichia.

spotted l. seen mainly in Arabian horses; multiple white spots appear, most commonly over the rump and thorax.

variegated l. see reticulated leukotrichia (above).

leukotriene [*loo"ko-tri'ēn*] arachidonic acid metabolite that participates in inflammatory reactions, probably as leukotaxine. May act as a slow-reacting substance in anaphylaxis.

leukovirus [*oo'ko-vi"rəs*] see ***Oncornavirinae***.

levallorphan [*lev"ə-lor'fan*] an analog of levorphanol, which acts as an antagonist to analgesic narcotics; used as tartrate in the treatment of respiratory depression produced by narcotic analgesics.

levamisole [*le-vam'ĭ-sōl*] a broad-spectrum anthelmintic of proven efficiency against gastrointestinal and lung worms that can be administered orally, by injection and by pour-on in cattle. It has no effect on tapeworms or liver fluke; it has a secondary effect in enhancing depressed immune responsiveness by stimulation of T lymphocytes and phagocytosis.

l. poisoning causes a syndrome of lip licking, head shaking, salivation, tremor, excitement and increased frequency of urination and defecation.

levarterenol [*lev"ər-tə-re'nol*] norepinephrine.

levator [*lə-va'tor*] pl. *levatores* [L.] 1. a muscle that elevates an organ or structure, e.g. the levator labii muscle. 2. an instrument for raising depressed osseous fragments in fractures.

LeVeen shunt a peritoneal–venous shunt used in the control of **ascites**. It routes excess ascitic fluid out of the peritoneal cavity and into the superior vena cava or the jugular vein.

level of confidence [*lev'əl*] see **confidence** level.

leveret a young hare.

levetiracetam [*le"və-ti-ras'ə-tam*] an anticonvulsant drug used to treat epilepsy.

levigation [*lev"ĭ-ga'shən*] the grinding to a powder of a moist or hard substance.

lev(o)- word element. [L.] *left*.

levobunolol [*le"vo-bu'no-lol*] a β-adrenergic blocking agent, used as the hydrochloride in ophthalmic preparations to treat glaucoma. Not commonly used in veterinary medicine.

levocardia [*le"vo-kahr'de-ə*] a term denoting normal position of the heart associated with transposition of other viscera (situs inversus).

levodopa [*le"vo-do'pə*] the pharmaceutical name for L-dopa.

levoduction [*le"vo-duk'shən*] movement of an eye to the left.

levopropoxyphene [*le"vo-pro-pok'sĭ-fēn*] the levo isomer of propoxyphene; the napsylate is used as a centrally acting cough suppressant.

levorotation [*le"vo-ro-ta'shən*] a turning to the left; levogyration.

levorotatory [*le"vo-ro'tə-tor"e*] turning the plane of polarization, or rays of light, to the left.

levorphanol [*le-vor'fə-nol*] a potent, synthetic, narcotic analgesic. The tartrate form is used.

levothyroxine [*le"vo-thi-rok'sēn*] the pharmaceutical name for the thyroid hormone thyroxine (T_4); used for replacement therapy in hypothyroidism.

levoversion [*le"vo-vur'zhən*] a turning toward the left.

levulose [*lev'u-lōs*] a sugar from honey and many sweet fruits, used in solution as a fluid and nutrient replenisher; called also fructose and fruit sugar.

ley a highly productive pasture composed of a variety of annual or perennial grasses and legumes; used in short-term or long-term rotations. It has a tremendous capacity to make milk but is susceptible to outbreaks of hypomagnesemia.

Leydig's cell [*li'dig*] interstitial cell of the testis, which secretes testosterone.

L. c. tumor a variant of ovarian sex cord-stromal tumors which are composed of cells that resemble those of Leydig's cells in the testicle. Some of them secrete androgenic hormones, especially in the mare. See also **interstitial** cell tumor.

LFA leukocyte functional antigen.

LH luteinizing hormone.

LH-RH luteinizing hormone-releasing hormone (gonadotropin releasing hormone).

Lhasa apso a small dog with a very long, straight haircoat in almost any color. The dark eyes are barely visible beneath the long coat; the tail is carried over the back with the long hair flowing onto the body. Called also the Bark lion sentinal dog, Tibetan apso. The breed is affected by an inherited renal cortical hypoplasia and lissencephaly.

Li chemical symbol, *lithium*.

liberty cap see ***Psilocybe***.

libido [*lĭ-be'do*] pl. *libidines* [L.] sexual drive, vigor, enthusiasm.

absent l. unwillingness to copulate on the part of a male.

Libyostrongylus a genus of nematodes in the family Trichostrongylidae.

L. douglassii causes proventriculitis in ostriches. Young birds are emaciated, poorly grown and anemic; death losses may be heavy.

lice [*līs*] plural of **louse**.

bird l. see **chicken**, **turkey**, **duck**, **goose**, **pigeon** lice.

sucking l. lice in the order Anoplura. Includes the families Echinophthiriidae, Haematopinidae, Hoplopleuridae, Lignognathidae and Pediculidae.

licensing the awarding of a license.

poisons l. registration of dealers so that the sources of poisons can be determined and controlled. A veterinarian's right to trade in substances which are of pharmacological benefit but are poisonous is ensured by appropriate scheduling in the legislation.

professional l. see **licensure**.

radioactive materials l. a license required in most countries for persons or institutions using radioactive materials of any sort. Granted only to persons who have had training in the radiation safety.

licensure the granting of a permit to perform acts which, without it, would be illegal. The licensure of veterinarians has traditionally been the responsibility of the state licensing boards, governed by licensing statutes enacted by the state.

individual l. the granting of a legal permit that is personal and cannot be transferred to another. The individual seeking the licensure must meet standards for practice as established by the state licensing statutes. In most instances the initial license is granted upon successful completion of an examination administered by the state examining board of the specific profession or vocation, and annual re-registration is required to maintain the license.

institutional l. licensure of an agency providing a particular service to the public. In veterinary services this is usually limited to organizations that provide animal welfare services or which are teaching institutions.

licentiate [*li-sen'she-āt*] a person holding a license from an authorized agency entitling him/her to practice a particular profession.

lichen [*li'kən*] 1. any of certain plants formed by the mutualistic combination of an alga and a fungus. 2. any of various papular skin diseases in which the lesions are typically small, firm papules set very close together, the specific kind being indicated by a modifying term.

L-19: Lichenification. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

l. tropicus see equine **allergic** dermatitis.

lichenification [*li-ken"ĭ-fĭ-ka'shən*] thickening and hardening of the skin, with exaggeration of its normal markings.

lichenoid [*li'kən-oid*] resembling lichen.

l. infiltrate adopts a banded configuration parallel to the epidermis.

l. keratosis circumscribed, firm, scaling plaque. See also **ear** plaque.

l.-psoriasiform dermatosis idiopathic, probably inherited skin disease of yearling Springer spaniels; lesions begin on the ear and groin and spread to all parts; lesions are symmetric, erythematous, hyperkeratotic, lichenoid papules and plaques.

Lichtenstern block see Lichtenstern **block**.

Lichtheimia a genus of nonseptate fungi in the class *Zygomycetes*. formerly considered in the genus *Absidia*. *L. corymbifera* and *L. ramosa* cause bovine abortion resulting from a severe placentitis. *Lichtheimia* spp. are also associated with zygomycosis, causing disease of the gastrointestinal tract, and less commonly oral cavity, larynx and subcutaneous tissue.

lick 1. a stroke with the tongue, normally used in cleaning the coat or ingesting a substance from a flat surface. See also **licking**. 2. a mixture of salt plus other macro-elements, especially phosphorus, trace elements, vitamins and other feed additives, fed loosely in a box in the field or indoor housing. The objective is to get the animals to ingest small amounts daily by licking the mixture; salt hungry cattle may eat larger amounts. May be consolidated into a block which encourages licking. Called also mineral mix.

acral l. dermatitis see **acral** lick dermatitis.

feline l. granuloma see feline **eosinophilic** granuloma complex.

l. granuloma called also lick dermatitis; see **acral** lick dermatitis.

licking stroking with the tongue. There are three kinds of licking in animals: (1) licking of inanimate objects including soil and trees, i.e. pica, which is usually interpreted as an expression of malnutrition; (2) grooming licking of self; (3) abrasive licking of self, often at the same spot. Examples are the 'mad itch' of bovine pseudorabies and the production of acral lick dermatitis in dogs.

l. disease see licking sickness (below).

floor l. sometimes the preliminary behavior in partial seizures.

psychogenic l. see psychogenic **dermatosis**.

l. sickness pica in cattle on a herd or area scale. Usually ascribed to nutritional deficiency of phosphorus or **copper**, but may also reflect inadequate salt intake.

l. syndrome usually refers to **sodium** chloride nutritional deficiency. See also licking sickness (above).

lid [*lid*] see **eyelid**.

Lidneria clavata see ***Pseudogaltonia clavata***.

lidocaine [*li'do-kān*] a local anesthetic used as a cardiac antiarrhythmic and to produce infiltration anesthesia and epidural and peripheral nerve blocks. Called also lignocaine.

lien [*li'ən*] [L.] *spleen*.

lien(o)- word element. [L.] *spleen;* see also words beginning *splen(o)-*.

lienocele [*li-e'no-sēl*] hernia of the spleen.

lienography [*li"ə-nog'rə-fe*] radiography of the spleen; splenography.

lienomalacia [*li-e"no-mə-la'shə*] abnormal softness of the spleen; splenomalacia.

lienomedullary [*li-e"no-med'u-lar"e*] pertaining to the spleen and bone marrow; splenomedullary.

lienomyelogenous [*li-e"no-mi"ə-loj'ə-nəs*] formed in the spleen and bone marrow; splenomyelogenous.

lienomyelomalacia [*li-e'no-mi"ə-lo-mə-la'shə*] softening of the spleen and bone marrow; splenomyelomalacia.

lienotoxin [*li-e'no-tok"sin*] splenotoxin.

lientery [*li'ən-ter"e*] diarrhea with passage of undigested food.

lienunculus [*li"ən-ung'ku-ləs*] a detached mass of splenic tissue; an accessory spleen.

LIF leukocyte inhibitory factor.

life span [*līf*] average duration of life in animals of the species in average circumstances where special treatment to maintain life is not provided. Called also *characteristic life span*—commonest age of senile death. Laboratory animals and small pets: gerbil, 3–4 years; guinea pig, 1–8 years; hamster, 15 months–2 years; mice, 2–3 years; rabbit, 5–6 years; rats, 3–4 years. Domestic pets: cat, 18–20 years; dog, small and medium size, 15 years; large breeds, 10 years. Farm animals (difficult to give a true figure as many are culled many years before they would die naturally): cattle, 9–12 years; sheep, 8–12 years; goat, 8–10 years; pig, 8–10 years; llama, 20–25 years; domestic poultry, 5–6 years; geese, no data but apparently much longer than other domestic birds; horse, 25–30 years.

life support the maintenance of life through the use of various treatment and management modalities to sustain vital functions. Priority is aimed at the maintenance of airway, breathing and circulation **ABC**. When required, added stabilization is provided with the use of drugs and electrical stimulation **ABCDE**. See also **cardiopulmonary** resuscitation.

life table a tabulation of deaths occurring in age groups, often with other information; may be a current life table, when all of the animals in a population at one time are surveyed, or a cohort table, when all of the animals born in a particular time span are dealt with as a group.

lifetime [*līf'tīm*] for the duration of the animal's (usually productive) life.

average l. performance total of production data divided by the number of years of records.

ligament [*lig'ə-mənt*] 1. a band of fibrous tissue connecting bones or cartilages, serving to support and strengthen joints. 2. a double layer of peritoneum extending from one visceral organ to another. 3. cordlike remnants of fetal tubular structures that are nonfunctional after birth. The injury suffered when a joint is wrenched with sufficient violence to stretch or tear the ligaments is called a **sprain**. For a complete list of named ligaments in the body, see Table 12. See also **ligamentum**.

accessory l. one that strengthens or supports another.

l. arteriosum fibrous remnant of the ductus arteriosus.

broad l. the peritoneal folds by which the uterus is suspended from the wall of the abdomen and pelvis.

capsular l. the fibrous layer of a joint capsule.

check l. see **check ligament**.

collateral l. attached on the medial and lateral sides of adjoining bones that form a joint; contribute to restricting joint movement to the sagittal plane.

cruciate l. one of a pair of ligaments which cross over one another, as for example the cranial and caudal cruciate ligaments of the stifle joint which tie the femur to the tibia.

median l. of the bladder a fold of peritoneum attaching the urinary bladder and urachus to the ventral abdominal wall.

pectinate l. see **pectinate** ligament.

phrenicocardial l. the continuation of the pericardial sac as a ligament attaching to the diaphragm; attaches to the sternum in species where the heart axis is less oblique.

round l. of the bladder cord-like remnants of the umbilical arteries and their mesenteries in the lateral ligaments of the urinary bladder.

round l. of the liver remnants of the umbilical veins found in the free border of the falciform ligament in young animals, and the adults of some species.

round l. of the uterus part of the gubernaculum of the female extending from the proper ligament of the ovary to the inguinal canal and even as far as the labia; in some species, e.g. dog, the ligament passes through the inguinal canal and is incriminated in the development of metrocele.

scrotal l. a vestige of the gubernaculum testis of the fetus that connects the skin of the scrotal wall to the vaginal tunic of the testis.

l. splitting a surgical procedure used in horses to stimulate vascularity of a diseased tendon. Through a single key-hole access

incision, a series of fan-like incisions are made in the longitudinal axis of the tendon with a special knife.
suspensory l. see **suspensory** ligament.
sutural l. a band of fibrous tissue between the opposed bones of a suture or immovable joint.
l. of the tail of the epididymis a vestige of the gubernaculum of the fetus that binds the tail of the epididymis to the tunica vaginalis.
ligamentopexy [*lig"ə-men"to-pek'se*] fixation of the uterus by shortening the round ligament.
ligamentum [*lig"ə-men'təm*] pl. *ligamenta* [L.] ligament.
l. arteriosum remnants of the ductus arteriosus between the aorta and the pulmonary artery.
l. flavum connects the arches of adjacent vertebrae.
l. nuchae see **nuchal** ligament.
l. venosum remnants of the ductus venosus in the liver.
ligand [*li'gand, lig'and*] an organic molecule that donates the necessary electrons to form coordinate covalent bonds with metallic ions. Also, an ion, molecule or part of a molecule that specifically binds to form a complex with another molecule.
ligandin an hepatic transport protein; measurement of it in serum and urine may be a means of estimating the severity of hepatocellular necrosis.
ligase [*li'gās*] an enzyme that repairs single-strand nicks in duplex DNA and covalently joins DNA fragments with complementary, overlapping (called also cohesive or sticky) ends or less efficiently, with blunt ends. Bacteriophage T4 ligase catalyzes the formation of a covalent phosphodiester bond between adjacent 5′-phosphate and 3′-hydroxyl groups in duplex DNA.
l. chain reaction (LCR) a technique for detecting a specific nucleotide pair in a gene. Called also LCR.
ligate [*li'gāt*] to apply a ligature.
ligation [*li-ga'shən*] 1. application of a surgical ligature. 2. the joining of two DNA molecules by a phosphodiester bond. See also **splicing**.
rubber-band l. see **rubber-band ligation**.
ligature [*lig'ə-chər*] any material, such as a thread or wire, used in surgery to tie off blood vessels to prevent bleeding, or to treat abnormalities in other parts of the body by constricting the tissues.
cruciate l. one in which the ligature material is passed around the vessel and surrounding tissue twice before being tied.
transfixation l. see **transfixation** ligature.
light [*līt*] electromagnetic radiation with a range of wavelength between about 390 nm (violet) and 770 nm (red), capable of stimulating the subjective sensation of sight; sometimes considered to include ultraviolet and infrared radiation as well.
l.–dark cycles an important environmental factor in proper housing of laboratory animals for optimal health and reproductive cycling. Most species do well on a 12:12 light–dark cycle but in rabbits more light for females and less for males is recommended.
polarized l. light of which the vibrations are made over one plane or in circles or ellipses.
Wood's l. see **Wood's light**.
Light Sussex a high-quality table poultry breed.
lightning visible discharge of electricity between storm clouds or between the clouds and an earthing point at ground level.
l. injury exposure to high voltage electric shock by means of a lightning strike, which causes sudden nervous shock and unconsciousness or permanent cessation of medullary vital centers, resulting in sudden death. Animals that recover may have residual signs. Vertebral fractures can occur in housed pigs due to sudden muscle contraction. Called also lightning strike. Fish in enclosed waters, e.g. farmed fish, may have their backs broken by lightning striking the water.
l. strike when lightning finds an earthing point.
lights [*līts*] an abattoir term for lung as meat.
lignification the laying down of lignin in a plant; the last stage in maturation, representing a heavy loss in nutritional value.
lignin an almost completely indigestible plant polyphenol present in large quantities in wood, hulls and straw. As lignin increases in forage, digestibility, intake, and animal performance usually decrease and the percent acid-detergent fiber (ADF) and neutral-detergent fiber (NDF) increase.
lignite pitch can cause poisoning. See **phenol**.
lignocaine [*lig'no-kān*] see **lidocaine**.
lignoceric acid [*lig"no-sēr'ik*] a C24 saturated fatty acid, called also tetracosanoic acid, found in wood tar, various cerebrosides, and in small amounts in most natural fats.
lignosol a pellet binder known to cause black, sticky cecal contents which stick to the skin of broilers during processing.
Ligula a genus of tapeworms in the family Diphyllobothriidae.
L. intestinalis the plerocercoids are found in the body cavity of freshwater fish, where they cause infertility and loss of condition. The adults are found in the alimentary tract of piscivorous birds.
Ligularia amplexicaulis Asian plant in the family Asteraceae; contains pyrrolizidine alkaloids which cause hepatitis; called also *L. mortonii*, dola.
Ligustrum European plant genus in the family Oleaceae. Reputed to cause gastroenteritis, but this is an uncommon event in view of the widespread occurrence of the plant. No toxin has been identified. Includes *L. japonicum, L. lucidum, L. sinense, L. vulgare*. Called also privet.
likelihood [*līk'le-hood*] probability.
l. function a method used to estimate unknown parameters, using a function constructed from a statistical model which gives the probability of the observed data for various values of the unknown parameter. The values which maximize the probability are the maximum likelihood estimates.
maximum l. estimates see likelihood function (above).
liksucht [Dutch] see **copper** nutritional deficiency.
lilac 1. a lilac-gray coat color of cats, most commonly seen as a variety of Siamese or Himalayan (Colorpoint). 2. breed of rabbits with a dove gray coat; originally called Cambridge blue.
Lilium garden plant genus in the family Liliaceae; an unidentified toxin causes nephrosis in cats. Includes *L. longiflorum* (Easter lily, Christmas lily), *L. lancifolium* (*L. tigrinum*, tiger lily), *L. speciosum* and Asiatic and Oriental hybrids. Called also lily.
lily a common name for many plants in the family Liliaceae, many of them poisonous. In cases where such plants are suspected of causing poisoning it is probably safest to assume that they are. See also ***Lilium***, ***Gloriosa***, ***Hemerocallis***, ***Arum***. Also a common name for plants in other genera, including blood lily (*Haemanthus multiflorus*), blue flax lily (*Dianella revoluta*), calla lily (*Zantedeschia aethiopica*), corn lily (*Veratrum californicum*), giant prairie lily (*Cooperia pedunculata*), Jamestown lily (*Datura stramonium*, called also Jamestown weed), native lily (*Diplarrhena moraea*), nodding blue lily (*Stypandra glauca*), lily-of-the-valley (*Convallaria majalis*), lily-of-the-valley tree (*Clethra arborea*), peace lily (*Spathiphyllum*), spider lily (*Crinum*), Tasmanian white lily (*Diplarrhena moraea*), thunder lily (*Cooperia pedunculata*), woolly water lily (*Philydrum lanuginosum*), yellow rush lily (*Sisyrinchium micranthum*).
limb [*lim*] 1. one of the paired appendages of the body used in locomotion and grasping. 2. a structure or part resembling an arm.
l. absence may be an acquired characteristic, or a congenital defect caused by inheritance of a modifying factor, e.g. 'mole' calves, or the effect of an environmental noxious agent, e.g. beta-irradiation. Called also amputates.
anacrotic l. the ascending portion of an arterial pulse tracing.
catacrotic l. the descending portion of an arterial pulse tracing.
l. curvature medially or laterally as in rickets, *Trachymene* spp. poisoning.
l. deformity abnormal size, shape, position or composition of a limb, which may be congenital and inherited or an acquired defect.
l. drag the limb is insufficiently flexed and the toe is dragged; indicates weakness or paresis.
l. flexure see **arthrogryposis**.
l.-hoof conformation the contours, angulation and relative size of the component parts of a limb, all of which are vital to a long and trouble free life of locomotion, the principal function of agricultural animals.
l. mange see **chorioptic mange**.
pectoral l. the frontlimb.
pelvic l. the hindlimb.
l. sparing an alternative to amputation in the treatment of large neoplastic lesions, most commonly osteosarcoma. Called also limb salvage.
thoracic l. pectoral limb.
limberleg [*lim'bər- leg*] flaccid paralysis or paresis. Used to describe cases of botulism or poisoning by *Karwinskia humboldtiana*.

VetBooks.ir

limberneck [*lim'bər-nek*] flaccid paralysis or paresis of the neck, used principally in referring to poultry with botulism.

limbic [*lim'bik*] pertaining to a limbus, or margin.

l. conjunctiva the mucous membrane at the place of transition from corneal to conjunctival epithelium.

l. system a system of brain structures common to the brains of all mammals, comprising the phylogenetically old cortex (archipallium and paleopallium) and its primarily related nuclei. It is associated with olfaction, autonomic functions and certain aspects of emotion and behavior.

limbus [*lim'bəs*] pl. *limbi* [L.] an edge, fringe or border; used in anatomical nomenclature to designate the junction of the cornea peripherally with the sclera, (the corneoscleral limbus, limbus corneae, or scleral limbus), and other margins in the body.

eyelid l. the skin–conjunctival junction at the palpebral margin.

oval fossa l. edge of a fossa in the atrial wall, location of the original interatrial foramen in the fetus.

scleral l. see limbus (above).

lime [*līm*] 1. calcium oxide, a corrosively alkaline earth, used for absorbing carbon dioxide from air. 2. agricultural lime, feed lime and chalk, which are all calcium carbonate. Lime for building mortar is calcium hydroxide; quick lime is calcium oxyhydroxide. 3. the acid fruit of **Citrus** *aurantiifolia*.

chlorinated l., chloride of l. a disinfectant and antiseptic with properties similar to chlorine. Contains at least 30% available chlorine which is quickly inactivated by organic material. Called also bleaching powder. In combination with sodium carbonate and sodium bicarbonate, it forms **Dakin's solution** which is used for wound disinfection.

sulfurated l. see **lime-sulfur**.

l. water a saturated aqueous solution of calcium hydroxide.

lime-sulfur [*līm- sul'fər*] used topically, usually a dip, as an ectoparasiticide and antifungal in the treatment of skin diseases, particularly in young, sick or debilitated animals, cats, rabbits and rodents. Can cause skin irritation in some animals. Called also calcium sulfide, calcium polysulfide, sulfurated lime.

limen [*li'mən*] pl. *limina* [L.] a threshold or boundary.

insula l., l. insulae the point at which the cortex of the insula is continuous with the cortex of the frontal lobe.

l. pharyngoesophagaeum a mucosal ridge where the pharynx becomes the esophagus; often marked on radiographs by a conspicuous gas bubble.

limestone rock which is largely calcium carbonate, used as a livestock feed when ground. Contains 38% calcium and is used as a calcium supplement. See also **dolomite**.

Limey disease renal coccidiosis in birds.

liminal [*lim'ĭ-nəl*] barely perceptible; pertaining to a threshold.

liming addition of lime to a pasture or crop field as a fertilizer and soil conditioner. Liming sufficient to elevate the pH of the soil may influence plant uptake of elements and has resulted in the occurrence of copper deficiency in sheep due to increased concentrations of molybdenum in pastures.

liminometer [*lim"ĭ-nom'ə-tər*] an instrument for measuring the strength of a stimulus that just induces a tendon reflex.

limit dextrinosis [*lim'it*] glycogenosis type III.

limitans [*lim'ĭ-tanz*] [L.] *limiting*.

limitation [*lim"ĭ-ta'shən*] avoidance of excessive size.

limited feeding see restricted **feeding**.

limiting udder infection a mastitis control program aimed at limiting the rate of acquisition of new udder infections so that the quarter infection rate does not exceed 10%.

Limnaea see ***Lymnaea***.

Limnatis [*lim-na'tis*] a genus of leeches in the class Hirudinea. Live in water and infest animals that pass through or drink the water.

L. africana found in the nasal cavity, vagina and urethra of humans, dogs and monkeys.

L. nilotica found in the pharynx and nasal cavity in all species. Causes anemia and local edema and obstruction.

D-limonene extracted from the oil of citrus peel, used as an external parasiticide on dogs, but may be toxic to cats.

Limousin dark yellow, beef or draft breed of cattle.

limping syndrome joint pain, hyperesthesia and muscle soreness reported in cats infected with feline ***Calicivirus***.

limulus test a lysate of blood cells from the horseshoe crab (*Limulus polyphemus*) is used to test specimens for the presence of bacterial lipopolysaccharide (endotoxin). Called also the limulus amebocyte lysate test.

L-20: Limousin beef bull. From Sambraus HH, Livestock Breeds. Mosby, 1992.

linalool a natural insecticidal compound found in oil extracted from citrus peel. Similar in activity to **D-limonene**.

linamarase an enzyme in the plants *Linum* spp. which liberates hydrocyanic acid from a cyanogenetic glycoside in the same plant. Boiling for 10 minutes destroys the enzyme and renders the material, usually linseed, safe.

linamarin the toxic cyanogenetic glycoside in linseed and flax. See also **linatine**, **linum**.

Linaria vulgaris a European plant of the family Scrophulariaceae. Contains cardiac glycosides and is a potential cause of poisoning, manifested by diarrhea. Called also toad flax.

linatine a toxin found in linseed. Causes pyridoxine deficiency in fowls fed on linseed meal. See also **linamarin**.

Lincoln an English longwool breed of polled, meat sheep, used as a base for new meat breeds.

Lincoln red a deep red breed of beef cattle, originating from Shorthorn cattle. A polled variety is also available.

Lincoln-Petersen method a statistical method used to estimate the number of animals in a wildlife population where the capture–release–recapture strategy is adopted. The formula is N/M=n/m, where N is the unknown population size, M is the number of marked animals released, n is the number of animals recaptured, and m is the number of recaptured animals that are marked. Called also Lincoln-Petersen estimator.

lincomycin [*lin"ko-mi'sin*] a lincosamide antibiotic produced by *Streptomyces lincolnensis*; used as the hydrochloride salt.

l.-associated colitis see antibiotic-associated **enterocolitis**.

lincosamides bacteriostatic antibiotics that inhibit protein synthesis; includes lincomycin and clindamycin.

lindane [*lin'dān*] the gamma isomer of benzene hexachloride used as a topical pediculicide and scabicide. Carries the same toxicity risks as all **chlorinated hydrocarbons**. Called also γ-HCH, γ-BHC, gamma benzene hexachloride.

line [*līn*] 1. a stripe, streak, mark or narrow ridge; often an imaginary line connecting different landmarks. See also **linea**. 2. conversion of a broad beam of X-rays to a pencil beam. 3. a single consignment of livestock from one farm. Said of a group of cattle or sheep notable for their homogeneity.

absorption l's dark lines in the spectrum due to absorption of light by the substance through which the light has passed.

blue l. 1. lead line (below). 2. an undulating line between the superficial layer of an articular cartilage and its deeper mineralized layer. Called also tidemark.

cell l. see **cell** culture.

cement l. a line visible in microscopic examination of bone in cross section, marking the boundary of an osteon (haversian system).

cervical l. see **cemento-enamel junction**, **cervical** line lesions.

cleavage l's linear clefts in the skin indicative of direction of the fibers.

iliopectineal l. the ridge on the ilium and pubes showing the brim of the true pelvis.

incremental l's lines supposedly showing the successive layers deposited in a tissue, as in the tooth enamel (**Ebner's** lines).

intertrochanteric l. one running obliquely from the greater to the lesser trochanter.

lead l. a bluish line at the edge of the gums in lead poisoning. Rarely seen in animals.

median l. an imaginary vertical line dividing the body equally into right and left parts.

VetBooks.ir

milk l. 1. the line of thickened epithelium in the embryo along which the mammary glands are developed. 2. the metal tube in a milking machine along which the milk, after extraction from the cow, passes to the storage vat.
mylohyoid l. a ridge on the inner surface of the lower jaw from the base of the symphysis to the ascending rami behind the last molar tooth that serves as the origin for the mylohyoid muscle.
pectinate l. one marking the junction of the zone of the anal canal lined with stratified squamous epithelium and the zone lined with columnar epithelium.
physeal l. one on the surface of an adult long bone, marking the junction of the epiphysis and diaphysis.
pleural reflection l. line of the junction between costal and diaphragmatic pleurae.
semilunar l. 1. a curved line along the sole surface of the distal phalanx of the horse that marks the zone of insertion of the deep digital flexor muscle tendon. 2. a curved line along the lateral border of each rectus abdominis muscle of the human abdominal wall, marking the meeting of the aponeuroses of the internal oblique and transverse abdominal muscles.
temporal l. a curved ridge on the external surface of the cranium that marks the origin of the temporal muscle. It is obvious in apple-headed dogs such as the Chihuahua, but in larger breeds retreats to the sagittal and frontal crests; in cattle it marks the boundary of the temporal fossa.
terminal l. an indicator of the entrance to the pelvic cavity formed in succession by the sacral promontory, the wing of the sacrum, the iliopectineal line of the ilium, and the cranial margin of the pubis. The line clearly has relevance to the dimensions of the pelvic inlet and all its obstetrical implications.
l. transects a technique for estimating the density of a population, e.g. the number of deer per hectare in a game park.
visual l. a line from the point of vision of the retina to the object of vision; better called the visual axis.
Lineweaver-Burk plot [*līn'wēv-ər burk'*] see double **reciprocal** plot.
linea [*lin'e-ə*] pl. *lineae* [L.] a narrow ridge or streak on a surface, as of the body or a bone or other organ; a line.
l. alba white line; the tendinous median line on the ventral abdominal wall between the two rectus muscles.
l. albicantes see atrophic **stria**.
l. aspera one or two rough longitudinal lines on the back of the femur for muscle attachments.
lineae atrophicae see atrophic **stria**.
linear [*lin'e-ər*] in a line.
linearity the characteristic of being a straight line. If one variable is a linear function of another, a graph prepared by plotting one against the other will be a straight line.
linebreeding breeding to animals in the same family. A form of inbreeding in which an attempt is made to concentrate the inheritance of some one ancestor, or line of ancestors, in a breed or herd.
linen suture suture material made of flax fiber.
liner see **teat cup liner**.
linezolid [*lī-nez'o-lid*] a synthetic antibiotic active against gram-positive bacteria.
lingua [*ling'gwə*] pl. *linguae* [L.] tongue.
l. nigra black tongue.
lingual [*ling'gwəl*] pertaining to or near the tongue.
l. bone hyoid bone.
Linguatula a genus of parasites in the class Pentastomida.
L. serrata adults occur in the nasal cavities of canines and larvae in mesenteric lymph nodes of the horse, goat, sheep and rabbit. Causes sneezing and a bloody nasal discharge. The larval stages may be confused with tuberculosis. Called also dog tongue worm.
linguatulosis, linguatuliasis [*ling-gwat"u-lo'sis*] disease caused by infection with ***Linguatula***.
linguitis inflammation of the tongue; the usual name is **glossitis**.
lingula [*ling'gu-lə*] pl. *lingulae* [L.] a small, tonguelike structure.
lingulectomy [*ling"gu-lek'tə-me*] excision of a lingula.
lingu(o)- word element. [L.] *tongue*.
linguo-occlusal angle [*ling"gwo-o-kloo'zəl*] where the lingual and the occlusal surfaces of a tooth meet.
linguofacial [*ling"gwo-fa'shəl*] pertaining to the tongue and the face.
linguopapillitis [*ling"gwo-pap"ĭ-li'tis*] inflammation or ulceration of the papillae of the edges of the tongue.
liniment [*lin'ĭ-mənt*] a medicinal preparation in an oily, soapy or alcoholic vehicle, intended to be rubbed on the skin as a counter-irritant or anodyne.
linitis [*lī-ni'tis*] inflammation of gastric cellular tissue.
l. plastica inelastic thickening and fibrosis of the gastric submucosa; called also leather bottle lesion.
linkage [*lingk'aj*] 1. the connection between different atoms in a chemical compound, or the symbol representing it in structural formulae. See also **bond**. 2. in genetics, the association of genes located on the same chromosome, which results in the tendency of a group of such nonallelic genes to be associated in inheritance (linkage disequilibrium). Called also syntenic group.
disequilibrium l. the inheritance of two alleles together at a higher than expected frequency.
l. map see **genetic** map.
l. test a genetic test based on the linkage between a marker allele and a disease. Used where the gene responsible for the condition has not been precisely located or the mutations have not been defined, but the DNA region containing the gene is known. The closer the markers are to the gene responsible, the more reliable the results are in predicting the disease state.
Linognathus [*lin-og'nə-thəs*] a genus of sucking lice of the family Linognathidae, mostly parasitic on ungulates. Includes *L. africanus* (goats), *L. ovillus* (sheep face or blue louse), *L. pedalis* (on hairless parts of limbs of sheep, called also foot louse), *L. setosus* (fox, dog), *L. stenopis* (goat), *L. vituli* (cattle—called also long-nosed cattle louse).
linoleate [*lī-no'le-āt*] see **linoleic acid**.
linoleic acid [*lin"o-le'ik*] an essential fatty acid; contains 18 carbons and 2 double bonds at carbons 9, 10 and 12,13 (C18:2 $\Delta^{9,12}$); precursor of n-6 or omega 6 fatty acids; the major unsaturated fatty acid found in vegetable oils.
l. acid deficiency dry, scaling skin and alopecia have been reported in cats fed diets low in fat, containing rancid fat, or with little or no animal-source fats.
linolenate [*lī-no'lə-nāt*] see **linolenic acid**.

L-21: *Linognathus setosus* (Anoplura) of dogs and foxes.
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2009.

VetBooks.ir

linolenic acid [*lin"o-len'ik*] an essential fatty acid; *α-linolenic acid* is an 18 carbon fatty acid containing three double bonds at carbons 9, 12, and 15 (C18:3 $\Delta^{9,12,15}$); found in plant leaves and some vegetable oils; an omega-3 (or n-3) fatty acid. *γ-linolenic acid* is an 18 carbon fatty acid containing double bonds at carbons 6, 9 and 12 (C18:3 $\Delta^{6,9,12}$); produced in animals by the desaturation of linoleic acid.

linoleum a floor-covering which contains lead; cows and dogs with pica may be poisoned when they eat it.

linseed [*lin'sēd*] ***Linum usitatissimum***. See also **flax**.

l. cake the residue after the removal of the linseed oil by commercial processes. Contains cyanogenetic glycosides and may cause poisoning.

l. meal cake ground into meal.

l. oil used at one time as a lubricant laxative for horses in doses of 1 to 2 quarts as a drench. Has the unfortunate effect on unpredictable occasions of causing superpurgation and is generally supplanted by mineral oil.

Linstowia anoplocephalid cestode found in Australian marsupials (bandicoots) and monotremes (echidnas).

lint [*lint*] an absorbent surgical dressing material.

Linton gag a gag in which two metal loops are hinged together at two sites so that they move inside each other. The closed loops are placed in the mouth and then opened by opening the other end of the loops. A good mouth speculum for sheep.

Linum [*li'num*] a European plant genus containing **linseed** or flax, a member of the Linaceae family. Includes *L. catharticum* (purging flax), *L. usitatissimum* (common flax, linseed). Causes cyanide poisoning. Long-term ingestion can cause goiter.

linuron a methyl urea herbicide. Sprayed plants may contain higher than normal amounts of nitrate and cause nitrite poisoning in ruminants.

lion (*Panthera leo*) a large wild cat, member of the family Felidae, native to Africa and Asia, with a short, yellow or tawny coat, a tail with a black tuft at the end, and a distinctive mane in the males.

l. jaw see craniomandibular **osteopathy**.

mountain l. see **cougar**.

lionfish see **scorpionfish**.

Lionhead a breed of small rabbits, recently developed in the UK, with a distinctive appearance. The ears are short and the coat medium length to long, particularly around the face where it forms a mane with fringe over the face.

liotrix [*li'o-triks*] a mixture of liothyronine sodium and levothyroxine sodium in a ratio of 1:4 in terms of weight; used for replacement therapy in hypothyroidism.

lip [*lip*] 1. the upper or lower fleshy margin of the mouth. 2. any fleshy boundary; labium.

l. droop an unnatural hanging of the lower lip, which is not used during prehension and mastication; there is an accompanying lack of sensitivity of the part. Unilateral droop is usually an indication of facial paralysis; bilateral droop occurs in many conditions of general paralysis, e.g. botulism.

l. fold dermatitis see fold **dermatitis**.

l.–leg ulceration a disease of sheep. See **ulcerative** dermatosis.

l. philtrum the vertical median groove or fissure in the upper lip of some mammals.

l. ulcer see **eosinophilic** ulcer.

lip-curl see **flehmen**.

lipacidemia [*lip"as-ĭ-de'me-ə*] an excess of fatty acids in the blood.

lipaciduria [*lip"as-ĭ-du're-ə*] fatty acid in the urine.

lipase (LPS) [*lip'ās*] fat-splitting enzyme. Any enzyme that catalyzes the splitting of fats into glycerol and fatty acids. The two important sources in the body are the pancreas and the intestinal mucosa. Measurement of the serum concentrations of lipase is an important diagnostic test for acute and chronic pancreatitis. See also **pancreatic** lipase.

hepatic l. enzyme produced by the liver involved in the metabolism of remnant lipoproteins and HDL.

canine pancreas-specific l. (cPL) an immunological test for lipase originating from the canine pancrease; useful in the diagnosis of acute pancreatitis in dogs.

hormone sensitive l. see **hormone-sensitive triacylglycerol lipase**.

pancreatic l. immunoreactivity (PLI) an immunoassay the specifically measures the concentration of pancreatic lipase in the serum. Used in the diagnosis of exocrine pancreatic disease. The assay specific for cats is fPLI.

triglyceride l. see **triacylglycerol** lipase.

lipectomy [*lĭ-pek'tə-me*] excision of a mass of subcutaneous adipose tissue.

lipedema [*lip"ə-de'mə*] an accumulation of excess fat and fluid in subcutaneous tissues.

lipemia [*lĭ-pe'me-ə*] an excess of lipids in the blood; hyperlipemia.

alimentary l. postprandial lipemia (below).

fasting l. that present when food has been withheld for at least 24 hours.

postprandial l. a physiological effect that occurs between 2 and 12 hours after the ingestion of food high in lipids.

l.-refrigeration test refrigeration of a lipemic blood sample may distinguish between triglyceride-rich lipoproteins, which persist in the turbid sample, and chylomicra, which rise to form a flocculent top layer while the sample clears.

l. retinalis that manifested by a milky appearance of the retinal venules and arterioles; seen in hyperlipoproteinemia.

Lipeurus a genus of lice in the suborder Ischnocera.

L. caponis the wing louse of fowl and pheasants.

lipid [*lip'id*] a group of substances comprising fatty, greasy, oily and waxy compounds that are insoluble in water and soluble in nonpolar solvents, such as hexane, ether and chloroform. Simple lipids are esters of fatty acids with various alcohols and include triacylglycerols (triglycerides) or neutral fats which consist of three fatty acids esterified to glycerol, and waxes, which are esters of fatty acids with higher molecular weight monohydric alcohols. Triacylglycerols are an important source of oxidizable substrate to the body and have a greater caloric density (2.25 times) than carbohydrate. Compound lipids are esters of fatty acids containing additional groups; phospholipids contain a phosphoric acid group and may also contain a nitrogenous base; they include lecithin and the cephalins, which are composed of fatty acids linked to phosphatidic acid, and the sphingomyelins, which are composed of fatty acids linked to sphingosine. Glycolipids are composed of a carbohydrate chain and fatty acids linked to sphingosine or ceramide. Glycolipids, also called glycosphingolipids, contain carbohydrate; sulfolipids contain sulfur; aminolipids contain amino acids. Phospholipids and glycolipids are important constituents of all cell membranes. Another important function of the phospholipids is as lung surfactants. Cholesterol is a steroid alcohol (sterol) which may be found esterified to a fatty acid (cholesteryl ester).

l. A a component of the lipopolysaccharide of the cell wall of gram-negative bacteria, responsible for their toxic properties. Specifically simulates the release of tumor necrosis factor alpha from leukocytes.

l. droplet subcellular structure in the cysotol in which triacylglycerol and other neutral lipids are stored. Found in large quantities in adipocytes, but may also be present in almost all other mammalian cell types. Previously thought to be an inert storage structure, but now known to be a dynamic organelle involved in lipid metabolism, vesicle trafficking and cell signaling.

l. pneumonia see lipid **pneumonia**.

protected l's fats treated to protect them against microbial degeneration in the rumen.

l. raft specialized membrane microdomains enriched in cholesterol and sphingolipid which play a role in cell signaling and in membrane protein and receptor trafficking; the lipids in the raft are ordered and tightly packed and float freely in the surrounding lipid bilayer.

l. transport disease a group of diseases in which there is a disorder of lipid metabolism with abnormal concentrations or types of lipoproteins in the blood, e.g. **hyperlipoproteinemia**, **hyperlipemia**.

lipidomics [*lip"ĭ-do'miks*] study of the complete lipid profile of cells, tissues or organisms.

lipidosis [*lip"ĭ-do'sis*] see lipid **storage disease**.

feline hepatic l. accumulation of triglycerides in the liver and hypertriglyceridemia that may develop in obese cats that are persistently anorexic for any reason. There is weight loss, jaundice, neurological signs and a high mortality.

sphingomyelin l. see **sphingomyelinosis**.

lipiduria [*lip"ĭ-du're-ə*] the presence of lipids in the urine.

L-22: Lipitsa or Lipizzaner horse.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

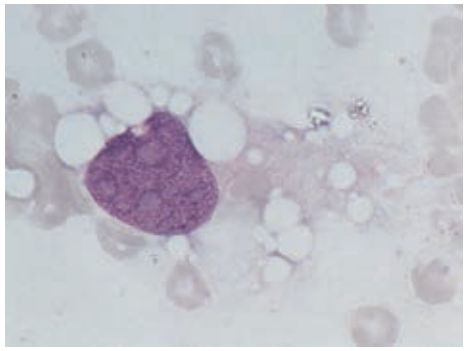
L-23: Bovine renal lipofuscinosis.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

lipiodol a radiopaque material at one time used as a contrast agent for salivary duct delineation and similar external tasks.
Lipitsa a famous breed of horses used at the Spanish Riding School in Vienna. Originated from Arab and Andalusian horses at Lipitsa stud in Yugoslavia. Light horses, usually gray, about 15.2 hands high. Foals are born black, gray or brown and change color gradually over a number of years. These horses are surprisingly small and muscular; one expects to see a much taller, more graceful animal. Called also Lipizzaner, Lippizaner and other similar spellings.
Lipizzaner see **Lipitsa**.
lip(o)- word element. [Gr.] *fat, lipid*.
lipoarthritis [*lip"o-ahr-thri'tis*] inflammation of the fatty tissue of a joint.
lipoatrophy [*lip"o-at'ro-fe*] atrophy of subcutaneous fatty tissues of the body.
lipoblast [*lip'o-blast*] a connective tissue cell that develops into a fat cell.
lipocardiac [*lip"o-kahr'de-ak*] pertaining to fatty degeneration of the heart.
lipochondrodystrophy mucopolysaccharidosis I.
lipochondroma [*lip"o-kon-dro'mə*] a tumor composed of mature lipomatous and cartilaginous elements.
lipochrome [*lip'o-krōm*] any one of a group of fat-soluble hydrocarbon pigments, such as carotene, lutein, chromophane, and the natural yellow coloring material of butter, egg yolk, and yellow corn. They are also known as carotenoids.
lipocyte [*lip'o-sīt*] a fat cell.
lipodystrophy [*lip"o-dis'trə-fe*] any disturbance of fat metabolism.
porcine cerebrospinal l. see GM_2**gangliosidosis**.
lipofection [*lip'o-fek"shən*] using encapsulation in a phospholipid vesicle as a means of delivering RNA, DNA or other substances into a eukaryotic cell.
lipofibroma [*lip"o-fi-bro'mə*] a lipoma containing fibrous elements.
lipofuscin [*lip"o-fu'sin*] any of a class of fatty pigments formed by the solution of a pigment in fat. They take the form of golden or brown granular deposits derived from lipid components of membranous organelles, and commonly occur with advancing age or vitamin E deficiency. Deposits in human skin are commonly called liver spots. Called also abnutzen pigment.
l.-like pigment accumulates in the liver of patients, e.g. mutant Corriedale sheep, which lack enzymes necessary for bile salt conjugation and transport; the livers of affected sheep are black.
lipofuscinosis [*lip"o-fu"sin-o'sis*] any disorder due to abnormal storage of lipofuscins.
ceroid l. an inherited disease in sheep, cattle, dogs and cats, characterized by blindness, mental dullness and abnormal behavior. There is atrophy of the brain with extensive accumulation of lipopigments ('ceroid bodies') in nervous tissue and other tissues due to a single base change in the gene known as CLN5. The comparable, though possibly not identical, disease in humans is also called Batten disease.
hepatic l. see acquired **melanosis**.
intestinal l. brown discoloration of the intestinal muscularis, especially the terminal small intestine. Called also brown dog gut.
bovine renal l. an inherited autosomal recessive trait in Danish Holsteins and Danish red cattle. Until recently, condemnation of kidneys at slaughter as unfit for human consumption was considered the only implication, but it is now established that it is also associated with increased total milk yield due to a longer production life.
lipogenesis [*lip"o-gen'ə-sis*] the formation of fat; the transformation of nonfat food materials into body fat.
lipogenic [*lip"o-jen'ik*] producing, forming or caused by fat.
lipogenous [*li-poj'ə-nəs*] producing fatness.
lipogranuloma [*lip"o-gran"u-lo'mə*] a nodule of lipoid material associated with granulomatous inflammation.
lipogranulomatosis [*lip"o-gran"u-lo-mə-to'sis*] a condition of faulty lipid metabolism in which yellow nodules of lipoid material are deposited in the skin and mucosae, giving rise to granulomatous reactions.
lipoic acid [*lip-o'ik*] a vitamin prosthetic group containing sulfur. Required for the activity of enzymes involved in oxidative decarboxylation of keto acids such as 2-oxoglutarate and pyruvate. Called also α-lipoic acid, thioctic acid.
lipoid [*lip'oid*] previous name for lipid.
lipoidemia lipemia.
lipoidosis lipidosis.
lipoiduria lipiduria.
lipolysis [*lĭ-pol'ə-sis*] the release of free fatty acids from triacylglycerols.
lipoma [*lip-o'mə*] a benign fatty tumor usually composed of mature fat cells. They have a special importance in horses, in which the pedunculated tumors in the abdominal cavity uncommonly twist themselves around a loop of small intestine, sometimes just below the pylorus or around the rectum. The occurrence of this particular form of colic is limited to horses 12 years or older. The clinical signs are not diagnostic except that the strangulation of the rectum causes a purse-string closure of the lumen just inside the anus and is easily detected at rectal examination. Common in aging dogs and in budgerigars.

L-24: Lipoma on the forearm of an aged dog.
From Taylor SM, Small Animal Clinical Techniques. Saunders, 2010.

VetBooks.ir

infiltrating l., infiltrative l. neoplasm of adipocytes that individually have benign histological features, but which show an infiltrative mode of expansion and which can cause local dysfunction.
skin l. localized nodules of histologically normal fat in sucutaneous tissues of older animals in most species. They may not be truly neoplastic, since many do not continue to grow.
lipomatosis [*lip"o-mə-to'sis*] a condition characterized by abnormal localized, or tumor-like, accumulations of fat in the tissues. Large lipomatous masses occur in large numbers in the peritoneal cavity of cattle. They have importance in that they may be mistaken for calves on rectal examination. They may also cause chronic partial obstruction of the intestine with intermittent colic and indifferent appetite as the main signs. The common sites for the obstructions are the pylorus and the coiled colon. Called also massive fat necrosis.
lipomatous [*lĭpo'mə-təs*] affected with, or of the nature of, lipoma.
lipomeningocele [*lip"o-mə-ning'go-sēl*] meningocele associated with an overlying lipoma, as in spina bifida.
lipomeria [*li"po-me're-ə*] amelia.
lipometabolism [*lip"o-mə-tab'o-liz-əm*] metabolism of fat.
lipomyxoma [*lip"o-mik-so'mə*] a myxoma containing fatty elements.
liponeogenesis formation of fat, mostly in the liver and adipose tissue and lactating mammary gland, and principally from glucose and acetate in the ruminant.
Liponyssus [*lip"o-nis'əs*] see ***Ornithonyssus***.
lipopenia [*lip"o-pe'ne-ə*] deficiency of lipids in the body.
lipophage [*lip'o-fāj*] a cell that absorbs or ingests fat.
lipophagia [*lip"o-fa'je-ə*] lipophagy.
lipophagy [*li-pof'ə-je*] the absorption of fat; lipolysis.
lipophanerosis an outmoded concept relating to intracellular deposition of lipid.
lipophilia [*lip"o-fil'e-ə*] affinity for fat.
lipopolysaccharide [*lip"o-pol"e-sak'ə-rīd*] a molecule in which lipids and polysaccharides are linked by a covalent bond. Found in the membrane of gram-negtive bacteria; acts as an **endotoxin**.
lipoprotein [*lip"o-, li"po-pro'tēn*] any of the macromolecular complexes that are the form in which lipids are transported in the blood. They consist of a core of hydrophobic lipids covered by a layer of phospholipids, cholesterol and apolipoproteins, which make the complex water-soluble. There are four main classes of lipoproteins: *chylomicrons*, in which lipids are transported after a meal from the intestine to tissues, where they are stored or used; *very low density lipoproteins* (VLDL); *low density lipoproteins* (LDL); and *high density lipoproteins* (HDL). VLDL and HDL are produced by both the liver and the intestine; LDL is produced by the metabolism of VLDL.
l. (a) (Lp(a)) an LDL-like lipoprotein containing apolipoprotein (a) covalently bound to the apolipoprotein B molecule. High plasma Lp(a) is a risk factor for atherosclerosis and coronary heart disease in humans.
α-l. high density lipoproteins which migrate in the alpha position in paper chromatography. Inherited deficiency of these proteins is described in humans but there is no known animal model of the disease.
high density l. (HDL) a lipoprotein fraction separable by ultracentrifugation. The smallest and most dense of the lipoprotein classes. See also **HDL**.
intermediate density l. (IDL) formed during the metabolism of VLDL to LDL and intermediate in density between the two; migrate in electrophoresis with β-globulins; called also VLDL remnants.
l. lipase specific lipase hydrolyzing triacylglycerols in lipoproteins, particularly chylomicrons and VLDL, releasing free fatty acids and glycerol for use by the tissues.
l. lipase deficiency see **hyperlipoproteinemia**.
low density l. (LDL) a lipoprotein fraction separable by ultracentrifugation. Formed from VLDL and functions to carry cholesterol to the tissues. See also **LDL**.
remnant l. lipoproteins formed by the action of lipoprotein lipase on chylomicrons and VLDL.
triglyceride-rich l. lipoprotein containing a high proportion of triglyceride; includes chylomicrons VLDL and their remnants; blood concentrations rise after a fat meal. Called also triacylglycerol-rich lipoprotein.
γ-lipotropin a polypeptide hormone isolated from the hypophysis.



L-25: Aspirate from a liposarcoma. Note the vacuolated cytoplasm with indistinct borders, large nucleus, ropy chromatin pattern, and multiple prominent nucleoli.
From Cowell RL, et al, Diagnostic Cytology and Hematology of the Dog and Cat, 3rd Edition. Mosby, 2007.

lipoproteinemia [*lip"o-pro"te-ne'me-ə*] the presence of excessive lipoproteins in the blood. See also **hyperlipoproteinemia**.
lipoproteinosis [*lip"o-pro"tēn-o'sis*] accumulation of acidophilic, acellular material, e.g. within pulmonary alveoli.
Lipoptena a parasitic genus of flies in the family Hippoboscidae.
L. caprina a ked of goats.
L. cervi a parasite of deer, wild boar and badger.
liposarcoma [*lip"o-sahr-ko'mə*] a malignant tumor characterized by large anaplastic lipoblasts, sometimes with foci of normal fat cells.
liposis [*lĭ-po'sis*] see **lipomatosis**.
liposoluble [*lip"o-sol'u-bəl*] soluble in fats.
liposome [*lip'o-sōm*] a spherical structure, usually multilamelate, prepared from eukaryotic cell membranes which may be used as a carrier for glycoprotein antigens and drugs.
lipotrope a substance which aids the breakdown of fat in the body, e.g. choline, methionine.
γ-lipotropic hormone one of the products of a cleavage of a β-lipotrophic hormone.
β-lipotrophin see **β-lipotropin**.
lipotrophy [*lĭ-pot'rə-fe*] increase of bodily fat.
lipotropic [*lip"o-tro'pik*] 1. acting on fat metabolism by hastening removal, or decreasing the deposit, of fat in the liver. 2. a lipotropic agent.
β-lipotropin a polypeptide which promotes the mobilization of fat; synthesized in the adenohypophysis.
lipotropism, lipotropy [*lĭ-pot'ro-piz"əm, lĭ-pot'rə-pe*] the condition of being lipotropic.
lipovaccine [*lip"o-vak'sēn*] an inactivated vaccine in an oil adjuvant.
lipoxygenase, lipoxidase (LOX) [*lĭ-pok'se-jen-ās*] an enzyme found in lungs, platelets and white blood cells; involved in the arachidonic acid cascade leading to the production of leukotrienes and lipoxins.
Lippia genus of South African plants in the family Verbenaceae; contain the triterpene lantadene which causes liver damage and photosensitization. Includes *L. javanica*, *L. pretoriensis*, *L. rehmanni* (*L. baziana*), *L. scaberrima*, *L. wilmsii*.
L. rehmanni a poisonous South African plant that contains icterogenin and rehmannic acid, both hepatotoxins that cause liver damage and a syndrome of depression, photosensitization and jaundice. Rehmannic acid is identical with lantadene A in *Lantana camara*.
lipuria [*lĭ-pu're-ə*] lipiduria.
liquefacient [*lik"wə-fa'shənt*] 1. producing or pertaining to liquefaction. 2. an agent that produces liquefaction.
liquefaction [*lik"wə-fak'shən*] conversion into a liquid form.
l. degeneration see **hydropic** degeneration.
l. necrosis tissue undergoing liquefaction.
liquescent [*lik-wes'ənt*] tending to become liquid or fluid.
liquid [*lik'wid*] 1. a substance that flows readily in its natural state. 2. flowing readily; neither solid nor gaseous.
liquor [*lik'ər*] 1. a liquid, especially an aqueous solution, containing medicinal substances. 2. a term applied to certain body fluids.
l. amnii amniotic fluid.
l. cerebrospinalis cerebrospinal fluid.
l. folliculi the fluid in the cavity of a developing graafian follicle.
l. pericardii pericardial fluid.
l. pleurae pleural fluid.
lisinopril [*li-sin'o-pril*] an angiotensin-converting enzyme inhibitor, similar to captopril, but with longer duration of activity. Used in the treatment of heart disease in dogs and cats.

VetBooks.ir

L-26: Lister bandage scissors.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

L-27: Merino ewe with listerial encephalitis.

lissencephaly [*lis"ən-sef'ə-le*] a malformation in which the gyri of the cerebral cortex are not normally developed and the external surface of the cerebral cortex remains smooth. In dogs it has been associated with behavioral abnormalities, visual deficits, ataxia and seizures. Called also agyria.

Lister scissors [*lis'tər*] scissors designed for the crossways cutting of bandages that are in place on the patient. The blades take a 45° angle at the pivot so that they can be inserted under the bandage and leave the knuckles of the cutting hand clear of the patient. The lower blade has a rounded, blunt end to facilitate entry under the bandage without catching the blade.

listerellosis [*lis"tər-ə-lo'sis*] see **listeriosis**.

Listeria [*lis-te're-ə*] a genus of gram-positive bacteria in the form of small rods which frequently resemble diphtheroids. The most important species, *L. monocytogenes*, causes disease most commonly in ruminants and can be divided into 13 serovars on the basis of somatic and flagellar antigens. There is considerable genetic diversity between serovars. Serovars 4b, 1/2a and 1/2b and 3 are most commonly isolated from diseased animals but there are geographical differences. It causes a multi-syndrome disease referred to as **listeriosis**. *L. ivanovii* causes abortion in cattle and sheep.

listeriosis [*lis-ter"e-o'sis*] an infectious disease affecting all species and caused by *Listeria monocytogenes* which can multiply in silage above pH 5.0–5.5 so that listeriosis in animals is commonly associated with feeding poorly prepared silage. In the northern hemisphere, listeriosis has a distinct seasonal occurrence associated with seasonal feeding of poorly preserved silage, with the highest prevalence in the months of December through May. Listeriosis is characterized by a number of syndromes: *Encephalitis* usually has sporadic occurrence and presents with unilateral brain stem and cranial nerve dysfunction, circling, facial paralysis, head pressing, and death following a short clinical course. Called also listerial meningoencephalitis. *Abortion* is late term, sporadic in cattle but can occur as an outbreak in small ruminants. Has zoonotic risk to pregnant females lambing - out the flock *Uveitis/ophthalmitis* occurs in both sheep and cattle and can occur as an outbreak. Many but not all outbreaks have been associated with round bale 'self-feed' silage in the winter period where infected silage can directly contaminate the eye. Called also silage eye. *Septicemic disease* is a less common manifestation but can occur as an outbreak with a high case fatality in newborn lambs and kids and also in periparturient ewes and does. *Spinal myelitis* may occur in sheep following dipping and spontaneously in cattle, but is uncommon. *Gastroenteritis* may occur in sheep of all ages, 2 days after the start of feeding on infected silage. *Mastitis* occurs but is uncommon. It can result in contamination of bulk milk with *L. monocytogenes* but the more common source is fecal contamination. In humans, septicemia, meningitis and miscarriage in pregnant women may result from consumption of contaminated food, especially milk, soft cheeses, and raw fruit and vegetables. Disease is most severe and may result in death in elderly and immunocompromised people.

listerism [*lis'tər-iz"əm*] the principles and practice of antiseptic and aseptic surgery.

listlessness shows lack of interest in its surroundings.

Liston forceps standard bone-cutting scissor-type forceps; a heavy instrument with handles sprung to open and blades presenting opposing chisel faces.

Listonella anguillarum a gram-negative, curved bacterum that causes disease in freshwater and marine fish and eels. Previously classified as *Vibrio anguillarum*.

Listrophorus a genus of mites in the family Listrophoridae. *L. gibbus* may cause a mange-like condition in rabbits.

liter [*le'tər*] the unit of capacity of the metric system, being equal to 1 cubic decimeter; equivalent to 1.1365 Imperial quarts (1.0567 American quarts) liquid measure. See **SI units**. Abbreviated L.

lithectasy extraction of calculi through a mechanically dilated urethra.

lithemia an excess of uric (lithic) acid in the blood.

lithiasis [*lĭ-thi'ə-sis*] a condition marked by formation of calculi and concretions. See **gallstone**, salivary **calculus**, **urolithiasis**, **urolith**, prostatic **calculus**.

lithium (Li) [*lith'e-əm*] a chemical element, atomic number 3, atomic weight 6.939. See Table 4.

l. carbonate used in the treatment of canine cyclic neutropenia to stabilize numbers of neutrophils.

lith(o)- word element. [Gr.] *stone, calculus*.

lithocholic acid [*lith"o-ko'lik*] the product of bacterial metabolism of bile acids in the intestine. Insoluble and not reabsorbed.

lithoclast [*lith'o-klast*] see **lithotrite**.

lithocystotomy [*lith'o-sis-tot'ə-me*] incision of the bladder for removal of stone.

lithodialysis [*lith'o-di-al'ə-sis*] 1. the solution of calculi in the bladder by injected solvents. 2. litholapaxy.

lithogenesis [*lith"o-gen'ə-sis*] formation of calculi, or stones.

litholapaxy [*lĭ-thol'ə-pak"se*] lithotripsy.

litholysis [*lĭ-thol'ĭ-sis*] dissolution of calculi.

lithonephritis [*lith"o-nə-fri'tis*] inflammation of the kidney due to irritation by calculi.

lithonephrotomy [*lith"o-nə-frot'ə-me*] excision of a renal calculus.

lithontriptic pertaining to **litholapaxy**.

lithopedion [*lith"o-pe'de-on*] a fetus calcified in utero.

lithophagia ingestion of stones and rock.

lithoscope an instrument for examining calculi in the urinary bladder; a cystoscope.

Lithospermum arvense toxic plant genus in the family Boraginaceae; contains pyrrolizidine alkaloids; capable of causing liver damage. Called also *Buglossoides arvensis*, corn gromwell.

lithotomy [*lĭ-thot'ə-me*] incision of a duct or organ for removal of calculi.

lithotripsy [*lith'o-trip"se*] application of sound waves from outside the body; used as a means of breaking up stones in the kidney or gall bladder.

extracorporeal l. application of sound waves from outside the body.

intracorporeal l. fragmentation of stones within the body requiring direct access to the site.

lithotrite [*lith'o-trīt*] an instrument for crushing calculi; lithoclast.

lithotrity [*lĭ-thot'rĭ-te*] see **litholapaxy**.

lithous pertaining to or of the nature of a calculus.

lithuresis [*lith"u-re'sis*] passage of gravel in the urine.

litmus [*lit'məs*] a blue pigment prepared from *Roccella tinctoria* and other lichens.

l. paper absorbent paper impregnated with a solution of litmus, dried and cut into strips. It is used to indicate the acidity or alkalinity of solutions. If dipped into alkaline solution, it remains blue; acid solution turns it red. It is used to test urine and other body fluids; it has a pH range of 4.5–8.3.

litre [*le'tər*] see **liter**.

Littauer scissors scissors designed especially for cutting skin sutures; one blade is hook-shaped and designed to slip easily

VetBooks.ir

L-28: Littauer scissors. From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

under a suture and to avoid the suture slipping off the end of the blade while it is being cut.

litter [*lit'ər*] 1. the group of neonates, products of one gestation, provided the average number is in excess of two. 2. dry particulate material used for bedding or as absorptive layer under animals or periodically by the animal to absorb urine and dry out feces. Dry litter system for poultry and litter for cats to use for urination and defecation while indoors.

l. size the number of young in a litter is an important statistic in pigs because of the need to maximize the output of piglets per sow per year.

l. tray the container that holds some absorbent material; used by indoor cats for urination and defecation.

Little lion dog see **Lowchen**.

littoral [*lit'ə-rəl*] pertaining to the shore.

live born pigs total pigs farrowed minus stillborn and mummified pigs. See also **litter** size.

live-and-let-live reaction the parasympathetic nervous system activity that conserves energy by enhancing digestion and decreasing heart rate and contractility; the opposite of the fight-or-flight reaction.

live-leaf see ***Bryophyllum*** *pinnatum*.

live plant see ***Bryophyllum*** *pinnatum*.

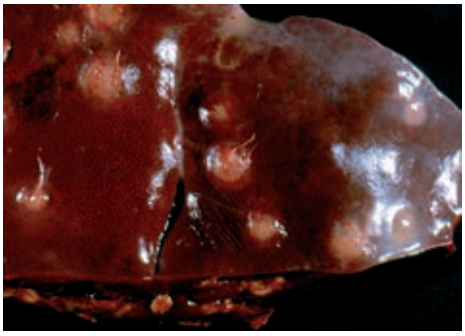
liver [*liv'ər*] 1. the large, reddish-brown organ located in the cranial portion of the abdomen, just behind the diaphragm. Its functions include storage and filtration of blood; secretion of bile; detoxication of noxious substances; conversion of sugars into glycogen; synthesis and breakdown of fats and temporary storage of fatty acids; and synthesis of serum proteins such as certain of the alpha and beta globulins, albumin, which helps regulate blood volume, and fibrinogen and prothrombin, which are essential blood clotting factors. See also **hepatic**. 2. a rich red-brown coat color in dogs that resembles the color of the organ.

l. abscess causes toxemia, possibly local signs of subacute abdominal pain, pain on percussion or palpation over the liver if peritoneal inflammation is present, when there may also be a positive paracentesis sample. See also liver necrobacillosis (below).

acute bovine l. disease hepatopathy of cattle in the southern areas of Australia evidenced by rapid death or photosensitivity, jaundice and reduced milk production. There is periportal necrosis of heptocytes. The cause is unknown but outbreaks have been linked with both kikuyu (*Pennisetum clandestinum*) and rough dog's tail (*Cynosurus echinatus*) grasses, neither of which seems to be causative in themselves; *Drechslera* spp. fungi may be involved as sources of a causative mycotoxin.

l. damage damage to the liver parenchyma causing some degree of hepatic insufficiency.

l. displacement may be because of a diaphragmatic hernia with the liver protruding into the thoracic cavity. Usually accompanied by dyspnea.



L-29: Liver abscess from rumenitis in a feedlot steer.

l. dullness dullness on percussion over the right rib cage, used to help in defining the size of the liver which must be grossly enlarged to register a recognizable change.

l. dysfunction the result of diffuse damage to the liver, e.g. in hepatitis. There may be clinical signs including photosensitization, jaundice, hepatic encephalopathy in the form of the dummy syndrome, dullness and anorexia, or there may be subclinical disease detectable by clinicopathological tests, e.g. hypoglycemia, hypoproteinemia, hyperammonemia. All of the functions of the liver will be affected at the one time.

l. enlargement may be caused by neoplasia, congestion (as with heart failure), and infiltration by fat or inflammatory cells.

l. enzyme when there is acute, diffuse damage to the liver some of its enzymes are liberated into the blood, where they can be measured. An indication of the severity of the damage can be obtained in this way. Different enzymes are used in each animal species.

l. failure when liver function is inadequate to sustain life; the end-stage of liver dysfunction.

fatty l. **fatty** change in the liver.

fatty l. syndrome 1. see feline hepatic **lipidosis**. 2. occurs in high-producing dairy cows that are overfed during the dry period. They may develop fatty liver syndrome with ketosis just before or after calving, precipitated by any factor or disease which interferes with feed intake. There is an adverse effect on reproductive efficiency. See also **fat** cow syndrome. 3. a disease of laying birds housed in battery cages. The cause is unknown. Affected birds are significantly heavier, there is a fall in egg production and they die acutely of liver rupture. The liver is greasy, mushy in consistency and yellow in color. Also occurs in caged birds, commonly in budgergiars, cockatiels and parrots, on high-fat diets.

l. fluke ***Fasciola*** *hepatica*.

l. fluke disease see hepatic **fascioliasis**.

l. function summation of the functions of the liver.

l. function tests biochemical tests capable of demonstrating that the liver's functions are, or are not, at full capacity. Many are available, the choice often determined by species and the type of liver dysfunction being investigated. Includes **alanine aminotransferase**, **alkaline phosphatase**, **aspartate aminotransferase**, **bilirubin**, **bile** acids, **γ-glutamyltransferase**, lactate **dehydrogenase**, iditol **dehydrogenase**.

l. inflammation see **hepatitis**.

inherited l. insufficiency occurs in several breeds of sheep and is characterized by the appearance of photosensitive dermatitis when the lambs begin to eat green feed. There is an accumulation of phylloerythrin in the blood and other biochemical indications of insufficiency, but the liver is histologically normal. Called also inherited photosensitization.

l. injury damage to the hepatic parenchyma, possibly by massive trauma, but usually by an hepatic toxin. A common cause of hepatic insufficiency.

l. insufficiency see liver dysfunction (above).

l. lobe torsion see liver torsion (below).

l. melanosis see acquired **melanosis**.

l. necrobacillosis a disease, particularly of feedlot cattle, characterized by multiple liver abscesses, usually containing *Fusobacterium necrophorum* and resulting from infection from a chemical rumenitis which originated from carbohydrate engorgement and lactic acid rumenitis.

l. protectant substance used for the treatment of liver failure. See **hepatoprotectant**.

l. rot see acute hepatic **fascioliasis**.

l. rupture is usually the result of severe trauma to the abdomen. In most cases there is massive hemorrhage into the peritoneal cavity, acute hemorrhagic anemia and mucosal pallor. Abdominal paracentesis recovers whole blood.

l. shunt see **portosystemic** shunt.

l. torsion is usually restricted to a single lobe. Causes severe abdominal pain and severe vomiting.

liverseed grass ***Urochloa*** *panicoides*.

livestock agricultural animals; animals kept for profit.

l. feed budget see **feed** budget.

l. gross income total of income from sales of livestock or their produce.

l. insurance insurance against loss by death or production, recoupable in terms of loss of capital asset.

VetBooks.ir

l. producer animal farmer, e.g. pig farmer.
l. production system management strategies, e.g. extensive grazing, zero-grazing, feedlotting, all-in–all-out system.
liveweight see body **weight**.
livid [*liv'id*] discolored, as from a contusion or bruise; black and blue.
lividity [*li-vid'ĭ-te*] the quality of being livid; discoloration, as of dependent parts, by gravitation of blood.
livor mortis [*li'vor*] hypostatic congestion appearing post mortem.
lixiviation [*lik-siv"e-a'shən*] separation of soluble from insoluble material by use of an appropriate solvent, and drawing off the solution.
lizard [*liz'ərd*] the majority of reptiles in the order Squamata; those other than snakes and the tuatara. Includes chameleons and geckos, which are very popular as pets, as well as the **Gila monster**, **iguana**, **monitor, and Komodo dragon**
beaded l. (*Heloderma horridum*) a venomous lizard, closely related to the Gila monster. It has a stocky body, covered with bead-like scales, and a short tail. The bite causes local tissue reaction, vomiting, shock and central nervous system depression. A protected species in its native habitat of Mexico and Guatamala, it nevertheless appears in the pet trade.
blue-tongued l. see **skink**.
l. poisoning 1. infection with the fluke ***Platynosomum*** *fastosum*. 2. a sometimes used name for feline **vestibular** syndrome, but not an valid indication of the etiology of that condition.
Lizard canary a very old breed with distinctively colored feathers. The basic colors are gold or silver with black markings on the feathers' edges which makes them resemble scales. On the back this is called spangling, on the breast, rowing, and on the head, the cap.
llama a South American camelid (*Lama glama*) used as a pack animal and for the production of meat in South America and elsewhere as a pet, pack animal, a sheep guard animal and for grazing pastures on hobby farm small acres. Llamas are covered with a wool-like fiber which covers the neck, back and sides. It can be 3–8 inches in length, but is not a commercial commodity, although it is used for making rope.
Llewellin setter see **English setter**.
LMF leukocyte mitogenic factor.
LMM light meromyosin; produced by a digestion of myosin.
LMN lower motor neuron.
LNPF lymph node permeability factor.
Loa a genus of onchocercid worms in the superfamily Filarioidea.
L. loa causes subcutaneous nodules in humans and primates. Transmitted by *Chrysops* spp.
load [*lōd*] the quantity of a measurable form of work, e.g. metabolic or circulatory, borne by an organism, especially when it exceeds the normal amount of work for that process. Called also workload.
loading [*lōd'ing*] administering sufficient quantities of a substance to test a subject's ability to metabolize or absorb it.
loaiasis [*lo"ə-ī'ə-sis*] infection with nematodes of the genus *Loa*; loiasis.
lobar [*lo'bər*] pertaining to a lobe.
congenital l. emphysema emphysema of one or more lung lobes usually the result of bronchial dysplasia or agenesis in the neonate.
l. pneumonia pneumonia affecting one or more lobes of the lungs. See also lobar **pneumonia**.
lobate [*lo'bāt*] divided into lobes.
lobe [*lōb*] 1. a more or less well-defined portion of an organ or gland. 2. one of the main divisions of a tooth crown.
caudate l. a small dorsally located lobe of the liver to the right of the caudal vena cava that frequently embraces the right kidney.
ear l. an elevated area of skin just below the external auditory meatus in birds.
frontal l. the anterior portion of the gray matter of the cerebral hemisphere.
hepatic l. one of the lobes of the liver.
occipital l. the most posterior portion of the cerebral hemisphere, forming a small part of its dorsolateral surface.
parietal l. the upper central portion of the gray matter of the cerebral hemisphere, between the frontal and occipital lobes, and above the temporal lobe. See also **parietal** lobe.
prefrontal l. the part of the brain rostral to the ascending convolution.
quadrate l. a small lobe of the liver, between the gallbladder on the right, and the left lobe.
temporal l. the lower lateral portion of the cerebral hemisphere.
lobectomy [*lo-bek'tə-me*] excision of a lobe, as of the lung, brain or liver.
Lobelia genus of toxic plants in the Campanulaceae family; toxins are pyridine alkaloids, e.g. lobeline; cause diarrhea, oral ulcers; include *L. berlandieri*, *L. inflata* (Indian tobacco), *L. pratioides*, *L. purpurascens*, *L. urens*.
lobelia [*lo-be'le-ə*] plants in the genus ***Lobelia***.
poison l. ***Lobelia*** *pratioides*.
lobeline [*lo'bə-lēn*] a poisonous alkaloid found in plants of ***Lobelia*** spp.
lobitis [*lo-bi'tis*] inflammation of a lobe, as of the lung.
lobomycosis [*lo"bo-mi-ko'sis*] a skin disease of dolphins caused by the yeast ***Lacazia loboi*** and manifested by dermal granulomas or keloids, especially around the head. The disease is a debilitating one and may kill the dolphin. Called also keloidal blastomycosis.
lobotomy [*lo-bot'ə-me*] cutting of nerve fibers connecting a lobe of the brain with the thalamus. In most cases the affected parts are the prefrontal or frontal lobes; thus the operation is referred to as prefrontal, or frontal, lobotomy. Performed in humans as a form of psychosurgery. It has been applied in dogs for the treatment of aggressive behavior, but is of limited usefulness.
lobster see ***Homarus***, ***Nephrops***, ***Panulirus***.
lobster claw deformity see **ectrodactylia**.
lobulated [*lob'u-lāt"ad*] made up of lobules.
lobulation [*lob"u-la'shən*] the state of having lobules or of being lobulated.
lobule [*lob'ūl*] a small segment or lobe, especially one of the smaller divisions making up a lobe.
ansiform l. a lobule of the cerebellar hemispheres.
l's of epididymis the wedge-shaped parts of the head of the epididymis, each comprising an efferent ductule of the testis.
hepatic l., liver l. in the lobular concept of liver histology, the smallest microcirculatory unit of liver structure. It has as its center the smallest draining vein, the central vein, while the portal triads lie about its periphery. See hepatic **acinus** for the alternative concept of liver microstructure.
l. of lung one of the smaller subdivisions of the lobes of the lungs.
paracentral l. a lobe on the medial surface of the cerebral hemisphere, continuous with the pre- and postcentral gyri, limited below by the cingulate sulcus.
paramedian l. a lobule of the cerebellar hemispheres.
parietal l. one of two divisions, inferior and superior, of the parietal lobe of the brain.
portal l. a polygonal mass of liver tissue containing portions of three adjacent hepatic lobules, and having a portal vein at its center and a central vein peripherally at each corner.
primary l. of lung the functional unit of the lung, including a respiratory bronchiole, alveolar ducts and sacs, and alveoli. Called also respiratory lobule.
l. quadrangularis a lobule of the rostral lobe of the cerebellum.
respiratory l. see primary lobule of lung (above).
l. simplex a lobule of the cerebellar hemispheres.
testis l. a group of seminiferous tubules, connective tissue and smooth muscle, the basic unit of the testis.
lobulus [*lob'u-ləs*] pl. *lobuli* [L.] lobule.
lobus [*lo'bəs*] pl. *lobi* [L.] lobe.
local [*lo'kəl*] restricted to or pertaining to one spot or part; not general.
localization [*lo"kəl-ĭ-za'shən*] 1. restriction to a circumscribed or limited area. 2. the determination of a site or place of any process or lesion.
cerebral l. determination of areas of the cortex involved in performance of certain functions.
germinal l. the location on a blastoderm of prospective organs.
localized [*lo'kəl-īzd*] limited in area or volume.
location a characteristic of data, for example those indicating central tendency, such as median, mean, mode.
lochia [*lo'ke-ə*] a vaginal discharge occurring during the first week or two after parturition.
l. alba the final vaginal discharge after parturition, when the amount of blood is decreased and the leukocytes are increased.
l. cruenta lochia rubra.

VetBooks.ir

l. purulenta lochia alba.
l. rubra that occurring immediately after parturition, consisting almost entirely of blood.
l. sanguinolenta the serous uterine discharge occurring four or five days after parturition. Called also lochia serosa.
l. serosa see lochia sanguinolenta (above).
lochiocolpos [*lo"ke-o-kol'pos*] distention of the vagina by retained lochia.
lochiometra [*lo"ke-o-me'trə*] distention of the uterus by retained lochia.
lochiometritis [*lo"ke-o-me-tri'tis*] puerperal metritis.
lochiopyra puerperal fever.
lochiorrhagia, lochiorrhea [*lo"ke-o-ra'jə, lo"ke-o-re'ə*] an abnormally profuse lochia.
lochioschesis [*lo"ke-os'kə-sis*] retention of the lochia.
loci [*lo'si*] [L.] plural of *locus*.
lock ups a row of stanchions, usually in the feeding alley of a free stall or loose housing dairy system, that have head catches that can be set to close when the animal puts its head through to feed so that they are restrained for veterinary or other handling purposes.

L-30: Lock up. (A) Cow about to enter lock up. (B) Cow caught in closed lock up.

lock-stitch suture pattern a continuous suture pattern in which the needle is passed through the previous over-skin loop before taking the next bite.
Locke's solution [*lok*] an aqueous solution of sodium chloride, calcium chloride, potassium chloride, sodium bicarbonate and dextrose adjusted to pH 7.4; used in physiological experiments to keep the excised heart beating.
lockjaw [*lok'jaw*] 1. tetanus. 2. trismus.
locking-loop suture pattern see **lock-stitch suture pattern**.
locks 1. inferior wool from the lower parts of the legs, under the forearm, inside the flank and the crutch. 2. normal fleece in longwool sheep. See **staple**. 3. clusters of individual fiber bundles in the fleece of an alpaca. Locks may be straight or form ringlets.
board l. locks of wool swept up from the shearing board after the fleece has been removed.
locky said of wool fleece that is open and of which the staples are thin, due to the absence of binder fibers to bind the staples together.
loco [*lo'ko*] 1. common name for plants in several genera, especially ***Astragalus*** and ***Oxytropis***. Includes Big bend loco (*A. mollisimus* var. *earlei*), blue loco (*A. diphysus*), earle or purple loco (*A. mollissimus*), sheep loco (*A. nothoxys*), speckled loco (*A. lentiginosus*), stemless or white loco (*O. lambertii*), Thurber loco (*A. thurberi*), white point loco (*O. sericea, O. lambertii*), Wooton loco (*A. wootonii*). See also **locoweed**. 2. see **locoism**.
locoism [*lo'ko-iz"əm*] poisoning by some species of *Astragalus* and *Oxytropis*, plants that contain swainsonine; syndrome of weight loss, incoordination and erratic behavior in horses and ruminant livestock; an acquired lysosomal storage disease. Called also loco.
locomotion [*lo"kə-mo'shən*] movement, or the ability to move, from one place to another. See also **gait**, **amble**, **gallop (2)**, **rack**, **trot**, **walk**.
locomotor [*lo"kə-mo'tər*] of or pertaining to locomotion.
l. area includes a mesencephalic locomotor area in the midbrain and a subthalamic locomotor area in the diencephalon.
l. dysfunction see **incoordination**, **lameness**.
locoweed [*lo'ko-wēd*] see ***Astragalus***, ***Oxytropis***. Includes halfmoon locoweed (*A. allochrous, A. argillophilus*), spotted locoweed (*A. lentiginosus*).
loculus [*lok'u-ləs*] pl. *loculi* [L.] 1. a small space or cavity. 2. a local enlargement of the uterus in some mammals, containing an embryo.
locum tenens [*lo'kəm*] a replacement for an absent veterinarian whose responsibility is to provide exactly the same services and at the same standard as those provided by the absentee.
locus [*lo'kəs*] pl. *loci* [L.] place; site; in genetics, the specific site of a gene on a chromosome.
l. ceruleus a pigmented eminence in the superior angle of the floor of the fourth ventricle of the brain.
locust tree see ***Robinia pseudoacacia***.
Loefflerella mallei see ***Burkholderia mallei***.
Löeffler's coagulated serum medium used for detection of protease production and the rapid presumptive identification of *Arcanobacterium pyogenes*.
lofentanil a potent fentanyl derivative with very long-lasting effect.
log 1. logarithm of. 2. daily record of work. 3. large, friable, compacted mass of concentrate and roughage feed suitable for feeding to animals at pasture. Usually contains a total ration.
log-linear model a statistical model which models frequency counts in contingency tables by using an analysis of variance approach.
logadectomy [*log"ə-dek'tə-me*] excision of a portion of the conjunctiva.
logarithm [*log'ə-rith-əm*] a mathematical device.
common l. the value of the power when a number is expressed as to the power of 10 (has the base 10). Thus 100 expressed as to the power of 10 is 10^2 and the log of 100 is 2.
Napierian l. see natural logarithm (below).
natural l. as for common logarithm, except that the base is e or 2.178. Called also Napierian logarithm.
logarithmic pertaining to logarithm.
l. relationship when the logs of two variables plotted against each other create a straight line. A semilogarithmic relationship is when there is linearity when only one of the variables is scaled as a logarithm.

VetBooks.ir

logic the principles of reasoning.
lognormal distribution see lognormal **distribution**.
log(o)- word element. [Gr.] *words, speech.*
-logy word element. [Gr.] *science, treatise, sum of knowledge in a particular subject.*
Lohmann's enzyme see **creatine** kinase.
loin [loin] the lumbar region of the back, between the thorax and pelvis.
l. disease see **botulism**.
slack l. hollow-flanked with too much room between the last rib and the thigh.
lolitrems complex indole tremorgenic mycotoxins found in *Lolium* spp. grasses infected with *Neotyphodium (Acremonium) lolii*; includes lolitrems A and B.
Lolium [lo'le-əm] grass genus of the family Poaceae; toxic when infested with ***Clavibacter toxicus***, ***Neotyphodium***, *Pithomyces*, ***Endoconidium temulentum*** or may contain toxic amounts of nitrate. Includes *L. multiflorum* (*L. italicum*, Italian ryegrass), *L. perenne* (perennial ryegrass), *L. rigidum* (annual ryegrass, Wimmera ryegrass), *L. temulentum* (darnel, drake).
L. perenne a staple grass for permanent pastures. It is not in itself poisonous, except that it does contain high concentrations of alkaloids, e.g. perloline, at some times and may accumulate nitrate. There are doubts about the pathogenicity of these compounds. The diseases that do occur on perennial ryegrass pastures are **ryegrass** staggers and **facial** eczema. Called also perennial ryegrass.
L. rigidum an annual pasture grass of great productivity. Its seeds may be parasitized by a gall-inducing grass nematode *Anguina lolii*, and if it is accompanied by *Clavibacter toxicus* which produces tunicaminyluracils (corynetoxins), it is very poisonous. Ataxia, convulsions and death are the common signs. Called also annual ryegrass, Wimmera ryegrass.
L. temulentum varying reports on the toxicity of this grass may be because the poisoning is due to a fungal infection, e.g. *Endoconidium temulentum*. Called also darnel.
Lomandra longifolia Australian plant in the family Xanthorrhaceae; unidentified toxin causes myelomalacia and associated clinical signs of incoordination and paralysis. Called also iron grass, mat rush.
lomustine [lo-mus'tēn] cyclohexylchloroethylnitrosurea (CCNU); used as an antineoplastic. Has been used in the treatment of mast cell tumors and cutaneous lymphosarcoma in dogs. Side effects include thrombocytopenia, neutropenia and delayed or cumulative hepatotoxicity.
Lonchocarpus [lon"ko-kahr'pəs] a plant genus, as well as *Derris* spp., that contains **rotenone** in its root.
London fancy a canary with a distinctive plumage pattern, consisting of a golden-yellow body with contrasting black wings and tail.
Lone Star tick see ***Amblyomma*** *americanum*.
long-acting thyroid stimulator (LATS) an autoantibody directed against thyroid-stimulating hormone receptors in the thyroid. Its occurrence is associated with hyperthyroidism in humans.
long-keep said of animals in feedlots; groups kept in the lot to grow before entering an intensive fattening period; in cattle 9 months to a year.
long-necked bladder worm see ***Cysticercus*** *tenuicollis*.
long terminal repeat (LTR) long, repeating sequences of genetic information located at the ends of genomes of retroviruses.
longeing lungeing.
longevity [lon-jev'i-te] duration of life. In agricultural animas this frequently means productive life.
Longhorn see **Texas longhorn**.
longissimus [lon-jis'i-məs] [L.] *longest*. See also Table 13 for longissimus dorsi muscle.
Longistrongylus a genus of worms in the family Trichostrongylidae.
L. albifrontis, L. meyeri found in the abomasum of antelope, gazelle and African buffalo.
longitudinal study [lon"ji-too'di-nəl] a chronological study in epidemiology which attempts to establish a relationship between an antecedent cause and a subsequent effect. See also **cohort** study.
longitudinalis [lon"ji-too"di-na'lis] lengthwise; a structure that is parallel to the long axis of the body or an organ.
longus [long'gəs] [L.] *long*.
longwool-type sheep breeds with coarse wool which hangs down in locks or ringlets instead of a dense, upright fleece, e.g. Lincoln, Leicester, Border Leicester, Romney Marsh, Wensleydale.
loogbos see ***Psilocaulon***.
loop [l p] a turn or sharp curve in a cordlike structure.
capillary l's minute endothelial tubes that carry blood, as in the papillae of the skin.
closed l. a system in which the input to one or more of the subsystems is affected by its own output.
l. diuretic see loop of Henle **diuretic**.
Henle's l. see **Henle's** loop.
intestinal l. in most species the small intestine is arranged in a series of ill-defined open loops. In ducks and geese the loops are closed, finite structures, five to eight in number, and are located more or less in fixed positions. The supraduodenal loop is one of them.
open l. a system in which an input alters the output, but the output has no effect on the input. See also **feedback**.
loose-box accommodation for a horse in which the animal is not tied up in any way. It needs to be big enough for the horse to be able to turn around and to lie down. 10 × 10 ft (3 × 3 m) is a minimum.
Lop a type of rabbits, generally kept as pets and for exhibition, characterized by extremely large and long ears which cannot be carried erect. Includes the recognized breeds, American fuzzy lop, English Lop, French Lop, Holland Lop, and Mini Lop.
Lop-eared Alpine a European group of sheep breeds with pendant ears and Roman nose, polled; the wool varies from carpet to medium-fine wool. The type breed is **Bergamo**. Called also Alpine.
lop ears rigid, usually large, ears that fall at their base from the perpendicular. Seen in Nubian goats and occasionally in dogs.
lope a gait in a horse which is faster than a running walk; a relaxed, uncollected, slow canter.
loperamide [lo-per'ə-mid] a butyramide derivative; the hydrochloride is used as an antiperistaltic in the treatment of diarrhea.
lophodont [lof'o-dont] having molar teeth with elongated ridges between the cusps on the occlusal surfaces.
Lophophora williamsii [lo-fof'ə-rə] a North American plant in the family Cactaceae; contains the alkaloid mescaline, a neurotoxin. Called also peyote, mescal.
Lophophyton a genus of fungus which causes dermatitis in fowl; usually accompanies infestation with the mite ***Epidermoptes bilobatus***.
lophotrichous [lo-fot'ri-kəs] having two or more flagella at one end or both ends (of a bacterial cell).
Lophura nycthemera silver pheasant. See **pheasant**.
Lophyrotoma interrupta the Australian silver-leaved ironbark sawfly, whose host plant is *Eucalyptus melanophloia*, the silver-leaved ironbark; produces larvae which can cause fatal hepatic necrosis when eaten by cattle, because of their content of the linear octapeptide lophyrotomin.
lophyrotomin toxic octapeptide in the larvae of sawfly (*Lophyrotoma interrupta*).
loquat see ***Eriobotrya japonica***.
Cooktown l. see ***Rhodomyrtus macrocarpa***.
native l. see ***Rhodomyrtus macrocarpa***.
lorazepam [lor-az'ə-pam] a benzodiazepine derivative used as an antianxiety agent.
lorcainide an antiarrhythmic drug that blocks Na+ conduction; used in the treatment of ventricular arrhythmias.
lordoscoliosis [lor"do-sko"le-o'sis] lordosis complicated with scoliosis.
lordosis [lor-do'sis] downward curvature of the lumbar spine.
lords-and-ladies ***Arum*** *maculatum*.
lorikeet called also lories. See ***Trichoglossus*** spp.
Lorna towel clamp a non-penetrating clamp, useful for securing pieces of equipment to surgical drapes.
loss-of-form see **poor performance syndrome**.
lot-fed cattle or sheep finished in a feedlot, usually on high density grain diets.
lotaustralin the cyanogenetic glycoside in white clover (*Trifolium repens*) and *Lotus australis*.
lotio [L.] *lotion*.
lotion [lo'shən] a liquid suspension or dispersion for external application to the body.

L-31: Lordosis in a horse. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

Lotus [*lo'tus*] a genus (family Fabaceae) of erect or semiprostrate leguminous plants for permanent pastures. They provide good feed, equal to alfalfa in nutritional quality, in many temperate regions, but some contain cyanogenetic glycosides, e.g. lotusin, or cause photosensitization. Includes *L. australis*, *L. cruentus* (*L. australis* var. *parviflorus*, *L. coccineus*), *L. corniculatus*, *L. major*; called also birdsfoot trefoils.

lotusin the cyanogenetic glycoside contained in trefoils.

Loudinia see ***Glishrocaryon***.

loupe [*l p*] a magnifying lens.

head l. a magnifying lens mounted on a headband, freeing both hands of the clinician. Used principally in ophthalmology and in surgery.

louping ill an acute encephalomyelitis affecting mostly sheep and red grouse (*Lagopus scoticus*), but occasionally other domestic animals and humans, caused by a flavivirus and transmitted by *Ixodes ricinus*. Clinically it is notable as a syndrome of fever, a peculiar bounding (louping) gait, paralysis and convulsions. Viruses that are closely related to louping-ill virus, and that cause very similar disease but in different regions of the world, include Russian spring-summer **encephalitis** virus, Turkish sheep encephalitis virus, Spanish sheep encephalitis virus and Greek goat encephalomyelitis. Called also ovine encephalomyelitis.

louse [*lous*] pl. *lice;* a general name for various species-specific parasitic insects, the true lice, which infest mammals and belong to the order Phthiraptera. This is divided into two suborders, Mallophaga, the biting lice, and Anoplura, the sucking lice. They are grayish, wingless, dorsoventrally flattened, and vary in length from about 1.5 to 4 mm. They stimulate rubbing, scratching and restlessness, causing damage to fleece and loss of production. Heavy infestations with sucking lice may cause serious anemia. Louse infestation is also called pediculosis. The term louse is also used loosely with respect to other external parasites, e.g. whale 'lice' are barnacles and small copepods.

bird l. members of the order **Mallophaga**. Includes *Amyrsidea*, *Anaticola*, *Anatoecus*, *Bonomiella*, *Campanulotes*, *Chelopistes*, *Ciconiphilus*, *Clayia*, *Coloceras*, *Colpocephalum*, *Columbicola*, *Cuclogaster*, *Gonioctes*, *Goniodes*, *Hohorstiella*, *Holomenopon*, *Lagopoecus*, *Lipeurus*, *Menacanthus*, *Menopon*, *Numidicola*, *Ornithobius*, *Oxylipeurus*, *Physconelloides*, *Somaphantus*, *Trinoton*.

blue l. ***Linognathus*** *ovillus*.

body l. ***Menacanthus***.

book l. see **psocid**. The intermediate hosts of *Avitellina* spp. tapeworms.

brown chicken l. see ***Goniodes*** *dissimilis*.

buffalo l. see ***Haematopinus*** *tuberculatus*.

cattle l. see ***Haematopinus*** and ***Linognathus***.

chicken l. see ***Menopon*** *pallidum*, ***Menacanthus*** *stramineus*.

duck l. *Anaticola crassicornis* (slender duck louse), *Trinoton querquedulae* (large duck louse).

face l. ***Linognathus*** *ovillus*.

fluff l. see ***Goniocotes*** *gallinae*.

foot l. ***Linognathus*** *pedalis*.

gill l. *Salmincola edwardsi* and *S. salmonicola*.

goat l. ***Damalinia*** *caprae*, biting louse; ***Linognathus*** *stenopsis*, sucking louse.

goose body l. see ***Trinoton anserinum***.

guinea fowl feather l. *Goniodes numidae* (guinea fowl feather louse), *Lipeurus numidae* (slender guinea fowl louse).

head l. see ***Cyclotogaster heterographus***.

large chicken l. see ***Goniodes*** *gigas*.

long-nosed l. ***Linognathus*** *vituli*.

shaft l. see ***Menopon*** *gallinae*.

shortnosed l. see ***Haematopinus*** *eurysternus*.

slender (small) pigeon l. ***Columbicola*** *columbae*.

tail l., tail switch l. see ***Haematopinus*** *quadripertusus*.

turkey l. includes *Chelopistes meleagridis* (large turkey louse), *Colpocephalum tausi*, *Oxylipeurus polytrapezius* (slender turkey louse), *O. corpelentus*.

wing l. ***Lipeurus*** *caponis*.

lousewort [*lous'wort*] see ***Pedicularis***.

love-in-a-mist ***Passiflora*** *foetida*.

lovebird name often applied to the budgerigar (***Melopsittacus undulatus***), but more correctly to *Agapornis* spp.

l. eye disease a severe, often fatal disease of *Agapornis* spp., characterized by ocular discharge, blepharitis, depression and weight loss. The cause is unknown.

l. pox see ***Poxviridae***.

Loven reflex an ancient discovery that impulses within an organ can cause systemic vasoconstriction leading to hypertension and a localized vasodilation and increased blood flow.

low the recognition call of cattle.

low-flow breathing system an anesthetic system, usually a circle, in which there is a low input of fresh gas and a high percentage of rebreathed air.

Löwchen a small (8–18 lb) lively dog with a long, wavy coat of any color which is traditionally clipped in the pattern of a lion, i.e. full coat over the head, shoulders, feet and end of the tail, but very short on the loin and hindquarters. Called also Little lion dog.

Lowenstein–Jensen medium one containing eggs for the cultivation of mycobacteria.

lower burner acupuncture term for the posterior or lower (in humans) abdomen; associated with elimination.

Lowman clamp a clamp designed to hold fractured ends of bone in position while plates are screwed into place, and so on. Consists of opposing sets of incurving claws which can be screwed into a tight position.

Lown–Ganong–Levine syndrome [*loun' gan'ong lə-vīn'*] a cardiac preexcitation syndrome, similar to Wolff–Parkinson–White syndrome, but of extreme rarity in domestic animals.

LOX lipoxygenase, lipoxidase.

Loxodontofilaria loxodontis see ***Dipetalonema*** *loxodontis*.

lozenge [*loz'ənj*] 1. a medicated tablet or disk; a troche. 2. a triangular area of tissue marked for excision in plastic surgery. 3. a name given to the chestnut-colored spot on the head of Blenheim type Cavalier King Charles and King Charles spaniels. Called also 'kissing spot', Blenheim spot.

LPS lipopolysaccharide.

LRF luteinizing hormone releasing factor.

LSA lymphosarcoma.

LSD a hallucinogenic compound (lysergic acid diethylamide), derived from lysergic acid, a constituent of ergot alkaloids; called also lysergide.

LT lymphotoxin.

LTH luteotropic hormone (prolactin).

Lu chemical symbol, *lutetium*.

lubb a syllable used to represent, or mimic, the first sound of the heart in auscultation. See also **heart sounds**.

l.-dupp two syllables used to mimic the first (lubb) and second (dupp) sounds of the heart in auscultation.

Lubra plate a plastic plate used to support segments of the spinal column or to maintain reduction of a pelvic fracture. The plates are arranged on either side of the spinous processes and are bolted to each other between the processes.

lubricants [*loo'brĭ-kənt*] preparations for the lubrication of passages to reduce frictional injury, e.g. oily preparations, including petroleum jelly, lanolin or water-soluble preparations such as methyl cellulose.

lubricin a polydisperse glycoprotein synthesized by synovial lining cells which provides boundary lubrication to articular cartilage.

lucerne ***Medicago*** *sativa*.

Barwon l. ***Lotus*** *australis*.

Brazilian l. ***Stylosanthes***.

Bullamon l. ***Cullen*** *patens*.

VetBooks.ir

wild l. ***Crotalaria*** *globifera, C. dura.*

lucifugal [*loo-sif'u-gəl*] avoiding, or repelled by, bright light.

Lucilia [*loo-sil'e-ə*] a genus of blowflies in the family Calliphoridae.

L. caesar, L. illustris flies with bright metallic colors. Called copper-bottle or green-bottle flies.

L. cuprina, L. sericata important causes of blowfly strike in sheep. See also cutaneous **myiasis**.

Lucioperca see **pike-perch**.

lucipetal [*loo-sip'ĭ-təl*] seeking, or attracted to, bright light.

Ludwigia peploides water plant in the family Onagraceae, suspected of causing diarrhea and paralysis in livestock. Called also water primrose.

Luebering–Rapoport pathway a biochemical pathway in mature erythrocytes involving the formation of **2,3-bisphosphoglycerate** and which regulates oxygen release from hemoglobin and delivery to tissues. Called also Luebering–Rapoport shunt.

Luer lock connector [*loo'ər*] a universally used standardized system, patented by Becton-Dickenson, for fitting together parts of medical equipment, particularly syringes and needles, with either a threaded or slip-on connection.

lufenuron a benzoylphenyl urea insecticide which acts as an insect development inhibitor. It blocks normal synthesis and deposition of chitin. Administered orally once a month to control fleas.

Lugol's iodine [*loo'gol*] a 2–4% solution of **Lugol's solution**, used as a uterine irrigant in the treatment of bovine endometritis.

Lugol's solution [*loo'gol*] strong iodine solution, each 100 mL containing 4.5–5.5 g of iodine and 9.5–10.5 g of potassium iodide; a source of iodine.

Luing a Scottish breed of beef cattle derived by crossbreeding Beef Shorthorn and Highland breeds.

lumbar [*lum'bər, -bahr*] pertaining to the loins.

l. paralysis paraplegia generally and specifically that due to **cerebrospinal** nematodiasis.

l. plexus one formed by the ventral branches of the last four or five lumbar nerves in the psoas major muscle.

l. puncture insertion of a needle and stylet into the subarachnoid space between the seventh lumbar vertebra and sacrum in most species except the dog, where the space between the sixth and seventh lumbar vertebrae is usually used; called also **spinal** puncture. A lumbar puncture may be done to measure the pressure of **cerebrospinal** fluid and obtain a specimen for examination, and to inject a contrast medium for special radiographic examinations such as myelography. As a therapeutic measure it is sometimes done to relieve intracranial pressure or to remove blood or pus from the subarachnoid space. A lumbar puncture also is necessary for injection of a spinal anesthetic.

l. spinal stenosis see **lumbosacral** stenosis.

l. tap see lumbar puncture (above).

l. vertebrae the vertebrae between the thoracic vertebrae and the sacrum, numbering seven in dogs and cats, six in horses and cattle, and six or seven in sheep and pigs.

lumbarization [*lum"bar-ĭ-za'shən*] nonfusion of the first and second segments of the sacrum so that there is one additional articulated vertebra, the sacrum consisting of one fewer segment.

lumb(o)- word element. [L.] *loin.*

lumbocostal [*lum"bo-kos'təl*] pertaining to the loin and ribs.

lumbodynia [*lum"bo-din'e-ə*] pain in the lumbar region.

lumbosacral [*lum"bo-sa'krəl*] pertaining to the lumbar and sacral region, or to the lumbar vertebrae and sacrum.

l. instability see lumbosacral stenosis (below).

l. intumescence the thicker portion of the spinal cord from which the roots of the lumbosacral plexus originate, corresponding to the caudal, cervical lumbar and the sacral spinal segments.

l. luxation may result from trauma; common in dogs and cats. Neurological deficits result from injury to spinal nerves, and parenchymal hemorrhage and edema in spinal cord segments distant from the site.

l. plexus a network made up of the caudal lumbar and sacral spinal nerves giving rise to the femoral, obturator, cranial gluteal, caudal gluteal, sciatic and pudendal nerves; innervates the perineum and muscles of the pelvic limb.

l. plexus injury severe trauma to the hindlimbs may cause injury to the lumbosacral plexus, causing femoral and sciatic nerve deficits (inability to bear weight, extend or flex the stifle, dropped hock, and knuckling onto the digits).

l. spondylopathy see lumbosacral stenosis (below).

l. stenosis a degenerative condition affecting the lumbosacral junction, usually in older large breed dogs, involving reduction in the diameter of the spinal canal or reduction in the diameter of the intervertebral foraminae, due to a combination of osseous and soft tissue lesions. Clinical signs are the result of compression of the cauda equina or the sciatic nerves and include difficulty sittng or rising, pain on palpation of the lumbosacral junction, weakness of the muscles innervated by the sciatic nerves, paresthesia with self-mutilation of the pelvic limbs and tail and urinary and fecal incontinence.

l. syndrome lesions involving the lumbosacral tumescence or the lumbosacral nerve roots. Signs include flaccid paresis or paralysis of pelvic limbs, paresthesia and sensory loss in the pelvic limbs, anal sphincter, tail, bladder and urethral sphincter, depressed or absent postural reactions in the pelvic limbs, and urine retention with passive incontinence. See also lumbosacral stenosis and lumbosacral plexus injury (above), **cauda equina neuritis**.

lumbricoid [*lum'brĭ-koid*] resembling the earthworm; designating the ascaris, or intestinal roundworms.

Lumbriculus variegatus intermediate host of *Dioctophyme renale*. Called also mudworm.

lumbricus [*ləm-brī'kəs*] pl. *lumbrici* [L.] 1. the earthworm. 2. ascaris.

lumbus [*lum'bəs*] [L.] *loin.*

lumen [*loo'mən*] pl. *lumina* [L.] 1. the cavity or channel within a tube or tubular organ, as a blood vessel or the intestine. 2. the SI unit of light flux.

luminescence [*loo"mĭ-nes'əns*] the property of giving off light without a corresponding degree of heat.

luminophore a chemical group that gives the property of luminescence to organic compounds.

lumirhodopsin [*loo"mĭ-ro-dop'sin*] an intermediate product of exposure of rhodopsin to light.

lumpectomy [*ləm-pek'tə-me*] excision of a 'lump', usually applied to skin lesions or mass lesions of the mammary gland, in contrast to a radical excision of the entire gland.

lumpy skin disease there are two distinct lumpy-skin diseases of cattle with a similar clinical syndrome in which there is a sudden appearance of cutaneous nodules on all parts of the body. Some of the lesions may become necrotic and slough, but most just subside. The more acute and systemic of the two diseases is caused by the 'Neethling' poxvirus. This is a disease notifiable to the OIE (see Table 22). Called also knopvelsiekte. The milder form is known as pseudo lumpy skin disease (see below).

pseudo-l.s.d. the disease of cattle that resembles a mild form of lumpy skin disease, but caused by bovine herpesvirus 2, the 'Allerton' herpesvirus, which appears to be identical to the virus of bovine ulcerative mammillitis.

lunate [*loo'nāt*] 1. moon-shaped or crescentic. 2. the lunate bone. See Table 10.

Lundehund see **Norwegian** lundehund.

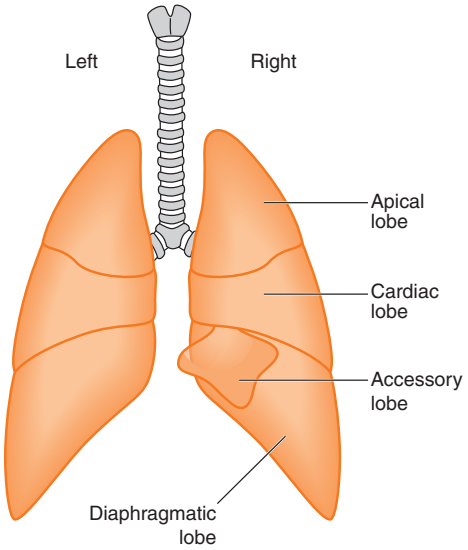
lung [*lung*] either of the two main organs of respiration, lying on either side of the heart, within the chest cavity. The lungs supply the blood with oxygen inhaled from the outside air, and they dispose of waste carbon dioxide in the exhaled air, as a part of the process of **respiration**. They are usually divided into lobes, the left lung has up to three (cranial, middle and caudal), while the right lung has up to four (cranial, middle, caudal and accessory). Horse lungs are least subdivided; cat and dog lungs are deeply fissured into lobes. The lungs are made of elastic tissue filled with interlacing networks of tubes and sacs carrying air, and with blood vessels carrying blood. The bronchi, which bring air to the lungs, branch out within the lungs into many smaller tubes, the bronchioles, which culminate in clusters of tiny air sacs called alveoli, whose total runs into millions. The alveoli are surrounded by a network of capillaries. Through the thin membranes of the capillaries, the air and blood make their exchange of oxygen and carbon dioxide. See also **pulmonary**, **respiratory**.

accessory l. develop from an embryonic lung bud in an abnormal site, e.g. neck, abdomen.

l. birth changes include dilation of the alveoli and the bronchial tree, marked pulmonary vasodilation, decreased resistance to blood flow through the lungs, constriction of the ductus arteriosus, removal of fluid from the fetal bronchial tree.

l. breath sounds see **breath** sounds.

VetBooks.ir



L-32: Lung lobes.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

L-33: Lungeing.
From Hinchcliff KW, Kaneps AJ, Geor RJ, Equine Sports Medicine and Surgery. Saunders, 2004.

l. bud blunt end of the respiratory diverticulum which grows ventrally out of the proximal end of the foregut, then extends caudally and divides into two, forming the origins of the bronchial tree.
l. consolidation see **consolidation**, **hepatization**.
l.-digit syndrome an uncommon condition in cats in which a primary lung tumor metastasizes to, usually multiple, digits as well as other sites.
ectopic l. edematous, lobulated masses of lung tissue in the abdominal or thoracic cavities or in subcutaneous sites.
l. factor closely related ipomeanols produced in rotting sweet potatoes by the catabolism of phytoalexins by the fungus *Fusarium* fungi. The factor is not toxic until it is activated by pulmonary microsomal enzymes.
l. hilus that part of the lung that is not covered by pleura and through which blood vessels, bronchi, nerves and lymphatics enter and leave the lung. It is not quite synonymous with the root of the lung that includes all of those structures entering or leaving at the hilus and which penetrate a short distance into the lung itself.
l. lobe torsion occurs uncommonly in dogs and cats, most often in large, deep-chested dogs. May occur spontaneously, following trauma, or in association with pleural effusion. Torsion at the hilus impedes ventilation and venous return, but arterial flow is less affected, resulting in engorgement and rapid necrosis. Clinical signs include respiratory distress, coughing and hemoptysis.
moist l. sounds sounds heard on auscultation of the lungs that indicate the presence of inflammatory or edema fluid in the bronchi or alveoli.
l. perforation may cause lung hemorrhage, emphysema, hemothorax or pneumothorax, or any combination of these conditions.
l. puller appliance for pulling the pluck, the heart and lungs on the trachea, out of the thorax at the abattoir.
l. puncture see lung perforation (above).
l. *Qi* deficiency in acupuncture terminology is a deficiency of *Qi* or energy in the lungs manifested by recurrent illness, weak cough, rapid shallow respiration, dry cracked muzzle.
l. reflexes **Hering-Breuer reflexes**.
l. resonance resonant sound achieved on percussion of the chest wall over normal lung.
shock l. see **shock** lung.
l. sounds absent breath sounds audible on auscultation over normal lung are absent over consolidated, neoplastic and collapsed lung.
stiff l. one with decreased compliance.
l. volume see total lung capacity (above).
lungeing exercising a horse by having it circle at the end of a long lead, encouraged if necessary by a lungeing whip.
lunger see **atypical interstitial pneumonia**.
lungfish freshwater fish in the subclass Dipnoi. They breathe through gills when in water but through lungs when out of it. Their peculiarity is that their nasal cavities, which are blind-ended, olfactory organs in most fish, connect with the roof of the mouth.
lungmotor an apparatus for forcing air, or air and oxygen, into the lungs.
lungworm [*lung'wərm*] any parasitic worm that invades the lungs, but generally refers to worms that preferentially invade the lungs, come to maturity there and either lay their eggs or produce viable larvae there. Includes *Aelurostrongylus* spp., *Angiostrongylus abstrusus*, *Capillaria aerophilia*, *Crenosoma* spp., *Dictyocaulus* spp., *Metastrongylus* spp., *Muellerius capillaris*, *Oslerus* spp., *Otostrongylus*, *Paragonimus* spp., and *Protostrongylus* spp.
l. disease is caused by species-specific lungworms. The cattle lungworm is *Dictyocaulus viviparus*, which causes a verminous pneumonia, a secondary bacterial pneumonia and an atypical interstitial pneumonia. The cardinal signs in all of them are chronic cough and respiratory distress. The sheep worms involved are *Dictyocaulus filaria*, *Muellerius capillaris* and *Protostrongylus rufescens*, and the clinical picture is one of persistent cough. In the pig, *Metastrongylus apri*, *M. pudendodectus* and *M. salmi* are the causative worms and chronic cough the outstanding clinical sign. Horses and donkeys are parasitized by *Dictyocaulus arnfieldi* and may be affected by coughing. In dogs, *Filaroides hirthi*, *F. milksi* and *Oslerus osleri* parasitize the respiratory tract at various levels and may be the cause of chronic cough. *Angiostrongylus vasorum* is found in pulmonary arteries and causes respiratory signs. In cats, mild to severe pulmonary disease with chronic cough and weight loss may be caused by *Aelurostrongylus abstrusus*.
nodular l. see ***Muellerius capillaris***.
lunula [*loo'nu-lə*] pl. *lunulae* [L.] a small, crescentic or moon-shaped area or structure, e.g. the segments of the semilunar valves of the heart.
luo points in acupunctorial theory these connect meridians; called also connection points.
lupanine toxic quinolizidine alkaloid in ***Lupinus***. At its greatest concentration in the seeds.
lupine, lupin plants in the genus ***Lupinus***. Includes *L. albicaulis* (pine), *L. albus* (white), *L. alpestris* (mountain silvery), *L. andersonii* (Anderson's), *L. angustifolius* (New Zealand blue), *L. arboreus* (tree), *L. burkei* (Burke's), *L. argeneus* (silvery), *L. caudatus* (Kellog's spurred, tailcup), *L. cosentinii* (sandplain,West Australian blue), *L. erectus* (tall silvery), *L. evermannii* (Everman's), *L. latifolius* (broadleaf), *L. laxiflorus* (Douglas spurred, wild), *L. leucophyllus* (velvet, wooly-leaved), *L. leucopsis* (Big bend), *L. littoralis* (seashore), *L. montigenus* (Mount Rose), *L. nootkatensis* (nootka), *L. onustus* (plumas), *L. polyphyllus* (garden, large-leaved, Washington), *L. pusillus* (low), *L. sericeus* (silky).
false l. ***Thermopsis*** *montana*, *T. rhombifolia*.
lupinosis [*loo"pĭ-no'sis*] the hepatic injury syndrome caused by poisoning with dead *Lupinus* spp. plants, as stubble, infested with the fungus *Diaporthe toxica*. Depression, jaundice and photosensitization are the common signs. Called also mycotoxic lupinosis.
Lupinus [*loo'pin-us*] temperate zone plant genus of the Fabaceae family of legumes; mature plants can cause several syndromes (the green plants are safe): (1) convulsions after exercise due to quinolizidine alkaloids in the seeds; (2) liver damage and sometimes skeletal myopathy caused by fungal toxins (phomopsins) produced by *Diaporthe toxica* fungus growing on the crop stubble or in the seeds, which also causes intermittent photosensitization (called also **lupinosis**); (3) arthrogryposis and/or cleft palate

L-34: Cleft palate in a calf resulting from exposure to teratogenic lupine alkaloids in early fetal life.

L-36: Discoid lupus erythematosus in a Collie.

in newborn calves whose dams have eaten lupines containing teratogenic alkaloids between 30 and 100 days gestation; (4) possibly precipitation of acute attacks of copper poisoning; and (5) pregnancy toxemia and ketosis in cows. Includes *L. albicaulis*, *L. albus*, *L. alpestris*, *L. andersonii*, *L. angustifolius*, *L. arboreus*, *L. argenteus*, *L. burkei*, *L. cosentini* (*L. digitatus*), *L. cumulicola*, *L. cyaneus*, *L. erectus*, *L. evermannii*, *L. formosus*, *L. greenei*, *L. latifolius*, *L. leucophyllus*, *L. leucopsis*, *L. littoralis*, *L. luteus*, *L. montigenus*, *L. nootkatensis*, *L. onustus*, *L. perennis*, *L. polyphyllus*, *L. pusillus*, *L. spathulatus*, *L. varius*.

L. caudatus, L. laxiflorus, L. leucophyllus, L. sericeus these plants, together with many other *Lupinus* spp., contain quinolizidine alkaloids (anagyrine), the cause of the crooked calf syndrome, in which calves are born with limbs in excessive flexion, rotated, generally malpositioned, and malaligned.

lupoid [*loo'poid*] 1. pertaining to lupus vulgaris. 2. a variant of sarcoidosis marked by small papular lesions.

l. dermatosis an hereditary disease of German shorthaired pointers. Scaling and crusting starts on the face, then spreads over the body, particularly to the hocks and scrotum. The lesions may be painful and pruritic.

l. leishmaniasis cutaneous **leishmaniasis**.

lupus [*loo'pəs*] [L.] *wolf, pike*.

l. band the deposit of immunoglobulin or complement, or both, at the basement membrane zone that can be demonstrated by direct immunofluorescence testing in lupus erythematosus.

l. panniculitis, l. profundus circumscribed, subcutaneous nodules of panniculitis associated with lupus erythematosus.

lupus erythematosus (LE) the Latin word *lupus* means wolf and erythematosus refers to redness. The name lupus erythematosus has been used since the 13th century because human medicine physicians thought the shape and color of the skin lesions (butterfly rash) gave affected patients a wolf-like appearance. Currently, there are at least two recognized autoimmune disorders: discoid lupus erythematosus and systemic lupus erythematosus.

l. e. cell a mature neutrophilic polymorphonuclear leukocyte, which has phagocytized a spherical, homogeneous-appearing inclusion, itself derived from nuclear material of degenerating leukocytes and coated with antinuclear antibody; a characterisitic of lupus erythematosus, but also found in analogous connective tissue disorders or immune-mediated disorders.

l. e. cell test see lupus erythematosus phenomenon (below).

cutaneous l. e. see discoid lupus erythematosus (below).

L-35: Velvet lupine (*Lupinus leucophyllus*).

discoid l. e. (DLE) an autoimmune skin disease of dogs, characterized by depigmentation, erythema, scaling, erosions, ulcerations and crusting, particularly on and spreading up the bridge of the nose, and sometimes the face and lips. Immunoglobulins and/or complement are deposited at the basement membrane zone in the skin. The disease is exacerbated by exposure to ultraviolet light (sunlight). The disorder called 'collie nose' or solar dermatitis has in the past included many cases of dogs with DLE. Called also cutaneous lupus erythematosus. See also vesicular cutaneous lupus erythematosus (below).

exfoliative cutaneous l. e. a disease of German shorhair pointers, characterized by scalilng and alopecia, typically of the muzzle, pinnae and dorsum. There may be systemic signs of pain, lameness, anemia and thrombocytopenia. Circulating antifollicular and antisebaceous gland IgG antibodies have been demonstrated in some affected dogs.

l. e. phenomenon, LE test the formation of LE cells on incubation of the clotted blood or bone marrow of affected animals at 98.6°F (37°C). The clot is disrupted and centrifuged, the white cells are smeared on a glass slide and examined for LE cells.

systemic l. e. (SLE) a multisystem, autoimmune disease of dogs and cats. An extremely wide variety of clinical signs may occur, but immune-mediated polyarthritis, hemolytic anemia and skin disease are most common.

vesicular cutaneous l. e. (VCLE) an uncommon vesicular variant of cutaneous (discoid) lupus erythematosus seen in Shetland sheepdogs and Collies; believed to be activated by exposure to ultraviolet radiation. Vesicles and bullae progress to ulcerations on skin in the axillae, groin, ventral abdomen and medial thighs. Mucocutaneous junctions, pinnae, oral cavity and footpads may also become affected.

Lurcher a traditional dog of the Romany gypsies in the United Kingdom; not an officially recognized breed, but generally a smooth-haired dog of variable conformation. It resembles a cross between a Whippet and a Greyhound, but generally can be a cross between any sight hound and any local dog. The name comes from the habit of hanging around in the background, more as a camp follower than as a family pet.

lure the skin-covered object which runs on a monorail on a Greyhound racing track and which the dogs are schooled to chase. The lure must be kept 30–40 ft ahead of the leading dog so that the field is stretched out. Bunching of the field is likely to cause too many injuries by bumping and fighting.

Lusitano a Portuguese gray horse, 15–16 hands high, very similar to **Andalusian**. An excellent riding and parade horse.

lusitropy, lusitropic [*loo-sit'ro-pe, loo"si-tro'pik*] relaxation of mycardium during diastole; drugs that produce this effect include calcium channel blockers and β-blockers. Used particularly in the treatment of hypertrophic cardiomyopathy in cats.

LUTD lower urinary tract disease.

luteal [*loo'te-əl*] pertaining to or having the properties of the corpus luteum or its active principle.

l. cyst luteinized cysts, which are usually anovulatory. Animals with luteal cysts tend to be anestrus due to progesterone secreted by the cysts. See also luteal **cyst**.

l. phase the stage of the estrous cycle during which the effect of the corpus luteum dominates and the cow is anestrous because of the high concentrations of progesterone in the blood.

lutein [loo'te-in] 1. a lipochrome from the corpus luteum, fat cells, and egg yolk; also found in leafy green vegetables. 2. any lipochrome.

luteinic [loo"te-in'ik] pertaining to the corpus luteum, to lutein, or to luteinization.

luteinization [loo"te-in"ĭ-za'shən] the process taking place in the follicle cells of graafian follicles that have matured and discharged their egg: the cells become hypertrophied and there is vascularization and lipid accumulation (the latter in some species giving a yellow color), the follicles becoming corpora lutea.

luteinized cyst a cyst that may develop when there is delayed or insufficient release of LH during estrus. Ovulation does not occur and the theca becomes luteinized. Commonly seen in cattle and pigs. See also **cystic** corpus luteum.

luteinizing cell-stimulating hormone see **luteinizing hormone**.

luteinizing hormone (LH) a gonadotropic hormone of the anterior pituitary gland, acting with follicle-stimulating hormone to cause ovulation of mature follicles and secretion of estrogen by thecal and granulosa cells of the ovary; it is also concerned with corpus luteum formation. In the male, it stimulates development of the interstitial cells of the testes and their secretion of testosterone. Called also interstitial cell-stimulating hormone.

l. h. releasing hormone (LH-RH) a hormone secreted by the hypothalamus that, together with a release-inhibiting factor, controls the secretion of, for example, the luteinizing hormone of the adenohypophysis. Called also Gn-RH.

luteohormone see **progesterone**.

luteolysis [loo"te-ol'ə-sis] regression of the corpus luteum.

premature l. results in a short interestrus interval in mares; results in nonseptic abortion in the bitch and queen. Also used to describe short cycles in other species; occurs often in cases of endometritis.

luteolytic factor [loo"te-o-lit'ik] prostaglandin-$F_{2\alpha}$ synthesized and secreted by the uterine epithelium.

luteoma [loo"te-o'mə] 1. a luteinized granulosa–theca cell tumor of the ovary. 2. nodular hyperplasia of ovarian lutein cells, sometimes occurring in the last trimester of pregnancy.

luteoskyrin mycotoxin produced by *Penicillium islandicum*; causes hepatic necrosis and its metabolites are carcinogenic.

luteotrope see **lactotroph**.

luteotroph see **luteotropin**.

luteotropic [loo"te-o-tro'pik] stimulating formation of the corpus luteum.

l. hormone (LTH) see **luteotropin**.

luteotropin [loo'te-o-tro"pin] a hormone of the anterior pituitary which stimulates formation of the corpus luteum; identical with prolactin. Called also luteotropic hormone (LTH).

lutetium (Lu) [loo-te'she-əm] a chemical element, atomic number 71, atomic weight 174.97. See Table 4.

Lutzomyia [l t-zo-mi'ə] a genus of sandflies, e.g. *L. trapidoi,* capable of transmitting *Leishmania* spp.

lux [luks] the SI unit of illumination, being 1 lumen per meter squared.

luxation [lək-sa'shən] see **dislocation**.

tooth l. a tooth that is tipped either towards the labial direction or the lingual or palatal direction; involves a fracture of alveolar bone. Compare with tooth dislocation.

luxator a dental instrument used for cutting the periodontal ligament in extraction of a tooth.

luxus [L.] *excess*.

LVH left ventricular hypertrophy.

Lw chemical symbol, *lawrencium*.

ly-1 marker a T lymphocyte marker, present only on a small set of B lymphocytes responsible for most antibodies to self antigens.

lyase [li'ās] any of a class of enzymes that remove groups from their substrates (other than by hydrolysis), often leaving double bonds or a ring structure, or that conversely add groups to double bonds.

Lycium barbarum plant in family Solanaceae; may contain a glycoalkaloid and cause convulsions and sudden death; called also *L. halimifolium, L. vulgare,* matrimony vine.

lycoctinine a diterpene alkaloid found in *Aconitum* spp.

Lycopersicum esculentum the tomato; ***Solanum*** *lycopersicum*.

lycorine [lik'o-rin] a toxic alkaloid found commonly in the bulbs of plants of the family Amaryllidaceae. Causes salivation, vomiting and diarrhea; large doses cause collapse and death.

Lycra plastic, segmented, polyurethane fiber used in making a snapback fabric, stronger and lighter than rubber. Used in surgical garments and as an implant to restore function to atrophied muscles, e.g. in prostheses in the treatment of laryngeal hemiplegia in horses.

lye [li] an alkaline percolate from wood ashes; household lye is a crude mixture of sodium hydroxide with some sodium carbonate.

Lyell's disease toxic epidermal **necrolysis**.

Lygodesmia North American plant genus in Asteraceae plant family; can cause nitrate–nitrite poisoning and photosensitization. Includes *L. juncea, L. texana*. Called also skeleton weed.

lying [li"ing] being recumbent; in a horizontal position.

l. down getting up a pattern of behavior in most large animal species indicative of acute abdominal pain; the patient appears apprehensive of further bouts of pain, then flops down heavily and may, especially in horses, roll violently and uncontrollably, before getting up and standing in a dejected attitude until the next bout of pain, usually within a few minutes.

l. on back a pattern of behavior characteristic only of the horse and indicative of subacute abdominal pain; the patient lies on its back, without struggling, for minutes at a time. Other signs, e.g. poor appetite and weight loss, usually present also.

l. time the amount of time in a 24-hour period that cows spend lying in a free stall. Influenced by type of bedding and a measure of cow comfort.

Lyme disease [lim] an acute, often recurrent, polyarthritis of dogs and humans caused by the spirochete *Borrelia burgdorferi* (in the USA) and *B. afzelii* and *B. garinii* (in Europe), and transmitted by the ticks in the genus *Ixodes*. The disease is endemic in the northeast and certain other areas of the USA. In endemic areas, dogs are often seropositive, but clinical signs are infrequent. Called also Lyme borreliosis. Findings of a thorough investigation of human and canine serology, and of the possible vectors in Australia fail to meet the internationally accepted criteria for Lyme disease so the presence of the disease in that country remains unproven.

Lymnaea [lim-ne'ə] a genus of snails, some of which act as intermediate hosts of *Fasciola hepatica.* The snails are *L. columella, L. tomentosa, L. truncatula, L. viridis*.

lymph [limf] a transparent, usually slightly yellow, often opalescent liquid found within the lymphatic vessels, and collected from tissues in most parts of the body and returned to the blood via the lymphatic system. It is about 95% water; the remainder consists of plasma proteins and other chemical substances contained in the blood plasma, but in a slightly smaller percentage than in plasma. Its cellular component consists chiefly of lymphocytes.

l. duct large vessels carrying lymph from smaller collecting vessels. Include thoracic **duct**, right lymphatic **duct**.

l. heart a muscular dilatation in a lymph vessel, capable of contraction and moving lymph along the vessel. Seen in embryos and non-mammalian vertebrates.

l. nodule germinal centers in lymph nodes which produce lymphocytes. Called also lymphatic or lymphoid nodule.

periarteriolar l. sheath (PALS) the white pulp, heavily populated with T lymphocytes, that surrounds arteries in the spleen.

l. tissue see **lymphoid** tissue.

lymph node any of the accumulations of lymphoid tissue organized as definite lymphoid organs along the course of lymphatic vessels, consisting of an outer cortical and an inner medullary part; they are the main source of lymphocytes of the peripheral blood and, as part of the reticuloendothelial system, serve as a defense mechanism by removing noxious agents, e.g. bacteria and toxins, and play a critical role in antibody formation. Sometimes called, incorrectly, lymph glands.

l. n. abscess firm swellings containing pus; secondary to primary bacterial infection within the node's drainage area; a feature of some chronic infections, e.g. tuberculosis, caseous lymphadenitis of sheep. Specific nodes may cause specific syndromes, e.g. retropharyngeal nodal abscesses can cause dysphagia and dyspnea.

l. n. hyperplasia increase in size due to increase in number of normal cells but with preservation of normal architecture.

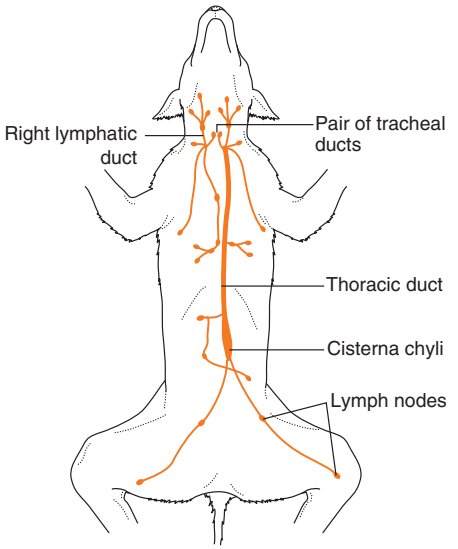
l. n. hypoplasia occurs in cattle and is associated with antenatal edema of the fetus, leading to dystocia in many cases. See fetal **anasarca**. The calves are not viable.

VetBooks.ir

lymph-vascular pertaining to lymphatic vessels.
lympha [*lim'fə*] [L.] *lymph*.
lymphadenectomy [*lim-fad"ə-nek'tə-me*] excision of one or more lymph nodes.
lymphadenitis [*lim-fad"ə-ni'tis*] inflammation of lymph nodes; a common finding as an incidental sign in diseases of animals. It is also a principal presenting sign in some others, especially **strangles** in horses, **cervical abscess of pigs**, bovine **tuberculosis**, **caseous lymphadenitis** of sheep and goats, and **lymphosarcoma** in dogs and cats.
lymphadenocele [*lim-fad'ə-no-sēl"*] a cyst of a lymph node.
lymphadenogram [*lim-fad'ə-no-gram"*] the radiograph produced by lymphadenography.
lymphadenography [*lim-fad"ə-nog'rə-fe*] radiography of lymph nodes after injection of a contrast medium in a lymphatic vessel.
lymphadenoid [*lim-fad'ə-noid*] resembling the tissues of the lymph nodes. Lymphadenoid tissue includes the spleen, bone marrow, tonsils and the lymphoid tissues of the organs and mucous membranes.
lymphadenoma [*lim-fad"ə-no'mə*] lymphoma.
lymphadenopathy [*lim-fad"ə-nop'ə-the*] disease of the lymph nodes.
algal l. enlargement and bright green coloration of lymph nodes caused by the presence of *Prototheca* spp.
hilar l. enlargement of the tracheobronchial and pulmonary lymph nodes.
lymphadenosis [*lim-fad"ə-no'sis*] hypertrophy or proliferation of lymphoid tissue.
lymphadenotomy [*lim-fad"ə-not'ə-me*] incision of a lymph node.
lymphagogue [*lim'fə-gog*] an agent promoting the production of lymph.
lymphangial [*lim-fan'je-əl*] pertaining to a lymphatic vessel.
lymphangiectasia [*lim-fan"je-ək-ta'zhə*] dilatation of the lymphatic vessels; may be congenital or acquired. See also **lymphatic vessel obstruction**.
intestinal l. leakage of protein from dilated lacteals in intestinal villi caused by lymphatic obstruction. May result in a protein-losing enteropathy with hypoproteinemia, diarrhea, edema, ascites and weight loss.
lymphangiectasis [*lim-fan"je-ek'tə-sis*] lymphangiectasia.
lymphangiectomy [*lim-fan"je-ek'tə-me*] excision of one or more lymphatic vessels.
lymphangioendothelioma [*lim-fan"je-o-en"do-the"le-o'mə*] lymphangioma in which endothelial cells are the main component. See also **lymphangiosarcoma**.
lymphangiofibroma [*lim-fan"je-o-fi-bro'mə*] a fibrosing lymphangioma.
lymphangiogram [*lim-fan'je-o-gram"*] the radiograph produced by lymphangiography.
lymphangiography [*lim-fan"je-og'rə-fe*] radiography of lymphatic channels after introduction of a contrast medium.
lymphangiology [*lim-fan"je-ol'ə-je*] the branch of anatomy relating to lymphatic vessels.
lymphangioma [*lim-fan"je-o'mə*] a tumor composed of newly formed lymph spaces and channels.
cavernous l. dilatation of the lymphatic vessels, resulting in cavities filled with lymph.
cystic l., l. cysticum a cystic growth thought to originate from a developmental anomaly of the primitive lymphatic spaces.
lymphangiophlebitis [*lim-fan"je-o-flə-bi'tis*] inflammation of lymphatic vessels and veins.
lymphangioplasty surgical restoration of lymphatic channels.
lymphangiosarcoma [*lim-fan"je-o-sahr-ko'mə*] a malignant tumor of lymphatic vessels.
lymphangiotomy [*lim-fan"je-ot'ə-me*] incision of a lymphatic vessel.
lymphangitis [*lim"fan-ji'tis*] inflammation of a lymphatic vessel. It is a common finding in diseases of animals, and is of particular importance in horses because of the need to differentiate causes from **glanders**, and in cows because of the importance of this lesion in bovine **tuberculosis**.
epizootic l. see **epizootic** lymphangitis.
mycotic l. see bovine **farcy**.
sporadic l. a noninfectious disease of horses, characterized by an acute onset of severe swelling in a hindleg, with lymphangitis, three-legged lameness and great distress. Incomplete recovery leads to extensive fibrosis of the entire limb. The disease is thought to be an extension from a pre-existing lymphadenitis and lymphangitis.
streptococcal l. occurs in young foals and is caused by *Streptococcus zooepidemicus*. It presents as an ulcerative lymphangitis.
ulcerative l. a mildly contagious disease of horses and cattle caused principally by *Corynebacterium pseudotuberculosis*. It is a lymphangitis of the lower limbs, marked by the presence of ulcers which discharge green pus.
lymphapheresis [*lim"fə-fə-re'sis*] lymphocytapheresis.
lymphatic [*lim-fat'ik*] 1. pertaining to lymph or to a lymphatic vessel. See also **lymphoid**. 2. a lymphatic vessel.
l. aplasia causes distention of other lymphatics where lymph flow is blocked and local edema.
l. ducts the two larger vessels into which all lymphatic vessels converge. The right lymphatic duct typically joins the venous system at the junction of the right jugular and subclavian veins and carries lymph from the cranial right side of the body. The left lymphatic duct, or thoracic duct, typically enters the circulatory system at the junction of the left jugular and subclavian veins; it returns lymph from the cranial left side of the body and caudal to the diaphragm.
l. enlargement includes distention with lymph as in lymphangiectasia, or thickened as in cutaneous tuberculosis.
l. flow obstruction by local compression, congenital, segmental aplasia, lymphangitis, lymphadenitis.
l. follicle see **lymph** nodule; may be primary or secondary.
inherited l. obstruction edema inherited as a single recessive in Ayrshire and Hereford cattle; calves are edematous, locally or generally at birth and do not improve; the defect is in aplasia of lymph vessels and nodes.
l. leukemia see lymphatic **leukemia**.
l. lumbar trunks a plexus of lymphatics on the abdominal roof that drain into the cisterna chyli.
l. nodule see **lymph** nodule.
primary l. organs see **lymphoid** organs.
secondary l. organs see **lymphoid** organs.
l. system the lymphatic vessels and lymphoid tissue, considered collectively. See also **circulatory** system.
l. tissue see **lymphoid** tissue.
l. vessel obstruction occurs as a result of pressure from nearby tumors or other space-occupying lesions, because of hypoplasia of lymph nodes in the fetus, in extensive calcinosis, e.g. in *Solanum malacoxylon* poisoning and in horses not getting sufficient exercise. Called also lymphangiectasia.
l. vessels the capillaries, collecting vessels, and trunks that collect lymph from the tissues and carry it to the bloodstream; called also lymphatics.

L-37: Ulcerative lymphangitis. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

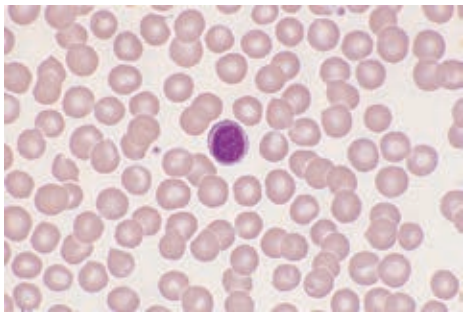
VetBooks.ir



L-38: Lymphatic vessels and lymph nodes in the dog.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

lymphaticostomy [*lim-fat"ĭ-kos'tə-me*] surgical creation of a permanent opening into a lymphatic duct, usually the thoracic duct.
lymphatolysis [*lim"fə-tol'ə-sis*] destruction of lymphoid tissue.
lymphectasia [*lim"fek-ta'zhə*] distention with lymph.
lymphedema [*lim"fə-de'mə*] acute or chronic aggregation of lymph fluid in local tissues caused by obstruction to flow in lymphatic vessels or through lymph nodes; common causes of obstruction are aplasia, hyperplasia or hypoplasia of lymphatics or nodes due to inflammation, trauma or neoplasia, or secondary due to compression of these by adjoining organ enlargement. Aplasia of lymph nodes is an inherited disorder in cattle, dogs and possibly pigs.
chronic progressive l. manifest with progressive swelling of the limbs in Belgian draft horses, Shires and Clydesdales with hyperkeratosis and fibrosis, secondary bacterial or parasitic dermatitis, ulceration and eventual disfigurement with severe discomfort and restriction of limb movement. Develops as early as two years of age and progresses proximally, eventually extending above the carpus and hock. A genetic etiology is suspected.
lymphemia the presence of an increased number of lymphocytes or their precursors in the blood.
lymphnoditis [*limf"no-di'tis*] lymphadenitis.
lymph(o)- word element. [L.] *lymph, lymphoid tissue, lymphatics, lymphocytes.*
lymphoblast [*lim'fo-blast*] the immature, nucleolated precursor of the mature lymphocyte. Called also large lymphocyte.
lymphoblastic [*lim"fo-blas'tik*] pertaining to a lymphoblast; producing lymphocytes.
Lymphocryptovirus [*lim"fo-krip'to-vi"rəs*] a genus in the family *Herpesviridae* that includes Epstein–Barr virus.
lymphocystis [*lim"fo-sis'tis*] viral (iridovirus) disease of marine and freshwater fish characterized by multiple creamy-white nodules on the skin and fins. The nodules, which are benign external growths composed of hypertrophied dermal fibroblasts, usually heal spontaneously.
Lymphocystivirus [*lim"fo-sis'tĭ-vi"rəs*] a genus of viruses of fish in the family *Iridoviridae*. They cause tumor-like growths on the skin.
lymphocytapheresis [*lim"fo-si"tə-fə-re'sis*] the selective removal of lymphocytes from withdrawn blood, which is then retransfused into the donor.
lymphocyte [*lim'fo-sit*] a mononuclear, nongranular leukocyte having a deeply staining nucleus containing dense chromatin and a sparse, pale-blue-staining cytoplasm. It participates in **immunity**.
activated l. one that has reacted on exposure to antigen or to a mitogen.
l.-activating antigen see lymphocyte-defined antigen (below).
B l's thymus-independent lymphocytes, which develop from stem cells in hematopoietic tissue, including the blood islands of the fetal yolk sac, the fetal liver and spleen, and the bone marrow. The *B* in B lymphocyte refers to the bursa of Fabricius, an organ in birds where B cell differentiation occurs. No analogous organ has been found in mammals, though an equivalent is assumed to exist-probably bone marrow. B lymphocytes are involved in humoral **immunity**, i.e. the production of **antibodies**. A small, mature B lymphocyte can be activated by the binding of an antigen to specific cell-surface receptors. This induces proliferation of the cell, resulting in an expanded clone of cells specific for that antigen. These cells can then differentiate and begin to secrete immunoglobulin (Ig) molecules. Antibody production for most antigens involves interaction with helper T lymphocytes. All of the cells of a single clone secrete Ig that binds specifically to the antigen that stimulated the production of antibody. Mature antibody-secreting cells are plasma cells. Following blastogenesis some of the cells produced by division revert to small lymphocytes and remain as a longlived clone of 'memory' cells.
l. blastogenesis increased DNA synthesis followed by cell division and differentiation of lymphocytes in response to antigens or mitogens; an in vitro test of lymphocyte function.
l.-defined antigen histocompatibility antigens found on lymphocytes, macrophages, epidermal cells and sperm, capable of stimulating division in allogeneic lymphocytes. Called also lymphocyte-activating antigen.
helper l's a subset of T lymphocytes that is itself comprised of Th1 and Th2 cells that cooperate with and regulate B lymphocytes in the antibody response and with themselves and other effector T lymphocytes.
histiocytic l. see **prolymphocyte**.
intraepidermal l's cellular components of the cutaneous immune system intercalated among epithelial cells, particularly in the intestinal columnar epithelium.
intraepithelial l's cellular components of the mucosal immune system.
large l. lymphoblast.
large granular l. see natural killer **cell**.
memory l. see memory **cell**.
natural killer (NK) l. see natural killer **cell**.
non-T, non-B l. see null **cell**.
pre-B l. a progenitor B cell derived from bone marrow stem cells.
resting l. small lymphocytes in the G_0 stage of the cell cycle, prior to activation.
small l. unstimulated B and T lymphocytes.
l. stimulation test see lymphocyte blastogenesis (above).
suppressor (Ts) l. see T lymphocytes (below).

L-39: Swelling, hyperkeratosis and skin ulcerations characteristic of chronic progressive lymphedema in four affected Belgian draft horses.
From Young AE, Bower LP, Affolter VK, De Cock HEV, Ferraro GL, Bannasch DL: Evaluation of FOXC2 as a candidate gene for chronic progressive lymphedema in draft horses. Vet J 174:397-399, 2007. Elsevier.



L-40: A small, mature lymphocyte in blood from a normal canine.
From Hendrix CM, Sirois M, Laboratory Procedures for Veterinary Technicians, 5th Edition. Mosby, 2007.

T l's lymphocytes produced from pluripotential bone marrow stem cells which migrate during late embryogenesis to the thymus. Enormous numbers of cells are produced in the thymus, most of which are destroyed there. Less than 10% of cells which are non-self reactive leave the thymus to populate the T lymphocyte areas of the secondary lymphoid tissues (lymph nodes, spleen, Peyer's patches, etc.). At least four subsets of T lymphocytes are defined by cell surface markers and more especially by function. Three of the subsets are regulatory cells called T helper (Th) 1 and 2, and T suppressor (Ts) lymphocytes. The other subset is an effector cell called cytotoxic T (Tc) lymphocytes or CTLs. Following antigen binding to antigen-specific T cell receptor (TCR) molecules, T lymphocytes, like B lymphocytes, undergo blastogenesis, in which they enlarge and divide. Some daughter cells revert to form an expanded clone of memory T lymphocytes. For both regulatory and effector functions, T lymphocytes produce a number of substances generally referred to as **lymphokines**. Lymphokines, unlike antibody, do not bind specifically with antigen, but rather they direct cell functions.

thymus-derived l. see T lymphocytes (above).

l. transfer test injection of lymphocytes from a potential graft recipient into the skin of a potential donor can be a test of histocompatibility, primarily in humans at the LD loci. Noncompatibility is marked by an inflammatory skin reaction.

l. transformation test see lymphocyte blastogenesis (above).

tumor-infiltrating l's (TILs) T lymphocyte preparations from surgically removed cancer tissue that may be activated in vitro and returned to the host as a basis for specific anticancer therapy.

lymphocytic [*lim"fo-sit'ik*] pertaining to, characterized by or of the nature of lymphocytes. See also **lymphocytic–plasmacytic**.

l. choriomeningitis (LCM) a disease of mice caused by an arenavirus and characterized by the occurrence of immunological tolerance and the subsequent development of an immune complex disease. The lesions caused by the immune reaction vary very widely and include meningeal and perivascular infiltration with lymphoid cells in many organs. There are several similar naturally occurring diseases. Infection in humans may occur by exposure to body secretions or contaminated materials from infected rodents.

l. leukemia see lymphatic **leukemia**.

l. synovitis see lymphocytic–plasmacytic **synovitis**.

lymphocytic–plasmacytic infiltration by lymphocytes and plasma cells. See also **gingivitis**, **enteritis**, **rhinitis**, **synovitis**.

lymphocytoblast [*lim"fo-si'to-blast*] a lymphoblast.

lymphocytoma [*lim"fo-si-to'mə*] well-differentiated lymphocytic malignant lymphoma.

lymphocytopenia [*lim"fo-si"to-pe'ne-ə*] see **lymphopenia**.

lymphocytopheresis [*lim"fo-si"to-fə-re'sis*] lymphocytapheresis.

lymphocytopoiesis [*lim"fo-si"to-poi-e'sis*] the formation of lymphocytes.

lymphocytosis [*lim"fo-si-to'sis*] increase in the number of normal lymphocytes in the blood or in an effusion.

lymphocytotoxicity [*lim"fo-si"to-tok-sis'ĭ-te*] the quality or capability of lysing lymphocytes, as in procedures in which lymphocytes having a specific cell surface antigen are lysed when incubated with antiserums and complement.

lymphoduct [*lim'fo-dəkt*] a lymphatic vessel.

lymphoepithelial [*lim'fo-ep"ĭ-the'le-əl*] emanating from or pertaining to lymphocytic and epithelial tissue.

l. thymoma a type of thymoma composed of lymphocytes and spindle cells; seen most frequently in goats and sheep.

l. organ an organ containing or composed of epithelial and lymphocytic tissue, e.g. thymus.

lymphogenous [*lim-foj'ə-nəs*] 1. producing lymph. 2. produced from lymph or in the lymph vessels.

lymphoglandula [*lim"fo-glan'du-lə*] pl. *lymphoglandulae* [L.] a lymph node.

lymphoglandular [*lim"fo-glan'du-lər*] pertaining to or emanating from combined lymphoid and glandular tissues.

l. bodies see lymphoglandular complexes (below).

l. complexes submucosal aggregates of follicular lymphoid tissue, invaded by glands from the mucosa, in the cecum and colon of dogs and pigs. Called also lymphoglandular bodies, Peyer's patches, *noduli lymphoidei aggregati*, aggregated lymphoid nodules.

lymphogram [*lim'fo-gram*] a radiograph of the lymphatic channels and lymph nodes.

lymphography [*lim-fog'rə-fe*] radiography of the lymphatic channels and lymph nodes, after injection of radiopaque material in a lymphatic vessel.

lymphohistiocytic [*lim"fo-his"te-o-sit'ik*] involving lymphocytes and histiocytes.

lymphoid [*lim'foid*] resembling or pertaining to lymph or to tissue of the lymphatic system. See also **lymphatic**.

bronchus-associated l. tissue (BALT) aggregations of B and T lymphocytes in the lower respiratory tract.

l. cells lymphocytes and plasma cells.

l. foci small foci of lymphoid tissue which occur in almost all parenchymatous organs in birds. The foci are not encapsulated and blend with the surrounding tissue.

l. follicles see germinal **center**.

l. granuloma one of the lesions in chronic follicular pharyngitis in the horse and a cause of persistent cough, difficulty in swallowing and a stertorous respiration.

gut-associated l. tissue (GALT) aggregations of mucosal-associated lymphoid tissue in the gastrointestinal tract, including adenoids, tonsils, Peyer's patches and lamina propria of the intestine; responsible for a local immune response to antigens.

l. leukemia see lymphatic **leukemia**.

l. leukosis an outdated term for **lymphoma**. Still used in relation to the lymphomatous diseases associated with retrovirus infection in chickens and cattle. See **avian** leukosis, **bovine** viral leukosis.

mucosal-associated l. tissue (MALT) aggregations and organized lymphoid cells tissue found immediately beneath mucous membranes lining the respiratory, gastrointestinal and urogenital system.

l. organs primary lymphoid organs include the thymus and the bursa of Fabricius and its mammalian equivalent; secondary lymphoid organs include lymph nodes, spleen, Peyer's patches, etc.

skin-associated l. tissues (SALT) include a group of non-activated T lymphocytes and Langerhans cells derived from lymphatic or hematopoietic tissues which have antigen-presenting properties; enable the skin to maintain a functional immunological relationship with the immune system.

l. system the lymphoid tissue of the body, collectively; it consists of the bone marrow, thymus, lymph nodes, spleen, and gut-associated lymphoid tissue (tonsils, Peyer's patches).

l. tissue a lattice work of reticular tissue, the interspaces of which contain lymphocytes.

l. tumor see **lymphoma**, **lymphosarcoma**, thymic **lymphoma**, **leukemia**.

lymphoidectomy [*lim"foi-dek'tə-me*] excision of lymphoid tissue.

lymphokine [*lim'fo-kīn*] soluble protein mediators released by lymphocytes undergoing blastogenesis following contact with antigen. Lymphokines influence the behavior of the cells that produce them (autocrine) and of other cells in the vicinity (paracrine) and cells at a distance (endocrine), including macrophages, neutrophils, lymphocytes and other cells; a subset of cytokines many of which are also defined as **interleukins**.

l.-activated killer (LAK) cells cytotoxic T lymphocytes produced by incubation with interleukin 2. See also K **cells**.

lymphokinesis [*lim"fo-kĭ-ne'sis*] 1. movement of endolymph in the semicircular canals of the internal ear. 2. the circulation of lymph in the body.

lymphology [*lim-fol'ə-je*] the study of the lymphatic system.

lympholysis [*lym-fol'ĭ-sis*] lysis of lymphocytes.

cell-mediated l. an *in vitro* assay used in transplant medicine to monitor CD8 cytotoxic T-cell responses in evaluation of the development of rejection or tolerance. See also cell-mediated **cytotoxicity**.

lympholytic [*lim"fo-lit'ik*] causing destruction of lymphocytes.

lymphoma [*lim-fo'mə*] any neoplastic disorder of lymphoid tissue. By default it denotes malignant lymphoma, since benign neoplasia of lymphoid tissue is not recognized. Classifications are based on predominant cell type and degree of differentiation; various categories may be subdivided into nodular and diffuse types, depending on the predominant pattern of cell arrangement. There is also a system of classification based on the histological characteristics of the lymphocytes and on their immunophenotype.

African l. see **Burkitt's lymphoma**.

angiotropic large-cell l. an uncommon form of the disease seen rarely in dogs; lesions most commonly in the lungs producing a syndrome similar in many ways to congestive heart failure.

VetBooks.ir

bovine malignant l. the tumor form of **bovine** viral leukosis.
Burkitt's l. see **Burkitt's lymphoma**.
canine malignant l. the commonest hemopoietic neoplasm of dogs. It is characterized by lymphoid tumors in multiple lymph nodes, spleen, liver or other organs. Lymphocytic leukemia with involvement of bone marrow is much less common.
cutaneous l. see epitheliotropic lymphoma (below).
epidermotropic l. see epitheliotropic lymphoma (below).
epitheliotropic l. occurs in older dogs in the form of exfoliative dermatitis, dermal plaques, nodules and ulcers; oral erosions are frequently present .
follicular l. a malignant lymphoma in which the lymphomatous cells are in clusters in the lymph node resembling follicles. Called also giant follicular lymphoma, nodular lymphoma.
giant follicular l. see follicular lymphoma (above).
Hodgkin's type l. rare, but reported most frequently in the dog. A diagnosis depends on the identification of the Reed–Sternberg cell in a mixed population of lymphocytes accompanied by sclerosis.
immunoblastic l. may be nonsecretory or may secrete immunoglobulins. See also **myeloma**.
large cell l. classified as diffuse, large cells, large cell immunoblastic or mixed tumors with large cells.
lymphoblastic l. tumors of medium-sized lymphocytes or small noncleaved lymphocytes.
malignant l. (histiocytic) a form in which the predominant cell is the prolymphocyte (reticulum cell).
malignant l. (mixed cell) a form containing proliferations of both prolymphocytes and lymphocytes.
malignant l. (poorly differentiated lymphocytic) a form in which the predominant cell is morphologically similar to the lymphoblast, containing a fine nuclear chromatin structure and one or more nucleoli.
malignant l. (small cell lymphocytic, small cleaved cell, well-differentiated lymphocytic) the form in which the predominant cell is the mature lymphocyte.
malignant l. (undifferentiated) a form in which relatively large stem cells with large nuclei, pale, scanty cytoplasm and indistinct borders predominate.
Mediterranean l. a human disease resembling plasmacytoid lymphoma in horses.
nodular l. see follicular lymphoma (above).
T cell l. a form in which the predominant cell is the mature lymphocyte.
thymic l. occurs most commonly in yearling cattle and cats. In cattle, it causes obstruction of the esophagus leading to ruminal tympany, engorgement of jugular veins and edema of brisket and submandibular space. In cats it is caused by feline leukemia virus infection and is usually associated with pleural effusion and accompanying dyspnea and regurgitation.

lymphomatosis [*lim"fo-mə-to'sis*] the formation of multiple lymphomas in the body. In cows the lesions are caused by the virus of **bovine** viral leukosis, in cats by the **feline** leukemia virus, in chickens by the avian **leukosis**, **Rous sarcoma** group of viruses. The canine disease is canine malignant **lymphoma**.
l. carcinomatosa invasion of alveolar septa by metastatic neoplastic cells. Occurs most commonly in dogs with metastasis from anaplastic scirrhous mammary carcinomas. Called also diffuse alveolar septal metastasis.
neural l. see **Marek's disease**.
visceral l. see **lymphoid** leukosis.

lymphomatous [*lim-fo'mə-təs*] pertaining to, or of the nature of, lymphoma.
lymphopathia lymphopathy.
lymphopathy [*lim-fop'ə-the*] any disease of the lymphatic system.
lymphopenia, lymphocytopenia [*lim"fo-pe'ne-ə*] decrease in the number of lymphocytes of the blood.
lymphopoiesis [*lim"fo-poi-e'sis*] the development of lymphocytes or of lymphoid tissue.
lymphoproliferative [*lim"fo-pro-lif'ər-ə-tiv*] pertaining to or characterized by proliferation of lymphoid tissue.
l. disease a general term applied to a group of diseases characterized by proliferation of lymphoid tissue and abnormal lymphoid elements in the peripheral blood, such as lymphocytic **leukemia**, plasma cell **myeloma**, and **lymphosarcoma**.
turkey l. disease a disease of young turkeys probably caused by a retrovirus and with lymphoproliferative lesions.
lymphoreticular system [*lim"fo-rə-tik'u-lər*] consists of the lymphoid tissues and the tissues of the reticuloendothelial system. Therefore includes reticular supporting cells, lymphoid cells and cells of the monocyte–macrophage series.
lymphoreticulosis [*lim"fo-rə-tik"u-lo'sis*] proliferation of the reticuloendothelial cells of the lymph nodes.
benign l. cat-scratch disease.
lymphorrhea, lymphorrhagia [*lim"fo-re'ə, lim"fo-ra'jə*] flow of lymph from cut or ruptured lymphatic vessels.
lymphorrhoid a localized dilatation of a perianal lymph channel, resembling a hemorrhoid.
lymphosarcoma [*lim"fo-sahr-ko'mə*] a general term applied to malignant neoplastic disorders of lymphoid tissue. In some usages it implies lymphoma in which malignant lymphocytes have infiltrated non-lymphoid tissues adjacent to the lymphoid tissues in which they have arisen. They may be classified according to tissue or organ involvement, e.g. alimentary, extranodal, multicentric.
bovine l. see **bovine** viral leukosis.
cutaneous l. epitheliotropic**lymphoma**.
feline l. see **feline** leukemia virus.
ferret l. common in ferrets; clinically resembles that seen in cats and dogs.
lymphosarcomatosis [*lim"fo-sahr"ko-mə-to'sis*] a condition characterized by the presence of multiple foci of lymphosarcoma.
lymphoscintigraphy [*lim"fo-sin-tig'rə-fe*] use of a radionuclear agent to demonstrate a lymphatic drainage system, using **scintigraphy**.
lymphostasis [*lim-fos'tə-sis*] stoppage of lymph flow.
lymphotaxis [*lim"fo-tak'sis*] the property of attracting lymphocytes via chemotactic cytokines.
lymphotomy the anatomy of the lymphatic system.
lymphotoxin [*lim'fo-tok"sin*] a lymphokine released by antigen-stimulated lymphocytes, particularly cytotoxic T lymphocytes, and involved in target-cell lysis, as in virus-infected target cells. The killing requires cell-to-cell contact and is restricted by Class I major histocompatibility antigens. Called also tumor necrosis factor-β (TNF-β).
Lyngbya a genus of marine cyanobacteria including the toxic *L. majuscula* algae which is not poisonous to fish but causes poisoning in the animals that eat the fish that eat the algae. Cases in humans may end fatally.

L-41: Juvenile lymphoma in the thymus of a calf.

L-42: Marked enlargement of the cervicdal and prescapular lymph nodes in a Great Dane with lymphosarcoma.

VetBooks.ir

lynx medium-sized wild cats in the genus *Lynx*, native to North American, Europe and Asia, they have short tails and tufted ears. They are generally spotted and of a rufous hue, though there are plain and fawn varieties. Includes the Eurasian lynx (*L. lynx*), Canadian lynx (*L. canadensis*), Spanish lynx (*L. pardinus*), and **bobcat** (*L. rufus*).

Lynxacarus [*lingk-sak'ə-rəs*] a genus of mites.

L. radovsky the cat fur mite; may cause pruritus and exudative, crusted skin lesions.

Lyon hypothesis [*li'ən*] the random and fixed inactivation (in the form of sex chromatin) of all X chromosomes in excess of one in mammalian cells at an early stage of embryogenesis, leading to mosaicism for X-linked genes in the female, since the paternal X chromosome is inactivated in some cells and the maternal one in the remainder.

Lyonia ligustrina member of the Ericaceae plant family; contains grayanotoxin (andromedotoxin) and causes gastroenteritis, tenesmus, vomiting, diarrhea, abdominal pain, sudden death; called also stagger bush, maleberry.

lyonization [*li"on-ĭ-za'shən*] the process by which or the condition in which all X chromosomes of the cells in excess of one are inactivated on a random basis.

lyophil [*li'o-fil*] a lyophilic substance.

lyophile [*li'o-fil*] 1. lyophil. 2. lyophilic.

lyophilic [*li"o-fil'ik*] having an affinity for, or stable in, solution.

lyophilization [*li-of"ĭ-lĭ-za'shən*] the creation of a stable preparation of a biological substance by rapid freezing and dehydration of the frozen product under high vacuum. Called also freeze-drying.

lyophobe [*li'o-fōb*] a lyophobic substance.

lyophobic [*li"o-fo'bik*] not having an affinity for, or unstable in, solution.

lyotropic [*li"o-tro'pik*] readily soluble.

Lyperosia see ***Haematobia***.

lypressin [*li-pres'in*] a synthetic preparation of lysine vasopressin used as an antidiuretic and vasoconstrictor in the treatment of diabetes insipidus due to deficiency of endogenous posterior pituitary antidiuretic hormone (vasopressin).

lyrate lyre shaped; said of horns, e.g. some Ayrshires, indigenous African breeds.

Lys lysine.

lyse [*līz*] 1. to cause or produce disintegration of a compound, substance or cell. 2. to undergo lysis.

lysemia disintegration of the blood.

lysergic acid [*li-sur'jik*] a psychomimetic compound. Occurs naturally in some plants, e.g. members of the family Convolvulaceae.

l. acid diethylamide a hallucinogenic drug. Called also lysergide, LSD.

lysergide [*li-sur'jīd*] lysergic acid diethylamide.

Lysichiton americanus plant in the Araceae family; toxin unidentified, causes congenital, including cranio-facial, deformity; called also skunk cabbage.

lysin [*li'sin*] 1. an **antibody** capable of causing dissolution of cells, including hemolysin, bacteriolysin, etc. 2. a product of bacterial cells causing lysis. See **bacteriolysin**.

lysine (Lys) [*li'sēn*] a naturally occurring, essential amino acid, important in the formation of collagen, fibrin and keratin. Often the first limiting essential amino acid in growth and production. Nutritional deficiency in Bronzewing turkeys causes deficient pigmentation in the feathers.

l. vasopressin see **vasopressin**.

lysinogen [*li-sin'ə-jən*] lysogen.

lysis [*li'sis*] 1. destruction by dissolution, as of a cell or other substance, under the influence of a specific agent. 2. mobilization of an organ by division of restraining adhesions. 3. gradual abatement of the clinical signs of a disease, e.g. lysis of a fever.

-lysis word element. [Gr.] *dissolution*.

lysogen [*li'so-jən*] an antigen causing the formation of lysin; called also lysinogen.

lysogenesis [*li"so-jen'ə-sis*] 1. the production of lysis or lysins. 2. lysogenicity.

lysogenic cycle [*li-so-jen'ik*] see **lysogenicity**.

lysogenicity [*li"so-jə-nis'ĭ-te*] 1. the ability to produce lysins or cause lysis. 2. the potential of a bacterium to produce bacteriophage. 3. the specific integration of the phage genome (prophage) into the bacterial genome in such a way that only a few, if any, phage genes are transcribed; the integrated phage DNA behaves much as any other bacterial gene, including being passed to each daughter cell following DNA replication and cell division, but may subsequently be induced to enter the lytic cycle of infection, producing infectious phage particles.

lysokinase [*li"so-ki'nās*] a general term for substances of the fibrinolytic system that activate plasma proactivators.

lysolecithin a lecithin with strong hemolytic properties; metabolized from lecithin by removal of its terminal fatty acid radical by phospholipase A. Found in oxidized LDL and contributes to its atherogenicity; called also lysophosphatidylcholine.

lysophosphatide [*li"so-fos'fə-tīd*] a phosphatide from which one molecule of fatty acid has been split off.

lysosomal pertaining to or emanating from lysosomes.

l. enzymes enzymes located in the lysosomes.

l. phospholipidosis overloading of lysosomes with phospholipids as caused by the inhibition of phospholipidases by aminoglycosides.

l. storage diseases diseases in which there is a congenital or acquired deficiency of an enzyme so that one or more specific metabolic processes are not completed. As a result there is an accumulation of metabolic products in the cellular lysosomes. The histological lesion indicates the error in function but not the cause. Most of these diseases are inherited but swainsonine poisoning is caused by plant (*Astragalus, Swainsona, Trachyandra* spp.) poisoning. See also ceroid **lipofuscinosis**, **glycogenosis**, **glycoproteinosis**, lipid **storage disease**, **mucopolysaccharidosis**.

lysosome [*li'so-sōm*] a small intracellular organelle occurring in the cytoplasm of most cells, containing various hydrolytic enzymes and normally involved in the process of localized intracellular digestion. Lysosomes are particularly prominent in certain cells such as granulocytes, in which they are the granules, and activated macrophages. They play a major role in intracellular killing of microorganisms, destruction of foreign or damaged tissues, and in embryogenesis.

lysotype phage type.

lysozyme [*li'so-zīm*] *lyso*—lyses bacteria; *zyme*—an enzyme naturally present in body fluids but ordinarily obtained from egg white for in vitro work. It hydrolyzes a specific glycoside bond in the peptidoglycan that forms bacterial cell walls, yielding the disaccharide *N*-acetylglucosamine-*N*-acetylmuramate. An important component of innate resistance.

lysozymuria [*li"so-zi-mu're-ə*] urinary excretion of elevated concentrations of lysozyme.

lyssa [*lis'ə*] 1. rabies. 2. a white fusiform, palpable, rod-like structure about 1.5 inches long within the tip of the ventral part of the dog's tongue, made of muscular, fatty and fibrous tissue. Thought at one time to be the cause of rabies, but whose function is unknown.

Lyssavirus [*lis'ə-vi"rəs*] a genus in the family ***Rhabdoviridae*** that contains **rabies** virus, **Mokola virus**, **Lagos virus**, Australian bat lyssavirus, and **Duvenhage virus**.

lyssoid resembling rabies.

lysyl oxidase [*li'səl ok'sĭ-dās*] a copper-containing enzyme responsible for the cross-linking essential for the stabilization of collagen and the elasticity of elastin in tissues; its absence leads to aneurysm formation in and rupture of large blood vessels.

lysylhydroxylase [*li'səl hi-drok'sə-lās*] an enzyme catalyzing the conversion of lysine to hydroxylysine during the modification of collagen precursors.

Lythrum hyssopifolia plant in family Lythraceae; an unidentified toxin causes liver necrosis and nephrosis; called also lesser loosestrife.

lytic [*lit'ik*] pertaining to lysis or a lysin.

l. necrosis local products of tissue destruction are reduced to liquid form.

l. test a simple method of cross-matching blood for transfusion in species that show little tendency to agglutinate, e.g. cattle, sheep and horses. Incompatibility causes hemolysis of red cells from either donor or recipient in the serum of the other.

Lytta vesicatoria see ***Cantharis vesicatoria***.

lyze lyse.

M

VetBooks.ir

M macerate; maximal; symbol, *mega;* member; meter; minim; [L.] *mil* or *mille* (thousand); *misce* (mix); *mistura* (mixture); symbol, *molar* (solution)—the expressions M/10, M/100, etc., denote the strength of a solution in comparison with the molar, as tenth molar, hundredth molar, etc.; muscle; myopia.

M99 see **etorphine**.

m symbol, *meter;* symbol *milli-*.

m. minim.

μ mu, the twelfth letter of the Greek alphabet; symbol for *micro-;* micron (μm).

m- symbol, *meta-*.

M cells special epithelial cells associated with Peyer's patches and lymphoid follicles that actively take up particulate matter from the intestinal contents. They are probably the portal of entry for bacteria and viruses.

M component a homogeneous immunoglobulin produced by a single clone of cells in a monoclonal **gammopathy**. May consist of either whole immunoglobulin molecules or their subunits, e.g. light chains or heavy chains. Called also paraprotein, myeloma protein or M protein.

M-CSF macrophage colony-stimulating factor.

M line a histological structure in myofibrils in skeletal muscle. The line runs transversely to the length of the myofibrils and corresponds to the segment occupied by myosin myofilaments.

M-mode motion mode. See M-mode **ultrasonography**.

M phase see cell **cycle**.

M-plasty a technique for suturing a fusiform incision.

M protein myeloma protein; membrane protein.

M substance a dense zone in each myofilament of a muscle fiber and contributing to the M band which runs across the fiber.

mA milliampere.

MA test microscopic agglutination test.

MAb monoclonal antibody.

MAC 1. in anesthetics, minimum alveolar concentration; a measure of potency. 2. in immunology, membrane attack complex.

Macaca [mə-kah'kə] genus of Old World monkeys in the subfamily Cercopithecinae; includes the **macaques**.

Macadamia Australian genus of trees in the family Proteaceae; grown commercially for their fruits (macadamia, Australian bush or bopple nut). The leaves and seeds contain cyanogenetic glycosides and are a potential cause of cyanide poisoning. Dogs eating the seed kernels (raw or roasted) develop a transient profound muscle weakness, sometimes with joint pain, caused by an unidentified toxin (not cyanide). Includes *M. integrifolia*, *M. ternifolia*, *M. tetraphylla*, *M. whelanii*.

macadamia nut toxicity ingestion of one nut or less per pound body weight by dogs can cause weakness, tremors, and ataxia, particularly in the hindlegs, within hours.

MacAllan clamps aluminum clamps used as templates for the cropping of the ears of various breeds of dogs.

macaque [mə-kahk'] members of the genus *Macaca*, of the family Cercopithecoidae, the Old World monkeys. They are generally medium to large-sized, heavily built, and their tails range in length from long to absent. Many species have been important in biomedical research. Includes stump-tailed macaque (*M. arctoides*); long-tailed or crab-eating macaque (*M. fascicularis*); rhesus macaque (*M. mulatta*), see rhesus **monkey**; pig-tailed macaque (*M. nemestrina*); crested black macaque (*M. nigra*); bonnet macaque or bonnet monkey (*M. radiata*); lion-tailed macaque (*M. silensus*); Barbary macaque or Barbary ape (*M. sylvana*).

McArdle disease [mək-ahr'dəl] glycogenosis type V

Macavirus (sigla from malignant catarrhal fever) a genus in the subfamily *Gammaherpesvirinae* that contains the species *Alcelaphine herpesvirus 1, Alcelaphine herpesvirus 2, Hippotragine herpesvirus 1* and *Ovine herpesvirus 2, Bovine herpesvirus 6, Caprine herpesvirus 2, Suid herpesvirus 3, Suid herpesvirus 4* and *Suid herpesvirus 5*.

macaw one of the tropical parrots of the family Psittacidae. Macaws are very colorful, have long tails and bare cheek patches. They are big birds (up to 3 feet long) and are members of the *Ara* genus, e.g. *Ara macao,* the scarlet macaw.

m. wasting disease see **proventricular** dilatation disease.

McBurney incision [mək-bur'ne] see grid **incision**.

McDonald operation [mək-don'əld] a purse-string retention technique for correction of cervical incompetence in breeding mares.

Macdonaldius a genus of filaroid worms found in the blood vessels of colubrid and viperine snakes. In aberrant host snakes they cause cutaneous ulceration.

McDowall reflex a reflex in which section of the vagi in cats subjected to severe hemorrhage causes a decrease in blood pressure.

macerate [mas'ər-āt] to soften by wetting or soaking.

maceration [mas"ər-a'shən] the softening of a solid by soaking. In histology, the softening of a tissue by soaking, especially in acids, until the connective tissue fibers are dissolved so that the tissue components can be teased apart. In obstetrics, the degenerative changes with discoloration and softening of tissues, and eventual disintegration, of a fetus retained in the uterus after its death. In herbal medicine, certain herbs may require cold water to make produce infusions or decoctions if the active ingredient is susceptible to inactivation by heat.

McFadyean's reaction a special staining reaction, demonstrating a pink capsule around a blue cell, after staining with methylene blue, which is used as a presumptive diagnosis for anthrax in a blood smear.

McFarland turbidity standard stock solutions of barium sulfate with consistent turbidity used to compare suspensions of bacteria in the disk diffusion method of **antimicrobial** sensitivity tests.

Mach effect an optical illusion in radiography. Wherever there is a boundary between two objects of different luminosity the retina enchances the image. It leads to the misdiagnosis of fractures in the metacarpal and metatarsal bones. Called also edge effect or enhancement, Mach band.

Machaeranthera ramosa North American plant in the family Asteraceae and a selenium accumulator capable of causing selenosis in grazing livestock.

macho male alpaca.

macies [L.] *wasting*.

Mackenzie brush technique [mə-ken'ze] a method of collecting samples from the haircoat, particularly of cats, for diagnosis of dermatophytosis. A sterile toothbrush is used to brush the hair thoroughly and is then pressed onto a plate or slant of Sabouraud's agar and incubated.

Mackenzie River disease [mə-ken'ze] Australian name for poisoning by ***Terminalia oblongata***.

mackerel see **tabby**.

Maclura pomifera a North American plant in the family Moraceae; contains an unidentified toxin causing diarrhea in sheep. Called also osage orange, bow wood.

McMaster technique a rapid, simple, quantitative technique for counting parasite eggs in ruminant feces, based on flotation in a concentrated salt solution (specific gravity of 1.1–1.3) in a counting chamber.

McNemar's chi-square test see **chi-square test**.

Macracanthorhynchus [mak"rə-kan"tho-ring'kəs] a genus of large acanthocephalans in the family Oligacanthorhynchidae.

M. catalinum found in the small intestine of dogs, wolves, badgers and foxes.

M. hirudinaceus found in the small intestine of domestic and wild pigs, where they cause granulomatous lesions in the intestinal wall, sometimes perforation and peritonitis.

M-1: *Macracanthorhynchus ingens* proboscis.
From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

M. ingens found in the small intestine of wild mammals including skunk, mink, raccoon and mole.

macrencephalia [mak-ren"sə-fa'le-ə] hypertrophy of the brain.

macr(o)- word element. [Gr.] *large, long*.

macroamylase [mak"ro-am'ə-lās] a complex in which normal serum amylase is bound to a variety of specific binding proteins, forming a complex too large for renal excretion. It is not correlated with any specific disease state; however, in hyperamylasemia or pancreatitis, it can result in urinary amylase concentrations not rising concomitantly with serum concentrations.

macroamylasemia [mak"ro-am"əl-ə-se'me-ə] the presence of macroamylase in the blood.

macroblast [mak'ro-blast] an abnormally large, nucleated erythrocyte; a large young normoblast with megaloblastic features.

macroblepharia [mak"ro-blə-far'e-ə] abnormal largeness of the eyelid.

macrocardius [mak"ro-kahr'de-əs] a fetus with an extremely large heart.

macrocarpa ***Cupressus*** *macrocarpa*.

macrocephalous [mak"ro-sef'ə-ləs] having an abnormally large head.

macrocephaly [mak"ro-sef'ə-le] abnormal enlargement of the cranium.

macrochromosomes [mak"ro-kro'mo-sōmz] a pair of normal chromosomes.

macroclimate the climate as described by standard meteorological information. Paints a broad picture of the weather as perceived by animals and humans, but has little relevance to pasture plants and pathogens.

macrocolon [mak'ro-ko"lən] see **megacolon**.

macroconidium [mak"ro-ko-nid'e-əm] pl. *macroconidia;* a large conidium produced by some fungi such as *Microsporum* spp.

macrocrania [mak"ro-kra'ne-ə] abnormal increase in size of the skull in relation to the face.

macrocyclic lactones [mak"ro-sik'lik] potent nematicidal and insecticidal compounds derived from *Streptomyces* spp. See also **avermectins**, **milbemycins**.

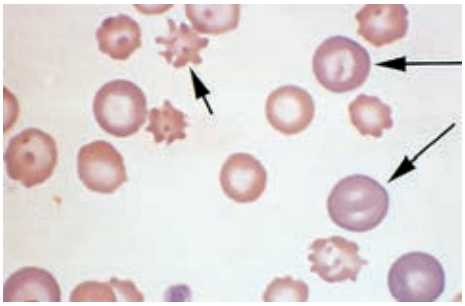
macrocyte [mak'ro-sīt] an abnormally large erythrocyte.

macrocythemia [mak"ro-si-the'me-ə] the presence of macrocytes in the blood. See **macrocytosis**.

macrocytic [mak"ro-sit'ik] manifested by or pertaining to the presence of macrocytes.

macrocytosis [mak"ro-si-to'sis] macrocythemia; the presence of macrocytes in the blood. Observed in miniature poodles with a hereditary bone marrow dyscrasia and in greyhounds.

Macrodactylus subspinosus the rose chafer beetle. The population of these beetles can be very high in some years and ingestion of large numbers of them can cause poisoning in birds. Signs include drowsiness, weakness and some deaths. Called also *Cetonia aurata*.



M-2: Macrocytes (long arrows) and acanthocytes (small arrow) in canine blood film.
From Hendrix CM, Sirois M, Laboratory Procedures for Veterinary Technicians, 5th Edition. Mosby, 2007.

macrodactyly [mak"ro-dak'tə-le] abnormal largeness of the digits.

macrodontia [mak"ro-don'shə] one or more abnormally large teeth.

macroelement [mak"ro-el'ə-ment] any of the **macronutrients** that are chemical elements, including calcium, phosphorus, magnesium, potassium, sodium and chloride.

macrogamete [mak"ro-gam'ēt] the larger, less active female gamete in anisogamy, which is fertilized by the smaller male gamete (microgamete).

macrogametocyte [mak"ro-gə-me'to-sīt] 1. a cell that produces macrogametes. 2. the female gametocyte of ampicomplexan protozoa that matures into a macrogamete.

macroglia [mak-rog'le-ə] neuroglial cells of ectodermal origin, i.e. the astrocytes and oligodendrocytes considered together.

macroglobulin [mak"ro-glob'u-lin] immunoglobulin M, an antibody protein (globulin) of molecular weight in the range of 1 000 000.

α_2-m. a glycoprotein that inhibits proteolytic enzymes. Increased concentrations are seen in diabetes mellitus and diseases of the liver and kidney.

macroglobulinemia [mak"ro-glob"u-lĭ-ne'me-ə] increased levels of immunoglobulin M in the blood.

Waldenström's m. a monoclonal gammopathy in which there are increased levels of IgM as a result of leukemia affecting IgM-producing B lymphocytes.

macroglossia [mak"ro-glos'e-ə] excessive size of the tongue.

macrognathia [mak"ro-na'the-ə] abnormal overgrowth of the jaw.

macrogols [mak'ro-gols] a polyethylene glycol used in the manufacure of drugs as solvents.

macrogyria [mak"ro-ji're-ə] moderate reduction in the number of sulci of the cerebrum, sometimes with increase in the brain substance, resulting in excessive size of the gyri.

macrohabitat the immediate, large-scale environment, as can be seen with the naked eye; flora, fauna, topography, climate in the broad sense, as an animal would experience it.

macrolide [mak'ro-līd] as in antibiotic; any antibiotic with molecules having many-membered lactone rings, e.g. erythromycin, spiramycin, tylosin.

macromastia [mak"ro-mas'te-ə] excessive size of the mammary glands.

macromelanosomes [mak"ro-mel'ə-no-sōm"] large pigment granules; seen in color dilution **alopecia.**

macromelia [mak"ro-me'le-ə] enlargement of one or more limbs.

macromelus [mak-rom'ə-ləs] a fetus with abnormally large or long limbs.

macromere [mak'ro-mēr] one of the larger cells (blastomeres) formed in unequal cleavage of the fertilized ovum (at the vegetal pole).

macrometeorology measurement of the macroclimate.

macromineral [mak"ro-min'ər-əl] the major minerals in animal nutrition (as distinct from trace minerals). Includes calcium, phosphorus, sodium, chlorine, potassium, magnesium, sulfur.

macromolecule [mak"ro-mol'ə-kūl] a very large molecule having a polymeric chain structure, as in proteins, polysaccharides, nucleic acids, etc.

macromonocyte [mak"ro-mon'o-sīt] a giant monocyte.

macromyeloblast [mak"ro-mi'ə-lo-blast] a large myeloblast.

macronormoblast [mak"ro-nor'mo-blast] a very large nucleated erythrocyte; macroblast.

macronucleus [mak"ro-noo'kle-əs] the larger nucleus when there are two in the cell.

macronutrient [mak"ro-noo'tre-ent] an essential nutrient that has a large minimal daily requirement (greater than 100 mg for a ruminant); calcium, phosphorus, magnesium, potassium, sodium and chloride are macronutrients.

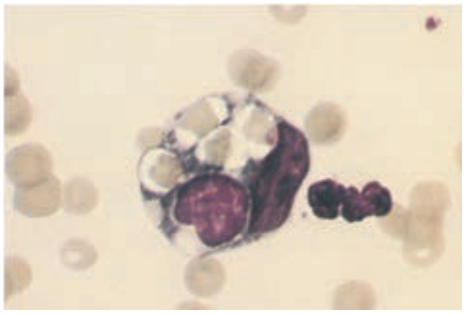
macronychia [mak"ro-nik'e-ə] abnormally enlarged claws or hooves.

macropalpebral fissure [mak"ro-pal'pə-brəl fish'ər] an abnormally large eyelid aperture that allows greater exposure of cornea, conjunctiva and sclera. Commonly seen in the brachycephalic dog breeds. Causes abnormal distribution of the tear film and lagophthalmos and predisposes to proptosis and exposure keratitis.

macropenis [mak"ro-pe'nis] megalopenis.

macrophage [mak'ro-fāj] any of the large, mononuclear, highly phagocytic cells derived from bone marrow cells, promonocytes, the progeny of which, the monocytes, enter the bloodstream, where

VetBooks.ir



M-3: A macrophage showing erythrophagocytosis. From Cowell RL, et al Diagnostic Cytology and Hematology of the Dog and Cat, 3rd Edition. Mosby, 2007.

they stay for a few days before entering the tissues and developing into macrophages. They are components of the monocyte-macrophage system. Macrophages are usually immobile but become actively mobile when stimulated by inflammation, immune cytokines and microbial products. They are an important class of antigen presenting cells (APCs). See also **immunity**.

activated m. under the influence of cytokines, particularly γ-interferon and interleukin 4, released by antigen-stimulated Th1 lymphocytes, resting macrophages are activated whereby they become larger, more motile, stickier, express more MHCII proteins on their surface, contain more lysosomes and lysosomal enzymes, and secrete a variety of substances including interleukin 1, tumor necrosis factors; they have increased phagocytic activity and increased killing via reactive oxygen intermediates, collagenases and lysosomal enzymes. Called also angry macrophage.

m. activating factor (MAF) a lymphokine that activates macrophages, for example interferon.

alveolar m's rounded, granular, mononuclear phagocytes within the alveoli of the lungs that ingest inhaled particulate matter.

angry m. see activated macrophage (above).

armed m's those capable of inducing cytotoxicity as a consequence of antibodies bound via Fc receptors on their surfaces.

m. chemotactic factor (MCF) a lymphokine that attracts macrophages.

m. colony-stimulating factor see **colony**-stimulating factors.

m. inhibition factor (MIF) a lymphokine that inhibits macrophage migration, causing them to accumulate at the site of antigen.

specific m. arming factor (SMAF) a term for an antigen specific factor produced by sensitized T lymphocytes capable of binding to macrophages, which subsequently exhibit specific cytotoxicity when encountering specific antigen bearing target cells. No such factor has been specifically identified.

macrophthalmia [*mak"rof-thal'me-ə*] abnormal enlargement of the eye.

macropinosomes [*mak"ro-pin'o-sōms*] large droplets filled with fluid formed when excess tissue fluid is engulfed by cells as part of a clean-up of tissue spaces.

macropod [*mak"ro-pod*] members of the marsupial family Macropodidae.

macropodia [*mak"ro-po'de-ə*] excessive size of the feet.

macropolycyte [*mak"ro-pol'e-sīt*] a hypersegmented polymorphonuclear leukocyte of greater than normal size.

macroprosopia [*mak"ro-pro-so'pe-ə*] excessive size of the face.

Macropus a genus in the family of marsupials, Macropododae. Includes **kangaroos**, **wallaroos** and some **wallaby**.

macroreticulocyte large reticulocytes released prematurely from bone marrow; they have a reduced life span.

macrorhabdosis infection by *Macrorhabdus ornithogaster*; see **megabacteriosis**.

Macrorhabdus ornithogaster an ascomycetous yeast that causes **megabacteriosis** in budgerigars. Called also avian gastric yeast.

macroscopic [*mak"ro-skop'ik*] of large size; visible to the unaided eye.

m. anatomy see gross **anatomy**.

macroscopy [*mə-kros'kə-pe*] examination with the unaided eye.

macrosigmoid [*mak"ro-sig'moid*] excessive size of the sigmoid colon.

macrosmatic [*mak"roz-mat'ik*] pertaining to a good sense of smell, e.g. macrosmatic animals such as dogs.

macrosomatia, macrosomia [*mak"ro-so-ma'she-ə, mak"ro-so'me-ə*] great bodily size.

macrotia [*mak-ro'shə*] abnormal enlargement of the pinna of the ear.

Macrozamia [*mak"ro-zam'e-ə*] one of the endemic Australian genera of the cycads in the family Zamiaceae; contain cycad glycosides (e.g. macrozamin) and cause liver necrosis, gastroenteritis and **zamia** staggers. Species associated with poisoning include *M. communis*, *M. diplomera*, *M. heteromera*, *M. lucida*, *M. miquelii*, *M. moorei*, *M. mountperriensis*, *M. pauli-guilielmi*, *M. riedlei.*; others are suspected. Called also burrawang, zamia.

macrozamin [*mak"ro-zam'in*] a glycoside of methylazoxymethanol (MAM) in *Macrozamia* spp. and other cycads.

macula [*mak'u-lə*] pl. *maculae* [L.] 1. a stain, spot, or thickening; 2. an area distinguishable by color or otherwise from its surroundings. Often used alone to refer to the macula retinae. 3. a moderate size corneal opacity that can be seen without special optical aids; presenting as a gray spot intermediate between a nebula and a leukoma. 4. macula lutea.

m. acusticae terminations of the vestibulocochlear nerve in the utricle and saccule.

m. adherens see **desmosome**.

m. atrophica a white atrophic patch on the skin.

m. corneae see macula (4) (above).

m. cribrosa a perforated spot or area; one of three perforated areas (inferior, medial and superior) in the wall of the vestibule of the ear through which branches of the vestibulocochlear nerve pass to the saccule, utricle and semicircular canals.

m. densa a zone of heavily nucleated cells in the distal renal tubule.

m. folliculi the point on the surface of a vesicular ovarian follicle where rupture occurs; follicular stigma.

m. germinativa germinal area; the part of the conceptus where the embryo is formed.

inner ear m. sensory receptor areas in the walls of the utriculus and sacculus which monitor the position of the head relative to gravity; see also macula sacculi (below), macula utriculi (below).

m. lutea retinae see macula retinae (below).

m. retinae an irregular yellowish depression on the retina, lateral to and slightly below the optic disk. Seen only in primates. Called also macula lutea.

m. sacculi a thickening on the wall of the saccule where the epithelium contains hair cells that receive and transmit vestibular impulses.

m. utriculi a thickening in the wall of the utricle where the epithelium contains hair cells that are stimulated by linear acceleration and deceleration and by gravity.

nebula 1. a small corneal opacity. See also **macula** and **leukoma**. 2. an oily preparation for use in an atomizer.

maculate [*mak'u-lāt*] spotted or blotched.

macule [*mak'ūl*] a discolored spot on the skin that is not raised above the surface.

maculocerebral [*mak"u-lo-ser'ə-brəl*] pertaining to the macula lutea and the brain.

maculopapular [*mak"u-lo-pap'u-lər*] both macular and papular.

mad apple ***Datura*** *stramonium*.

mad cow disease see **bovine spongiform encephalopathy (BSE)**.

mad itch see **Aujeszky's disease**.

mad mushroom see ***Psilocybe***.

madarosis [*mad"ə-ro'sis*] loss of eyelashes or eyebrows.

madeira vine see ***Anredera cordifolia***.

madness see **mania**.

Madura foot [*mə-doo'rə*] see **maduromycosis**.

maduramicin, maduramycin a polyether ionophore used in poultry feed as a coccidiostat.

Madurella [*mad"u-rel'ə*] a genus of fungi associated with the lesions of maduromycosis in humans.

maduromycetoma [*mə-doo'rə*] maduromycotic mycetoma.

maduromycosis [*mə-doo'rə-mi-ko'sis*] a chronic disease due to various fungi or actinomycetes, affecting various body tissues, particularly the feet; called also mycetoma. The most common form in humans affects the foot (Madura foot) and is characterized by sinus formation, necrosis and swelling. The disease is recorded in the horse, in which there are nasal granulomas and similar lesions in the skin. The fungi *Helminthosporium* spp., *Allescheria* spp. and *Curvularia* spp. are present in the lesions. See also **mycetoma**.

VetBooks.ir

maduromycotic [*mə-doo'rə-mi-kot-ik*] pertaining to or emanating from maduromycosis.

m. mycetoma see **mycetoma**.

maedi a chronic pneumonia of sheep caused by a lentivirus, which also causes visna when it invades the brain of sheep. In maedi the characteristic features are a prolonged incubation period of more than 2 years, a progressive pneumonia which lasts for about 6 months, initially with dyspnea and respiratory distress at exercise but terminally also at rest, and at the inevitable death, an abnormally high density and heaviness of the lungs. Some sheep show chronic wasting and/or have indurative mastitis. A disease notifiable to the OIE (see Table 22). Called also maedi–visna, Graaff–Reinet disease, la bouhite, ovine progressive pneumonia and lymphoid interstitial pneumonia.

maedi–visna see **maedi**.

Maesa lanceolata an African plant of the family Myrsinaceae that causes diarrhea, polyuria, emaciation and death in cattle. The principal necropsy lesion is nephrosis; the toxin has not been identified. Called also ol odoa.

MAF macrophage activating factor.

mafenide [*maf'ən-īd*] a sulfonamide that is not inhibited by the presence of pus and necrotic tissue; used mostly for local application to infected wounds, especially burns. Called also homosulfanilamide, sulfamylon.

MAFF [formerly] Ministry of Agriculture, Fisheries and Food, in the UK. See **DEFRA**.

MEG magnetoencephalography.

maggot [*mag'ot*] the soft-bodied larva of an insect, especially one living in decaying flesh or tissue debris. See also **myiasis**.

cattle m. see ***Hypoderma***.

m. debridement therapy (MDT) method for the treatment of intractable, infected and necrotic wounds. Sterile larvae of *Lucilia sericata* are applied to infected wounds where they debride the wound bed of necrotic tissue and exert antibacterial effects.

rat-tailed m. larva of *Eristalis* spp., a hover fly of no veterinary importance other than in confusing an identification. Called also filth fly. The maggots are found in areas with high concentrations of organic matter, e.g. stable drains.

wool m. see cutaneous **myiasis**.

magic mushroom see ***Psilocybe***.

Magill circuit [*məgil'*] see Magill **circuit**.

magma [*mag'mə*] 1. a suspension of finely divided material in a small amount of water. 2. a thin, paste-like substance composed of organic material.

Magner war bridle a type of restraint used on horses, it is a rope with a loop around the lower jaw, then passed over the head and back through the jaw loop.

magnesemia [*mag"nə-se'me-ə*] hypermagnesemia.

magnesia [*mag-ne'zhə*] magnesium oxide; aperient and antacid.

magnesium (Mg) [*mag-ne'ze-əm*] a chemical element, atomic number 12, atomic weight 24.312. See Table 4. Its salts are essential in nutrition, being required for the activity of many enzymes, especially those concerned with oxidative phosphorylation. It is found in the intra- and extracellular fluids and is excreted in urine and feces.

m. ammonium phosphate (MAP) a common constituent of urinary calculi. See **urolithiasis**.

blood m. concentration of magnesium in the blood. See **hypermagnesemia**, **hypomagnesemia**.

m. carbonate, m. hydroxide, m. oxide, m. phosphate, m. trisilicate compounds used as antacids.

m. chloride used as a source of magnesium in the treatment of hypomagnesemia in cattle, and as a chemical defibrillator in cardiopulmonary resuscitation.

m. citrate a mild cathartic.

endogenous m. magnesium contributed to the feces by the intestinal secretions.

m. gluconate a magnesium replenisher.

m. nutritional deficiency is most important in the part that it plays in lactation tetany in ruminants. It also causes deformities of the limbs and nervous signs of tremor and convulsions in pigs. See also **lactation tetany** (1).

M-4: Nail and wire covering a reticular magnet recovered at postmortem of a cow.

m. phosphide used commercially to control insect and rodent populations. Phosphine gas is liberated when the parent compound comes into contact with acidic moist environments. Clinical signs in poisoned animals are due to multisystemic effects (lung, liver, heart, kidney) of the parent and metabolite, although initial gastrointestinal signs predominate.

m. salicylate the magnesium salt of salicylic acid used as an analgesic and a non-steroidal anti-inflammatory drug.

m. silicate talcum powder; capable of causing starch granulomatous peritonitis if introduced into the peritoneal cavity, so it has been superseded by other compounds for use on surgeon's gloves.

m. sulfate Epsom salts; used as an electrolyte replenisher, cathartic and local anti-inflammatory. Used in the treatment of hypomagnesemia in cattle.

m. sulfate–chloral hydrate mixture see **chloral** hydrate and magnesium sulfate.

magnet [*mag'nət*] an object having polarity and capable of attracting iron.

oral dose m. see reticular **magnet**.

reticular m. a magnet placed in the reticulum to attract and isolate sharp metal and help to prevent traumatic reticuloperitonitis in ruminants.

magnetic field strength measured in tesla (T); MRI machines range from 0.2–5 T compared to the earth's magnetic field which is ~1/20 000 T.

magnetic field therapy [*mag-net'ik*] a modality of alternative medicine using magnetic lines of force to stimulate healing, particularly musculoskeletal injuries. It may be used in combination with other modalities of treatment, most commonly acupuncture. *Pulsed magnetic field therapy* is produced by passing an electric current through a coil of wire. The frequencies commonly produced, 1–60 Hz, pass through the body without causing any thermal effect in tissues.

magnetic resonance imaging (MRI) [*mag-net'ik*] the patient is placed in a magnetic field and radiofrequency signals are transmitted and received by surrounding coils. A computer processes the information and constructs cross-sectional images which provide detailed information on soft tissues. *Functional* MRI (fMRI) detects local changes in blood oxygenation that indicate neural activation. See also **proton** density weighted scans, T_1, T_2.

magnetism [*mag'nə-tiz-əm*] magnetic attraction or repulsion.

magnetoencephalography (MEG) [*mag•ne•to•en•ceph•a•lo•graph-e*] a non-invasive imaging technique that directly measures magnetic fields emitted by neuronal activity in the brain.

magnetropism [*mag-net'ro-piz-əm*] a growth response in a nonmotile organism under the influence of a magnet.

magnification [*mag"nĭ-fĭ-ka'shən*] 1. apparent increase in size, as under the microscope. 2. the process of making something appear larger, as by use of lenses. 3. the ratio of apparent (image) size to real size. 4. radiological magnification; a factor of object to film distance.

magnum [*mag'nəm*] the highly coiled, second zone of the hen's left oviduct. About 30 cm long. The albumen-secreting zone. The egg takes about 3 hours to pass through this part.

Mahaim fibers [*mah-ă'*] short, direct connections from the AV node (or the bundle of His or bundle branches) to muscle fibers in the interventricular septum.

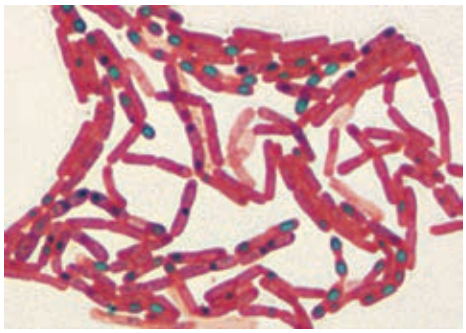
M. fiber conduction a type of accessory AV conduction with abnormal beats originating below the region of normal delay in the AV-conducting system; causes an arrhythmia.

ma huang [*mah hwahng'*] in traditional Chinese medicine, the name for ***Ephedra sinica***. Called also Chinese ephedra.

maiden 1. a female, e.g. ewe, gilt, heifer, bitch, mare, of breeding age but not yet mated. 2. a racehorse that has not yet won a race on a recognized track.

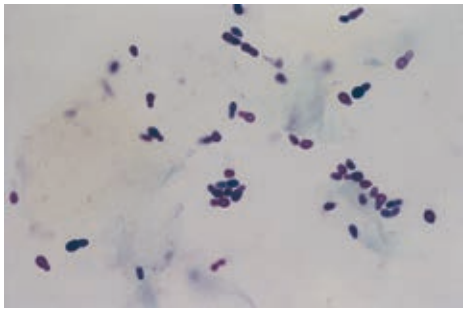
VetBooks.ir

Main Drain virus [mă] one of the California serotype bunyaviruses isolated in California from a horse with encephalitis.
Maine-Anjou red, red-and-white, or red-roan dual-purpose cattle originating in northern France.
Maine coon cat a breed of cats originating from shipboard cats that landed in the American state of Maine in the 19th century. Now recognized as a distinct breed, it is a very large, muscular, long-haired cat in a variety of colors, although originally tabby.
maintenance requirement [mān'tə-nans] in terms of animal nutrition, the amount and quality of the diet required to maintain an adult animal without providing additional nutriment for production, reproduction or weight gain.
m. r. for energy see **energy** requirements.
m. r. interval the interval between doses of a medication arranged so as to maintain an appropriate blood concentration of the drug.
Maireana brevifolia Australian plant genus in the family Chenopodiaceae; suspected of acute oxalate poisoning; includes *M. brevifolia, M. sedifolia*. Called also bluebush.
maize [māz] usually referred to as **corn** (3) in the USA or as maize in other countries. Called also *Zea mays*.
Majocchi's granuloma [mah-zhok'e] a form of dermatophytosis with a granulomatous, pyogranulomatous or suppurative reaction containing fungal grains or hyphae. Called also nodular granulomatous perifolliculitis.
major histocompatibility complex [ma'jər] see major **histocompatibility** complex.
mal [mahl] [Fr.] *illness*. disease.
m. de caderas see ***Trypanosoma*** *equinum*.
m. de mer seasickness.
m. de playa South American name for ***Lantana*** poisoning.
m. des mains sales see **hydatid** disease.
m. do eucalipto disease caused by poisoning with the fungus *Ramaria* spp.
m. du coit see **dourine**.
grand m. a generalized convulsive seizure attended by loss of consciousness. See also generalized tonic-clonic **seizure**.
petit m. momentary loss of consciousness without convulsive movements. See also partial **seizure**.
m. seco [Span.] South American name for **grass** sickness, dysautonomia.
mala [ma'lə] the cheek or cheek bone.
malabsorption [mal"əb-sorp'shən] impaired intestinal absorption of nutrients.
fat m. see **steatorrhea**.
m. syndrome a group of disorders marked by subnormal intestinal absorption of dietary constituents, and thus excessive loss of nutrients in the stool, with chronic diarrhea and weight loss; it may be due to a digestive defect, a mucosal abnormality, or lymphatic obstruction. A common disease in dogs and a major part of some of the enteric diseases of food animals. It is the pathogenesis of the diarrheas of trichostrongylosis of sheep and cattle, of the viral diarrheas of pigs and the undifferentiated chronic diarrheas of horses.
malaccol an insecticidal substance present in the roots of *Derris* spp. plants.
malachite green a green dye used to stain bacteria and as an antibacterial and antifungal. Used, with great caution, as a treatment of cutaneous mycosis in aquarium fish.
m. g. test used to determine the completeness of bleedout in an abattoir carcass. Also used to detect the presence of the meat preservative, sodium metabisulfite.
malacia abnormal softening or softness of a part or tissue; also used as a word termination, as in osteomalacia, encephalomalacia, myelomalacia.
malacoma an abnormally soft part or spot.
malacoplakia a circumscribed area of softening on the membrane lining a hollow organ, such as the ureter, urethra or renal pelvis.
m. vesicae a flat yellow growth on the mucosa of the bladder.
malacosis [mal"ə-ko'sis] malacia.
malacosteon [mal"ə-kos'te-on] osteomalacia.
maladie [mahl"ah-de'] see **mal**.
m. du jeune âge du chat feline panleukopenia.



M-5: Malachite green endospore stain of *Bacillus anthracis*. From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, 2004.

maladjustment syndrome [mal"ə-just'mənt] see **neonatal** maladjustment syndrome.
malady [mal'ə-de] a disease or illness.
malalignment [mal"ə-līn'mənt] displacement, especially of the teeth from their normal relation to the line of the dental arch.
Malamute, malemute see **Alaskan malamute**.
malar [ma'lər] pertaining to mala. See also **zygomatic**, **jugal**.
m. abscess abscessation at the root of the carnassial tooth (upper fourth premolar in dogs and upper third in cats) may give rise to an inflammatory reaction, then a fistula on the face, below the eye. Called also carnassial abscess, facial abscess, facial sinus. Less often, abscessation of the roots of the lower carnassial tooth (first molar in dogs and in cats) can drain through the skin over the mandible or into the mouth.
m. rash dogs with systemic lupus erythematosus (SLE) sometimes develop a symmetric scaling erythematous lesion over the nose which resembles the change seen in humans with SLE.
malaria see **avian** malaria.
malaris muscle the cutaneous muscle which depresses the lower eyelid.
Malassez named after L.C. Malassez (1842–1909), a French physiologist.
M. disease cyst of the testis.
M. epithelial rests epithelial remnant in the periodontal membrane; sometimes develops into a dental cyst.
Malassezia [mal"ə-se'zhə] a lipophilic yeast which is commonly found on the skin and particularly in normal and diseased ears of dogs and cats. Includes *M. pachydermatis*, *M. canis*. Called also *Pityrosporum canis*.
M. furfur **(syn. *P. orbiculare, P. ovale*)** causes a tinea versicolor, a fungal dermatomycosis on the teats of goats.
malasseziasis [mal"ə-se'zhə sis] infection with the yeast, *Malassezia*. In dogs and rarely cats, skin and ear infections occur, usually secondary to allergic skin disease or an underlying systemic disease, resulting in overgrowth of yeasts which are otherwise normal inhabitants. There is alopecia, erythema, seborhea, and intense pruritus; with chronicity, the skin becomes hyperpigmented, hyperkeratotic and lichenified.
malassimilation [mal"ə-sim"ĭ-la'shən] 1. imperfect, faulty or disordered assimilation. 2. the inability of the gastrointestinal tract to take up one or more ingested nutrients, whether due to faulty digestion (**maldigestion**) or to impaired intestinal mucosal transport (**malabsorption**).
malate [ma'lāt] a salt of malic acid.



M-6: *Malassezia pachydermatis* from a dog ear (modified Wright-Giemsa stain). From Gotthelf LN, Small Animal Ear Diseases, 2nd Edition. Saunders, 2005.

VetBooks.ir

M-7: Malasseziasis in a West Highland white terrier.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

m.–aspartate shuttle system for the transfer of reducing equivalents as NADH and H+ between the site of generation in glycolysis in the cytosol and the site of oxidation in the electron transport chain for production of ATP in the mitochondria. Reducing equivalents are transported into the mitochondria as malate, using oxaloacetate as the carbon carrier. The oxaloacetate is generated from transamination of aspartate. Oxaloacetate does not have a mitochondrial transport protein.

m. dehydrogenase, NAD-linked malate dehydrogenase an enzyme found in the mitochondria (as part of the TCA cycle) or cytosol that participates in the reversible conversion of malate to oxaloacetate.

malathion [*mal"ə-thi'on*] one of the least toxic and most widely used organophosphorus insecticides in companion animals. Toxicity when it occurs is usually due to gross overconcentration of the compound in the topical preparation used. See also **organophosphorus compound**.

malaxate [*mal'ək-sāt*] to knead, as in making pills.

malaxation [*mal"ək-sa'shən*] an act of kneading.

maldescent faulty descent of the testicle into the scrotum.

maldevelopment [*mal"də-vel'əp-mənt*] abnormal growth or development.

maldigestion [*mal"di-jes'chən*] incomplete digestion such as occurs in pancreatic exocrine or bile salt deficiency. In ruminants a defect in ruminal microflora could have the same effect. See also **malassimilation**.

maldronksiekte Afrikaans term for poisoning with ***Solanum kwebense***. Literal translation is 'mad drunk disease'.

male [*māl*] an individual of the sex that produces spermatozoa.

m. castrate see **barrow**, **capon**, **gelding**, **steer**, **wether**.

m. feminizing syndrome see **feminizing syndrome**.

m. genital system is comprised essentially of penis, prepuce, scrotum, testes, epididymides, vasa deferentia, prostate, seminal vesicles, bulbourethral glands and the male urethra.

m. pseudohermaphrodite see **pseudohermaphrodite**.

m. sex hormones testosterone is the most important male hormone. Weaker androgens are androstenedione and dihydroepiandrosterone.

maleberry see ***Lyonia ligustrina***.

maleic hydrazide used experimentally to control the growth of grass without killing it. May cause vomiting in dogs walking in the grass.

maleruption [*mal"ə-rup'shən*] see **teeth** maleruption.

malformation [*mal"for-ma'shən*] defective or abnormal formation; deformity; an anatomical aberration, especially one acquired during development.

malic acid [*ma'lik*] a dicarboxylic acid that is found in the juices of many fruits and plants, and is an intermediate in the tricarboxylic acid cycle.

malic enzyme [*ma'lik*] an adaptive enzyme involved in lipogenesis. Catalyses the irreversible conversion of malate to pyruvate + CO_2 in the cytosol. Called also the NADP-linked malate dehydrogenase.

malignancy [*mə-lig'nən-se*] a tendency to progress in virulence. In popular usage, any condition that, if uncorrected, tends to worsen so as to cause serious illness or death. Malignant neoplasia is the best known example.

malignant [*mə-lig'nənt*] tending to become progressively worse and to result in death; having the properties of anaplasia, invasiveness, virulence and metastasis; said of tumors and fulminating infections.

m. aphtha see contagious **ecthyma**.

m. carbuncle a form of anthrax in humans.

m. fibrous histiocytoma a rare aggressive tumor of dogs and cats; composed of densely packed fibroblasts and histiocytes.

m. head catarrh malignant catarrhal fever.

m. histiocytosis see malignant **histiocytosis**.

m. hyperthermia see malignant **hyperthermia**, porcine stress syndrome.

m. lymphoma tautology for **lymphoma**; all lymphomas are malignant.

m. pustule see malignant carbuncle (above).

m. theileriosis theileriosis caused by *Theileria hirci*.

malignant catarrhal fever (MCF) [*mə-lig'nənt kə-tahr'əl fe'vər*] an acute highly infectious, fatal herpesvirus disease of cattle, farmed deer and occasionally pigs characterized by an erosive stomatitis and gastroenteritis, erosions on the mucosa of the upper respiratory tract, keratoconjunctivitis, encephalitis, lymphadenopathy and lymphoproliferative vasculitis in multiple tissues. There are at least two viruses involved both of which cause inapparent infection in their reservoir hosts. A wildebeest-associated form of the disease is caused by alcephaline herpesvirus 1. It occurs in most African countries in cattle which co-mingle with clinically normal wildebeest and hartebeest. It is epizootic and seasonal. It can also occur in zoological gardens in other countries. Sheep-associated MCF is caused by a poorly characterized virus, presumably ovine herpesvirus 2 (OvHV-2). Cases mostly occur when cattle have had contact with lambing ewes and usually start 1–2 months later. Goats can also act as a source of OvHV-2 infection for cattle. Cases without apparent or recent exposure to sheep do occur but are uncommon. Called also bovine malignant catarrh, malignant head catarrh.

malignant edema [*mə-lig'nənt ə-de'mə*] an acute infection of wounds by *Clostridium chauvoei, C. novyi, C. perfringens, C. septicum* or *C. sordellii*. The inflammation causes severe swelling and discoloration of skin and exposed tissues. There may be local subcutaneous emphysema and a frothy exudate, depending on the identity of the invading organism. There is a high fever and a profound toxemia; death follows within a few hours if treatment is not provided. Special occurrences are when a large number of animals are affected at one time. These include involvement of the vulva in recently lambed ewes, of shearing or docking wounds, and of the umbilicus or eyes of recently born lambs.

malignin a protein fragment present in the serum of human patients with malignant glial tumors.

malingerer in human terms, an individual who feigns illness. The word cannot really be applied to animals but is sometimes used as a name for an assortment of otherwise difficult to classify cases, e.g. cows which 'sulk' and will not rise even though they probably can, or animals that practice attention–attraction behavior, e.g. dogs feigning lameness.

Malinois see **Belgian** Malinois.

malkop-ui ***Dipcadi glaucum***.

mallard see ***Anas platyrhynchos***.

malleable susceptible of being beaten out into a thin plate.

m. retractor a flat elongated piece of metal shaped like a tongue depressor, which can be bent into a desired shape and used as a retractor for soft tissue. See **ribbon malleable retractor**.

mallein [*mal'e-in*] a substance prepared from *Burkholderia mallei* (previously *Malleomyces mallei* and *Pseudomonas mallei*) that elicits

M-8: Malignant catarrhal fever, keratoconjunctivitis showing centripetal spread of corneal opacity.

a delayed-type hypersensitivity reaction when injected intradermally as a test for glanders.

m. test the intradermal test for glanders.

mallenders a chronic dermatitis on the posterior aspect of the carpal joint; a disease of cart horses with thick legs and coarse feather.

malleoincudal [*mal"e-o-ing'ku-dəl*] pertaining to the malleus and incus.

malleolus [*mal'e-əs*] pl. *malleoli* [L.] a rounded process, especially either of the two rounded prominences on either side of the distal end of the fibula (external, lateral or outer malleolus) or of the tibia (inner, internal or medial malleolus).

Malleomyces see ***Burkholderia***.

mallet a heavy-headed surgical instrument used for driving a bone chisel.

Kirk m. a mallet with a solid bronze head.

malleus 1. the largest of the three ossicles of the ear; called also hammer. 2. glanders.

Mallophaga [*mal-of'ə-gə*] suborder of insects comprising the biting or bird lice. Also found on mammals. See also **louse**.

mallow [*mal'o*] plants in the family Malvaceae. Includes marsh or small-flowered mallow (*Malva parviflora*), red-flowered mallow (*Modiola caroliniana*).

malnutrition [*mal"noo-trish'ən*] the term used to describe the condition caused by a diet that contains all of the essential nutrients but in suboptimal amounts—an intermediate stage to starvation. It is compatible with life and the same metabolic changes occur as in starvation but to a lesser degree. Ketosis, loss of body weight and muscular power accompany a lower metabolic rate. There is also a fall in body temperature, reduced heart and respiratory rates and sexual activity. Could also be used to describe gross over-nutrition. See also **cachexia**, **starvation**.

milk replacer m. see **milk** replacer.

malocclusion [*mal"o-kloo'zhən*] malposition of the teeth resulting in the faulty meeting of the teeth or jaws. Malocclusion of the incisors is a common defect in all species. See also **occlusion**, **bite** (3), **parrot** mouth.

malonate utilization [*mal'ə-nāt*] a biochemical test used for the identification of *Salmonella arizonae* based on the utilization of malonate in the broth as the sole carbon source.

malonyl CoA [*mal'ə-nəl*] first committed intermediate in the synthesis of fatty acids. Inhibitor or carnitine palmitoyl transferase I.

malpighian [*mahl-pig'e-ən*] named after Marcello Malpighi (1628-1694), an Italian anatomist. See malpighian **body**, malpighian **capsule**, malpighian **corpuscle**, malpighian **layer**, malpighian **pyramid**, malpighian **tuft**.

malposition [*mal"pə-zish'ən*] abnormal placement.

fetal m. see **presentation**.

malpractice [*mal"pə-zish'ən*] in human medical practice, malpractice means bad, wrong or injudicious treatment of a patient professionally; it results in injury, unnecessary suffering or death of the patient. The court may hold that malpractice has occurred even though the physician acted in good faith. Also, malpractice may occur through omission to act as well as commission of an unwise or negligent act. In veterinary practice, a client may proceed against a veterinarian if loss has been incurred and damages are sought. Malpractice suits are much more common in American law than in English law, where negligence suits are more usual. Misconduct charges are usually brought by the professional registering body, whose objective it is to preserve the reputation of the profession against the excesses of nonconformists and incompetents.

malpresentation [*mal"prez-ən-ta'shən*] faulty fetal presentation.

malrotation [*mal"ro-ta'shən*] abnormal or pathological rotation, as of the vertebral column; failure of normal rotation of an organ, such as the gut, during embryological development.

MALT [*mawlt*] mucosal-associated lymphoid tissue.

malt feeds [*mawlt*] by-products of the brewing industry. Include malt cleanings (18% protein), malt culms (24% protein) and malt hulls which have a high fiber content. See also **culms**.

malt worker's lung [*mawlt*] an immediate, immune complex (antibody–antigen) mediated hypersensitivity pneumonitis of humans caused by inhalation of *Aspergillus clavatus* in moldy barley.

Malta fever brucellosis in humans caused by *Brucella melitensis*. Called also Mediterranean fever.

maltase [*mawl'tās*] an enzyme that hydrolyzes α-glucosides to glucose; there are two maltases found at the brush border of the intestinal epithelium, where they hydrolyze maltose (a product of the digestion of starch) to glucose for absorption. Maltase is absent from the intestine at birth and calves are unable to properly digest starch as a result.

acid m. deficiency see bovine generalized **glycogenosis**.

Maltese 1. pertaining to or emanating from Malta. 2. a very small (4–6 lb) dog with dark eyes and a long, silky, flowing, white haircoat that obscures the long, pendant ears and small, arched tail. Sometimes called Maltese terrier. The breed is affected by white shaker dog disease.

M. cockspur ***Centaurea*** *melitensis*.

M. cross characteristic formation within phagocytes in peritoneal granulomas caused by granules of starch; visible in polarized light.

maltose [*mawl'tōs*] a sugar (disaccharide) consisting of two glucose units linked by an α 1-4 glycosidic bond; formed when starch is hydrolyzed by amylase.

maltotriose [*mawl"to-tri'ōs*] a trisaccharide product of amylase digestion of starch consisting of 3-glucose units linked by α 1-4 glycosidic bonds.

malunion [*mal-ün'yon*] faulty union (i.e. incorrect anatomical alignment) of the fragments of a fractured bone.

M-9: Mallophaga (*Trichodectes canis*) of the dog: male on left, female on right.
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

M-10: Malunion of a distal femoral fracture in a dog.
From Slatter D, Textbook of Small Animal Surgery, 3rd Edition. Saunders, 2002.

VetBooks.ir

Malus sylvestris [*ma'ləs*] the common apple. The fruit can be eaten in sufficient amounts to cause **carbohydrate engorgement**. The pips contain sufficient cyanogenetic glycoside to cause cyanide poisoning if they were eaten in quantity. Called also *M. pumila*, *Pyrus malus*.

Malva [*mal'və*] plant genus in the family Malvaceae; includes *M. parviflora* (marshmallow, small-flowered mallow), *M. nicaeensis*. Unidentified toxin in *M. parviflora* causes skeletal muscle degeneration and necrosis in sheep; can also cause nitrate-nitrite poisoning; contains thiaminase, but not thought responsible for poisonings. Malvalic acid in *M. parviflora* causes pink discoloration of egg yolks and whites.

malvalic acid a cyclopropene fatty acid in the plant *Malva parviflora* that causes discoloration of hens eggs.

MAM methylazoxymethanol.

Mamatrovirus genus in the family *Astroviridae* that contains members that cause enteric nfection and possibly disease in sheep, cattle, pigs, cats, mink and humans.

mamba [*mahm'bə*] highly venomous African tree-snake in the family Elapidae. Called also *Dendroaspis*.

mamilla [*mə-mil'ə*] pl. *mamillae* [L.] a nipple-like prominence or rounded breast-like eminence.

mamillated [*mam"i-lāt'ad*] having nipple-like or rounded, breast-like projections or prominences.

mamillation [*mam"i-la'shən*] 1. the condition of being mamillated. 2. a nipple-like elevation or projection.

mamilliform [*mə-mil'i-form*] shaped like a nipple or breast.

mamilliplasty theleplasty; plastic reconstruction of the nipples or teats.

mamillitis [*mam"i-li'tis*] mammillitis.

mamma [*mam'ə*] pl. *mammae* [L.] the milk-secreting gland of the female; mammary gland; the breast, udder.

mammal [*mam'əl*] an individual of the class Mammalia, a division of vertebrates, including all that possess hair and suckle their young.

eutherian m's true placental mammals which develop chorion, amnion, yolk sac and allantois, all of which contribute to the placenta. Called also placental mammals.

marine m's. mammals inhabiting the sea; generally taken to include the cetaceans (whales, porpoises, dolphins), the sirenians (sea-cows, including manatees and dugong) and the pinnipeds (the carnivores of the group, seals, sea lions, walruses). Other mammals that spend a great deal of time in the water but are not classified as marine mammals are the polar bear and the sea otter.

metatherian m's marsupials including kangaroos, opossums which are born after a brief period of development and spend a long time being nurtured by the mother, usually in a pouch or marsupium.

placental m. see eutherian mammals (above).

prototherian m's monotremes, the egg-laying mammals.

mammalgia [*mə-mal'jə*] pain in the mammary gland.

mammalian [*mə-mal'e-ən*] emanating from or pertaining to mammals.

mammaplasty [*mam'ə-plas"te*] mammoplasty.

mammary [*mam'ər-e*] pertaining to the mammary gland. In dairy herds and when talking about dairy cattle, the term udder is more commonly used.

m. abscess usually an abscess of connective and subcutaneous tissue with no abnormality of the milk. Large masses of necrotic debris may occur in infection of the udder by *Arcanobacterium pyogenes* but these are usually classified as mastitis because they connect with the duct system and cause the discharge of pus in the milk.

m. agalactia the absence of milk secretion in an animal that has recently given birth and has normal mammary development. See also **agalactia**.

m. bud produced along the length of the embryonic mammary ridge these buds represent the future locations of the mammary glands. Invagination of ectoderm at each bud leads to the development of epithelial diverticula, later maturing as lactiferous ducts.

m. cyst recorded in ewes; filled with milk.

m. ductal ectasia milk ducts are distended with proteinaceous fluid containing cell debris. Common in bitches and queens. May rupture to the exterior causing granulomas. Called also mammary ductal hyperplasia.

M-11: Fibroepithelial mammary hyperplasia in a young cat.
From Withrow SJ, Vail DM, Withrow & MacEwen's Small Animal Clinical Oncology. Saunders, 2007.

m. ductal hyperplasia see mammary ductal ectasia (above).

m. ectopic tissue bilateral swellings in vulvar tissue; enlarge at parturition; milk can be aspirated.

m. edema see **udder** edema.

feline m. hyperplasia a hormone-dependent, benign enlargement of one or more mammary glands, occurring spontaneously in young, intact female cats and in others treated with progestins. Called also fibroepithelial hyperplasia, fibroadenomatous hyperplasia and fibroadenomatosis.

m. fibrosis diffuse thickening or local lumps palpable through skin, mostly in ventral part; may be sufficient to cause asymmetrical enlargement of the gland; terminally leads to atrophy.

m. gangrene a lesion which includes skin, a well demarcated mass of tissue usually involving whole or part of teat; secretion is watery, red-tinged; gangrenous mass eventually sloughs leaving a slow-to-heal gaping cavity. Called also gangrenous mastitis.

m. gland a gland of female mammals developed from specialized sweat glands, which secrete milk for nourishment of the young. The mammary glands are composed of alveolar tissue, with the alveoli lined by milk-secreting epithelium, and connecting to a collecting duct system which empties into the milk cistern (sinus) at the base of the teat and then into the teat cistern (sinus). They exist in a rudimentary state in the male. In food animal females and mares, called also udder.

m. gland caking appears as tense edema of the skin along the floor of the udder, usually in a first calf heifer immediately after calving. The milk is normal but the udder is sore and let-down is poor.

m. gland suspensory ligament see **udder** suspensory apparatus.

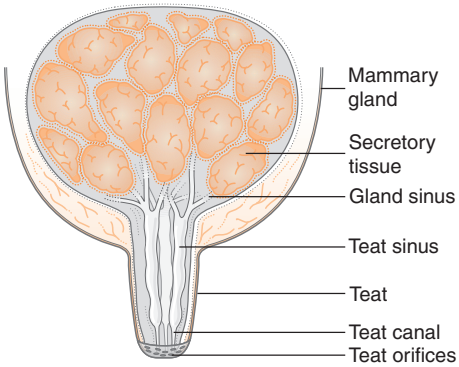
m. hypertrophy normal tissue on palpation but quarter enlarged compared to opposite one of pair.

m. hypoplasia failure of the glands to develop. It is also usually extended to include those udders or individual quarters that do not undergo reconstitution after regression during a dry period.

m. inflammation see **mastitis**.

m. involution regression of mammary tissue to a non-secreting state, with disappearance of much of the epithelial tissue. The

VetBooks.ir



M-12: Mammary gland. From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

process can be induced by the infusion of colchicine into the milk system.

m. mazoplasia an increase in the number of ducts per lobule of mammary gland.

m. neoplasia is rare in food animals and mares. It accounts for approximately 25% of all neoplasms in dogs but is less common in cats. See **mixed** tumor.

m. pustular dermatitis old name for bovine herpes **mammillitis**.

m. secretion just before parturition and for the first week afterwards the secretion is thick, sticky **colostrum**. This is followed by **milk** for the duration of the lactation and superseded in the weeks after drying off by honey-dew, a clear, viscid secretion. The gland may be completely dry for a variable period between lactations.

m. suspensory ligament rupture a condition manifested by separation of the median ligaments (medial laminae) resulting in the glands dropping ventrally. The teats point almost laterally. It is a problem of recently calved cows. Called also dropped udder.

ulcerative m. dermatitis four-smelling erythematous and ulcerative lesions located at the anterior and in the central cleft of the udder of dairy cattle and occasionally between thigh and udder. Unknown etiology but responds to antimicrobial therapy. *Treponema* spp. postulated as the cause. See also **intertrigo**.

m. underdevelopment congenital lack of development of all glands, possibly an inherited defect.

mammatrope see **mammotrope**.

mammectomy [*mə-mek'tə-me*] see **mastectomy**.

mammilla [*mə-mil'ə*] see **mamilla**.

mammillary [*mam'ĭ-lar"e*] pertaining to or resembling a teat or breast.

mammillitis, mamillitis [*mam"ĭ-li'tis*] thelitis; inflammation of the nipple.

bovine herpes m. an infectious ulcerative dermatitis of the teats and udder of cows, caused by bovine herpesvirus 2 (BHV-2). The same virus also causes the Allerton form of lumpy skin disease. Spread between herds may be by insect vector. The lesions are severe and include vesicles, papules, sloughing of skin, scab formation and ulceration.

mammiplasia [*mam"ĭ-pla'zhə*] mammoplasia.

mammiplasty see **mammoplasty**.

mammitis [*mam-i'tis*] see **mastitis**.

mamm(o)- word element. [L.] *breast, mammary gland*.

mammogenesis [*mam"o-jen'ə-sis*] development of the mammary gland.

mammogram [*mam'ə-gram*] a radiograph of the mammary gland.

mammography [*mə-mog'rə-fe*] radiography of the mammary gland with or without injection of an opaque contrast medium into its ducts.

Mammomonogamus [*mam"o-mon"o-ga'mus*] a genus of nematodes in the family Syngamidae. They are parasites of the nasal sinuses and trachea of mammals.

M. auris found in the puma.

M. ierei found in cats, a cause of chronic nasopharyngitis.

M. indicus found in the pharynx of the Indian elephant.

M. laryngeus found in the larynx of cattle, goats, water buffalo and deer, and occasionally in humans.

M. loxodontus in the trachea of the African elephant.

M. mcgaughei found in cats.

M. nasicola found in the nasal cavities of cattle, sheep, goats and deer.

mammoplasia [*mam"o-pla'zhə*] development of mammary tissue.

mammoplasty [*mam'o-plas"te*] plastic surgery of the breast.

mammotomy [*mə-mot'o-me*] see **mastotomy**.

mammotrope one of the acidophils of the adenohypophysis that secretes prolactin.

mammotrophic [*mam"o-tro'fik*] mammotropic.

mammotropic [*mam"o-tro'pik*] having a stimulating effect on the mammary gland.

mammotropin [*mam'o-tro"pin*] see **prolactin**.

mammotrops one of the five types of secretory cells found in the adrenohypophysis; secrete prolactin.

man masculine member (sole) of the genus *Homo*, i.e. *Homo sapiens*.

management technique, practice or science of managing or controlling; the skillful use of resources and time; the specific treatment of a disease or disorder.

m. factors parts of the management program that influence the occurrence and prevalence of disease. They include such things as feeding, breeding program, culling program, genetic selection, disease prevention, cash flow, and capital accessibility.

m. groups livestock grouped according to management parameters, usually age, sex, purpose.

m. history history of a herd or flock which includes all management operations.

manatee members of the genus *Trichechus* which with the dugongs make up the order Sirenia, of sea-cows. They are almost completely aquatic mammals with a large, fish-like body with flippers in front and horizontal tail flukes behind. They can be up to 10 ft long and weigh up to 1200 lb.

Manchester terrier [*man'chəs-tər*] a small (12–22 lb), compact dog with a very short, black coat and mahogany markings on specified areas of the body, but generally on the face and legs. The 'candle-flame' shaped ears are v-shaped and folded over the head, which is long and wedge-shaped, and the tail is short and tapered. A smaller version with erect ears is recognized in the UK as the English Toy Terrier.

Manchester wasting disease [*man'chəs-tər*] see **enzootic** calcinosis.

manchette [*man-shet'*] see **caudal** sheath.

Mancini technique see radial **immunodiffusion**.

Mandalong special cattle a beef breed of cattle produced in Australia by intercrossing Charolais, Chianina, British white, Shorthorn, Brahman.

mandarin duck see ***Aix galericulata***. Called also *Dendronessa galericulata*.

mandatory required by law.

m. continuing education participation in a continuing education program is a prerequisite for continued registration in some countries.

mandelic acid used as a urinary antiseptic in nephritis, pyelitis and cystitis. It must be excreted in the urinary tract unchanged in order to have a bacteriostatic effect; therefore, a strongly acid urine must be maintained during its administration.

mandible [*man'dĭ-bəl*] the horseshoe-shaped bone forming the lower jaw or the two halves of the lower jaw that are united by a fibrous or bony union (the mandibular symphysis). Consists of a horizontal central body, which forms the chin and supports the lower teeth, and two vertical or perpendicular rami, which point upward from the back of the chin on either side and articulate with the temporal bones by their condylar processes. The rami end as coronoid processes to which the temporal muscles attach. . In ruminants and carnivores the mandible is permanently divided into two halves by the mandibular symphysis, a joint that allows some axial rotation that in turn enables the sectorial grinding cheek teeth to engage efficiently.

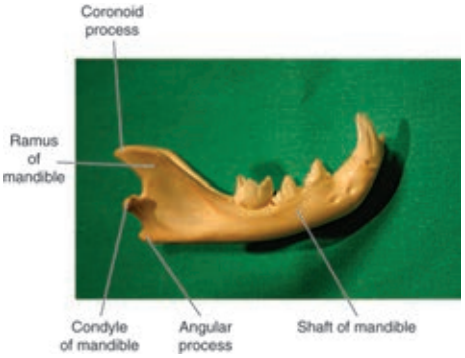
narrow m. see narrow **base**.

swollen m. generally enlarged due to osteodystrophia in horses and pigs; localized enlargement in actinomycosis of jaw in cattle, bone neoplasm.

mandibular [*man-dib'u-lər*] emanating from or pertaining to the mandible.

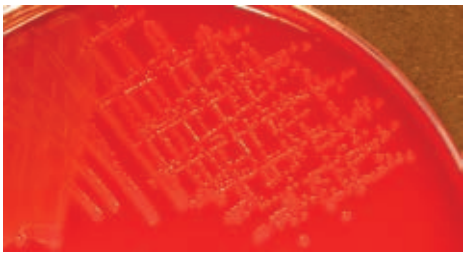
m. arch cartilage an early skeletal element in the embryonic viscerocranium, the cartilage eventually becomes the mandible.

VetBooks.ir



M-13: Cat mandible, right lateral view. From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

m. duct the duct of the mandibular salivary gland that runs just ventral to the floor of the mouth close to the frenulum of the tongue to open close to the sublingual caruncle.
m. enlargement causes a characteristic lateral silhouette in animals similar to that of bottle jaw. It is a common sign in osteodystrophia fibrosa in horses and pigs, craniomandibular **osteopathy** in dogs, and lymphoma and actinomycosis of cattle.
m. gland a salivary gland situated behind the angle of the jaw, sometimes partly covered by the parotid salivary gland and the mandible.
m. lymph node one of a cluster of nodes grouped around the facial vein at the angle of the jaw.
m. nerve block see mandibular **block**.
m. neuritis acute onset, idiopathic, transient paralysis of the motor fibers of the mandibular branch of the trigeminal nerve. Seen in mature large breed dogs. Clinical signs include paralysis of the muscles of mastication, with a dropped jaw that cannot be fully closed voluntarily, difficulty eating and drinking, atrophy of the temporal muscles, ptosis and occasionally Horner's syndrome. The condition is temporary and usually resolves within 4-6 weeks, but occasionally persists with atrophy of the temporal, masseter, pterygoid, rostral digastricus and myloyhoid muscles. The cause is unknown, although an autoimmune etiology has been proposed.
m. osteodystrophy one of the regions of the body where a generalized **osteodystrophy** is most readily observable. The ventral edge of each ramus is thickened and the intermandibular space reduced.
m. prognathism an abnormal protrusion of the mandible so that there is difficulty in prehending and masticating food, especially in animals at pasture. The defect is inherited in some breeds of cattle and also occurs as part of a more general range of defects, e.g. in achondroplastic dwarf cattle. Called also undershot. See also **malocclusion**.
mandibulectomy [*man-dib"u-lek'tə-me*] excision of the mandible.
mandrel [*man'drəl*] a farrier's tool used in fitting frost nails to shoes.
mandrill (*Mandrillus sphinx*) a large Old World monkey, closely related to baboons and drills. They are the most brutal-looking of the monkeys, with a red and blue face and blue to purple genital regions and buttocks. They are an endangered species.
mandrin [*man'drin*] a metal guide for a flexible catheter.
mane the long coarse hair at the dorsal border of the neck and terminating at the poll in the forelock. Present in the horse and other Equidae. Similar gatherings of coarse hairs are present in the giraffe, gnu, various antelope, cheetah and lion. Called also juba.
buzzed-off m. broken or sheared hairs in the mane, causing it to be irregularly shortened; seen with self-trauma in response to pruritic skin disease such as *Culicoides* hypersensitivity.
m. and tail dystrophy short, sparse, brittle hair in the mane and tail of horses; the cause is unknown.
hogged m. a horse's mane from which all of the hair has been removed.
roached m. the mane is clipped but a central narrow fringe of erect short hairs is left, like the plume on a Roman soldier's helmet.
maneb an organic compound used in agriculture as a fungicide; appears to have minimal toxicity.
mangabeys (*Cercocebus* spp.) dark-colored, long-snouted Old World monkeys with a wide distribution and common as zoo specimens.
manganese (Mn) [*mang'gə-nēs*] a chemical element, atomic number 25, atomic weight 54.938. See Table 4. Its salts occur in the body tissue in very small amounts and serve as activators of liver arginase and other enzymes.
m. nutritional deficiency in cattle, sheep and pigs is thought to cause infertility and skeletal deformities, including enlarged joints, pain, knuckling at the fetlocks and twisting of the legs. It is a rare deficiency in dogs and cats.
mange [*mānj*] a skin disease of domestic animals, caused by a number of genera of mites and described under those headings. See **chorioptic mange**, **demodectic mange**, **notoedric mange**, **otodectic mange**, **psoroptic mange** and **sarcoptic mange**.
auricular m. see ear mange (below).
body m. **psoroptic mange**.
ear m. called also auricular mange; see **otodectic mange**, **psoroptic mange**.
follicular m. **demodectic mange**.
fox m. see **sarcoptic mange**.
head m. **notoedric mange**.
incognito m. a form of sarcoptic mange, usually in well-groomed dogs, in which lesions are virtually absent, but there is still intense pruritus.
leg m. **chorioptic mange**.
notoedric m. see **notoedric mange**.
otodectic m. see **otodectic mange**.
red m. synonym for **sarcoptic mange** in farm animals and **demodectic mange** in dogs.
scrotal m. chorioptic mange.
summer m. see **onchocercosis**.
tail m. see **chorioptic mange**.
ursicoptic m. pruritus and alopecia caused by a sarcoptiform mite (*Ursicoptes americanus*) found in the follicular sinuses of bears.
mangel-wurzel see **mangels**.
mangels *Beta vulgaris*; called also mangel-wurzel.
manger a receptacle, usually of wood or iron, for the feeding of grain and chopped roughage to farm and racing animals.
mangolds see ***Beta vulgaris***.
mania [*ma'ne-ə*] a disordered mental state of excitement. Affected animals act in bizarre ways and appear to be unaware of their surroundings. Their actions include licking and chewing of foreign materials, abnormalities of voice, apparent blindness, aggression and lack of response to normal stimuli.
maniac [*ma'ne-ak*] one affected with mania.
manica flexoria a tubular sheath on the palmar aspect of the metacarpophalangeal region of the front paw of carnivores, through which the tendons of the deep digital flexor muscle pass.
manicoba *Manihot carthagensis*.
Manihot a plant genus in the Euphorbiaceae family. Includes *M. esculenta* (*M. dulcis, M. utilissima*, cassava, manioc, tapioca), *M. carthagensis* (manicoba), *M. tripartita*. The tuber and foliage of *M. esculenta* are used for food but contain large amounts of cyanogenetic glycosides and can cause poisoning in animals if fed unprocessed.
manioc [*man'e-ok*] see ***Manihot esculenta***.
manipulation [*mə-nip"u-la'shən*] skillful or dextrous treatment by the hands. In physical therapy, the forceful passive movement of a joint beyond its active limit of motion.
Manley ventilator a ventilator suitable for anesthetizing small animals. Operated by the gas flow from the anesthetic apparatus.
mannagrass see ***Glyceria***.
Mannheimia a genus of gram-negative, facultatively anaerobic, rod-shaped bacteria in the family *Pasteurellaceae*. Formerly members of the genus *Pasteurella*.
M. glucosida was serotype 11 of *P. haemolytica* biotype A; has low virulence and is largely an opportunistic pathogen of sheep.
M. granulomatis associated with **lechiguana**, a focal proliferative fibrogranulomatous panniculitis in cattle.
M. haemolytica (*P. haemolytica* biotype A); causes bovine pneumonic **pasteurellosis** and pneumonic and septicemic **pasteurellosis** in sheep, as well as pneumonia in wild bighorn sheep. A cause of septicemic pasteurellosis in sucking lambs. Viral infection, especially by parainfluenza virus 3, commonly predisposes



M-14: *Mannheimia haemolytica* colonies on blood agar.
From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, 2004.

VetBooks.ir

animals to disease. A common cause of mastitis in sheep and occasional cause of acute mastitis in cattle.

M. varigena associated with septicemia, pneumonia and abscesses in pigs, and septicemia, pneumonia and mastitis in cattle.

M. ruminalis has not been associated with disease.

Manning eye shield see protective **eye** shield.

mannitol [*man'ĭ-tol*] a sugar alcohol occurring widely in nature, especially in fungi; utilization of mannitol is used in identification of some bacteria; used in diagnostic tests of kidney function and as an osmotic diuretic, particularly in the treatment of cerebral edema and oliguric acute renal failure.

mannose [*man'ōs*] an aldohexose, a monosaccharide produced from mannitol by oxidation.

mannosidase deficiency [*mə-nōsĭ'-dās*] see **mannosidosis**.

mannosidosis [*man"o-sĭ-do'sis*] an inborn error of metabolism, in which inactivity or an inherited deficiency of mannosidase results in lysosomal accumulation of mannose-rich substrates. Deficiency of the α-isomer (α-mannosidosis) is inherited in Aberdeen Angus, Murray Grey, Simmental, Holstein and Galloway calves as an autosomal recessive trait, and the resulting disease is of economic importance. From several months of age, affected calves show ataxia, head tremor, aggression, and finally paralysis. A similar disease has been reported in cats. Deficiency of the β-isomer is inherited, also as an autosomal recessive trait, in Nubian goats and Saler calves, causing neurological deficits and tremors from birth. There are also skeletal abnormalities. Most breed societies offer testing programs.

acquired m. caused by ingestion of ***Astragalus, Oxytropis*** and ***Swainsona*** spp., which contain alkaloids that inhibit α-mannosidase activity. Called also locoweed poisoning.

manometer [*mə-nom'ə-tər*] an instrument for ascertaining the pressure of gases or liquids, particularly blood pressure. See also **sphygmomanometer**.

aneroid m. provides direct measurement of mean arterial blood pressure through a catheter placed in a peripheral artery.

manometry [*mə-nom'ə-tre*] technique of using a manometer and interpreting the result.

esophageal m. a method of recording pressures within the esophagus, particularly during the passage of a food bolus.

Manson's eyeworm [*man'sən*] see ***Oxyspirura mansoni***.

Mansonella [*man"sən-el'ə*] a genus of nematode parasites of the superfamily Filaroidea transmitted by *Culicoides* and *Simulium* spp.

M. ozzardi a species found in the mesentery and visceral fat of humans in Central and South America; suspected sightings also in domestic animals.

Mansonia [*mən-so'ne-ə*] a genus of mosquitoes in the family Culicidae and vectors of *Dirofilaria immitis* of dogs and the virus of Rift Valley fever in all species. Now called *Taeniorhynchus* spp.

Mansonia altissima [*mən-so'ne-ə*] a tree in the family Sterculiaceae. Animals kept on its shavings as litter may abort and develop oral and cutaneous ulcers, diarrhea and death. No toxin has been identified. Called also African redwood.

Mantel–Haenszl technique [*man'təl*] an odds ratio named after N. Mantel and W. Haenszl, modern day epidemiologists who devised the method.

mantle [*man'təl*] 1. an enveloping structure or layer, especially the brain mantle, or pallium. 2. see **frilled**.

m. zone an outer region surrounding germinal centers in the cortex of lymph nodes.

Mantoux test [*mahn-too'*] a tuberculin skin test used in humans to detect prior exposure to *Mycobacterium* spp.

manubrium [*mə-noo'bre-əm*] pl. *manubria* [L.] 1. the most cranial portion of the sternum. 2. the largest process of the malleus, giving attachment to the tendon of the tensor muscle of the tympanum.

manure the dung of farm animals used as replenishment for the ground.

m. disposal has become a major problem to animal farming in urban areas. Methods have been devised to avoid labor involvement by the use of pits under animal accommodation, or by discharging onto pasture or into evaporative lagoons by use of a slurry pushed through a hose. Housing animals on litter and rapid composting of the litter has advantages.

m. management includes collection, storage, fly and odor control, avoidance of environmental pollution, avoiding soiling of cow's hair and udder, bedding supply and distribution, maintaining good footage.

m. pit gas poisoning large quantities of hydrogen sulfide gas are produced in pits and tanks in which animal manure is undergoing biological degradation. If the contents of the pit are stirred violently to facilitate emptying, the gas may be released into the atmosphere in a high concentration, and if the area is enclosed, poisoning of animals and humans can occur.

m. solids the solid material feces, urine and other effluent that is separated by settling. May be applied to the farm's land, but commonly is composted and sold as garden fertilizer and compost.

manus [*ma'nəs*] pl. *manus* [L.] hand, i.e. the distal part of the forelimb made up of carpus, metacarpus and digits.

Manx a shorthaired, medium-sized cat with long hindlegs, prominent hindquarters and some degree of taillessness which can range from absolute, with only a hollow at the end of the spine ('rumpies'), to a short, immobile tail only a few coccygeal vertebrae long and not projecting above the back ('rumpyriser'), to one longer, mobile, but often kinked or otherwise deformed ('stumpy'). Occasionally a normal looking, but abnormally short, tail is produced ('longie'). The Manx gene which is dominant is often associated with other deformities of the lower gastrointestinal tract, such as atresia ani, or spine, such as spina bifida, and many Manx have unusual hindleg gaits as a result. All Manx are heterozygotes, as the trait is lethal, prenatally, in the homozygous state. The usual breeding is Manx to normal, to avoid such losses, but Manx litters are normally very small. The breed is also affected by a hereditary corneal edema.

M. virus a strain of calicivirus, isolated from and named after a Manx cat, at one time incriminated in the etiology of the feline lower urinary tract disease; its significance is unclear.

Manx Loaghtan breed of sheep found on the Isle of Man and descended from primitive sheep. A horned breed with four horns being preferred.

manyplies [*men'ĭ-plīz"*] omasum.

MAO monoamine oxidase.

MAP 1. magnesium-ammonium-phosphate; a type of **urolith**. 2. microtubule-associated protein. See **microtubule**.

map distance, map unit the amount of recombination between two genes expressed as a percentage. See also **centimorgan**.

maple common name for trees and shrubs in the genus *Acer*. The national tree of Canada.

red m. *Acer rubrum*.

swamp m. *Acer rubrum*.

M-15: Manx Loaghtan.

maple syrup urine disease [*ma'pəl*] an autosomal recessive inherited disease of polled Hereford and Shorthorn cattle and humans, in which there is a deficient decarboxylation of branched-chain α-ketoacids derived from several amino acids. It is marked clinically by mental and physical retardation, feeding difficulties and a characteristic odor of the urine resembling burnt sugar.

Mapleson classification a scheme for categorizing anesthetic breathing circuits, based on the position of the breathing bag, the fresh gas flow and the patient. See also Mapleson **circuit**.

mapoon see ***Morinda reticulata***.

mapping [*map'ing*] see **genetic** map.

maps [*maps*] an important feature of epidemiological investigations. Maps with special features suited to data analysis are grid, **isodemic**, **isopleth** and **spot** maps.

grid m. maps marked by a grid of numbered intersecting parallel lines making it possible to identify particular locations numerically.

maranguey see ***Zamia***.

marasmus [*mə-raz'məs*] a form of protein-calorie malnutrition characterized by growth retardation and wasting of subcutaneous fat and muscle, but usually with retention of appetite and mental alertness. See **cobalt** nutritional deficiency.

marathon races races for horses. See also **endurance rides**.

marble bone disease see **osteopetrosis**.

marble spleen disease a disease of pheasants and a similar disease of chickens and turkeys which is caused by group II avian adenovirus and characterized by the postmortem finding of a marble-like mottling and enlargement of the spleen.

marbling 1. the presence of different stages of congestion and necrosis in adjoining lobules of an organ, giving a gross effect of a pattern similar to that of marble. 2. the desirable intermixing of fat and muscle fibers in good beef produced by feeding a high energy diet when the animal is still young.

marbofloxacin a fluoroquinolone antibiotic with wide antibacterial activity; used orally and topically.

Marburg disease a severe, often fatal, viral hemorrhagic fever of humans first reported in Marburg, Germany, among laboratory workers exposed to African green monkeys. The virus is a member of the family *Filoviridae*.

marc [*mahrk*] grape pulp used as animal feed. When dried, it is called pomace.

Marcenac incision a low flank grid incision for entry to the equine abdomen for ovariectomy or cesarean section.

Marche a gray Italian breed of beef cattle. Called also Marchigiana.

Marchigiana see **Marche**.

mare 1. a female horse, 4 years or older. 2. in Great Britain, also applied to a female donkey (jenny).

mare's nest something thought to be an extraordinary discovery but proving to be a delusion or hoax.

mare reproductive loss syndrome is characterized by regional epidemics of early fetal loss, late term abortion and foal loss in eastern USA, particularly Kentucky, in certain years. There are inflammatory changes in the amnion and amniotic portion of the umbilical cord. The syndrome is associated epidemiologically with exposure to the Eastern tent **caterpillar** and has been experimentally reproduced by gavage of pregnant mares with the cuticle of the caterpillar larvae. Cases of fibrinous pericarditis and unilateral uveitis in horses have been temporally and geographically clustered with the occurrence of the mare reporductive loss syndrome.

Marek's disease [*mah'rek*] a transmissible disease of chickens caused by an alphaherpesvirus that carries some retrovirus oncogenes; characterized by a tumorous, mononuclear infiltration of peripheral nerves, causing limb paralysis. Infiltration of other organs and tissues is common, especially of the iris, causing blindness, and of the ovaries. Vaccination is highly effective and without it serious outbreaks with heavy losses can occur. A disease notifiable to the OIE (see Table 22). Called also neural lymphomatosis, neurolymphomatosis gallinarum.

Marek's tumor-specific antigen [*mah'rek*] see Marek's tumor-specific **antigen**.

Maremma sheepdog a large (80–100 lb) sturdy dog with a thick, long white coat which forms a collar on the neck. The small, v-shaped ears are folded over and the tail is long and carried low. The breed has gained popularity as livestock guardians, living with herds or flocks of goats, sheep and camelids to guard against predators.

marestail see ***Equisetum***.

Marfan's syndrome [*mahr-fah'*] congenital defect in calves comparable to an inherited human disorder in which there is enlargement of the aortic root associated with a loud systolic murmur on the left side, long, thin limbs, joint laxity, lenticular displacement and opacity.

Margaropus a genus of ticks in the family Ixodidae, similar physically to *Boophilus* spp.

M. reidi found on giraffes.

M. winthemi found on horses, sometimes cattle; called also Argentine tick.

margay (*Leopardus wiedii*) a member of the family Felidae, native to Central and South America, about the size of a domestic cat and resembling a small ocelot. They are sometimes kept as pets.

margin [*mahr'jin*] border, margin or edge.

antitragal m. caudal edge of the ear.

central m. the inner margin of the sole of the horse's hoof, occupied by the bars and the apex of the frog.

coronal m. proximal border of the hoof where the horn meets the skin.

epididymal m. the attached border of the testis where the epididymis is attached.

free m. (margo liber) the unattached border of the testis.

interalveolar m. the ridge along the alveolar process of the maxillae and mandibles between the teeth.

mesometric m. the border of the uterus to which the broad ligament is attached.

parietal m. outer margin of the sole of the hoof, connected to the wall of the hoof by the white line.

plicated m. the raised cuticular ridge that separates the esophageal part of the stomach in the horse from the glandular part.

pupillary m. the free edge of the iris, the edge of the pupil.

safety m. 1. the ratio between the lethal dose for 1% of the population and the effective dose for 99% of the population. Used to describe the toxicity of a pharmaceutical agent. 2. estimate of the ratio of the 'no-observed-effect' level (NOEL) to the level accepted in regulations relating to epidemiology and disease control. Called also margin of safety.

tragal m. (margo tragicus) anteromedial edge of the ear.

marginal [*mahr'ji-nəl*] pertaining to margin.

m. folds folds of endothelium found in lymphatics which provide a valve-like effect, only permitting ingress only of fluid.

neural tube m. layer on the external surface of the embryonal neural tube; houses axonal processes of developing neurons.

margination [*mahr"ji-na'shən*] accumulation and adhesion of leukocytes to the epithelial cells of blood vessel walls at the site of injury in the early stages of inflammation.

marginoplasty [*mahr-jin'ə-plas-te*] surgical restoration of a border, as of the eyelid.

margo [*mahr'go*] pl. *margines* [L.] border; margin. See also **margin**.

m. plicatus the conspicuous folded edge of the mucous membrane between the large non-glandular portion of the horse's stomach and the dorsally located glandular portion.

marguerite see ***Chrysanthemum***.

mariculture marine aquaculture.

Marie–Bamberger disease [*mah-re'*] see hypertrophic **osteopathy**.

Marie's disease [*mah-re'*] see hypertrophic **osteopathy**.

marijuana, marihuana [*mar"i-hwah'nə*] a preparation of the leaves and flowering tops of *Cannabis sativa*, the hemp plant, which contains a number of pharmacologically active principles (cannabinoids). See also **cannabis**.

marine of or pertaining to the sea.

marine biologist specialist in the biology of marine life.

marine flexibacter disease erosive skin and gill disease of marine fish caused by *Tenacibaculum maritimum*.

marine orders the laws governing the conduct of sea travel and transport on board ship. They are relevant to the sea transport of animals.

mark to identify an animal with a mark; may be temporary as with a color crayon or color spray, or permanent as with a hot brand for an ownership mark.

marker [*mahrk'ər*] a visual or electronic signal that permits identification and therefore sorting of individual items from a group.

m. animals males or teasers wearing chin-ball or siresine harness so that females mounted are marked by crayon or paint.

m. crayon a color marker in crayon or cake form used to temporarily identify livestock by marking them on the hide or the tip of the fleece. Called also paint stick, raddle.

VetBooks.ir

m. genes genes with a known location on a chromosome and an obvious phenotype which are used as reference points when mapping other genes.
histochemical m. marking of cells or tissues based on a chemical identification of the contents; the location of specific chemical substances in particular locations is marked by the installation of an electronic or color signal.
markhor (*Capra falconeri*) a goat-antelope, native to the Himalayas, distinguished by long, shaggy hair on the neck and chest, and very thick, corkscrew horns. Hunted for their trophy horns, they are an endangered species.
marking 1. docking of tails in lambs and, where appropriate, castration. 2. a form of olfactory communication or territorial marking by dogs and cats with urine or feces. Dogs deliberately defecate against a vertical surface such as tree, post, or bush. Cats uncharacteristically leave their feces uncovered. See also urine **spraying**. 3. a color marking on a horse's coat.
Markov chain, Markov model a mathematical model that makes it possible to study complex systems by establishing a state of the system and then effecting a transition to a new state, such a transition being dependent only on the values of the current state, and not dependent on the previous history of the system up to that point.
Marmite disease affected pigs look as if they have been smeared with dark brown, yeast extract spread known as Marmite. See **exudative** epidermitis.
marmoset very small New World monkey in several genera in the family Callitrichidae; they are fruit-eaters, arboreal and diurnal. Small and endearing, they are popular as pets.
common m. (*Callithrix jacchus*) native to the Brazilian rainforest, they are distinguished by the showy white tufts of hair around the ears and transverse stripes on the bushy tail.
marmot [*mahr'mot*] a member of the squirrel family Sciuridae. Heavy-set, burrowing animals, red-gray in color with fine fur and a short tail. Includes the **ground-hog**.
maropitant a neurokinin-1 receptor antagonist; used in dogs as an antiemetic, particularly in association with cancer chemotherapy and to prevent motion sickness .
Maroteaux–Lamy syndrome [*mah-ro-to' lah-me'*] mucopolysaccharidosis VI.
Marree disease *Pimelea simplex* subsp. *simplex* poisoning in north-eastern South Australia. Called also St. George disease.
marrow [*mar'o*] see **bone marrow**.
Marsdenia [*mahrz-de'ne-ə*] plant genus in the family Asclepiadaceae; toxins are probably pregnane glycosides; liana-type vines with milky sap. The leaves are unpalatable but if eaten cause signs of unsteadiness, collapse, convulsions, dyspnea and, in pigs, vomiting. Death follows within a few hours. Include *M. rostrata* (milk vine), *M. floribunda* (*Stephanotis floribunda*). See also ***Cynanchum***, ***Sarcostemma***.
Marseilles fever boutonneuse fever.
marsh [*mahrsh*] pertaining to or emanating from swamplands, marshes and bogs. Archetypal denizens are leeches, mangroves, baying hounds and bunyips.
m. buck see ***Situtunga***.
m. marigold see ***Caltha palustris***.
Marshallagia a genus of intestinal worms in the family Trichostrongylidae; not known to have significant pathogenicity.
M. dentispicularis found in sheep.
M. marshalli found in the abomasum of sheep, goats, antelopes, bighorn sheep and the like.
M. mongolica found in the abomasum of sheep, goat and camel.
M. orientalis found in hillgoats (*Capra sibirica*).
M. schikhobalovi found in sheep.
marshbuck see **sitatunga**.
marshmallow [*mahrsh'mel"o*] see **Malva** *parviflora*, **Althaea officinalis**.
Marsilea drummondii Australian aquatic fern; contains a thiaminase and contributes to the etiology of **polioencephalomalacia** in sheep, horses and occasionally cattle. Called also nardoo.
marsupial [*mahr-soo'pe-əl*] an animal member of the order Marsupiala, infraclass Metatheria, which produces viviparous young by hatching eggs internally. The bean-sized fetus is transferred to the characteristic marsupial pouch on the anterior abdomen with its mammary gland and reared there. Two monotremes, the platypus and the spiny anteater, lay and hatch eggs and rear the young, the latter in rudimentary marsupial pouches.
carnivorous m. see **dasyurids**.
marsupialization [*mahr-soo"pe-əl-ĭ-za'shən*] conversion of a closed cavity, such as an abscess or cyst, into an open pouch, by incising it and suturing the edges of its wall to the edges of the wound. The urinary bladder and prostatic cysts are treated similarly.
marsupium [*mahr-soo'pe-əm*] pl. *marsupia* [L.] pouch; the scrotum.
Marteilia a haplosporidium protozoan parasite. Includes *M. refringens* (in European flat oysters), *M. sydneyi* (causes QX disease in Sydney rock oysters). See also **marteiliosis**.
marteiliosis disease of the digestive gland of molluscs, caused by protozoan parasite *Marteilia* spp. Infection with *Marteilia refringens* is a disease notifiable to the OIE (see Table 22).
Martina Franca ass an Italian black donkey with paler underline.
Martindale [*mar'tin-dāl*] the Extra Pharmacopoeia; published in 30 editions over a period of 110 years by the Royal Pharmaceutical Society of Great Britain; contains over 5000 monographs on substances used in pharmacy and medicine.
Martinez corneal dissector surgical instrument designed to allow separation of superficial and deeper layers of the corneal stroma along the collagen lamellae.
martingale [*mar'tin-gāl*] a leather strap running from the girth to the reins or the noseband for the purpose of restricting the movements of the horse's head. There are many designs. The common ones are the standing martingale, which is attached to the noseband, and the running martingale, which is divided in two, each of which has a ring through which one of the reins passes.
marupa *Simarouba amara*
mAs, mA·s milliampere-second.
Mascagnia genus of South American plants in the family Malpighiaceae; contains an unidentified toxin which causes sudden death, incoordination, recumbency, convulsions, dyspnea and cardiomyopathy. Includes *M. pubiflora* (timbo), *M. rigida* (tingui).
masculine [*mas'ku-lin*] pertaining to the male sex.
masculinity [*mas"ku-lin'ĭ-te*] the possession of masculine qualities.
masculinization [*mas"ku-lin-ĭ-za'shən*] the normal induction or development of male sex characteristics in the male; also, the induction or development of male secondary sex characteristics in the female.
masculinize [*mas'ku-lĭ-nīz"*] to produce masculine qualities in the female or in the sexually maturing male.
masculinized females see **virilism**.
maser [*ma'zər*] an acronym for *M*icrowave *A*mplification by *S*timulated *E*mission of *R*adiation; a device that produces an extremely intense, small and nearly nondivergent beam of monochromatic radiation in the microwave region, with all the waves in phase.
mash [*mash*] dry food moistened with a little water. See also **bran** mash.
mask [*mask*] 1. to cover or conceal, as the masking of the nature of a disorder by the presence of unassociated signs, organisms, etc.; in audiometry, to obscure or diminish a sound by the presence of another sound of different frequency. 2. an appliance for shading, protecting, or medicating the face, e.g. a surgical mask. 3. the dark shaded markings on the face of some dog and cat breeds.
face m. used in the semi-open method of anesthesia which ensures that all of the inspired air and gas passes through a mask and is exited to the atmosphere. Several patent masks are available for use in animals, e.g. Cox, **Schimmelbush** and **Venturi**.
masking 1. using a mask for administering a gaseous anesthetic. 2. covering part of an X-ray film, usually with lead, while the other part is being exposed. 3. see **blinding**.
m. down the use of a mask for inducing general anesthesia, using a gaseous anesthetic, followed by intubation.

M-16: Face mask for supplemental oxygen. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

VetBooks.ir

M-17: Mason-meta splint.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. Mosby, 2011.

M-18: Mast cell tumor on the hind leg of a dog.
From Raskin RE, Meyer D, Canine and Feline Cytology, 2nd Edition. Saunders, 2010.

Mason-meta splint spoon-shaped aluminum splint, curved lengthwise so as to fit around bones and limbs; similar extensions can be added on to the main splint.

Mason–Pfizer monkey virus a type D retrovirus isolated from a mammary carcinoma in a macaque.

mass 1. a lump or collection of cohering particles. 2. that characteristic of matter which gives it inertia.

m.–action ratios the ratio of substrate to product, where the predominance of one, usually the substrate, over the other thermodynamically favors a particular direction for a reaction.

inner cell m. an internal cluster of cells at the embryonic pole of the blastocyst which develops into the body of the embryo.

lean body m. that part of the body including all its components except neutral storage lipid; in essence, the fat-free mass of the body.

m. medication (or immunization, or treatment, or prophylaxis, or testing, or screening) application of the procedure to all of the animals in the population, which may be as small as a herd or as large as a national herd. This sort of strategy has been used extensively and for many years in the control of diseases of animals, and has been the principal reason for the dramatic virtual eradication of the major plagues in many countries. The unintelligent extension of the strategy to the control of wastage caused by endemic disease has contributed most to the problem of residues of antibacterial drugs in the human food chain and antimicrobial resistance. See also mass **medication**.

m. reflex reflex actions by all the body parts controlled by the part of the spinal cord which has been injured.

thalamic intermediate m. see **interthalamic adhesion**.

massa [*mas'ə*] pl. *massae* [L.] mass (1).

massage [*mə-sahzh'*] systematic therapeutic stroking or kneading of the body or part.

acupressure m. massage therapy based on the Chinese meridian theory in which pressure is applied to acupuncture points to keep energy channels open.

cardiac m. intermittent compression of the heart by pressure applied through the chest wall (closed cardiac massage) or directly to the heart through an opening in the chest wall (open cardiac massage). See also **cardiac** massage.

cold m. uses ice to massage to skin. Vasoconstriction and delayed nerve conduction in deep tissues raises the pain threshold.

friction m. applied across the direction of underlying fibers to promote blood flow and prevent adhesions.

genitalic m. of the seminal vesicles in bulls or the penis in male dogs for the purpose of collecting semen, of the clitoris in cows and goat does for the collection of urine.

m. therapy a technique of physical therapy in which hands and body are used to massage soft tissues. Its objective is to improve circulation and muscle function, release scar tissue and produce relaxation.

trigger m. massage techniques are centered on areas of maximal tenderness in muscle tissue, detectable as taut bands. Called also myotherapy.

vibratory m. massage by rapidly repeated light percussion with a vibrating hammer or sound.

masseter [*mə-se'tər*] see masseter **muscle** and Table 13.1H.

massotherapy [*mas"o-ther'ə-pe*] treatment of disease by massage. See **massage** therapy.

mast cell a cell derived from a committed stem cell in the bone marrow, it elaborates granules that contain histamine, heparin and, in the rat and mouse, serotonin. It plays an important role in acute hypersensitivity (type I) reactions such as atopy and anaphylaxis. Finding differentiated mast cells in the blood of animals is abnormal and usually indicative of disease. See **mastocytosis**, mast cell **leukemia**.

m. c. tumor a neoplasm derived from mast cells that occurs in the skin of most species, but most commonly in dogs. It may also arise in the alimentary tract. The release of histamine or other vasoactive substances may be associated with gastroduodenal ulceration. These tumors are always malignant, but clinical outcome depends on the grade of malignancy as determined histologically. See also **mastocytosis**.

mastadenitis [*mas"tad-ə-ni'tis*] inflammation of a mammary gland; see also **mastitis**.

Mastadenovirus [*mast-ad'ə-no-vi"rəs*] one of the four genera in the family ***Adenoviridae***, the members of which infect mammals.

mastatrophy [*mas-tat'rə-fe*] atrophy of the mammary gland.

mastectomy [*mas-tek'tə-me*] surgical removal of mammary gland tissue. In dogs and cats, usually performed to treat malignant tumors, while in cows, does and ewes it is most used as an amputation of a gangrenous quarter which will otherwise kill the animal.

master [*mas'tər*] superior, overseer.

m. problem list see problem-oriented **medical** record.

masterate master's degree.

mastication [*mas"tĭ-ka'shən*] the act of chewing. Abnormalities of this function commonly occur and often have diagnostic significance. Painful teeth may cause slow, intermittent or one-sided eating. Dropping of the food from the mouth during eating may have a similar cause. Periodic stopping eating for long periods when there is food in the mouth is a common sign in encephalitis and encephalopathy. See also **cud** dropping, **quidding**, **tobacco-chewers**.

masticatory [*mas'tĭ-kə-tor"e*] 1. pertaining to mastication. 2. a substance to be chewed, but not swallowed.

m. muscles include the masseter, temporal, pterygoids and digastric muscles.

m. muscle myositis see masticatory muscle **myositis**.

Mastiff a massive, very large (150–200 lb), muscular dog with very short fawn, apricot or brindle coat. The ears are small and folded over the broad head, the muzzle is blunt and dark colored, and the tail is tapered. Called also Old English mastiff. A large number of other recognized and unrecognized breeds are of the mastiff type and some have mastiff in their name, including American mastiff, **Bull mastiff**, German mastiff (**Great Dane**), **Neopolitan mastiff**, **Tibetan mastiff**, and French mastiff (**Dogue de Bordeaux**).

Mastigophora [*mas"tĭ-gof'ə-rə*] a subphylum of protozoa, including all those that have one or more flagella throughout most of their life cycle and a simple, centrally located nucleus; many are parasitic in invertebrates and vertebrates. Included are the Kinetoplastida (e.g. *Trypanosoma*), Diplomonadina (e.g. *Hexamita*) and Trichomonadida (e.g. *Trichomonas*).

mastigote [*mas'tĭ-gōt*] any member of the subphylum Mastigophora.

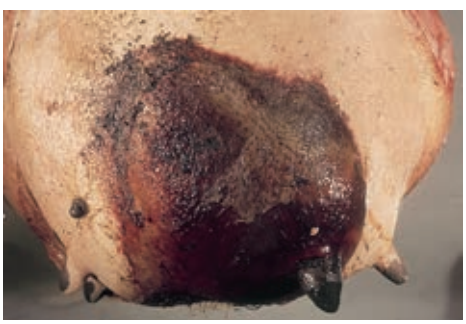
mastitic [*mas'tĭ-ik*] emanating from or pertaining to mastitis.

mastitis [*mas-ti'tis*] inflammation of the mammary gland. Although it may be caused by chemical or physical agents, the causes are almost entirely infectious, and mostly bacterial. Clinical signs vary with the severity of the disease, but include pain, heat and swelling of the affected quarter or half or gland, and abnormality of the milk, either as clots or flakes, and wateriness of the liquid phase. Subclinical mastitis is the most important form and is diagnosed on the basis of bacteriological examination or by indirect tests, principally based on the cell count of the milk. Called also mammitis, garget. See also blue **breast**.

VetBooks.ir

M-19: Enlargement of the mammary gland in a mare with mastitis.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

acute m. acute swelling of the mammary gland accompanied by heat and pain, together with grossly abnormal milk. There may be a slight systemic reaction.
black m. severe, usually peracute clinical mastitis in which one or more quarters become gangrenous. Usually caused by *Staphylococcus aureus*.
botryomycotic m. persistent local infection, usually by *Staphylococcus aureus*, causes granulomas and the collection of pus within them to produce a botryomycotic effect. See also **coliform** mastitis.
coliform m. caused by *Escherichia coli, Klebsiella* spp. or *Enterobacter aerogenes*. See **coliform** mastitis.
contagious m. caused by those bacteria which are resident in bovine udders or on teat skin and are spread primarily during milking. *Staphylococcus aureus*, *Streptococcus agalactiae*, *S. dysgalactiae* are the common causes. Called also 'cow-associated' mastitis.
m. control aimed at reducing new infection rate and the static quarter infection rate; based on dry period treatment, culling or treating infected animals, teat disinfection, **teat cup liner** sanitization, and milking machine maintenance and correct use.
direct capture ELISA m. test measures polymorphonuclear antigens in milk sample as an indication of elevated milk cell counts and therefore presence of mastitis.
discarding m. milk milk from infected quarters flushed to waste, not fed to calves.
m. dry cow treatment intramammary infusion with a long-acting formulation, at the time of the last milking for the lactation; may be blanket (all cows) or selective (infected quarters only). See also **dry period** treatment.
environmental m. caused by those bacteria which are usually resident in the environment of the cow, especially in the feces, bedding or water. *Escherichia coli*, *Streptococcus uberis* and *Klebsiella* spp. are the common infections. See also coliform **mastitis**.
gangrenous m. the teat and much of the quarter are black and cold, the secretion is thin blood-stained fluid and there is a severe systemic reaction. The quarter is lost, and the cow may very well die.
granulomatous m. see botryomycotic mastitis (above).
m. infection rate rate of quarters or cows infected with pathogenic bacteria or showing clinical mastitis or, a much more commonly used index nowadays, the percentage of cows with a milk cell count in excess of a stated norm.



M-20: Acute necrotizing mastitis.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

NIRD m. control program the basis of all modern mastitis control programs. Named after the National Institute for Research in Dairying (now called the Animal Grassland Research Institute) at Reading, UK, which introduced dry period treatment and teat dipping into mastitis control. Highly effective in reducing the prevalence of contagious mastitis pathogens such as *Streptococcus agalactiae, Staphylococcus aureus*. Called also 'five point program'.
peracute m. as for acute mastitis, but there is also a severe systemic reaction and the cow may die of the attending septicemia.
pyogranulomatous m. a chronic disease in cattle caused by *Nocardia asteroides*, also occurs in sows caused by *Actinomyces suis*.
recurrent m. clinical mastitis recurring in the same quarter due usually to residual foci of infection in tissue where udder infusion therapy does not penetrate; caused usually by infection with coagulase-positive *Staphylococcus aureus*.
selective dry-period m. therapy application of dry period intramammary therapy only to those cows known or suspected of being infected with organisms which cause mastitis; contrasts with blanket therapy in which all cows in the group are treated.
m. screening testing for evidence of inflammation of mammary epithelium, of individual cows or entire herd, by use of milk cell counts, biochemical tests which measure products of inflammation, e.g. NAG-ase test, electrical conductivity.
subclinical m. mastitis in which the only evidence of disease is an abnormality of cell count or other clinicopathological parameter.
summer m. an acute suppurative bacterial infection of the udder in pregnant heifers and dry cows in summer in association with seasonally active biting flies. A serious disease likely to cause the loss of the quarter and a severe clinical illness. Occurs mainly in Europe. Caused by *Arcanobacterium pyogenes*, *Peptostreptococcus indolicus* and other bacteria also commonly present.
suppurative m. mastitis in which the secretion of the quarter is largely pus.
m. tests see **California mastitis test**, **Hotis test**, **NAGase mastitis test**, **somatic** cell count, **Wisconsin mastitis test**
traumatic m. mastitis in which the infection is introduced through the skin into the teat canal or mammary tissue by a penetrating injury; it is usually a mixed infection and causes a suppurative or gangrenous mastitis, depending on the bacteria that are present. The quarter is ruined and the cow may die.
m. treatment withholding times after intramammary infusion in lactating cow—withhold 72 hours; dry cow intramammary infusion—administered at least 4 weeks before calving, withhold for 96 hours after calving.
m. vaccination in general, not proven to exert beneficial effect. Only vaccination with an autogenous bacterin against *Staphylococcus aureus*, where the infecting organism is highly antigenic, appears to even reduce the severity of the disease. The J5 vaccine can reduce the incidence and severity of coliform mastitis.
mastitis–metritis–agalactia (MMA) [*mas-ti'tis mə-tri'tis a"gə-lak'te-ah*] a syndrome which occurs in sows that have farrowed for 12–48 hours. It is manifested by an indeterminate set of signs including anorexia, lethargy, fever, agalactia, swelling of mammary glands, constipation and a marked disinterest in the piglets. There is always a mastitis, most often caused by *Escherichia coli*, but a variety of gram-negative organisms can be involved. Metritis is a rare occurrence. Called also toxemic agalactia, farrowing fever.
mast(o)- word element. [Gr.] *mammary gland.*
mastocyte [*mas'to-sīt*] a mast cell.
mastocytoma [*mas"to-si-to'mə*] see **mast cell** tumor.
mastocytosis [*mas"to-si-to'sis*] an accumulation, local or systemic, of mast cells in the tissues. Occurs in horses of all ages where the lesions disappear spontaneously from the skin but the nodules are present for about a year. See also **mast cell** tumor.
systemic m. see mast cell **leukemia**.
mastography radiography of the mammary gland; mammography.
mastology study of the mammary gland.
mastoncus a tumor or swelling of the mammary gland.
masto-occipital [*mas"to-ok-sip'ĭ-təl*] pertaining to the mastoid process and occipital bone.
mastoparietal [*mas"to-pə-ri'ə-təl*] pertaining to the mastoid process and parietal bone.
mastopathy [*mas-top'ə-the*] any disease of the mammary gland.

mastopexy [*mas'to-pek-se*] surgical fixation of a pendulous mammary gland.

Mastophorus a genus of worms in the family Spirocercidae.

M. muris found in the stomach of a wide range of rodents.

mastoplasia [*mas"to-pla'zhə*] mammoplasia.

mastoplasty [*mas'to-plas"te*] mammoplasty.

mastoptosis [*mas"top-to'sis*] a pendulous condition of the mammary glands.

mastorrhagia [*mas"to-ra'jə*] hemorrhage from the mammary gland.

mastotomy [*mas-tot'ə-me*] incision of a mammary gland.

masturbation [*mas"tər-ba'shən*] self-stimulation of the genitals, seen in stallions, and an annoying habit seen in pet dogs which mount inanimate objects or the arms or legs of people.

Masugi nephritis [*mah-soo'ge nə-fri'tis*] an experimentally produced, immune-mediated nephritis. Called also nephrotoxic nephritis.

MAT microscopic agglutination test.

mat a localized, tight tangle of hairs, often seen in poorly groomed longhaired dogs and cats. They occur most commonly around the ears and on the legs, but in extreme cases, large areas of the body may be encased in a continuous mat.

match head toxicity ingestion may lead to poisoning by chlorates, which are nephrotoxic, and potent oxidizing agents, which may cause methemoglobinemia.

matched study, matched control a comparison between groups in which each subject animal is matched by a comparable animal in terms of age and all other measurable parameters. Called also matched or paired **control**.

matching [*mach'ing*] comparison for the purpose of selecting objects having similar or identical characteristics.

blood m. see **crossmatch**.

control m. see **matched study**.

cross-m. see **crossmatch**.

materia [*mə-tēr'e-ə*] pl. *materiae* [L.] material; substance.

m. alba material that accumulates on teeth; it is a conglomeration of salivary protein, desquamated epithelial cells, degenerating leukocytes and bacteria. See also **plaque**.

materia medica [*mə-tēr'e-ə me'dica*] the study of materials used as medicine. It used to be a subject in veterinary curricula and dealt mostly with the physical and chemical characteristics of the medicinal substances. As a science it has now been largely superseded by pharmacology.

Chinese m.m. a standard reference book of information on medicinal substances used in Chinese herbal medicine.

Material Safety Data Sheet (MSDS) [*mə-tēr'e-əl*] technical bulletin that supplements information found on a product label. It provides detailed descriptions of a product's physical properties and toxicity, and provides users and emergency personnel with the proper procedures for handling and working with that substance. Required to be present in a laboratory/workplace for any chemical used. Internationally, called also chemical safety data sheet.

maternal [*mə-tur'nəl*] pertaining to the female parent.

m. bond see **dam–offspring bond**.

m. effect the transitory influence of the mother on the phenotype of her offspring, caused by factors such as milk yield and uterine environment.

m. neglect failure of the dam to stay with the neonate, failure to groom it, help it to feed, find it if separated. The extreme degree is desertion. Characteristic of some breeds, e.g. Merino ewes. See also **mismothering**.

m. nutritional status body condition of a dam, pregnant or with a neonate at foot; important management feature as insurance for the survival of the offspring.

maternity [*mə-tur'nĭ-te*] motherhood and the establishment of the maternal–neonatal bond.

Mathevotaenia [*mə-the"vo-te'ne-ə*] a genus of cestodes in the family Linstowiidae. Includes *M. oklahomensis*, *M. pedunculata*, *M. wallacei* in raccoons and skunks. Occurs also in rodents, primates (*M. megastoma*), bats, edentates and marsupials.

Mathieu needle holder the conventional needle driver with a scissor action but with palm-held handles that spring open when the ratchet is activated. The face of the blades is grooved to avoid the needle slipping.

Mathieu retractor a surgical instrument with three prongs at one end and a right-angled bent at the other, used to retract tissues.

mating [*māt'ing*] sexual union by vagina between male and female. Called also breeding, covering, joining, serving.

m. ability see **serving capacity test**.

artificial m. see **artificial insemination**.

assortative m. sexual reproduction in which the pairing of male and female is not random.

m. behavior in the female consists mostly of evading male advances while in proestrus and until she is in estrus when she stands quietly and copulation occurs. In males early attempts at Mating occur during the females' proestrus; copulation behavior is very variable between species but generally consists of seeking, intromission, thrusting and a period of ejaculation which is very brief in ruminants, brief in horses, prolonged in pigs and very prolonged due to the development of the copulatory tie in dogs. Mating behavior in camelids is very peculiar in that the receptive female readily assumes a sternal 'kush' recumbency and allows the male to mount; mating can last 10 to 45 minutes. Mating behavior in cats is the most demonstrative of all the species; the queen actively seeks the tom; copulation is very quick and characterized by the tom grasping the queen's neck nape with his teeth. During the queen's estrus period copulation usually occurs many times.

block m. mating of all the females in a group during a brief period, e.g. within the span of three estral cycles; a characteristic of seasonal animal farming.

double m. putting the female to the male twice at an interval of some hours or days to optimize the chances of conception.

m. failure incomplete mating for any one of several causes and at any one of the several stages of the mating act.

free m. see paddock mating (below).

hand m. mating in which the female is detected to be in estrus and is then handheld while she is mated or is let into a paddock or pen with a male, where she is the only female. Mating is observed and can be guaranteed to have occurred. It also allows accurate recording of the day and genetics of breeding as opposed to pen mating (below). In horses, hand mating is completely controlled in order to reduce any chance of injury. The mare is held, often restrined with breeding hobbles and nose twitch, and the stallion is led by a handler.

m. harness hobbles and sidelines are often used on mares to prevent them from kicking the stallion.

inappropriate m. time at too young an age; too early in the lactation cycle; not an appropriate time to provide for a saleable young at yearling sales, major exhibitions at which entrants are grouped in age classes.

paddock m. males and females are allowed to run uncontrolled at pasture. The percentage of males to females varies between 1% and 5% in sheep and cattle. Called also free mating.

pen m. in species other than pigs, this form of mating is synonymous with hand mating (above). In swine, the boar is placed in a pen with a group of sows for breeding. Not all sows may be bred and the day of breeding may not be seen.

seasonal m. the males are put in with the females only at particular times of the year in order to match good feed supplies with the arrival of lambs or with a need for maximum ovulation and fertilization.

m. tie see **copulatory** tie.

Matricaria nigellifolia [*mat"rĭ-kar'e-ə*] South African plant in the family Asteraceae; unidentified toxin causes hepatic encephalopathy in cattle, manifested by a syndrome called stootsiekte (pushing disease) including incoordination, compulsive walking, convulsions and apparent blindness. Called also stootsiektebossie, staggers weed.

matrimony vine see ***Lycium barbarum***.

matrix [*ma'triks*] pl. *matrices* [L.] 1. the intercellular substance of a tissue, such as bone matrix. 2. the tissue from which a structure develops, such as hair or nail matrix. 3. a rectangular arrangement of quantities or symbols.

bone m. (1) see **bone** matrix.

cartilage m. (1) the intercellular substance of cartilage, consisting of cells and extracellular fibers embedded in an amorphous ground substance.

claw m. (2) the claw bed. Called also matrix unguis.

correlation m. (3) a square table giving a correlation between each pair of a set of variables. The diagonal elements give the correlation of a variable with itself, namely 1.

VetBooks.ir

covariance m. (3) similar to the correlation matrix but gives the variances and covariances.
m. Gla protein (MGP) vitamin K-dependent calcium binding protein; part of the organic phase of bones; found tightly bound to the bone morphogenetic protein. Inhibits vascular calcification by complexing calcium in tissues.
transition m. (3) a table of values used in a **Markov chain** mathematical model, giving the probability of a transition from one state to another in a specified time interval.
m. unguis see claw matrix (above).
MATSA Marek's tumor-specific **antigen**.
Matson elevator a handheld instrument with a tool at each end. At one end is a two-pronged rib lifter, at right angles to the handle. At the other end is a curved elongated periosteal stripper.
matter 1. physical material having form and weight under ordinary conditions of gravity. 2. pus.
gray m. matter of the central nervous system, which represents the aggregations of the nerve cells, especially nerve cell bodies.
white m. matter of the central nervous system, which comprises the axons of the nerve cells.
mattress suture pattern a surgical suturing procedure. The needle goes into the skin, across the incison and out through the skin on the other side; then a bite parallel to the incision and on top of the skin; then back through the skin, across the wound and out to the surface again. It is tied to the end of the suture if the pattern is to be an interrupted one. It may be interrupted or continuous, vertical or horizontal, and direct or crossed. The interrupted horizontal pattern is called also the automatic ridge suture, the four-stitch interrupted suture and the U-suture.
maturation [*mach"u-ra'shən*] 1. the stage or process of attaining maximal development. In biology, a process of cell division during which the number of chromosomes in the germ cell is reduced to one-half the number characteristic of the species. 2. the formation of pus.
m. arrest an interruption in the progressive development of erythrocytes, characterized by a bone marrow dominated by macrocytes and megaloblasts. Seen in anemias caused by deficiency of folic acid and vitamin B_{12}.
in vitro m. process of incubation of immature oocytes in culture until they are ready for fertilization.
mature equivalency (ME) [*mə-chōōr'*] age-conversion formulas (provided by the US Department of Agriculture and dairy breed associations) applied to milk production records of young cows to predict their expected milk production potential as mature cows. See also **milk** production.
maverick a wild, ungathered, unbranded calf whose ownership is in doubt.
maw worm ***Oxyuris equi***.
Maxam–Gilbert method used in DNA sequencing; four samples of end-labeled DNA restriction fragments are chemically cleaved at different specific nucleotides. The resulting subfragments are separated by gel electrophoresis, and the labeled fragments are detected by autoradiography (originally) or by specific fluorescence (currently). The sequence of the original end-labeled restriction fragment can be determined directly from the electropherograms.
maxilla [*mak-sil'ə*] pl. *maxillae, maxillas* [L.] one of two identical bones that form the upper jaw. The maxillae meet in the midline of the face. Together the maxillae form the floor of the orbit for each eye, the sides and lower walls of the nasal cavities, and the hard palate. The lower border of the maxilla supports the upper teeth. In most species, each maxilla contains an air space called the maxillary sinus.
maxillary [*mak'sĭ-lar"e*] emanating from or pertaining to the maxilla.
m. collapse includes failure of the maxilla to grow, as in achondroplastic dwarfism, or atrophy due to turbinate atrophy, as in atrophic rhinitis. The result is a dishing or depression of the face.
m. cyst a cyst that occurs in young horses and causes sufficient distortion of the bone as to obstruct the nasal passage.
m. myositis a localized myositis of unknown origin which occurs in young horses. It causes inability to eat or to suck the mare. The muscles of the cheeks are hard.
m. nerve block see maxillary **block**.
m. process an embryonic fold which develops from the first visceral arch and expands to produce the rostral bones of the upper jaw.
m. sinusitis infection in the maxillary sinus, often from an infected tooth. Causes local facial swelling and nasal discharge. See also **malar** abscess.
m. swelling a unilateral swelling which is usually an indication of an osteomyelitis, as in **actinomycosis** of cattle, tooth-root abscess of dogs or sinusitis in horses. Bilateral swellings are characteristic of osteodystrophia fibrosa in dogs and horses.
maxillectomy [*mak"sĭ-lek'tə-me*] surgical removal of the maxilla.
maxilloethmoidectomy [*mak-sil"o-eth"moi-dek'tə-me*] excision of the portion of the maxilla surrounding the maxillary sinus and of the cribriform plate and anterior ethmoid cells.
maxillofacial [*mak-sil"o-fa'shəl*] pertaining to the maxilla and the face.
maxillomandibular [*mak-sil"o-man-dib'u-lər*] pertaining to the upper and lower jaws.
maxillotomy [*mak"sĭ-lot'ə-me*] surgical sectioning of the maxilla which allows movement of all or part of the maxilla into the desired position.
maximum [*mak'sĭ-məm*] the greatest quantity, effect or value possible or achieved under given circumstances.
mayapple see ***Podophyllum peltatum***.
Mayne's pest see ***Glandularia aristigera***.
Mayo–Hegar needle holder lightweight needle driver with finger holes at the end of ratcheted handles and blades with cross-hatched faces.
Mayo scissors heavy-duty surgical sissors with narrowed but blunt pointed blades, which may be straight or curved.
mayweed see ***Anthemis cotula***.
maze [*māz*] a complicated system of intersecting paths used in intelligence tests and in demonstrating learning in experimental animals.
m. test see **obstacle test**.
Mazzotti reaction [*mah-zo'te*] a skin reaction that occurs in humans when the microfilariae of *Onchocerca volvulus* in cutaneous sites are killed by the administration of diethylcarbamazine.
MBC minimal bactericidal concentration. See **minimal** lethal concentration.
MBD methylene blue dye bindng test. See **Sabin–Feldmann dye test**.
MBM meat and bone meal.
MbO_2 oxymyoglobin.
MBV mixed bacterial vaccine.
Mc- for words beginning thus see under *Mac-*.
MCC milk cell count.
MCF malignant catarrhal fever.
mcg microgram.
MCH **mean** corpuscular (cell) hemoglobin.
MCHC **mean** corpuscular (cell) hemoglobin concentration.
mCi millicurie; a non-SI unit now replaced by the **becquerel**.
mCi-h millicurie-hour.
μCi microcurie; a non-SI unit now replaced by the **becquerel**.
μCi-h microcurie-hour.
MCPA, MCP 2-methyl-4-chlorophenoxyacetic acid; a weedkiller reported to be nontoxic at the levels likely to be encountered on pasture, though it has killed cattle dosed experimentally with large single doses.
MCT 1. mean circulation time. 2. medium-chain triglyceride.
MCT oil see medium-chain **triglyceride**.
MCV 1. **mean** corpuscular (cell) volume. 2. mean clinical value, obtained by assigning a numerical value to the response noted in a number of patients receiving a specific treatment, adding these numbers and dividing by the number of patients treated. 3. minute canine virus.
Md chemical symbol, *mendelevium*.
MDF myocardial depressant factor.
MDR multi-drug resistance; minimum daily requirement (pertaining to nutrition). See also **MDR1** gene.
MDR1 gene multi-drug resistance gene; normally responsible for sufficient p-glycoprotein to maintain the blood-brain barrier to certain drugs. A deletion mutation in this gene is responsible for the sensitivity to ivermectin observed in Collie dogs and related breeds. Dogs with the MDR1 mutation may also be more sensitive to the effects of some other drugs, including acepromazine,

butorphanol, erythromycin, H_2 blockers, loperamide and some chemotherapy agents.

MDT maggot debridement therapy.

MDV mucosal disease virus.

ME metabolizable energy.

M:E ratio myeloid:erythroid ratio.

meadow grassland, used for grazing and/or haying.

m. saffron ***Colchicum autumnale***.

m. sweet ***Ammi majus***.

meal [*mēl*] 1. a portion of food or foods taken at some particular, and usually stated or fixed, time. 2. a ground feed which may be a plain cereal, e.g. barley meal, or a ground up cake which is a residue from oil extraction, e.g. linseed meal. It has an undefined particle size greater than that of flour; a ground up animal by-product, e.g. bone meal, fish meal.

m. pattern feeding pattern which may be imposed by humans or be a natural behavior pattern in the species.

mealworm [*mēl'wərm*] see ***Alphitobius diaperinus***.

lesser m. see ***Alphitobius diaperinus***.

yellow m. see ***Tenebrio molitor***.

mealy rosettes ***Psathyrotes annua***.

mean [*mēn*] an average; a numerical value intermediate between two extremes. Called also arithmetic mean.

m. arterial pressure average pressure in artery for one heartbeat.

m. cell constants see **erythrocyte** indices.

m. corpuscular (cell) hemoglobin (MCH) the quantity of hemoglobin in an average erythrocyte, calculated from the measured hemoglobin and measured red blood cell count, expressed in picograms (pg).

$$\text{MCH} = \frac{\text{Hgb} \times 10}{\text{RBC}}$$

m. corpuscular hemoglobin concentration (MCHC) an expression of the average concentration of hemoglobin per average erythrocyte; calculated from values for the hemoglobin concentration (Hbg) and the hematocrit (Hct), reportd in g/dL.

$$\text{MCHC} = \frac{\text{MCH}}{\text{MCV}}$$

Decreased values are termed **hypochromasia**. Increased values (hyperchromasia) may occur with spherocytosis, but are often artifactual.

m. corpuscular (cell) volume (MCV) mean corpuscular (cell) volume, an indication of the average volume of individual red cells expressed in μm^3 or in SI units as fL (10^{-15} L); obtained by multiplying the hematocrit determination by 10 and dividing by the erythrocyte count (in millions).

$$\text{MCV} = \frac{\text{Hct} \times 10}{\text{RBC}}$$

Increase in the MCV is termed macrocytosis and decrease is microcytosis.

m. deviation the average value of a set of absolute deviations from the mean of a set of observations.

m. electrical axis (MEA) in electrocardiography, a calculation based on the relative amplitude of Q, R and S waves in the three bipolar limb leads. It is an aid to recognizing right ventricular enlargement in small animals and various intraventricular conduction defects.

geometric m. the antilog of the mean of the logarithm of the calculated values, the same as the n^{th} root of the product of the values. It is often a more useful mean for growth curves.

harmonic m. the reciprocal of the arithmetic mean of values converted to their reciprocals (used in dealing with skewed data).

rolling m. see moving **average**.

measles [*me'zəlz*] 1. a highly contagious disease of humans characterized by a maculopapular skin rash and caused by a morbillivirus; called also rubeola. 2. a term used in veterinary science to identify animal diseases that have a speckled appearance thought to resemble the skin rash of measles in humans. The resemblance in most diseases is superficial and highly speculative. See also **cysticercosis**.

beef m. see ***Cysticercus bovis***.

pork m. see ***Cysticercus cellulosae***.

sheep m. see ***Cysticercus ovis***.

m. vaccine a preparation containing attenuated human measles virus has been used to immunize dogs against canine distemper virus, based on the close antigenic relationship between the two viruses. It is only administered to young puppies between 4 to 12 weeks, in which the persistence of maternal antibodies against canine distemper virus may interfere with an immune response to canine distemper vaccine. It must always be followed by the administration of canine distemper vaccine by 4 months of age. With the development of more recent vaccines, particularly recombinant canine distemper vaccines, this vaccine is less likely to be used.

measly [*me'zle*] said of beef, pork and mutton because infected meat has a speckled appearance thought to resemble **measles** (1) in humans. See also **cysticercus**.

Meat & Livestock Australia (MLA) an industry organization providing market information and marketing to benefit the red meat industry in Australia.

meat 1. flesh and other tissues of farm animals for human consumption. 2. the edible parts of nuts or fruit seeds. Called also kernels.

m. and bone meal meat meal that contains more than 4.4% phosphorus because bones have been included; used as a protein feed supplement.

conditionally admissible m. see **Freibank system**.

frozen m. meat preserved at low temperatures in a **freezer**.

m. inspection examination of all meat sold for human consumption to ensure that it is wholesome and free from any disease that might be communicated from the animals to humans. Includes antemortem examination of the living animal, examination of the carcass, the head and the viscera. Mazy also include testing for the presence of bacteria and serological tests on carcass fluids such as the meat juice test for *Salmonella* spp.

m. intoxication hepatic encephalopathy.

m. juice ELISA a serological test for *Salmonella* spp. that measures the presence of antibody in 'meat juice' collected from the diaphragm after slaughter. Widely used in Europe for monitoring infection prevalence and herd status in national control/eradication programs for salmonella infection in pig herds.

knackers' m. meat from animals dead on arrival or of insufficient quality to go into the human food chain; killed at a separate establishment. It is not always possible to keep this meat separate from butcher's meat—illegal substitutions are serious offenses but the rewards are high.

m. meal a by-product of meat-packing or abattoir industries containing about 50% protein but varying depending on the material included and whether preparation is by a wet-cooking or tankage process, or a dry-cooking method. A popular protein supplement for all classes of livestock. Use for food-producing animals now restricted because of the risk of transmitting the agents causing spongiform encephalopathies.

mechanically recovered m. meat harvested by putting a carcass through an industrial process to separate it from the bones, instead of carving it off by hand knife. Prohibited in some countries because of the risk for contamination with the agent of bovine spongiform encephalopathy present in neurological tissues.

processed m. encompasses the processes of smoking, drying, salting, curing, fermenting, pickling, or cooking. Processed meat may contain other ingredients but must contain 30% of meat. Examples are sausages, frankfurts, ham, prosciutto. Manufactured meats are a category of procced meats.

meat packing plant a building for the slaughter of animals for human food. It may vary in size and sophistication depending on location and local government ordinance, but usually consists of a holding area for animals awaiting slaughter, also called lairage, a kill floor or stunning area, a processing line, a cooler for hanging carcasses and a cutting room where the chilled carcass is broken down into primals and subprimals for boxed meat. It should also have an area to hold offal, gut and hides. There should be a veterinary offiercer's room, preferably including a laboratory, and amenities for personnel. Also spelled meatpacking plant and sometimes, when referring to animals, simply packing plant.

Meatmaster a South African composite breed of sheep bred from indigenous fat-tailed sheep and European and British breeds. It is well muscled and bred for meat; it has a short, hair-type coat and is not shorn.

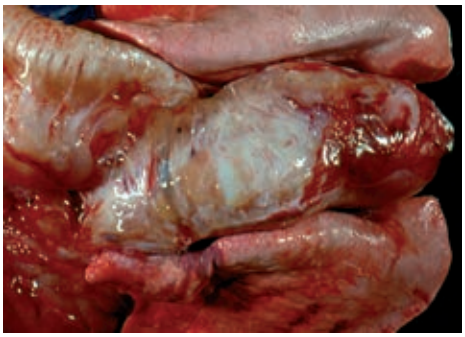
VetBooks.ir

meatorrhaphy suture of the cut end of the urethra to the glans penis after incision for enlarging the urinary meatus.
meatoscopy [*me"ə-tos'kə-pe*] visual examination of any meatus, especially the urinary meatus or the ureteral orifices.
meatotomy [*me"ə-tot'ə-me*] incision of the urinary meatus in order to enlarge it.
meatus [*me-a'təs*] pl. *meatus* [L.] an opening or passage.
acoustic m., m. acusticus, m. auditorius, auditory m. a passage in the ear; see external acoustic meatus and internal acoustic meatus (below).
ethmoidal m. the spaces between the ethmoturbinal bones.
external acoustic m. the passageway that is part of the external ear between the ear flap and the eardrum.
internal acoustic m. the passageway on the medial surface of the petrous temporal bone that transmits the facial and vestibulocochlear nerves.
m. nasi, m. of nose one of the three main airways of the nasal cavity which are found on either side of the septum; they are the dorsal, middle and ventral meati.
nasopharyngeal m. the common space shared by the right and left nasal cavities just before they enter the nasopharynx.
m. urinarius, urinary m. the opening of the urethra on the body surface through which urine is discharged; called also external urethral orifice, *pstium urethrae externum*, external urinary meatus.
mebendazole [*mə-ben'də-zōl*] a broad-spectrum anthelmintic efficient against all gastrointestinal nematodes, lungworms and *Moniezia* in ruminants. It is not effective against *Trichuris* spp. and has reduced activity against benzimidazole-resistant worm species. It is not very effective against larval forms of *Taenia* spp., not effective against *Draschia* or *Habronema* spp. in horses, nor against *Trichostrongylus axei*. It is effective against *Strongylus* spp., but not against migrating *Strongylus vulgaris* larvae nor against *Strongyloides* spp. or *Anoplocephala perfoliata*. It is recommended for general use in horses and combined with metriphonate for use against bot fly larvae. It is useful in dogs but does not remove *Echinococcus granulosus* or *Dipylidium caninum*. The drug has very low toxicity but has caused severe acute hepatic necrosis in some dogs.
MEC minimum effective concentration.
mechanical extraction [*mə-kan'ĭ-kəl*] exposure to heat and pressure as a means of extracting oil from seeds. See also **solvent** extraction of oil seeds.
mechanics [*mə-kan'iks*] the science dealing with the motions of material bodies.
body m. the application of kinesiology to the use of the body in normal activities.
mechanism [*mek'ə-niz-əm*] 1. a machine or machine-like structure. 2. the manner of combination of parts, processes, etc., which subserve a common function.
mechanobullous disease see **epidermolysis** bullosa.
mechanoreceptor [*mə-kan"ĭ-ko-re-sep'tər*] a nerve-ending sensitive to mechanical pressures or distortions, such as those responding to touch and muscle contractions.
cutaneous m. touch, pain, temperature, pressure receptors are defined in human skin; also some touch sensors which are stimulated only by firm pressure over a long period.
mechanotherapy [*mek"ə-no-ther'ə-pe*] use of mechanical apparatus in treatment of disease or its results, especially in therapeutic exercises.
mechlorethamine [*mek"lor-eth'ə-mēn*] a nitrogen mustard compound used in cancer chemotherapy. Called also mustine. See also **MOPP**.
mecillinam [*mə-sil'ĭ-nəm*] see **amdinocillin**.
Mecistocirrus [*me-sis"to-sir'əs*] a genus of worms in the family Trichostrongylidae.
M. digitatus found in the abomasum of domestic ruminants and buffalo, and in the stomach of pigs. In endemic areas it is an important parasite, causing effects similar to those of *Haemonchus* spp.
Meckel named after J.F. Meckel Jr (1781–1833), a German anatomist.
M's cartilage a bar in the mandibular arch of the embryo that forms a temporary supporting strucure of the first branchial arch. Called also first pharyngeal arch cartilage, mandibular cartilage.
M's diverticulum a congenital sac or appendage occasionally found in the ileum; a relic of a fetal structure that connects the yolk sac with the intestinal cavity of the embryo. In horses persistence of this structure has caused acute intestinal obstruction by creating a torsion of the ileum.

M-21: Meconium may be present as discrete balls or have a pasty consistency, as shown.

meclizine [*mek'lĭ-zēn*] a centrally acting antiemetic used as the hydrochloride to control motion sickness.
meclocycline [*mek"lo-si'klēn*] a tetracycline antibiotic derived from oxytetracycline; used topically.
meclofenamic acid an oral, nonsteroidal anti-inflammatory agent with analgesic and antipyretic activity; for use in horses and dogs.
meconium yellow-orange mucilaginous material in the intestine of the full-term fetus; it constitutes the first stools passed by the newborn.
m. aspiration aspiration of fragments of meconium into the pulmonary airways occurs in the fetus in the terminal stages of many infections.
m. ileus intestinal obstruction in the newborn due to the blocking of the bowels with thick meconium. This is an important disease of newborn colt foals. The syndrome is usually one of subacute abdominal pain, restlessness and straining, and a positive finding on rectal examination. Occasional cases show severe pain and tympany of the large intestine. Called also meconium retention.
m. retention see meconium ileus (above). See also impaction **colic**.
MED minimal effective dose; minimal erythema dose.
medaka (*Oryzias latipes*) one of the unusual fish that carries its fertilized eggs in a membranous sac attached to the abdomen. Native to Southeast Asia, it is popular as an aquarium fish. Widely used as an experimental animal, particularly in research of developmental biology and genetics. Called also Japanese killifish, ricefish.
medetomidine a potent α_2 adrenoreceptor agonist used widely as a sedative, hypnotic and analgesic. Used in combination with ketamine in wild animals where it provides good immobilization and can be reversed with α_2 antagonists.
medi- prefix meaning middle.
media [*me'de-ə*] [L.] 1. plural of *medium*. 2. middle, especially the middle coat of a blood vessel, or tunica media. 3. materials used as substrates on which to culture microbiological agents. See also **broth**.
medial [*me'de-əl*] pertaining to or situated toward the midline on the inside.
m. palatine process see **palatine** process.
m. patellar ligament in the species in which the tendon is trifurcated (horse, cattle), the largest and most medial of the three patellar ligaments.
medialis [*me"de-a'lis*] [L.] *medial*.
median [*me'de-ən*] 1. situated in the median plane or in the midline of a body or structure. 2. the perpendicular line that divides the area of a frequency curve into two equal halves.
m. eminence a slightly prominent segment of the infundibulum of the hypothalamus immediately proximal to the hypophyseal stalk. Called also *eminentia mediana*.
m. nerve see Table 14.
m. nerve block see median **block**.
m. nerve injury results in overextension and dropping of the carpus.

VetBooks.ir



M-22: Abscession of the mediastinal lymph nodes in a sheep with caseous lymphadenitis.

mediastinal [*me"de-əs-ti'nəl*] of or pertaining to the mediastinum.
m. abscess an abscess that causes systemic signs of toxemia and fever but also severe pain with each inspiration, causing grunting as in pleurisy but without the auscultatory findings of pleurisy.
m. cyst remnants of branchial pouches may be found in the anterior mediastinum, particularly in brachycephalic dogs; bronchogenic cysts are found in the posterior mediastinum.
m. emphysema see **pneumomediastinum**.
m. flutter movement of the tissues and organs of the mediastinum back and forth with each movement of air in and out of an open sucking wound in the thoracic cavity. The condition can produce serious impairment of cardiopulmonary function and is fatal if not treated promptly. Signs are similar to those of mediastinal shift (see below).
m. lymph node enlargement a condition due to abscess formation or neoplastic growth which may cause obstruction to the esophagus and dysphagia, or to the bronchi, causing inspiratory dyspnea. If it is in the anterior chest and of considerable size, it may mimic congestive heart failure, with jugular vein engorgement and edema of the brisket.
m. neoplasm characterized by progressive weight loss, reduced exercise tolerance, dyspnea, hydrothorax, areas of dullness on auscultation or percussion over lungs, neoplastic cells in pleural fluid if lesion intrudes into pleural cavity.
m. shift a shifting or moving of the tissues and organs that comprise the mediastinum (heart, great vessels, trachea and esophagus) to one side of the chest cavity. The condition occurs when a severe injury to the chest causes the entrapment of air in the pleural space (tension **pneumothorax**). As the volume of air increases on the affected side, the lung collapses and the organs and tissues of the mediastinum are crowded to the opposite side of the chest. This can produce compression of the other lung and kinking or twisting of one or more of the great blood vessels, which in turn seriously impairs blood flow to and from the heart.
mediastinitis [*me"de-as"tĭ-ni'tis*] inflammation of the mediastinum.
mediastinography [*me"de-as"tĭ-nog'rə-fe*] radiography of the structures of the mediastinum.
mediastinopericarditis [*me"de-as"tĭ-no-per"e-kahr-di'tis*] inflammation of the mediastinum and pericardium.
mediastinoscope [*me"de-ə-stĭ'no-skōp*] a specially designed endoscope used in mediastinoscopy.
mediastinoscopy [*me"de-as"tĭ-nos'kə-pe*] examination of the mediastinum by means of an endoscope inserted through an anterior midline incision just above the thoracic inlet.
mediastinotomy [*me"de-as"tĭ-not'ə-me*] incision of the mediastinum.
mediastinum [*me"de-əs-ti'nəm*] pl. *mediastina* [L.] 1. a median septum or partition. 2. the mass of tissues and organs separating the two lungs, between the sternum ventrally and the vertebral column dorsally, containing the heart and its large vessels, trachea, esophagus, thymus, lymph nodes, and other structures and tissues. In the horse, the caudal part of the mediastinum is usually fenestrated and the two pleural cavities communicate with each other through it.
m. testis a partial septum of the testis that contains the rete testis.
MEDIC minimum essential drug information checklist.
medic, medick common name for plants in the genus ***Medicago***. Includes barrel medic (*M. truncatula*), burr medic (*M. polymorpha*), harbginger medic (*M. littoralis*).
medicable subject to treatment with medicine with reasonable expectation of cure.
Medicago [*med"ĭ-ka'go*] plant genus of the legume family Fabaceae; contains coumestans, the phytoestrogens, in certain circumstances, and cause hyperestrogenism; can also cause photosensitivity possibly through steroidal saponins; causative plants include *M. littoralis*, *M. minima* (burr medic), *M. polymorpha* (*M. denticulata*, *M. hispida*, burr medic or trefoil), *M. sativa* (lucerne, alfalfa), also a common cause of primary frothy bloat, *M. trombiculata* (barrel clover), *M. truncatula* (barrel medic).
medical [*med'ĭ-kəl*] 1. pertaining to or emanating from the study or discipline of medicine, in the context of veterinary science in veterinary medicine. 2. a class of diseases that are traditionally treated by medicines rather than by surgery.
m. ecology study of the environment and its relationship to a population of animals with respect to the effect of the environment on the diseases of the animals.
problem-oriented m. record a standardized format for keeping clinical records in a problem-oriented case management system. An early decision is made on what is the nature of the patient's problem or problems and from then on the patient's status with respect to each problem is assessed daily. This has the undeniable advantage that the clinician does not lose sight of the objective with respect to the individual patient. Without this approach there is always an inclination for the clinician to attack the disease and place the patient on a lower priority. The attitude adopted as a result of this approach is very similar to the herd health approach in herd medicine—the objective is the farmer's survival, not the eradication of some bacteria.
m. records the detailed records, made at the time, of the clinical, clinical pathology and pathology examinations and treatments of each patient, or patient group. The records have importance to the welfare of the patient, and to potential medical research and legal investigations, and to be worth their full value they must be made contemporaneously.
m. technologist a qualified worker in a paramedical field such as laboratory scientist, veterinary nurse or livestock inspector.
m. subject headings (MeSH®) the controlled vocabulary thesaurus used by the US National Library of Medicine to index articles from biomedical journals in the MEDLINE/PubMED database. Terms are arranged in hierarchical and alphabetical structures.
medicament [*med'ĭ-kə-mənt*] a medicinal agent.
medicated [*med'ĭ-kāt"əd*] contains a medicinal substance.
m. feed feed containing medicines for the purpose of treating or controlling disease in animals.
medication [*med"ĭ-ka'shən*] 1. administration of remedies. 2. a medicinal agent. 3. impregnation with a medicine.
m. delivery the routes used in medication. See **drug** administration.
mass m. the medicament may be administered in the drinking water or in the feed. Mixing with the feed is limited to prophylactic dosing because sick animals rarely eat their feed in adequate amounts. Sick animals are more inclined to keep up their water intake, but still need to be observed to ensure that they are doing this. Animals suspected of not drinking must be treated individually. Special techniques of mass treatment include the laying of palatable baits for wildlife, although this is limited to once-only medications, such as oral vaccines, and aerosol administration, limited to closely confined groups such as chickens.
teratogenic m. teratogenous effects produced by medication; known agents include methallibure, griseofulvin, cyclophosphamide, folic acid antagonists, parbendazole, corticosteroids, phenytoin, thalidomide, hydroxyzine, metrifonate, hydroxyurea.
m. tube 1. a short esophageal tube used in sheep, perorally, and horses, pernasally, for the administration of medicines. 2. an in situ tube used for the treatment of the eye in horses. More accurately called subpalpebral **lavage** tube.
medication pneumonia [*med"ĭ-ka'shən*] see lipid **pneumonia**.
medicinal [*mə-dis'ĭ-nəl*] having healing qualities; pertaining to a medicine.
medicine [*med'ĭ-sin*] 1. any drug or remedy. 2. the nonsurgical treatment of disease.
food animal m. the veterinary medicine of the domesticated farm animals, including cattle, sheep, goats, pigs, poultry and, with some flexibility, horses, that are used for and in the production of human food and of fiber used in human raiment. It includes the increasingly important segment of preventive and herd/flock medicine.

VetBooks.ir

nuclear m. that branch of veterinary medicine devoted to the use of radionuclides in the diagnosis and treatment of animal diseases.
population m. the practice of veterinary medicine that deals with disease and production inefficiency in herds and flocks.
veterinary m. the science and art of diagnosis, treatment and prevention of the diseases of animals, and the maintenance of normal health. This classic definition is now expanded in many areas to include the promotion of financially optimal production. It consists mostly of prevention of wastage caused by disease, but also includes inputs from nutrition, genetics, housing, and other management disciplines. See also **veterinary medicine**.

medicolegal [*med"ĭ-ko-le'gəl*] pertaining to medicine and law, or to forensic medicine. See forensic **veterinary medicine**.

medina worm see ***Dracunculus*** *medinensis*.

medionecrosis [*me"de-o-nə-kro'sis*] focal areas of destruction of the elastic tissue and smooth muscle of the tunica media of a blood vessel, especially of the aorta or its major branches.

mediotarsal [*me"de-o-nə-kro'sis*] pertaining to the center of the tarsus.

Mediterranean named after the Mediterranean Sea or region.
M. coast fever see ***Theileria*** *annulata* infection in cattle.
M. fever see **Malta fever**.

medium [*me'de-əm*] pl. *media, mediums* [L.] 1. an agent by which something is accomplished or an impulse is transmitted. 2. a substance providing the proper nutritional environment for the growth of microorganisms or cells; called also culture medium.
basic nutritive m. one adequate for the growth requirements of most bacteria.
contrast m. a radiopaque (positive) substance, or (negative) gases used in radiography to permit visualization of body structures.
culture m. a substance used to support the growth of microorganisms or other cells.
dioptric m. refracting medium (see below).
disperse m., dispersion m. the continuous phase of a colloid system; the medium in which a colloid is dispersed, corresponding to the solvent in a true solution.
enriched m. modification of a basic medium for the growth of fastidious bacteria. Common additions are blood, serum or egg yolk.
indicator m. a type of bacteriological medium which may contain a fermentable sugar plus a pH indicator that gives a color change. It is used to identify bacteria on the basis of a characteristic biochemical reaction.
pigment-enhancing m. formulated to promote the production of pigment by some bacteria, such as *Pseudomonas aeruginosa* and *Rhodococcus equi*, to aid in identification.
refracting m., refractive m. transparent tissues and fluids in the eye through which light rays pass and by which they are refracted and focused on the retina.
m. sausage a technique for examining meat for bacterial contamination. The solid medium is made up in the form of a sausage and slices are removed from it after application of the exposed end to the suspect meat.
selective m. formulated to facilitate the isolation of specific bacteria, they contain substances to inhibit growth of other bacteria.
transport m. formulated to preserve a specimen, usually tissue or microbiological swab, and minimize bacterial overgrowth for the time necessary to transport it to the laboratory.

medius [*me'de-əs*] [L.] *situated in the middle*.

medlar body see **chromo body**.

MEDLARS [*med'lahrz*] acronym for *Med*ical *L*iterature *A*nalysis and *R*etrieval *S*ystem, a computerized bibliographic system of the National Library of Medicine (USA).

MEDLINE [*med'līn*] acronym for *MED*LARS on-*line*, a computerized bibliographical retrieval system, an on-line segment of MEDLARS.

medroxyprogesterone acetate (MPA) [*med-rok"se-pro-jes'tər-ōn*] a synthetic progestogen used for estrus control and the treatment of behavioral problems in dogs and cats.

medrysone [*med'rĭ-sōn"*] a synthetic glucocorticoid used in the treatment of inflammatory and allergic conditions of the conjunctiva; applied topically.

medulla [*mə-dul'ə*] pl. *medullae* [L.] the central or inner portion of an organ.
adrenal m. the inner portion of the **adrenal gland**, where epinephrine is produced.
m. of bone **bone marrow**, contained in the medullary cavity of bone.
m. oblongata that part of the hindbrain continuous with the pons anteriorly and the spinal cord posteriorly; it houses nerve centers for both motor and sensory nerves, where such functions as breathing and the beating of the heart are controlled. Called also myelencephalon. In animals the principal clinical manifestations of local lesions in the medulla are those of head rotation and circling, and facial and tongue paralysis with resulting difficulty in prehension and swallowing. With diffuse lesions spastic paralysis or a stiff-legged incoordination occurs.
m. ossium bone marrow.
renal m. the inner part of the substance of the kidney, composed chiefly of collecting tubules, and in some species organized into a group of structures called the renal pyramids.
spinal m., m. spinalis spinal cord.
m. of thymus the central portion of each lobule of the thymus; it contains many more reticular cells and far fewer lymphocytes than does the surrounding cortex.

medullary [*med'ə-lar"e*] emanating from or pertaining to a medulla. Used most frequently in relation to diseases of glands, e.g. thyroids, or gland-like structures, e.g. lymph nodes.
m. cavity cavity of the bone marrow.
m. cord cords of tissue in lymph nodes; may be hyperplastic in cases of chronic localized disease.
m. reticular formation the part of the medulla oblongata which controls the trigeminal, facial, vagal and hypoglossal nerve nuclei.
m. sinus part of the flow system for lymph through lymph nodes; drain into efferent lymphatic vessels at the node hilus.

medullated [*med'ə-lāt"əd*] 1. said of nerve fibers; means myelinated, equipped with myelin sheaths. 2. said of hair; means having a core of air-filled cells. If the medulla is coarse, the fiber is hairy and has irregular dyeing properties. It is a blemish in a wool fiber.

medullization [*med"ə-lĭ-za'shən*] the enlargement of the haversian canals in rarefying osteitis, followed by their conversion into marrow channels; also the replacement of bone by marrow cells.

medulloadrenal [*mə-dul"o-ə-dre'nəl*] pertaining to the adrenal medulla.

medulloblast [*mə-dul'o-blast*] an undifferentiated cell of the neural tube that may develop into either a neuroblast or spongioblast.

medulloblastoma [*mə-dul"o-blas-to'mə*] a brain tumor composed of medulloblasts.

medulloepithelioma [*mə-dul"o-ep"ĭ-the"le-o'mə*] a brain tumor composed of primitive neuroepithelial cells lining the tubular spaces.

medusa [*mə-doo'sə*] jellyfish; a colony of animals comprising a bell from which hang a number of filaments and tentacles. Called also hydromedusa. Inflict painful stings and can cause death, even of humans. See also ***Hydrozoa***.
m. head colonies colonies of *Bacillus anthracis* on agar have this appearance of being domes with a fringe of filaments.

MEED multicentric eosinophilic epitheliotrophic disease.

meerkat (*Suricata curicatta*) a small, gregarious mammal in the mongoose family Herpestidae, native to deserts of Botswana and South Africa. It has a pointed nose, large eyes and a tapered tail. They are very alert and are often pictured standing erect on the hindlegs, usually in a group. Called also slender-tailed mongooses.

mefenamic acid [*mef"ə-nam'ik*] a nonsteroidal anti-inflammatory agent with analgesic and antipyretic activity, used for relief of mild to moderate pain.

MEFR maximal expiratory flow rate.

MEG magnetoencephalography

mega- (M) [Gr.] *large*; a prefix used in the metric system of measurement to designate an amount 10^6 (one million) times the size of the unit to which it is joined, e.g. megacuries (10^6 curies).

Megabacteria see ***Macrorhabdus ornithogaster***.

megabacteriosis [*meg"ə-kal"ĭ-ko'sis*] an infection of the gastric isthmus of budgerigars and other caged birds, caused by *Macrorhabdus*.

megabat bats in the suborder Megachiroptera. See **bats**.

megabladder permanent overdistention of the bladder.

megacalorie 1000 kilocalories; a therm.

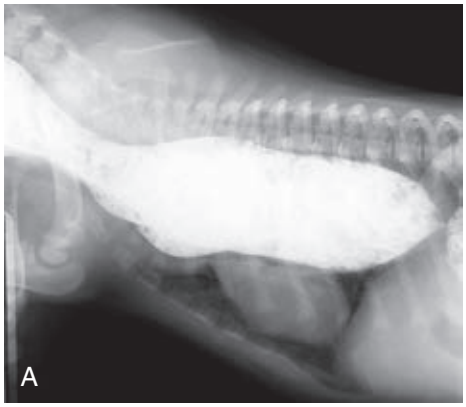
megacalycosis nonobstructive dilatation of the renal calices due to malformation of the renal papillae.

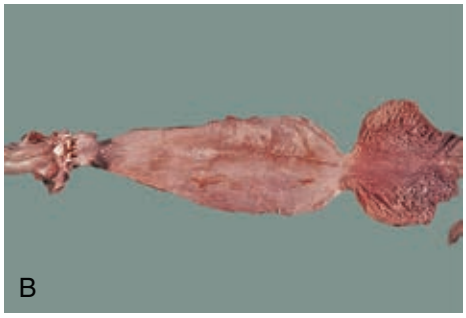
megacaryocyte [*meg"ə-kar'e-o-sīt"*] megakaryocyte.

Megachiroptera the subfamily of fruit bats, flying foxes; see **bats**.

megacolon [*meg"ə-ko'lən*] dilatation and hypomotility of the colon.
acquired m. colonic enlargement associated with chronic constipation, but with normal ganglion cell innervation. Most common in dogs and cats, the usual causes are dietary factors, lack of exercise, prostatic enlargement, anorectal stricture, perineal hernia, and neurological deficits.
aganglionic m. due to congenital absence of myenteric ganglion cells and abnormal motor activity in a distal segment of the large bowel. There is continuous spasm in the aganglionic segment that causes a stenosis, and a massive distention of the normal proximal colon develops secondarily. The disease in humans is called Hirschsprung's disease and a similar, but not identical, condition occurs in piebald mice and overo horses. Congenital megacolon may occur in dogs and cats, but acquired disease is much more common. Called also congenital megacolon.
congenital m. see aganglionic megacolon (above).
idiopathic m. recurrent episodes of constipation in aging cats over a long period of time is believed to lead to the progressive development of a dilated colon.
inherited m. is presumed in fattening pigs in which there is abdominal distention and wasting without rectal stricture. Segmental colon aganglionosis is recorded in some cases, but not others.
neurogenic m. neurologic dysfunction causing lack of normal motility in the colon. Can be associated with an dysautonomia or spinal cord disease.
obstructive m. see acquired megacolon (above).
psychogenic m. seen in cats and dogs that will not defecate indoors. Prolonged fecal retention causes loss of the defecation reflex, especially in aged patients.
megaesophagus [*meg"ə-ə-sof'ə-gəs*] chronic dilatation and atony of the body of the esophagus, usually associated with asynchronous function of the esophagus and the caudal esophageal sphincter. It occurs sporadically in cattle, horses and cats, but is most common in dogs. It is usually a congenital condition, causing accumulation of food and saliva with regurgitation and the risk of aspiration pneumonia from an early age, but may also be acquired and secondary to systemic disease, particularly general neuromuscular disorders such as myesthenia gravis. An inherited basis is suspected in dogs. Vascular ring anomaly and a defective local neuromuscular plexus are listed pathogeneses.
megahertz (MHz) [*meg'ə-hartz*] one million (10^6) hertz. See also **ultrasound**.
megajoule 1 million joules.
megakaryoblast [*meg"ə-kar'e-o-blast*] the earliest cytologically identifiable precursor in the thrombocytic series, which matures to form the promegakaryocyte.
megakaryoblastic characterized by the presence of megakaryoblasts.
megakaryocyte [*meg"ə-kar'e-o-sīt"*] the giant cell of bone marrow; it is a large cell with a greatly lobulated nucleus and gives rise to blood platelets.
megakaryocytic characterized by the presence of large numbers of megakaryocytes.
m. hypoplasia depressed thrombopoiesis; a common cause of thrombocytopenia.
m. leukemia, m. myelosis see megakaryocytic **leukemia**.
megakaryocytopoiesis the production of megakaryocytes.
megakaryocytosis the presence of megakaryocytes in the blood or of excessive numbers in the bone marrow.
megakaryophthisis deficiency of megakaryocytes in bone marrow.
megakaryopoiesis megakaryocytopoiesis.

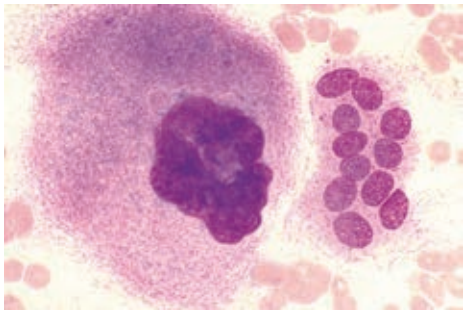
M-23: Barium enema in an aged cat with idiopathic megacolon. From Ettinger SJ, Feldman E, Textbook of Veterinary Internal Medicine, 6th Edition. Saunders, 2004.





M-24: (A) Radiograph of megaesophagus in a dog. (B) Post mortem specimen of megaesophagus. (B) From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

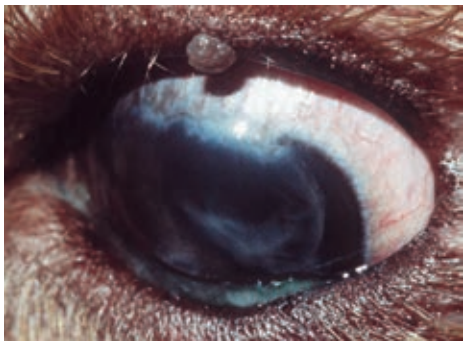
megalencephaly [*meg"əl-ən-sef'ə-le*] macrencephalia; hypertrophy of the brain.
megalgia [*məg-al'jə*] a severe pain.
megal(o)- word element. [Gr.] *large, abnormal enlargement*.
megaloblast [*meg'ə-lo-blast"*] a large, nucleated immature progenitor of an abnormal erythrocytic series; megaloblasts are present in the blood in certain anemias. These changes reflect asynchronism in maturation between cytoplasm and nucleus. Observed in folic acid responsive anemias.
megaloblastic pertaining to or emanating from a megaloblast.
m. anemia see megaloblastic **anemia**.
megaloblastoid [*meg"ə-lo-blas'toid*] resembling a megaloblast.
megalocardia cardiomegaly; enlargement of the heart.
megalocephaly [*meg"ə-lo-sef'ə-le*] abnormally increased size of the head.
megalocornea an enlarged cornea on an otherwise normal globe.
megalocystis [*meg"ə-lo-sis'tis*] an abnormally enlarged bladder.
megalocyte macrocyte.
megalocytosis strictly speaking, **macrocythemia**. The term is also used in relation to hepatic, renal and pulmonary disease where there is gross enlargement of hepatocytes, tubular epithelium and pulmonary epithelium.
megalodactyly [*meg"ə-lo-dak-til'e-ə*] excessive size of the digits.
megaloenteron enlargement of the intestine.
megalo-esophagus [*meg"ə-lo-ə-sof'ə-gəs*] megaesophagus.
megalogastria [*meg"ə-lo-gas'tre-ə*] enlargement of the stomach.
megaloglobus enlargement of the eye; end-stage sequela in advanced glaucoma. More commonly called buphthalmos/ia.



M-25: Bone marrow aspirate. Mature megakaryocyte (left) with a condensed multilobulated nucleus and eosinophilic, granular cytoplasm. A multinucleated osteoclast is on the right. From Cowell RL, Diagnostic Cytology and Hematology of the Dog and Cat, 3rd Edition. Mosby, 2007.

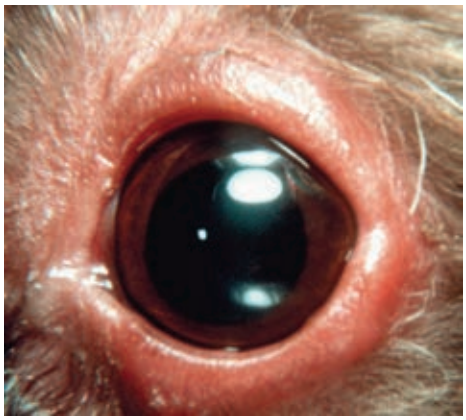
VetBooks.ir

megaloglossia [*meg"ə-lo-glos'e-ə*] macroglossia; hypertrophy of the tongue.
megalohepatia [*meg"ə-lo-he-pat'e-ə*] enlargement of the liver; hepatomegaly.
megaloileitis the segmental dilatation and inflammation of ileum seen in rats with **Tyzzer's disease**.
megalomelia abnormal largeness of the limbs.
megalonychosis hypertrophy of the claws and their matrices.
megalopenis [*meg"ə-lo-pe'nis*] abnormal largeness of the penis. Called also megalophallus or macropenis.
megalophallus [*meg"ə-lo-fal'əs*] megalpenis.
megalophthalmos [*meg"ə-lof-thal'mos*] abnormally large size of the eyes; buphthalmos.
megalopodia [*meg"ə-lo-po'de-ə*] abnormal largeness of the extremities of the limbs.
megalosplenia [*meg"ə-lo-sple'ne-ə*] enlargement of the spleen; splenomegaly.
megaloureter [*meg"ə-lo-u-re'tər*] congenital ureteral dilatation without demonstrable cause.
-megaly suffix meaning enlargement.
meganeurites neurons swollen with ganglioside in ganglioside storage disease may store the ganglioside in a swollen compartment between the axonal hillock and the first axonal segment; the swollen section is the meganeurite.
megarectum [*meg"ə-rek'təm*] a greatly dilated rectum.
Megasphaera elsdenii one of the bacterial participants in ruminal digestion.
megathrombocyte [*meg"ə-throm'bo-sīt*] an enlarged thrombocyte.
Megathyrsus genus of tropical grasses in the family Poaceae. See also ***Panicum***.
M. maximus poisoning characterized by hepatogenous photosensitization due probably to steroidal saponins. Called also *Panicum maximum*, pigeon grass, guinea grass.
m. maximus* var. *pubiglumis causes equine nutritional secondary hyperparathyroidism. Called also *Panicum maximum* var. *trichoglume*, green panic.
megaureter [*meg"ə-u-re'tər*] dilatation of the ureter.
megavolt [*meg'ə-vōlt*] one million volts.
megestrol acetate [*mə-jes'trol*] a synthetic progestational agent, commonly used for estrus control in dogs and cats and also in the treatment of behavioral abnormalities and a variety of inflammatory skin diseases, including miliary dermatitis and eosinophilic granuloma, and benign prostatic hyperplasia. Side effects in cats, including diabetes mellitus, adrenal suppression and mammary hyperplasia, limit its use in that species.
meglumine [*meg'loo-mēn*] 1. a crystalline base used in preparing salts of certain acids for use as diagnostic radiopaque media. Meglumine diatrizoate is used in angiocardiography and excretory urography; meglumine iodipamide is used in cholecystography; and meglumine iothalamate is used in cerebral angiography, excretory urography and peripheral arteriography. Called also methylglucamine. 2. meglumine antimonate, a pentavalent antimonial used as an antiprotozoal, a preferred drug in the treatment of leishmaniasis.
Megninia a genus of feather mites in the family Analgesidae. Considered to be nonpathogenic but may cause depluming itch on rare occasions.
M. columbae found on pigeons.
M. cubitalis found on fowl.
M. ginglymura found on fowl.
M. phasiani found on pheasants and peacocks.
M. velata found on ducks.
megohm [*meg'ōm*] one million ohms.
megophthalmos [*meg-of-thal'mos*] megalophthalmos.
megrims pigeon fanciers' name for salmonellosis caused by *Salmonella typhimurium*.
Mehlis gland part of the reproductive system of a trematode or a cestode. Called also the shell gland.
meibomian [*mi-bo'me-ən*] named after Heinrich Meibom (1590–1655), a German anatomist.
m. adenoma benign neoplasm of the meibomian or tarsal gland; commonest canine eyelid neoplasm.
m. cyst misnamed as this is not a cyst; see **chalazion**.
m. gland see tarsal **gland**.
meibomitis [*mi"bo-mi'tis*] inflammation of the meibomian glands. See also **chalazion**, internal **hordeolum**, **blepharadenitis**.



M-26: Meibomian adenoma on the upper eyelid of a dog.
From Maggs DJ, Miller PE, Ofri R, Slatter's Fundamentals of Veterinary Ophthalmology, 4th Edition. Saunders, 2008.

meiogenic promoting meiosis.
meiosis [*mi-o'sis*] the process of cell division by which reproductive cells (gametes) are formed. There are two successive divisions, meiosis I and meiosis II, in which four daughter cells that have the haploid chromosome number are formed. As in **mitosis** (somatic cell division), meiosis I and II are each divided into four phases: *prophase*, *metaphase*, *anaphase* and *telophase*.
meiotic [*mi-ot'ik*] pertaining to meiosis.
meitnerium (Mt) a chemical element, atomic number 109, atomic weight 276. See Table 4.
Melaleuca [*mel"ə-loo'kə*] see **tea tree** oil.
melamine an organic compound with numerous industrial uses, including the manufacture of plastic housewares, glues, cement, and fertilizers. In 2007, melamine cyanurate was discovered as an adulterant in the manufacture of pet food that was causing serious illness and death from nephrotoxicity in dogs and cats in North America. The melamine had been added to wheat flour sourced from China in order to produce falsely a higher protein content by analysis. An extensive recall of pet food followed.
Melampyrum arvense European hemiparasotoc plant of the family Scrophulariaceae, members of which contain cardiac glycosides and are therefore potentially poisonous, causing dyspnea, diarrhea, sudden death. Called also cow wheat.
mélangeur [Fr.] an instrument for drawing and diluting specimens of blood for examination.
melaniferous [*mel'ə-nif'ər-əs*] containing melanin or other black pigment.
melanin [*mel'ə-nin*] a dark, sulfur-containing pigment normally found in the hair, skin, ciliary body, choroid of the eye, pigment layer of the retina, and certain nerve cells. It occurs abnormally in certain tumors, known as melanomas, and is sometimes excreted in the urine when such tumors are present (melanuria).
m. deficiency hypopigmentation, leukoderma, hypomelanosis.
excess m. hyperpigmentation, hypermelanosis, melanism, melanoderma, melanotrichia.
m.-stimulating hormone see **melanocyte**-stimulating hormone.
melanism [*mel'ə-niz-əm*] excessive deposition of melanin in the skin.
melan(o)- word element. [Gr.] *black, melanin*.
melanoblast [*mel'ə-no-blast*] a cell from the neural crest that develops into a melanocyte.



M-27: Meibomitis or marginal blepharitis in a dog.
From Maggs DJ, Miller PE, Ofri R, Slatter's Fundamentals of Veterinary Ophthalmology, 4th Edition. Saunders, 2008.

melanocyte [*mel'ə-no-sīt*] any of the dendritic clear cells of the epidermis that synthesize tyrosinase and, within their melanosomes, the pigment melanin; the melanosomes are then transferred from melanocytes to keratinocytes.
m.-stimulating hormone (MSH) a peptide from the anterior pituitary which influences the formation or deposition of melanin in the body, especially in amphibians and fish.
melanocytoma [*mel"ə-no-si-to'mə*] see **melanoma**.
melanoderma [*mel"ə-no-dur'mə*] an abnormally increased amount of melanin in the skin due to either an increase in production of melanin by the melanocytes normally present or to an increase in the number of melanocytes, with production of hyperpigmented patches.
melanodermatitis [*mel"ə-no-dur"mə-ti'tis*] dermatitis with a deposit of melanin in the skin.
melanoepithelioma see **melanoma**.
melanogen [*mə-lan'o-jən*] a colorless chromogen, convertible into melanin, which may occur in the urine in certain diseases.
melanogenesis [*mel"ə-no-jen'ə-sis*] the production of melanin.
melanoglossia [*mel"ə-no-glos'e-ə*] blackening and elongation of the papillae of the tongue; black tongue.
melanoid [*mel'ə-noid*] 1. resembling melanin. 2. a substance resembling melanin.
melanoleukoderma [*mel"ə-no-loo"ko-dur'mə*] a mottled appearance of the skin.
melanoma [*mel"ə-no'mə*] a tumor arising from melanocytes, dendritic cells of neuroectodermal origin, or melanoblasts. They are most common in the skin, eye and oral cavity of dogs and aged gray horses (see gray horse melanoma, below), but occur occasionally as congenital lesions in pigs, goats and cattle. An inherited, malignant melanoma is recorded in swordtail–platyfish hybrids.
amelanotic m. one containing little or no melanin.
benign m's usually pigmented plaques or nodules. Those with junctional activity are analogous to the human compound junctional nevus. Cutaneous melanomas in pigs and cattle are usually benign. See also gray horse melanoma (below).
congenital m. of pigs a single or multiple pigmented tumor of the skin or viscera that grows slowly and may metastasize. Spontaneous regression is common. An inherited form seen in Sinclair miniature pigs.
dermal m. a tumor which arises from rests of melanocytes in the dermis, remnants of neural crest precursors. Pigmentation is variable. It is usually benign.
gray horse m. as gray horses age and become white-haired, they very often develop heavily pigmented skin nodules, often multiple, most often around the perineum and about the lips and parotid region. Affected animals may have enlarged pigmented regional lymph nodes, and this has led to many of these growths being erroneously diagnosed as malignant. But careful histological examination (which may necessitate bleaching of the heavily pigmented tissues) shows that they are usually histologically benign. Some have regarded this condition more as a storage disorder than true neoplasia.
malignant m. a malignant, rapidly growing, frequently ulcerated mass, consisting of either spindle cells or epithelioid cells or a mixture of the two, with a marked tendency to ulcerate and to metastasize. The tumor cells may or may not (amelanotic) be pigmented. Melanomas in the mouth and around the nailbed in dogs are likely to be aggressively malignant. They are common in Angora goats in low latitudes, where UV light is the presumed predisposing factor.

M-28: Pony with melanomas in perianal region.

M-29: Malignant melanoma in the oral cavity of a dog.

melanomatosis [*mel"ə-no"mə-to'sis*] the formation of melanomas throughout the body.
melanonychia [*mel"ə-no-nik'e-ə*] blackening of the claws by melanin pigmentation.
melanophage [*mel'ə-no-fāj"*] a histiocyte laden with phagocytosed melanin.
melanophore [*mel'ə-no-for"*] a pigment cell containing melanin, especially such a cell from fish, amphibians and reptiles.
melanoplakia [*mel"ə-no-pla'ke-ə*] pigmented patches on the mucous membrane of the mouth.
melanosarcoma [*mel"ə-no-sahr-ko'mə*] malignant melanoma.
melanosis [*mel"ə-no'sis*] 1. a condition characterized by dark pigmentary deposits. 2. a disorder of pigment metabolism.
acquired m. deposits of melanin pigment usually in liver, but sometimes also in kidneys, lungs and lymph nodes of sheep giving them a deep black color and making them unsaleable. The condition is known in lymph nodes of pigs in the Mediterranean region where acorns (*Quercus* spp.) are eaten. It is common in regions of Australia where mulga (*Acacia aneura*) is fed to or browsed by sheep. Tannins in acorns and mulga may have induced tyrosinase (a polyphenol oxidase) in the affected tissues, leading to aberrant melanin synthesis using the tannins (polyphenols) as a substrate instead of tyrosine. Called also environmental melanosis and (erroneously) hepatic lipofuscinosis.
m. coli brown-black discoloration of the mucosa of the colon.
congenital m. patches of melanin in the capsule and stroma of the liver or lung in the neonate.
liver m. see acquired melanosis (above).
focal macular m. dark colored spots on the skin, not elevated above the skin surface but apt to be confused with melanosis.
melanosome [*mel'ə-no-sōm"*] any of the granules that contain melanin. The melanin is synthesized within melanocytes, then the melanosomes are transferred to keratinocytes.
melanotic [*mel"ə-not'ik*] characterized by the presence of melanin; pertaining to melanosis.
melanotrichia [*mel"ə-no-trik'e-ə*] abnormally increased pigmentation of the hair.
melanotroph [*mel'ə-no-trōf"*] a pituitary cell that elaborates melanocyte-stimulating hormone (MSH).
melanotropin [*mel'ə-no-tro"pin*] melanocyte-stimulating hormone.
Melanthera biflora **Wollastonia** *biflora*.
Melanthium North American plant genus in the Liliaceae family; unidentified toxin causes dyspnea, incoordination, recumbency. Includes *M. hybridum, M. virginicum*. Called also bunchflower.
melanuria [*mel"ə-nu're-ə*] the discharge of darkly stained urine.
melarsomine a trivalent arsenical with activity against adult *Dirofilaria immitis*.
melarsoprol [*mə-lahr'so-prol*] an antiprotozoal agent effective against *Trypanosoma* spp.
melasma [*mə-laz'mə*] dark pigmentation of the skin. Called also chloasma.
melatonin [*mel"ə-to'nin*] an indoleamine hormone synthesized and released by the pineal body during the hours of darkness; it may have a role in the control of the regulation of gonadotropin release. Used in the treatment of some causes of alopecia in dogs, includine recurrent flank alopecia, pattern baldness and alopecia-X.

VetBooks.ir

Meleagris gallopavo gallopavo the South Mexican Turkey, from which the domestic turkey originated.

melena, melaena [mə-le'nə] darkening of the feces by blood pigments. Typically the feces have a black color with a red tinge at the edges and are soft and almost slimy.

melengestrol acetate [mel-ən-jes'trol] an effective oral progestational agent used as a feed additive in cattle to promote growth.

Melia [mel'e-ə] genus in the family Meliaceae.

M. azederach much used as a shade tree; some plants contain the tetranortriterpene meliatoxin in fruits. The fruit can cause severe diarrhea with dysentery. There may also be excitement and dyspnea. Called also *M. duba*, white cedar, chinaberry, dhrek.

M. major ***Melianthus*** *comosus*.

Melianthus South African plant genus in the family Melianthaceae; contain cardiac glycosides; roots are more toxic than the leaves and cause salivation, vomiting, colic, diarrhea and dysentery. Mistletoes growing on these plants are toxic and, being more palatable, are more dangerous. Includes *Melianthus major* (tall Cape honey flower), *M. comosus* (Cape honey flower, kruidjie-roer-my-nie).

meliatoxin toxic tetranortriterpene from *Melia azederach* fruits.

Melica decumbens South African grass from family Poaceae; unidentified agent causes incoordination and recumbency. Called also staggers grass, dronkgras.

melilot see ***Melilotus***. Includes King Island or small-flowered melilot (*M. indica*), ribbed melilot, yellow sweet clover (*M. officinalis*), tall melilot (*M. altissima*), white sweet melilot (*M. alba*).

Melilotus [mel"ĭ-lo'tus] a genus of the legume family Fabaceae; plants contain coumarol, converted by fungal infestation of the hay to toxin dicoumarol, which causes greatly prolonged clotting time, spontaneous hemorrhage and often fatal anemia. Includes *M. alba* (white sweet clover, Bokhara clover), *M. altissima* (tall melilot), *M. indica* (Hexham scent, King Island melilot), *M. officinalis* (ribbed melilot, yellow sweet clover).

melioidosis [me"le-oi-do'sis] a glanders-like disease of rodents, transmissible to humans, and caused by *Burkholderia pseudomallei*. Minor outbreaks, some with heavy mortalities have been recorded in all animal species. The syndromes seen vary widely and may include lymphangitis, meningoencephalitis, ocular and nasal discharge and pneumonia. Called also Nightcliff gardners' disease.

melitoptyalism [mel"ĭ-tō-ti'ə-liz-əm] secretion of saliva containing glucose.

melitose [mel'ĭ-tōs] see **raffinose**.

melittin one of the toxic peptides in bee sting.

melituria [mel"ĭ-tu're-ə] the presence of any sugar (glucose, fructose, galactose, lactose, etc) in the urine.

melkbos ***Euphorbia*** *mauritanica*.

melktou ***Sarcostemma*** *viminale*.

Melochia pyramidata [mə-lo'ke-ə pĭ-ram"ĭ-da'tə] a South American shrub in the Sterculiaceae family; unidentified toxin causes posterior paralysis in cattle.

melochinine toxic alkaloid in *Melochia pyramidata*.

melon common name for many plants in the family Cucurbitaceae. Includes Afghan or bitter melon (***Citrullus*** *lanatus*), Ulcardo melon (***Cucumis*** *melo* subsp. *agrestis*).

Melophagus [mə-lof'ə-gəs] a genus of insects in the family Hippoboscidae.

M. ovinus a permanent ectoparasite, the wingless, brown, leathery ked of sheep. Heavy infestations cause anemia, loss of condition and wool damage.

meloplasty [mel'o-plas"te] plastic surgery of the cheek.

Melopsittacus undulatus [mel"o-sit'ə-kəs] the budgerigar. A mostly green with some yellow, small (3–4 inches long) psittacine bird with very affectionate ways. The most popular cage bird, it can be taught to speak. Domesticated birds have been bred to produce a great variety of colors, especially a powder blue. Called also love bird, but other species, especially *Psittacula* spp., probably have first call on the name.

melorheostosis [mel"o-re"os-to'sis] a form of osteosclerosis, with linear tracks extending through the long bones.

meloxicam [mə-lok'sĭ-kam] a nonsteroidal anti-inflammatory drug used in dogs and cats for management of pain.

melphalan [mel'fə-lan] a cytotoxic nitrogen mustard alkylating agent used in the treatment of multiple myeloma in dogs and cats.

melt butcher's name for spleen.

member [mem'bər] a distinct part of the body, especially a limb.

membra [mem'brə] [L.] plural of *membrum*.

membrana [mem-bra'nə] pl. *membranae* [L.] membrane.

m. granulosa the layer of small, actively mitotic cells in the wall of the ovarian follicle.

m. nictitans the third eyelid present in most species. Major exceptions include primates, fish and some reptiles. In mammals it is a relatively immobile conjunctivally lined structure with a T-shaped cartilage to provide form. In birds and some reptiles it is a mobile translucent structure under skeletal muscle control. An aqueous-producing lacrimal gland or Harderian gland is present at its base in many species. See also **nictitating membrane**. Called also third eyelid, *palpebra III*.

membrane [mem'brān] a thin layer of tissue that covers a surface, lines a cavity, or divides a space or organ.

4th m. see epidermal membrane (below).

alveolocapillary m. a thin tissue barrier through which gases are exchanged between the alveolar air and the blood in the pulmonary capillaries.

m.-attack complex complement components C5–C9 which form in terminal stage of either of the classical or alternative complement pathways and lead to cell lysis.

basilar m. the lower boundary of the scala media of the ear.

Bowman's m. a thin layer of basement membrane between the outer layer of stratified epithelium and the substantia propria of the cornea.

Bruch's m. the inner layer of the choroid, separating it from the pigmented layer of the retina.

m. carrier a mechanism in the cell membrane of epithelial cells in the intestinal mucosa which facilitates the rapid transport of for example glucose, into the cell and thus into the bloodstream.

cell m. plasma membrane (below).

m. channels see **channel**.

continuous m. the middle of the three membranes on the outside of the yolk of the hen egg.

cricothyroid m. the membrane connecting the thyroid cartilage to the cricoid cartilage. It is extensive in the horse and surgical incision through it allows access to the interior of the larynx.

Descemet's m. the posterior lining membrane of the cornea; it is a thin hyaline membrane between the substantia propria and the endothelial layer of the cornea.

drum m. tympanic membrane (below).

epidermal m. a thin membrane layer covering the fetus and neonate in camelids, the only species that has this additional fetal membrane. Called also epithelion or 4th membrane.

external elastic m. a condensation of elastic fibers separating the media of blood vessels from the adventitia.

extraembryonic m's those that protect the embryo or fetus and provide for its nutrition, respiration and excretion; the yolk sac (umbilical vesicle), allantois, amnion, chorion, decidua and **placenta**.

extravitelline m. the outermost of the three membranes on the outside of the yolk of the hen egg.

false m. pseudomembrane.

fenestrated m. one of the perforated elastic sheets of the tunica intima and tunica media of arteries.

fetal m's see **fetal** membranes. See also extraembryonic membranes (above).

fibrous m. the strong, fibrous support layer in a joint capsule.

Henle's m. see **Henle's** membrane.

hyaline m. 1. a membrane between the outer root sheath and inner fibrous layer of a hair follicle. 2. **basement membrane**. 3. a homogeneous eosinophilic membrane lining alveolar ducts and alveoli, frequently found at necropsy in premature human infants. See also **hyaline** membrane disease.

hyoglossal m. a fibrous lamina connecting the under-surface of the tongue with the hyoid bone.

interosseous m. 1. the membrane connecting the shaft of the fibula to the tibia. In sheep, (in which the fibular shaft is missing), the vestige of this sheet is sometimes partly ossified and may account for spicules of bone appearing in minces (or ground) lamb. taken from the leg. 2. the antebrachial membrane that unites the radius and ulna of ungulates and many other species. Called also *membrana interossea antebrachii*.

limiting m. one that constitutes the border of some tissue or structure.

mucous m. the moist and mucous membrane covered with epithelium that lines many tubular organs of the body.
nictitating m. *palpebra III*; see **membrana** nictitans.
nuclear m. 1. either of the membranes, inner and outer, comprising the nuclear envelope. 2. nuclear envelope.
olfactory m. the olfactory portion of the mucous membrane lining the nasal fossa.
periodontal m. see **periodontium**.
perivitelline m. the innermost of the three layers on the outside of the yolk in the hen egg.
placental m. the membrane that separates the fetal from the maternal blood in the placenta.
plasma m. the membrane that encloses a cell; it is composed of phospholipids, glycolipids, cholesterol and proteins. The primary structure is a lipid bilayer. Phospholipid molecules have an electrically charged 'head' that attracts water and a hydrocarbon 'tail' that repels water; they line up side by side in two opposing layers, with their heads on the inner or outer surface of the membrane and their tails in the core, from which water is excluded. The other lipids affect the structural properties of the membrane. Proteins embedded in the membrane transport specific molecules across the membrane, act as hormone receptors, or perform other functions.
m. potential of a cell is the voltage difference across the cell membrane resulting from the differential concentrations of sodium and potassium on either side of the membrane. The resting potential, for example in a nerve cell, is altered by the temporary opening of the sodium channels in the membrane during an action potential, allowing a redistribution of the ions.
m. proteins the large number of proteins attached to a cell membrane. They include *integral* proteins, called also intrinsic, which are embedded in the phospholipid bi-layer of the cell membrane, and *peripheral* proteins, called also extrinsic, because they are loosely bound and can readily be extracted without damage to the cell membrane.
pupillary m. a vascular membrane which occupies the pupil in the embryo stage, completely covering the anterior surface of the lens but subsequently disappears. See also persistent **pupillary** membrane.
Reissner's m. the thin anterior wall of the cochlear duct, separating it from the scala vestibuli.
Scarpa's m. the membrane closing the fenestra cochleae.
semipermeable m. one permitting passage through it of some but not all substances.
serosal m. serous membrane.
serous m. the membrane lining the walls of the body cavities and enclosing the contained organs; it consists of mesothelium lying upon a connective tissue layer and it secretes a watery fluid.
shell m. the membrane on the outside of the soft contents of the hen egg and just inside the shell. It consists of two membranes close together, with an air cell in between.
synovial m. see **synovial** membrane.
m. transport transport of electrolytes across semipermeable membranes with the aid of a transporter.
unit m. the trilaminar structure of all cellular membranes (such as the plasma membrane, nuclear membranes, mitochondrial membranes, endoplasmic reticulum, lysosomes) as they appear in electron micrographs. The biochemical structure is a lipid bilayer.
wing m. the membrane comprising the wing of the bat. Called also *patagium*.
yolk m. the membrane investing the yolk of the hen egg; it includes (from the inside out) the perivitelline, the continuous and the extravitelline membranes.
membranella a membrane formed of a fused row of cilia.
membraniform [*məm-bra'nĭ-form*] resembling a membrane.
membranocartilaginous [*mem"brə-no-kahr"tĭ-laj'ĭ-nəs*] 1. developed in both membrane and cartilage. 2. partly cartilaginous and partly membranous.
membranoid [*mem'brə-noid*] resembling a membrane.
membranous [*mem'brə-nəs*] pertaining to or emanating from a membrane.
m. glomerulonephritis see membranous **glomerulonephritis**.
m. pneumocyte see **alveolar epithelial cells** (type 1).
membrum [*mem'brəm*] pl. *membra* [L.] a limb or member of the body; an entire leg.
memory [*mem'ə-re*] the capacity to recall previously experienced sensations, information, data and ideas.
brain m. the ability of the brain to use knowledge gained from past experience. This is essential for the process of learning by animals. The process is poorly understood, but its practical application is sophisticated, especially in dogs.
immunological m. the ability of the immune system to respond to more strongly and rapidly to the second and subsequent exposures to an antigen.
suture m. a property of some synthetic fibers which encourages the spontaneous untying of knots—the 'memory' of the fiber is that it is a straight fiber.
Menacanthus [*men"ə-kan'thus*] a genus of lice in the superfamily Amblycera.
M. cornutus resembles *M. stramineus*.
M. pallidulus a body louse of chickens.
***M. stramineus* (syn. *Eomenacanthus stramineus*)** yellow body louse of poultry.
menace response a response that may be tested by stabbing the finger towards the eye, with all precautions to avoid setting up a wind current. A positive response is a closing of the eyelids. The pathway for the menace response involves the retina, optic nerve, optic chiasm, optic tract, lateral geniculate nucleus, occiptal cortex, sensorimotor cortex, cerebellum and facial nerve nucleus. An absence of the response indicates defective vision (either due to ocular lesions, optic nerve lesions or lesions within the prosencephalon), paralysis of the eyelids, serious depression of consciousness or a cerebellar lesion. Called also eye preservation test, opticofacial reflex. The menace response is a learned response that is only apparent (in small animals) over the age of approximately 14 weeks.
menadiol [*men"ə-di'ol*] a water-soluble synthetic derivative of menadione. The sodium diphosphate salt is used in the treatment and prevention of vitamin K deficiency.
menadione [*men"ə-di'ōn*] a fat-soluble synthetic derivative of vitamin K used in the treatment and prevention of deficiency. Called also vitamin K_3.
Menangle virus disease a disease of pigs in Australia caused by a paramyxovirus in the genus *Rubulavirus*, characterized by reproductive inefficiency including abortion, mummified and stillborn piglets and arthrogryposis, craniofacial and spinal deformities and degeneration of the brain and spinal cord. Reservoir hosts are flying foxes (bats) belonging to the genus *Pteropus*, family Pteropodidae.
menaquinone [*men"ə-kwin'ōn*] any of a series of compounds having vitamin K activity, in which the phytyl side-chain of phytomenadione (vitamin K_1) is replaced by a side-chain of prenyl units. Called also vitamin K_2.
mendelevium (Md) [*men"də-le've-əm*] a chemical element, atomic number 101, atomic weight 256. See Table 4.
Mendel's laws [*men'dəlz*] *Law 1* The Law of Segregation—refers to the separation into different gametes, and therefore into different offspring, of the two members of every pair of alleles possessed by a parent. *Law 2* The Law of Independent Assortment—refers to the members of different pairs of alleles which are assorted independently into gametes, and that pairing of male and female gametes is a random activity. See also **inheritance**.
Mendelian [*mən-de'le-ən*] pertaining to **Mendel's laws**.
m. inheritance the patterns of **inheritance** (1) as explained by Mendel's laws.
m. rate an expression of the numerical relations of the occurrence of distinctly contrasted mendelian characteristics in succeeding generations of hybrid offspring.
Ménétrier's disease [*mā-na"tre-a'*] see giant hypertrophic **gastritis**.
Menghini needle a long needle used for percutaneous biopsy of the liver.
Mengo virus a virus strain in the genus *Cardiovirus* which causes encephalomyocarditis.
menhaden oil an oil from a fish of the herring family which is found off the Atlantic coast of North America.
meningeal [*mə-nin'je-əl*] pertaining to the meninges.
m. hemorrhage common in neonates which have suffered forced traction to relieve dystocia and after normal births from cows being fed moldy sweet clover hay; whether or not they cause clinical signs depends on their size and location.

VetBooks.ir

m. metaplastic ossification ossifying pachymeningitis. See dural **ossification**.
m. worm ***Paraelaphostrongylus*** *tenuis*.
meningeal dura [*mə-nin'je-əl*] see **dura mater**.
meningeorrhaphy [*mə-nin'je-əl*] suture of membranes, especially the meninges.
meninges [*mə-nin'jēz*] the three membranes covering the brain and spinal cord: the dura mater, arachnoid and pia mater. Consists of cranial and spinal membranes and special sections of it in diaphragma sellae, falx cerebri, tentorium cerebelli.
meningioangiomatosis [*mə-nin"je-o"mə-to'sis*] a rare benign lesion characterized by circumscribed plaques on the brain surface.
meningioma [*mə-nin"je-o'mə*] tumor thought to arise from the arachnoid cap cells of the meninges. Meningiomas are the most common prmary brain tumor encountered in dogs and cats, occur on either the outside of the brain and spinal cord or occasionally within the third ventricle. They are usually histologically benign, although canine meningiomas are frequently locally invasive and extend into the Virchow-robin spaces.
angioblastic m. angioblastoma.
epithelioid m. see meningotheliomatous meningioma (below).
extracranial m. anaplastic, locally aggressive tumors in the paranasal region and the orbit.
meningotheliomatous m. a diffusely cellular mesodermal tumor with cells in sheets or in pseudoalveoli.
meningism [*mə-nin'jiz-əm*] the signs of meningitis associated with acute febrile illness or dehydration but without actual inflammation of the meninges.
meningitis [*men"in-ji'tis*] inflammation of the meninges. When the inflammatory process affects the dura mater, the disease is termed *pachymeningitis*; when the arachnoid and pia mater are involved, it is called *leptomeningitis* or *meningitis proper*. It is also classified as fibrinous, hemorrhagic, purulent or eosinophilic, depending on the principal reaction of the tissues. The term *meningitis* does not refer to a specific disease entity but rather to the pathological condition of inflammation of the tissues of the meninges. The etiological agent can be anything that activates the inflammatory process, including both pathogenic and nonpathogenic organisms, such as bacteria, viruses and fungi; chemical toxins such as lead and arsenic; contrast media used in myelography; metastatic malignant cells; and autoimmune processes. In dogs the majority of cases of meningitis are non-infectious and associated with the immune-mediated condition known as steroid-responsive meningitis-arteritis. In other domestic species the majority of cases have a bacterial etiology. Clinical signs seen commonly include fever, hyperesthesia and rigidity of the muscles of the neck.
Beagle m. see steroid-responsive meningitis-arteritis (below).
Bernese Mountain Dog m. of unknown etiology an acute, aseptic nonsuppurative meningitis seen in young Bernese Mountain Dogs. See steroid-responsive meningitis-arteritis (below).
cerebrospinal m. an inflammation of the brain and spinal cord; it may be caused by many different organisms.
Pug m. see necrotizing **meningoencephalitis**.
spinal m. inflammation of the meninges of the spinal cord.
steroid-responsive m.-arteritis (SRMA) a non-infectious meningitis and polyarteritis that affects young large breed dogs, particularly Bernese Mountain dogs and mature Beagles. The condition is thought to be autoimmune in nature and results in clinical signs of pyrexia, depression, pain on manipulation of the cervical spine, and occasionally neurological deficits. Cerebrospinal fluid (CSF) tap reveals high numbers of non-degenerate neutrophils, but no organisms are isolated on culture. CSF and serum IgA concentrations are elevated. Treatment with immunosuppressive doses of corticosteroids results in resolution of the disease. The condition is often more severe in Beagles in which it is commonly referred to as Beagle pain syndrome.
mening(o)- word element. [Gr.] *meninges, membrane*.
meningocele [*mə-ning'go-sēl"*] hernial protrusion of meninges through a defect in the skull or vertebral column.
meningocerebritis [*mə-ning"go-ser"ə-bri'tis*] inflammation of the brain and meninges.
meningocortical [*mə-ning"go-kor'ti-kəl*] pertaining to the meninges and cortex of the brain.
meningocyte [*mə-ning'go-sīt"*] a histiocyte of the meninges.

M-30: Meningocele in a calf.
From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

meningoencephalitis [*mə-ning"go-ən-sef"ə-li'tis*] encephalomeningitis; inflammation of the brain and its meninges. Etiologies include infectious (most commonly bacterial) and non-infectious causes such as immune-mediated conditions.
bovine infectious m. see **hemophilosis**.
eosinophilic m. see **sodium** chloride poisoning (in pigs).
listerial m. see **listeriosis**.
necrotizing m. non-infectious meningoencephalitis in dogs characterized by multifocal perivascular infiltrates of varying numbers of mononuclear inflammatory cells, including lymphocytes and plasma cells, and large numbers of gemistocytic astrocytes together with atrophy and malacia of brain tissue. The cause is unknown, although an autoimmune etiology has been proposed and anti-astrocyte antibodies have been detected in the blood of patients with the disease. Treatment with immunosuppressive drugs may improve clinical signs, but the disease is ultimately progressive and fatal. Initially the disease was reported in Pugs, giving rise to the term Pug dog encephalitis, but it has since been reported in Yorkshire terriers, Maltese, Chihuahuas and sporadically in other breeds of dogs. Necrotizing meningoencephalitis has been used to describe the form that affects Pugs, with necrotizing leukoencephalitis used to describe the form that affects Yorkshire terriers, although both forms have been reported in several breeds.
pasteurella m. can be caused by *Pasteurella multocida* or **Mannheimia** *haemolytica* in calves and in horses, mules and donkeys. Clinical signs include tremor, opisthotonos, rotation of the eyeballs, blindness, collapse and coma.
Pug dog m. see necrotizing meningoencephalitis (above).
streptococcal m. a common complication of streptococcal septicemia of newborn pigs. The cause is usually *Streptococcus suis* type 1. The syndrome includes stiffness, tremor, blindness, recumbency and violent, paddling convulsions.
thromboembolic m. see **hemophilosis**.
m. of unknown etiology clinical term used to describe non-infectious meningoencephalitis prior to histopathological confirmation. Includes granulomatous meningoencephalomyelitis and necrotizing meningoencephalitis.
West Nile equine m. see **West Nile encephalomyelitis**.
meningoencephalocele [*mə-ning"go-ən-sef'ə-lo-sēl"*] hernial protrusion of the meninges and brain substance through a defect in the skull.
congenital m. occurs in **cranium** bifidum. An inherited form has been identified in Landrace pigs. The piglets are not viable. Called also cranioschisis.
meningoencephalomyelitis [*mə-ning"go-ən-sef"ə-lo-mi"ə-li'tis*] inflammation of the meninges, brain and spinal cord.
granulomatous m. a disease affecting dogs marked by granulomatous inflammation within the brain, meninges and spinal cord, with perivascular accumulations of variable numbers of lymphocytes, histiocytes and plasma cells. Occurs as both focal and generalized forms with an ocular form also described. The underlying pathogenesis is unknown with both autoimmune and neoplastic causes proposed. Clinical signs relate to the region of the brain affected and are frequently multifocal and asymmetrical. Treatment with immunosuppressive drugs often results in improvement or resolution of clinical signs, but ultimately the

VetBooks.ir

disease becomes refractory to treatment and is progressive and fatal. Previously called inflammatory reticulosis.

meningoencephalopathy [mə-ning"go-ən-sef"ə-lop'ə-the] noninflammatory disease of the cerebral meninges and brain.

meningogenic [mə-ning"go-jen'ik] arising in the meninges.

meningomalacia [mə-ning"go-mə-la'shə] softening of a membrane.

meningomyelitis [mə-ning"go-mi"ə-li'tis] inflammation of the spinal cord and its meninges.

meningomyelocele [mə-ning"go-mi'ə-lo-sēl"] hernial protrusion of the meninges and spinal cord through a defect in the vertebral column, often spina bifida.

meningomyeloradiculitis [mə-ning"go-mi'ə-lo-rə-dik"u-li'tis] inflammation of the meninges, spinal cord and spinal nerve roots.

Meningonema peruzzi a filarial parasite of the central nervous system of a number of African monkeys including talopin monkeys and *Cereopithecus aethions*. Thought also to cause cerebral filariasis of humans.

meningopathy [men"in-gop'ə-the] any disease of the meninges.

meningoradicular [mə-ning"go-rə-dik'u-lər] pertaining to the meninges and the cranial or spinal nerve roots.

meningoradiculitis [mə-ning"go-rə-dik"u-li'tis] inflammation of the meninges and spinal nerve roots.

meningorhachidian [mə-ning"go-rə-ra-kid'e-ən] pertaining to the spinal cord and meninges.

meningorrhagia [mə-ning"go-ra'jə] hemorrhage from cerebral or spinal membranes.

meningorrhea [mĕ-ning"go-re'ə] effusion of blood between or upon the meninges.

meninx [me'ninks] pl. *meninges* [Gr.] a membrane, especially one of the membranes of the brain or spinal cord—the dura mater, arachnoid and pia mater.

meniscectomy [men"i-sek'tə-me] excision of a meniscus, as of the stifle joint.

menisci [mə-nis'i] plural form of *meniscus*.

meniscitis [men"i-si'tis] inflammation of a meniscus.

meniscosynovial [mə-nis"ko-sə-no've-əl] pertaining to a meniscus and the synovial membrane.

meniscus [mə-nis'kəs] pl. *menisci* [L.] 1. something of crescent shape, such as the concave or convex surface of a column of liquid in a pipette or buret. 2. one of a pair of crescent-shaped fibrocartilages (semilunar cartilages) in the stifle joint that provide stability and some shock absorption while permitting both flexion and rotation of the joint. The excavated, concave, upper surfaces of the menisci of the stifle allow flexion of the rounded femoral condyles, while the flattened lower surfaces permit sliding, and hence rotation on the tibial plateau.

m. tear a common injury in dogs with rupture of the cranial cruciate ligament and the accompanying instability of the stifle joint. Most tears occur in the caudal horn of the medial meniscus.

Menopon a genus of bird lice in the suborder Amblycera.

M. gallinae the 'shaft louse' of fowl, ducks and pigeons.

M. pallidum a chicken louse found to harbor the virus of equine **encephalomyelitis**.

M. phaeostomum found on peacocks.

menstruum [men'stroo-əm] the end product of a process of extraction using a solvent—the combined extract plus solvent.

mental [men'təl] 1. pertaining to the mind. 2. pertaining to the chin.

m. nerves see Table 14.

m. nerve block see mental **block**.

m. organ an accumulation of apocrine tubular glands in the intermandibular space of swine. Called also *glandula mentalis*.

m. state description of the appropriateness of response to external stimuli; abnormal mental states include states of excitement, e.g. hyperexcitability, frenzy, mania and panic, and states of depression, including somnolence, lassitude, narcolepsy, catalepsy, stupor and coma. Delirium is not diagnosable in animals but aimless wandering and headpressing are reminiscent of that mental state in humans.

m. status assessment of level of patient awareness or consciousness.

mentation [men-ta'shən] mental activity or acuity.

Mentha genus of herbs in family Lamiaceae; unidentified toxin; clinical signs include incoordination, diarrhea; with some plants abortion and photosensitization also recorded; includes *M. australis* (native mint), *M. longifolia* (horse mint), *M. pulegium* (penny royal), *M. satureioides* (native mint).

menthol [men'thol] an alcohol from various mint oils or produced synthetically, used locally to relieve pruritus.

mentum [men'təm] [L.] *chin*.

Menziesia ferruginea North American plant in family Ericaceae; toxin is grayanotoxin (andromedotoxin); causes sudden death, abdominal pain, vomiting, diarrhea; called also *M. glabella*, mock azalea.

meow see **mew**.

mepacrine [mep'ə-krēn] quinacrine.

mepazine a phenothiazine derivative used as an antiemetic.

mepenzolate [mə-pen'zo-lāt] an anticholinergic used in the form of the bromide to relieve abdominal pain and diarrhea.

meperidine [mə-per'ĭ-dēn] a centrally acting analgesic with spasmolytic properties equal to those of atropine. Has little hypnotic effect and relieves pain without reducing consciousness, muscular activity, coordination or responsiveness of the special senses. An addictive drug for humans. Called also pethidine (INN).

mephenesin [mə-fen'ə-sin] a centrally acting muscle relaxant. Once used in association with pentobarbital for anesthesia, but no longer used because of its many side-effects, including venous thrombosis and hemolysis.

mephenytoin, methoin [mə-fen'ə-to-in] a hydantoin anticonvulsant drug, similar to phenytoin, but more toxic.

mephitic [mə-fit'ik] noxious; foul smelling.

mephobarbital [mef"o-bahr'bĭ-təl] see **methylphenobarbital**.

mepivacaine [mə-piv'ə-kān] a compound used as a local anesthetic.

meprobamate [mə-pro'bə-māt mep"ro-bam'āt] a carbamate derivative used as a tranquilizer and skeletal muscle relaxant.

mepyramine [mə-pir'ə-mēn] pyrilamine.

mEq milliequivalent.

merbromin [mər-bro'min] organic, hydroxomercury disodium salt; used as a topical antiseptic. Called also mercurochrome, which in some countries is a trademark name.

mercaptans [mər-kap'tənz] organic mercurial compounds, used as fungicides on plants and animals. See **captan**.

3-mercapto-3-methylbutan-1-ol found in cat urine as a degradation product of felinine; thought to be a cat pheromone.

2-mercaptoethanol (2 ME) test [mər-kap"to-eth'ə-nol] formerly used to differentiate IgM and IgG antibodies in order to identify recent immune responses to an infectious agent. Currently, more commonly done by ELISA.

2-mercaptopropionylglycine (MPG) a drug with properties similar to penicillamine; used in the treatment of cystine urolithiasis. Called also tiopronin.

mercaptopurine [mər-kap"to-pūr'ēn] an antimetabolite that acts by blocking purine synthesis; used as an antineoplastic agent, primarily in the treatment of leukemia and lymphosarcoma. Called also 6-mercaptopurine.

merchandising the selling of medicines which are generally available to the public without prescription and specialized foods. It is extended by some veterinarians to include general items such as grooming kits and dog collars.

mercurial [mər-kūr'e-əl] 1. pertaining to mercury. 2. a preparation containing mercury.

Mercurialis European plant genus in Euphorbiaceae family; unidentified toxin causes hemolytic anemia and gastritis when eaten; includes *M. annua* (annual mercury), *M. perennis* (dog's mercury).

mercurialism [mər-kūr'e-əl-iz"əm] chronic mercury poisoning.

mercuric [mər-kūr'ik] pertaining to mercury as a bivalent element; containing bivalent **mercury**.

m. chloride, m. bichloride used as a skin antiseptic and disinfectant and counterirritant; is limited by its toxicity and irritant properties. Called also corrosive sublimate.

m. iodide a counterirritant and vesicant; use of this compound in blisters for horses has been discontinued because of its renal and hepatic toxicity.

m. nitrate has antiseptic and miticidal properties; once used topically in the treatment of demodectic mange in dogs, but replaced by safer and more effective agents.

m. oxide a topical antiseptic, used in ointment form for eye disorders. Called also yellow oxide.

mercurochrome [mər-ku'rə-krōm] see **merbromin**.

mercurous [mur'kūr-əs] pertaining to mercury as a monovalent element; containing monovalent **mercury**.

m. chloride used mainly as a cathartic and irritant vermicide, but largely superseded by more reliable preparations. It increases

VetBooks.ir

peristalsis and glandular secretions, especially of bile. It is also used rarely as an intestinal antiseptic and to reduce edema, or in an ointment as a local antibacterial agent. Called also calomel.

mercury[1] (Hg) [*mur'kūr-e*] a chemical element, atomic number 80, atomic weight 200.59. See Table 4. Mercury forms two sets or classes of compounds: *mercurous*, in which a single atom of mercury combines with a monovalent radical, and *mercuric*, in which a single atom of mercury combines with a bivalent radical. Mercury and its salts have been employed therapeutically as purgatives; as alternatives in chronic inflammations; and as intestinal antiseptics, disinfectants and astringents. They are absorbed by the skin and mucous membranes, causing chronic mercurial poisoning, or hydrargyria. The mercuric salts are more soluble and irritant than the mercurous and oral exposures can cause gastroenteritis and liver and kidney damage. See also **mercurous**, **mercuric**.

ammoniated m. used as an antiseptic skin and ophthalmic ointment.

organic m. includes the fungistats phenylmercurials, ethyl and methyl mercurials, e.g. methoxyethylmercury silicate; poisonous to animals and cause unacceptable residues in animal products.

m. poisoning by inorganic compounds causes gastritis and kidney damage manifested by diarrhea and terminal uremia. Organic mercury compounds were until recently extensively used as fungistatic agents in stored grain. They cause poisoning manifested by nervous signs, including incoordination, blindness and recumbency. With larger doses there are convulsions.

mercury[2] [*mur'kūr-e*] common name for plants in the genus ***Mercurialis***. Includes annual mercury (*M. annua*), dog's mercury (*M. perennis*).

mercy killing the euthanasia of animals for humane reasons is regarded by the veterinary profession as one of its responsibilities to the animal population. When the animal is in a great deal of pain and there is no chance of a favorable outcome, it is thought that the veterinarian is required to carry out euthanasia. In most Western countries this is enshrined in legislation relating to the protection of animals against cruelty. In awkward situations, e.g. when the owner resists or is not available to give consent to euthanasia, it is prudent to get another veterinary opinion if that is possible.

meridian [*mə-rid'e-ən*] an imaginary line on the surface of a globe or sphere, connecting the opposite ends of its axis.

m. points acupuncture points located on one of the meridians.

m. theory traditional Chinese medicine is based on the theory that all body parts are connected by a network of main and collateral channels along which are situated the bulk of the acupuncture points; there are also some meridians, the dorsally located Governing Vessel and the ventrally located Conception Vessel, which are not connected to specific anatomical organs.

Merino a fine-woolled sheep with unpigmented hooves used for fabric wool; males are usually horned (polled strains are available), females are polled. Originated in Spain, now many ethnic varieties. Classes of Australian Merinos include Superfine (18 microns), Medium (20–22 microns), and Strongwoolled (23–25 microns). Other strains exist, e.g. Booroola, which has a much better fertility performance than average merinos.

Merinolandschaf sheep polled, meat and medium wool, German sheep. originated from local breed mated with imported breed.

Meriones unguiculatus see Mongolian **gerbil**.

M-31: Merino sheep.

Merkel cell, Merkel disk [*mur'kəl*] found in the basal layer of the epidermis; these cells have some neurosecretory properties. The combination of cell and disk is believed to act as a slow-acting tactile endorgan.

M. c. tumor see **neuroendocrine** cell tumor.

merle [*murl*] a pattern of coat color pigmentation with dark, irregular blotches on a lighter background. Seen in some Collies and Welsh corgis. In shorthaired dogs, e.g. Great Danes and Dachshunds, the similar pattern is called **dapple**. The trait is sometimes associated with congenital defects such as deafness and heterochromia iridis. In the homozygous state, there are severe ocular defects and deafness.

merlin [*mur'lin*] a small falcon, ***Falco columbarius***; called also pigeon hawk.

Mermis subnigrescens a worm in the family Mermithidae which is parasitic in grasshoppers and earwigs. Called also rainworm.

mer(o)- word element. [Gr.] 1. part. 2. thigh.

meroblastic [*mer"o-blas'tik*] partially dividing; undergoing cleavage in which only part of the egg participates.

merocele [*mer'o- sēl"*] femoral hernia.

merocrine [*mer'o-krin*] partly secreting; denoting that type of glandular secretion in which the secreting cell remains intact throughout the process of formation and discharge of the secretory products, as in the salivary and pancreatic glands; see also **apocrine**, **holocrine**.

merogenesis [*mer"o-jen'ə-sis*] cleavage of an ovum.

merogony [*mə-rog'ə-ne*] the development of only a portion of an ovum.

meromelia [*mer"o-me'le-ə*] congenital absence of a part, but not all, of a limb.

meromicrosomia [*mer"o-mi"kro-so'me-ə*] unusual smallness of some part of the body.

meromyarian [*mer"o-mi-ar'e-ən*] nematode whose somatic musculature is composed of closely packed units of three or four flattened muscle cells. Includes *Ancylostoma* and *Necator* spp.

meromyosin [*mer"o-mi'o-sin*] a fragment of the myosin molecule isolated by treatment with proteolytic enzyme; there are two types, heavy (H-meromyosin) and light (L-meromyosin).

meropenem [*mer"o-pen'am*] an ultra-broad spectrum β-lactam antibiotic in the carbopenem class.

meropia [*mə-ro'pe-ə*] partial blindness.

merorachischisis [*me"ro-rə-kis'kĭ-sis*] fissure of part of the vertebral column.

merotomy a cutting into segments.

merozoite [*mer"o-zo'īt*] a daughter cell of a protozoan (usually coccidial) parasite produced by binary fission during the asexual phase of reproduction (schizogony or merogony).

mersalyl [*mur'sə-ləl*] mercurial diuretic; rarely used.

Merthiolate [*mər-thi'o-lāt*] trademark for an alcohol, acetone and water preparation of **thimerosal**.

M.–iodine–formalin preservative a preparation used for the preservation and staining of protozoa.

Merwilla plumbea a South African toxic plant in the family Liliaceae; probably contains cardiac glycosides and causes sudden death and cardiac irregularities in sheep. Called also *Scilla natalensis*, blue hyacinth, blue squill, blouslangkop.

Merychippus a primitive stage in the evolution of the horse that existed in the Miocene era.

mesalamine [*mə-sal'ə-mēn*] 5-aminosalicylic acid; the active anti-inflammatory component of sulfasalazine when used in the treatment of inflammatory bowel disease. Used orally or rectally as suppositories or enemas. Spelled also as mesalazine (INN, BAN).

mésalliance, misalliance [Fr.] see **mismating**.

mesamnion the longitudinal chorioamniotic raphe, formed by the fusion of the two chorioamniotic folds.

mesangial [*mes-an'je-əl*] of the nature of or pertaining to mesangium.

m. cell connective tissue cells of the glomerulus; occur singly or in pairs in a thin matrix.

m. sclerosis increased mesangial matrix.

mesangiocapillary [*mes-an"je-o-kap'ĭ-lar"e*] pertaining to or affecting the mesangium and the associated capillaries.

m. glomerulitis apparently inherited disease in Finnish-Landrace lambs younger than 4 months old; most are asymptomatic and found dead; the kidneys are enlarged and there is severe proteinuria.

VetBooks.ir

mesangium [*mes-an'je-əm*] the thin membrane in the form of a central matrix supporting the capillary loops in renal glomeruli.
mesaortitis [*mes'ə-or-ti'tis*] inflammation of the tunica media of the aorta.
mesarteritis [*mes"ahr-tər-i'tis*] inflammation of the tunica media of an artery.
mesaticephalic [*mə-sat"ĭ-sə-fal'ik*] a skull with the cranium and nasal cavity about equal lengths. Seen in a majority of dog breeds.
mesatipellic [*mə-sat"ĭ-pel'ik*] having a round pelvis.
mesaxon [*mes-ak'son*] the pair of longitudinal adjoining membranes that mark the edge-to-edge contact of the Schwann cell that encircles the axon.
mescal [*mes-kahl'*] *Lophophora williamsii*.
mescaline [*mes'kə-lēn*] a poisonous alkaloid derived from the flowering heads (mescal buttons) of *Lophophora williamsii*, a Mexican cactus, which produces hallucinations of sound. See also peyote.
mescalism [*mes'kə-liz"əm*] intoxication due to mescal buttons or mescaline. See **peyote**.
Mesembryanthemum African genus of succulent plants in family Aizoaceae; includes *M. crystallinum*, *M. nodiflorum*; toxin is soluble oxalates characterized by occurrence of nephrosis, urolithiasis; called also mesems, pigface, ice plants.
mesems see ***Mesembryanthemum***.
mesencephalic aqueduct [*mez-en"sə-fal'ik*] constricted portion of the lumen of the neural tube in the midbrain.
mesencephalitis [*mez"en-sef"ə-li'tis*] inflammation of the mesencephalon, or midbrain.
mesencephalon [*mez"en-sef'ə-lon*] 1. region of the brain consisting of the portion of the brainstem rostral to the pons and caudal to the thalamus. Divided into the tectum dorsally and tegmentum ventrally. Also known as the midbrain. 2. the middle of the three primary brain vesicles of the embryo. See also **midbrain** syndrome.
mesenchyma [*mez-eng'kĭ-mə*] mesenchyme.
mesenchyme [*mez'ang-kim*] the meshwork of embryonic connective tissue in the mesoderm, from which are formed the muscular and connective tissues of the body and also the blood vessels and lymph vessels.
mesenchymoma [*mez"ən-ki-mo'mə*] a mixed mesenchymal tumor composed of two or more cellular elements that are not commonly associated, exclusive of fibrous tissue.
mesenterectomy [*mez"ən-tə-rek'tə-me*] resection of the mesentery.
mesenteric [*mez"ən-ter'ik*] pertaining to or emanating from the mesentery.
m. abscess in horses causes a syndrome of subacute abdominal pain, due usually to the coexistence of thromboembolic colic, plus the toxemia of the abscess and a commonly concurrent peritonitis.
m. arteritis see **verminous** mesenteric arteritis.
m. hemorrhage spontaneous rupture of a blood vessel in the mesentery in horses, which causes severe colic, hemorrhagic anemia and shock. Blood is found in a paracentesis sample.
m. lymph node cranial and caudal groups of nodes clustered about the arteries of the same names.
m. receptors Pacinian corpuscle mechanoreceptors plus some less readily adaptive mechanoreceptors found near mesenteric blood vessels.
m. root the dorsal attachment making up the origin of the mesentery from the mesentery; it contains the cranial mesenteric artery. Called also *radix mesenterii*.
m. stretch a tight bowstring-like edge of mesenteric fold in equine colic, where the large bowel is impacted and very heavy, or in acute intestinal obstruction, with loops of bowel very heavy with fluid. The stretching is a significant factor in causing pain and may be relieved by the horse lying on its back.
m. tear see mesenteric **hernia**.
m. torsion torsion of the mesenteric root, causing ischemia of the mesentery and intestine so that the tissue is devitalized and the animal dies quickly of shock and toxemia.
m. vessel thrombosis causes thromboembolic **colic**.
mesenteriopexy [*mez"ən-ter'e-o-pek"se*] fixation or suspension of a torn mesentery.
mesenteriorrhaphy [*mez"ən-ter"e-or'ə-fe*] suture of the mesentery.
mesenteriplication [*mez"ən-ter"ĭ-plĭ-ka'shən*] the operation of taking a tuck in the mesentery to shorten it.
mesenteritis [*mez"en-tə-ri'tis*] inflammation of the mesentery.
mesenterium [*mez"ən-ter'e-əm*] mesentery.
mesenteron [*mez-en'tər-on*] the midgut.
mesentery [*mez'an-ter"e*] a membranous sheet attaching various organs to the body wall, especially the peritoneal fold attaching the intestine to the dorsal body wall.
ovarian m. see **mesovarium**.
testicle m. see **proper ligament** of the testis.
MeSH® see **medical** subject headings.
mesh [*mesh*] interlaced structure; a net.
nylon m. woven fiber in sheets used to repair gaps in tissue. Other less reactive and more easily worked materials are also available.
polyester m. see surgical mesh (below).
surgical m. made of stainless steel, polyester fiber or polypropylene. Used in hernia repair or when there is a tissue deficiency.
mesiad [*me'ze-ad*] toward the middle or center.
mesial [*me'ze-əl*] situated in the middle; median; nearer the middle line of the body or nearer the center of the dental arch.
mesially [*me'ze-al"e*] toward the median line.
mesiobuccal [*me"ze-o-buk'əl*] pertaining to or formed by the mesial and buccal surfaces of a tooth, or the mesial and buccal walls of a tooth cavity.
mesiocervical [*me"ze-o-sur'vi-kəl*] pertaining to the mesial surface of the neck of a tooth.
mesioclusion [*me"ze-o-kloo'zhən*] anteroocclusion; malrelation of the dental arches, with the mandibular arch anterior to the maxillary arch. Called also prognathism. In the classification of **occlusion**, a Class III malocclusion.
mesiodistal [*me"ze-o-dis'təl*] pertaining to the mesial and distal surfaces of a tooth.
mesiodistoclusion [*me"ze-o-dis-to-kloo'zhən*] Class IV dental malocclusion; a combination of mesioclusion and distoclusion. See **occlusion** (2).
mesiolabial [*me"ze-o-la'be-əl*] pertaining to the mesial and labial surfaces of a tooth or a tooth cavity.
mesion [*me'se-on*] the plane dividing the body into right and left symmetrical halves.
mes(o)- word element. [Gr.] *middle*.
mesoblast [*mez'o-, me'zo-blast*] the mesoderm, especially in the early stages.
mesobronchitis inflammation of middle coat of the bronchi.
mesocardia [*mez"o-, me"zo-kahr'de-ə*] location of the apex of the heart in the midline of the thorax.
mesocardium [*mez"o-, me"zo-kahr'de-əm*] the part of the embryonic mesentery which connects the embryonic heart with the body wall in front and the foregut behind.
mesocecum [*mez"o-, me"zo-se'kəm*] the occasionally occurring mesentery of the cecum.
mesocephalon [*mez"o-sef'ə-lon*] mesencephalon, or midbrain.
Mesocestoides [*mez"o-ses-toi'dēz*] a genus of tapeworms in the family Mesocestoididae.
M. corti, M. lineatus, M. variabilis found in the intestines in a range of carnivores including dogs, foxes, cats and humans. They may cause enteritis in humans, but are innocuous in other species. The worm has an unusual life cycle and has a stage of tissue invasion which may cause peritonitis.
mesocolon [*mez"o-, me"zo-ko"lən*] the mesentery that attaches the colon to the dorsal abdominal wall; it is called ascending, descending or transverse, according to the portion of the colon to which it attaches.
pelvic m. the peritoneum attaching the sigmoid colon to the dorsal abdominal wall of cattle. Called also sigmoid megacolon.
sigmoid m. see pelvic megacolon (above).
mesocolopexy [*mez"o-, me"zo-ko'lo-pek"se*] suspension or fixation of the colon.
mesocoloplication plication of the mesocolon to limit its mobility.
mesocord [*mez'o-, me'zo-kord*] an umbilical cord adherent to the placenta.
mesoderm [*mez'o-, me'zo-dərm*] the middle of the three primary germ layers of the embryo, lying between the ectoderm and endoderm; from it are derived the connective tissue, bone, cartilage, muscle, blood and blood vessels, lymphatics, lymphoid organs, notochord, pleura, pericardium, peritoneum, kidneys and gonads.
extraembryonic m. located outside the developing embryo and forming its accessory organs.
intermediate m. mesoderm located just lateral to the somites, uniting the paraxial and lateral plate mesoderm.

VetBooks.ir

lateral m. or lateral plate mesoderm; mesoderm which extends (1) around the embryonal gut and (2) inside the surface ectoderm to enclose the celom between these splanchnic and parietal layers respectively.
paraxial m. adjacent to the mid line beneath the epiblast of the embryo which develop into somites.
somatic m. the outer layer of the developing mesoderm.
splanchnic m. the inner layer of the developing mesoderm.

mesodiastolic [*mez"o-, me"zo-di"ə-stol'ik*] pertaining to the middle of the diastole.

mesodiverticular band [*mez"o-, me"zo-di"vər-tik'u-lər*] an anomalous persistence of a vitelline artery appearing as a fold of mesentery stretching from the cranial mesenteric artery to the antimesenteric side of the intestine, the site of Meckel's diverticulum. The pouch that it forms with the normal mesentery may entrap a loop of intestine and cause obstruction of it.

mesoductus deferens [*mez"o-, me"zo-duk'təs def'ər-enz*] the peritoneal web or 'mesentery' that attaches the ductus deferens to the mesorchium.

mesoduodenum [*mez"o-, me"zo-doo"o-de'nəm*] the mesenteric fold that supports the duodenum.

mesoepididymis [*mez"o-, me"zo-ep"i-did'i-mis*] a fold of tunica vaginalis connecting the epididymis and testis.

mesogastrium [*mez"o-, me"zo-gas'tre-əm*] the portion of the primitive mesentery that encloses the stomach; from its dorsal sheet, the greater omentum develops, and from its ventral sheet, the lesser omentum.

mesogenic [*mez"o-, me"zo-jen'ik*] 1. a host–parasite relationship in which the parasite dominates but the host usually survives. 2. of medium virulence; said of some strains of **Newcastle disease** virus.

Mesogyna a genus of tapeworms in the family Mesocestoididae.
M. hepatica found in the small bile ducts and blood vessels of the liver in a little known fox (*Vulpis macrotis*) in California.

Mesohippus a prehistoric, three-toed, horse-like creature; probably not in the direct line of ancestors of the modern horse.

mesoileum [*mez"o-, me"zo-il'e-əm*] the mesentery of the ileum.

mesojejunum [*mez"o-, me"zo-jə-joo'nəm*] the mesentery of the jejunum.

mesomelic [*mez"o-, me"zo-mel'ik*] the middle parts of limbs.
m. dysplasia deformity of the middle parts of a limb.

mesomere [*mez'o-, me'zo-mēr*] 1. a blastomere of size intermediate between a macromere and a micromere. 2. a midzone of the mesoderm between the epimere and hypomere.

mesometrium [*mez"o-, me"zo-me'tre-əm*] the portion of the broad ligament caudal to the mesovarium.

Mesomycetozoea a class of microorganisms intermediate between animals and fungi. Includes the pathogens of fish, *Ichthyophus* and *Dermocystidium*, and the mammalian and avian pathogen, *Rhinosporidium*. Most produce uniflagellated zoospores.

meson [*mes'on*] 1. mesion. 2. any elementary particle having a mass intermediate between the mass of the electron and that of the proton.

mesonephric [*mez"o-, me"zo-nef'rik*] emanating from or pertaining to the mesonephros.
m. duct embryonal structure that develops into the vas deferens and epididymis in males and remains vestigial in females. Called also wolffian duct. It is subject to a variety of manifestations of segmental aplasia and hypoplasia, especially in bulls. In mares remnants of the ducts may become cystic and produce **paraovarian** cyst.
m. tube excretory tube of the mesonephros; becomes the mesonephric duct and contributes in the adult to the vasa efferentia of the male.
m. tubules embryonic tubules which connect at one end with a blood vessel, at the other with the mesonephric duct.

mesonephroma [*mez"o-, me"zo-nə-fro'mə*] a malignant tumor of the female genital tract, usually the ovary, formerly thought to arise from mesonephric rests. Two types are recognized: one of müllerian duct derivation, the other an embryonal tumor which may also arise in the testis.

mesonephron [*mez"o-, me"zo-nef'ron*] mesonephros.

mesonephros [*mez"o-, me"zo-nef'ros*] pl. *mesonephroi* [Gr.] the excretory organ of the embryo, arising caudal to the pronephros and using its duct. Displaced by the metanephros which becomes the kidney of the postnatal animal.

mesopexy [*mez'o-, me'zo-pek-se*] repair of the mesentery; mesteriopexy.

mesophile [*mez'o-, me'zo-fīl*] a microorganism that grows best at 68–131°F (20–55°C).

mesophlebitis [*mez"o-, me"zo-flə-bi'tis*] inflammation of the tunica media of a vein.

mesoporphyrin III a crystalline, iron-free porphyrin derived from heme.

mesorchium [*mə-sor'ke-əm*] the portion of the primitive mesentery enclosing the fetal testis, represented in the adult by a fold between the testis and epididymis.

mesorectum [*mez"o-, me"zo-rek'təm*] the fold of mesentery connecting the cranial portion of the rectum with the sacrum. The length of this mesentery largely determines the range of structures available for palpation per rectum; it is relatively long in the horse and more restricted in cattle.

mesoropter [*mez"o-, me"zo-rop'tər*] the normal position of the eyes with their muscles at rest.

mesorrhaphy [*mez"o-, me"zor'ə-fe*] suture of the mesentery.

mesosalpinx [*mez"o-, me"zo-sal'pinks*] the part of the broad ligament detached from the mesovarium, that supports and invests the uterine tube.

mesosigmoid [*mez"o-, me"zo-sig'moid*] the peritoneal fold by which the sigmoid flexure is attached to the abdominal wall.

mesosome [*mez'o-, me'zo-sōm*] an invagination of the bacterial cell membrane, seen in fixed cells; the significance is unknown.

mesosternum [*mez"o-, me"zo-stur'nəm*] the middle piece or body of the sternum.

mesotendineum, mesotendon [*me"zo-tən-din'e-əm, me"zo-ten'don*] the connective tissue web of tissue attaching the inner layer of a tendon sheath to its outer layer. It may persist, disappear altogether, or leave vestigial strands called vincula (see **vinculum**).

mesothelial [*mez"o-, me"zo-the'le-əl*] pertaining to the mesothelium.
m. cells cover all serous membranes and normally found in fluid samples aspirated from the pleural or peritoneal cavities.

mesothelioma [*mez"o-, me"zo-the"le-o'mə*] a rare malignant tumor made up of cells derived from the mesothelium. Recorded in the pleural cavity of animals, causing massive effusion and dyspnea. Found most commonly as a congenital tumor of calves.

mesothelium [*mez"o-, me"zo-the'le-əm*] the layer of flat cells, derived from the mesoderm, that lines the body cavity of the embryo. In the adult it forms the simple squamous epithelium that covers the surface of all true serous membranes (peritoneum, pericardium, pleura).

mesotocin [*mez"o-, me"zo-to'sin*] an oxytocin-like neuropeptide in birds, marsupials and amphibians.

mesotympanum [*mez"o-, me"zo-tim'pə-nəm*] the portion of the middle ear medial to the tympanic membrane.

mesovarium [*mez"o-, me"zo-var'e-ən*] the portion of the broad ligament enclosing and holding the ovary in place.

mesoviductus [*mez"o-, me"zo-və-duk-tus*] the peritoneal sheet or 'mesentery' which suspends the avian oviduct.

mesquite [*mə-skēt'*] see ***Prosopis juliflora***.

messenger RNA (mRNA) [*mes'ən-jər*] see **ribonucleic acid**.

mesulfen a sulfur-containing scabicide and antipruritic.

Met methionine.

met check the clinical search for evidence of metastasis when a malignant neoplasm is detected. May include radiographs, diagnostic imaging, and clinical laboratory examination of blood, effusions and other fluids.

met-enkephalin (Met-ENK) methionine **enkephalin**.

met-tRNA$_i$ a single species of methionyl tRNA that forms a tertiary complex with eukaryotic initiation factor 2 (eIF2) with bound GTP as a first step in the initiation of protein synthesis.

meta- word element. [Gr.] 1. change, transformation, exchange. 2. after, next. 3. the 1,3-position in derivatives of benzene.

metabasis [*mə-tab'ə-sis*] change in the manifestations or course of a disease.

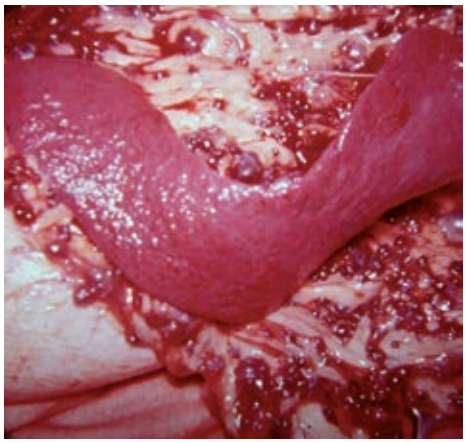
metabiosis [*met"ə-bi-o'sis*] the dependence of one organism upon another for its existence; commensalism.

metabolic [*met"ə-bol'ik*] pertaining to internal metabolism.
m. acidemia acidemia due to a metabolic disorder.
m. bone disease includes a range of bone diseases associated with metabolic diseases, e.g. secondary hyperparathyroidism, rickets and osteoporosis.

m. defect generally an inherited defect that is present at birth, but which is not necessarily evident clinically for several months afterwards. The defect creates a metabolic error, which leads to the accumulation of end products which cause clinical signs, e.g. mannosidosis, porphyria or an exaggerated response from an end-organ, e.g. inherited goiter. See also inborn error of metabolism (below).
m. diseases diseases in which normal metabolic processes are disturbed and a resulting absence or shortfall of a normal metabolite causes disease, e.g. hypocalcemia in cows, or an accumulation of the end products of metabolism causes a clinical illness, e.g. ketosis of dairy cows. Many diseases in this group really have their beginnings in a nutritional deficiency state. See also **production** diseases.
m. encephalopathy many disorders of metabolism can lead to neurologic abnormalities through alterations in electrolytes and acid–base balance, accumulation of endogenous toxins. See also **encephalopathy**.
m. error see metabolic defect (above).
m. inhibition technique a virus neutralization test in tissue culture in which phenol-red indicator is used to detect the acid metabolic products of actively metabolizing cells or the lack of metabolism when cells are infected and destroyed by the virus.
m. laminitis see **laminitis**.
m. myopathies muscular dystrophies caused by metabolic defects; include systemic glycogenoses, deposits of a PAS-positive glycoprotein, the lipid storage disease of cats caused by carnitine deficiency.
m. pathways groupings of enzymic processes leading to the synthesis or breakdown of carbohydrates, amino acids, lipids and other compounds in the body.
m. polymyopathy a muscle disease associated with a metabolic disorder, e.g. hyperadrenocorticism.
m. polyneuropathy a disease of the nerves associated with a metabolic disorder, e.g. uremia, diabetes mellitus or hypothyroidism.
m. profile results of a spectrum of tests of metabolic functions.
m. profile test see **Compton metabolic profile test**.
m. rate the rate of energy metabolism in the body. The basal metabolic rate (BMR) is the rate of energy consumption by the body when it is completely at rest.
m. syndrome characterized by hypertension, insulin resistance, an abnormal plasma lipid profile, and obesity.
m. toxins include histamine, other toxic amines, ketone bodies, phenols and cresols from the large intestine, which are normal end-products of metabolism and indigestion but if their normal excretion and detoxication are impeded, cause intoxication. See also toxin.
m. water the water produced in the body by oxidative metabolism of food; it represents 5–10% of the body's water utilization.
metabolism [*mə-tab'ə-liz"əm*] the sum of the physical and chemical processes by which living organized substance is built up and maintained (anabolism), and by which large molecules are broken down into smaller molecules to make energy available to the organism and to form waste products (catabolism). Essentially these processes are concerned with the disposition of the nutrients absorbed into the blood following digestion.
inborn error of m. a genetically determined biochemical disorder in which a specific enzyme defect produces a metabolic block that may have pathological consequences at birth, as in maple syrup urine disease of calves, or in later life, e.g. in mannosidosis in calves. See also **metabolic** defect.
metabolite [*mə-tab'o-līt*] any substance produced during metabolism.
metabolizable [*mə-tab'o-līz"ə-bəl*] capable of being converted by metabolism.
m. energy (ME) said of a feed or ration, the net energy available to an animal after the utilization of some energy in the processes of digestion and absorption and the loss of some of the material as being undigested or indigestible.
metabolize to subject to or be transformed by metabolism.
metabolome [*mə-tab'ə-lōm*] all the elements involved in metabolic processes of a single organism or a particular cell; includes metabolic intermediates, enzymes, hormones.
metabolomics [*mə-tab"ə-lo'miks*] study of the complete profile of metabolites in cells, tissues or organisms.
metacarpal [*met"ə-kahr'pəl*] 1. pertaining to the metacarpus. 2. a bone of the metacarpus.
dorsal m. disease a range of compressive stress lesions of the cortex of the third metacarpal bone of young racing horses; includes bucked shins, incomplete cortical fracture.
m. pad see **footpad**.
small m. bone see **splint bone** and Table 10.
metacarpectomy [*met"ə-kahr-pek'tə-me*] excision or resection of a metacarpal bone.
metacarpophalangeal [*met"ə-kahr"po-fə-lan'je-əl*] pertaining to the metacarpus and phalanges.
m. joint see Table 11. Called also fetlock.
metacarpus [*met"ə-kahr'pəs*] the segment of the limb housing the aggregate of metacarpal bones.
metacentric [*met"ə-sen'trik*] a replicating chromosome with the centromere midway between the ends.
metacercaria [*met"ə-sər-kar'e-ə*] pl. *metacercariae*; the encysted resting or maturing stage of a trematode parasite in the tissues of a second intermediate host or on vegetation.
metacestode [*met"ə-ses'tōd*] larval stage of cestodes.
metachromasia [*met"ə-kro-ma'zhə*] 1. failure to stain true with a given stain. 2. the different coloration of different tissues produced by the same stain. 3. change of color produced by staining.
metachromatic [*met"ə-kro-mat'ik*] having the characteristics of metachromasia.
m. leukodystrophy see metachromatic **leukodystrophy**.
metachromophil, metachromatophil [*met"ə-kro'mo-fil*] not staining normally.
metacresyl acetate see ***m*-cresyl acetate**.
metacyclic [*met"ə-sik'lik, -si'klik*] produced in an intermediate host, and infective for the definitive host; said of the infective stages of trypanosomes.
metaflumizone a sodium channel blocking, antiparasitic agent used as a spot-on treatment for fleas on dogs and cats.
metagenesis [*met"ə-jen'ə-sis*] alternation of generations; there are alternate sexual and asexual cycles of reproduction in the one species.
metagenomic profile [*met"ə-je-no'mik*] the DNA sequences that are recovered and analyzed to characterize the pool of genomes present in a sample.
metagenomics [*met"ə-je-no'miks*] use of molecular-biological technology for culture independent genetic analysis of natural microbial communities.
Metagonimus [*met"ə-gon'ĭ-məs*] a genus of digenetic trematodes in the family Heterophyidae.
M. yokogawai found in the small intestine of the dog, cat, pig, pelican and humans. May cause enteritis in humans but considered to be nonpathogenic in animals.
metal [*met'əl*] any chemical element marked by luster, malleability, ductility and conductivity of electricity and heat, and which will ionize positively in solution.
alkali m. one of a group of monovalent elements including lithium, sodium, potassium, rubidium and cesium.
m. detector a portable electronic device used to detect metal in the reticulum of cows. Most clinically normal cows fed on prepared rations give positive results.
m. implants see **implant**.
m. retriever a long, probang-like instrument, passed orally into the reticulum in cattle for the retrieval of metallic foreign bodies that might cause traumatic reticuloperitonitis.
metaldehyde [*met-al'də-hīd*] a common molluscicide; its formulation in a bran base, especially pellets, makes it a positive risk for all animal species and a very serious threat to all urban dogs.
m. poisoning clinical signs include tremor, incoordination, salivation, dyspnea, unconsciousness and death due to respiratory failure.
metalkamate a carbamate pesticide.
metalloenzyme [*mə-tal"o-en'zīm*] any enzyme containing tightly bound metal atoms, e.g. cytochrome oxidase.
metalloid [*met'əl-oid*] 1. any element with both metallic and nonmetallic properties. 2. any metallic element that has not all the characteristics of a typical metal.
metalloporphyrin [*mĕ-tal"o-por'fə-rin*] a combination of a metal with porphyrin, as in heme.
metalloprotein [*mĕ-tal"o-pro'tēn*] a protein molecule bound to a metal ion, e.g. hemoglobin.

VetBooks.ir

metallurgy [*met'əl-ur"je*] the science and art of using metals.
metalosis [*met'əl-o'sis*] a nonsuppurative osteomyelitis that occurs around metal implants as a result of corrosion or hypersensitivity reaction.
metamere [*met'əl-ur"je*] one of a series of homologous segments of the body of an animal.
metameric [*met"ə-mer'ik*] of or pertaining to metamerism.
metamerism [*mə-tam'ər-is"əm*] a system of structures in which similar segments succeed each other craniocaudally.
metamorphosis [*met"ə-mor'fə-sis*] change of structure or shape; particularly, transition from one developmental stage to another, as from larva to adult form.
fatty m. any normal or pathological transformation of fat, including fatty infiltration and fatty degeneration.
metamyelocyte [*met"ə-mi'ə-lo-sīt"*] a precursor in the granulocytic series, being a cell intermediate in development between a promyelocyte and the mature, segmented (polymorphonuclear) granular leukocyte, between the myelocyte and the band stage, and having a U-shaped nucleus.
metanephric [*met"ə-nef'rik*] pertaining to the metanephros.
m. diverticulum first stage in the development of the metanephros; an evagination from the caudal end of the mesonephric duct. Called also ureteric bud.
m. duct embryonic ureter.
metanephrine [*met"ə-nef'rin*] a urinary metabolite of epinephrine.
metanephros [*met"ə-nef'ros*] pl. *metanephroi* [Gr.] the third and final attempt to produce a permanent embryonic kidney, developing later than and caudal to the mesonephros.
metaphase [*met'ə-fāz*] the second stage of cell division (mitosis or meiosis), in which the chromosomes, each consisting of two chromatids, are arranged in the equatorial plane of the spindle prior to separation.
metaphylaxis [*met'ə-fə-lak'sis*] the timely mass medication of a group of animals to eliminate or minimize an expected outbreak of disease.
metaphyseal [*met"ə-fiz'e-əl*] pertaining to or emanating from the metaphysis.
m. aclasis see multiple cartilaginous **exostosis**.
m. dysplasia see hypertrophic **osteodystrophy**.
m. osseous replacement occurs within the primary spongiosa and carried out by the trabecular endosteal envelope.
m. osteopathy see hypertrophic **osteodystrophy**.
m. reduction part of the bone modeling process is funnelization of the metaphysis to reduce its diameter to conform with the smaller diameter of the diaphysis.
metaphysis [*mə-taf'ə-sis*] pl. *metaphyses* [Gr.] the wider part at the end of the shaft of a long bone on the diaphyseal side of the epiphyseal disk, characterized by much bone remodeling and, towards the diaphysis, a gradual narrowing of the diameter, to make up the so-called 'cut-back zone'; the cortical surface is often somewhat porous, reflecting the remodeling that is occurring.
metaplasia [*met"ə-pla'zhə*] the change in the type of adult cells in a tissue to a form abnormal for that tissue.
osseous m. formation of bone in a non-bony structure.
metaplastic [*met"ə-plas'tik*] characteristic of metaplasia.
metapneumonic [*met"ə-noo-mon'ik*] succeeding or following pneumonia.
Metapneumovirus [*met"ə-noo'mo-vi"rəs*] a genus in the subfamily *Pneumovirinae,* a member of the genus causes turkey rhinotracheitis.
metapodium the segment of limb supported by metacarpal or metatarsal bones.
metaproterenol [*met"ə-pro-ter'ə-nol*] orciprenaline.
metaraminol a noncatecholamine symphathomimetic amine, active at peripheral α-receptors; used as the bitartrate for its pressor effects in the treatment of shock.
metarteriole [*met"ə-ahr-tēr'e-ōl*] a branch of an arteriole.
metarubricyte [*met"ə-roo'brĭ-sīt*] an erythrocyte precursor, the most mature stage that still contains a nucleus; followed in maturation by the polychromatophilic erythrocyte.
metarubricytosis [*met"ə-roo'brĭ-sī-tos-is*] excessive production of metarubricytes (normoblasts) by the bone marrow. Called also normoblastosis.
metastasis [*mə-tas'tə-sis*] pl. *metastases* [Gr.] 1. the transfer of disease from one organ or part to another not directly connected with it.



M-32: Metastases from a splenic hemangiosarcoma implanted on the omentum.

It may be due either to the transfer of pathogenic microorganisms (e.g. tubercle bacilli) or to the transfer of cells, as in malignant tumors. 2. *metastases,* growths of pathogenic microorganisms or of abnormal cells distant from the site primarily involved by the morbid process. See also malignant **neoplasia**.
metastasize [*mə-tas'tə-sīz*] to form new foci of disease in a distant part by metastasis.
metastatic [*met"ə-stat'ik*] pertaining to or of the nature of a metastasis.
m. abscesses abscesses seeded down in tissues distant from a mother abscess.
m. calcification deposition of calcification in soft tissues, e.g. muscles and connective tissue.
m. cascade the series of events leading to metastasis, starting with detachment of neoplastic cells from the primary site through to attachment and tumor growth at a distant site.
metasternum [*met"ə-stur'nəm*] the xiphoid process.
Metastrongylidae [*met"ə-stron-jil'ĭ-de*] a family of nematode parasites, the adults of which invade the bronchi and lung parenchyma; primarily parasites of pigs.
Metastrongyloidea a superfamily of nematodes whose members are found in the bronchi, parenchyma and blood vessels of the lungs; the lungworms.
Metastrongylus [*met"ə-stron'jə-ləs*] a genus of nematodes in the family Metastrongylidae; earthworms are intermediate hosts.
M. apri occurs in the bronchi and bronchioles of pigs, occasionally in ruminants and very rarely in humans. No significant pathogenic effect. Called also *M. elongatus*.
M. brevivaginatus see *M. pudendotectus* (below).
M. elongatus see *M. apri* (above).
M. madagascariensis found in the bronchi of pigs, where it causes bronchitis, verminous pneumonia and loss of body weight.
***M. pudendotectus* (syn. *M. brevivaginatus*)** found in the lungs of pigs.
M. salmi a pig lungworm.
metatarsal [*met"ə-tahr'səl*] 1. pertaining to the metatarsus. 2. a bone of the metatarsus.
m. pad see **footpad**.
m. fistulation of German shepherd dogs fistulous tracts proximal to the metatarsal pads with a serous or serosanguinous discharge. The cause is unknown but a disorder of collagen is suspected.
m. spur see **spur** (3).
metatarsectomy [*met"ə-tahr-sek'tə-me*] excision or resection of a metatarsal bone.
metatarsophalangeal [*met"ə-tahr"so-fə-lan'je-əl*] pertaining to the metatarsus and the phalanges of the hindlimb.
m. joint the joint formed by the metatarsus and phalanges. Called also fetlock.
metatarsus [*met"ə-tahr'səs*] the part of the hindlimb between the tarsus and the first phalanx. In the cat and dog it contains five bones (metatarsals) extending from the tarsus to the phalanges. See also Table 10.
m. primus varus angulation of the first metatarsal bone toward the midline of the body, producing an angle sometimes of

VetBooks.ir

20 degrees or more between its base and that of the second metatarsal bone.

metathalamus [*met"ə-thal'ə-məs*] the part of the diencephalon composed of the medial and lateral geniculate bodies; often considered to be part of the thalamus.

Metathelazia a genus of nematode worms of the family Pneumospiruridae, found in the lungs. Includes *M. ascaroides* (langur monkeys), *M. californica* (various cats), *M. felis* (ocelots), *M. multipapillata* (hedgehogs).

metathesis [*mə-tath'ə-sis*] 1. artificial transfer of a morbid process. 2. a chemical reaction in which an element or radical in one compound exchanges places with another element or radical in another compound.

metatrophic [*met"ə-tro'fik*] utilizing organic matter for food.

Metazoa [*met"ə-zo'ə*] the division of the animal kingdom that includes the multicellular animals, i.e. all animals except the Protozoa.

metazoan [*met"ə-zo'ən*] member of the zoological division of Metazoa.

metazoon [*met"ə-zo'on*] pl. *metazoa* [Gr.] an individual organism of the Metazoa.

metazoonosis [*met"ə-zo"o-no'sis*] a zoonosis transmitted to vertebrate hosts by invertebrates. It depends on the invertebrate vectors or other intermediate hosts to complete the life cycle. Rift Valley fever, babesiosis and fascioliasis are examples.

metencephalon [*met"en-sef'ə-lon*] pl. *metencephala* [Gr.] 1. portion of the brain comprising the brainstem between the midbrain and the medulla oblongata (the ventral metencephalon - also knwon as the pons) together with the cerebellum (the dorsal metencephalon). 2. the anterior of two brain vesicles formed by specialization of the rhombencephalon in the developing embryo.

meteorism [*me'te-ə-riz"əm*] tympanites; drum-like distention of the abdomen caused by the presence of gas in the abdomen or intestines.

meteorismus see **meteorism**.

meteorotropism [*me"te-ə-rot'rə-piz"əm*] the possible response to influence by meteorological factors noted in certain biological events, such as sudden death, attacks of bovine parturient hypocalcemia, joint pain, colic and traffic accidents.

meter (m) [*me'tər*] the basic unit of linear measure of the metric system, being equivalent to 39.371 inches. See also Table 1 and **SI units**.

-meter word element. [Gr.] *instrument for measuring*.

metergoline a dopamine antagonist used for pregnancy termination in dogs and cats. Called also methergoline.

metestrus [*mə-tes'trəs*] the period of early corpus luteum development, commencing at the end of estrus and lasting until the beginning of dioestrus. Generally a period of 2 days, but in the bitch the term is usually taken to include the pseudopregnancy (40–90 days).

metformin [*mət-for'min*] a biguanide used in the management of diabetes in cats. It acts by inhibiting gluconeogenesis, stimulation of peripheral glycolysis and inhibiting intestinal absorption of carbohydrates.

methacholine [*meth"ə-ko'lēn*] a synthetic choline ester with pharmacological effects similar to those of acetyl choline, but has little effect on alimentary tract and is little used in veterinary medicine.

methacycline [*meth"ə-si'klēn*] a derivative of oxytetracycline with slower excretion and more sustained effective blood concentrations.

methadone [*meth'ə-dōn*] a synthetic opioid agonist used for analgesia and sedation. Commonly used in horses.

methallibure [*mə-thal'ī-būr*] an inhibitor of pituitary gonadotropin, used to control estrus in sows. It causes congenital defects of cranium and limbs in fetuses of sows fed the compound in early pregnancy.

methamphetamine [*meth"am-fet'ə-mēn*] a central nervous system stimulant and pressor drug; used as the hydrochloride salt. See also **amphetamine**.

methandrostenolone [*məth-an"dro-sten'ə-lōn*] an anabolic steroid with androgenic effects. Called also methandienone.

methane [*meth'ān*] CH_4; an inflammable, explosive gas from decomposition of organic matter. Large amounts are produced in the rumen. Attempts have been made to use the output from slurry pits to heat the animal accommodation in the building overhead.

methanearsonate a preparation which includes two herbicides, monosodium methanearsonate (MSMA), disodium methanearsonate (DSMA). See also organic **arsenical**.

methanethiol 1. a flammable gas used in the manufacture of pesticides and fungicides. Called also methyl mercaptan. 2. an inflammable gas with the odor of rotten cabbage. Produced in the intestine by the actions of anaerobic bacteria on albumin. 3. a toxic metabolite of methionine that induces hepatic coma and encephalopathy.

Methanobrevibacter ruminantium a bacterial resident of the rumen involved in its digestive processes.

methanol [*meth'ə-nol*] a mobile, colorless liquid widely used as a solvent; methyl alcohol. A potent poison causing death due to its toxic effect on cardiac muscle. A component of methylated spirit.

Methanosarcina barkeri one of the wide range of digestive bacteria in the ruminal population.

methantheline [*mə-than'thə-lēn*] a quaternary amine with antimuscarinic activity similar to atropine; the bromide is used as a smooth muscle relaxant.

methaqualone [*mə-thak'wə-lōn*] a nonbarbiturate hypnotic similar to barbiturates in its effects. Withdrawn from the market.

metharbital [*mə-thahr'bĭ-təl*] a long-acting barbiturate used as a central nervous system depressant with anticonvulsant action.

methazolamide [*meth"ə-zo'lə-mīd*] a carbonic anhydrase inhibitor used orally in the treatment of glaucoma.

MetHb methemoglobin.

metHb methemoglobin.

methemalbumin [*met"he-mal-bu'min*] a brownish pigment formed in the blood by the binding of albumin with heme; indicative of intravascular hemolysis.

methemalbuminemia [*met"hēm-al-bu"min-e'me-ə*] the presence of methemalbumin in the blood.

methemoglobin [*met-he'mo-glo"bin*] a compound formed from hemoglobin by oxidation of the iron atom from the ferrous to the ferric state. A small amount of methemoglobin is normally present in the blood, but injury or toxic agents convert a larger proportion of hemoglobin into methemoglobin, which does not function as an oxygen carrier. See also **hemoglobin**.

m. reductase pathway an intraerythrocyte enzyme system that maintains hemoglobin in a reduced state. A deficiency of the enzyme, resulting in methemoglobinemia with insufficient oxygenation of the blood, occurs in the dog.

methemoglobinemia [*met"he-mo-glo"bĭ-ne'me-ə*] methemoglobin in the blood, usually due to the toxic action of drugs or other agents, or to hemolytic processes. The common cause in food animals is nitrite poisoning. In small animals, it most often follows the administration of oxidizing drugs such as acetaminophen (especially to cats). Clinically there is dyspnea and sometimes coffee colored blood and mucosae.

inherited m. a familial form of methemoglobin reductase deficiency occurs in several breeds of dogs and in cats, and a glutathione reductase deficiency has been reported in horses.

methemoglobinuria [*met"he-mo-glo-bĭ-nu're-ə*] methemoglobin in the urine. Urine containing a high concentration of hemoglobin from an intravascular hemolysis may also contain large amounts of methemoglobin.

congenital m. congenital defect recorded in horses, characterized by pale mucosae, hemic heart murmur, decreased exercise tolerance, hemolytic anemia. Rare and unproven as an inherited defect.

methenamine [*meth-en'ə-mēn*] a white crystalline powder used orally as a urinary antiseptic; in acidic urine it is hydrolyzed to formaldehyde and ammonia. Called also hexamine, hexamethylenetetramine.

m. hippurate hexamine combined with hippuric acid.

m. mandelate a salt of hexamine and mandelic acid, used in infections of the urinary tract.

methenolone an anabolic steroid; used as the acetate or enanthate.

methergoline metergoline.

methestrol a synthetic estrogenic agent.

methetharimide see **bemegride**.

methicillin [*meth"ĭ-sil"in*] a semisynthetic penicillin which is highly resistant to inactivation by penicillinase; its sodium salt is used parenterally.

m.-resistant *Staphylococcus aureus* (MRSA) see **MRSA**.

VetBooks.ir

methimazole [*meth-im'ə-zōl*] a thiourea antithyroid drug used in the treatment of feline hyperthyroidism.

methiocarb [*mə-thi'o-kahrb*] an organophosphorus choninesterase-inhibitingcompound which is used as a molluscicide; it causes poisoning in many species, particularly dogs, with vomiting, diarrhea, salivation, pupillary constriction, bradycardia, muscular tremor and convulsions.

methionine (Met) [*mə-thi'o-nēn*] a sulfur-containing amino acid occurring in proteins and which is required in the diet of animals.

m. deficiency exacerbates deficiencies of choline and vitamin B_{12}.

m. enkephalin met-enkephalin; see **enkephalin**.

m. sulfoximine the convulsant agent produced in flour by the agene process. Causes **hysteria** in dogs, ferrets, rabbits and cats, but other species are not affected.

DL-methionine racemethionine. See **methionine**.

methisazone [*mə-this'ə-zōn*] a thiosemicarbazone derivative that inhibits mRNA and protein synthesis. Used as an oral antiviral agent.

methocarbamol [*meth"o-kahr'bə-mol*] a compound used as a skeletal muscle relaxant, particularly in dogs with intervertebral disk disease.

method [*meth'əd*] procedure for carrying out a particular task, e.g. investigating a hypothesis.

agreement m. when a particular factor is common to all occurrences of the disease, it may be that the common factor is the cause of the disease.

analogy m. when the circumstances of occurrence in one disease are similar to those in which another disease occurs, the diseases may come about in the same way even though the causes are different.

concomitant variation m. when variation in the frequency of the disease is mirrored by a similar variation in the strength of a particular agent which may be the cause.

difference m. when there are wide differences in the rate of occurrence of a disease and a high frequency is accompanied by the presence of the suspected cause and a low frequency by its absence.

nearest neighbor m. a method for establishing the population density of a particular species of animal or plant. One of the units is identified and the distance to its nearest neighbor of the same species measured. The number of units of that species in an area can then be established, the accuracy increasing with the number of measurements made.

methodology [*meth"ədol'ə-je*] the science dealing with principles of procedure in research and study.

methohexital [*meth"o-hek'si-təl*] an ultra-short-acting barbiturate. Called also methohexitone.

methomyl a carbamate insecticide capable of causing poisoning similar to organophosphorus poisoning.

methoprene an insect growth regulator used to control ectoparasites on animals and in their environment. A common ingredient of household flea-bombs.

methotrexate [*meth"o-trek'sāt*] an inhibitor of dihydrofolate reductase used as an antineoplastic agent in the treatment of lymphoproliferative disorders of dogs and cats.

methotrimeprazine [*meth"o-tri-mep'rə-zēn*] a phenothiazine tranquilizer used as a sedative and antiemetic.

methoxamine [*mə-thok'sə-mēn*] a sympathomimetic amine used as the hydrochloride for its vasopressor effects.

3-methoxy-2(5H)-furanone toxin responsible for kidney damage caused by the plant *Narthecium ossifragum*.

5-methoxy-*N*-methyl-tryptamine toxic tryptamine found in *Phalaris* spp.

methoxy-pyridone (4-methoxy-) toxic pyridoxine analog found in *Albizia* spp.

methoxychlor [*mə-thok'sə-klor*] one of the group of chlorinated **hydrocarbon** insecticides which cause typical signs of that poisoning.

methoxycoumestrol, 4-methoxycoumestrol toxic coumestan, phytoestrogen, found in plants.

5-methoxydimethyltryptamine one of the toxic substances in the grass *Phalaris aquatica*.

methoxyethyl mercury silicate used as a fungistatic seed dressing. Feeding the grain to livestock can cause **mercury** poisoning.

methoxyflurane [*mə-thok"se-floo'rān*] a fluorinated ether derivative used as a general anesthetic administered by inhalation.

8-methoxypsoralen the photodynamic agent in ***Ammi majus***.

methscopolamine [*meth"sko-pol'ə-mēn*] a methylated derivative of **scopolamine**.

methyl [*meth'əl*] the monovalent radical, $-CH_3$.

m. alcohol see methyl **alcohol**.

m. bromide a soil and grain fumigant. Poisoning by this compound causes incoordination and somnolence. Called also bromoethane.

m. carbamate see **propoxur**.

m. demeton an organophosphorus cholinesterase-inhibiting insecticide. Called also methyl systox, oxydemeton-methyl.

m. harmane (3-methyl) carboline alkaloid toxin found in plants.

m. hydroxybenzoate see **methylparaben**.

m. orange an orange-yellow aniline dye, used as an indicator with a pH range of 3.2–4.4 and a color change from pink to yellow.

m. parathion a very toxic organophosphorus cholinesterase-inhibiting insecticide.

m. red test a biochemical test for identification of enterobacteria.

m. salicylate a natural or synthetic wintergreen oil, used as a topical analgesic and as a clearing agent when mounting parasites. Called also oil of sweet birch. Used topically as an alternative therapy in humans, but the salicylates are toxic for dogs and, in particular, cats.

m. systox see methyl demeton (above).

methyl mercaptan [*meth"əl-mər-kap'tan*] see **methanethiol**.

methylamphetamine [*meth"əl-am-fet'ə-mēn*] methamphetamine.

methylases [*meth'əl-āzez*] host cell enzymes that introduce methyl groups into bases of DNA. In prokaryotic cells two methyl groups are introduced into the palindromic sequences recognized by restriction endonucleases; when methylated, the restriction enzyme cannot cut the DNA so that methylation protects host cell DNA from cleavage.

methylate [*meth'əl-āt*] 1. a compound of methyl alcohol and a base. 2. to add a methyl group to a substance.

methylated spirit [*meth'əl-āt"əd*] a mixture of methyl **alcohol** (4%) and ethyl alcohol. Used as fuel, and as a skin disinfectant; poisonous if taken orally.

methylation [*meth"əl-a'shən*] the addition of methyl groups.

methylatropine [*meth"əl-at'tro-pēn*] a synthetic muscarinic blocking agent used as a smooth muscle relaxant but less effective against poisoning with organophosphorus insecticides than atropine. Called also atropine methylbromide.

methylazoxymethanol (MAM) [*meth"əl-az-ok"se-meth'ə-nol*] the aglycone which is linked with a sugar to make the toxic glycosides cycasin and macrozamin in **cycads**.

methylbenzene [*meth"əl-ben'zēn*] see **toluene**.

methylbenzethonium chloride a quaternary ammonium compound used as a disinfectant and antiseptic.

methylcellulose [*meth"əl-sel'u-lōs*] a methyl ester of cellulose; used as a bulk laxative, obstetrical lubricant and, in squeeze bottles, as a lubricant for rectal examinations in large animals. Used also as a topically applied ophthalmic drug to protect and lubricate the corneoconjuncitval surface; a form of 'artificial tears'.

methylcholanthrene [*meth"əl-ko-lan'thrēn*] a thyroid initiator, capable of initiating thyroid tumors.

methylconiine one of the toxic alkaloids in ***Conium maculatum***.

***S*-methylcysteine sulfoxide (SMCO)** the non-protein amino acid in plants of the family Brassicaceae which is metabolized in the rumen and converted to dimethyldisulfide, the hemolytic agent.

methylcytosine [*meth"əl-sī 'to-sēn*] a pyrimidine occurring in deoxyribonucleic acid.

methylene blue [*meth'ə-lēn*] a synthetic organic compound, in dark green crystals or lustrous crystalline powder, used in treatment of methemoglobinemia, as an antidote in cyanide poisoning, as a stain in pathology and bacteriology, and as an antiseptic.

m. b. dye binding test see **Sabin–Feldmann dye test**.

new m. b. stain see new methylene blue **stain**.

3,3'-methylene (4-hydroxycoumarin) the anticlotting agent in moldy sweet clover hay. Called also dicoumarol. See also ***Melilotus***.

methylergometrine maleate, methylergonovine maleate [*meth"əl-ur"go-met'rin mal'e-āt*] a compound used as an oxytocic.

***N*-methylglucamine** [*meth"əl-gloo'kə-mēn*] see **meglumine** (1).

3-methylindole [*meth"əl-in'dol*] produced in the rumen from diets high in L-tryptophane; causes damage to pulmonary tissue and

the development of **atypical interstitial pneumonia** in cattle and horses.

methyllycaconitine diterpenoid alkaloid toxin found in plants.

methylmalonic acid [*meth"əl-mə-lon"ik-as"id*] a normal ruminant metabolite detoxified in animals receiving a diet adequate in cobalt. A high content in the urine suggests nutritional deficiency.

methylmalonyl CoA [*meth"əl-mal'ə-nəl*] intermediate in the conversion of propionate into glucose.

m. CoA mutase vitamin B_{12} containing enzyme catalyzing the isomerization of methylmalonyl CoA to succinyl CoA, a step in the conversion of propionate into glucose.

methylmercurialism [*meth"əl-mər-kūr'e-əl-iz"əm*] poisoning with organic mercurial compounds.

methylmercury compounds fungistatic agents used in stored feeds. They include methylmercury acetate, chloride, dicyandiamide and hydroxide. When treated grain is accidentally fed to livestock, poisoning may result. See **mercury** poisoning.

methylmethacrylate [*meth"əl-meth-ak'rə-lāt*] used in orthopedic surgery to construct protective structures, e.g. in laminectomy to protect the spinal meninges, in dentistry, and to cement prostheses.

methylmorphine [*meth"əl-mor'fēn*] codeine.

***N*-methyl-*N*-nitrosourea** poisoning can cause a higher than normal incidence of thyroidal tumors.

methylparaben [*meth"əl-par'ə-bən*] an antifungal and antibacterial agent used as a preservative in pharmaceutical preparations. Called also methyl hydroxybenzoate. See also **hydroxybenzoate**.

***N*-methyl-β-phenethylamine** the toxin in the tree *Acacia berlandieri*.

methylphenidate [*meth"əl-fen'ĭ-dāt*] a central nervous system stimulant used in the treatment of hyperkinesis and narcolepsy in dogs.

methylphenobarbital, mephobarbital, methylphenobarbitone [*meth"əl-fe"no-bahr'bĭ-təl*] related to phenobarbital, but produces less sedation; is used as an anticonvulsant in dogs.

methylprednisolone [*meth"əl-pred-nis'ə-lōn*] a glucocorticoid with anti-inflammatory action similar to that of prednisolone. The acetate is often prepared in long-acting forms while the water-soluble, rapid-acting succinate is suitable for intravenous administration and is used in the treatment of shock.

m.-21-dimethylaminoacetate a long-acting glucocorticoid, used in the treatment of dermatoses and allergic conditions.

4-methylpyrazole see **fomepizole**.

methylrosaniline chloride [*meth"əl-ro-zan'ĭ-lēn*] gentian violet.

methylselenocysteine [*meth"əl-sə-le"no-sis'te-ēn*] a selenium-containing amino acid found in the selenium converter plant ***Astragalus*** *bisulcatus*.

methyltestosterone [*meth"əl-təs-tos'tər-ōn*] an orally effective, synthetic form of testosterone.

methylthiouracil [*meth"əl-thi"o-u'rə-sil*] a thiourea antithyroid drug.

methyltransferase [*meth"əl-trans'fər-ās*] any enzyme that catalyzes the transfer of a methyl group from a donor to an acceptor.

α-methyltyrosine metirosine

methyluracil compounds compounds used as herbicides which could cause poisoning at the concentrations used if animals are allowed access to treated pasture. Signs include bloat, incoordination and anorexia. Includes bromacil and isocil.

methylxanthine [*meth"əl-zan'thēn*] methylated derivatives of xanthine, including caffeine, theobromine and theophylline. See also **chocolate toxicity**.

methysergide [*meth"ĭ-sur'jīd*] a potent serotonin antagonist.

metichlorpindol see **clopidol**.

metipranolol [*met"ĭ-pran'ə-lol*] a β-blocker used to lower intraocular pressure in glaucoma. Not commonly used in the management of veterinary glaucoma.

metirosine L-tyrosine, an inhibitor of catecholamine synthesis used in the treatment of pheochromocytoma.

metmyoglobin [*mət-mi"o-glo'bin*] a compound formed from myoglobin by oxidation of the ferrous to the ferric state with essentially ionic bonds.

metoclopramide [*met"o-klo'prə-mīd*] a dopamine antagonist that stimulates motility of the upper gastrointestinal tract, relaxes the pyloric sphincter, and promotes gastric emptying. Used as an antiemetic.

metocurine iodide [*met"o-ku'rēn*] a nondepolarizing muscle relaxant, similar to *d*-tubocurarine.

metoestrus metestrus.

Metol a common developing agent for use with X-ray films. Commonly used together with hydroquinone.

metolazone [*mə-to'lə-zōn*] a thiazide-like diuretic and saluretic.

metomidate [*mə-to'mi-dāt*] a nonbarbiturate hypnotic with minimal analgesia; used in pigs and birds, especially raptors. It is often used in combination with azaperone.

metopic [*me-top'ik*] pertaining to the forehead.

metoprolol [*met"o-pro'lol*] a cardioselective β-blocker having a greater effect on β_1-adrenergic receptors of the heart than on β_2-adrenergic receptors of the bronchi and blood vessels.

Metorchis [*met-or'kis*] a genus of flukes (digenetic trematodes) parasitic in the gallbladder and bile ducts, members of the family Opisthorchidae.

M. albidis found in dogs, cats, fox, gray seal; also in birds and humans.

M. conjunctus found in cat, dog, mink, raccoon, fox.

metoserpate [*met"o-sur'pāt*] a rauwolfia derivative, administered as the hydrochloride in drinking water to fowls as a tranquilizer before handling.

metoxenous [*mə-tok'sə-nəs*] requiring two hosts for the entire life cycle.

metra [*me'trə*] the uterus.

metra- word element. [Gr.] *uterus*.

metratonia [*me"trə-to'ne-ə*] uterine atony.

metratrophia [*me"trə-tro'fe-ə*] atrophy of the uterus.

metre [*me'tər*] see **meter**.

metrectasia [*me"trek-tā-zha*] dilatation of the nonpregnant uterus.

metreurynter [*me"troo-rin'tər*] an inflatable bag for dilating the cervical canal of the uterus.

metreurysis dilatation of the cervix uteri by means of the metreurynter.

metric [*met'rik*] 1. of or pertaining to the metric system. 2. pertaining to measures or measurement. 3. having the meter as a basis.

m. system the system of units of measurement that is based on the meter, gram and liter, and in which new units are formed by prefixes denoting multiplication by a power of ten. See also Tables 2.1–2.5.

Metricheck tube™ stainless steel probe with attached rubber cap at one end to sample the contents of the anterior vagina of cattle.

metrifonate [*met"rĭ-fo'nāt*] an organophosphorus insecticide. See **trichlorfon**.

metritis [*mə-tri'tis*] inflammation of the uterus.

contagious equine m. (CEM) see **contagious** equine metritis.

m. dissecans metritis with necrosis of portions of the uterine wall.

mastitis–m.–agalactia see **mastitis–metritis–agalactia**.

puerperal m. infection of the uterus in the first week postpartum.

purulent m. see **pyometra**.

septic m. metritis with a severe systemic reaction, either as a toxemia or a septicemia.

metritis–mastitis–agalactia in sows [*mə-tri'tis*] see **mastitis–metritis–agalactia**.

metrizamide [*mə-triz'ə-mīd*] a nonionic, water-soluble, iodinated radiographic contrast medium used in myelography and cisternography. Replaced by newer contrast media because of a high rate of side-effects.

metrocele [*me'tro-sēl*] hernia of the uterus.

metrocolpocele hernia of the uterus with vaginal prolapse.

metrocystosis [*me"tro-sis-to'sis*] formation of cysts in the uterus.

metrodynia [*me"tro-dī-ne-ə*] pain in the uterus.

Metroliasthes a genus of tapeworms in the family Paruterinidae.

M. lucida found in the small intestine of fowl and turkeys.

metrology [*mə-trol'ə-je*] the study of weights and measures used in prescription writing.

metrolymphangitis [*me"tro-lim"fan-ji'tis*] inflammation of the uterine lymphatic vessels.

metromalacia, metromalacoma [*me"tro-mə-la'shə*] abnormal softening of the uterus.

metronidazole [*met"ro-ni'də-zōl*] an antimicrobial compound effective against protozoa and anaerobic bacteria. Commonly used to treat trichomoniasis, amebiasis, giardiasis and balantidiasis.

metroparalysis [*me"tro-pə-ral'ə-sis*] paralysis of the uterus.

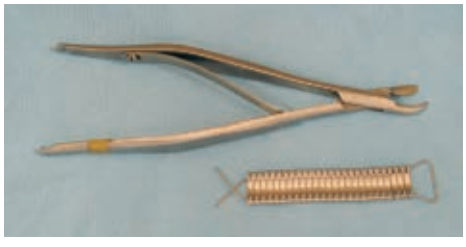
metropathia [*me"tro-pa'the-ə*] any disorder of the uterus.

metropathy [*mə-trop'ə-the*] any uterine disorder.

metroperitoneal [*me"tro-per"ĭ-to-ne'əl*] pertaining to the uterus and peritoneum.

VetBooks.ir

metroperitonitis [*me"tro-per"ĭ-to-ni'tis*] inflammation of the peritoneum about the uterus.
metrophlebitis [*me"tro-flə-bi'tis*] inflammation of the uterine veins.
metroplasty [*me'tro-plas"te*] reconstructive surgery on the uterus.
metroptosis [*me"trop-to'sis, me"tro-to'sis*] prolapse of the uterus.
metrorrhagia [*me"tro-ra'jə*] uterine bleeding, usually of normal amount. Occurs normally in cows following ovulation.
metrorrhea [*me"tro-re'ə*] abnormal uterine discharge.
metrorrhexis [*me"tro-rek'sis*] rupture of the uterus.
metrosalpingitis [*me"tro-sal"pin-ji'tis*] inflammation of the uterus and uterine tubes.
metrosalpingography [*me"tro-sal"pin-gog'raf-e*] hysterosalpingography; radiography of the uterus and uterine tubes.
metroscope [*me'tro-skōp*] hysteroscope.
metrostaxis [*me"tro-stak'sis*] slight but persistent uterine bleeding.
metrostenosis [*me"tro-stə-no'sis*] stenosis of the uterus.
-metry word element. [Gr.] *measurement*.
metyrapone [*mə-tēr'ə-pōn*] a compound that selectively inhibits adrenocortical 11β-dehydroxylase and the synthesis of cortisol. Used in the treatment of hyperadrenocorticism.
m. test blood concentrations of cortisol and 11-desoxycortisol are measured, before and after administration of metapyrone. In pituitary dependent hyperadrenocorticism, there is a decrease in cortisol and increase in 11-desoxycortisol; both values decrease if there is an adrenal tumor.
Metzenbaum scissors lightly built curved scissors with blunt-pointed, narrow blades.
Meuse–Rhine–Yssel red pied, dual-purpose European cattle. Called also Dutch red and white.
MEV mink enteritis virus.
MeV megaelectron volt.
mevalonic acid [*mev-ə-lon'ik*] an intermediate in the synthesis of cholesterol in the body. It is formed in the rate limiting step catalyzed by 3-hydroxy-3-methylglutaryl CoA reductase, the site of dietary control.
mevinphos an organophosphorus cholinesterase-inhibiting insecticide. Light poisoning can cause pupillary constriction in the absence of other signs. Called also phosdrin.
mew, miaow the vocal sound characteristic of domestic cats; in various languages it is spelled in 31 different ways, which include 'miaow', 'meow', 'myaus', 'mio', and 'mau'. See also **vocalization**.
Mexican named after or originating in Mexico.
M. beaded lizard see beaded **lizard**.
M. blue eye see porcine **paramyxovirus** encephalomyelitis.
M. hairless in the USA, a common name for the **Xoloitzcuintli**, but outside North American, this is the recognized name for this breed of small, hairless dogs.
M. hat cell see target **cell**.
M. poppy see ***Argemone***.
M. tea see ***Chenopodium*** *ambrosioides*.
M. walking fish see **axolotl**.
mexiletine [*mek'sĭ-lə-tēn*] a cardiac antiarrhythmic agent that shortens the action potential duration but increases the refractory period; used orally to suppress ventricular arryhythmias in dogs.
Meyerding retractors a handheld retractor with a thumb grip at one end and a curved, sharp-toothed blade at the other. It is used for retracting large muscles during orthopedic surgery.
mezerein, mezereum [*mə-ze're-in*] an intensely irritating resin whose action resembles that of cantharides. Signs include vomiting, colic, prostration. The seeds and bark of *Daphne mezereum* and *D. laureola* are the important sources of the poison.
mezereinic acid the anhydride of this acid is **mezerein**.
mezereon ***Daphne*** *mezereum*.
mezereum [*me-ze're-əm*] see **mezerein**.
mezlocillin [*mez"lo-sil'in*] a ureidopenicillin with a broad spectrum of activity.
MF mitogenic factor.
μF microfarad.
M'Fadyean's reaction see **McFadyean's reaction**.
Mg chemical symbol, *magnesium.*
mg milligram.
μg microgram.
Mg^{2}+ magnesium ion.
MH malignant hyperthermia.
MHA microangiopathic hemolytic **anemia**.
MHC major histocompatibility complex.
mho previous name for the unit of electric conductance, derived from spelling ohm backwards; now largely replaced by the SI unit **siemens**.
MHV mouse hepatitis virus.
MI myocardial infarction.
miasma [*mi-az'mə*] noxious exhalations from putrescent organic matter; the basis for an early concept of the origin of epidemics.
mibolerone a synthetic androgenic, anabolic, antigonadotrophic steroid used to control estrus in dogs; contraindicated for use in cats. Called also dimethylnortestosterone.
MIC minimal inhibitory concentration.
mication [*mi-ka'shən*] a quick motion, such as winking.
micelle [*mi-sel'*] a supermolecular colloid particle made up of amphipathic molecules having single hydrophobic tails in a spherical arrangement with, in aqueous solution, the polar head groups in contact with the water and the non polar tails in the core. A stage in the luminal phase of fat digestion; bile salts form spheres containing fatty acids, monoglycerides and the fat-soluble vitamins.
critical m. concentration the concentration of bile salts in solutions at which they aggregate into poymolecular aggregates called micelles.
Michaelis constant [*mĭ-ka'lis*] see K_M **constant**.
Michaelis-Menten equation mathematical relationship between the initial velocity V_0 and substrate concentration [S] of an enzyme reaction.
Michaelis–Menten rate law [*mĭ-ka'lis men'tən*] law defined by the Michaelis-Menten equation governing enzymatic reactions in steady-state with the constants, V_{max} and K_M.
Michel [*me-shel'*] named after Gaston Michel, a French surgeon (1875–1937).
M. clip metal skin sutures in various sizes from 8–16 mm long. Each clip is a 2 mm wide band of metal with a downturned sharp prong at each end. When the clip is bent double the points face each other and approximate. There is a special instrument for applying and removing the clips. They are excellent in design and concept but can be easily removed by rubbing.
M.'s trephine a heavy-duty trephine with an adjustable head for cutting holes in bone of 0.5–0.8 mm diameter.
Michel's fixative [*me-shel'*] a tissue fixative used for preservation of skin biopsy specimens to be examined by direct immunofluorescent testing for demonstration of tissue-fixed immunoglobulins.
Michigan test an indirect test on milk carried out to determine whether mastitis is present in the gland. Is based on the formation of a gel when there are a large number of cells in the sample. Now largely superseded by milk cell counts.
miconazole [*mi-kon'ə-zōl*] an imidazole antifungal agent used topically as the nitrate in the treatment of fungal and yeast infections of the skin.
micrencephaly [*mi"krən-sef'ə-le*] abnormal smallness and underdevelopment of the brain.
micr(o)- (μ) [Gr.] *small*; a prefix used in the metric system of measurement to designate an amount 10^{-6} (one-millionth) the size of the unit to which it is joined; e.g. microgram (μg).
microabscess [*mi"kro-ab'ses*] abscess visible only under a microscope.
Munro m. a small collection of neutrophils within or under the stratum corneum.
Pautrier m. a collection of malignant lymphocytes in the epidermis occurring as solid intraepidermal nodules; seen in epitheliotropic lymphomas.



M-33: Michel skin clips and Michel clip forceps. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

microadenoma [*mi"kro-ad"ə-no'mə*] an adenoma less than 13 mm diameter.

microaerophilic [*mi"kro-ār'o-fil"ik*] requiring oxygen for growth but at a lower concentration than is present in the atmosphere, in conjunction with an enhanced carbon dioxide concentration; said of bacteria.

microagglutination test [*mi"kro-ə-gloo"tĭ-na'shən*] see microscopic **agglutination** test.

microaggregate [*mi"kro-ag'rə-gət*] a microscopic collection of particles, such as platelets, leukocytes or fibrin, that occurs in stored blood.

microalbuminuria [*mi"kro-al-bu"min-u're-ə*] the presence of a very low concentration of albumin in urine (30–300 mg/L) which is abnormal, but below the concentration detectable by the usual dipstick tests for proteinuria. An early indicator of glomerular renal disease.

microalgae [*mi"kro-al'je*] unicellular aquatic plants (phytoplankton), the starting point of the aquatic food chain. Include toxic microalgae which are important causes of marine fish mortalities, especially *Alexandrium*, *Chaltonella*, *Heterosigma* spp., and pathogenic microalgae, e.g. *Chaetoceros* spp., phytoplankton with long, sharp spines which penetrate the gills of fish.

microanalysis [*mi"kro-ə-nal'ə-sis*] the chemical analysis of minute quantities of material.

microanatomy [*mi"kro-ə-nat'ə-me*] see **histology**.

microaneurysm [*mi"kro-an'u-riz"əm*] a minute aneurysm occurring on a vessel of small size, such as one in the retina of the eye or as occurs in thrombotic purpura.

microangiopathic [*mi"kro-an"je-o-path'ik*] having the characteristics of microangiopathy.

m. hemolytic anemia see microangiopathic **anemia**.

microangiopathy [*mi"kro-an"je-op'ə-the*] a disorder involving the small blood vessels.

cerebrospinal m. in pigs is manifested by depression, incoordination, aimless wandering, circling and wasting. The characteristic microangiopathy is not restricted to the nervous system. Thought to be a sequel to **edema** disease.

dietetic m. one of the less commonly occurring lesions that can be prevented by the dietary addition of selenium and vitamin E.

thrombotic m. formation of thrombi in the arterioles and capillaries.

microatelectasis lung collapse visible only by microscope.

microbat bats in the suborder Microchiroptera; see **bats**.

microbe [*mi'krōb*] a microorganism, especially a pathogenic bacterium.

microbial pertaining to or emanating from a microbe.

m. digestion the breakdown of organic material, especially feedstuffs, by microbial organisms. It is the basis of the functioning of the rumen, the large intestine of the horse, and a significant part of the digestive process in the crop of birds. The function can be seriously damaged by the prolonged or heavy dosing of the animal with antibiotics or sulfonamides.

direct fed m's. see **probiotic**.

m. flora see **microbiota**.

microbicidal [*mi-kro"bĭ-si'dəl*] destroying microbes.

microbicide [*mi-kro'bĭ-sīd*] an agent that destroys microbes.

microbiologist [*mi"kro-bi-ol'ə-jist*] a specialist in microbiology.

microbiology [*mi"kro-bi-ol'ə-je*] the study of microorganisms, including bacteria, fungi, viruses and pathogenic protoza, and the diseases they cause.

microbiome [*mi"kro-bi'ōm*] the entire population of microorganisms found in an organism; constitutes a very large (many billions), and somewhat variable populations that often have particular niches such as the skin, respiratory, gastrointestinal and urogenital tracts and form part of the so called 'normal flora' as well as transient and persistent infections that may cause disease. With advances in high throughput genomic sequencing techniques and bioinformatics, there is an NIH project (Human Microbiome Project) that aims to identify the entire human microbiome.

microbiota [*mi"kro-bi-o'tə*] the microscopic living organisms of a region. Called also microbial flora.

microblast [*mi'kro-blast*] an abnormally small erythroblast.

microblepharia [*mi"kro-blə-far'e-ə*] developmental anomaly characterized by abnormal shortness of the vertical dimensions of the eyelids.

microbody [*mi"kro-bod'e*] any of the cytoplasmic particles found in kidney and liver cells and in certain other cells, surrounded by a limiting membrane, and containing dense crystalline-like inclusions and oxidases.

microbrachius [*(mi"kro-bra'ke-əs*] a fetus with abnormally small forelimbs.

Microcalliphora see ***Chrysomya***.

microcardia [*mi"kro-kahr'de-ə*] abnormal smallness of the heart.

microcephalus [*mi"kro-sef'ə-ləs*] an animal with a very small head.

microcephaly [*mi"kro-sef'ə-le*] small size of the head in relation to the rest of the body.

microchip [*mi"kro-chip'*] a form of radio frequency identification in which a transponder is read by a scanner or reader (transceiver) that emits a radio frequency wave to power the transponder to transmit its information back to the reader. In dogs and cats it is commonly implanted under the skin, in birds it is implanted within the pectoral muscles, and in horses into the nuchal ligament. The information, usually an identifying number, can be compared with that stored on a database registry, which usually identifies the owner or other relevant information. They can be attached to animals by other means, such as ear tags and collars. Implanted microchips are the preferred method for permanent identification of camelids. See also electronic **identification**.

Microchiroptera the suborder of insectivorous **bats**, in the order Chiroptera.

microchromosomes very small chromosomes found only in avian karyotypes.

microcirculation [*mi"kro-sur"ku-la'shən*] the flow of blood through the fine vessels (arterioles, capillaries and venules).

microclimate [*mi"kro-kli'mət*] the temperature, humidity, pH and air movement at a particular level, usually an interface between two systems, e.g. ground and air, skin and air.

Micrococcaceae [*mi"kro-kŏ-ka'se-e*] a family of gram-positive, catalase-positive, aerobic or facultatively anaerobic spherical bacteria, containing the genera *Arthrobacter, Micrococcus* and *Renibacterium*.

micrococci [*mi"kro-kok'si*] any bacteria belonging to the family *Micrococcaceae*.

Micrococcus [*mi"kro-kok'əs*] a genus of gram-positive coccoid bacteria of the family *Micrococcaceae* found in soil, water, etc.

micrococcus [*mi"kro-kok'əs*] pl. *micrococci* [Gr.] any organism of the genus *Micrococcus*.

microcolon [*mi"kro-ko'lən*] abnormal smallness of the colon.

microconidium [*mi"kro-ko-nid'e-əm*] pl. *microconidia;* small conidia, as produced by *Trichophyton*.

microcoria [*mi"kro-ko're-ə*] smallness of the pupil.

microcornea [*mi"kro-kor'ne-ə*] unusual smallness of the cornea, usually bilateral.

Microcotyle a monogenetic trematode of marine fish that attaches to the skin of the host.

microcotyledons [*mi"kro-kot"ə-le'donz*] a microscopic grouping together of villi in the equine placenta in a manner similar to that in ruminants.

microcryoepilation [*mi"kro-kri'o-ep"ĭ-la'shən*] use of freezing to destroy hair follicles; used in distichiasis.

microcrystalline [*mi"kro-kris"tə-lin*] made up of minute crystals.

microcurie (μCi) [*mi'kro-ku"re*] one-millionth (10^{-6}) curie. A non-SI unit, now replaced by the **becquerel**.

microcurie-hour (μCi-h) a non-SI unit of dose equivalent to that obtained by exposure for one hour to radioactive material disintegrating at the rate of 3.7×10^4 atoms per second.

microcyst [*mi'kro-sist*] a cyst visible only under a microscope.

microcystin [*mi'kro-sis"tin*] a group of toxic cyclic decapeptides, the hepatotoxins in some cyanobacteria. See also ***Anabaena, Gloeotrichia Microcystis, Nostoc rivulare, Oscillatoria.***

Microcystis [*mi"kro-sis'tis*] a genus of the **cyanobacteria**, produces a peptide toxin, microcystin, which causes acute liver necrosis. Includes *M. aeruginosa*, *M. flosaquae* (*M. toxica*, *Anacystis cyanea*), *M. viridis* (*Anacystis*). Called also *Anacystis*, *Gloeotrichia*.

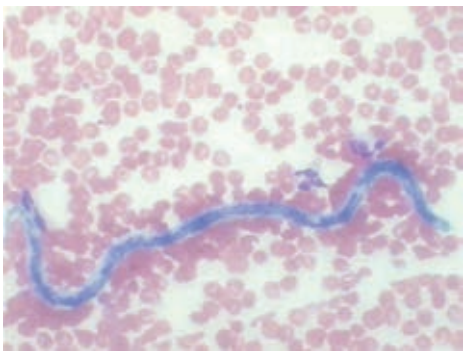
microcystoid retinal degeneration [*mi"kro-sis'toid*] cyst formation in and thinning of the peripheral retina of aging animals, especially dogs and horses but of no apparent functional significance; called also peripheral cystic retinal degeneration.

microcyte [*mi'kro-sīt*] an erythrocyte that has a smaller diameter than is normal for the species in which it occurs.

microcythemia [*mi"kro-si-the'me-ə*] microcytosis.

VetBooks.ir

microcytosis [*mi"kro-si-to'sis*] a condition in which the erythrocytes are smaller than normal.
microdactyly [*mi"kro-dak'tə-le*] abnormal smallness of the digits.
microdissection [*mi"kro-di-sek'shən*] dissection of tissue or cells under the microscope.
microdontia [*mi"kro-don'shə*] abnormal smallness of the teeth.
microembolus [*mi"kro-em'bo-ləs*] pl. *microemboli* [L.] an embolus of microscopic size.
microencapsulation [*mi"kro-ən-kap"su-la'shən*] a manufacturing process in which an active agent is contained in microcapsules, suspended in a liquid. As the vehicle dries, the capsules dry out and the contents become active. Used to apply insecticides in order to prolong their period of effectiveness, usually for several days, and to reduce the hazard of ingestion by dogs and cats.
microencephaly [*mi"kro-ən-sef'ə-le*] micrencephaly.
microerythrocyte [*mi"kro-ə-rith'ro-sīt*] microcyte.
microfarad (μF) [*mi"kro-far'əd*] one-millionth (10^{-6}) farad.
microfauna [*mi"kro-faw'nə*] microscopic animals, e.g. protozoa.
microfibril [*mi"kro-fi'bril*] an extremely small fibril.
microfilament [*mi"kro-fil'ə-mənt*] any of the submicroscopic filaments composed chiefly of actin, found in the cytoplasmic matrix of almost all cells, often in close association with the microtubules.
microfilaremia [*mi"kro-fil"ə-re'me-ə*] the presence of microfilariae in the circulating blood.
microfilaria [*mi"kro-fĭ-lar'e-ə*] the first-stage larva of worms in the superfamily Filarioidea. They are produced by adult worms residing in the bloodstream, tissues or body cavities, from where they can be ingested by biting insects. There they pass through a developmental stage and are transmitted to another permanent host when it is bitten by the insect. The microfilariae of some species are nocturnal and are therefore available for transmission only at night.
microfilarial [*mi"kro-fĭ-lar'e-əl*] emanating from or pertaining to microfilariae.
m. pityriasis a name given to a seasonal skin lesion on the backs of horses, characterized by hair loss and severe pruritus. Some of the lesions contain microfilariae, hence the name; but many of the cases appear to be allergic dermatitis. See also equine **allergic** dermatitis.
microfilariasis [*mi"kro-fil"ə-ri'ə-sis*] any disease caused by microfilariae. Includes equine microfilarial pityriasis, heartworm in dogs, filarial dermatoses, cerebrospinal nematodiasis and miscellaneous localizations in individual organs, e.g. *Onchocerca* spp. invasions of the eye.
microflora [*mi"kro-flor'ə*] living microorganisms that are so small that they can be seen only with a microscope and that usually inhabit a particular area, e.g. the pharynx or the rumen. Includes bacteria, viruses, protozoa, fungi.
microgamete [*mi"kro-gam'ēt*] the smaller, actively motile male gamete which fertilizes the macrogamete in anisogamy.
microgametocyte [*mi"kro-gə-me'to-sīt*] a cell that produces microgametes.
microgastria [*mi"kro-gas'tre-ə*] congenital smallness of the stomach.
microgenitalism [*mi"kro-jen'ĭ-təl-iz-əm*] smallness of the external genitalia.
microglia [*mi-krog'le-ə*] non-neural cells forming part of the adventitial structure of the central nervous system. They are migratory and act as phagocytes of waste products of the nervous system.



M-34: Canine blood smear with microfilaria of *Dirofilaria immitis*. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

microgliosis [*mi"krog-li-o'sis*] accumulation of microglial cells as a reaction to injury to the parenchyma of the central nervous system, a characteristic of nonsuppurative encephalomyelitis.
microglobulin [*mi"kro-glob'u-lin*] any globulin, or any fragment of a globulin, of low molecular weight.
β_2 m. a polypeptide found free in serum and which also combines with the α (heavy) chain to form class I major histocompatibility heterodimer. See also major **histocompatibility** complex.
microglossia [*mi"kro-glos'e-ə*] abnormal smallness of the tongue. An inherited defect in glossopharyngeal development in dogs in which the small, narrow, curled tongue prevents effective sucking; occurs in association with other skeletal defects. Called also bird tongue.
micrognathia [*mi"kro-na'the-ə*] abnormal smallness of the jaws, especially the lower jaw.
microgram (μg) [*mi'kro-gram*] one-millionth (10^{-6}) gram, or one-thousandth (10^{-3}) milligram.
micrograph [*mi'kro-graf*] 1. an instrument for recording very minute movements by making a greatly magnified photograph of the minute motions of a diaphragm. 2. a photograph of a minute object or specimen as seen through a microscope.
electron m. photographic images of electron microscopic fields.
microgyria [*mi"kro-ji're-ə*] abnormally small external convolutions of the brain.
microgyrus [*mi"kro-ji'rəs*] pl. *microgyria;* an abnormally small, malformed convolution of the brain.
microhabitat [*mi"kro-hab'ĭ-tat*] the normal environment, the natural home, of a microorganism.
microhematocrit [*mi"kro-he-mat'ə-krit*] a method for rapid determination of the packed cell volume by high-speed centrifugation of blood contained in capillary tubes.
microhepatia [*mi"kro-hə-pat'e-ə*] a small liver.
microinfarct [*mi"kro-in'fahrkt*] a very small infarct due to obstruction of circulation in capillaries, arterioles or small arteries.
microingredient [*mi"kro-in-grē'de-ent*] a ration ingredient, such as minerals, vitamins, antibiotics, estimated to be present in parts per million or milligrams or micrograms per ton of feed.
microinjection [*mi"kro-in-jek'shən*] a method in which very finely drawn glass pipettes held in a finely adjustable mechanical device are used to introduce new materials (antibodies, organelles, DNA) into cells as they are visualized under a microscope.
microinjector [*mi"kro-in-jek'tər*] an instrument for infusion of very small amounts of fluids or drugs.
microinvasion [*mi"kro-in-va'zhən*] microscopic extension of malignant cells into adjacent tissue.
microlesion [*mi"kro-le'zhən*] a minute lesion.
microliter (μL) [*mi'kro-le"tər*] one-millionth (10^{-6}) part of a liter, or one-thousandth (10^{-3}) of a milliliter.
microlith [*mi'kro-lith*] a minute concretion or calculus.
microlithiasis [*mi"kro-lĭ-thi'ə-sis*] the formation of minute concretions in an organ.
m. alveolaris pulmonum a rare condition in dogs of unknown etiology. There is deposition of minute calculi in the alveoli of the lungs and progressively compromised pulmonary function so that the affected dog shows dyspnea, cough and fatigue. Called also pulmonary calcinosis, and pumice-stone lung. Called also pulmonary alveolar microlithiasis.
pulmonary alveolar m. see microlithiasis alveolaris pulmonum (above).
micromanipulation [*mi"kro-mə-nip"u-la'shən*] the performance of surgery, injections, dissections, etc., by means of micromanipulators.
micromanipulator [*mi"kro-mə-nip'u-la"tər*] an instrument for the moving, dissecting, etc., of minute specimens under the microscope.
micromastia [*mi"kro-mas'te-ə*] abnormal smallness of the mammary gland.
micromelia [*mi"kro-me'le-ə*] abnormal smallness of one or more extremities.
micromelus [*mi-krom'ə-ləs*] an animal with abnormally small limbs.
micromere [*mi'kro-mēr*] one of the small blastomeres formed by unequal cleavage of a zygote.
micrometeorology [*mi'kro-me"te-ə-ro-ol'ə-je*] study of the climate of a microhabitat or a microclimate.
micrometer (μm) [*mi'kro-me"tər*] 1. instrument for making minute measurements. 2. **micron**; one thousandth (10^{-3}) of a millimeter or one millionth (10^{-6}) of a meter.

micromethod [*mi"kro-meth'əd*] a technique dealing with exceedingly small quantities of material.

micrometry [*mi-krom'ə-tre*] measurement of microscopic objects.

micromicro- word element designating 10^{-12} (one-million-millionth) part of the unit to which it is joined; now supplanted by the prefix pico-.

Micromonospora purpurea [*mi"kro-mon"o-spor'ə*] a bacterium (an actinomycete), cultures of which produce the antibiotic gentamicin.

micromyelia [*mi"kro-mi-e'le-ə*] abnormal smallness of spinal cord.

micromyeloblast [*mi"kro-mi'ə-lo-blast*] a small, immature myelocyte.

micron (μm) [*mi'kron*] pl. *micra, microns* [Gr.] micrometer; one thousandth (10^{-3}) of a millimeter or one millionth (10^{-6}) of a meter.

m. count measure of diameter of the fiber in sheep and alpaca fleeces. The lower the micron count, the finer the fiber and the higher the value. Fiber diameter can vary with location on the body and is influenced by breed and genetics, age, nutrition, season, illness and stress.

microneedle [*mi"kro-ne'dəl*] a fine glass needle used in micromanipulation.

Micronema deletrix [*mi"kro-ne'mə*] see ***Halicephalobus***.

microneurosurgery [*mi"kro-noo"ro-sur'jər-e*] surgery conducted under high magnification with miniaturized instruments on microscopic vessels and structures of the nervous system.

micronization [*mi"kro-nə-za'-shən*] a process for preparing medication in which the particle size is greatly reduced, thereby increasing absorption following oral administration.

micronize [*mi'kro-nīz*] an industrial process of heating grain or pharmaceuticals with microwaves from infrared burners and then rolling to achieve a standard size. The purpose is to produce a dry, free-flowing product.

micronodular [*mi"kro-nod'u-lər*] marked by the presence of small nodules.

micronucleus [*mi"kro-noo'kle-əs*] 1. in ciliate protozoa, the kinetoplast, the smaller of two types of nucleus in each cell, which functions in sexual reproduction. 2. a small nucleus. 3. nucleolus.

micronutrient [*mi"kro-noo'tre-ənt*] a dietary element essential only in small quantities.

micronychia [*mi"kro-nik'e-ə*] abnormal smallness of the claws or nails.

micro-orchidism [*mi"kro-or'kĭ-diz-əm*] abnormal smallness of the testicle.

microorganism [*mi"kro-or'gən-iz-əm*] a microscopic organism; those of veterinary interest include bacteria, rickettsiae, viruses, fungi, algae, and protozoa and protists.

micropalpebral fissure [*mi"kro-pal'pə-brəl fish'ər*] an abnormally narrow or small eyelid opening. Can be associated with other ocular abnormalities such as microphthalmos. Sometimes apparent rather than real, because of the size or position of the globe.

micropapilla [*mi"kro-pə-pil'ə*] a small optic disk without blindness. Compare with **optic** nerve hypoplasia.

micropathology [*mi"kro-pə-thol'ə-je*] 1. the sum of what is known about minute pathological change. 2. pathology of diseases caused by microorganisms.

microphage [*mi'kro-fāj*] a small phagocyte; an actively motile neutrophilic leukocyte capable of phagocytosis.

microphakia [*mi"kro-fa'ke-ə*] abnormal smallness of the crystalline lens. Inherited as a congenital defect, often together with other ocular defects.

Microphallidae a family of intestinal digenetic trematodes that parasitize anserine and gallinaceous birds and may cause losses if the infestations are heavy.

microphallus [*mi"kro-fal'əs*] abnormal smallness of the penis.

microphone [*mi"kro-fōn'*] a device to pick up sound for purposes of amplification or transmission.

microphonia [*mi"kro-fo'ne-ə*] marked weakness of voice.

microphonic [*mi"kro-fon'ik*] 1. serving to amplify sound. 2. cochlear microphonic.

cochlear m. any of the electrical potentials generated in the hair cells of the organ of Corti in response to acoustic stimulation.

microphotograph [*mi"kro-fo'tə-graf*] a photograph of small size.

microphthalmia [*mi"krof-thal'me-ə*] see **microphthalmos**.

microphthalmos [*mi"krof-thal'mos*] abnormal smallness in all dimensions of one or both eyes at birth, in association with other ocular abnormalities. (Compare with **nanophthalmos**.) Seen in piglets born to sows on vitamin A-deficient diets in early pregnancy, and as an inherited condition in some dog breeds, e.g. as part of the Collie eye anomaly.

M-35: Microphthalmia in a Collie.

pure. m. see **nanophthalmos**.

micropinocytosis [*mi"kro-pi"no-si-to'sis*] pinocytosis.

micropipette [*mi"kro-pi-pet'*] a pipette for handling small quantities of liquids (1μL–1 mL).

microplethysmography [*mi"kro-pleth"is-mog'rə-fe*] the recording of minute changes in the size of a part as produced by circulation of blood.

micropodia [*mi"kro-po'de-ə*] abnormal smallness of the feet.

Micropolyspora faeni [*mi"kro-pol"e-spor'ə*] a thermophilic actinomycete which produces spores in moldy hay. The spores are inhaled by cattle eating the hay and cause granulomas and bronchitis, bronchiolitis, and a chronic interstitial pneumonia. It is also associated with chronic obstructive pulmonary disease in horses.

microprobe [*mi'kro-prōb*] a minute probe, such as one used in microsurgery.

Micropterus finfish in family Centrarchidae. Includes *M. dolomieu* (smallmouth bass) and *M. salmoides* (largemouth bass).

microradiography [*mi"kro-ra"de-og'rə-fe*] radiography under conditions that permit subsequent microscopic examination or enlargement of the radiograph up to several hundred linear magnifications.

microrchidia [*mi"kror-kid'e-ə*] micro-orchidism.

microrespirometer [*mi"kro-res"pĭ-rom'ə-tər*] an apparatus for investigating oxygen utilization in isolated tissues.

microscope [*mi'kro-skōp*] an instrument used to obtain an enlarged image of small objects and reveal details of structure not otherwise distinguishable.

acoustic m. one using very high frequency ultrasound waves, which are focused on the object; the reflected beam is converted to an image by electronic processing.

binocular m. one with two eyepieces, permitting use of both eyes simultaneously.

bright-field m. the standard bench microscope used in histology and requiring stained tissue sections.

compound m. the standard laboratory microscope used in veterinary science; consists of a two lens system whereby the image formed by the system near the object (objective) is magnified by the one nearer the eye (eyepiece).

confocal m. used in confocal **microscopy**.

darkfield m. used for examining unstained, often living cells, in which light is only directed into the objective lens if it is refracted by an object in its path. The object is thus viewed as a white structure in an otherwise black (darkfield) background.

electron m. one using an electron beam of very short wavelength as the source of illumination. It has a resolving power of 2 nm (which is 100 times greater than with the light microscope). Includes the transmission electron microscope and the scanning electron microscope (below). See also immunoelectron **microscopy**.

fluorescence m. one using ultraviolet light illumination to trigger fluorescence in specimens stained with fluorochromes or fluorochrome complexes, e.g. a fluorescein-labeled antibody. See also fluorescence **microscopy**.

interference m. a microscope similar to the phase contrast microscope but delivers a three-dimensional image. Called also Nomarski interference phase microscope.

light m. used for examining unstained or stained particles or the cellular structure of tissues that have been cut into sections and

VetBooks.ir

stained. It has a resolving power of 0.2 μm. Modern light microscopes have an eyepiece and objective lenses which provide magnification, and a condenser beneath the stage which gathers and focuses light on the object being examined.

operating m. one designed for use in performance of delicate surgical procedures, e.g. on the middle ear, eye or small vessels of the heart.

phase m., phase-contrast m. a form of light microscope useful for examining living, unstained structures, including animal cells and bacteria, e.g. *Leptospira*. The phase of the light wave passing through different structures in the cell, e.g. nucleus vs. thin part of the cytoplasm, is changed by different amounts and thereby provides contrast.

polarizing m. based on the phenomenon of birefringence; useful in the study of bone and muscle.

scanning electron m. (SEM) an electron microscope that produces a high-magnification image of the surface of a metal-coated specimen (shadow casting) by scanning an electron beam and building up an image from the electrons reflected at each point. Particularly useful for determining the three-dimensional structure of objects.

simple m. one that consists of a single lens.

specular m. one used in the in vivo examination of the corneal endothelium.

stereoscopic m. a binocular microscope modified to give a three-dimensional view of the specimen.

surgical m. see operating microscope (above).

transmission electron m. (TEM) one that resembles an inverted light microscope in that the beam of electrons generated from a heated filament at the top of the instrument passes down through a column where it is focused by magnetic coils (lenses) and is differentially scattered when it passes through the specimen. The image is recorded either on a photographic plate or on a phosphorescent screen.

ultraviolet m. uses an ultraviolet light source; useful in histochemical studies; only photographic images are available.

microscopic [*mi"kro-skop'ik*] of extremely small size; visible only with the aid of a microscope.

m. agglutination test see microscopic **agglutination** test.

microscopical [*mi"kro-skop'ĭ-kəl*] pertaining to a microscope or to microscopy.

microscopist [*mi-kros'kə-pist*] a person skilled in using a microscope.

microscopy [*mi-kros'kə-pe*] examination with a microscope.

confocal m. a technique for obtaining high resolution images and 3-D reconstructions of biological specimens; a laser light beam is expanded to make optimal use of the optics in the objective lens and is turned into a scanning beam via an x-y deflection mechanism and is focused to a small spot by the objective lens onto a fluorescent specimen. The mixture of reflected light and emitted fluorescent light is captured by the same objective and after conversion into a static beam by the x-y scanner device is focused onto a photodetector (photomultiplier) via a dichroic mirror (beam splitter) to create the final image. Called also laser scanning microscopy; confocal scanning laser microscopy.

fluorescence m. the use of techniques for conjugating antibodies with fluorescent dyes in order to identify specific microorganisms or tissue constituents using a fluorescence microscope. Fluorescent antibody (FA) techniques can be used in place of time-consuming culture methods for identifying bacteria and viruses. There are two major types of FA techniques, direct and indirect, both of which are based on the antigen–antibody reaction in which the antibody attaches itself to its specific antigen. In the *direct* fluorescent antibody (DFA) method, the antibody is bound to the antigen, for example, a bacterial cell in a smear, and cannot be easily removed by elution (washing). The antibody remains attached to the cell after all other serum proteins have been washed away. Since the antibody has been rendered fluorescent by conjugation with fluorescein or another dye, the outline of the bacterial cell that it coats can readily be seen with a special microscope. In the *indirect* method (IFA), the specific antibody is allowed to react with the antigen. The slide is then washed and treated with a labeled antibody to the specific antibody. For example, if the specific antibody was raised in a rabbit, it is then treated with fluorescein-labeled anti-rabbit globulin, which results in a combination of this labeled antibody with the rabbit immunoglobulin already attached to the antigen. Fluorescent antibody studies have been used in the detection of numerous bacterial, viral, fungal and protozoan infections and in the identification and localization of many tissue antigens.

immunoelectron m. the mixing of antibody with an antigen such as a virus on a specimen grid so as to increase the probability of visualizing a virus and to identify (type) the kind of virus present in the specimen, or antibody may be conjugated with gold and used to visualize and determine the location of specific antigenic determinants on a specimen.

microsecond (μs, μsec) [*mi'kro-sek"ənd*] one-millionth (10^{-6}) of a second.

microsomal [*mi"kro-so'məl*] pertaining to or emanating from microsome.

microsomatic [*mi"kro-so-mat'ik*] having a poor sense of smell, e.g. primates.

microsome [*mi"kro-som'*] any of the vesicular fragments of endoplasmic reticulum produced during disruption and centrifugation of cells.

microsomia [*mi"kro-so'me-ə*] abnormally small size of the body.

microspectroscope [*mi"kro-spek'trə-skōp*] a spectroscope and microscope combined.

microspherocyte [*mi"kro-sfe'ro-sīt*] spherocyte.

microsphygmia [*mi"kro-sfig'me-ə*] that condition of the pulse in which it is perceived with difficulty by the finger.

microsplenia [*mi"kro-sple'ne-ə*] smallness of the spleen.

microsporid [*mi"kro-spor'ĭd*] a secondary skin eruption which is an expression of hypersensitivity to *Microsporum* infection.

Microsporidia [*mi"kro-spə-rid'e-ə*] a phylum of spore-forming protozoa characterized by having small spores and one polar capsule. Common occurrence is as parasites of arthropods and vertebrates (including fish and mammals including humans). Includes ***Enterocytozoon***, ***Encephalitozoon***, and ***Nosema***. In finfish, may cause xenomas, in crustaceans causes 'cotton flesh'.

microsporidiosis [*mi"kro-spo-rid"e-o'sis*] infection by species of the genus *Microsporidia*; common infections in flounder and other marine fish and in ornamental fish; include *Thelohania* and *Pleistophora* spp.

Microsporum [*mi-kros'pə-rəm*] a genus of fungi that cause various diseases of the skin and hair, referred to as **ringworm**. The sexual state is known as *Nannizia*.

M. audouinii an anthropophilic species which may occasionally infect domestic animals.

M. canis* var *canis causes ringworm in dogs, cats, humans and occasionally other animals.

M. canis* var *distortum principally an infection of laboratory primates, but occurs also in dogs and cats.

M. canus* var *equinum a cause of ringworm in horses. Sometimes called *M. equinum*.

M. fulvum occasionally infects pigs, goats, monkeys, jaguars and lions.

M. gallinae causes favus in chickens and turkeys.

M. gypseum a soil dermatophyte that causes ringworm in dogs, horses and sometimes other species.

M. nanum causes ringworm in pigs and rarely other animals and humans.

M. persicolor infects voles.

microstomia [*mi"kro-sto'me-ə*] abnormally decreased size of the mouth.

microsurgery [*mi'kro-sur"jər-e*] dissection of minute structures under the microscope, with the use of extremely small instruments.

M-36: *Microsporum canis* infection (ringworm) in a cat.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

M-37: *Microsporum nanum* infection in a pig.

microsyringe [*mi"kro-sə-rinj'*] a syringe fitted with a screw-threaded micrometer for accurate measurement of minute quantities of liquids.

Microtetramere a genus of spirurid nematode found in the proventriculus of birds.

Microthoracius a genus of sucking lice in the family Linognathidae.
M. cameli found on camels and dromedaries.
M. mazzai, M. minor, M. praelongiceps found on the neck of the llama.

microtia abnormal smallness of the pinna of the ear.

microtiter [*mi"kro-ti'tər*] a titer determined using small volumes of reagents.

microtitration [*mi"kro-ti'trāt*] procedure for titrating substances such as antibiotics, antibodies or viruses in which small volumes are used, often 0.025 or 0.05 mL, using special delivery and transfer equipment referred to as diluters, droppers or micropipettes and also conducted using robotic equipment. Commonly performed in 96-well plastic plates.

microtome [*mi'kro-tōm*] an instrument for making thin sections for microscopic study.
freezing m. one for cutting frozen tissues.
rotary m. one in which wheel action is translated into a back-and-forth movement of the specimen being sectioned.
sliding m. one in which the specimen being sectioned is made to slide on a track.

microtomy [*mi-krot'ə-me*] the cutting of thin sections.

microtrauma [*mi"kro-traw'mə*] a microscopic lesion or injury.

microtubule [*mi"kro-too'būl*] any of the slender, tubular structures composed chiefly of tubulin, found in the cytoplasmic ground substance of nearly all cells; they are involved in maintenance of cell shape and in the movements of organelles and inclusions, and form the spindle fibers of mitosis.
m.-associated protein (MAP) any of the high molecular weight proteins that bind to microtubules, enhancing polymerization.
m.-associated protein (MAP) kinase a protein kinase that is activated in response to cell stimulation by many different growth factors and that mediates cellular responses by phosphorylating specific transcription factors and other target proteins.
m. organizing center (MTOC) the location in a cell from which microtubules regrow after depolymerization. See also **centrosome**.

microurolith [*mi"kro-u'ro-lith*] microscopic urolith.

microvasculature [*mi"kro-vas'ku-lə-chər*] the finer vessels of the body, such as the arterioles, capillaries and venules.

microvent ventilator [*mi"kro-vent' ven"tĭ-la'tər*] see **Minivent ventilator**.

microvesicle [*mi"kro-vesĭ-kəl*] microscopic vesicle.

microvillus [*mi"kro-vil'əs*] pl. *microvilli;* a minute process of protrusion from the free surface of a cell, especially cells of the proximal convolution in renal tubules and of the intestinal epithelium.

microvolt (μV) [*mi'kro-volt*] one-millionth (10^{-6}) of a volt.

microwave [*mi'kro-wāv*] a wave typical of electromagnetic radiation between far infrared and radiowaves.
m. acupuncture utilizes deeply penetrating heat, produced by a microwave generator and transmitted via acupuncture needles.

micrurgy [*mi'krər-je*] manipulative technique in the field of a microscope.

micturate [*mik'tu-rāt*] urinate.

micturition [*mik"tu-rĭ"shən*] urination.
m. disorders includes neurogenic disorders controlling urination, urinary incontinence from several causes, and behavioral disorders. See also **incontinence**, **urinary bladder**, **elimination behavior**, ectopic **ureter** and inappropriate micturition (below).
inappropriate m. done at the wrong time or place, as house-trained dogs or cats urinating in the house or away from a litter tray. See also **spraying**.
m. reflex the sequence of neurological impulses and muscular responses that controls the retention and release of urine.

mid-lactation in a 10-month lactation in a cow, month 2 to month 8, the peak of the lactation.

midazolam [*mid'a-zo-lam"*] a potent, short-acting benzodiazepine, similar to diazepam, suitable for intravenous injection, for use as a taming agent and as an adjunct for induction of anesthesia.

midbrain [*mid'brān"*] the short part of the brainstem just rostral to the pons. It contains the nerve pathways between the cerebral hemispheres and the medulla oblongata, and also contains nuclei of the third and fourth cranial nerves. The centers for visual and auditory reflexes, such as moving the head and eyes, are located in the midbrain. Called also mesencephalon.
m. lesion causes spastic paresis or paralysis, tremor, nystagmus, opisthotonos and depression or coma.
m. syndrome mental depression, ipsilateral oculomotor nerve deficits, and spastic weakness or paralysis of all four limbs or those on the contralateral side of the body. May be caused by cranial trauma, thiamine deficiency, brain tumors, and degenerative or inflammatory disorders of the mesencephalon.

midcrop mortality syndrome cause of severe mortality of Australian cultured prawns. Multifactorial cause including a yellow-head-like virus.

midden dungheap.

middle burner in traditional Chinese medicine, the anterior or upper (in humans) abdominal cavity, containing organs associated with digestion.

middle ear see **ear**, **otitis** media.
m. e. cavity cavity of the middle ear made up of the tympanic bulla and the epitympanic recess.
m. e. ossicles see **ossicle**.

middlings a by-product of the milling industry used as a protein supplement in diets for ruminants and pigs. A finer grade of offal than bran and it approximates **pollard** or shorts. The nomenclature is poorly defined.

midge [*mij*] see ***Ceratopogonidae*** and ***Culicoides***.
biting m. insects of the family ***Ceratopogonidae***. Called also punkies, no-see-ums, sandflies.
owl m. see **sandfly**.

midget ***Acacia*** *osswaldii*.

midgut [*mid'gut*] the region of the embryonic digestive tube into which the yolk sac opens; ahead of it is the foregut and caudal to it is the hindgut.

midline [*mid'līn*] the imaginary line that divides the body into right and left halves.

midshaft [*mid'shaft*] midway between the epiphyses of a long bone.

Miescher's tubes cysts of ***Sarcocystis***. Called also Miescher's corpuscles, tubules and Rainey's corpuscles and tubules, all expressions used in human medicine.

MIF 1. melanocyte-stimulating hormone-inhibiting factor. 2. macrophage migration inhibition factor.

mifepristone [*mif"ə-pris'tōn*] a synthetic steroid that acts as a competitive progesterone receptor antagonist; used as an abortifacient and in the treatment of cystic endometrial hyperplasia in dogs. Called also RU-486. Not available for veterinary use in some countries.

migram a disease of sheep occurring in the UK on the Romney Marsh, of unknown cause and characterized by incoordination and collapse while being driven. Possibly rye grass staggers.

migrating motor complexes regularly occurring motor complexes are recorded in the intestine of turkeys and chickens.

migrating myoelectric complex mechanisms for sweeping large food particles and residues in starving animals into the terminal small intestine; reported only in the fasting period and in humans and dogs.

migration [*mi-gra'shən*] movement of cells from one place to another by their motility. Also used to describe movement of non-living biological material in response to external forces, e.g. migration of protein in electrophoretic media.
m. inhibition factor see **leukocyte** migration-inhibition factor, **macrophage** inhibition factor, migration inhibition test (below).

VetBooks.ir

m. inhibition test an in vitro test for detection of cell-mediated immunity (or delayed hypersensitivity) in which peritoneal exudate cells (lymphocytes and macrophages) are packed in capillary tubes and placed in a medium; if the medium contains an antigen to which the lymphocytes are primed, macrophage migration from the tubes is inhibited by lymphokines, particularly macrophage inhibiting factor, released by the antigen stimulated lymphocytes.

migratory [*mi'grə-tor"e*] emanating from or pertaining to migration.

Mikrocytos a genus of protozoan parasites infecting the hemocytes of oysters. Can cause substantial mortality. See **mikrocytosis**.

mikrocytosis [*mi"kro-si-to'sis*] protozoan infection of the hemocytes of oysters. Includes *Mikrocytos mackini* (Denman island disease in Pacific oysters) and *M. roughlei* (winter mortality in Sydney rock oysters).

milagaipoondu ***Catharanthus*** *pusilla*.

Milan frill a frilled canary of solid color, either white, red-orange or blue.

milbemycin a macrolone lactone, derived from *Streptomyces cyanogeneus*, similar to the avermectins, effective as an anthelmintic and parasiticide. Milbemycin oxime is used for the prevention of heartworm in dogs and it has found a use in the treatment of generalized demodecosis. See also **milbemycin**.

milch [*milch*] giving milk or kept for milking.

mild as in disease; does not interfere with normal activities such as grazing, ambulation.

mile-a-minute *Wollastonia biflora*.

miliary [*mil'e-ar-e*] 1. like millet seeds. 2. characterized by the formation of lesions resembling millet seeds.

m. bronchiolithiasis see **microlithiasis**.

m. dermatitis see feline miliary **dermatitis**.

m. tuberculosis an acute form of tuberculosis in which minute tubercles are formed in a number of organs of the body, owing to dissemination of the bacilli throughout the body by the bloodstream.

milieu [*mēl-yoo'*] [Fr.] *surroundings, environment*.

m. extérieur external environment.

m. intérieur internal environment; the interstitial tissue fluid and lymph in which the cells are bathed.

milium [*mil'e-əm*] pl. *milia* [L.] spheroidal follicular cyst of lamellated keratin lying just under the epidermis, which appears as small white or yellow nodule. Popularly called *whitehead*.

milk [*milk*] 1. a nutrient fluid produced by the mammary gland of many mammals for the nourishment of their young. 2. a liquid (emulsion or suspension) resembling the secretion of the mammary gland. 3. to remove milk from the mammary gland.

absent m. see **agalactia**.

acid m. reported as a cause of death in neonatal puppies and kittens, presumably resulting from bacterial mastitis or metritis which concurrently lowers the pH of the bitch's milk. See also toxic milk (below).

acidophilus m. milk fermented with cultures of *Lactobacillus acidophilus*; used in gastrointestinal disorders to modify the bacterial flora of the intestinal tract.

m. allergy see milk **allergy**.

artificial m. see milk replacer (below).

augmented m. culture system includes preculture incubation, followed by freezing, then use of a larger inoculum than usual.

blood in m. see **blood** in milk.

bulk m. milk stored on the farm in a bulk tank (or tanks) which are refrigerated stainless steel tanks that can quickly cool milk and hold it cold until it is picked up by a bulk milk tank truck.

bulk m. testing using antibody or antigen detection used for monitoring the herd and regional prevalence of agents/diseases such as bovine virus diarrhea, bovine leukosis, and infectious bovine rhinotracheitis.

casein m. a prepared milk containing very little salts and sugars and a large amount of fat and casein.

m. cell counts see **somatic** cell counts, bulk tank **somatic** cell counts.

m. chickens very young chickens weighing 0.5–1 lb (0.25–0.50 kg); birds up to 2 lb (1.0 kg) are accepted. Called also poussins.

m. clots slimy lumps in milk affected by mastitis; block filters and teat canals; usually accompanied by a watery fluid in visible amounts.

m. coagulation coagulation of milk in the abomasum of the calf, precipitated by rennin, the enzyme produced by the abomasal mucosa, converts the dissolved casein into a rubbery clot. See also **chymosin**.

condensed m. milk that has been partly evaporated and sweetened with sugar.

m. cow, milch cow cow used expressly for the production of milk for human consumption.

days in m. (DIM) the number of days during a lactation that a cow has been milking, beginning with the last date of calving to the current test date.

dialyzed m. milk from which the sugar has been removed by dialysis through a parchment membrane.

m. drinker's syndrome metastatic calcification in young animals kept on high milk intakes for long periods.

m. drop syndrome a sudden and often unexplained fall in milk production in a dairy herd. It can occur when any disease or condition affects a significant proportion of a herd at one time; identified causes include poisoning by ***Neotyphodium*** *(Acremonium) coeniophialum* or *Claviceps purpurea*, infection with *Leptospira hardjo*, severe combined nutritional and environmental stress.

m. ejection see **letdown**.

m.-ejection reflex filling of the teat and udder cisterns with milk in response to teat stimulation, the response being effected via a release of oxytocin from the posterior pituitary; called also letdown.

evaporated m. milk prepared by evaporation of half of its water content.

m.-fed neonate a neonate still being suckled by the dam or being reared on artificial milk replacer.

m. fever see parturient **hypocalcemia**.

m. flake fine, flat sheets of fibrin as part of the inflammatory process in the cow's udder, especially in cases of coliform mastitis.

m. flow sensor a sensor fitted in the long milk tube from the cluster to the milk line which is sensitive to the rate of flow; designed to trigger the automatic removal of the cluster when the rate of flow of milk in the milk tube falls below a predetermined level.

fluid m. milk intended for drinking milk and cream products as opposed to products such as butter, cheese, frozen dairy products and milk powders.

fortified m. milk made more nutritious by addition of cream, egg white or vitamins.

Grade A m. producers are issued a permit by their state to ship Grade A milk. The milk must meet certain standards of temperature at shipping, low bacterial count and low somatic cell count and content of protein and fat. Other requirements include the absence of antibiotics, absence of added water, and construction, management and sanitation of animal holding and milking facilities. Milk samples are taken each time the milk truck picks up milk from a farm. That sample is taken back to the processing plant and tested for these components, including the presence of antibiotics in the milk. The dairy facilities are periodically inspected by a government inspector. Also known as Class 1 milk or marketing milk in some countries. Non-Grade A milk would either be considered as manufacturing grade or reject milk.

m. harvesting the process of producing, extracting and storing milk on the farm.

homogenized m. milk treated so that the fats form a permanent emulsion and the cream does not separate.

m. impacts drops of milk from other teat cups propelled vigorously against the teat ends of susceptible-to-mastitis quarters during, and as a result of **teat cup liner** slips.

inappropriate production of m. see **galactorrhea**.

m. intolerance deficiency of intestinal **lactase** which results in diarrhea, abdominal distention and cramping. Occurs most commonly in puppies and kittens.

m. knots palpable, milk-containing dilations in the lactiferous ducts in the udder, especially of cows.

m. lameness see milk **leg**.

m. leakage teats which drip milk between milkings have defective external sphincters and are susceptible to infection. Also occurs when the udder is very full, e.g. just before calving, or when letdown has occurred prior to milking when the intramammary pressure exceeds the closing forces of the normal teat end sphincter.

m. letdown see **letdown** (1).
m. line the site for future location of mammary glands developing early as a ridge along the ventral abdomen of the embryo.
m. lipid butter fat globules in the milk; some is synthesized by mammary epithelium, some is secreted unchanged from the bloodstream.
low-fat m. normal milk but with the normal fat percentage greatly reduced, e.g. to below 50%; usually due to feeding finely ground grain or low-fiber roughage.
m. of magnesia a suspension containing 7–8.5% of magnesium hydroxide, used as an antacid and laxative.
m. meter flow meter at each unit in a milking machine designed to measure the yield of milk for each cow at each milking.
m. pasteurization see **pasteurization**.
peak m. yield in cows the period during early lactation when the amount of milk produced per day is higher than at any other time. In bitches and queens, maximum lactation is achieved at 3–4 weeks postpartum.
m. persistency rate of decline of milk production from the peak; milk yield until dry off. A major determinant of total milk production in lactation. Regardless of persistency, most cows are dried off to allow a 45–60 day dry period.
m. pipeline a stainless steel or glass pipe used for transporting milk by gravity to storage. May be above the milking units (high line) or below the level of the units (low line).
m. premium in addition to payment for quantity, producers are paid for the quality/nutrient value (% fat, % protein or % solids-not-fat) and for low somatic cell count. See also **bulk tank** somatic cell counts.
m. production 1. the secretion of milk by the mammary epithelium. 2. the volume of milk produced, usually quoted for a year or a lactation, sometimes quoted as lb (kg) of butterfat or of milk solids produced. Used as the benchmark of productivity of dairy cows.
m. production data records of volume and components of milk produced by individual cows or the whole herd, either actually measured, or aspirated from periodic samplings.
m. progesterone tests see **pregnancy** tests.
m. protein casein.
protein m. milk modified to have a relatively low content of carbohydrate and fat and a relatively high protein content.
raw m. unpasteurized, unprocessed milk; illegal to be sold in many states and countries because of public health risks.
m. replacer used as replacement for milk in calf, lamb and piglet diets to permit early weaning and to rear orphans. Milk replacers are manufactured from dried milk products but may contain large amounts of animal fats, nonmilk carbohydrates and proteins. The dried milk powder used may also have been denatured during heat treatment. Poor replacers cause dietary diarrhea. Traditionally, milk replacers have contained less than 0.1% plant fiber, 36–40% lactose, 30–40% fat, 28–32% milk protein. Whey protein concentrate and dried whey are the primary sources of protein in all-milk replacer and in recent years have increased in price such that lower protein percentages are fed and alternate protein sources such as soy, wheat, egg, blood plasma, and potato may be used.
m. replacer malnutrition malnutrition in calves fed on poorly formulated milk replacer.
m. ring test is used for surveillance of brucellosis prevalence in dairy cattle. It depends on the presence of agglutinable antibodies in the milk and the agglutination of added stained antigen by antibodies in the milk of positive reacting cows.
m. sample culturing from cows may be composite of all quarters in one sample or single quarter samples. Samples must be refrigerated until cultured. Culture on sheep blood agar is standard but many special media available for particular purposes. Herd milk samples for culture are taken from the bulk tank to determine the most likely pathogens responsible for an elevated bulk tank somatic cell count. String sampling is the collection from a sub-group of cattle through sampling milk from the milk line of the milking system.
m. scald alopecic dermatitis around the muzzle of bucket-fed calves caused by frequent immersion in milk.
m. sickness the disease of humans caused by the drinking of milk from cows which have been eating ***Eupatorium*** *rugosum*; the milk contains tremetol.
skim m. see **skim milk**.
m. solids combined yield of fat and protein in the milk.
m. spots 1 mm diameter white spots in the capsule of the pig's liver caused by migration of *Ascaris suum* larvae.
m. stage the period of plant growth after blooming has finished when the seed is formed but still soft and milky when squeezed.
m. stone a calcareous deposit which accumulates in milking machinery and utensils over a long period if proper cleaning techniques are not practiced.
m. sugar lactose.
synthetic m. see milk replacer (above).
m. teeth see milk **dentition**.
m. tetany see hypomagnesemic **tetany**.
toxic m. toxins from the uterus excreted into the dam's milk are believed to be the cause of death in neonatal puppies and kittens.
uterine m. see **uterine** milk.
m. veins conspicuous subcutaneous abdominal veins of lactating cows that pursue a highly flexuous course; the veins of heavily lactating cows become varicose and their incompetent valves provide an arrangement that allows blood to flow either towards or away from the udder so that recumbent animals do not obstruct the venous return from the udder, but can utilize the alternative venous return pathway that includes the internal pudendal vein. See also Table 15.
m. vine ***Marsdenia*** *rostrata*.
waste m. milk for cows treated with antibiotics or drugs that must be discarded because of still being in the withholding period and milk from recently fresh cows that cannot be marketed.
m. well a pit-like opening through the ventral abdominal wall to permit entry of the milk vein where it anastomoses with the internal thoracic vein.
whole m. milk as it is drawn from the udder, undiluted, not separated into skim milk, buttermilk, whey. See also **whole milk fed**.
m. yield see milk production (above).
Milk and Dairy Beef Residue Prevention Protocol 10-Point Plan a protocol for the assessment of management practices for risk for antibiotic residues and for developing a plan to prevent residues in milk and dairy beef. Used by veterinarians and producers it concentrates on the following 10-critical control points. 1. Practice healthy herd management and follow good management practices related to housing, nutrition, reproduction, preventive vaccines, parasite control and total mastitis control. 2. Establish a valid veterinarian-client-patient relationship. 3. Use only Food and Drug Administration (FDA) approved over-the-counter or prescription drugs with a veterinarian's guidance. 4. All drugs used for the dairy herd must have labels which comply with state and/or federal labeling requirements. 5. Store all drugs properly. 6. Administer all drugs properly and identify all treated animals. 7. Use and maintain treatment records. 8. Use drug residue screening tests. 9. Make sure all employees on the farm, whether hired or family, are trained and aware of the herd health protocols. 10. Annually review herd health program and procedures to be certain objectives are being met.
milk fat see **butterfat**, **milk** lipid.
low m.f. syndrome dramatic fall in butterfat content of milk (as low as 50%) while volume remains normal, due to low fiber content of ration.
milk of sulfur see precipitated **sulfur**.
milk shake a solution of sodium bicarbonate administered to racehorses by stomach tube 4–6 hours before racing to produce a metabolic alkalosis. Promoted as a means of producing relief from tying-up and delaying the onset of fatigue by producing additional buffering to counteract the accumulation of lactic acid, induced by anaerobic muscular activity. Some commercial preparations include a mixture of vitamins and minerals. Legislated against by limiting the blood concentration of CO_2. See also saline **drench**.
milker's nodule, milker's node see **pseudocowpox**.
milkbush, milk bush common name of plants in several genera.
African m. ***Synadenium*** *arborescens*.
yellow m. ***Euphorbia*** *mauritanica*.
milkfish see ***Chanos chanos***.
milking [*milk'ing*] the procedure of extracting the milk from the udder usually with a milking machine. The process and the machine play a large part in the transmission of mastitis,

VetBooks.ir

pseudocowpox, bovine ulcerative mammillitis, cowpox, udder impetigo, teat papillomatosis, and in the causation of black spot. It is a special portal of entry for infection in the cow, goat and rarely sheep.

m. bail the head lock or stock which restrains the cow while she is milked.

m. hygiene includes milking machine sanitation between milkings, **teat cup** sanitation during milking, teat washing, teat dipping or spraying, hand disinfection, fly control, shed floor washing.

machine m. milking with a **milking machine** as opposed to hand milking.

mechanical m. see **milking machine**.

m. order the order in which groups of cattle in a milking herd pass through the milking parlor twice each day; for reasons of mastitis control the order should be heifers first followed by uninfected senior cows, followed by known infected but clinically normal individuals and then cows with clinical mastitis last. With large herds, cows are kept and milked in strings and cows with mastitis are milked separately, sometimes with different machinery.

m. parlor the room or shed used for milking cows. In most parlors, the milkers stand in a pit below the level of the cows, or the cows are on an elevated walkway so that the cow's udder is elevated and easier to reach without kneeling down (as opposed to milking in a flat barn). This also allows better cleaning of the teats and for better hygiene in the udder environment. Most parlors have milking machines on both sides of the pit (double sided). The milking stalls may be in line abreast (a walkthrough), angled away from a central pit, and often not divided into stalls (herringbone), in-line behind each other on either side of a pit (tandem), standing side-by-side at 90 degrees away from the pit and milked between the rear legs (parallel), or on a milking platform that rotates around a central point (carousel or rotary); there are a number of other variations on these styles.

prenatal m. milking of cows for a week or so before calving to reduce pressure in the udder and prevent development of udder edema, or to stimulate parathyroid activity and reduce chance of parturient hypocalcemia (milk fever) occurring. Has the disadvantage of reducing the colostral antibodies available for the calf.

m. ratio the duration of the milk flow within each pulsation cycle expressed as a percentage of the period when milk does not flow.

m. time 1. the time of day at which milking occurs. 2. total time taken to milk the entire herd or the average time taken to milk each cow.

milking herd see **dairy** herd.

milking machine a machine for the milking of cows, occasionally sheep and rarely goats. It includes a vacuum pump, a pulsation system, clusters of teat cups, a rigid milk line, some flexible rubber tubes which connect the clusters to the milk line and a number of other components. Many of the components are replicated in the usual machine so that a number of cows can be milked at the same time. The vacuum applied directly to the teat sphincter effects milk removal from the teat, and an intermittent vacuum between the teat cup and the liner relieves the tendency to edema of the teat by squeezing it intermittently. The pressure used in the machine is critical, too great causes damage to the teat, too little causes incomplete milking. The art of good milking technique is to balance one against the other. See also **automatic** take-off.

M-38: Milking parlor on a dairy farm.

m. m. claw the metal handpiece to which are attached the four cups that, with their inflations, are used to milk the cow.

m. m. clean-in-place cleaning system consisting of the circulation of cleaning and rinsing fluids through the milking machine without disassembling it.

m. m. cluster claw plus cups, plus connecting rubber tubes.

high level m. m. a machine in which the distance between the milk inlet to the milkline and the floor on which the cow is standing exceeds 4 feet.

m. m. liner slip see **teat cup liner** slip.

low level m. m. a machine in which the milk inlet to the milkline is below the level of the floor on which the cow is standing.

m. m. milking extracting milk from the udder with a milking machine.

m. m. pulsation rate number of pulsation cycles per minute; varies between machine manufacturers but average is 40 vacuum releases/min.

m. m. pulsation ratio the ratio of the time during which the teat cup liner is more than half open to the time for which it is less than half open.

m. m. pulsation system the intermittent increase in vacuum pressure in a milking machine mimics the application of sucking pressure by a sucking neonate by cyclic opening and closing of the teat cup liner; the intermittency is provided by the pulsator which consists of a servodiaphragm. The pulsation to a cluster may be alternate, when two teat cups move alternately with the other two, or simultaneous, when all four cups move at the same time.

m. m. pump capacity air-moving capacity of the vacuum pump in a milking machine.

m. m. reverse milk flow excessive changes in machine vacuum pressure cause reverse flow of milk for very brief periods, which allows contact of milk from infected quarters with the teat ends of uninfected quarters. The impact of this milk on a relaxed teat sphincter can effect the entry of infected milk.

m. m. stripping see machine **stripping**.

m. m. teat cup liner see **teat cup liner**.

m. m. vacuum pressure varies with design but average is 50 kPa (37.5 cm Hg).

m. m. vacuum reserve governs vacuum stability, the protection against random acute fluctuations in vacuum pressure, the cause of milk flow reversal and elevation of the new mastitis infection rate.

Milking shorthorn a red, red-and-white or red-roan dual-purpose breed of cattle.

milklame see **osteomalacia**.

milkleg see **osteomalacia**.

milkline pipeline in a milking machine which carries milk and air during milking, thus providing milking vacuum and a conduit for the passage of milk.

milksnake non-venomous colubrid snake *Lampropeltis triangulum* marked by transverse bands of alternating colors on the skin; closely related to kingsnakes; popular as pets.

milkvetch common name for some plant species in the genus *Astragalus*. Includes Patterson m. (*A. pattersonii*), stinking m. (*A. praelongus*), Toano m. (*A. toano*), Waheap m. (*A. lentiginosus*).

milkweed [*milk'wēd*] plants in the genus ***Asclepias***. Includes broadleaf milkweed (*A. latifolia*), labriform milkweed (*A. labriformis*), low whorled milkweed (*A. pumila*), Mexican whorled milkweed (*A. mexicana*), plains milkweed (*A. pumila*), short-crowned milkweed (*A. brachystephana*), showy milkweed (*A. speciosa*), swamp milkweed (*A. incarnata*), whorled milkweed (*A. subverticillata*), wolly-pod milkweed (*A. eriocarpa*).

milky mangrove [*mil'ke*] *Excoecaria agallocha*.

milky pine ***Alstonia*** *scolaris*.

miller's disease see **osteodystrophia fibrosa**.

Miller's suture tie used as a ligature around a soft tissue stump. It is a clove hitch.

millet common name for a variety of grain crops in several genera of the family Poaceae, including *Brachiaria ramosa* (brown millet), *Echinochloa colona* (Sharma millet), *Echinochloa frumentacea* [syn. *Echinochloa crus-galli* var. *frumentacea*] (barnyard, Shirohie, Japanese barnyard, Japanese, white Japanese or Sanwa [or sawa]

millet), *Echinochloa utilis* (Japanese or Samwa millet), *Eleusine coracana* (finger, African finger or Indian finger millet), *Panicum miliaceum* (millet, common millet, French millet, proso millet, hog millet, millet panic), *Panicum miliare* (little millet), *Panicum sumatrense* (little millet), *Paspalum scrobiculatum* (Kodo millet), *Pennisetum americanum* (pearl, bullrush, Indian or horse millet), *Pennisetum glaucum* (African, pearl, spiked, cat-tail or bullrush millet), *Setaria italica* (fox-tail, cat-tail, panorama, Italian, German or Hungarian millet), and *Sorghum bicolor* (great or milo millet).

milli- (m) [L.] *one-thousand*; prefix used in the metric system of measurement to designate one-thousandth (10^{-3}) the size of the unit to which it is joined; e.g. milligram (mg).

milliamperage in radiography, the X-ray tube current during an exposure, measured in milliamperes (mA).

milliampere (mA) [*mil"e-am'pēr*] one-thousandth (10^{-3}) of an ampere.

milliampere-second (mAs, mA·s) a unit of radiographic exposure equal to the product of the milliamperage and the exposure time in seconds.

millicurie (mCi) [*mil"ĭ-ku're*] a non-SI unit of radioactivity; one-thousandth (10^{-3}) of a curie. The quantity of radioactive material in which the number of disintegrations of nuclei is 3.7×10^{7} per second. Now replaced by the **becquerel**.

millicurie-hour (mCi-h) [*mil"ĭ-ku're*] a non-SI unit of dose equivalent to that obtained by exposure for one hour to radioactive material disintegrating at the rate of 3.7×10^{7} atoms per second.

milliequivalent (mEq) [*mil"e-e-kwiv'ə-lənt*] one-thousandth of a chemical equivalent.

milligram (mg) [*mil'ĭ-gram*] one-thousandth (10^{-3}) of a gram; equivalent of 0.015432 grain avoirdupois or apothecaries' weight.

milliliter (mL) [*mil'ĭ-le"tər*] one-thousandth (10^{-3}) of a liter.

millimeter (mm) [*mil'ĭ-me"tər*] one-thousandth (10^{-3}) of a meter; equivalent to 0.039 inch.

millimicro- word element, formerly used to designate one-thousand-millionth (10^{-9}) part of the unit to which it is joined; now supplanted by the prefix nano-.

millimole (mmol) [*mil'ĭ-mōl*] one thousandth (10^{-3}) part of a mole.

milling [*mil'ing*] the grinding or cracking of grain, and the mixing and compounding of feeds. Could reasonably include pelleting.

m. error an error in which the miller has usually included a wrong ingredient or the correct ingredient at the wrong concentration. A common cause of poisoning in housed cattle.

milliosmole (mOsm) [*mil"e-os'mōl*] one-thousandth (10^{-3}) of an osmole.

millipede [*mil'ĭ-pēd*] nonpoisonous, multisegmented, circular in cross-section, arthropod with two legs per segment. Some species produce a toxin that causes skin irritation.

Millipore filter trademark for cellulose acetate filters with pore sizes of 8 μm to 10 nm; such membranes are widely used for sterilizing liquid media.

millirad (mrad) [*mil'ĭ-rad*] a non-SI unit of dosage of absorbed radiation, 10^{-3} rad. Now replaced by **gray**.

millivolt (mV) [*mil'ĭ-vōlt*] one-thousandth of a volt.

Millotia greevesii Australian plant in the family Asteraceae; causes nitrate–nitrite poisoning; called also creeping millotia.

milo a variety of sorghum used for grain, with the same toxic potential as fodder sorghum. Called also *Sorghum bicolor (S. vulgare)*.

milphosis [*mil-fo'sis*] the falling out of the eyelashes.

milrinone [*mil'rĭ-nōn*] a synthetic phosphodiesterase inhibitor compound, used to provide inotropic support to the failing myocardium.

milt fish spermatozoa.

milzbrand anthrax.

Mima now classified as *Acinetobacter*.

-mimetic [*mĭ-met'ik*] imitating; used as a word ending to indicate what it is that is being imitated, e.g. sympathomimetic.

MIMI multifactorial intramural myocardial infarction.

Mimosa plant genus in the legume family Mimosaceae; contain toxin mimosine; includes *M. invisa* (giant sensitive plant), *M. pudica* (sensitive plant).

mimosine the toxic amino acid in *Leucaena leucocephala*, *Mimosa* spp. Causes depilation, especially of the long hairs of the mane and tail.

min. minim; minimum; minute.

M-39: Loss of tail hairs due to poisoning by the toxin mimosine in *Leucaena leucocephala*. From Pascoe R, Knottenbelt DC, Manual of Equine Dermatology. Saunders, 1999.

Min pin see **Miniature pinscher**.

Minamata disease [*me"nah-mah'tah*] mercury poisoning in cats, birds and humans originating from industrial pollution of Minamata bay in Japan, and the poisoning of fish and shellfish which were then absorbed into the local food chains.

minaxolone a steroidal anesthetic agent for intravenous use.

mindi see ***Melia azederach***.

mineral [*min'ər-əl*] any naturally occurring nonorganic homogeneous solid substance. There are 19 or more minerals forming the mineral composition of the animal body; at least 13 are essential to health. These minerals must be supplied in the diet and are generally found in a varied or mixed diet of animal and vegetable products which meet the energy and protein needs. Nutritional deficiencies of individual minerals are listed under each of them.

chelated m. see organic minerals (below).

m. deficiencies see under the appropriate mineral, e.g. phosphorus, iodine.

m. flux the excessive output of a mineral from the animal body, leading to a state of deficiency; a negative balance.

m. imbalances imbalances between minerals that need to be maintained in a proper balance with others as well as being present in appropriate absolute amounts, e.g. calcium:phosphorus, sodium:potassium.

organic m's. mineral bonded to an organic ligand of an amino acid, a hydrolyzed protein, propionic acid, or a polysaccharide solution and used as feed additives for livestock. Believed to have higher bioavailabity than inorganic minerals.

m.-salt mixtures mixtures of stock grade salt, with sterilized bonemeal, copper, cobalt, iodine and other trace minerals where required, in granular form or in a hard cake for licking. Set out in barns or at pasture for **ad libitum** access by cattle, sheep, goats. Called also lick.

m. supplements minerals added to the diet of animals to prevent or correct a nutritional deficiency.

trace m. see **trace element**.

m. tolerance limits of dietary supplementation with minerals which animals can survive for a limited period without a decline in their production or performance, and without creating unsafe residues in the human food chain.

mineralization the addition of mineral matter to the body, especially the skeleton.

cutaneous m. see **calcinosis** cutis.

dystrophic m. see **dystrophic** calcification.

ectopic m. deposition of calcium salts of phosphate, silicate, etc. in unusual situations, e.g. calcifying myopathy in horses.
m. front the interface between the unmineralized osteoid and the mineralized bone. Called also phosphate ridge.
heterotopic m. see ectopic mineralization (above).
metastatic m. calcification of unusual tissues leading to the development of metastatic bone.
muscle m. ectopic deposition of minerals in muscle.

mineralized ring see **perichondrial** ring.

mineralocorticoid [*min″ər-əl-o-kor′tĭ-koid*] any of a group of hormones elaborated by the cortex of the **adrenal** gland, so called because of their effects on sodium, chloride and potassium concentrations in the extracellular fluids. They are the adrenocortical hormones that are essential to the maintenance of adequate fluid volume in the interstitial and intravascular fluid compartments, normal cardiac output and adequate levels of blood pressure. Without sufficient supply of the mineralocorticoids, fatal shock from diminished cardiac output can occur very quickly. The principal mineralocorticoid is *aldosterone*, which accounts for most of the activities of this group of hormones. The primary effects of the mineralocorticoids are increasing the reabsorption of sodium and the secretion of potassium in the renal tubules. Secondary effects are related to the reabsorption of water, serum concentrations of sodium and potassium, anion reabsorption and secretion of hydrogen ions. The net result of these activities is maintenance of fluid and electrolyte balance and, therefore, adequate cardiac output.

miniature [*mi′nē-ə-chur′*] much smaller in size than normal animals of the species, but with normal proportions. Animals born prematurely are miniatures but show evidence of prematurity in their haircoat, unerupted teeth and immature hooves. A nonviable form of miniaturism in calves with these characteristics is thought to be inherited. See also **dwarfism**.
m. dog breeds several dog breeds or varieties which are specified as miniatures, usually in contrast to a larger variety with similar characteristics except for size. They include the Miniature **schnauzer**, **Miniature bull terrier**, Miniature **poodle**, Miniature **dachshund** and **Miniature pinscher**.

Miniature bull terrier a smaller (10–14 inches tall) version of the Bull terrier, although recognized as a distinct breed. It has a similar appearance and coloring and is subject to similar health problems, including polycystic kidney disease, hereditary nephritis, mitral valve dysplasia, and primary lens luxation,

Miniature pinscher a very small (10 lb), lively dog with very short coat in solid red, brown, blue, chocolate or black, with tan markings on the face, throat, chest and legs. The ears may be erect, dropped, or cropped where practiced. The tail is docked. Sometimes regarded as a miniature Doberman pinscher. Called also 'Min pin' and Roe terrier.

Miniature schnauzer see **Schnauzer**.

minihemilaminectomy see **pediculectomy**.

minilaparotomy a small abdominal incision for liver biopsy, open transhepatic cholangiography, or sterilization by ovariectomy.

minim (m.) [*min′im*] [L.] *least* a unit of volume (liquid measure) in the apothecaries' system, equivalent to 0.0616 mL.

minimal [*min′ĭ-məl*] the smallest possible; the least.
m. disease pigs a synonym for **specific pathogen free** pigs.

minimum [*min′ĭ-məm*] see also **minimal**.
m. alveolar anesthetic concentration (MAC) the concentration of an anesthetic in the alveoli that prevents a muscular response to a painful stimulus in 50% of the subjects.
m. daily requirement (MDR) the minimum amount of a nutrient that is required daily for the maintenance of good health.

Minimum Essential Drug Information Checklist (MEDIC) a checklist for use in a problem-solving approach to the understanding of pharmacology. It includes the therapeutic goal, route of administration and dose form, dose regimen, legal/withdrawal time, cost, special precautions and contraindications, adverse reactions and antidotes, evaluation, and patient education plan.

Minivent ventilator a small, simple unit that fits onto any continuous-flow anesthetic apparatus and acts as a minute volume divider. Used for anesthesia of small animals.

mink a small mammal of the family Mustelidae; a semi-aquatic carnivore much prized for its fur. There are two species, American mink (*Neovison vison*) and European mink (*Mustela lutreola*).
Aleutian m. disease see **Aleutian mink disease**.
m. encephalopathy a prion spongiform encephalopathy; there is similarity between this disease and scrapie produced experimentally in mink. There is a very long incubation period, hyperirritability, biting, paralysis, coma and death. Called also transmissible encephalopathy of mink (TEM).
m. enteritis a condition caused by the mink enteritis virus, which is closely related to feline panleukopenia virus, and characterized by mucoid, sometimes blood-stained, diarrhea that may contain casts.
ranch m. mink cultivated artificially on a mink farm or 'ranch'.

Minnesota disease reporting system a surveillance system for diseases in farm animals, initiated by the Minnesota Veterinary Association, and based on periodic reporting and analysis of the diseases occurring on **sentinel** farms.

minnie-minnie see ***Abrus precatorius***.

minocycline [*mĭ-no-si′klēn*] a second-generation, highly lipid-soluble derivative of tetracycline.

Minorca a lightweight, black breed of egglaying fowl with a large, erect, single comb, and black legs; it lays a bright, white-shelled egg.

minoxidil [*mĭ-nok′sĭ-dil*] a potent, long-acting vasodilator, which acts primarily on arterioles. Used as an antihypertensive agent in humans and also topically as a hair restorer in male baldness. Has been used in the treatment of alopecia in dogs. Accidental ingestion or excessive dermal absorption, particularly in cats, can cause vomiting and lethary, but could lead to hypotension, pulmonary edema, and acute myocardial ischemia.

mint [*mint*] see ***Mentha longifolia***.
native m. *M. australis*.
purple m. see ***Perilla frutescens***.
wild m. see ***Perilla frutescens***.

Mintchew's operation an operation for dorsal fixation of a prolapsing vagina in a cow. A heavy suture is placed from the skin beside the tailhead into the vagina.

mintweed see ***Salvia reflexa***.

minute [*mi-nōōt′*] very small.
m. canine virus (MCV) see canine **parvovirus** type 1.
m. mouse virus a parvovirus recovered from mice. Experimental infection of neonatal or fetal mice causes runting and cerebellar hypoplasia, but natural infection has not been associated with clinical disease. Sometimes referred to as the 'mini-mouse' virus.

mio mio ***Baccharis cordifolia***.

miocardia [*mi″o-kahr′de-ə*] the contraction of the heart; systole.

Miohippus [*mi″o-hip′əs*] one of the early evolutionary stages of the horse; existed during the Oligocene period.

miopus [*mi′o-pəs*] a fetus with two fused heads, one face being rudimentary.

miosis, myosis [*mi-o′sis*] constriction of the pupil. May be physiologic, due to increased parasympathetic and decreased sympathetic tone to the iridal sphincter and dilator muscles, or pathologic.

miotic [*mi-ot′ik*] 1. pertaining to, characterized by or causing miosis. 2. an agent that causes constriction of the pupil.

mipafox a cholinesterase inhibitor, organophosphorus insecticide which causes degeneration of the spinal cord tract in fowl.

miracidium [*mi-rə-sid′e-əm*] pl. *miracidia* [Gr.] the free-swimming, ciliated larva of a trematode parasite which emerges from an egg and penetrates the body of a snail host.

mirex an effective organic pesticide used in ant control and as a fire retardant; it is, however, very persistent in tissue and now banned because of residue problems.

mirosamycin a macrolide antibiotic used in pigs and poultry and as a feed additive in apiculture in Japan.

mirror-image artifact [*mir′ər*] in ultrasonography, highly reflective interfaces, such as lung–diaphragm, may result in multiple reverberations of sound waves causing some echoes to be delayed in returning to the transducer so that a more superficial structure may appear deeper.

misalliance [*mis″ə-li′ənce*] see **mismating**; called also mésalliance.

misbeksiektebos see ***Geigeria***.

misbredie see ***Amaranthus***.

miscible [*mis′ĭ-bəl*] susceptible to being mixed.

misconduct conduct as a professional person which brings sufficient discredit to the profession to damage its reputation and decrease the trust that the public places in it. Personal morality, social behavior, language and dress are all criteria that need to

be included in any assessment, but they must be judged in the light of the prevailing community standards of the day.

miserotoxin the β-glycoside of 3-nitro-1-propanol in *Astragalus miser* (timber milk vetch) which when converted to an aglycone causes the signs of poisoning by this plant—loss of condition, incoordination on driving and a roaring respiration.

mismatch 1. in blood transfusions and transplantation immunology, an incompatibility between potential donor and recipient. 2. one or more nucleotides in one of the double strands in a nucleic acid molecule without complementary nucleotides in the same position on the other strand.

mismating [*mis"ma'ting*] unintended mating or a female mated to the wrong male, often by failure of restraint of one or the other. The emphasis in most cases is to ensure that the mating does not proceed to conception or to parturition. Called also mésalliance, misalliance.

mismothering failure of the newborn to be matched up with its own mother, which is one of the hazards of raising animals in flocks and submitting them to intensive management with much human intervention. The problem can be a serious one in sheep flocks, especially with timid Merino-type sheep, and many newborn lambs may be lost.

misoprostol [*mi-so-pros'tol*] a synthetic analog of prostaglandin E and inhibitor of gastric secretion; used in the treatment of gastrointestinal ulceration, particularly those associated with the use of nonsteroidal anti-inflammatory drugs.

mispickel arsenical pyrites, an iron-rich ore containing a high content of arsenic. Fumes from an industrial plant handling the ore can cause local chronic arsenic poisoning in livestock.

mission bells ***Bryophyllum*** *delagoense*.

mission grass ***Pennisetum*** *polystachyon*.

Missulena one of the genera of venomous trapdoor spiders.

mist flower *Ageratina riparia*.

mistis [*mis'tis*] cross between a male alpaca and a female llama.

mistletoe [*mis'əl-to*] parasitic plants that grow on other trees. Makes a traditional appearance in the culture of Christmas decorations. See ***Viscum album*** (European mistletoe) and ***Phoradendron*** (American mistletoe).

mistura [L.] *mixture*.

MIT monoiodotyrosine.

mitchell grass [*mich'əl*] see ***Astrebla***.

Mitchell markers [*mich'əl*] lead letters containing a mercury bubble to indicate orientation of the cassette when the X-ray is taken.

Mitchell needle [*mich'əl*] a needle designed especially for intravenous anesthesia, with a device that keeps the needle in place and prevents reflux of blood up the needle.

mite [*mīt*] any arthropod of the order Acarina except the ticks; they are characterized by minute size, usually transparent or semitransparent body, and the anterior position (or absence) of the stigmata or spiracles, distinguishing them from the ticks. They may be free living or parasitic on animals or plants, and may produce various irritations of the skin. See **mange**, **chigger** mites, ***Psorergates***, ***Demodex***, ***Notoedres***, ***Otodectes***, ***Cheyletiella***, and many locality names, e.g. cat fur mites, ear mites, nasal mites, and other special titles, e.g. harvest mites, housedust mites.

air sac m. see ***Cytodites*** *nudus*.

canine nasal m. see ***Pneumonyssoides*** *caninum*.

cat fur m. see ***Lynxacarus*** *radovsky*.

cereal m. see ***Tyroglyphus***.

chicken m. see ***Dermanyssus gallinae***.

chigger m. see **chigger**.

copra m. see ***Tyrophagus*** *longior*.

cyst m. see ***Laminosioptes*** *cysticola*.

depluming m. see ***Cnemidocoptes*** *laevis gallinae*.

dust m. see **housedust mite**.

ear m's. see ***Psoroptes*** *cuniculi*, ***Raillietia*** *auris*, *R. caprae*.

European harvest m. see ***Trombicula*** *autumnalis*.

feather m. mites that live on and in feathers, often in enormous numbers but have little pathogenicity. Include the genera of *Analges* and *Megninia* of the family Analgesidae and the genus *Dermoglyphus* of the family Dermoglyphidae. Other miscellaneous genera are *Syringophilus*, *Falculifer*, *Freyana*, *Pterolichus*, *Pteronyssus*.

m. fever see scrub **typhus**.

flour m. a mite capable of causing dermatitis. See ***Carpoglyphus***, ***Glycyphagus***, ***Tyroglyphus***, ***Tyrophagus***, ***Suidasia nesbitti***.

forage m. see ***Trombicula***.

fur m. see ***Lynxacarus*** *radovsky*.

grain itch m. see ***Pediculoides ventricosus***.

harvest m. are pests of grain and hay where they are predators on arthropods. The larvae ordinarily parasitize rodents but can infest other animals including humans. The infections are self-limiting but can cause dermatitis of the face and the lower limbs. The lesions are itchy, small scabs, which cause rubbing and stamping of the feet. In pigs the lesions are distributed over most of the body. Called also chigger mites, grain mites, *Pyemotes ventricosus*, *Neotrombicula autumnalis*, *Eutrombicula alfreddugesi*, *E. splendens*, *E. batatas*, *Lepotrombidium* spp., *Schoengastia* spp.

housedust m. a probable factor in the development of allergic skin diseases in dogs. See ***Allodermanyssus***, ***Dermatophagoides***, ***Cheyletus eruditus***, ***Tyrophagus*** *farinae*.

housemouse m. ***Allodermanyssus*** *sanguineus*.

internal parasitic m's poultry cutaneous mites in a number of families are found in the trachea, air sacs and subcutaneous tissues. Includes *Cytodites*, *Epidermoptes*, *Laminosioptes*, *Pneumonyssus*, *Rivoltsia* and *Sternastoma* spp.

itch m. see ***Psorergates*** *ovis*.

leg-itch m. of sheep; see ***Eutrombicula*** *sarcina*.

laelapid m. see ***Echinolaelaps echidninus***.

lung m. see ***Pneumonyssoides***, ***Halarachne***, ***Orthohalarachne***.

nasal m. *Pneumonyssoides caninum*

nocturnal m. see ***Dermanyssus gallinae***.

northern fowl m. see ***Ornithonyssus*** *sylviarum*.

nose m. *Speleognathus australis*; occurs in wild ruminants and may cause bouts of sneezing. See also **nasal** acariasis.

oribatid m. freeliving, nonparasitic mites, intermediate hosts to tapeworms found in grazing animals, e.g. *Moniezia*, *Anoplocephala*, *Paranoplocephala*, *Avitellina* spp. Members of the superfamily Oribatoidea.

poultry m. see ***Dermanyssus gallinae***.

rabbit fur m. ***Cheyletiella*** *parasitivorax*.

red m. see ***Dermanyssus gallinae***.

roost m. see ***Dermanyssus gallinae***.

scab m. see ***Chorioptes***, ***Psoroptes***, ***Sarcoptes***.

scaly leg m. see ***Cnemidocoptes***.

scrub-itch m. see ***Acomatacarus***, ***Trombicula*** *minor*.

sheep itch m. see ***Psorergates*** *ovis*.

storage m's many species, e.g. *Acarus siro*, in stored cereals.

straw-itch m. ***Pyemotes*** *tritici*.

subcutaneous m. see ***Laminosioptes*** *cysticola*.

trombidiform m. see ***Trombicula***.

tropical fowl m. ***Ornithonyssus*** *bursa*.

tropical rat m. ***Ornithonyssus*** *bacoti*.

velvet m. see ***Trombicula***.

mithramycin [*mith"rə-mi'sin*] see **plicamycin**.

mithridate mustard see ***Thlaspi arvense***.

mithridatism acquisition of immunity to a poison by ingestion of gradually increasing amounts of it.

miticide [*mi'tī-sīd*] an agent destructive to mites.

mitis [*mi'tis*] [L.] mild—opposite of forte.

mitochondria [*mi"to-kon'dre-ə*] [Gr.] plural of *mitochondrion;* small, spherical to rod-shaped, membrane-bounded cytoplasmic organelles that are the principal sites of ATP synthesis; they also contain enzymes of the citric acid cycle and for fatty acid oxidation, oxidative phosphorylation, and other biochemical pathways. Mitochondria also contain DNA, RNA and ribosomes; they replicate independently and synthesize some of their own proteins.

mitochondrial [*mi"to-kon'dre-əl*] pertaining to **mitochondria**.

m. RNAs a unique set of tRNAs, mRNAs, rRNAs, transcribed from mitochondrial DNA by a mitochondrial-specific RNA polymerase, that account for about 4% of the total cell RNA that are transcribed.

m. targeting signal a not fully defined sequence of amino acids, rich in hydroxyl amino acids and normally lacking acidic residues, that is recognized by a mitochondrial receptor that permits mitochondrial-specific proteins synthesized in the cytoplasm to be imported into mitochondria.

mitochondrion [*mi"to-kon'dre-on*] singular of **mitochondria**.

mitogen [*mi'to-jən*] an agent that induces mitosis and lymphocyte blastogenesis.

pokeweed m. (PWM) a lectin from the plant, *Phytolacca americana*, that produces B and T lymphocyte blastogenesis.

mitogenesis [*mi"to-jen'ə-sis*] the induction of mitosis in a cell.

VetBooks.ir

mitogenic factor [*mi"to-jə-net'ik*] a lymphokine with lymphocyte mitogenic activity.

mitomycins [*mi"to-mi'sin*] a group of highly toxic antineoplastics (mitomycin A, B and C) produced by *Streptomyces caespitosus*, indicated for palliative treatment of certain neoplasms that do not respond to surgery, radiation and other drugs.

mitosis [*mi-to'sis*] the ordinary process of cell division which results in the formation of two daughter cells, and by which the body replaces dead cells. The two daughter cells receive identical diploid complements of chromosomes, which are characteristic of somatic cells. Cell division that results in haploid reproductive cells is known as **meiosis**. The period between mitotic divisions is called *interphase.* Mitosis itself occurs in four phases: *prophase*, *metaphase*, *anaphase* and *telophase.* Originally, the term *mitosis* referred only to the division of the nucleus, which can occur without cytokinesis in certain fungi and in the fertilized eggs of insects. As used now, it usually refers to mitotic cell division.

mitotane [*mi"to-tān*] an oral chemotherapeutic agent that causes selective necrosis and atrophy of the adrenocortical zona fasciculata and zona reticularis. Used in the treatment of inoperable adrenal cortical carcinoma in humans and in canine Cushing's syndrome. Called also *o,p-DDD*.

mitotic [*mi-tot'ik*] pertaining to mitosis.

m. activity degree to which a cell population is proliferating; used as an index of tumor aggression. Can be quantified by counting the percentage of cells showing mitotic figures, or by flow cytometry.

m. figure the condensed chromosomes by which a cell that is undergoing mitosis can be identified.

m. index the percentage of cells simultaneously in the process of division, normally calculated after counting 1000 cells. Used in morbid pathology as a measure of the malignancy of a tumor, and in clinical pathology as an index of survival time of a neoplasm.

m. metaphase chromosomes chromosomes in metaphase manifesting as mitotic figures.

m. nondisjunction failure of proper disjunction of the paired chromosomes during metaphase which results in the chromosomal abnormalities of monosomy or trisomy.

m. potential estimate of the cell's potential reproductive capacity.

mitoxantrone a synthetic anthracene derivative, similar to doxorubicin, used as an antineoplastic agent.

mitral [*mi'trəl*] shaped like a miter; pertaining to the mitral valve.

m. area that area of the thoracic wall through which sounds of the mitral valve can best be auscultated; generally the lower one-third of the mid- to anterior left thorax.

m. atresia–hypoplastic left heart syndrome defects in the development of the mitral valve, left heart and aortic valve, which occur rarely in cats.

m. complex includes the leaflets, anulus, chordae tendineae and papillary muscles of the mitral valve, left atrium and left ventricular muscle wall.

m. insufficiency a functional incompetence resulting in regurgitation of blood from the left ventricle to the left atrium. See chronic **valvular** heart disease.

m. regurgitation see mitral insufficiency (above).

m. valve the left atrioventricular valve, the valve between the left atrium and the left ventricle of the heart; it is composed of two cusps, anterior and posterior. Called also the bicuspid valve.

m. valve prolapse (MVP) a condition in which some portion of the mitral valve is pushed back too far during ventricular contraction. Often a complication of chronic **valvular** heart disease (endocardiosis).

mitratapide an inhibitor of microsomal triglyceride transfer proteins; used in the management of obesity in dogs.

Mittendorf's dot an embryologic remnant of the anterior insertion of the hyaloid artery on the posterior lens capsule present for variable periods postnatally in some eyes, without any effect on vision. Manifested as a small gray or white opacity on the posterior lens capsule just inferior and nasal to the posterior pole. See also **Bergmeister's papilla**, **Cloquet's canal** and **arcuate line of Vogt**.

mivacurium [*mi"və-ku're-əm*] a nondepolarizing drug used to achieve neuromuscular blockade.

mixed 1. affecting various parts at the same time. 2. having two or more characteristics. 3. comprising several different ingredients.

m. bacterial vaccine an experimental preparation once investigated as a nonspecific immunostimulant in the treatment of different types of tumors in dogs. It contained *Streptococcus pyogenes* and *Serratia marcescens.*

m. lymphocyte reaction a test for histocompatibility between donor and recipient; lymphocytes from both are mixed in vitro and the responses quantitated by measuring the uptake of labeled thymidine. In the usual assay one of the two populations which will serve as the target is blocked from undergoing blastogenesis by the drug mitomycin. The degree of incompatibility is reflected in the amount of cell division as measured by the uptake of labeled thymidine, incompatibility increasing the uptake.

m. tumor canine mammary tumors are often mixtures of epithelial, myoepithelial or connective tissues. They are common; are usually clinically benign, but may undergo malignant transformation. Mixed tumors also occur in the dog in the thyroid, sweat and salivary glands.

Mixter forceps lightweight, ratchet-handled hemostats with the blades curved sharply downwards near their tip.

mixture [*miks'chər*] a combination of different drugs or ingredients, such as a fluid with other fluids or solids, or a solid with a liquid.

Miyagawanella an obsolete name for a genus of organisms, the species of which were reassigned to the genus *Chlamydia,* but are now in the order *Chlamydiales*.

mizoribine an immunoduppressant drug.

mjölkhälta [Scand.] see **phosphorus** nutritional deficiency.

mL, ml milliliter.

µL microliter.

MLC minimum lethal concentration.

MLD minimum lethal dose.

MLR mixed lymphocyte reaction.

MLV modified live virus. See attenuated **vaccine**.

mm millimeter; muscles.

mm^3 cubic millimeter; millimeter cubed.

µm micrometer.

MM disease *Mycoplasma meleagridis* disease. See **turkey** syndrome.

MMA called also MMA sow syndrome; see also **mastitis–metritis–agalactia**.

MMF maximal midexpiratory flow (rate).

MMFR maximal midexpiratory flow rate.

mmHg millimeters of mercury; a unit of pressure.

mmol millimole; see **mole**.

Mn chemical symbol, *manganese.*

Mn^{2+} manganese ion.

Mo chemical symbol, *molybdenum.*

mob Australian vernacular for a group of sheep which stay together for an extended period. Also a name for a group of kangaroos.

mobilization [*mo"bĭ-lĭ-za'shən*] the rendering of a fixed part movable.

Mobitz block [*mo'bĭtz*] see Mobitz **heart block**.

modality [*mo-dal'ĭ-te*] 1. a method of application of, or the employment of, any therapeutic agent; limited usually to physical agents. 2. a specific sensory entity, such as taste. 3. in homeopathy, a condition that modifies drug action; a condition under which clinical signs develop, becoming better or worse.

mode [*mōd*] 1. in statistics, the value or item in a variations curve that shows the maximum frequency of occurrence; in a series of values, the value that occurs most frequently. 2. the manner in which a procedure is carried out.

amplitude m. see A-mode **ultrasonography**.

brightness m. see B-mode **ultrasonography**.

motion m. see M-mode **ultrasonography**.

modeccin toxalbumin in ***Adenia digitata***.

model [*mod'əl*] a simulation, a copy, occurring naturally or manufactured. Models used in statistical and epidemiological studies may be deterministic, stochastic or random.

m. 1 the fixed version of the linear additive model used in linear regression analysis.

m. 2 the random version of the linear additive model used in linear regression analysis.

animal m. any condition in an animal that has enough similarities to a condition in humans that studies of the animal disease are will assist in understanding the human disorder.

causal m. a model used to determine the part played by multiple factors in the cause or causes of disease; a path model in which the variables are arranged temporally.
descriptive m. consist largely of diagrams and maps or charts designed to describe a real-world system.
deterministic m. see epidemiological model (below).
epidemiological m. a mathematical model, which may be a computer simulation model, of a disease for the purpose of studying the behavior of the disease in a variable animal population under variable conditions of climate, density of population, mix of population, and so on. It may be an *analytical* model, an *economic decision making* model, an *explanatory* model or a *predictive* model. It may also be a *causal* model, which allows the operator to vary the determinants of prevalence and observe the respective outcomes. It may permit only the use of fixed numbers so that it will always return the same answer to the same question, in which case it is a *deterministic* model, or it may introduce the element of chance into the selection of outcomes, in which case it is a *stochastic* model. Specific computer simulation models have been prepared, for example for the study of rinderpest, the costs of mastitis control, the cost-benefits of foot-and-mouth disease control, and the costs of mortality in dairy calves. For example see **Reed–Frost model**.
linear programming m. a statistical model of a dependent variable, e.g. Y, as a linear combination of other variables, e.g. X. The model is based on a series of linear equations with a linear equation, called the objective function, as the desired end. Such an end could, in the determination of lowest cost rations, be the total cost of each ration.
mathematical m. a representation of a system, process or relationship in a mathematical form; see also mathematical **modeling**.
physical m. e.g. a model of a molecule utilizing colored balls connected by rigid wires.
probabilistic m. includes basic concepts of probability theory and may be deterministic or stochastic.
Reed–Frost m. a deterministic probability model of a theoretical epidemic.
stochastic m. see epidemiological **model**.
symbolic m. mathematical symbols used to describe the status of variables at a given time and to define the manner in which they change and interact.
modeling [*mod'əl-ing*] the art and science of constructing models.
mathematical m. the use of a set of consequential mathematical formulae to create a numerical model of the possible events in a system. Introduction of a series of values for individual constants makes it possible to produce a series of results that mirror the outcome of practical experiments.
moderate said of a disease or condition that interferes with normal activities, such as eating and ambulation, without completely blocking them out.
moderator band a ribbon of cardiac muscle that stretches from the septal to outer wall of the heart that was once thought to prevent overdilation of the ventricles, but is now known to function chiefly as a pathway for conduction fibers. Now known properly as *trabecula septomarginalis*. See septomarginal **trabecula**.
modified contemporary comparison a two-step method of comparing the productivity of herd mates to establish breeding values; sires are evaluated first, then the sire data is used in the evaluation of the cows.
Modiola toxic plant in family Malvaceae; unidentified toxin causes incoordination, recumbency, convulsions; includes *M. caroliniana* (creeping mallow, *M. multifida*).
modiolus the central pillar or columella of the cochlea.
MODS multiple organ dysfunction syndrome.
modulation [*mod"u-la'shən*] the capacity to regulate; widely used in biology, e.g. modulation of immune responses, food intake, etc.
antigenic m. the alteration of antigenic determinants in a living cell surface membrane following interaction with an antibody.
covalent m. activation or inactivation of enzymes, either by covalent addition/removal of a phosphate (phosphorylation/dephosphorylation), acetyl (acetylation/deacetylation) or other chemical group or by proteolytic cleavage. A major means of regulation of enzyme action by hormones.
modus [*mo'dəs*] mode of.
MOET multiple ovulation and embryo transfer.
MOF multiple organ failure. See multiple **organ** dysfunction syndrome.
moggy term of endearment addressed to a cat.
mohair goat hair, product of the Angora goat.
moiety [*moi'ə-te*] any equal part; a half; also any part or portion, such as a portion of a molecule.
Moiré lines [*mwa'rā*] interference patterns seen in digital radiography caused by grid lines interfering with other linerar patterns.
moist having a moderate moisture content, slightly wet to the touch.
moisture wetness due to any liquid; usually refers to water as a component, e.g. in feed.
m. free a substance heated at 220˚F (105˚C) to constant weight. Called also oven-dry or 100% dry matter.
moisturizers hydroscopic agents, applied to the skin and hair, as creams, rinses or shampoos, to increase hydration of the stratum corneum. Examples are propylene glycol, glycerine and lactate.
Mokola virus a rhabdovirus found in bats that has serological similarities to, but significant differences from, the rabies virus.
mol [*mol*] see **mole** (2).
mol. wt. molecular weight.
molal [*mo'ləl*] containing one mole of solute per kilogram of solvent. See also **molar**[1].
molality [*mo-lal'ĭ-te*] the number of moles of a solute per kilogram of solvent.
molar[1] [*mo'lər*] 1. massive; pertaining to a mass; not molecular. 2. pertaining to an amount of substance specified in moles rather than mass units. 3. containing 1 mole of solute per liter of solution; symbol M. note: *molal* refers to the *mass* of *solvent*, *molar* to the *volume* of the *solution*.
m. extinction coefficient constant in the equation describing the Lambert–Beer law pertaining to light spectrophotometry. Usually given the symbol ε.
molar[2] [*mo'lər*] 2. adapted for grinding. See also molar **teeth**.
m. extractor the universal heavy-duty plier-type instrument with jaws offset to the plane of the handles.
m. gland see **salivary gland**.
inherited displacement of m. teeth a deformity of the mandible with gross displacement of the teeth. Affected calves are not viable.
m. tooth cutter long-handled, heavily constructed cutter, usually with a double-action scissor system of closing. The chisel-edged blades face each other and are brought together in parallel. They are operated from outside the mouth of the anesthetized horse and are sufficiently powerful to remove a protruding piece of tooth.
molarity [*mo-lar'ĭ-te*] a measure of the concentration of a solute in solution; the number of moles of a solute per liter of solution (mol/L or mol/m^3).
molasses [*mo-las'əz*] thick syrup obtainable as sugar cane, beet, citrus or wood molasses. All contain 50–55% sugar except citrus, which contains 42%. All are low in protein but high in minerals. The common form is black treacle, a biproduct of the cane sugar industry. Used as a feed supplement to supply additional energy. Because of its high carbohydrate content and palatability it is a common cause of carbohydrate engorgement in cattle. It is also a cause of polioencephalomalacia in cattle in feedlots.
m. sugar-beet pulp a cattle feed made of sugar beet pulp, after sugar extraction, and molasses.
mold [*mōld*] any of a group of parasitic and saprophytic fungi causing a cottony growth on organic substances; also, the deposit of growth produced by such fungi. See also **fungi**, **fungal**.
m. nephrosis ochratoxin A and citrinin in moldy feed cause nephrosis in pigs.
moldy animal feed overgrown with fungus; the feed may be harvested and stored or be still in the ground.
m. corn disease see **leukoencephalomalacia**, ***Fusarium moniliforme***.
m. feed causes mycotoxic nephropathy in horses.
m. garden beans causes acute interstitial pneumonia in cattle.
m. hay see ***Micropolyspora faeni***.
m. sweet potato ***Fusarium*** *javanicum*.
mole [*mol*] 1. a fleshy mass formed in the uterus by abortive development of an ovum. 2. the amount of a substance that contains as many elementary entities (atoms, ions, molecules, or free radicals) as there are atoms in 0.4 oz (12 grams) of pure carbon-12, i.e. equivalent to Avogadro's number (6.023×10^{23}) of elementary entities; the amount of a chemical compound having a mass in

VetBooks.ir

grams equal to its molecular weight. 3. a fleshy growth caused by a defect in development of the skin; a nevus. The name is also sometimes incorrectly used to describe the tactile hairs and underlying tubercles which are sometimes distinctively pigmented, on either side of the face in dogs. 4. a highly efficient burrowing insectivorous, small mammal in the family Talpidae or Chrysochloridae, with black, velvety fur, and almost blind and deaf.

hydatid m., hydatidiform m. a condition in females characterized by an abnormal pregnancy resulting from a pathological ovum, with proliferation of the epithelial covering of the chorionic villi and dissolution and cystic cavitation of the avascular stroma of the villi. It results in a mass of cysts resembling a bunch of grapes.

pigmented m. see pigmented **nevus**.

molecular of, pertaining to, or composed of molecules.

m. mimicry see **antigenic** mimicry.

molecular biology [*mo-lek'u-lər*] study of the biochemical and biophysical aspects of the structure and function of genes and other subcellular entities, and of such specific proteins as hemoglobins, enzymes and hormones; it provides knowledge of cellular differentiation and metabolism and of comparative evolution.

molecule [*mol'ə-kūl*] a group of atoms joined by chemical bonds; the smallest amount of a substance that possesses its characteristic properties.

chimeric m. a molecule containing both human and bacterial DNA joined end to end; used in recombinant DNA research.

möle [Scand.] a deformity of calves which have short and malformed limbs, hydrocephalus, mandibular hypoplasia and facial tissue deficits. The body is edematous. An inherited defect in Danish cattle.

molera a term for the frontal fonticulus that persists in some dogs, particularly Chihuahuas.

Moll's glands [*mol*] sweat glands that have become arrested in their development, situated at the edges of the eyelids; called also ciliary glands, glands of Moll. See also external **hordeolum**.

Möller–Barlow's disease see hypertrophic **osteodystrophy**.

mollicutes [*mol"ĭ-ku'tēz*] members of the order *Mycoplasmatales*, class *Mollicutes*. Genera of veterinary importance are *Acholeplasma*, *Mycoplasma*, and *Ureaplasma*.

haemophilic m. include organisms previously included in the genera *Eperythrozoon* and *Haemobartonella*; have a high degree of host specificity, with different species causing hemolytic anemia in different animal species.

nonhaemotrophic m. include members of the genus *Ureaplasma* and members of the genus *Mycoplasma* not associated with red blood cells. Most have a high degree of host specificity and infect a wide range of animal species causing subclinical to severe infections of the respiratory and urogenital tracts, arthritis, septicemia and mastitis.

mollities [*mo-lish'e-ēz*] abnormal softening.

m. ossium see **osteomalacia**.

mollusc [*mol'usk*] members of the phylum Mollusca, which comprises about 50,000 species. Includes snails, slugs and the aquatic molluscs—oysters, mussels, clams, cockles, arkshells, scallop, abalone, cuttlefish, squid. Also includes gastropods, whose main veterinary interest is as an intermediate host for animal flukes and lungworms.

molluscicide [*mo-lus'ĭ-sīd*] an agent used for killing molluscs (mainly snails and slugs), e.g. copper sulfate, **metaldehyde**, **methiocarb**.

molluscum [*mo-lus'kəm*] any of various skin diseases in humans marked by the formation of soft rounded cutaneous tumors.

m. body intracytoplasmic inclusion body, containing poxvirus particles, seen in keratinocytes in molluscum contagiosum.

m. contagiosum a disease of the skin in humans and a similar condition in horses, macropods and chimpanzees caused by a poxvirus in the genus *Molluscipoxvirus*. It is characterized by the formation of firm, rounded, translucent, crateriform papules containing caseous matter that occur mainly on the muzzle, penis, prepuce, and axillary and inguinal skin in horses. The lesions are usually an incidental finding. Two similar diseases occur in horses: viral **papular** dermatitis and **Uasin gishu disease**.

molly see mare **hinny**.

molly fish popular, viviparous aquarium fish in the genus *Poecilia* (syn. *Mollienesia sphenops*).

molt [*mōlt*] the physiological shedding of the integument, usually annual, and at the beginning of the breeding season, including the shedding of the skin by reptiles, of hair by many species, and of feathers by birds; the phenomenon is gradual, has severe metabolic overtones and leaves the bird flightless and off lay for several weeks. It is assumed to be related to hormonal changes related to changes in the length of daylight hours.

eclipse m. the summer molt, following the breeding season, when the brightly colored plumage of drakes is replaced with more subdued colors, more closely resembling the female.

forced m. induced by a period of limited light and starvation in commercial egg-laying flocks. Its purpose is to increase egg production of flocks in their second or third laying seasons.

Molteno disease a disease of cattle in South Africa caused by *Senecio burchellii*.

molting [*mōlt'ing*] 1. the change of coat in animals at the change of season, most noticeable in animals kept outside in cold climates that stimulate a long winter coat. 2. the replacement in birds of all their feathers once each year in the autumn. Hens stop laying for 8–12 weeks at this time. Molting may occur at other times if there is a feed stress.

molybdenosis [*mə-lib"də-no'sis*] **molybdenum** poisoning.

molybdenum (Mo) [*mə-lib'də-nəm*] a hard, silvery-white, metallic element, atomic number 42, atomic weight 95.94. See Table 4. It is an essential trace element, being a component of the enzymes xanthine oxidase, aldehyde oxidase and nitrate reductase. Molybdenum poisoning causes a secondary hypocuprosis, and clinical signs including chronic diarrhea, illthrift and depigmentation of hair. It occurs most commonly on pastures growing on soils naturally rich in the element, but can be caused by excessive pasture supplementation in an attempt to stimulate the growth of *Rhizobium* spp., the nitrogen-fixing bacteria of legume roots.

moment 1. the force exerted by a lever about a fulcrum. 2. statistically, the mean. The first moment is the same as the mean, the second moment is the mean of the square of a variable, and so on.

momentum [*mo-men'təm*] the quantity of motion; the product of mass and velocity.

mometasone [*mo-met'ə-sōn"*] a glucocorticoid used topically to treat inflammatory skin disease and otitis externa.

Momordica genus in the plant family Cucurbitaceae; contain cucurbitacins; cause gastroenteritis. Includes *M. balsamina* (balsam apple), *M. charantia* (balsam pear), *M. dioica* (bitter gourd).

mona grass ***Paspalum scrobiculatum***.

monad [*mon'əd*] 1. a protozoon or coccus. 2. a univalent radical or element. 3. in meiosis, one member of a tetrad.

monarthric [*mon-ahr'thrik*] pertaining to a single joint.

monarthritis [*mon"ahr-thri'tis*] inflammation of a single joint.

monarticular [*mon"ahr-tik'u-lər*] pertaining to a single joint.

monathetosis [*mon"ath-ə-to'sis*] athetosis of one limb.

monatomic [*mon"ə-tom'ik*] 1. containing one atom. 2. univalent.

Monday morning disease diseases of horses which occur most frequently after a period of rest. See **sporadic lymphangitis**, exertional **rhabdomyolysis**.

monensin [*mo-nen'sin*] used as a growth promotant in ruminants to improve milk production in dairy cattle and for control of coccidiosis; produced by cultures of *Streptomyces cinnamonensis*. Not to be used in horses, dogs or cats because of its toxicity in these species. Large doses in cattle and normal doses in horses cause sudden death due to heart failure. Signs include jugular engorgement, edema and dyspnea. Monensin also increases chances of nitrite poisoning occurring in ruminants fed on high-nitrate rations. Toxicities in other species may induce signs associated with skeletal muscle myopathy.

m.-tiamulin poisoning simultaneous administration of both compounds can result in the development of monensin poisoning.

monepantel an amino-acetonitrile derivative (AAD) anthelmintic effective against nematode parasites of ruminants.

monestrous [*mon-es'trəs*] completing only one estrus cycle in each sexual season.

money plant *Epipremnum pinnatum* cv. *aureun*.

Mongolian pony Chinese multipurpose pony, including riding and draft, meat, milk, all coat colors,

Mongolian sheep fat-tailed, meat and carpetwool sheep; white with black or brown head, polled or horned.

Mongolian wild horse Przewalski's horse.

mongoose [*mahn'goos*] small, cat-sized carnivores in the family Herpestidae. There are a number of varieties and genera including the Egyptian mongoose (*Herpestes ichneumon*) and the banded

mongoose (*Mungos mungo*). A voracious eater of rodents and reptiles and a favorite house pet.

mongrel of mixed or uncertain breeding; said of dogs in particular but also used adjectively to refer to any species.

Moniella a genus of pigmented (dematiaceous) molds within the Fungi Imperfecti. Cause pheohyphomycosis in animals.

Moniezia a genus of tapeworms in the family Anoplocephalidae.

M. benedini*, *M. expansa common inhabitants of the small intestine in young ruminants up to the age of 6 months. Massive infestations may cause diarrhea and wasting.

Monilia [*mo-nil'e-ə*] former name of a genus of parasitic fungi, now called ***Candida***.

monilial [*mo-nil'e-əl*] pertaining to or caused by *Monilia* (***Candida***).

moniliasis [*mon-ĭ-li'ə-sis*] see **candidiasis**.

moniliform [*mo-nil'ĭ-form*] beaded; having the appearance of a string of beads.

Moniliformis moniliformis [*mo-nil"ĭ-for'mis*] acanthocephalid (thorny headed) worms found in the small intestine of rodents.

Monin technique a surgical procedure for urethroplasty as part of the repair of a rectovaginal fistula in a mare.

monitor [*mon'ĭ-tər*] in diagnostic imaging, a screen that displays images.

cathode ray m. a computer display using a TV type tube.

liquid crystal display (LCD) m. flat panel display where fluorescent light passes through polarizing filters and a rod shaped matrix filled with charged molecules. The alignment of the molecules is controlled by the voltage applied to each matrix textile by a computer graphics card. This leads to differential intensity of light transmission so controlling the light output of each pixel.

monitor lizard [*mon'ĭ-tər*] carnivorous lizards in the families Lanthanotidae and Varanidae that vary greatly in size and habitat. Includes the Komodo dragon (*Varanus komodoensis*) and goanna (*Veranus* spp). Smaller varieties, especially, are popular in the commercial pet trade

monitoring continuous observation and measurement of a variable; to check constantly on a given condition or phenomenon, e. g. blood pressure or heart or respiration rate.

m. alarm devices used to monitor an anesthetized patient to alert the anesthetist and surgeon of abnormalities in the heart rate, respiration and blood pressure. Most are electrical and rely on a satisfactory connection to the patient.

therapeutic drug m. (TDM) measurement of blood levels of specific drugs at intervals to determine whether therapeutic concentrations are being achieved and maintained at the prescribed dose and frequency of administration. Used with anticonvulsant medications, insulin, and some hormone replacement treatments.

monk-fish see ***Squatina squatina***.

monkey [*mung'ke*] primates in the parvorder Platyrrhini (New World monkeys) and the family Cercopithecidae (Old World monkeys). They are all diurnal animals with great anatomical similarity to humans, including orbital cavities that are closed laterally, digits that end in nails and pectoral mammary glands. There are minor differences between the New World and Old World monkeys and the total number of genera and species is very large. Prehensile tails are found only in some of the New World monkeys. The nose of New World monkeys is flatter and has nostrils that face to the side, whereas in Old World monkeys the nostrils are close together and face downwards. See also names of individual species.

bonnet m. see **macaque**.

capuchin m. (*Cebus* spp.) New World arboreal monkey used commonly as a laboratory primate. They are popular as pets. Called also organ-grinder monkey.

colobus m. (*Colobus* spp.) Old World monkeys; they have a black coat with a long white mantle, whiskers and beard and a bushy white tail. Unlike other monkeys, they have no thumb or only a small stump. Includes the guereza (*C. guereza*).

m. dog see **Affenpinscher**.

green m. (*Chlorocebus* spp.) medium sized primates in the family of Old World monkeys distinguished by their blue scrotum and red penis. They have been important in biomedical research with the African Green monkey (*C. aethiops*) notable as the original source of kidney cells used in cell culture **Vero cells**. Called also vervet monkey, grivet monkey.

howler m. (*Alouatta* spp.) large New World primates with a long prehensile tail; noted for the very loud voice of males, created by an extraordinarily large and cavernous larynx.

m. jaw undershot jaw.

m. mouth common deformity in goats, especially the breeds selected for the Roman nose; the upper jaw is shorter than the lower; undershot jaw. Also occurs in hypothyroid foals.

m. muscle the triceps brachii muscle of the shoulder; a term used by Greyhound fanciers. See also **dropped** monkey muscle.

night m. see owl monkey (below).

organ-grinder m. see capuchin monkey (above).

owl m. (*Aotus* spp.) nocturnal, New World monkey with very large eyes, gray-brown to red in color. Make good pets; eat fruits, insects and birds. Called also night monkey, douroucouli. The species has a natural resistance to the plasmodium responsible for malaria in humans, so has been important in biomedical research.

patas m. (*Erythrocebus patas*) an orange, terrestrial, Old World monkey with white underparts and a black face. Sometimes used in biomedical research; sometimes kept as pets.

m. pox see **monkeypox**.

rhesus m. (*Macaca mulatta*) a small Old World monkey that is really a macaque; it has gray to brown hair and red ischial callosities. They adapt well to living in captivity and have been used extensively in biomedical research and behavioral studies. Their genome has been sequenced.

m. rope ***Cynanchum africanum***.

spider m. (*Ateles* spp.) a tropical, New World monkey with long, thin limbs and a long prehensile tail. They are used in biomedical research.

squirrel m. (*Saimiri sciureus* spp.) a colorful New World monkey, noted for the size of its brain, proportionally the largest of all primates. It is used in medical research and appears in the pet trade.

m. terrier see **Affenpinscher**.

titi m. (*Callicebus* spp.) one of the many small New World monkeys, about the size of a squirrel with dense, short fur and a long, nonprehensile tail.

vervet m. see green monkey (above).

woolly m. (*Lagothrix* spp.) a large New World monkey with a thick, woolly coat and a long, thick prehensile tail. They are hunted for meat and commonly sold as pets.

monkeypox [*mung'ke-poks*] a disease mainly of monkeys, but also of rodents, squirrels and rabbits, caused by a poxvirus in the genus *Orthopoxvirus*. Typical pox lesions occur on the face, hands, feet and ears, and there is a systemic reaction with bronchitis. Healing of the umbilicated, pustular lesions is complete in about a month. Although found most commonly in central and western Africa, monkeypox infection of humans has occured in the USA following exposure to pet prairie dogs.

monkshood [*mungks'hood*] see ***Aconitum***.

mon(o)- word element. [Gr.] *one; single; limited to one part; combined with one atom*.

monoacylglycerol hydrolase, lipase enzyme catalyzing the final hydrolytic removal of a fatty acid from monoacylglycerol releasing glycerol into the bloodstream; present in adipose tissue.

monoamine [*mon"o-ə-mēn', mon"o-a'mēn*] an amine containing only one amino group.

m. oxidase (MAO) a cuproprotein enzyme that deaminates monoamines such as serotonin, epinephrine, norepinephrine, dopamine, tyramine and tryptamine.

m. oxidase inhibitors substances that inhibit the activity of monoamine oxidase, increasing catecholamine and serotonin concentrations in the brain; they are used as antidepressants and antihypertensives. Called also MAO inhibitors.

monoaminergic [*mon"o-am"in-ur'jik*] of or pertaining to neurons that secrete the monoamine neurotransmitters dopamine, norepinephrine and serotonin.

monoamnionic [*mon"o-am"ne-ot'ik*] having or developing within a single amniotic cavity; said of monozygotic twins.

monoamniotic [*mon"o-am"ne-ot'ik*] monoamnionic.

monobactams [*mon"o-bak'tam*] a group of monocyclic β-lactamase resistant antibiotics, incluidng **aztreonam** and **carumonam sodium**.

monobasic [*mon"o-ba'sik*] having but one atom of replaceable hydrogen.

VetBooks.ir

monoblast [*mon'o-blast*] the earliest precursor arising from a committed stem cell in the monocytic series, which develops into the promonocyte.
monobrachia [*mon"o-bra'ke-ə*] a fetal anomaly in which there is only one forelimb.
monobrachius [*mon"o-bra'ke-əs*] an individual with only one forelimb.
monocephalus [*mon"o-sef'ə-ləs*] a fetus with one head. but duplication of some body parts.
Monocercomonas a genus of protozoa of the family Monocercomonadidae. No pathogenic effect is associated with the following notable species: *M. caviae*, *M. minuta*, *M. pistillum* (guinea pig), *M. cuniculi* (rabbit), *M. gallinarum* (chicken), all in ceca, and *M. ruminantium* (cattle rumen).
monochloroacetate used in agriculture as a defoliant; nontoxic unless taken in large doses.
monochorial [*mon"o-kor'e-əl*] said of twins that have developed sharing a single chorion. Called also monochorionic.
monochorionic [*mon"o-kor"e-on'ik*] having or developing in a common chorionic sac; said of monozygotic twins.
monochromatic [*mon"o-kro-mat'ik*] 1. existing in or having only one color. 2. staining with only one dye at a time.
monocistron [*mon"o-sis'tron*] an mRNA encoding a single polypeptide.
monocistronic mRNAs [*mon"o-sis-tron'ik*] each eukaryotic mRNA contains information coding for only one protein, hence monocistronic, whereas prokaryotic mRNAs may encode more than one protein and are said to be polycistronic.
monoclonal [*mon"o-klo'nəl*] derived from a single cell; pertaining to a single clone.
m. antibodies identical immunoglobulin molecules formed by a single clone of plasma cells; may occur naturally in plasma cell myelomas or in vitro by the fusion of an antibody producing B lymphocyte with a non-antibody-producing myeloma B cell. The fused heterokaryon has the properties of immortality and production of a monoclonal antibody. For the most part, monoclonal antibodies are made in mouse systems.
m. gammopathy see monoclonal **gammopathy**.
monocontaminated [*mon"o-kən-tam'ĭ-nāt"əd*] infected by only one species of microorganism or a single contaminating agent.
monocotyledonous [*mon"o-kot"ə-le'don-əs*] said of plants the seeds of which have only one cotyledon, e.g. grasses, lilies, iris.
monocrotaline [*mon"o-kro'tə-lēn*] a pyrrolizidine alkaloid in ***Crotalaria*** spp.
monocrotophos an organophosphorus cholinesterase-inhibiting compound used as a pesticide and capable of poisoning all animals.
monocular [*mon-ok'u-lər*] 1. pertaining to one eye. 2. having but one eyepiece, as in a microscope.
monoculus [*mon-ok'u-ləs*] 1. a bandage for one eye. 2. a cyclops.
monocyte [*mon'o-sīt*] a mononuclear, phagocytic leukocyte having an ovoid or kidney-shaped nucleus and azurophilic cytoplasmic granules. Monocytes are derived from promonocytes in the bone marrow. They circulate in the blood before migrating to the tissues, as in the lung and liver, where they develop into macrophages.
m. leukemia see monocytic **leukemia**.
m.–macrophage system see **reticuloendothelial system**.
monocytic leukemia [*mon"o-sit'ik*] see monocytic **leukemia**.
monocytopenia [*mon"o-si"to-pe'ne-ə*] a deficiency of monocytes in the blood.
monocytopoiesis [*mon"o-si"to-poi-e'sis*] the production of monocytes.
monocytosis [*mon"o-si-to'sis*] an excess of monocytes in the blood.
monodactyl [*mon"o-dak-til'*] a foot with one digit, as in the horse. See also **soliped**.
monodactyly [*mon"o-dak'tə-le*] the presence of only one digit on a limb.
monodermoma [*mon"o-dər-mo'mə*] a tumor developed from one germinal layer.
monodon baculovirus disease affects larval *Penaeus monodon*, *P. merguiensis*, *P. semisulcatus*, and to a lesser extent other penaeids under conditions of poor husbandry and stress.
monofilament suture [*mon"o-fil'ə-mənt soo'chər*] a suture made of a single filament. Causes less irritation than a braided suture.
monogastric [*mon"o-gas'trik*] referring to a stomach with a single chamber as in the dog, cat, horse or pig.
Monogenea a class of platyhelminth parasites that infest cold-blooded aquatic or amphibious vertebrates. Includes the genera *Benedenia*, *Dactylogyrus*, *Diplozoon*, *Discocotyle*, *Gyrodactylus*.
monogenean pertaining to or emanating from Monogenea.
monogenic pertaining to or influenced by a single gene.
monogerminal [*mon"o-jur'mĭ-nəl*] developed from one ovum; said of identical twins; monozygotic.
monoglyceride [*mon"o-glis'ər-īd*] a compound consisting of one molecule of fatty acid esterified to glycerol.
monoiodotyrosine (MIT) [*mon"o-ī-o"do-ti"ro-sin*] the first step in the production of thyroxine. Iodine trapped in the thyroid gland is conjugated with the tyrosine moiety of thyroglobulin.
monokine [*mon'o-kīn*] a cytokine produced by macrophages that act on T lymphocytes to enhance cell-mediated immunity, e.g. interleukin 1.
monolayer [*mon"o-la'ər*] pertaining to or consisting of a single layer of molecules or cells, as in a monolayer cell culture, as used for the isolation and assay of viruses.
monolocular [*mon"o-lok'u-lər*] having but one cavity, as in a cyst.
monomastest an indirect test for bovine mastitis based on the concentration of serum albumen in the milk.
monomelic affecting one limb.
monomer [*mon'o-mər*] 1. a simple molecule of relatively low molecular weight, which is capable of reacting chemically with other molecules to form a polymer, in which the monomers are linked by covalent bonds. 2. a single protein molecule that combines with other monomers by hydrogen bonds to form a larger protein.
fibrin m. the material resulting from the action of thrombin on fibrinogen, which then polymerizes to form fibrin.
monomeric [*mon"o-mer'ik*] 1. pertaining to a single segment. 2. in genetics, determined by a gene or genes at a single locus. 3. consisting of monomers. 4. see also monomeric **diet**.
monomolecular [*mon"o-mo-lek'u-lər*] pertaining to a single molecule or to a layer one molecule thick.
monomorphic [*mon"o-mor'fik*] existing in only one form.
monomphalus [*mon-om'fə-ləs*] omphalopagus.
monomyoplegia [*mon"o-mi'o-ple'jə*] paralysis of a single muscle.
monomyositis [*mon"o-mi"o-si'tis*] inflammation of a single muscle.
Mononegavirales an order of RNA viruses containing four families, *Bornaviridae*, *Filoviridae*, *Paramyxoviridae* and *Rhabdoviridae*.
mononeural [*mon"o-nŏŏ'ral*] supplied by a single nerve.
mononeuritis [*mon"o-nŏŏ-ri'tis*] inflammation of a single nerve.
m. multiplex simultaneous inflammation of several nerves remote from one another.
mononeuropathy [*mon"o-nŏŏ-rop'ə-the*] a lesion or lesions affecting a single nerve or nerve root.
m. multiplex neuropathy involving a number of peripheral nerves but in a random manner.
mononuclear [*mon"o-noo'kle-ər*] having only one nucleus.
blockade of m.–phagocytic system results when large numbers of particles or bacteria adsorb to all available receptor sites or otherwise interfere with phagocytosis. May be a factor in reducing host defense mechanisms.
m. phagocytes macrophages.
m. phagocyte system the group of highly phagocytic cells that have a common origin from stem cells of the bone marrow and develop circulating monocytes and tissue macrophages, which develop from monocytes that have migrated to connective tissue of the liver (Kupffer's cells), lung, spleen and lymph nodes. The term has been proposed to replace *reticuloendothelial system*, which includes some cells of different origin.
mononucleosis [*mon"o-noo"kle-o'sis*] excess of mononuclear leukocytes (monocytes) in the blood.
monooxygenase [*mon"o-ok'sĭ-ja-nās"*] one of the microsomal enzyme systems; mixed function enzyme systems; incorporates one atom from molecular oxygen into the substrate, the second atom is reduced to water.
monoparesis [*mon"o-pə-re'sis*] paresis of a single part.
monopathy [*mo-nop'ə-the*] a disease affecting a single part.
monophthalmus. [*mon"of-thal'məs*] a fetus with one eye; a cyclops.
monophyletic [*mon"o-fi-let'ik*] descended from a common ancestor or stem cell.
monophyodont [*mon"o-fi'o-dont*] an animal in which permanent teeth do not have a temporary precursor.
monoplegia [*mon"o-ple'jə*] paralysis of a single limb.
monopoiesis [*mon"o-poi-e'sis*] the development of monocytes.

monopolar [*mon'o-po"lər*] having a single pole.
monops [*mon'ops*] cyclops.
monorchid [*mon-or'kid*] an animal having only one testis in the scrotum.
monorchidism, monorchism [*mon-or'kid-iz-əm*] the condition of having only one testis or one descended testis.
Monordotaenia taxidiensis a tapeworm of the family Taeniidae recorded in wild amimals, skunk, mink, ermine, marten and badger.
monosaccharide [*mon"o-sak'ə-rīd*] a simple sugar; a carbohydrate that cannot be broken down to simpler substances by hydrolysis, e.g. glucose, fructose and galactose.
m. absorption tests see **glucose** tolerance test; **xylose** absorption test.
monosodium methyl arsenate [*mon"o-so'de-əm*] a potent brushwood killer, toxic to animals by mouth or percutaneously, causing diarrhea and weight loss. See also organic **arsenic** poisoning.
monosomy [*mon'o-so"me*] existence in a cell of only one instead of the normal diploid pair of a particular chromosome.
monospecific [*mon"o-spə-sif'ik*] having an effect on only a particular kind of cell or tissue, or reacting with only a single antigen, as, for example, a monospecific antiserum.
Monosporium [*mon"o-spor'e-əm*] see ***Scedosporium apiospermum***.
monostotic [*mon"os-tot'ik*] affecting a single bone.
monosulfiram an ectoparasiticide, called also sulfiram; used extensively against mites, but toxic if overused.
monosymptomatic [*mon"o-simp"tə-mat'ik*] manifested by only one clinical sign.
monosynaptic [*mon"o-sĭ-nap'tik*] pertaining to or passing through a single synapse.
monothermia [*mon"o-thur'me-ə*] a condition in which the body temperature remains the same throughout the day.
monotocous [*mo-not'ə-kəs*] having one offspring per gestation.
monotreme [*mon'o-trēm*] a member of the animal order of Momotremata, the egg-laying mammals. Includes only two species, the **platypus** and the **echidna**.
monotrichous [*mon-otrĭ-kəs*] having a single flagellum, usually at a polar position; applied to a bacterial cell.
monotypic [*mon'o-tip'ik*] said of a genus with only one species.
monovalent [*mon"o-va'lənt*] 1. having a valency of one. 2. capable of binding with only one antigenic or antibody specificity.
monovular [*mon-ov'u-lər*] developed from one oocyte, i.e. identical twins.
monoxenous [*mo-nok'sə-nəs*] requiring only one host to complete the life cycle.
monozygotic [*mon"o-zi-got'ik*] pertaining to or derived from a single zygote (fertilized ovum); said of **twins**.
monozygous [*mon"o-zi'gəs*] see **monozygotic**.
mons [*monz*] pl. *montes* [L.] a prominence.
monster [*mon'stər*] a term previously used to describe a fetus or neonate with such pronounced developmental anomalies as to be grotesque and usually nonviable.
Monstera deliciosa toxic plant in the Araceae family; contains raphide crystals of calcium oxalate; causes buccal irritation.
monstrosity [*mon-stros'ĭ-te*] a great congenital deformity; a monster.
Montadale an American medium-woolled, meat sheep produced by crossing **Columbia** and **Cheviot** breeds.
Montana progressive pneumonia see **maedi**.
Monteggia's fracture [*mon-tej'ə*] a fracture in the proximal half of the shaft of the ulna, with dislocation of the head of the radius.
Montenegro test an immunodiagnostic test for use in diagnosing cutaneous **leishmaniasis**. A suspension of inactivated promatigotes is injected intradermally; a positive reaction is seen in 48 or 72 hours. Called also leishmanin skin test.
Montgomery's disease [*mont-gum'ər-e*] African swine fever.
Montgomery T tube [*mont-gum'ər-e*] a T-shaped tube used in a tracheostomy to treat laryngeal and tracheal injuries. It serves as a stent and to provide an airway.
monticulus [*mon-tik'u-ləs*] pl. *monticuli* [L.] a small eminence.
m. cerebelli the projecting part of the superior vermis cerebelli.
montmorillonite a smectite clay; in addition to a variety of nonmedical uses, in the form of a paste administered orally it is used as an intestinal absorbent and protectant for the treatment of diarrhea in dogs and cats.
monuron a selective urea-based herbicide. Can cause anemia and methemoglobinemia. Vomiting, ataxia and urticaria are also recorded.
moo the subdued talking voice of cattle.
moon blindness [*mōōn*] a previous name for equine recurrent **uveitis**.
moorit color type in Shetland sheep with shades between fawn and dark reddish brown.
moose [*mōōs*] (*Alces alces*) the largest member of the deer family; they have a prominent Roman nose and overhanging upper lip, dark brown coat with white legs. Males have palmate antlers. Known in the USA also as *A. a. americana*. In Europe, called elk.
m. disease see **neurofilariasis**. Called also moose sickness.
m. tick see ***Dermacentor albipictus***.
MOPP an aggressive cancer chemotherapy rescue protocol using mechlorethamine (mustine), Oncovin® (vincristine), procarbazine and prednisone.
Mopshond an early Dutch name for the Pug.
Moraea a Mediterranean and South African plant genus of the family Iridaceae; contains bufadienolide cardiac glycosides which cause cardiac irregularity, diarrhea, dysentery, abdominal pain, tympany, stiff gait and sudden death. Includes *M. flaccida (H. flaccida, H. aurantica, H. breynia, H. collina*, one-leaf cape tulip), *M. glauca (H. natalensis), M. miniata* (two-leaf cape tulip), *M. mossii, M. ochroleuca (H. lucasi), M. pallida, M. pura, M. bellendini, M. bipartitia, M. graminicola, M. juncea, M. lilacina, M. polyanthos, M. polystachya, M. setifolia (Gynandriris setifolia*, thread iris), *M. venenata*. Called also *Homeria*, tulp, native tulip, Cape tulip, Natal yellow tulip.
morantel a general purpose anthelmintic for horses and cattle, used as the tartrate. Can be used against worms that have benzimidazole resistance. Mode of action is similar to levamisole.
Moraxella a genus of short, rod-shaped bacteria that occur in pairs. *M. lacunata* and *M. phenylpyruvica* are of unknown pathogenicity in animals.
M. anatipestifer see ***Riemerella anatipestifer***.
M. bovis causes **infectious** bovine keratoconjunctivitis.
M. bovoculi gram-negative cocci isolated from calves with **infectious** bovine keratoconjunctivitis.
morbid [*mor'bid*] 1. pertaining to, affected with, or inducing disease; diseased. 2. unhealthy; unwholesome.
morbidity [*mor-bid'ĭ-te*] the condition of being diseased.
proportional m. the proportion of all of the diseased animals in the population that have the particular disease under discussion.
m. rate the ratio of diseased to healthy animals in the population. The ratio is said to be standardized when it is expressed as a proportion of the expected rate compared with a standard group. It is also expressed as a proportional rate when it is stated as a proportion of all of the cases of illness due to all causes in the group.
morbific [*mor-bif'ik*] causing or inducing disease.
Morbillivirus [*mor-bil'ĭ-vi"rəs*] one of the three genera in the family ***Paramyxoviridae*** that includes the viruses of human measles, canine distemper, phocine distemper and rinderpest.
equine m. see **equine** henipavirus.
morbus [L.] *disease*.
morcellation [*mor"səl-a'shən*] division of solid tissue (as a tumor) into pieces, followed by piecemeal removal.
mordant [*mor'dənt*] 1. a substance capable of intensifying or deepening the reaction of a specimen to a stain. 2. to subject to the action of a mordant before staining.
Morel's disease [*mo-rel'*] a disease of sheep characterized by abscesses containing green pus located near lymph nodes, and is caused by a gram-positive micrococcus.
Morellia a genus of flies in the family Muscidae. They are essentially flies of flowers and vegetation, but are attracted to sweat and mucus and can be a significant source of insect worry in summer. The common species are *M. aenescens*, *M. hortorum* and *M. simplex*. Called also sweat flies.
Moreton Bay chestnut see ***Castanospermum australe***.
Morgagni [*mor-gah'nye*] pertaining to Giovanni Battista Morgagni (1682–1771), Italian anatomist. See Morgagnian **cataract**, Morgagnian **globule**,
Morgagni's hydatid [*mor-gah'nye*] small wrinkled wart-like cyst adjacent to the head of the epididymis. It is progbably a vestige of the cranial end of the paramesonephric (Mullerian) duct. Most

VetBooks.ir

commonly (but not exclusively) seen in the horse. Called also 'appendix testis'.

Morgan's conjunctival pocket technique [mor'gən] surgical technique used to reduce a prolapsed gland of the third eyelid ('cherry eye') into a conjunctival pocket created on the posterior surface of the third eyelid. The conjunctiva is then sutured closed over the repositioned gland to restrain it in position.

morgan flower [mor'gən] *Stemodia florulenta*.

Morgan horse [mor'gən] an American light horse, named after a famous sire Justin Morgan. An all-round pleasure horse in harness or under saddle. Bay, black, brown or chestnut; 14.2–15.2 hands high.

M. h. cuneate nucleus neuraxonal dystrophy suspected inherited defect in Morgan horse foals less than 6 months old; characterized by hindlimb ataxia progressing gradually over a period of several years and dystrophic neuraxonal lesions only in the accessory cuneate nucleus.

Morganella morganii [mor"gə-nel'ə] see ***Proteus morganii***.

moribund [mor'ĭ-bənd] in a dying state.

Morinda reticulata Australian plant in the Rubiaceae family; a converter plant which preferentially absorbs selenium and has a higher content of it than other plants; causes alopecia, laminitis in horses; called also mapoon.

Mormon tea see ***Ephedra***.

morning glory [mor'ning glo're] common name for members of the genus ***Ipomoea***. Includes poison morning glory (*I. muelleri*), purple-flowered morning glory (*I. purpurea*).

Morocco leather the appearance of the abomasal mucosa, hyperplasia and covered with small, 2–3 mm diameter, circular nodules, in cattle with heavy infestations of *Ostertagia ostertagi*.

Morone genus of finfish in family Moronidae. Includes *M. chrysops* (white bass), *M. saxatilis* (striped bass).

morphea [mor-fe'ə] see canine localized **scleroderma**.

morphine [mor'fēn] the principal and most active opium alkaloid, a narcotic analgesic and respiratory depressant, usually used as morphine sulfate.

m. substitutes those used in veterinary medicine include **meperidine**, **methadone**, **pentazocine lactate**.

morphium morphine.

morph(o)- prefix meaning shape.

morphogenesis [mor"fo-jen'ə-sis] the developmental changes of growth and differentiation occurring in the organization of the body and its parts.

morphogeny [mor-foj'ə-ne] morphogenesis.

morphology [mor-fol'ə-je] the science of the forms and structure of organisms; the form and structure of a particular organism, organ, tissue or cell.

morphometry [mor-fom'ə-tre] the measurement of forms.

-morphous word element. [Gr.] *shape, form*.

Morris Animal Foundation [mor'is] a non-profit organization that supports research in animal health in small animals, wildlife, horses and llamas.

mors [morz] [L.] *death*.

morsus [mor'səs] [L.] *bite*.

m. diaboli the fimbriated end of a uterine tube.

mortal [mor'təl] 1. destined to die. 2. causing or terminating in death; fatal.

mortality [mor-tal'ĭ-te] 1. the quality of being mortal. 2. death as a statistic.

embryonic m. see early **embryonic** mortality.

m. rate the death rate; the ratio of the total number of deaths to the total number of the population during a specified time period. Commonly used specific mortality rates include *disease*, *case fatality*, *neonatal*, *perinatal* and *preweaning* mortality rates. The rate may also be expressed as a standardized rate, when it is stated as a ratio of the expected death rate in a standard group of animals. It may also be expressed as a proportional rate, when it is stated as a proportion of all of deaths due to all causes in the group.

mortar [mor'tər] 1. wooden or ceramic vessel with a rounded internal surface, used with a pestle, for reducing a solid to a powder or producing a homogeneous mixture of solids. 2. a material used to cement bricks in place.

m. licking a form of pica usually ascribed to a nutritional deficiency of calcium.

Mortellaro's disease see digital **dermatitis**.

Mortierella wolfii [mor"te-ə-rel'ə] a mucoraceous fungus causing mycotic abortion in cattle. See also **mortierellosis**.

mortierellosis a disease caused by infection with *Mortierella wolfii*. Abortion is the best known manifestation of the disease. There is in addition the uncommon finding of acute necrotizing pneumonia in the cow that has just aborted.

mortification [mor"tĭ-fĭ-ka'shən] gangrene.

morula [mor'u-lə] 1. a solid mass of cells (blastomeres) resembling a mulberry, formed by cleavage of a zygote. 2. a cluster of organisms appearing as an inclusion in the cytoplasm of circulating leukocytes infected by *Ehrlichia* spp.

mosaic [mo-zā'ik] a pattern made of numerous small pieces fitted together; in genetics, the occurrence in an animal of two or more cell populations, each having a different chromosome complement, e.g. XY/XXY mosaic.

m. animals all the genotypes arise from a single zygotic genotype because of chromosomal loss or mitotic nondisjunction.

ecological m. a pattern of interspersed ecosystems of similar size and on a recurring basis.

mosaicism [mo-zā'ĭ-siz-əm] the presence in an individual animal of cells derived from the same zygote, but differing in chromosomal constitution.

Moskoff's islets islets of seminiferous tissue, supplied with blood from the tunic of the testis, which survive ligation of the spermatic artery in the prepubertal lamb and regenerate. However, recanalization does not occur and the tissue ultimately degenerates.

mOsm milliosmole.

mosquito [məs-ke'to] blood-sucking insect of the genera *Aedes*, *Anopheles*, *Culex*, *Psorophora* and *Taeniorhynchus (Mansonia)*. Some species are concerned with the transmission of diseases, such as equine encephalomyelitis, filarial nematodes, avian malaria and Rift Valley fever.

m.-bite dermatitis pruritic papules and plaques develop on the face and ears of cats and dogs with hypersensitivity reactions to mosquito bites.

mosquitofish [məs-ke'to] see ***Gambusia***.

MOSS [mos] Monitoring and Surveillance Systems.

moss-ill [mos] see ovine **hypocalcemia**.

most common fee the average fee charged for a particular professional service, as a guide to what should be charged; the recommended fee.

moth balls [mawth] a source of naphthalene for domestic pets who may be poisoned following accidental ingestion. Signs of toxicity include vomiting, seizures and an acute hemolytic anemia associated with methemoglobinemia, hemoglobinuria and renal failure.

mother [muth'ər] maternal parent; in animals, usually called the dam.

m. hairs kemp hairs in the fleece of newborn lambs which are shed soon after birth and do not recur.

m.–young relationship the bond established between the newborn and the mother—a critical factor in maintaining high survival rates; a matter of great importance in enhancing lamb survival.

mother of millions [muth'ər] see ***Bryophyllum***.

green m. *Bryophyllum pinnatum*.

hybrid m. *Bryophyllum daigremontium* × *houghtonii*.

mothering the instinct in a dam to provide the best protective care for the young. See also **maternal** neglect, **mismothering**.

m. capability lack of this capacity can cause loss of the neonate, a characteristic of some individual dams and of Merino ewes.

M-40: Mosquito bite hypersensitivity on the nose of a cat.

motherumbah *Acacia cheelii*.

moths [*mawths*] insects belonging to the order Lepidoptera; see *Arcyophora*.

brown-tail m. (*Euproctis chrysorrhoea*) has body scales that have a **nettling** effect, causing irritation of skin and bronchi on contact. The caterpillars of the moth have similarly irritant hairs.

molopo m. an African moth which infests *Acacia erioloba* and *A. mellifera* producing very many cocoons of silk fiber which cause ruminal impaction in cattle browsing on the tree. Called also Molopo moth.

motif for proteins a three-dimensional structural unit formed by a particular sequence of amino acids, found in proteins and which is often linked with a particular function. For nucleic acids a particular, usually short, nucleotide sequence that forms a recognition site usually to which other proteins bind.

structural m's in proteins, certain specific orderings of secondary structure that may have a functional role and include β-α-β helix-turn-helix, leucine zippers, calcium binding EF hands, zinc fingers and longer orderings that take on a structural domain such as the β-barrel and the immunoglobulin fold.

motile [*mo'təl*] having spontaneous but not conscious or volitional movement.

motilin [*mo-til'in*] a polypeptide hormone secreted by enterochromaffin cells of the gut; it causes increased motility of several portions of the gut and stimulates pepsin secretion. Its release is stimulated by the presence of acid and fat in the duodenum.

motility [*mo-til'ĭ-te*] the ability to move spontaneously.

abomasal m. synchronized contractions and motility of the abomasal wall and the opening of the pyloric sphincter are dependent on the fullness of the abomasum, the degree of trituration and the pH of the contents and the integrity of the vagal and sympathetic nerve supplies.

intestinal m. is essential to onward movement of the digesta and excreta. Absence leads to lack of absorption, accumulation of fluid and gas, and development of paralytic ileus. Audible over the flank with a stethoscope.

m. modifiers a class of drugs used to regulate activity of gastrointestinal smooth muscle; includes cholinergics, anticholinergics, **domperidone**, **cisapride**, opioids, **loperamide**, **metoclopramide** and **diphenoxylate** hydrochloride.

ruminal m. audible and visible in the upper left flank. The best indicator of the state of activity of the alimentary tract in cattle.

m. tests carried out to characterize the motility of some bacteria. Methods include the direct microscopy of a hanging-drop, semisolid media with an indicator dye, and other specialized types of medium.

motion mode [*mo'shən*] see M-mode **ultrasonography**.

motion sickness [*mo'shən*] discomfort observed by some companion animals while being transported. It is caused by irregular and abnormal motion that disturbs the organs of balance located in the inner ear. There may be hypersalivation, restlessness and vomiting.

motivation [*mo"tĭ-va'shən*] see **drive census**.

motoceptor [*mo'to-sep"tər*] any muscle sense receptor.

motor [*mo"tər*] 1. pertaining to motion. 2. a muscle, nerve or center that effects movements.

m. activity limb movement the most obvious of these forms of activity.

m. alpha-neuron ventral spinal cord neurons which innervate skeletal muscle. Called also final common pathway, lower motor neuron.

m. depressant anticonvulsant a drug that depresses motor activity and hence prevents convulsions, e.g. phenobarbital sodium, phenytoin sodium.

m. dysfunction abnormality of the motor system.

m. end-plate the highly excitable region of muscle fiber plasma membrane responsible for initiation of action potentials across the muscle's surface. The motor end-plate is the muscle fiber surface of the neuromuscular junction.

m. fibers innervate the body effectors.

m. lubricating oil ingestion may cause lead poisoning (rare).

m. nerve conduction measurement of the velocity of transmission of compound action potentials along motor nerves to skeletal muscle.

m. unit includes the lower motor neuron, neuromuscular junction, and the myofibrils innervated by that neuron.

m. unit action potential the electrical activity of voluntary muscle contractions recorded by needle electromyography.

motor neuron [*mo"tər nŏŏ'ron*] a neuron having a motor function; an efferent neuron conveying motor impulses to striated muscle for initiation of contraction.

m. n. disease see **abiotrophy**.

equine m.n. disease (EMND) a syndrome of mature horses of uncertain etiology, but possibly an oxidative disorder associated with insufficient green forage in the diet and a deficiency of vitamin E. Characterized by generalized weakness, muscle fasciculations and weight loss, despite a normal appetite, that is caused by neurogenic muscle atrophy. There is also a distinctive retinopathy.

lower m. n's (LMN) a motor neuron which has its cell body within the central nervous system and its ending at the neuromuscular junction on a striated muscle fiber; the final part of the motor system which conveys signals from the motor cortex of the cerebral hemispheres to the striated muscle fibers to enable voluntary contraction of a muscle; the ventral horn cell in the spinal cord and the peripheral motor neuron. A lesion of a sufficient number of these neurons causes neurogenic atrophy of the muscles supplied by the affected nerve, weak reflexes and decrease or loss of muscle tone.

progressive m. n. disease various forms of these diseases, all characterized by progressive paresis, paralysis and local muscle atrophy, progressive muscular dystrophy, are recorded in dogs (Brittany spaniel, Rottweiler, Swedish Lapland), horses, Brown Swiss calves, pigs (Yorkshire, Hampshire).

peripheral m. n's neurons in a peripheral reflex arc that receive impulses from interneurons and transmit them to voluntary muscles.

upper m. n's (UMN) neurons whose cell bodies and endings are contained entirely within the central nervous system and which conduct impulses from the motor cortex to the motor nuclei of the cranial nerves or to the ventral gray columns of the spinal cord. Upper motor neurons are part of the pathway responsible for conveying signals for voluntary muscle contraction from the motor cortex to striated muscle fibers. Lesions of the upper motor neuron interrupt the inhibitory effect that upper motor neurons have on lower motor neurons, resulting in exaggerated or hyperactive reflexes. This is also called extensor rigidity.

MOTT mycobacteria other than tuberculosis.

moufflon (*Ovis orientalis*) the European wild sheep, characterized by a reddish color, short wool and big curly horns, and an ability to survive in very tough conditions.

moulage [*moo-lahzh'*] [Fr.] *a wax model of a structure or lesion*.

mould [*mōld*] mold.

mount [*mount*] 1. to prepare specimens and slides for study. 2. a preparatory step to mating in animals.

mountain related in some way to high altitude.

m. devil see ***Lambertia formosa***.

m. disease see **altitude sickness**.

m. mahogany see ***Cercocarpus***.

m. pink ***Centaurium beyrichii***.

m. sickness see **altitude sickness**.

m. thermopsis ***Thermopsis montana***.

Mountain collie see **Bearded collie**.

mounting see mount.

mouse [*mous*] pl. *mice*. 1. members of the large superfamily Muridae which includes the mice, rats, gerbils and their relatives. Old World mice (subfamily Murinae) include many species such as house mouse (*Mus musculus*), harvest mouse and wood mouse. New World mice (family Cricetidae) also include many species and varieties such as deer mice (*Peromyscus leucopus*). Various species are used in laboratory experiments and kept as domestic pets. See also **dormouse**. 2. a small loose body, e.g. in a joint.

athymic m. see **nude mouse**.

deer m. (*Peromyscus maniculatus*) small, New World rodent; used as a laboratory animal. They are carriers of **hantavirus** and deer ticks that carry the spirochete responsible for **Lyme disease**.

m. ectromelia see **ectromelia** (2).

fancy m. strains of *Mus musculus* domesticated and kept as pets; there are many variations in color and patterns. They are prone to obesity, due to overfeeding, and subject to any of the parasitic, viral and bacterial diseases that occur in the species, particularly *Pasteurella* and *Mycoplasma* infections.

VetBooks.ir

field m. (*Apodemus* spp.) lives in fields, woods and gardens. *A. flavicollis* and *A. sylvaticus* have been shown to be the main reservoir hosts for Lyme disease spirochetes in Europe.
house m. *Mus musculus* an Old World mouse, now distributed throughout the world. The common household and agricultural pest. Some strains have been developed as laboratory mouse and some are domesticated to be kept as pets (fancy mice).
joint m. (2) a movable fragment of synovial membrane, cartilage or other body within a joint; usually associated with degenerative osteoarthritis and osteochondritis dissecans.
knockout m. see knockout **gene**.
laboratory m. derived from *Mus musculus*, but selectively bred to be of a consistent type for experimental work under laboratory conditions. Many lines are closely inbred to produce selected genetic characteristics that make them develop certain diseases or biochemical abnormalities. Most laboratory mice are white, but some colored varieties exist.
m. lactic dehydrogenase elevating virus an arterivirus, originally isolated as a contaminant of transplantable mouse tumor cells. Subsequently found to cause life-long viremia associated with elevated blood concentrations of lactic dehydrogenase, but no clinical disease.
marsupial m. see **antechinus**.
m. parvovirus see **minute** mouse virus.
peritoneal m. a free body in the peritoneal cavity, probably a small detached mass or omentum, sometimes visible radiographically.
m. pneumonia virus a pneumovirus that causes chronic illness and emaciation in athymic mice, but subclinical infection in others.
m. poliomyelitis a picornavirus disease causing generalized paralysis in older mice (6–10 weeks) and encephalitis in younger mice (up to 30 days). Called also **Theiler's disease**.
pocket m. (*Perognathus* spp.) small rodents that store food in large external cheek pouches.
m. pox see **ectromelia** (2).
spiny m. (*Acomys cahirinus*) a desert rodent of the eastern Mediterranean and North Africa that has been used as an animal model of nutritionally induced type 2 diabetes.
m. tick ***Ixodes*** *muris*.
m. typhoid infection by *Salmonella enteritidis*.
white-footed m. (*Peromyscus leucopus*) a rodent native to eastern North America and closely related to the deer mouse (*P. maniculatus*). They are carriers of **hantavirus** and the deer ticks that carry **Lyme disease**.

mouse deer not true deer, these are very small, forest-dwelling, hornless ruminants in the family Tragulidae, native to South and Southeast Asia and tropical Africa. See also **chevrotain**.

mouse-tailed crumbleweed see ***Dysphania*** *rhadinostachya*.

mouth [*mouth*] an opening, especially the oral cavity, which forms the beginning of the **digestive** system and in which the chewing of food takes place. It is also the site of the organs of taste and the teeth, tongue and lips, and the entrance to the body for food and sometimes air. In animals it is a part of the system of defense and attack. Called also oral cavity, buccal cavity.
m. brooders species of fish that incubate, rear, or protect their offspring in their oral cavities; can be paternal, maternal or biparental. Numerous species use this strategy and it has evolved independently, several times. Numerous species of cichlids are mouth brooders, but other families do this, as well.
m. carcinoma in food animals may occur in those eating bracken. It is usually a squamous cell carcinoma of gum epithelium.
m. dryness xerostomia; characteristic of dehydration, atropine poisoning.
m. erosions **erosive stomatitis**.
full m. a mature animal with all permanent teeth erupted and in wear.
m. gag see mouth speculum (below).
m. inflammation see **stomatitis**, **gingivitis**, **glossitis**, etc.
monkey m. mandibular prognathism; undershot jaw.
m. mucosal lesions includes stomatitis, necrobacillosis, ulcer, foreign body lodgment, laceration.
m. necrobacillosis necrosis, ulceration caused usually by *Fusobacterium necrophorum*.
m. neoplasms see oral **neoplasms**.
parrot m. see **brachygnathism**.
paw and m. disease a name for feline ***Calicivirus*** or ***Herpesvirus*** infection because of the infrequent occurrence of ulcerations on the skin, usually of the front paws, as well as the usual location in the mouth; probably the result of transmission from grooming.
m. rot see infectious **stomatitis** of reptiles.
scabby m. see contagious **ecthyma**.
shear m. malocclusion producing marked pointing of the enamel. Seen particularly in horses.
m. shyness avoidance of handling around the mouth may be a sign of dental disease in animals.
smooth m. said of a horse's dentition when the molars are worn so that dentin and enamel are evenly worn and the tables are completely smooth and have lost their triturating capacity.
sow m. mandibular prognathism; undershot jaw.
m. speculum a device for preventing the mouth from being closed which permits the passage of the hand or an easily damaged piece of equipment such as a rubber stomach tube. See also **Frick**, **McPherson**, **Schoupe**, **Drinkwater**, **Bayer** specula. There are several unnamed pieces: a wooden one used in cows, which is inserted crossways between the teeth and a stomach tube passed through a hole in its middle; a metal one used in horses by placing its two dental plates over the tables of the incisor teeth and screwing them apart with a thumbscrew working inside the frame that supports the plates; and a similar, simpler device used in sheep and small pigs which has two horizontal bars running crossways between the two parallel prongs of a handheld, fork-like device. It is inserted horizontally between the molar teeth and then turned to a vertical position.
m. ulcers in large animals, ulcers of the oral mucosa usually caused by secondary bacterial infection of less severe mucosal lesions caused by a primary disease, e.g. mucosal disease. In cats, ulcerations are often associated with **feline** viral respiratory disease complex.
m. wart a common location for infection by papilloma virus.
wry m. a twisted mouth caused by unilateral malocclusion.

mouthing 1. familiarizing the unbroken horse with the novelty of having a bit in its mouth. A special mouthing bit with dangling players on the bit is used. 2. checking the teeth of a grazing animal, e.g. to identify sheep with a **broken mouth**.

mouton lamb pelt made to resemble seal or beaver.

Movar 33/63 herpesvirus a strain of bovine herpesvirus 4.

movement [*mōōv'mənt*] an act of moving; motion.
m. abnormality includes involuntary movement, lack of flexion or rigidity, hyper- or hypometric.
active m. movement produced by the animal's own muscles.
ameboid m. movement like that of an ameba, accomplished by protrusion of cytoplasm of the cell.
associated m. movement of parts that act together, such as the eyes.
brownian m. continuous movement of particles suspended within a liquid.
conjugate m. two parts moving synchronously in the same direction, e.g. the eyes.
disjunctive m. two parts moving synchronously but in opposite directions.
involuntary m. a movement which the animal is unable to prevent.
molecular m. see brownian movement (above).
passive m. a movement of the body or of the extremities of an animal performed by a person without voluntary motion on the part of the animal.
purposeful m. see voluntary movement (below).
vermicular m's the wormlike movements of the intestines in peristalsis.
voluntary m. performed out of the will of the animal; an intentional purposeful movement.

moving average see moving **average**.

moxa stick [*mok'sah*] a tuft of soft, combustible herb *Artemisia vulgaris* is burned upon the skin as a cautery. A procedure in traditional Chinese medicine.

moxalactam [*mok"sə-lak'tam*] a third-generation cephalosporin antibiotic having an oxa-β-lactam ring and a broad spectrum of activity, effective against β-lactamase-producing strains of *Haemophilus influenzae* and gram-negative enteric bacilli, including multiple drug-resistant strains.

moxibustion [*mok"sĭ-bus'chən*] in traditional Chinese medicine and acupuncture, the stimulation of an acupuncture point by heat, which may be applied to the end of an acupuncture needle, or a

cone or cylinder of dried herbs (moxa stick) is burned on or near the skin at acupuncture points to strengthen blood, stimulate *Qi* and maintain general health.

moxidectin [*mok"sĭ-dek'tin*] a macrolide (milbemycin) derived from *Streptomyces cyaneogriseus noncyanogenus* with activity against nematodes and arthropods; used in cattle, sheep, horses and dogs. It has been used in the treatment of generalized demodecosis in dogs.

moxifloxacin [*mok"sĭ-flok'sə-sin*] a fluoroquinolone antibiotic with activity against anaerobic bacteria.

6-MP 6-mercaptopurine.

MPA medroxyprogesterone acetate.

MPC mutant prevention concentration.

MPD maximum permissible dose.

MPF mitosis-promoting factor.

MPG 2-mercaptopropionylglycine.

MPS mononuclear phagocytic system; mucopolysaccharidosis.

MPV mean platelet volume.

MR methemoglobin reductase.

mR milliroentgen.

mrad millirad. A non-SI unit now replaced by the **gray**.

MRI magnetic resonance imaging.

MRL maximum residue limit.

mRNA a unique set of tRNAs, mRNAs, rRNAs, transcribed from mitochondrial DNA by a mitochondrial-specific RNA polymerase, which account for about 4% of the total cell RNA which is transcribed.

MRSA methicillin-resistant *Staphylococcus aureus*; an emerging agent in humans and animals. Methicillin resistance is due to the production of a modified penicillin-binding protein PBP2a. Human healthcare-associated MRSA clones usually contain additional genetic material, including genes encoding resistance to multiple classes of antimicrobials. Traditionally a nosocomial human pathogen, but more recently it has emerged in the human community at large, and in animals. Isolated from many domestic animal species including companion animals, cattle, horses, sheep, pigs and chickens with nasal and skin carriage. Human clinical infections are predominantly skin and soft tissue, particularly post-surgical infections and open wounds, but there is also risk of systemic disease. In companion animals, carriage of MRSA is usually associated with domicile with a colonized human or animal, hospitalization and surgery, and usage of antimicrobials. Environmental contamination is a reservoir for infection in veterinary hospitals and transmission can occur via the hands of animal handling personnel. MRSA strains found in dogs and cats are identical to epidemic strains found in human hospitals, probably because companion animals are mainly infected by humans. MRSA can be associated with skin disease in companion animals, but the major concern is the risk of them infecting other humans. Poor skin condition facilitates carriage. MRSA found in farm animal species tends to be distinct from strains causing widespread problems in humans.

animal-associated MRSA (AA-MRSA) strains are distinct from healthcare-associated MRSA. In cattle and camelids, isolates are largely from skin or mastitis milk, but their relative prevalence in *Staphylococcus aureus* isolates is low. Clinical isolates from pigs have been from skin conditions and in horses from skin and soft tissue infections, bacteremia, septic arthritis, implant-related infections, catheter-related infections and pneumonia. AA-MRSA spreads as a carriage form within the same animal species and to human contacts. Some, for example ST398, spreads extensively in animals of different species, has been found in retail meat, and may pose a threat to public health.

community-associated MRSA (CA-MRSA) infections acquired in the community by healthy individuals without healthcare-associated risk factors, and by clones different to those of MRSA healthcare-associated infections. An increasingly prevalent form of human MRSA infection. Unlike many healthcare-associated nosocomial strains of MRSA, community-acquired MRSA strains tend to remain susceptible to most non-β-lactam antibiotics. Agricultural animals may be one reservoir.

healthcare-associated MRSA (HA-MRSA) healthcare-associated pathogen with a risk for nosocomial infection associated with prolonged antimicrobial therapy, surgery, prolonged hospitalization, treatment in an intensive care unit and close proximity to other patients infected or colonized with MRSA. The vast majority of infections caused by five major epidemic clones and there is generally resistance to many other antibiotic classes in addition to β-lactam antibiotics. Also defined as hospital-acquired MRSA and healthcare-associated MRSA.

MRT milk ring test.

MRV minute respiratory volume.

μs, μsec microsecond.

MS-222 tricaine methanesulfonate.

MSDS Material Safety Data Sheet

MSH melanocyte-stimulating hormone.

MSMA monosodium methanearsonate; an organic arsenical herbicide which can cause poisoning characterized by the signs of organic **arsenic** poisoning.

Mt chemical symbol, *meitnerium*.

mtDNA mitochondrial DNA.

MTOC microtubule-organizing center.

mu the twelfth letter of the Greek alphabet, M or μ.

***Mu* points** see **alarm points**.

mu tree ***Aleurites*** *montana*.

muciferous [*mu-sif'ər-əs*] secreting mucus.

muciform [*mu'sĭ-form*] resembling mucus.

mucigen [*mu'sĭ-jən*] a substance present in mucous cells, convertible into mucin and mucus.

mucilage [*mu'sĭ-ləj*] an aqueous solution of a gummy substance, used as a vehicle or demulcent.

mucilloid [*mu'sĭ-loid*] a preparation of a mucilaginous substance.

psyllium hydrophilic m. a powdered preparation of the mucilaginous portion of blond psyllium seeds, used in treatment of constipation. See also **psyllium**.

mucin [*mu'sin*] a mucopolysaccharide or glycoprotein which is the chief constituent of mucus.

m. clot test the adding of acetic acid to normal synovial fluid, which causes clot formation. The compactness of the clot and the clarity of the supernatant fluid are the criteria on which the result is based.

mucinase an enzyme that acts upon mucin.

mucinogen a precursor of mucin.

mucinoid 1. resembling mucin. 2. mucoid (2).

mucinomimetics artificial tears that, due to their rheological properties mimic the mucinous rather than aqueous portion of natural tears; used in the treatment of dry eye, especially qualitative tear film disturbances.

mucinosis [*mu"sĭ-no'sis*] a state with abnormal deposits of mucin in the skin, often associated with hypothyroidism (myxedema).

follicular m. hair loss associated with mucinosis of the epidermis and hair follicles. Called also alopecia mucinosa.

cutaneous m. normal in the Shar pei dogs, but occurs in others as thickened sking with mild to moderately exaggerated skin folds. There may be vesicles or bullae containing mucin.

idiopathic m. see Shar pei mucinosis (below).

Shar pei m. increased amounts of mucin in the dermis is associated with the greatly wrinkled skin which is characteristic of this breed. Called also idiopathic mucinosis.

mucinous [*mu'sĭ-nəs*] relating to, resembling or containing mucin.

m. carcinoid see goblet-cell **carcinoid**.

muciparous [*mu-sip'ə-rəs*] secreting mucin.

mucking out removing manure and soiled straw from a horse's loose box.

mucoarteritis [*mu'ko-ahr"tə-ri'tis*] a degenerative disease in which glycosaminoglycan is deposited in the subendocardium of the left atrium and in the intima of the large arteries in dogs. Seen in uremic dogs, significant only in dogs on a high fat diet.

mucocele [*mu'ko-sēl*] 1. dilatation of a cavity with accumulated mucous secretion. 2. a mucous polyp.

gallbladder m. occurs in older dogs in association with cystic mucosal hyperplasia of the gallbladder; may occur with hyperadrenocorticism.

nasolacrimal m. see **dacryops**.

orbital m. may be due to dilation of the zygomatic salivary gland or lacrimal gland. Causes exophthalmos and protrusion of the nictitating membrane and/or conjunctival fornix.

pharyngeal m. see salivary mucocele (below).

salivary m. extravasation of saliva into subcutaneous tissue following injury to a salivary gland or duct. Most commonly seen in dogs as a fluctuant, sometimes large and pendulous, nonpainful mass in the intermandibular, cranial, cervical or

VetBooks.ir

sublingual area. Called also honey cyst, sialocele, salivary cyst. See also **ranula**.

sublingual m. leakage of mucoid saliva from the sublingual chain of salivary glands or associated ducts. See also **ranula**.

submandibular m. leakage of mucoid saliva from the submandibular salivary glands or associated duct.

zygomatic m. leakage of mucoid saliva from the zygomatic salivary glands or associated duct. See also orbital mucocele (above).

mucocervix [*mu'ko-sur'viks*] a condition in cows in which the cervix is much enlarged (4 inches diameter × 5–6 inches long or 10 cm diameter ×12–15 cm) and has a tenacious and enlarged seal of mucus.

mucociliary [*mu"ko-sil'e-ar-e*] pertaining to a combination of cilia and mucus.

m. blanket a blanket of mucus overlying cilia beating in a watery sol on the surface of the respiratory mucosa.

m. escalator the nonimmunological defense mechanism involving ciliary action and flow of mucus from bronchioles, through the bronchi and trachea to the larynx, by which particulate matter is removed from the respiratory tract. Called also mucociliary ladder.

m. ladder see mucociliary escalator (above).

m. transport the effect of the operation of the mucociliary escalator.

mucocoele [*mu'ko-sēl*] mucocele.

mucocutaneous [*mu'ko-ku-ta'ne-əs*] pertaining to mucous membrane and skin.

m. margin the sites where skin and mucosae merge, e.g. at the anus, mouth, urethra. Called also mucocutaneous junction.

mucoenteritis [*mu"ko-en-tər-i'tis*] see irritable **colon** syndrome.

mucoepidermoid [*mu"ko-ep"i-dur'moid*] composed of mucus-producing epithelial cells, e.g. mucoepidermoid carcinoma.

mucogingival line, mucogingival junction [*mu"ko-jin'jī-vəl*] the junction between gingiva attached to underlying bone (attached gingiva) and the flap overlying the tooth (free gingiva).

mucohemorrhagic [*mu"ko-hem"ə-raj'ik*] characterized by hemorrhage and mucus, e.g. mucohemorrhagic diarrhea.

mucoid [*mu'koid*] 1. resembling mucus. 2. a mucus-like conjugated protein of animal origin, differing from mucin in solubility.

m. degeneration see mucoid **degeneration**.

m. enteritis see mucoid **enteropathy**, irritable **colon** syndrome.

m. valvular degeneration see chronic **valvular** heart disease.

mucolipidosis [*mu"ko-lip"i-do'sis*] a group of inherited lysosomal storage diseases in which mucopolysaccharides and lipids accumulate in tissues. Mucolipidosis I is also called sialosis.

m. II lysosomes contain large inclusions of undigested glycosaminoglycans and glycolipids. Called also I-cell disease.

mucolytic [*mu"ko-lit'ik*] 1. destroying or dissolving mucus. 2. an agent that so acts.

mucomembranous [*mu"ko-mem'brə-nəs*] pertaining to or composed of mucous membrane.

mucometra [*mu"ko-me'trə_*] a uterus distended with a fluid containing much mucin. Occurs in segmental aplasia, imperforate hymen and cystic ovarian degeneration. See also **hydrometra**.

mucoperiosteum [*mu"ko-per"e-os'te-əm*] periosteum having a mucous surface, as in parts of the auditory apparatus.

Mucophilus cyprini algae in tanks and ponds which may asphyxiate fish by blocking the gills.

mucopolysaccharide [*mu"ko-pol"e-sak'ə-rīd*] a group of polysaccharides that contain hexosamine, which may or may not be combined with protein; when dispersed in water, mucopolysaccharides form many of the mucins. Called also glycosaminoglycans.

acid m. hyaluronan, the amorphous, PAS-positive intercellular substance of most connective tissue. Formed by fibroblasts and osteoblasts.

mucopolysaccharidosis (MPS) [*mu"ko-pol"e-sak"ə-ri-do'sis*] any of a group of genetically determined disorders caused by a defect in glycosaminoglycan (GAG) metabolism, marked by skeletal changes, mental retardation and visceral involvement. Achondroplastic dwarfism in cattle may be a defect of this type.

m. I caused by an inherited deficiency of α-L-iduronidase with increased urinary excretion of dermatan sulfate and heparan sulfate. Affected dogs and cats show facial dysmorphia, stunted growth, corneal clouding, lameness and granulation of leukocytes. Called also Hurler's syndrome.

m. IIIB an inherited deficiency of *N*-acetyl-α-D-glucosaminidase, resulting in the accumulation of heparin sulfate. Affected dogs develop slowly progressive tremors and incoordination from 2–4 years of age. Occurs as an autosomal recessive trait in Schipperke dogs.

m. VI caused by an inherited deficiency of arylsulfatase B with increased urinary excretion of dermatan sulfate. Affected Siamese cats show facial dysmorphia, corneal clouding, granulation of leukocytes, posterior paresis, and skin nodules. Called also Maroteaux–Lamy syndrome.

m. VII caused by a deficiency of β-glucaronidase. Affected dogs have facial dysmorphism and corneal edema.

mucopolysaccharidu ria [*mu"ko-pol"e-sak"ə-rī-du're-ə*] an excess of mucopolysaccharides in the urine.

mucoprotein [*mu"ko-pro'tēn*] a compound present in all connective and supporting tissues, containing, as prosthetic groups, mucopolysaccharides; soluble in water and relatively resistant to denaturation. An important component of many uroliths.

Tamm–Horsfall m. locally secreted in Henle's loops, the distal tubules, and the collecting ducts of the kidney; the principal constituent of hyaline casts.

mucopurulent [*mu"ko-pu'roo-lənt*] marked by an exudate containing both mucus and pus.

mucopus [*mu'ko-pəs"*] mucus blended with pus.

Mucor [*mu'kor*] a genus of saprophytic mold fungi; some species cause **mucormycosis**.

M. amphibiorum the cause of ulcerative dermatitis in platypus in Tasmania, Australia.

mucormycosis [*mu"kor-mi-ko'sis*] a fungal disease which may take the form of: (1) a necrotic placentitis which causes abortion; sometimes there are cutaneous lesions over much of the skin of the calf; (2) granulomatous lesions in various tissues and closely resembling lesions of tuberculosis; (3) gastroenteritis and ulceration of the alimentary tract mucosa at all levels; (4) a secondary invasion of rumenitis lesions, which leads to peritonitis and lesions in the liver. The causative fungi may be *Rhizopus*, *Lichtheimia* and *Mucor* spp.

mucosa [*mu-ko'sə*] pl. *mucosae* [L.] mucous membrane.

m.-only rectal tears a tear in the rectal wall, usually along the length of the rectum, which penetrates only as far as the submucosa and is without clinical effect. Possibly caused by any rectal penetration by a rigid object but observed mostly during manual examination by a veterinarian.

mucosal [*mu-ko'səl*] pertaining to or emanating from mucosa.

m.-associated lymphoid tissue (MALT) see mucosal-associated **lymphoid** tissue.

m. block a concept relating to the prevention of absorption of more iron by the intestinal epithelium when the rate of absorption passes a certain limit.

m. crypts invaginations of mucosa; occur in many organs, e.g. biliary and intestinal mucosae.

m. disease see **bovine** virus diarrhea.

m. glands small glands which lie within the lamina propria of the mucosa.

m. transport a means of effecting absorption of materials from the intestinal lumen through the cell membrane of the epithelial cell. Much of this movement has to be in addition to passive diffusion based on osmotic, pH or electromagnetic gradient. It is carried out by membrane carriers, which provide an active transport system.

mucosanguineous [*mu"ko-sang-gwin'e-əs*] composed of mucus and blood.

mucoserous [*mu"ko-se'rəs*] composed of mucus and serum.

mucositis [*mu"ko-si'tis*] inflammation of a mucous membrane.

mucosocutaneous [*mu-ko"so-ku-ta'ne-əs*] pertaining to a mucous membrane and the skin.

mucosubstances [*mu"ko-sub'stəns-ez*] a superseded name for glycosaminoglycans.

mucous [*mu'kəs*] pertaining to or resembling mucus; secreting mucus.

m. cell a cell which secretes mucus.

m. colitis see irritable **colon** syndrome.

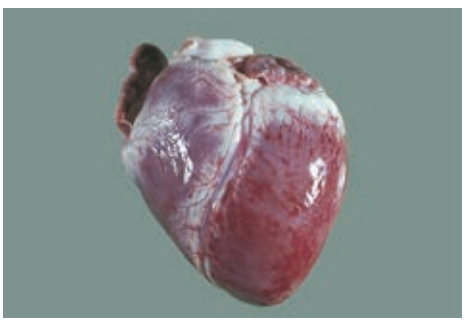
m. membrane see mucous **membrane**.

m. thread accumulations of mucus at the conjunctival fornices.

m. tissue a jelly-like connective tissue, such as occurs in the umbilical cord.

VetBooks.ir

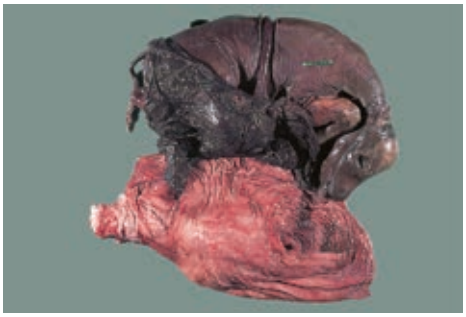
mucus [*mu'kəs*] the free slime of the mucous membrane, composed of the secretion of its glands, various salts, desquamated cells and leukocytes. See also **mucous**.
m. agglutination test an agglutination test carried out on mucus, e.g. the test for the presence of antibodies to *Campylobacter* spp. carried out on vaginal mucus.
gastric m. a protective gelatinous material coating gastric mucosal cells.
respiratory m. part of the protective **mucociliary** blanket of the upper respiratory tract.
vaginal m. the appearance of the mucus from the cow's vagina is a good indication that she is in estrus. Laboratory examination of the mucus for cell patterns and arborization is used to determine the stage of reproduction in bitches.
mud pertaining to or emanating from wet conditions underfoot.
m. fever said of horses affected by **dermatophilosis**, **leptospirosis**, **greasy heel**.
Mudi a medium-sized (18–29 lb) farm dog from Hungary. Except on the face, the coat is medium length, curly or wavy, and black or black merle, fawn, white, ash or brown. The ears are erect and the tail is naturally short or docked.
mudworm 1. polychete worms, especially *Polydora websteri* which infect the shells of molluscs and can cause significant losses. 2. *Lumbriculus variegatus*.
Muellerius [*mu-ler'e-əs*] a genus of nematodes in the family Protostrongylidae.
M. capillaris the common lungworm of sheep; occurs also in goat and chamois. In sheep the worm causes little harm, but in goats it may cause dyspnea and cough and occasionally severe interstitial pneumonia.
mugwort [*mug'wort*] ***Artemisia vulgaris***.
mulberry heart disease a common form of vitamin E/selenium deficiency in pigs, usually manifested by sudden death, or by dyspnea, cyanosis and recumbency. Extensive subepicardial hemorrhage gives the disease its name.
mule [*mūl*] 1. sterile offspring of a mating between a jack (male donkey) and a mare. 2. a bird-fancier's term for a hybrid bird with one parent, usually the female, a canary, and the other a finch; they are usually sterile. Breeding and exhibiting of these birds is a popular hobby in the UK.
m. foot see **syndactyly**.
horse m. the male mule.
mare m. the female mule.
Mules operation [*mūlz*] the removal of strips of skin from the perineal area of lambs so as to increase the area of woolless skin and confer a lower susceptibility to blowfly strike. Animal rights groups have lobbied strongly against this practice.
mulesing the performance of the **Mules operation**.
mulga Australian vernacular for inland areas where mulga trees, several species of *Acacia*, especially *A. aneura*, grow. See also acquired visceral **melanosis**.
mulgee ***Acacia osswaldii***.
mullein a plant in the genus *Verbascum*.
müllerian duct, Muellerian duct [*meu-ler'e-ən dukt*] either of the paired embryonic paramesonephric ducts developing into the vagina, uterus and uterine tubes, and becoming largely obliterated in the male or retained as the uterus masculinus or prostatic utricle. Named after J.P. Müller, a German physiologist.
m. d. aplasia the ovaries cycle normally and the lumen of the tube oral to the obstruction distends with secreted fluids. The lumen may be obstructed at any location along its length, including only one horn; the commonest form is hymenal persistence. Called also 'white heifer disease'.
m. d. inhibitory factor produced by the Sertoli cells in the developing testis; causes müllerian duct regression, a key step in sexual differentiation.



M-41: Mulberry heart disease.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

multi- word element. [L.] *many*.
multiallelic [*mul"te-ə-le'lik*] pertaining to or occupied by many different genes affecting the same or different hereditary characters.
multiarticular [*mul"te-ahr-tik'u-lər*] pertaining to or affecting many joints.
multicapsular [*mul"te-cap'su-lər*] having many capsules.
multicellular [*mul"te-sel'u-lər*] composed of many cells.
multicentric [*mul"te-sen'trik*] the same pathological lesion occurring in many different sites at the same time, e.g. multicentric periarticular calcinosis.
Multiceps [*mul'tĭ-seps*] see ***Taenia***.
multicuspidate [*mul"te-kus'pĭ-dāt*] having numerous cusps; said of teeth.
multicystic [*mul"te-sis'tik*] polycystic.
multifactorial [*mul"te-fak-tor'e-əl*] 1. of or pertaining to, or arising through the action of, many factors. 2. in genetics, arising as a result of the interaction of several genes, i.e. polygenic.
m. etiology see multiple **causation**.
multifocal [*mul"te-fo'kəl*] arising from or pertaining to many foci.
m. syndrome neurological signs indicating more than one lesion site. Usually seen with infectious diseases of the brain or degenerative storage diseases.
multiform [*mul'tĭ-form*] occurring in many forms; polymorphic.
multiformat camera one used to record frozen ultrasound images on X-ray film.
multigene family see **gene** cluster.
multiglandular [*mul"te-glan'du-lər*] affecting several glands.
multigravida [*mul"te-gravĭ-də*] a female pregnant for the third (or more) time.
multilobar [*mul"te-lo'bər*] having numerous lobes.
multilobular [*mul"te-lob'u-lər*] having many lobules.
m. chondroma and osteoma nodular masses involving membranous bones, as in the canine cranium, causing local disfigurement, and sometimes pressure on the brain.
multilocular [*mul"te-lok'u-lər*] having many compartments.
m. hematic bone cyst aneurysmal bone cyst.
m. hydatid cysts see ***Echinococcus multilocularis***.
multimeric a protein containing two or more, same or different, polypeptide chains.
multinodular [*mul"te-nod'u-lər*] having many nodules.
multinuclear, multinucleate cells having more than one nucleus.
m. chondrone characteristic cell clusters which accompany the proliferation of chondrocytes. Called also brood capsules, clones.
multinucleated [*mul"te-noo'kle-āt-əd*] characterized by having more than one nucleus per cell.
m. giant cell see **giant cell** (2).
multipara [*məl-tip'ə-rə*] a female which has had two or more normal parturitions or term birthings.
multiparity [*mul"te-parĭ-te*] the condition of being a multipara.
multiple [*multĭ-pəl*] manifold; occurring in various parts of the body at once.
multiplier [*mul"te-pli'ər*] second tier in the conventional structure of breed organizations; takes males and females from the nucleus herds and flocks and produces mostly males to supply commercial herds.
multipolar [*mul"te-po'lər*] having more than two poles or processes.
multipotent [*mul"te-po'tənt*] can form multiple cell lineages that constitute an entire tissue or tissues; exemplified by hematopoietic stem cells.
multisynaptic [*mul"te-sĭ-nap'tik*] pertaining to or relayed through two or more synapses.
multisystemic [*mul"te-sis-tem'ik*] affecting more than one body system.
multivalent [*mul"te-va'lənt*] 1. combining with several univalent atoms. 2. a vaccine that is active against several strains of an organism or against multiple pathogens.
multivariate analysis [*mul"te-var'e-āt*] see multivariate **analysis**.
multivesicular body [*mul"te-və-sik'u-lər*] a primary lysosome with engulfed vesicles.
mummification [*mum"ĭ-fĭ-ka'shən*] conversion to a dehydrated state; commonly said of a fetus. The soft tissues are very much reduced

M



M-42: Fetal mummification. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

in volume, the skin is leathery and the tissues are deeply brown-stained. Occurs also in extremities affected by dry **gangrene**.

corneal m. see **corneal** sequestrum.

mumps [*mumps*] a communicable paramyxovirus disease of humans that attacks one or both of the parotid salivary glands. Called also epidemic parotitis. There is some evidence that the infection also occurs rarely in dogs and cats.

Münchener 1. a dog breed, the Giant **Schnauzer**. 2. a breed of canaries, originating in Munich; similar to the Scotch Fancy, but without the exaggerated curvature of the body.

Munchkin cat a variety of cats characterized by very short legs, which appears to be a form of achondroplastic dwarfism. Not recognized by most breed registries.

Munro microabscess [*mən-ro'*] spongiform microabscesses sometimes found in seborrheic skin disease.

Munsterlander pertaining to Münsterland, an administrative region in Germany; may refer to either of two, not closely related, dog breeds, **Large Munsterlander** or **Small Munsterlander pointer** (Kleiner Munsterlander).

muntjac (*Muntiacus* spp.) a small deer native to Southeast Asia, but introduced to the UK and the USA. The males have short, tusk-like canines and short antlers with one or two points. Includes the common or Indian muntjac (*M. muntjak*). Called also barking deer.

munyeroo ***Portulaca*** *oleracea*.

mupirocin [*mu-pir'o-sin*] a bacteriostatic antibiotic produced by *Pseudomonas fluorescens* and used topically, mainly against gram-positive bacteria.

mural [*mu'rəl*] pertaining to or occurring in a wall of an organ or cavity.

muramidase see **lysozyme**.

muramyl dipeptide a component of the cell wall of the mycobacteria that is active in Freund's complete adjuvant and in purified form also used as an adjuvant. In both instances, it enhances T cell mediated immune responses.

muricide predatory behavior of rats in which they kill mice.

murid a member of the family Muridae.

Muridae a family in the order Rodentia; includes the Old World mice and rats, and gerbils.

murine [*mu'rin*] pertaining to or affecting mice or rats. Strictly speaking refers to members of the subfamily Murinae, the Old World rats and mice. See also **mouse**.

chronic m. pneumonia see murine respiratory mycoplasmosis (below).

chronic m. respiratory disease see murine respiratory mycoplasmosis (below).

m. epizootic diarrhea occurs in young mice up to 3 weeks of age. Caused by a rotavirus and characterized by mucoid yellow diarrhea, a high morbidity but a low mortality. Called also epizootic diarrhea of infant mice (EDIM).

m. leukemia virus a number of viruses in the family *Retroviridae* which are associated with the naturally occurring and experimentally induced leukemia or lymphosarcoma in mice.

m. respiratory mycoplasmosis a disease of mice caused by *Mycoplasma pulmonis* and characterized by dyspnea, nasal discharge, head tilt and incoordination. In most mice, infection occurs without clinical signs. Called also chronic respiratory disease of rats and mice, chronic murine pneumonia.

transmissible m. colonic hyperplasia see **transmissible** murine colonic hyperplasia.

murmur [*mur'mər*] an auscultatory sound which results from vibration of turbulent blood flow. Classified and described according to the part of the cardiac cycle in which they occur, on their intensity (using a graded system from I to VI with grade VI being the loudest), on their site of maximal intensity and radiation, and on their sound characteristics. See also **Reynold's number**.

anemic m. see blood murmur (below).

aortic m. a sound indicative of disease of the aortic valve.

apex m. one heard over the apex of the heart.

arterial m. one in an artery, due to turbulent flow caused by an aneurysm or a constriction.

blood m. one due to an abnormal condition of the blood, commonly anemia or hypoproteinemia, reducing blood viscosity. Called also anemic murmur.

cardiac m. see heart murmur (below).

continuous m. a humming murmur heard throughout systole and diastole. Usually associated with flow between a high pressure area and a low pressure area without an intervening valve such as occurs in patent ductus arteriosis.

crescendo m. one marked by progressively increasing loudness.

crescendo–decrescendo m. one with increasing intensity until mid- to late systole, then a decreasing intensity, giving a diamond-shaped tracing on phonocardiography. Characteristic of pulmonary stenosis.

decrescendo m. one with an intensity that gradually decreases. Heard during diastole in aortic or pulmonary valvular insufficiency.

diamond-shaped m. refers to the phonocardiographic tracing of a crescendo–decrescendo murmur.

diastolic m. one at diastole, due to mitral obstruction or to aortic or pulmonary regurgitation.

ejection m. systolic murmur heard predominantly in mid-systole, when ejection volume and velocity of blood flow are at their maximum. Common in trained Thoroughbreds.

friction m. friction rub.

functional m. a cardiac murmur occurring in the absence of structural changes in the heart. These occur in young foals and disappear before maturity.

heart m. any adventitious sound heard over the region of the heart. It may indicate a leaking or stenotic valve, a congenital patency between the right and left sides of the heart, or be a functional murmur which does not indicate cardiac disease.

hemic m. see blood murmur (above).

holosystolic m. one heard throughout systole.

innocent m. one caused by increased velocity of blood rather than a cardiac lesion.

machinery m., machinery-like m. one occupying most of systole and diastole with alternating loud (systolic) and soft (diastolic) components. Characteristic of patent ductus arteriosus and arteriovenous fistulas.

mitral m. one due to disease of the mitral valve.

musical m. a cardiac murmur having a periodic harmonic pattern.

organic m. one due to structural change in the heart.

pansystolic m. one heard throughout systole and that obliterates the heart sounds.

prediastolic m. one occurring just before and with diastole, due to mitral obstruction or to aortic or pulmonary regurgitation.

presystolic m. one occurring shortly before the onset of ventricular ejection, usually associated with a narrowed atrioventricular valve.

pulmonary m. one due to disease of the valves of the pulmonary artery.

radiating heart m. one which is heard over a wider area or over another area. The systolic murmur of subaortic stenosis radiates up the aortic arch and carotid arteries. It can be heard over the right, as well as left, heart base and occasionally over the head.

regurgitant m. one due to a dilated valvular orifice, with consequent regurgitation of blood through the valve.

seagull m. a raucous murmur resembling the call of a seagull, frequently heard in aortic insufficiency.

systolic m. one occurring at systole, usually due to mitral or tricuspid regurgitation, or to aortic or pulmonary obstruction.

tricuspid m. one caused by disease of the tricuspid valve.

vascular m. one heard over a blood vessel.

vesicular m. the normal breath sounds heard over the lungs.

VetBooks.ir

Muromegalovirus a genus in the subfamily *Betaherpesvirinae;* mouse cytomegalovirus.

Murphy eye [mur'fe] the distal opening in the side or wall of an endotracheal tube which allows airflow in the event of the tube opening lying against the tracheal wall or being obstructed in other ways.

MURR1 a deletion in part of the Commd1 protein; associated with the inherited copper toxicosis of Bedlington terriers.

Murrah a group of domestic breeds of Indian (or European) buffalo including the Kundi, Nili-Ravi and Murrah.

Murray Grey a gray to gray-dun, polled breed of beef cattle, which originated in Australia from gray calves produced by mating a nearly white Shorthorn cow with an Aberdeen Angus bull. The breed carries a number of inherited defects, including mannosidosis and Elso heel.

Murray Valley encephalitis see Murray Valley **encephalitis**.

murrina [mur'fe] [Span.] *Trypanosoma evansi* infection.

Murrurrundi disease probably the same disease as inherited ovine degenerative **axonopathy**.

Mus a genus of rodents in the subfamily Murinae. Includes *M. musculus*, the house mouse.

Musca [mus'kə] a genus of flies in the family Muscidae, including the common house fly, *M. domestica*, bush flies (*M. sorbens, M. fergusoni, M. terraereginae, M. hilli, M. vetustissima*) and face fly (*M. autumnalis*). *M. larvipara, M. convexifrons* and *M. amica* all act as intermediate hosts for *Thelazia* spp.

M. amica, M. convexifrans, M. larvipora are intermediate hosts for *Thelazia* spp. worms.

M. autumnalis congregates on the face of cattle and may spread infectious keratoconjunctivitis. Called also face fly.

M. bezzi, M. fasciata, M. lusoria, M. pattoni, M. vitripennis flies that follow the blood-sucking fly species and clean up the spilt blood.

M. conducens transmits *Stephanofilaria* spp.

M. crassirostris is able to draw blood.

M. domestica a mechanical carrier of a good many bacterial, viral and protozoan diseases and an intermediate host for the helminths *Habronema* and *Raillietina* spp. Called also house fly.

M. fergusoni, M. hilli, M. terraereginae, M. vetustissima bush flies.

M. sorbens a complex of bush flies.

M. vetustissima the Australian bush fly, an intermediate host for *Habronema* spp.

muscae volitantes literally, 'gliding flies'; small opacities in the vitreous body, **vitreous** floaters.

muscarine [mus'kə-rēn] a deadly alkaloid from various mushrooms, e.g. *Amanita muscaria* (the fly agaric), and also from rotten fish.

muscarinic [mus"kə-rin'ik] pertaining to the transmission of nerve impulses mediated by muscarinic receptors; these may be adrenergic or cholinergic.

m. activity includes slowing and reduced stroke volume of the heart, bronchiolar constriction, arteriolar dilatation, increased tone, motility and secretion in the alimentary tract, and increases in salivation and lacrimation.

m. blocking agents block muscarinic receptors, e.g. atropine and the synthetic agents homatropine, methantheline, propantheline and methylatropine.

m. receptors cholinergic receptors of autonomic effector cells (and also on some autonomic ganglion cells and some central neurons) that are stimulated by muscarine and parasympathomimetic drugs and antagonized by atropine.

Muscina [mə-si'nə] a genus of flies in the family Muscidae.

M. assimilis, M. pabulorum, M. stabulans denizens of rotting fruit and carrion.

muscle [mus'əl] an organ composed of bundles of fibers that has the power to contract and hence to produce movement. Muscles are responsible for locomotion and help support the body, generate heat and perform a number of other functions. They are of three varieties: *striated* (or striped, voluntary or skeletal), which makes up most of the meat of a carcass, *smooth* (unstriated), which includes all the involuntary muscle of the viscera, heart and blood vessels, and *cardiac* that constitutes the contractile wall of the heart and shares some of the properties of the other two. Skeletal muscle fibers range in length from a few millimeters to many centimeters. They also vary in color from white to deep red. Each muscle fiber receives its own nerve impulses, which trigger fine and varied motions. At the signal of an impulse traveling down the nerve, the muscle fiber changes chemical energy into mechanical energy, and the result is muscle contraction. At least two major types of muscle fiber have been identified by histochemical techniques: type I (red) fibers, which have a slow contraction; and type II (white) fibers, which have a fast contraction. Some muscles are attached to bones by tendons. Others are attached to other muscles, and to skin, producing, for example, the skin twitch, the eye blink and hair erection. Parts of the walls of hollow internal organs, such as the heart, stomach and intestines and also blood vessels, are composed of muscles. See also **muscular**. For a complete list of named muscles see Table 13.

agonistic m. prime mover; a muscle opposed in action by another muscle, called the antagonist.

antagonistic m. one that counteracts the action of another muscle (the agonist).

appendicular m. one of the muscles of a limb.

arrector pili m. small, smooth muscle attached to the bulb of the hair which causes erection of the hair and compression of the attending sebaceous gland when it contracts.

arterial m. part of the tunica media; smooth muscle fibers arranged in a circular pattern around the lumen.

articular m. one that has one end attached to the capsule of a joint.

axial m. 1. muscles derived from the somites in the embryo. 2. the muscles around the vertebral column.

m. biopsy sample of living muscle obtained by excision or punch.

cardiac m. striated involuntary muscle with branched fibers and containing modified fibers which act as cardiac conducting cells.

congenital m. defects may be environmental, e.g. nutritional muscular dystrophy, or inherited, e.g. splayleg of piglets.

congenital type II m. fiber hypertrophy occurs in the hip joint musculature in German shepherd dogs but there is no detectable abnormality of gait.

m. of Crampton anterior-most of the striated ciliary body muscles of birds. Acts to alter the radius of curvature of the cornea and effect accommodation. See also **Brücke's muscle**.

cutaneous m. striated muscle that inserts into the skin.

double m. see **myofiber** hyperplasia.

esophageal m. the tunica muscularis of the esophagus in most domestic animals is mostly striated; in pigs, horses and cats there are small segments of smooth muscle; in birds the entire tunic is smooth muscle.

extraocular m's the six or seven voluntary muscles that move the eye: dorsal, ventral, medial and lateral recti, dorsal and ventral oblique, and retractor bulbi muscles.

extrinsic m. one that originates in another part than that of its insertion, e.g. those originating outside the eye, which move the eyeball.

fast-twitch skeletal m. two of the three types of skeletal muscle are pale in color and fast-twitch—type IIa (fast-twitch oxidative–glycolytic), type IIb (fast-twitch glycolytic). Type IIa fibers are fatigue-resistant, type IIb fatigue easily.

m. fiber see muscle (above).

fixation m's, fixator m's accessory muscles that serve to steady a part.

hamstring m's the biceps, semimembranosus and semitendinosus muscles. See also **hamstring**.

intraocular m's the intrinsic muscles of the eye.

intrinsic m. one whose origin and insertion are both in the same part or organ, such as those entirely within the eye.

involuntary m. see smooth muscle (below).

iridal m. layers of circular (sphincter) and radial (dilator) muscles. See also **iris**[1].

jaw m. see Table 13.1H muscles of mastication.

laryngeal m. see Table 13.1E muscles of the larynx.

limb m. see Table 13.3, 13.4 muscles of the fore- and hind-limbs.

masseter m. the principal muscle of mastication. See also Table 13.1H.

Müller's m. smooth muscle responsible for opening tone of the eyelids. Denervation of this muscle in Horner's syndrome is manifest as ptosis.

mylohyoid m. see Table 13.1D muscles of the hyoid apparatus.

m. neoplasms of striated muscle—rhabdomyoma, rhabdomyosarcoma; of plain muscle—leiomyoma, leiomyosarcoma.

m. nonstriated see smooth muscle (below).

VetBooks.ir

orbicular m. one that encircles a body opening, e.g. the eye or mouth.
m.-paralyzing drugs drugs which produce neuromuscular blockade, used as muscle relaxants during surgical procedures. Include *d*-**tubocurarine**, **alcuronium chloride**, **pancuronium**, **vecuronium**, **atracurium besylate**, **succinylcholine**.
red m. type 1 fibers predominate with slow contraction cycles and aerobic metabolism.
m. rupture the muscle may have torn away from its insertion, in which case the tendon will be slack, or it may be a complete or partial separation of the belly of the muscle, when the muscle will be swollen and hard. Structural and conformational changes may result, e.g. in rupture of the gastrocnemius muscle, and the hernias caused by rupture of the ventral abdominal muscles or the diaphragm.
skeletal m's striated muscles are typically, but not exclusively, attached to bones. Called also voluntary or striated muscles.
slow-twitch skeletal m. red (type I, slow twitch) muscles as distinct from white (type II, fast twitch) muscles. As a generalization, fast fibers require more stimulation to contract, develop greater tensions and fatigue more quickly than red fibers. See also **muscle**.
smooth m. plain or involuntary muscle which powers the internal organs and is controlled by the autonomic nervous system; undergoes slow contracting cycles and is fatigue resistant. Two types listed, visceral and vascular.
sphincter m. a ring-like muscle that closes a natural orifice; called also sphincter.
m. spindle sensory mechanoreceptor attached to the perimysial connective tissue of the muscle that responds to passive stretch. See also **spindle** (2).
m. strain soreness and stiffness in a muscle due to overexertion or contusion, especially in muscles that have not been conditioned for hard use; some of the muscle fibers may actually tear.
striated m. see skeletal muscles (above).
synergic m's those that assist one another in action.
temporal m. a significant muscle of mastication. See also Table 13.1H.
m.–tendon junction the union between connective tissue investing muscles and anchoring connective tissue.
type I m. fiber see slow-twitch skeletal muscle (above).
type II m. fiber see fast-twitch skeletal muscle (above).
type II m. fiber deficiency a relative deficiency of type II muscle fibers, with a predominance of type I fibers. An inherited defect in Labrador retrievers. Clinical signs include stunted growth, and muscle weakness and abnormal gait, which subside with rest, from an early age.
voluntary m. see skeletal muscle (above).
white m. consist of type II fibers; fast contraction fibers and aerobic metabolism are characteristic.
yoked m's those that normally act simultaneously and equally, as in moving the eyes.
muscle relaxant an agent that specifically aids in reducing muscle tone. Most such agents inhibit the transmission of nerve impulses at the somatic neuromuscular junctions. They include atracurium, mivacurium, tubocurarine, gallamine, pancuronium, succinylcholine and decamethonium bromide.
Muscovy treated as a duck, but it is really a member of the goose family. A meat duck, white mostly but some varieties are black, or black with white wings. Poor egg producers. Called also *Cairina moschata*.

M-43: Muscovy ducks. From Sambraus HH, Livestock Breeds. Mosby, 1992.

muscular [*mus'ku-lər*] 1. pertaining to a muscle. 2. having well developed muscles.
m. asymmetry due usually to neuronal or disuse atrophy on one side of the body.
m. atrophy wasting away of muscle or a muscle because of reduction in cross sectional area of muscle fibers; may be due to disease of the muscle or its nerve supply, or to disuse or nutritional inadequacy. See also hereditary spinal muscular atrophy (below).
m. degeneration varies in severity from degeneration of only the myofibrils or degeneration of the myofibrils plus sarcoplasm, leaving satellite cells and myonuclei and sarcolemmal laminae unaffected, or further levels of increasing severity. See also **rhabdomyolysis** and **nutritional** muscle degeneration.
m. denervation destruction or congenital absence of the motor nerve supply to the muscle; manifested by paralysis and atrophy and absence of spinal reflexes.
m. denervation atrophy progressive shrinkage of muscle fibers when the nerve supply to the muscle is severed.
m. fatigue during brief, intense exercise probably due in large part to the accumulation of lactate.
hereditary spinal m. atrophy progressive degeneration of the motor cells of the spinal cord. It is an inherited, slowly progressive flaccid tetraparesis from an early age, with muscular atrophy. Occurs as an autosomal recessive trait in Swedish lapland dogs, a dominant trait in Brittany spaniels. Also reported in German shepherd dogs, English pointers and Rottweilers. See also hereditary neuronal abiotrophy of Swedish Lapland dogs. In cattle, inherited as an autosomal recessive trait and reported in Brown Swiss, Holstein-Friesian and Red Danish calves with an onset at 3–8 weeks of age. There is hind limb ataxia progressing to recumbancy. Associated with lesions in the lower motor neurons of the cervical and lumbar spinal cord.
m. hyperplasia an increase in the size of a muscle mass due to an increase in the number of muscle cells. See also **myofiber** hyperplasia, **ileal** muscular hypertrophy.
m. hypertrophy an increase in the size of a muscle mass due to an increase in the length and thickness of each muscle cell without any increase in the number of cells.
m. ischemia short duration or temporary or partial cessation of blood supply causes loss of muscle power and possibly some muscle fiber necrosis; long duration or severe or complete cessation cause ischemic muscle necrosis and atrophy. See also **compartment** syndrome, **downer cow syndrome**.
m. ischemic necrosis see ischemic **myonecrosis**.
myelopathic m. atrophy muscular denervation atrophy due to a lesion of the spinal cord, as in spinal muscular atrophy.
m. parasitic diseases includes cysticercosis, hepatozoonosis, *Neospora caninum* myositis, sarcocystosis, toxoplasmosis, trichenellosis.
m. receptors muscle spindles which respond to stretch.
m. vascular occlusive syndrome see ischemic **myonecrosis**.
m. weakness see **weakness**.
muscular dystrophy [*mus'ku-lər dis'trə-fe*] in humans and animals the true dystrophies are a group of genetically determined, painless, degerative myopathies that are progressively crippling because muscles are gradually weakened and eventually atrophy. See Duchenne muscular dystrophy (below). The term has been incorrectly applied to any degenerative muscular disorder due to faulty nutrition of the muscles; this is really a degeneration, not a disorder of growth.

M-44: Nutrional muscular dystrophy. Recently shorn sheep showing painful stance.

VetBooks.ir

Duchenne m. d. an X-linked inherited disease in humans, which is believed to be due to a deficiency of a membrane-associated protein, dystrophin. An analogous disease has been identified in Irish terriers, Golden retrievers and mice.
nutritional m. d. more correctly designated nutritional muscle degeneration. In food animals the principal disease in this group is **enzootic** muscular dystrophy caused by a nutritional deficiency of selenium and/or vitamin E.
pseudohypertrophic m. d. see **Erb's dystrophy**.
X-linked m. d. see Duchenne muscular dystrophy (above).
muscularis [*mus"ku-lar'is*] [L.] relating to muscle, specifically a *muscular layer* or *coat*.
musculature [*mus'ku-lə-chər*] the muscular system of the body, or the muscles of a particular region.
musculocutaneous [*mus"ku-lo-ku-ta'ne-əs*] pertaining to muscle and skin.
m. nerve notable because it is connected to the median nerve forming a sling in which the axillary artery is supported. See also Table 14.
musculomembranous [*mus"ku-lo-mem'brə-nəs*] pertaining to muscle and membrane.
musculophrenic [*mus"ku-lo-fren'ik*] pertaining to (chest) muscles and the diaphragm.
musculoskeletal [*mus"ku-lo-skel'ə-təl*] pertaining to muscle and skeleton.
m. system the muscles and the skeleton.
musculotendinous [*mus"ku-lo-ten'dĭ-nəs*] pertaining to muscle and tendon.
musculotropic exerting its principal effect upon muscle.
musculus [*mus'ku-ləs*] pl. *musculi* [L.] muscle.
mushroom [*mush'rōōm*] the fruiting bodies of fungi of the class *Basidiomycetes*. See ***Amanita***, ***Clavaria***, ***Cortinarius*** and ***Ramaria***.
m. worker's lung an immediate, immune complex-mediated hypersensitivity pneumonitis of humans caused by inhalation of thermophilic actinomycetes in compost.
m. toxicity cause acute liver toxicity in dogs.
mushy chick disease see avian **omphalitis**.
musk ox (*Ovibos moschatus*) a longhaired, short necked, thickset ruminant of the Arctic tundra, characterized by horns set low on the head, curving down and then upward. Sometimes farmed for their valuable, very fine and soft undercoat or wool (quiviut).
muskrat (*Ondatra zibethicus*) a medium-sized aquatic rodent, native to North America; lives in a burrow, feeds on vegetable matter, has thick, shiny, brown and gray fur and a long tail covered with scales, much like the beaver but round, not flat. It gives off a musky odor from scent glands near the tail.
Musladin-Lueke syndrome an inherited, multi-systemic disorder of collagen in Beagle dogs. See Chinese **Beagle** syndrome.
Muslim slaughter Muhammadan ritual in which animals are slaughtered while conscious. Has much in common with the **Jewish slaughter** method. The objective is to obtain an instant painless death, after food and water have been provided, and the slaughter does not take place in the sight of other animals. Death is achieved by drawing a very sharp knife across the throat and cutting both carotid arteries and both jugular veins with one stroke. Called also the Halal or Al-Dhabh method. See also **slaughter**.
mussel [*mus'əl*] bivalve molluscs, some of which are farmed commercially. Most saltwater species are in the genera *Mytilus* or *Perna*.
green-lipped m. *Perna canaliculus*; a rich source of lipids and glycosaminoglycans with anti-inflammatory, gastroprotective and chondroprotective properties; extracts are used as a dietary supplement, particularly in some commerically prepared dog foods. Called also New Zealand mussel.
mustang American for feral horse, also charitably described as a scrub-type of light horse varying a good deal in conformation. Any color, 14–15 hands high. Descended from the horses brought into Central America by Spanish conquistadores.
mustard [*mus'tərd*] 1. plants mainly in the genera ***Brassica*** and ***Sinapis***. Includes black mustard (*B. nigra*), brown mustard (*B. juncea* var. *juncea*), white mustard (*S. alba*), wild mustard (*S. arvensis*). 2. an irritant compound derived from the dried ripe seed of *Brassica* (*Sinapis*) *alba*, *B. nigra* or *B. juncea*. Contains toxic allyl isothiocyanate in nontoxic glycoside form, though the plant also contains myrosinase, an enzyme that converts the glycoside to the toxic form. Used as a carminative, emetic and counterirritant in poultices.
m. greens green foliage of several mustard-type plants, used in salads.
m. oil present in high concentrations in mustard plants and causes acute indigestion in animals.
m. oil glucosinolates toxic oil glucosinolates found in plants.
sulfur m. a synthetic compound with vesicant and other toxic properties.
tansy m. see ***Descurainia pinnata***.
wormseed m. see ***Erysimum cheiranthoides***.
Mustela a genus of the family Mustelidae.
mustelid a member of the Mustelidae family.
Mustelidae the weasel family; carnivores, both aquatic and terrestrial, with a large number of species. The mustelids include weasels, stoats, polecats, ferrets, mink, marten, fishers, wolverines, badgers, and otters all of which vary greatly in size and habitat, but all have enlarged anal scent glands that are better developed in some than others.
muster [*mus'tər*] to collect sheep or cattle into a herd (cattle) or flock or mob (sheep); round-up.
musth the period of great sexual activity in the male Asian elephant. The elephant is very aggressive at this time and the temple glands drain continuously. Similarly, the rutting male camel displays musth from the poll glands in the back of his neck. See also **rut**.
mustine see **mechlorethamine**.
mutagen [*mu'tə-jən*] a physical agent or chemical reagent that damages DNA, e.g. x-irradiation, nitrous acid, and thereby increases the mutation rate of a gene.
mutagenesis [*mu"tə-jen'ə-sis*] the process of inducing genetic mutation.
site directed m. a set of methods used to experimentally create specific changes in the nucleotide sequence of a gene.
mutagenic [*mu"tə-jen'ik*] inducing genetic mutation.
mutagenicity [*mu"tə-jə-nis'ĭ-te*] the property of being able to induce genetic mutation.
mutant [*mu'tənt*] 1. an organism with a mutant gene which expresses itself in the phenotype. 2. a normal organism that is genetically different in one or more characteristics from an arbitrarily defined, previously existing 'wild-type' organism. 3. produced by a change in the nucleotide sequence of the genome.
conditional lethal m. mutations that occur in viruses, rendering them unable to grow under certain conditions which can be controlled experimentally. See permissive **temperature**.
defective interfering m. see **defective interfering virus**.
ts m. see **temperature-sensitive**.
mutase [*mu'tās*] any of a group of enzymes (transferases) that catalyze the intramolecular shifting of a chemical group from one position to another.
mutation [*mu-ta'shən*] 1. a nucleotide change, including base substitutions, insertions or deletions in DNA, or RNA in the case of some viruses. 2. an animal exhibiting an abnormal phenotype change as a result of such change. Called also a sport.
back m. see reverse mutation (below).
base substitution m. may be a *transition* in which a purine is replaced by the other purine, or a pyrimidine is replaced by the other pyramidine; or a *transversion* in which a purine is replaced by a pyrimidine pair or a pyramidine is replaced by a purine.
chain termination m. one in which the new base sequence introduces a stop codon and thereby prematurely terminates synthesis of the polypeptide; the three mutations are also called amber (UAG), ochre (UAA) and opal (UGA).
deletion m. one produced by loss of one or more nucleotides from a DNA sequence.
fetal m. an obstetrical term describing the manipulation of the fetus into a normal posture for parturition.
frame shift m. occur as a result of either the insertion or deletion of a block of base pairs not divisible by 3 from the DNA base sequence; these result in drastic alteration of downstream protein sequence as a result of the triplet codon system.
leaky m. one in which the amino acid substitution only partially disrupts the function of the protein; in bacteria this is usually manifested by reduced growth rate.
mis-sense m. one causing an amino acid substitution in the protein.

VetBooks.ir

nonsense m. one in which a stop codon is substituted for a codon that specifies an amino acid.
non-synonymous m. a mutation that results in a change in the encoded protein's amino acid sequence.
operator constitutive m. one or more base changes in the operator region (originally defined for the lactose operon) which stop the repressor protein from tightly binding to sequence such that it is less effective in preventing RNA polymerase from inhibiting transcription.
point m. a single changed base pair in the DNA of an organism which may be a base substitution, base insertion or base deletion.
m. rate the frequency of mutations in the population over time.
repressor-constitutive m. in regulation of gene expression, a mutation in the repressor protein that decreases the binding affinity of the repressor protein for the operator which leaves the gene permanently turned on.
reverse m. one in which the wild-type phenotype is restored; such organisms are called revertants. Called also back mutation, reversion mutation.
second-site m. see suppressor **mutation**.
silent m. one in which there is a base change but because of the redundancy of the genetic code the same amino acid is coded (silent mutation), or one in which there is an amino acid substitution in the protein which has no detectable effect on the phenotype.
somatic m. a change in the DNA sequence that occurs in somatic cells, i.e. not gametes. The mechanism underlying the generation of diversity of antigen recognition by immunoglobulins and T cell receptor molecules. The fundamental cause of cancer, in which the mutation occurs spontaneously or is induced by carcinogens, such as sunlight, chemicals or viruses. In the generation of antibody and T-cell receptor diversity, called somatic hypermutation.
suppressor m. a particular type of reversion mutation in which a mutation at a second site restores the original phenotype; most simply a mutation produced by a base deletion may be restored to wild type by a proximate but independent base substitution. Called also second-site mutation.
synonymous m. a mutation that does not affect the amino acid sequence of the encoded protein due to the redundancy of the genetic code.
temperature-sensitive (ts) m. one in which there is an altered protein that is active at one temperature, typically 86°F (30°C) and inactive at a higher temperature, usually 104–108°F (40–42°C), e.g. ts mutant virus and bacteria.
transdominant m. occur in genes producing diffusible products, in contrast to *cis*-dominant mutation in which mutations occur in regulatory sequences that are recognized by other proteins.
transition m. a base change mutation which replaces a pyrimidine with the other pyrimidine, or replaces a purine with the other purine. See also base substitution mutation (above).
transposition m. one produced by the insertion of a transposable genetic element.
transversion m. a base change mutation in which a purine is replaced by a pyrimidine, or a pyrimidine is replaced by a purine. See also base substitution mutation (above).

mutilation [*mu"tĭ-la'shən*] the cutting off or otherwise depriving an animal of a limb or other essential part. Farming procedures, classified as mutilations by animal welfare organizations, include tail-docking of cows and horses, ear-cropping in dogs, mulesing of sheep, debarking of dogs, debeaking of birds.
acral m. syndrome see hereditary sensory **neuropathy**.

muting removal of the capacity of an animal to make a loud call.
muton a gene when specified as the smallest hereditary element that can be altered by mutation.
mutt vernacular for dog.
mutton meat obtained from ewe, wether, hogget or ram and from lambs not finished to lamb quality.
mutualism [*mu'choo-əl-iz-əm*] the biological association of two animals or populations of different species, both of which are benefited by the relationship and sometimes unable to exist without it.
mutualist [*mu'tu-əl-ist*] one of the organisms or species living in a state of mutualism.
muzzle [*muz'əl*] 1. the part of the face supported by the maxillae and nasal bones; the part of a dog's head anterior to the stop and cheeks, containing the nasal passages and bearing the nosepad. Longer in dolichocephalics and practically nonexistent in brachycephalics. In farm animals it comprises the nasolabial plane, between the edge of the upper lip, the two nostrils and the junction between the nasolabial plane and the haired part of the face. It includes the skin and fascia and the muscles of the upper lip. 2. an appliance placed over the mouth of an animal, usually a dog, to prevent it biting. The simplest form is a clove-hitch made of bandage and wound around the two jaws.

M-45: Gauze used to make a muzzle on a dog. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

m. bagging occluding the muzzle, usually of a horse, to cause temporary asphyxia and succeeding dyspnea, during an auscultatory examination of the lungs.
box m. a solid, box-like appliance, usually made of stiff leather over a frame. It prevents the animal sucking or feeding, but holes in the box allow it to drink.
calf-weaning m. a cavesson with spikes on the nose-band.
tape m. a piece of tape or bandage tied in a half-hitch around the upper and lower jaws of dogs. A temporary measure only. Largely replaced by contoured sleeve made of strong, rip-proof material.
wire m. a muzzle made of strong wire mesh. Used to prevent dogs fighting or biting, especially Greyhounds during races. Companion animal appliances are more commonly made of leather or heavy synthetic materials.

MV [L.] *Medicus Veterinarius* (veterinary physician).
Mv chemical symbol, *mendelevium*.
mV millivolt.
μV microvolt.
MVC minute virus of canines.
MVV maximal voluntary ventilation.
MVY virus **Yucaipa disease**.
My 301 see **guaifenesin**.

myalgia [*mi-al'jə*] pain in muscle.

myasthenia [*mi"əs-the'ne-ə*] primary skeletal muscle weakness in the absence of nervous system lesions or myositis or myodystrophy. For the most part the weakness is reversible or temporary. Examples amongst animal diseases are myasthenia gravis, hypocalcemia, hypopotassemia, hypoglycemia, botulism and many plant toxins that cause the so-called staggers syndromes in food animals.
angiosclerotic m. excessive muscular fatigue due to vascular changes; intermittent claudication.
m. gastrica weakness and loss of tone in the muscular coats of the stomach; atony of the stomach.
m. gravis a condition in dogs and cats which results in a deficiency of acetylcholine receptors at motor endplates of the neuromuscular junction. Since acetylcholine is the neurotransmitter responsible for conduction of signals across the neuromuscular junction, clinical signs are of muscular weakness and increased fatiguability with exercise, which usually improve following a period of rest. Megaesophagus and regurgitation may also be seen. The disease occurs most commonly as an acquired form in

older dogs, in which the underlying etiology is an immune-mediated attack on the acetylcholine receptor, but also occurs as a congenital form involving an overt deficiency in receptor number. Treatment with anticholinesterases often leads to significant improvement and resolution of signs. Methimazole treatment for hyperthyroidism in cats has also been associated with acquired myasthenia gravis.

paraneoplastic m. gravis seen in association with neoplasms and other lesions of the thymus.

myatonia [*mi"ə-to'ne-ə*] defective muscular tone. See **myotonia**.

m. congenita amyotonia congenita.

myatrophy [*mi-at'rə-fe*] atrophy of a muscle.

mycelium [*mi-se'le-əm*] pl. *mycelia;* the mass of threadlike processes (hyphae) constituting the fungal thallas.

mycetism [*mi'sə-tiz-əm*] mushroom poisoning.

mycetogenic [*mi"sə-to-jen'ik*] caused by fungi.

mycetoma [*mi"sə-to'mə*] chronic granulomatous infection of the skin and underlying tissues, with edema, draining sinuses and granules, giving the appearance of a tumor. May be caused by bacteria (actinomycetoma) or fungi (eumycetoma).

actinomycotic m. containing filamentous bacteria of the order *Actinomycetales*.

blackgrain m. a mycetoma may contain small, dense masses of necrotic material, some of them calcified. They may be yellow or white or black—hence blackgrain mycetoma.

eumycotic m. mycetoma containing fungi.

maduromycotic m. a disease of humans, but with a similar disease in horses and dogs. The common findings in lesions are the fungi *Curvularia geniculata*, *Petriellidium boydii* (syn. *Allescheria boydii, Monosporium apiospermum*). In horses *Bipolaris spicifera* has also been identified. Characterized by an extensive distribution of mycetomas. The name originated from a commonly associated fungus *Madurella* spp.

white-grain m. caused by non-pigmented fungi, such as *Neotyphodium* spp. and *Pseudallescheria* spp.

myc(o)- word element. [Gr.] *fungus*.

mycobacteria [*mi"ko-bak-tēr-eə*] members of the genus *Mycobacterium*.

anonymous m. see opportunistic (atypical) mycobacteria (below).

nontubercular m. see opportunistic (atypical) mycobacteria (below).

opportunistic (atypical) m. saprophytic mycobacteria which may cause disease in animals. Included are *M. chelonae*, *M. fortuitum*, *M. phlei*, *M. smegmatis*. Called also anonymous and nontuberculous. See also **Runyon classification**, opportunist ***mycobacterial*** granuloma.

rapid growing m. a distinguishing characteristic used for classifying mycobacteria, based on growth rate in cultures. Rapid growth is defined as less than 7 days. This group includes the saprophytic or opportunistic mycobacteria, only some of which are associated with disease.

slow growing m. these mycobacteria take more than 7 days for the appearance of colonies. This group includes the tubercle bacilli, *M. avium*, *M. bovis* and *M. tuberculosis*, and many of the others pathogenic for animals and humans.

mycobacterial emanating from or pertaining to ***Mycobacterium***.

m. granuloma may be caused by *Mycobacterium tuberculosis* (cutaneous **tuberculosis**), *M. lepraemurium* (feline **leprosy**) or opportunistic mycobacteria (see opportunistic mycobacterial granuloma, below).

opportunistic m. granuloma a chronic infection of the skin and subcutaneous tissue, caused by saprophytic mycobacteria, usually as a result of wound contamination. Seen most commonly in cats, particularly in the inguinal region, the lesion may be extensive with ulceration and draining fistulas. Called also pyogranulomatous panniculitis. See also canine **leproid** granuloma.

mycobacteriosis [*mi"ko-bak-tēr-eo'sis*] infection by *Mycobacterium* spp. Includes **Johne's disease**, **mycobacterial** granuloma, **tuberculosis**, feline **leprosy**. See also **mastitis**.

atypical m. infection by one of the opportunistic or atypical species in the genus *Mycobacterium* which cause mild to moderate infections in most animals and fish and make them react positively to the tuberculin tests. The bacteria are *M. aquae*, *M. fortuitum*, *M. intracellulare*, *M. kansasii*, *M. scrofulaceum*. See also opportunist **mycobacterial** granuloma, opportunist (atypical) **mycobacteria**.

M-46: Opportunist mycobacterial granuloma in a dog.

cutaneous m. see skin **tuberculosis**, feline **leprosy**, opportunist **mycobacterial** granuloma.

nontubercular m. infection by a species of bacteria in the genus *Mycobacterium*, other than *M. tuberculosis*.

tubercular m. tuberculosis.

Mycobacterium [*mi"ko-bak-tēr-eəm*] the only genus in the family *Mycobacteriaceae* of bacteria; slender acid-fast rods which may be straight or slightly curved. They may produce filaments or cocci. The most serious disease caused by members of this genus is **tuberculosis**. *M. fortuitum*, *M. chelonae*, *M. marinum* are listed as causes of piscine tuberculosis. Other species, including *M. aquae*, *M. kansasii* and *M. scrofulaceum*, may occasionally cause disease in a number of different species.

M. avium* subsp. *avium found mostly in birds but occasionally also in other animals and in humans. The tubercle bacillus of birds, it causes avian **tuberculosis**.

M. avium* subsp. *paratuberculosis causes Johne's disease in cattle, sheep, goats, deer and camelids. Previously called *M. johnei* and *M. paratuberculosis*.

M. avium–intracellulare complex see *M. intracellulare* (below).

M. bovis the tubercle bacillus of the bovine, it causes **tuberculosis** in many animal species and humans.

M. chelonae, M. fortuitum, M. phlei, M. smegmatis, M. thermoresistible cause disease in a number of animal species, including mastitis in cattle and cutaneous **mycobacterial** granuloma in cats and dogs. See also opportunist (atypical) **mycobacteria**.

M. farcinogenes, M. senegalense associated with bovine **farcy**.

M. genavense causes mycobacteriosis in birds.

M. intracellulare found in tuberculin-positive cattle and causes limited lymph node lesions in pigs. Closely related to *M. avium* and also described as *M. avium–intracellulare* complex.

M. johnei see *M. avium* subsp. *paratuberculosis* (above).

M. kansasii causes tuberculosis-like disease in pigs, deer and cattle.

M. leprae the cause of leprosy in humans.

M. lepraemurium causes murine and feline **leprosy**.

M. marinum found in water, it causes tuberculosis in fish and skin ulcers in humans.

M. microti the vole bacillus; lesions sometimes occur in other species.

M. paratuberculosis previously called *M. johnei*; now called *M. avium* subsp. *paratuberculosis* (above).

M. tuberculosis the tubercle bacillus of humans, but found also in monkeys and pigs, and rarely in cattle, dogs and parrots.

M. ulcerans causes skin ulcers in humans and cats.

M. xenopi causes **mycobacterial** granuloma in cats and lymph node lesions in pigs.

mycobactin [*mi"ko-bak'tin*] a substance in some mycobacteria capable of promoting the growth of other mycobacteria; it is capable of extracting ferric ion from the medium which some *Mycobacterium* spp. are unable to do.

mycodermatitis [*mi"ko- dur"mə-ti'tis*] fungal infection of the skin.

mycolic acid [*mi-kol'ik*] the component of mycobacterial cell walls that confirms their acid-fast characteristic.

mycological [*mi"ko-loj'i-kəl*] pertaining to or arising from mycology.

mycologist [*mi-kol'ə-jist*] a specialist in mycology.

mycology [*mi-kol'ə-je*] the study of fungi and fungal diseases.

mycomyringitis [*mi"ko- mir"in-ji'tis*] fungus inflammation of the eardrum.

VetBooks.ir

mycophenolate [*mi"ko-fen'o-lāt*] an immunosuppressant used to suppress rejection in organ transplantation.

Mycoplasma [*mi'ko-plaz"mə*] a genus of highly pleomorphic, aerobic or facultatively anaerobic bacteria that lack cell walls, but are most closely related to gram-positive bacteria. Previously called pleuropneumonia-like organisms (PPLO).

***M. agalactiae, M. capricolum, M. conjunctivae, M. mycoides* subsp. *mycoides* and subsp. *capri*, *M. ovipneumoniae*, *M. putrefaciens*, *M.* strain F-38** cause disease in sheep and goats. See **contagious** agalactia, **contagious** caprine/ovine pleuropneumonia, **enzootic** pneumonia, **keratoconjunctivitis**, mycoplasmal **polyarthritis**.

M. alkalescens, M. bovis, M. bovoculi, M. bovigenitalium, M. bovirhinis M. californicum, M. canadense, M. dispar* and *M. mycoides* subsp. *mycoides found in cattle and may cause disease, including pneumonia, mastitis, arthritis, ocular infection and mastitis. See **enzootic** pneumonia and **keratoconjunctivitis**.

M. anatis, M. gallinarum, M. gallisepticum, M. gallopavonis, M. iowae, M. meleagridis, M. synoviae cause disease in poultry. See **chronic** respiratory disease, infectious avian **synovitis**, infectious **sinusitis** of turkeys, and **turkey** syndrome.

M. arthritidis, M. neurolyticum, M. pulmonis cause disease in rats and mice. See **murine** respiratory mycoplasmosis, **rolling** disease.

M. coccoides may cause anemia in mice. Previously classified as *Eperythrozoon coccoides*.

M. columbinasale, M. columborale found in pigeons, but pathogenicity is not known.

M. cynos, M. gateae, M. spumans found in dogs and cats and may be associated with disease. See also histiocytic ulcerative **colitis**, **kennel cough**.

M. felis found in the respiratory tract of horses and may cause pleuritis. It causes conjunctivitis in cats.

M. flocculare, M. hyorhinis, M. hyosynoviae, M. hyopneumoniae cause disease in pigs. See **atrophic** rhinitis, mycoplasma **arthritis** and **enzootic** pneumonia.

M. haematoparvum a hemophilic species of uncertain clinical significance found in dogs.

M. haemocanis a hemophilic species found in dogs that is usually apathogenic, but can cause anemia in spelenctomized dogs. Previously called *Haemobartonella canis*.

M. haemofelis a hemophilic species that causes **feline** infectious anemia. Previously called *Haemobartonella felis*.

M. haemominutum a hemophilic species of uncertain clinical significance found in cats.

M. haemomuris a hemophilic species found in rats that is transmitted by lice and is usually apathogenic, but can cause fatal anemia in splenectomized or immunosuppressed animals.

***M. mycoides* supsp. *mycoides* small colony type** cause of **contagious** bovine pleuropneumonia.

M. ovis a hemophilic species that can cause anemia and ill thrift in weaner sheep, although infection is often inapparent. Previously called *Eperythrozoon ovis*.

M. suis a hemophilic species that causes anemia and jaundice in piglets. Can cause high mortalities. Previously called *Eperythrozoon suis*.

M. wenyonii a hemophilic species that may occasionally cause fever and anemia, but is usually apathogenic. Previously called *Eperythrozoon wenyonii*.

mycoplasma [*mi'ko-plaz"mə*] microorganisms in the class *Mollicutes;* the genera of importance in animals are *Mycoplasma, Ureaplasma* and *Acholeplasma.*

t-strain m. see ***Ureaplasma***.

hemotropic m. a cluster of organisms (formerly the genera *Haemobartonella* and *Eperythrozoon*) within the mycoplasmas; causative agents of infectious anemia in a variety of mammalian species. Includes *Mycoplasma haemofelis*, Candidatus *Mycoplasma haemominutum* and Candidatus *Mycoplasma turicensis*. Called also hemoplasmas.

mycoplasmal [*mi"ko-plaz'məl*] emanating from or pertaining to infection with *Mycoplasma.*

mycoplasmosis [*mi"ko-plaz-mo'sis*] any disease caused by infection with *Mycoplasma* spp., e.g. bovine mycoplasmosis; includes contagious bovine pleuropneumonia, enzootic calf pneumonia, mycoplasmal mastitis, murine respiratory mycoplasmosis and granular vulvovaginitis.

mycosis [*mi-ko'sis*] pl. *mycoses;* any disease caused by fungi.

dermal m. see **ringworm**, **epizootic** lymphangitis, **sporotrichosis**, **swamp cancer**. Called also dermatophytosis.

m. fungoides epitheliotrophic cutaneous **lymphoma**.

guttural pouch m. see **guttural pouch** mycosis.

opportunistic m. a fungal or fungus-like disease occurring in an animal with a compromised immune system. Opportunistic organisms are normal resident flora that become pathogenic only when the host's immune defenses are altered, as in immunosuppressive therapy, in a chronic disease, such as diabetes mellitus, or during steroid or antibacterial therapy that upsets the balance of bacterial flora in the body.

superficial m. those involving the superficial layers of the skin; typical of infections caused by **dermatophytes**.

systemic m. fungal infection spread via the bloodstream and characterized by multiple granulomatous lesions in many organs. See **aspergillosis**, **blastomycosis**, **coccidioidomycosis**, **cryptococcosis**, **histoplasmosis**, **mucormycosis**.

mycostasis [*mi-kos'tə-sis*] fungistasis.

mycostat [*mi'ko-stat*] fungistat.

mycota [*mi-kō'tə*] see **fungus**.

mycotic [*mi-kot'ik*] pertaining to a mycosis; caused by fungi. Fungal infections occur in most organs of the body, e.g. mycotic mastitis, keratitis, hepatitis, rumenitis, colitis.

m. abortion is common only in cattle and is caused by *Mortierella wolfii*, *Mucor* and *Aspergillus* spp. *Pseudallescheria boydii* is also recorded as a cause.

m. dermatitis the name is a misnomer because it is caused by a bacterium *Dermatophilus congolensis*. It occurs in all species but is a disease of high prevalence in horses, cattle and sheep. Lesions are worst on the dorsal parts of the body. They are thick, tenacious scabs, difficult to remove, underrun by granulation tissue. Continual wetness is a major risk factor. In sheep the lesions are in the woolled parts and damage the fleece badly.

m. granuloma see **swamp cancer**.

m. lymphangitis see bovine **farcy**.

m. nasal granuloma a disease of cows, characterized by noisy and distressed breathing and nasal discharge. There are large polyps containing yellow-green granulation tissue in the nasal cavities. Histologically the lesions are eosinophilic granulomas containing fungal elements. *Exserohilum rostratum* has been isolated from the lesions. *Rhizobium* spp. fungus is also recorded as a cause in cattle.

m. stomatitis is regarded as a secondary lesion produced by the invasion of devitalized tissue or existing mucosal lesions by fungi, especially *Candida* spp. Characterized by a growth of soft, white, elevated patches on an inflamed or ulcerated mucosa. Occurs especially in very young animals still drinking milk. The lesions usually extend into the pharynx and in fatal cases further still down the alimentary tract.

mycotoxic [*mi"ko-tok"sik*] pertaining to or emanating from a mycotoxin, e.g. mycotoxic lupinosis, mycotoxic nephropathy.

m. nephrotoxic tubular necrosis caused by **ochratoxin** and **citrinin** in pigs.

mycotoxicosis [*mi"ko-tok"sĭ-ko'sis*] 1. poisoning due to a fungal toxin. 2. poisoning due to ingestion of fungi is poisoning caused by fungal toxins, resulting from the ingestion of moldy feeds or as toxins produced by fungi that parasitize living plants externally or live in the tissues of the plants as endophytes. The common toxic fungi on standing crops are *Alternaria*, *Claviceps*, *Fusarium*, *Helminthosporium* and *Rhizopus* spp. On stored feeds the common ones are

M-47: Mycotic dermatitis in a Hereford.

VetBooks.ir

Aspergillus, *Fusarium* and *Penicillium*. There are a number of identified specific poisonous fungi, but it is probable that there are a great number of fungal toxic incidents that go unnoticed. Food animals are frequently exposed to fungi on moldy stored food and also on standing plants and on the litter lying at the ground surface in a pasture. See also **facial** eczema, **ryegrass staggers**, ***Lupinus*** poisoning, **stachybotryotoxicosis**.

mycotoxin [mi'ko-tok"sin] poisonous substance produced by a fungus.

m. hyperthermia see ***Neotyphodium*** *(Acremonium) coenophialum*, ***Claviceps*** *purpurea*.

mydriasis [mĭ-dri'ə-sis] dilatation of the pupil. May be physiologic, due to reduced parasympathetic and increased sympathetic tone to the iridal sphincter and dilator muscles, or pathologic.

mydriatic [mid"re-at'ik] 1. dilating the pupil. 2. a drug that dilates the pupil.

m. test measurement of intraocular pressure before and after the administration of a short-acting mydriatic; used in the diagnosis of glaucoma.

myectomy [mi-ek'tə-me] excision of a muscle or a portion of a muscle.

caudal m. see **nicking** (2). Instead of severing the ventral sacrococcygeal muscle, a portion is removed.

pectineal m. see **pectinotomy**.

myectopia [mi-ek-to'pe-ə] displacement of a muscle.

myelapoplexy [mi"el-ap'o-plek"se] hematomyelia; hemorrhage in the spinal cord.

myelatelia [mi"el-ə-te'le-ə] imperfect development of the spinal cord.; myelodysplasia.

myelatrophy [mi"əl-at'rə-fe] atrophy of the spinal cord.

myelemia [mi"ə-le'me-ə] myelocytosis.

myelencephalon [mi"əl-en-sef'ə-lon] 1. portion of the brainstem caudal to the pons; the medulla oblongata. 2. the posterior of the two brain vesicles formed by specialization of the rhombencephalon in the developing embryo.

myelin [mi'ə-lin] 1. the lipid-rich bilamellar membrane forming concentrically laminated sheaths around the axons of certain nerve fibers; these nerve fibers are spoken of as myelinated or medullated fibers. 2. lipoid substance found in various normal and pathological tissues, which differs from fats in being doubly refractive. Ultrastructurally, these are called myelin figures. Myelinated nerve fibers occur predominantly in the cranial and spinal nerves and compose the white matter of the brain and spinal cord. It is the myelin sheath that gives the whitish color to the areas of white matter. Unmyelinated fibers are abundant in the autonomic nervous system.

m. proteolipid protein a hydrophobic protein found in myelin that is the major component of lipoprotein complexes isolated from the brain.

myelinated [mi'ə-lĭ-nāt"əd] having a myelin sheath.

myelination, myelinization [mi"ə-lĭ-na'shən] production of myelin around an axon.

myelinic edema [mi"ə-lin'ik] disruption of the lamellar structure of peripheral and central myelin; seen in hepatic encephalopathy in many species (not horses), and also caused by chemicals, such as hexachlorophene; leads to spongy appearance of white matter in histological sections.

myelinogenesis [mi"ə-lin"o-jen'ə-sis] formation of myelin in the nervous system. Commences in the embryo at about the midpoint of gestation but is not complete until after parturition, later in those species in which neonates do not walk immediately after birth; myelinogenesis is not simultaneous in all parts of the nervous system so that clinical signs may appear temporarily and recover spontaneously, e.g. some types of neonatal tremor in pigs.

myelinolysis [mi"ə-lin-ol'ə-sis] destruction of myelin; demyelination.

myelinolytic [mi"ə-lin"o-lit'ik] of the nature of or pertaining to myelin.

myelinopathy [mi"ə-lĭ-nop'ə-the] general term used to include any disease of myelin; includes hypomyelination, dysmyelination, leukodystrophies, myelinolytic diseases, spongiform myelinopathies, encephalomyelinopathies.

bovine spinal m. inherited disease of Murray grey cattle conditioned by a recessive gene; congenital or appears at up to one year of age. Characterized by paresis progressing to recumbency and necropsy lesions of neuronal degeneration in the midbrain, cerebellum and spinal cord.

feline spinal m. an iodiopathic, adult-onset, progressive myelin loss in the spinal cord in Californian cats.

myelinosis [mi"ə-lĭ-no'sis] fatty degeneration, with formation of myelin.

myelinotoxic [mi'ə-lin-o-tok"sik] having a deleterious effect on myelin; causing demyelination.

myelitis [mi"ə-li'tis] 1. inflammation of the spinal cord; there are no specific myelitides in animals but myelitis is a significant lesion in listeriosis, equine herpesvirus-1 infection in horses, caprine arthritis–encephalitis, equine protozoal **myeloencephalitis**. 2. inflammation of bone marrow (see also **osteomyelitis**).

bulbar m. that involving the medulla oblongata.

focal m.-encephalitis widely disseminated inflammatory lesions, usually the result of blood-borne infection, in brain and spinal cord.

spinal cord m. is most commonly caused by a viral infection, though protozoa and helminth parasites are also significant causes. The signs are weakness through to complete flaccid paralysis, including paralysis of the anus and the tail. See also **myelomalacia**, **encephalomyelitis**.

myel(o)- word element. [Gr.] *marrow* (often with specific reference to the spinal cord).

myeloblast [mi'ə-lo-blast] an immature cell of bone marrow, not normally found in peripheral blood; it is the most primitive precursor in the granulocytic series, which develops into the promyelocyte and eventually into a granulocyte.

myeloblastemia [mi"ə-lo-blas-te'me-ə] myeloblasts in the peripheral blood as in myeloblastic leukemia.

myeloblastoma [mi"ə-lo-blas-to'mə] a focal malignant tumor composed of myeloblasts, observed in acute myelocytic leukemia.

myeloblastosis [mi"ə-lo-blas"to-mə-to'sis] 1. an excess of myeloblasts in the blood as in myeloblastic leukemia. 2. one of the specific viral diseases in the leukosis–sarcoma group of diseases of fowl. It is characterized by a spectacular leukemia with a great preponderance of myelocytes. There are general signs of debility, anemia and spontaneous hemorrhage.

myelocele [mi'ə-lo-sēl] protrusion of the spinal cord through a defect in the vertebral column.

myelocyst [mi'ə-lo-sist] a cyst developed from rudimentary medullary canals.

myelocystocele [mi"ə-lo-sis'to-sēl] protrusion of the spinal cord through a defect in the vertebral column.

myelocystomeningocele [mi"ə-lo-sis"to-mə-ning'go-sēl] myelomeningocele.

myelocyte [mi'ə-lo-sīt] 1. a precursor in the granulocytic series intermediate between a promyelocyte and a metamyelocyte, normally occurring only in the bone marrow. In this stage, differentiation into specific cytoplasmic granules has begun. 2. any cell of the gray matter of the nervous system.

myelocythemia [mi"ə-lo-si-the'me-ə] myelocytosis.

myelocytoma [mi"ə-lo-si-to'mə] see **myeloma**.

myelocytomatosis [mi"ə-lo-si"to-mə-to'sis] one of the virus-induced diseases in the leukosis–sarcoma group of diseases of fowl. It is characterized by tumors of the skull, ribs and limb bones. There is emaciation, weakness, pallor of the comb and a course of several months. There are often bony protuberances at the head and on the thorax and shanks.

myelocytosis [mi"ə-lo-si-to'sis] increase of myelocytes in the blood.

myelodysplasia [mi"ə-lo-dis-pla'zhə] 1. defective development of the spinal cord; called also myelatelia. 2. disorders of myeloid cells of the bone marrow, either in number or degree of maturity.

hemopoietic m. includes myeloid metaplasia and myelofibrosis, refractory anemia with excess blast cells, and myelomonocytic leukemia.

periodic m. see canine **cyclic** neutropenia.

m. syndrome qualitative defect in stem cells characterized by dysplastic hematopoietic cells and the presence of abnormal blast cells in the blood. There is also anemia, leukopenia and sometimes thrombocytopenia. See also **myeloproliferative** disease.

myeloencephalic [mi"ə-lo-en"sə-fal'ik] pertaining to the spinal cord and brain.

myeloencephalitis [mi"ə-lo-en-sef"ə-li'tis] inflammation of the spinal cord and brain. See also **encephalomyelitis**, **myeloencephalopathy**.

equine protozoal m. (EPM) a progressively debilitating disease affecing the central nervous system of horses which presents with

VetBooks.ir

focal or multifocal signs of neurologic disease involving the brain, brain stem and or spinal cord. It is caused most commonly by *Sarcocystis neurona*, but occasionally by *Neospora caninum* or the closely related *N. hughesi*. The definitive host for *S. neurona* in North America is the North American possum, *Didelphis virginiana*, and in South America, *D. marsupialis* and *D. albiventris*. The disease is more common in the summer, may be acute or chronic, and there is great variation in clinical signs due to the ability of the organism to infect both white and gray matter at multiple sites in the central nervous system. Ataxia is a common manifestation at some time during the clinical course.

myeloencephalopathy [*mi"ə-lo-en-sef"ə-lop'ə-the*] any degenerative disease affecting the brain and the spinal cord. Usually used as a pathoanatomical diagnosis when the etiological diagnosis is elusive.

equine degenerative m. an irreversible disease affecting young horses in several breeds and characterized by hypermetria of all limbs causing ataxia and falling backwards. One of the causes of **enzootic** equine incoordination. Demyelination is present in the medulla and spinal cord, especially the cervical and midthoracic regions.

equine herpesvirus m. a diffuse, multifocal myeloencephalopathy secondary to vasculitis, hemorrhage, thrombosis and ischemic neuronal injury, caused by equine herpesvirus-1 (EHV-1). There is sudden onset and early manifestation of ataxia, paresis and urinary incontinence. Usually multiple horses are involved and there is usually a history of fever, respiratory infection or abortion in the population. Relatively uncommon manifestation of EHV-1 infection, but results in severe loss and disruption to farms, boarding stables and racing establishments.

progressive degenerative m. inherited disease particularly of Brown Swiss cattle characterized by appearance at 6–8 months of age, progressive, bilateral hindlimb weakness causing a weaving gait; euthanasia inevitable after a 12–18 month course. Called also weaver syndrome, weavers.

myelofibrosis [*mi"ə-lo-fi-bro'sis*] replacement of bone marrow by fibrous tissue, e.g. in the end-stage of myeloid metaplasia and myelofibrosis.

myelogenesis [*mi"ə-lo-jen'ə-sis*] 1. development of the central nervous system. 2. the deposition of myelin around the axon.

myelogenic, myelogenous [*mi"ə-lo-jen'ik*] produced in the bone marrow.

m. leukemia see myelocytic **leukemia**.

myelogeny [*mi"ə-loj'ə-ne*] development of the myelin sheaths of nerve fibers.

myelogone [*mi'ə-lo-gōn"*] a white blood cell of the myeloid series having a reticulate violaceous nucleus, well-stained nucleolus, and deep blue rim of cytoplasm.

myelogram [*mi'ə-lo-gram*] 1. the film produced by myelography. 2. a graphic representation of the differential count of cells found in a stained representation of bone marrow.

myelography [*mi"ə-log'rə-fe*] radiography of the spinal cord after injection of a contrast medium into the subarachnoid space.

cervical m. injection of a radiopaque contrast medium into the subarachnoid space before taking an X-ray to outline more clearly the structures in the vertebral canal.

stress m. the spine is positioned to place stress on articulations in positions of either extension, flexion or traction. Used most commonly in the diagnosis of **cervical** spondylomyelopathy (wobbler syndrome).

myeloid [*mi'ə-loid*] 1. pertaining to, derived from or resembling bone marrow. 2. pertaining to the spinal cord. 3. having the appearance of myelocytes, but not derived from bone marrow.

m.:erythroid (M:E) ratio the ratio of myeloid to erythroid cells found in an examination of the bone marrow; provides an assessment of bone marrow activity.

m. leukemia see myelocytic **leukemia**.

m. leukosis see **myeloblastosis** (2).

m. metaplasia hyperplasia of the bone marrow, with erythroid phthisis and compensatory splenomegaly and sometimes hepatomegaly. It is usually succeeded by bone marrow fibrosis and sclerosis. The initiating cause is usually not apparent.

m. tissue red bone marrow.

myeloidosis [*mi"ə-loi-do'sis*] formation of myeloid tissue, especially hyperplastic development of such tissue.

myelolipoma [*mi"ə-lo-lĭ-po'mə*] a rare benign tumor of the adrenal gland composed of adipose tissue, lymphocytes and primitive myeloid cells.

myeloma [*mi"ə-lo'mə*] 1. a B lymphocyte tumor. 2. multiple myeloma (see below).

giant cell m. giant cell tumor (1).

multiple m. a malignant neoplasm of plasma cells, in which the plasma cells proliferate and invade the bone marrow, causing destruction of the bone and resulting in pathological fracture and bone pain. A secretory form of the disease is characterized by the presence of an immunoglobulin recognized as Bence Jones protein (monoclonal immunoglobulin), Bence Jones proteinuria, anemia, and lowered resistance to infection. It is the most common type of monoclonal **gammopathy**. A non-secretory form of the disease also occurs.

osteosclerotic m. multiple myeloma associated with osteosclerosis (rather than bone destruction) and often with peripheral neuropathy.

plasma cell m. see multiple myeloma (above).

m. protein the immunoglobulin molecules produced by myeloma cells. See **gammopathy**.

myelomalacia [*mi"ə-lo-mə-la'shə*] morbid softening (necrosis) of spinal cord. It is not commonly recorded as an entity separate from encephalomalacia. Poisonings by selenium in pigs, *Phalaris tuberosa* in sheep and sorghum in horses are examples. There is a gradual onset of paresis or paralysis.

ascending-descending m. a progressive, ascending and descending, intramedullary hemorrhage of the spinal cord that sometimes follows trauma; the result of ischemic and hemorrhagic infarction of the parenchyma, but not nerve roots in the leptomeninges. Called also hematomyelia.

progressive hemorrhagic m. see ascending-descending myelomalacia (above).

myelomatosis [*mi"ə-lo-mə-to'sis*] see multiple **myeloma**.

myelomeningitis [*mi"ə-lo-men"in-ji'tis*] inflammation of the spinal meninges.

myelomeningocele [*mi"ə-lo-mə-ning'go-sēl"*] hernial protrusion of the spinal cord and its meninges through a defect in the vertebral column.

myeloneuritis [*mi"ə-lo-noo-ri'tis*] inflammation of the spinal cord and peripheral nerves.

myelopathy [*mi"ə-lop'ə-the*] 1. any functional disturbance or pathological change in the spinal cord; often used to denote nonspecific lesions, as opposed to myelitis. Examples are ischemic encephalopathy, that due to intervertebral disk disease, in the wobbler syndrome in horses. 2. pathological change in bone marrow.

compressive cervical m. of Texel and Beltex sheep suspected as an inherited syndrome of ataxia and weakness, commencing at 5-18 months of age and believed to be caused by the presence of fatty nodules encroaching into the dorsal vertebral canal at C6-C7.

degenerative m. a slowly progressive ataxia and paresis beginning in the hindlimbs and ultimately progressing to involve the forelimbs and brainstem nuclei in older dogs. It has been recognized in German shepherds since the 1970s, but occurs sporadically in many large breed dogs. Familial forms have been reported in Corgis, Chesapeake Bay retrievers, Boxers and Rhodesian ridgebacks. Marked muscle atrophy is common, as is some loss of reflex function (particularly the patellar reflex) despite relative preservation of strength. Fecal and urinary incontinence are rare until the advanced stages of the disease. The disease is now known to be caused by a missense mutation in the superoxide dismutase 1 (SOD1) gene, making it likely that this represents a canine form of amyotrophic lateral sclerosis in humans.

demyelinating m. of Miniature poodles a diffuse demyelination with sparing of spinal gray matter and dorsal and ventral nerve roots. There is a progressive weakness, then paralysis of hindlegs and later forelegs as well, beginning at a few months of age; believed to be inherited.

fibrocartilaginous embolic m. embolism of fibrocartilaginous material within the vertebral arteries and assoicated vessels, which results in an ischemic myelopathy. The material has a similar appearance to intervertebral disk on histopathological examination, and it is proposed that the etiology involves entry of degenerate disk material into the spinal cord blood supply through as yet undetermined means. It occurs in horses and, most

frequently, in large breeds of dogs, and is manifested by acute paresis or paralysis, often strikingly asymmetric in its presentation. Called also necrotizing myelopathy, spinal cord ischemia, fibrocartilaginous embolism.

hereditary m. of Afghan hounds an autosomal recessive inherited degenerative myelopathy of young Afghan hounds, in which there is ataxia, paresis and eventually paralysis, first in the hindlimbs, then in the forelimbs as well. Called also a leukodystrophy.

ischemic m. see fibrocartilaginous **embolism**.

spondylotic cervical m. myelopathy secondary to encroachment of cervical spondylosis upon a congenitally small cervical spinal canal. See **cervical** spondylomyelopathy.

myeloperoxidase [*mi"ə-lo-pər-ok'sĭ-dās*] a hemoprotein having peroxidase activity, occurring in the primary granules of promyelocytes, myelocytes and neutrophils, and which exhibits bactericidal, fungicidal and virucidal properties.

myelopetal [*mi"ə-lop'ə-təl*] moving toward the spinal cord.

myelophthisic [*mi"ə-lo-tiz'ik*] pertaining to or emanating from myelophthisis.

m. anemia see myelopathic **anemia**.

myelophthisis [*mi"ə-lof'thĭ-sis*] reduction or replacement of the normal cell-forming functions of bone marrow by a space-occupying pathological process such as neoplasia.

myeloplast [*mi'ə-lo-plast"*] any leukocyte of the bone marrow.

myelopoiesis [*mi"ə-lo-poi-e'sis*] the formation of bone marrow or the cells arising from it.

ectopic m., extramedullary m. formation of myeloid tissue outside bone marrow.

myeloproliferative [*mi"ə-lo-pro-lif'ər-ə-tiv*] pertaining to or characterized by abnormal proliferation of bone marrow constituents.

m. disease a group of diseases characterized by medullary and extramedullary proliferation of one or more lines of bone marrow constituents, including myelocytic, erythroblastic and megakaryocytic forms, sometimes by stromal cell proliferation (myelofibrosis). It occurs most commonly in cats, often associated with feline leukemia virus infection, causing anemia, weight loss, fever and hepatosplenomegaly. Hematological findings usually include non-regenerative anemia and abnormal cells in the circulation. See also **erthremic myelosis**, **reticuloendotheliosis**, myeloid **leukemia**, **erythroleukemia**, monocytic **leukemia**, myelomonocytic **leukemia**, megakaryocytic **myelosis** and eosinophilic **leukemia**.

myeloradiculitis [*mi"ə-lo-rə-dik"u-li'tis*] inflammation of the spinal cord and nerve roots.

myeloradiculodysplasia [*mi"ə-lo-rə-dik"u-lo-dis-pla'zhə*] abnormal development of the spinal cord and spinal nerve roots.

myeloradiculopathy [*mi"ə-lo-rə-dik"u-lop'ə-the*] disease of the spinal cord and spinal nerve roots.

myelorrhagia [*mi"ə-lo-ra'jə*] hematomyelia; spinal hemorrhage.

myelosarcoma [*mi"ə-lo-sahr-ko'mə*] a sarcomatous growth made up of myeloid tissue or bone marrow cells.

myeloschisis [*mi"ə-los'kĭ-sis*] a cleft neural tube and an incompletely closed spinal cord.

myelosclerosis [*mi"ə-lo-sklə-ro'sis*] 1. sclerosis of the spinal cord. 2. obliteration of the marrow cavity by small spicules of bone. 3. myelofibrosis.

myelosis [*mi"ə-lo'sis*] 1. proliferation of bone marrow tissue, producing the blood changes of myelocytic leukemia. 2. formation of a tumor of the spinal cord.

erythremic m. a malignant blood dyscrasia, one of the **myeloproliferative** disorders, with progressive anemia, megaloblastic erythroid hyperplasia, myeloid dysplasia and hepatosplenomegaly. Seen most often in cats with feline leukemia virus infection.

megakaryocytic m. see megakaryocytic **leukemia**.

myelospongium [*mi"ə-lo-spon'ge-əm*] a network developing into the neuroglia.

myelostimulation [*mi"ə-lo-stim"u-la'shən*] stimulation of the bone marrow to produce blood cells; an important therapeutic objective in treating conditions which involve bone marrow suppression, such as aplastic anemia and in cancer chemotherapy. Various hemopoietic growth factors are used, including the **colony-stimulating factors**.

myelosuppression [*mi"ə-lo-sə-presh'ən*] depression of bone marrow activity.

myelosuppressive [*mi"ə-lo-sə-pres'iv*] 1. inhibiting bone marrow activity, resulting in decreased production of blood cells and platelets. 2. an agent having such properties.

myelotomy [*mi"ə-lot'o-me*] severance of nerve fibers in the spinal cord.

myelotoxicity [*mi"ə-lo-tok-sis'ĭ-te*] state of being toxic to myeloid tissue, i.e. bone marrow.

myelotoxin [*mi'ə-lo-tok"sin*] a toxin that destroys bone marrow cells.

myenteric [*mi"ən-ter'ik*] pertaining to the myenteron.

absent m. ganglia congenital defect associated with colonic atresia.

m. ganglionitis lesion of unspecified origin in horses, probably inflammatory; causes malfunction of intestinal movement, ingesta and fluid accumulation and colic.

m. plexus see **Auerbach plexus**.

myenteron [*mi-en'tər-on*] the muscular coat of the intestine.

myesthesia [*mi"es-the'zhə*] muscle sensibility.

myiasis [*mi-i'ə-sis*] invasion of the body by the larvae of flies, characterized as cutaneous (subdermal tissue), gastrointestinal, nasopharyngeal, ocular or urinary, depending on the region invaded.

blowfly m. see cutaneous myiasis (below).

cutaneous m. infestation of devitalized skin, skin covered by hair or wool fouled by feces or urine, or skin wounds by maggots of *Lucilia* spp., *Phormia* spp., *Calliphora* spp. Sheep are especially susceptible and large areas of skin may be destroyed and the sheep die as a result. Called also calliphorine myiasis, blowfly myiasis or strike and struck. In dogs and cats, seen most often in debilitated or paretic animals and those with fur matted with feces and urine or neglected wounds. There are deep sharp craters which progress to coalesce into large scallop-edged defects, all of which contain maggots.

gastrointestinal m. see gastric **habronemiasis**, **gasterophilosis**.

scrotal m. blowfly strike of a recently castrated ram lamb.

nasal m. ***Oestrus*** *ovis* infestation.

ocular m. see **onchocerciasis**, **thelaziasis**.

oculovascular m. ***Gedoelstia*** *hassleri* infection, in which the eye is invaded by larvae per medium of the vascular system.

oestrid m. includes invasion of tissues by larvae of *Oestrus* spp. and *Hypoderma* spp.

screw-worm m. see **screw-worm** myiasis.

warble m. see ***Hypoderma***.

myk(o)- for words beginning thus, see those beginning *myco-*.

Mylabris phalerata, Mylabris sidae a beetle containing **cantharidin**. Called also Chinese blistering beetle, Chinese blister fly, mylabris.

mylohyoid [*mi"lo-hi'oid*] pertaining to the hyoid bone and molar teeth.

mynah bird widely distributed birds in the starling family; some are popular as caged birds, particularly the common hill myna (*Gracula religiosa*) which are accomplished mimics.

my(o)- word element. [Gr.] *muscle*.

myoarteritis [*mi"o-ahr"tə-ri'tis*] inflammation of the smooth muscle in the arterial wall.

myoatrophy [*mi"o-at'ro-fe*] muscular atrophy.

Myobia [*mi-o'be-ə*] a genus of parasitic mites in the family Myobiidae.

M. musculi causes alopecia and dermatitis in laboratory mice.

myoblast [*mi'o-blast*] an embryonic cell that becomes a cell of a muscle fiber; called also sarcoblast.

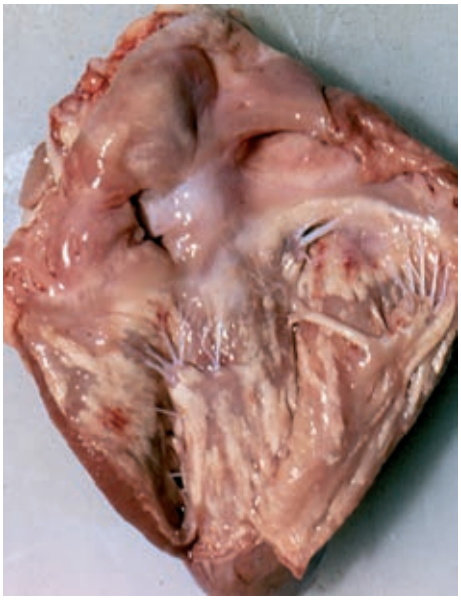
myoblastoma [*mi"o-blas-to'mə*] a benign circumscribed tumor-like lesion of soft tissue.

granular cell m. see **granular** cell tumor.

M-48: Myiasis. Numerous maggots filling a cutaneous lesion in an adult dog.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

myobradia [*mi"o-bra'de-ə*] slow reaction of muscle to stimulation.
myocardial [*mi"o-kahr'de-əl*] pertaining to the muscular tissue of the heart (the myocardium).
m. asthenia myocardial weakness and decrease in the power of the heart's contraction, leading to reduction in cardiac reserve and ultimately to congestive heart failure.
m. cells 1. being surrounded by an intact sarcolemma prevents the cells forming a true syncytium; but do form a functional syncytium because of presence of gap junctions with low electrical resistance which allow the passage of ions and small molecules. 2. myocardial cells are specialized smooth muscle cells with acquired features and properties similar to those of skeletal muscles.
m. contractility 1. myocardium has an intrinsic periodic contractility which enables the denervated heart to continue beating; in the intact animal neurogenic control of contractility is paramount, inhibited by parasympathetic effects, stimulated by sympathetic effects. 2. the force of contraction of the heart.
m. damage any disease causing loss of muscular or nervous function of the heart. Includes myocarditis, ischemia, degeneration.
m. depressant factor (MDF) substances liberated from the pancreas, intestine and liver during any type of circulatory shock. They reduce cardiac and reticuloendothelial activity and cause vasoconstriction.
m. dystrophy degenerative change in heart muscle, e.g. that occurring as a result of nutritional deficiency of selenium or vitamin E. Commonly manifest with unexpected death.
m. fiber see myocardial cells (above).
m. heart failure heart failure due to myocardial inefficiency.
m. hypertrophy increase in size of myocardial muscle due to increase in size of individual myocardial cells, usually in response to increased work load. Two forms occur. In *eccentric* hypertrophy, there is enlargement of ventricles with walls of normal to reduced thickness. In *concentric* hypertrophy, the ventricles are reduced in size with thick walls.
m. infarction (MI) necrosis of the cells of an area of the heart muscle (myocardium) occurring as a result of oxygen deprivation, which in turn is caused by obstruction to the blood supply; commonly referred to in humans as a 'heart attack'. This is not a common disease in animals, but does occur in cats and in horses, especially in the right atrium. It is a cause of myocardial weakness. See myocardial asthenia (above).
m. inflammation see **myocarditis**.
m. injury see myocardial damage (above).
ischemic m. necrosis localized or widespread necrosis due to interruption of the blood supply via the coronary arteries.
m. lipofuscinosis occurs in aged or cachectic cattle, also in healthy cattle; most common in Ayrshires; no apparent significance in terms of health; called also brown atrophy.



M-49: Myocardial dystrophy.

m. necrosis focal or massive and subsequent scarring caused by infection, e.g. *Histophilus somni*, the encephalomyocarditis virus, nutritional deficiency, e.g. vitamin E–selenium, poisoning by plants, e.g. *Acacia georgina*, farm chemicals, e.g. monensin, and ischemic necrosis due to general or local inadequacy of blood supply to the myocardium.
m. tension affects myocardial contractility but the importance of the effect in the living animal is obscure.
myocardiograph [*mi"o-kahr'de-o-graf"*] an instrument for making tracings of heart movements.
myocardiopathy [*mi"o-kahr"de-op'ə-the*] any noninflammatory disease of the myocardium.
myocarditis [*mi"o-kahr-di'tis*] inflammation of the muscular walls of the heart (the myocardium). The condition may result from bacterial or viral infections or it may be a toxic inflammation caused by drugs or toxins from infectious agents. The effect is to reduce cardiac reserve, possibly to the point of precipitating heart failure. Focal lesions may cause cardiac arrhythmia.
fibrotic m. healed lesion with much myocardium replaced by scar tissue; cardiac function will be severely compromised.
infectious myocarditis see **goose** hepatitis.
primary m. usually the result of a primary viral or protozoal infection of the myocardium.
secondary m. associated with an infectious or noninfectious systemic disease or associated with another cardiovascular disorder.
myocardium [*mi"o-kahr'de-əm*] the middle and thickest layer of the heart wall, composed of cardiac **muscle**.
myocardosis [*mi"o-kahr'do-sis*] any degenerative, noninflammatory disease of the myocardium.
myocele [*mi'o-sēl*] hernia of muscle through its sheath.
myocellulitis [*mi"o-sel"u-li'tis*] myositis with cellulitis.
myoceptor [*mi"o-sep'tər*] the motor end-plate of the muscle fiber.
myocerosis [*mi"o-sĭ-ro'sis*] waxy degeneration of muscle.
myoclonia congenita [*mi"o-klo'ne-ə*] see **congenital tremor syndrome**.
myoclonic [*mi"o-klon'ik*] pertaining to myoclonus.
m. epilepsy see **glycoproteinosis**.
m. jerk a generalized **seizure** consisting of a jerk of most muscles in the body.
myoclonus [*mi-ok'lo-nəs*] repetitive, rhythmic contractions of a group of skeletal muscles, persisting in sleep. The result of encephalitis or myelitis caused by distemper virus in dogs. Called also canine chorea, flexor spasm and tremor syndrome.
familial reflex m. a familial disease seen in young Labrador retriever puppies; myoclonus is followed by a generalized extensor rigidity and opisthotonos.
inherited congenital m. inherited as an autosomal recessive trait in Polled Hereford cattle; at birth affected calves are unable to stand because of myoclonic jerks to skeletal muscles in response to external stimuli. Affected calves appear normal while recumbent, but are unable to stand; they are not viable. Due to disturbance of glycine-mediated neurotransmissin in the spinal cord. Originally called neuraxial edema. See also **maple syrup urine disease**.
palatal m. a condition characterized by a rapid rhythmic movement of one or both sides of the palate.
Myocoptes [*mi"o-kop'tēz*] a genus of mites in the family Listrophoridae.
M. musculinus found on the hair of guinea pigs and laboratory mice.

M-50: Extensor hindlimb rigidity in a recumbent calf with inherited congenital myoclonus (neuraxial edema).

M. romboutsi see ***Tichoecius romboutsi***.

myocyte [*mi'o-sīt*] a cell of muscular tissue.

myocytolysis [*mi"o-si-tol'ĭ-sis*] dissolution of muscle cells.

myocytoma [*mi"o-si-to'mə*] a tumor composed of myocytes.

myodemia [*mi"o-de'me-ə*] fatty degeneration of muscle.

myodesmone a furanosesquiterpenoid plant poison found in *Lasiospermum*, *Myoporum* spp.

myodysplasia [*mi"o-dis-pla'zhə*] abnormal development of muscles. An inherited form of the disease occurs in calves, manifested by small, pale skeletal muscles and an inability to stand. Hydrocephalus is an additional lesion. See also **myodystrophia** fetalis deformans.

myodystonia [*mi"o-dis-to'ne-ə*] disorder of muscular tone.

myodystrophia [*mi"o-dis-to'ne-ə*] see **muscular dystrophy**.

m. fetalis deformans muscular dystrophy with limb deformity in the newborn. Occurs as an inherited disease in lambs. See also inherited **arthrogryposis**.

myodystrophy [*mi"o-dis'trə-fe*] see **muscular dystrophy**.

myoedema [*mi"o-ə-de'mə*] edema of a muscle.

myoelectric [*mi"o-e-lek'trik*] pertaining to the electric properties of muscle.

myoendocarditis [*mi"o-en"do-kahr-di'tis*] combined myocarditis and endocarditis.

myoepithelioma [*mi"o-ep"ĭ-the"le-o'mə*] a tumor derived from myoepithelial cells, most common in canine **mixed** mammary tumors.

myoepithelium [*mi"o-ep"ĭ-the'le-əm*] tissue made up of contractile epithelial cells.

myofascitis [*mi"o-fə-si'tis*] inflammation of a muscle and its fascia.

myofiber **muscle** fiber.

m. hyperplasia an inherited marked increase in the number of fibers in the muscle masses of affected cattle and sheep. There is a corresponding diminution in the amount of fat and connective tissue in the carcass. There is no deleterious effect on the animals except a higher prevalence of dystocia, and some other minor musculoskeletal defects, including elso-heel. Called also culard, doppellender, doppellendigkeit, double muscle.

myofibril [*mi"o-fi'bril*] a muscle fibril, one of the slender threads of a muscle fiber, composed of numerous myofilaments.

myofibrillar [*mi"o-fi'brĭ-lər+*] pertaining to a myofibril.

m. ATPase muscle enzyme which can be stained histochemically to aid in the differentiation between type I and type II muscle fibers.

m. hypoplasia see **splayleg**.

myofibroblast [*mi"o-fi'bro-blast*] an atypical fibroblast combining the ultrastructural features of a fibroblast and a smooth muscle cell.

myofibroma [*mi"o-fi-bro'mə*] a myoma combined with a fibroma.

myofibrosis [*mi"o-fi-bro'sis*] replacement of muscle tissue by fibrous tissue.

myofibrositis inflammation of the sheath of muscle fibers.

myofilament [*mi"o-fil'ə-mənt*] any of the ultramicroscopic threadlike structures composing the myofibrils of striated muscle fibers.

myogenesis [*mi"o-jen'ə-sis*] the formation of muscle fibers and muscles in embryonic development.

myogenic giving rise to or forming muscle tissue.

m. atrophy atrophy which is intrinsic to the muscle and not to its nerve, neurogenic atrophy, or to its blood supply, ischemic atrophy.

myogenous [*mi-oj'ə-nəs*] originating in muscular tissue.

myoglobin [*mi'o-glo"bin*] the oxygen-transporting pigment of muscle, a conjugated protein resembling a single subunit of hemoglobin, being composed of one globin polypeptide chain and one heme group.

myoglobinuria [*mi"o-glo"bĭ-nu're-ə*] the presence of myoglobin in the urine. It is evidence of severe muscle degeneration, though all such degenerations do not necessarily lead to myoglobinuria; it depends on the content of the pigment in the muscle and the renal threshold for it. The urine is red to dark red-brown, but in severe cases may be almost black.

atypical m. see atypical **myopathy**.

paralytic m. a severe manifestion of exertional rhabdomyolysis in horses characterized by red-brown urine due to myoglobinuria, and acute myopathy with muscle weakness, often to the point of being unable to get up. It occurs after exercise after several days of inaction while still being fed a high-energy ration. Called also azoturia and Monday morning disease.

M-51: Myoglobinuria in a horse with exertional myopathy.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

myoglobinuric nephropathy, -nephrosis accumulation of large quantities of myoglobin in renal convoluted tubules during an episode of severe muscle damage can result in damage by the myoglobin to the tubular epithelium and lead to nephrosis; renal ischemia may also contribute to the epithelial damage.

myoglobulin [*mi"o-glob'u-lin*] a globulin from muscle serum.

myogram [*mi'o-gram*] a record produced by myography.

myograph [*mi'o-graf*] an apparatus for recording the effects of muscular contraction.

myography [*mi-og'rə-fe*] 1. the use of a myograph. 2. description of muscles. 3. radiography of muscle tissue after injection of a radiopaque contrast medium.

myoid [*mi'oid*] resembling muscle.

m. cell striated muscle cells found in thymus tissue; they contain acetylcholine receptors that may trigger anti-acetylcholine antibodies in immune-mediated myasthenia gravis.

myointimal cell cells of the muscle layer of arterial wall that migrate to a subendothelial site and are responsible for organization of deposits on the vessel wall.

myoischemia [*mi"o-is-ke'me-ə*] local deficiency of blood supply in muscle.

myokinase [*mi"o-ki'nās*] see **adenylate** kinase.

myokinesimeter an apparatus for measuring muscular contraction induced by electrical stimulation.

myokinetic [*mi"o-kĭ-net'ik*] pertaining to the motion or kinetic function of muscle, as contrasted with the myotonic or tonic function.

myokymia [*mi"o-ki'me-ə*] continuous involuntary muscle twitchings that give the appearance of wormlike rippling of muscle.

myolipoma [*mi"o-lĭ-po'mə*] myoma with fatty elements.

myology [*mi-ol'ə-je*] scientific study or description of the muscles and accessory structures (bursae and synovial sheaths).

myolysis [*mi-ol'ĭ-sis*] degeneration of muscle tissue.

-myoma [*mi-o'mə*] a tumor formed of muscle tissue. See **adenomymoa**, **angiomyoma**, **leiomyoma**, **rhabdomyoma**.

myomalacia [*mi"o-mə-la'shə*] morbid softening of a muscle.

myomectomy [*mi"o-mek'tə-me*] 1. excision of a myoma. 2. myectomy.

myomelanosis [*mi"o-mel"ə-no'sis*] melanosis of muscle.

myomere [*mi'o-mēr*] myotome.

myometer [*mi-om'ə-tər*] an apparatus for measuring muscle contraction.

myometritis [*mi"o-mə-tri'tis*] inflammation of the myometrium.

myometrium [*mi-o-me'tre-əm*] the smooth muscle coat of the uterus.

myonecrosis [*mi"o-nə-kro'sis*] necrosis or death of individual muscle fibers.

infectious m. a disease important in farmed shrimp, caused by the infectious myonecrosis virus, a putative totivirus. Affected shrimp have focal to extensive muscle necrosis with a rate of mortalities. A disease notifiable to the OIE (see Table 22).

ischemic m. muscle necrosis due to interruption of the blood supply, as in prolonged recumbency of cows or in thrombus development. See **downer cow syndrome**, **iliac** artery thrombosis, **compartment syndrome**.

myoneural junction [*mi"o-nŏŏ'rəl*] the junction of nerve and muscle fibers. Called also somatic myoneural junction; see also **motor** end-plate.

myoneuralgia [*mi"o-nŏŏ-ral'jə*] neuralgic pain in a muscle.

myopalmus [*mi"o-pal'məs*] muscle twitching.

myoparalysis [*mi"o-pə-ral'ĭ-sis*] paralysis of a muscle.

myoparesis [*mi"o-pə-re'sis*] slight muscle paralysis.

myopathic [*mi"o-path'ik*] emanating from or pertaining to myopathy.

VetBooks.ir

m. syndrome generalized muscle weakness with fatigue and reduced exercise tolerance.

myopathy [*mi-op'ə-the*] strictly speaking, any disease of a muscle. Common usage is to restrict its use to describe the noninflammatory degenerations of skeletal muscle characterized by hyaline degeneration of muscle fibers, muscle weakness, myoglobinuria and a high serum concentration of muscle enzymes. This includes post-exertional rhabdomyolysis, nutritional muscle degeneration, congenital myopathies, neurogenic atrophy and pale, soft, exudative pork. See also **muscular**.

atypical m. a recently described acute rhabdomyolysis of grazing horses, occurring most commonly in the spring. Affected animals have sudden onset of pronounced muscular weakness and stiffness and are often found in lateral recumbency at pasture, unable to stand. Mortalities can occur within 72 hours of the onset of signs. In addition to skeletal muscle myopathy, there is myodegeneration of the diaphragm and intercostal muscles. Formerly known as atypical myoglobinura.

capture m. an acute myopathy occurring most frequently in wild animals after a long chase or with a lot of struggling. The course is short and the death rate high. Affected animals are recumbent, dyspneic, hyperthermic and show muscle tremor. It is basically an exertional **rhabdomyolysis**.

centronuclear m. an autosomal recessive inherited muscular disease of Labrador retrievers characterized by muscle weakness starting at a very young age. There is generalized muscle atrophy with gait abnormalities and sometimes megaesophagus. Called also Labrador muscular myopathy.

congenital myotonic m. see **myotonia** congenita.

deep pectoral m. a disease of turkey and broiler breeders in which the breast muscles become necrotic and turn a green color. Apparently caused by faulty blood supply and resulting muscle ischemia. Called also degenerative myopathy of turkeys, Oregon disease, green muscle disease.

equine polysaccharide storage m. (EPSM) a form of exertional rhabdomyolysis that occurs in several breeds but particularly the Quarter horse and draft horse breeds with age of onset older than two years, and resulting in signs of exertional rhabdomyolysis with muscle tremor, muscle pain, stiffness, sweating, exercise intolerance, reluctance to move and weakness following exercise after a period of rest of several days. In Quarter horse and Quarter horse related breeds, the mode of inheritance is autosomal dominant and the defect has high prevalence. Results from a mutation in the glycogen synthase 1 gene located on chromosome 10 which results in unregulated glycogen synthesis and potentially impaired aerobic glycogen metabolism. Diagnosed by biopsy and finding intracytoplasmic polysaccharide aggregates in anaerobic, fast-twitch, type IIb muscle fibers.

exertional m. acute myopathy occurring as a result of intensive activity of large muscle masses. See exertional **rhabdomyolysis**, equine polysaccharide storage myopathy (above), paralytic **myoglobinuria**, **tying-up syndrome**, capture myopathy (above), **porcine** stress syndrome.

fibrotic m. fibrous adhesions between the muscle masses in the posterior thigh muscles in horses. A sequel to traumatic mysositis. See also ossifying myopathy (below).

Golden retriever m. a progressive myopathy seen from a very young age in male Golden retrievers that show a stiff gait, abduction of thoracic limbs, bunny-hopping in the pelvic limbs, and enlargement of the tongue. The clinical signs worsen with exercise and as the dog matures. Now recognized as an X-linked inherited deficiency of dystrophin, analogous to the human disorder, Duchenne **muscular dystrophy**.

gracilis-semitendinosus m. fibrotic thickening of the gracilis and sometimes semitendinosus muscle in dogs, particularly German shepherds, causing a lameness characterized by inward rotation of the paw and stifle with outward rotation of the tuber calcis. The cause is unknown.

hereditary m's see X-linked **muscular dystrophy**, Golden retriever myopathy (above), **nemaline body** myopathy, type II muscle fiber deficiency.

hypokalemic m. see feline **hypokalemic** polymyopathy.

Labrador m. see centronuclear myopathy (above).

lipid storage m. increased amounts of lipid accumulate in myofibers causing weakness, muscle pain and atrophy and rarely cardiomyopathy. Reported in Labrador retrievers, Cocker spaniels and Rottweilers; the cause is unknown but abnormalities in concentrations of lactate, pyruvate and carnitine have been found.

mitochondrial m. caused by a deficiency of pyruvate dehydrogenase; reported in Clumber spaniels, Sussex spaniels and Old English sheepdogs.

myotubular m. a form marked by myofibers resembling those of early fetal muscle, i.e. myotubules.

nemaline rod m. a rare inherited neuromuscular disease of humans characterized by myotonia and the presence of fine fibrous threads called nemaline rods. Seen in young adult cats with sowly progressive muscle atrophy and weakness; myofibers contain nemaline rods.

neurogenic m. the muscle lesions resulting from interruption of its nerve supply.

ossifying m. calcification of the adhesions of fibrotic myopathy. A special occurrence is in the semimembranosus, semitendinosus and biceps femoris muscles of Western performance horses. See **ossifying** fibrotic myopathy.

m. post-exercise see exertional **rhabdomyolysis**.

postoperative m. after a period of recumbency with general anesthesia, affected horses are usually unable to rise. If they do rise, they show severe tremor, weakness and easy falling. Serum muscle enzyme concentrations indicate gross muscle damage and both fore- and hindlimbs are affected.

toxic m. uncommon but is caused by e.g. gossypol, *Cassia* spp., monensin and the other ionophore coccidiostats.

myopericarditis [*mi"o-per"ĭ-kahr-di'tis*] inflammation of both the myocardium and pericardium.

myophosphorylase the muscle isoenzyme of glycogen phosphorylase.

m. deficiency see **glycogenosis** type V.

myopia [*mi-o'pe-ə*] short sightedness; light rays focus in front of the retina. The opposite of hypermetropia.

axial m. results from the anteroposterior length of the eye being longer than normal.

myoplasm [*mi'o-plaz-əm*] the contractile part of the muscle cell.

myoplasty [*mi'o-plas"te*] plastic surgery on muscle in which portions of detached muscles are used, especially in the field of defects or deformities.

Myoporum [*mi"o-po'rəm*] Australian genus of plants in the Myoporaceae family; contain a number of poisonous substances, of which furanosesquiterpenes are the most significant; the most important is a hepatoxin, ngaione, which causes liver necrosis, photosensitization, jaundice and death in animals eating them. Includes *M. laetum* (ngaio), *M. montanum* (*M. acuminatum* boobialla), *M. insulare* (*M. serratum, M. tetrandrum*, boobialla). See also ***Erremophila*** *deserti* (*M. deserti*, Ellangowan poison bush).

Myoptes musculinus see ***Myocoptes*** *musculinus*.

myoreceptor [*mi"o- re-sep'tər*] a receptor situated in skeletal muscle that is stimulated by muscular contraction, providing information to higher centers regarding muscle position.

myorrhaphy [*mi-or'ə-fe*] suture of a muscle.

myorrhexis [*mi"o-rek'sis*] rupture of a muscle.

myosarcoma [*mi"o-sahr-ko'mə*] a malignant tumor derived from myogenic cells.

myosclerosis [*mi"o-sklə-ro'sis*] hardening of muscle tissue.

myosin [*mi'o-sin*] any of a family of motor proteins found in muscle; responsible for actin-based muscle fiber contraction.

m. ATPase enzyme catalyzing ATP hydrolysis which occurs when myosin binds to actin and provides the energy which allows myosin to move along the actin filaments causing muscle contraction.

m. light chains each molecule of smooth muscle cell myosin contains two pairs of light molecular weight chains (MLCs), one alkali MLC and one regulatory MLC.

myosis [*mi-o'sis*] see **miosis**.

myositis [*mi"o-si'tis*] pl. *myositides* inflammation of a voluntary muscle. Causes heat, swelling, pain and lameness if a limb is affected. Trauma is the common cause, especially in racing and work horses. Blackleg is a specific myositis. See also **polymyositis**.

atrophic m. see masticatory myositis (below).

eosinophilic m. 1. see masticatory myositis (below). 2. multifocal granulomatous inflammation of myocardium and skeletal muscle found at meat inspection. Histologically, the infiltrates are

dominated by eosinophils, which impart a greenish tinge grossly. It reduces the value of the carcass. The cause is unknown.
familial m. see canine familial **dermatomyositis**.
m. fibrosa a type in which there is formation of connective tissue in the muscle.
masticatory m. an autoimmune, focal inflammatory myopathy of dogs in which type 2M fibers of the masticatory muscles (temporalis, masseter, pterygoid, and rostral digastricus) ae targeted. In the acute phase, there is painful swelling of affected muscles, sometimes causing exophthalmos. In the chronic phase, inflammation and pain subside, and the fibrosed, atrophied muscles prevent opening of the mouth. Called also atrophic myositis and eosinophilic myositis.
maxillary m. a slowly developing myogenic degeneration of the muscles of the jaw in horses.
multiple m. polymyositis.
m. ossificans a generalized myositis with dystrophic ossification in muscle. It may be familial in pigs. In horses, dogs and cats, usually a focal lesions in a single muscle, secondary to trauma. Called also fibrodysplasia ossificans progressiva.
soft palate m. a cause of dorsal displacement of the soft palate in horses, resulting in chronic obstruction of the airway during exercise.
trichinous m. caused by the presence of *Trichinella spiralis*.
myospasm [*mi'o-spaz"əm*] spasm of a muscle.
myospherulosis a granulomatous reaction containing saclike structures with spherules; associated with lipid medications being applied to open wounds or being injected. There are solid subcutaneous or dermal nodules.
myotasis [*mi-ot'ə-sis*] stretching of muscle.
myotatic [*mi"o-tat'ik*] pertaining to the stretching of a muscle.
m. reflex spinal reflex elicited by the tapping (stretching) of a muscle tendon, which causes a response, usually seen as the flexion or extension of a joint. The patellar, biceps and triceps reflexes are examples.
myotendinous junction [*mi"o-ten'dĭ-nəs*] see **muscle–tendon junction**.
myotenositis [*mi"o-ten"o-si'tis*] inflammation of a muscle and tendon.
myotenotomy [*mi"o-tə-not'ə-me*] surgical division of the tendon of a muscle.
myotherapy [*mi'o-ther"ə-pe*] a form of natural medicine that assesses and physically treats myofascial pain, injury and dysfunction. It includes manipulation, massage and elements of acupuncture. See also trigger-point **massage**.
myotic see **miotic**.
Myotis genus of bats. Includes *M. thysanodes* (fringed myotis bat), *M. myotis* (European common mouse-eared bat), *M. lucifugus* (little brown bat).
myotome [*mi'o-tōm*] 1. an instrument for dividing muscles. 2. the muscle plate or portion of a somite that develops into voluntary muscle. 3. a group of muscles innervated from a single spinal nerve.
myotomy [*mi-ot'ə-me*] cutting or dissection of muscular tissue or of a muscle.
circumferential m. a means of relieving tension when attempting resection and anastomosis of the cervical or thoracic esophagus.
coccygeal m. transection of a dorsal sacrococcygeal muscle to correct a crooked tail in horses.
Heller's m. an esophagomyotomy at the esophagogastric junction, usually performed as a treatment for megaesophagus caused by achalasia. Called also **cardioplasty**.
ventral caudal m. see **nicking** (2).
myotonia any disorder involving tonic spasm of muscle.
acquired m. see **pseudomyotonia**.
m. congenita an inherited muscle stiffness with excessive muscle mass and a stilted gait that worsens with excitement; observed from a few months of age in Chow Chows and miniature Schnauzers. A DNA-based test is available for the disease in Schnauzers.
equine m. is manifest with a stiff gait, hypertrophy of the proximal appendicular musculature and percussion of muscle produces sustained contraction. It may be inherited in some Quarter horse lines.
inherited congenital m. an inherited disease of goats characterized by the development of muscle rigidity when they are startled or made to move quickly. Affected goats fall with extensor rigidity of the limbs but after a few minutes rest can rise and walk normally. Incorrectly colloquially called 'fainting goats' and unfortunately considered by some to be a desirable and amusing trait.
myotonic [*mi"o-ton'ik*] pertaining to or emanating from myotonia.
m. dimple a depression or furrow that forms from a sudden local contraction of muscle in response to percussion and persists for up to a minute. It occurs in **myotonia** and is used as a diagnostic test for the condition.
m. myopathy see **myotonia** congenita.
myotonus [*mi-ot'ə-nəs*] tonic spasm of a muscle or a group of muscles.
myotoxin toxins affecting muscle fibers only.
myotrophic [*mi"o-tro'fik*] 1. increasing the weight of muscle. 2. pertaining to myotrophy.
myotrophy [*mi-ot'rə-fe*] nutrition of muscle.
myotropic [*mi"o-tro'pik*] having a special affinity for muscle.
myotube [*mi'o-tōōb"*] a developing skeletal muscle fiber with a centrally located nucleus.
myotubule [*mi"o-too'būl*] a developing skeletal muscle fiber with a centrally located nucleus.
myovascular [*mi"o-vas'ku-lər*] pertaining to muscle and blood vessels.
Myriapoda [*mir"e-ap'ə-də*] originally a class of arthropods, including the millipedes and centipedes now superseded by two classes—Diplopoda (millipedes) and Chilopoda (centipedes).
myringa [*mĭ-ring'gə*] see **tympanic** membrane.
myringectomy, myringodectomy [*mir"in-jek'tə-me*] excision of the tympanic membrane.
myringitis [*mir"in-ji'tis*] inflammation of the tympanic membrane.
myring(o)- word element. [L.] *tympanic membrane*.
myringodectomy [*mĭ-ring'go-dek'to-me*] myringectomy.
myringomycosis [*mĭ-ring'go-mi-ko'sis*] fungus disease of the tympanic membrane.
myringotomy [*mir"ing-got'o-me*] tympanotomy; incision of the tympanic membrane. In otitis media, the procedure is usually performed to relieve pressure and allow for drainage or irrigation of the middle ear behind the tympanic membrane, as well as collection of samples for microbiology and cytologic examination.
myrosinase the enzyme in plants of the family Brassicaceae that release the toxic allyl isothiocyanate and other products from glucosinolates that occur in the plant. Called also thioglucosidase.
myrotheciotoxicosis [*mi"ro-the"se-o-tok"sĭ-ko'sis*] poisoning due to ingestion of the fungi *Myrothecium roridum* and *M. verrucosum*, characterized by diarrhea, dysentery, abomasal hemorrhage, hepatitis, pulmonary congestion and a fatal outcome in sheep, cattle and horses. The toxin is a trichothecene.
Myrothecium [*mi"ro-the'se-um*] *Myrothecium roridum* and *M. verrucosum* (*M. verrucaria*) are fungi that grow on standing grasses or clover, and on stored feed. There is a special disposition to grow on kikuyu grass. The link between these fungi and 'kikuyu poisoning' is not clearly established. See **myrotheciotoxicosis**, ***Pennisetum clandestinum***.
mystery pig disease see **porcine** reproductive and respiratory syndrome.
Mytilus genus of farmed mussels in the family Mytilidae. Includes *M. edulis* (blue mussel), *M. galloprovincialis* (Mediterranean mussel), *M. crassitesta* (Korean mussel).
myxadenitis [*miks"ad-ə-ni'tis*] inflammation of a mucus-secreting gland.
myxadenoma [*miks"ad"ə-no'mə*] an epithelial tumor with the structure of a mucous gland.
myxasthenia [*miks"əs-the'ne-ə*] deficient secretion of mucus.
myxedema [*mik"sə-de'mə*] a mucinous degeneration with thickening of the skin that occurs in hypothyroidism. In animals it occurs mainly in newborn piglets and in dogs.
myxedematoid [*mik"sə-dem'ə-toid*] resembling myxedema.
myx(o)- word element. [Gr.] *mucus, slime*.
Myxobolus cerebralis a myxosporean parasite which invades the cranial cartilages of juvenile rainbow trout, causing **whirling disease**.
myxochondroma [*mik"so-kon-dro'mə*] chondroma with stroma resembling primitive mesenchymal tissue.
myxocyte [*mik'so-sīt*] one of the cells of mucous tissue.
myxofibroma [*mik"so-fi-bro'mə*] a fibroma containing myxomatous tissue; called also fibroma myxomatodes and fibromyxoma.
myxofibrosarcoma [*mik"so-fi"bro-sahr-ko'mə*] fibrosarcoma with myxomatous areas.

VetBooks.ir

myxoid [*mik'soid*] resembling mucus; rich in mucopolysaccharides mostly chondroitin sulfate.

myxolipoma [*mik"so-lĭ-po'mə*] lipoma with foci of myxomatous degeneration.

myxoma [*mik-so'mə*] a tumor composed of primitive connective tissue cells and stroma rich in mucopolysaccharides, mostly chondroitin sulfate.

heart valve m. developmental abnormality caused by persistence of embryonic myxomatous tissue in the endocardial cushions.

m. virus a poxvirus in the genus *Leporipoxvirus*; the cause of **myxomatosis** of rabbits.

myxomatosis [*mik"so-mə-to'sis*] 1. the development of multiple myxomas. 2. myxomatous degeneration.

infectious m. of rabbits a highly infectious, mosquito and rabbit flea or contact transmitted, generalized disease caused by myxoma virus which is a poxvirus, similar to the rabbit fibroma virus. It is characterized by swelling of the eyelids and a profuse, purulent ocular and nasal discharge, subcutaneous lumps 0.5–1 inch in diameter, especially on the head, and swelling of the genitalia. The case fatality rate with virulent virus strains is 100% and the morbidity in a closed rabbitry is usually more than 50%. A disease notifiable to the OIE (see Table 22).

myxomatous [*mik-so'mə-təs*] characterized by the development of lesions resembling myxomas.

m. transformation see mucoid **degeneration**.

m. valve degeneration see chronic **valvular** heart disease.

myxomyoma [*mik"so-mi-o'mə*] a myoma with myxomatous degeneration.

myxopoiesis [*mik"so-poi-e'sis*] the formation of mucus.

myxorrhea a flow of mucus.

m. intestinalis excessive secretion of intestinal mucus.

myxosarcoma a sarcoma containing myxomatous tissue.

Myxosoma [*mik"so-so'mə*] a genus of myxozoan parasites in the class Myxosporea. Cause serious disease losses in free-living fishes.

M. cartilaginis invades cartilage in the head of fish without causing deformity or nervous signs.

M. cerebralis causes whirling disease and twist disease characterized by tail chasing, black pigmentation of the tail and deformity, including sunken heads and twisted spines. The parasite invades and destroys skeletal cartilage.

M. dujardini causes cysts in the gills, followed by dyspnea and death due to asphyxia.

myxovirus [*mik'so-vi"rəs*] a synonym for influenza virus. See ***Orthomyxoviridae***.

myxozoan [*mik"so-zo'ən*] member of the phylum Myxozoa, a group of parasitic animals of aquatic environments found chiefly in fish, amphibians and reptiles.

Myzorhynchus [*mi"zo-ring'kəs*] one of the mosquito vectors of the canine heartworm, *Dirofilaria immitis*.

myzorhyncus [*mi"zo-ring'kəs*] the apical glandular region of the scolex of a cestode belonging to the order Tetraphyllidea, parasitic in sharks.

N

N 1. symbol, *newton*. 2. chemical symbol, *nitrogen*. 3. symbol, *normal* (solution); the expressions 2N (double normal), 0.5N (half-normal), 0.1N (tenth-normal), etc., denote the strength of a solution in comparison with the normal.

n 1. symbol, *refractive index*. 2. symbol, *nano-*. 3. statistically speaking, the number of individuals or values in a sample.

ν nu, small letter; thirteenth letter of the Greek alphabet.

N-3-pyridylmethyl N^1-*p*-nitrophenyl urea see **valor**.

N banding a staining technique for karyotypes; performed with Giemsa or silver stains; called N band because it identifies nucleolus organizer regions.

N-CAMs nerve-cell adhesion molecules.

***N*-methylconiine** plant toxin found in *Conium maculatum*.

***N*^{5},*N*^{10}-methylene H_4 folate** form of tetrahydrolate essential to the synthesis of purines.

N_5,N_{10}A band the wide (1.5–2 μm) anisotropic central zone in the sarcomere or contractile unit of the myofibril, made of both actin and myosin filaments.

N-region template independent addition of 1-6 nucleotides at V-J-D recombination junctions in the process leading to immunoglobulin heavy chain and T-cell receptor assembly, important in the generation of diversity of complementarity determining regions.

NA Nomina Anatomica. The former official anatomical nomenclature for human anatomy upon which the official veterinary anatomical terminology (**NAV**) was based. It has now been superseded by the ***Terminologia Anatomica***.

Na chemical symbol, *sodium* (L. *natrium*).

Na+ sodium ion.

Na+ gradient the rate of increase or decrease of sodium ion concentration.

Na+ pump see **Na^+, K^+-ATPase**.

Na+-dependent transport voltage-sensitive protein 'gates' with complex subunit structure of large α-subunit and smaller β-subunits. Present in axonal fibers and involved in transmission of action potential along a nerve.

NAA Nomina Anatomica Avium. The official anatomical nomenclature for birds edited by J.J. Baumel and others, in its 2nd edition 1993, and prepared on behalf of the World Association of Veterinary Anatomists through their International Committee on Avian Anatomical Nomenclature.

Naalehu [Hawaiian] see **enzootic** calcinosis.

Naboth's cyst [*nah'bot*] see cervical **cyst**.

NaCl sodium chloride.

nacreous [*na'kre-əs*] having a pearl-like luster.

NAD in medical records, an abbreviation for no abnormalities detected.

NAD+ the oxidized form of nicotinamide adenine dinucleotide.

NAD+ malate dehydrogenase see **malate** dehydrogenase.

NADC National Animal Disease Center.

NADH the reduced form of nicotinamide-adenine dinucleotide.

NADH-methemoglobin reductase the enzyme in the erythrocyte that converts methemoglobin to hemoglobin, which is the form responsible for the transport of oxygen. Called also cytochrome-b_5 reductase. A familial deficiency has been reported in several breeds of dogs and in cats.

nadolol [*na-do'lol*] an adrenergic blocking agent that affects both β_1- and β_2-receptors.

NADP nicotinamide-adenine dinucleotide phosphate.

NADP diaphorase more commonly called NADPH dehydrogenase; an enzyme catalyzing oxidation-reduction reactions.

NADP-linked malic enzyme see **malic enzyme**.

NADPH reduced form of nicotinamide adenine dinucleotide phosphate (NADP) used in a number of reductive syntheses such as those of fatty acids and steroids.

NAE net acid excretion.

Naegleria [*na-glēr'e-ə*] a genus of protozoa in the family Vahlkampfiidae.

N. fowleri persists in thermally heated swimming pools and causes fatal meningoencephalitis in humans.

naevus nevus.

nafcillin a narrow spectrum, semisynthetic, acid- and penicillinase-resistant penicillin that is effective against staphylococcal infections.

naftalofos see **naphthalophos**.

naftifine an antifungal drug in the allylamine class, closely related to terbinafine.

nag vernacular for horse; called also steed, cayuse, neddy.

nagana endemic disease of mammals in tropical Africa, Central and South America with greatest economic importance in cattle; caused by infection with *Trypanosoma brucei brucei*. Non-descript syndrome of fever, depression, anemia, enlargement of peripheral lymph nodes, emaciation and death. Currently, no parasitological nor serological test can make a clear distinction between *T. b. brucei* and *T. evansi* infections and the clinical signs of chronic nagana and chronic **surra** are very similar and prohibit correct differential diagnosis. See also **trypanosomiasis**.

NAGase mastitis test an indirect test for mastitis based on the presence in the milk of mastitic quarters of high concentrations of a cell-associated enzyme *N*-acetyl-β-D-glucosaminidase.

Nagler's reaction a test for the identification of alpha toxin of *Clostridium perfringens*; the addition of antitoxin to cultures on egg yolk agar prevents visible opacity, due to lecithinase action which is normally observed around colonies.

Nagpuri a domestic breed of Indian buffalo; used for draft and milk production; long horns, usually black, sometimes white on face, legs and tail.

NAHMS National Animal Health Monitoring System.

nail [*nāl*] 1. a rod of metal, bone or other material used for fixation of the ends of fractured bones. 2. see horseshoe nail (below). 3. a horny cutaneous plate overlying the dorsal surface of the distal phalanx of the human fingers and toes; similar structures are found in other primates. 4. (loosely) one of the claws of dogs, cats, chickens, etc.

n. bed infection see **paronychia**.

n. bind usually used to indicate a nail prick of the horse's hoof caused by the blacksmith driving a nail too close to the soft tissues and causing pressure on the sensitive laminae without penetrating them. See also nail prick (below).

n.-hole curette a curette with a fine stem and a tiny, half-cup shaped end designed to be inserted in a nail-hole in the hoof to curette out damaged tissue and to provide drainage. Called also Hughes nail-hole curette.

n. dermatophytosis see **onychomycosis**.

horseshoe n. a nail made of a special soft metal and with a specific shape that directs the point of the nail away from the soft tissues and out through the side wall of the hoof.

interlocking n. a system of intramedullary bone nails with screws passed through the cortex to connect with the nails and increase the stability in fixing long bone fractures.

intramedullary n. one placed within the medullary cavity, bridging the fracture site and providing support and immobilization although rotation may be a problem. See internal skeletal **fixation**.

n. prick penetration of the sole of the horse's hoof by a nail or other sharp object to the depth of the sensitive laminae. Causes acute lameness and may lead to infection, **hoof** abscess and tetanus. See also nail bind (above). Called also nail tread.

pulled n. an injury common in racing Greyhounds, in which the attachment of the nail to the nail bed is separated by trauma. Causes severe pain and lameness.

n. tread see **nail** prick.

n. trimmers instruments designed for cutting the nails of dogs or cats; may be guillotine or scissors style; see also **White scissors**.

N-1: Nail trimmers, White (left), Resco (right). From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

Nairobi bleeding disease [*ni-ro'be*] canine ehrlichiosis.

Nairobi sheep disease [*ni-ro'be*] an infectious disease of sheep caused by an arbovirus in the genus *Nairovirus* and transmitted by the tick *Rhipicephalus appendiculatus* and possibly other ticks. It is characterized by acute hemorrhagic gastroenteritis and blood-stained purulent nasal discharge. A disease notifiable to the OIE (see Table 22).

Nairovirus [*ni"ro-vi'rəs*] a genus in the family *Bunyaviridae*; includes Nairobi sheep disease virus.

naive [*nah-ēv'*] in immunology, an individual that has not been exposed to a particular antigen.

Na+,K+-ATPase widely distributed enzyme consisting of two large α-subunits and two smaller β-subunits, whose function is to transport Na+ and K+ against their concentration gradients using hydrolysis of ATP as the thermodynamic couple. The stoichiometry of exchange is two K+ for every three Na+ pumped. Often called the sodium-potassium pump.

nakanuke a characteristic sign in avian reticuloendotheliosis. The barbs of the central portion of the wing and tail feathers of some affected birds remain adherent to the shaft.

naked ladies see ***Colchicum autumnale***.

Nakuru grass ***Cynodon*** *aethiopicus*.

nalbuphine [*nal'bu-fēn*] a synthetic κ-agonist–μ-antagonist opioid analgesic.

naled [*nah'led*] an organophosphorus insecticide.

nalidixic acid [*nal-i-dik'sik*] a naphthylidine derivative that inhibits DNA synthesis. Used for the treatment of urinary tract infections due to susceptible gram-negative bacteria. Side-effects in dogs include vomiting, diarrhea and seizures.

nalmefene, nalmetrene [*nal'mə-fēn"*] a parenteral opiate receptor antagonist used to reverse the effects of opiates.

nalorphine a semisynthetic congener of morphine used as the hydrochloride to antagonize morphine and related narcotics and as an analgesic.

naloxone [*nal-ok'sōn*] a narcotic antagonist structurally related to oxymorphone used to reverse the effects of previously administered narcotics.

naltrexone [*nal-trek'sōn*] an opiate antagonist similar to naloxone but with longer action and greater potency.

namaqua ***Thesium*** *namaquense*.

name [*nām*] title; identifying word(s).

colloquial disease n. the name given to a disease in a particular district. The same disease may therefore have many names.

International Nonproprietary Name (INN) see **International Nonproprietary Name (INN)**.

preferred n. the name amongst two or more which refer to a single disease, condition or clinical sign, which is recommended to be used generally.

problem n. key name; key indicant. The name of the problem, which may be a clinical sign, a production average, or a performance figure. A critical identification in a problem-oriented system of record keeping.

United States Adopted Name (USAN) see **United States Adopted Name (USAN)**.

Nandina domestica horticultural plant in family Berberidaceae; can cause cyanide poisoning; called also sacred or heavenly bamboo.

nandrolone an androgenic, anabolic steroid. The decanoate and phenpropionate esters are long-acting repository preparations. It is also subject to abuse as a performance enhancing drug in human athletes and in racing animals.

nanism [*na'niz-əm*] dwarfism or marked small size from any cause.

Nannizia [*nə-niz'e-ə*] see ***Microsporum***.

nanny mature goat doe.

nano- (n) [Gr.] *dwarf, small size*; prefix used in the metric system of measurement to designate an amount 10^{-9} (one-thousand-millionth) the size of the unit to which it is joined, e.g. nanogram (ng).

nanocephaly [*nan"o-sef'ə-le*] microcephaly.

nanocormia [*nan"o-kor'me-ə*] abnormal smallness of the body or trunk.

nanocurie (nCi) [*nan"o-ku're*] a non-SI unit of radioactivity, being 10^{-9} curie, or the quantity of radioactive material in which the number of nuclear disintegrations is 3.7 × 10, or 37, per second. Now replaced by the **becquerel**.

VetBooks.ir

nanogram [*nan'o-gram*] one-thousand-millionth (10^{-9}) gram.
nanoid [*nan'oid*] dwarfish.
nanomelus [*nan-om'ə-ləs*] micromelus.
nanometer [*nan'o-me"tər*] a unit of linear measure or wave length equal to one-thousand-millionth (10^{-9}) of a meter; nm; millimicron.
nanophthalmia [*nan"of-thal'me-ə*] nanophthalmos.
nanophthalmos [*nan"of-thal'məs*] congenital abnormal smallness in all dimensions of one or both eyes in the absence of other ocular defects. Called also pure **microphthalmos**.
nanophthalmus [*nan"of-thal'məs*] 1. nanophthalmos. 2. an animal affected with nanophthalmos.
nanophyetiasis [*nan"o-fi"ə-ti'ə-sis*] see **salmon** poisoning.
Nanophyetus [*nan"o-fi'ə-təs*] a genus of digenetic trematodes in the family Nanophyetidae, parasites in the intestines of mammals.
N. salmincola found in the small intestines of cats, dogs and many small, wild mammals, and occasionally in piscivorous birds and humans. The second intermediate host is fish. The fluke carries the rickettsia that causes **salmon** poisoning and **Elokomin fluke fever** in the terminal host.
nanosecond (ns, nsec) [*nan'o-sek"ond*] one-thousand-millionth (10^{-9}) second.
nanosomia [*nan"o-so'me-ə*] dwarfism.
nanous [*nan'əs*] dwarfed; stunted.
Nantucket fever human **babesiosis**.
nanus [*nā'nəs*] a dwarf.
Nanyang cattle Chinese draft cattle, usually red with gray or white spots.
nape [*nāp*] the back of the neck. Called also nucha.
naphazoline [*naf-az'o-lēn*] a sympathomimetic used topically as a vasoconstrictor in the treatment of conjunctivitis.
naphthalene [*naf'thə-lēn*] a hydrocarbon from coal tar oil.
chlorinated n. see **chlorinated naphthalenes**.
naphthalophos a species-specific anthelmintic against *Haemonchus contortus*, most useful in areas where benzimidazole resistance has developed in the worm population and where frequent treatment is necessary. It also has the advantage that it is used at a single dose level for sheep of all sizes. It is an organophosphate compound but is safe at the recommended dose rates. Higher dose rates are of moderate efficiency against most intestinal nematodes of sheep, but may be toxic. Called also naftalofos.
naphthlindandione an anticoagulant rodenticide, related to warfarin.
naphthol [*naf'thol*] a phenol occurring in coal tar: α-naphthol (1-hydroxynaphthalene) or β-naphthol (2-hydroxynaphthalene). It has antiseptic properties and is used in compound form as a skin antiseptic.
2-naphthylamine an industrial chemical identified as a urinary bladder carcinogen.
α-naphthylthiourea (ANTU) a rodenticide. Causes fatal pericardial and pleural effusion and pulmonary edema in most domestic animal species if taken accidentally. Little used nowadays.
Napier grass *Pennisetum purpureum.* Called also elephant grass.
napkin ring lesion a circumferential adenocarcinoma of the rectum, often a cause of rectal stricture.
naproxen [*nə-prok'sən*] a propionic acid derivative with analgesic, antipyretic and anti-inflammatory activity (a nonsteroidal anti-inflammatory agent); associated with severe gastrointestinal toxicity in dogs and cats.
napsylate [*nap'sə-lāt*] USAN contraction for 2-naphthalenesulfonate.
narasin [*nar'ə-sin*] an ionophore (polyether of monocarboxylic acid produced by *Streptomyces aureofaciens*) used as an aid to gastrointestinal absorption and to improve weight gains as for monensin. Causes poisoning similar to monensin poisoning.
Narcissus [*nahr-sis'əs*] European genus of plants in the family Liliaceae. Includes the daffodil and narcissus. Can be poisonous if plant residues, especially bulbs, are ingested by animals because of the high content of lycorine, which causes salivation, vomiting and diarrhea.
narc(o)- word element. [Gr.] *stupor, stuporous state.*
narcolepsy [*nahr'ko-lep"se*] brief, transient episodes of acute loss of consciousness, often precipitated by exercise or excitement, with partial to complete loss of muscle tone. It occurs in dogs and rarely cats and is thought to be inherited in Doberman pinschers, Shetland ponies, miniature horses and Suffolk horses.
narcosis [*nahr-ko'sis*] a reversible state of central nervous system depression induced by a drug.
basal n., basis n. narcosis with complete unconsciousness, amnesia and analgesia.
narcotic [*nahr-kot'ik*] 1. pertaining to or producing narcosis. 2. a drug that produces insensibility or stupor. In veterinary medicine the term narcotic includes any drug that has this effect, but care is needed to avoid confusion with the more common usage of the word to mean the habit-forming drugs—for example, opiates such as morphine and heroin, and synthetic drugs such as meperidine. These can be legally obtained for use in animals only with a veterinarian's prescription. The sale or possession of narcotics for other than strictly therapeutic purposes is prohibited by law.
n. analgesics opiate derivatives such as morphine and etorphine.
n. antagonists substances used to reverse the effects of morphine derivatives. They include naloxone, and partial antagonists such as levallorphan and nalorphine.
n. antitussives cough suppressants, usually containing codeine.
narcotize [*nahr'ko-tīz*] to put under the influence of a narcotic.
nardoo see ***Marsilea drummondii***.
nares [*nā're*] [L.] plural of *naris;* the openings of the nasal cavity. See also **nostril**, **choana**.
caudal n. see **choana**.
holorhinal n. the type of external nostrils found in many gallinaceous and anserine birds. The nostril does not reach beyond the naso-frontal hinge.
schizorhinal n. a kind of nostril found in some birds. The external nares are long and slit-like and extend caudally beyond the nasal-frontal hinge.
stenotic n. a congenital anomaly found most commonly in brachycephalic dogs. There is inspiratory dyspnea, often forcing open-mouth breathing, and sometimes coughing or gagging. Associated anomalies, such as elongated soft palate and everted laryngeal saccules, are common, as are secondary changes in the respiratory tract, including laryngeal and tracheal collapse. See also **brachycephalic** obstructive syndrome.
narrow-leaved sumpweed see ***Iva angustifolia***.
Narthecium [*nahr-the'se-əm*] toxic plant genus in the family Liliaceae; contain steroidal saponins which cause alveld, a crystal-associated cholangiohepatopathy and a resulting jaundice and photosensitive dermatitis; contain 3-methoxy-2(5H)-furanone causing nephrosis; includes *N. asiaticum*, *N. ossifragum* (bog asphodel).
narwhal an Arctic whale (*Monodon monoceros*) with an extraordinary dentition. It has only two teeth, neither of which erupt in the female and usually only the left one in the male where it grows as an elongated, spiral tusk, up to nine feet in length.
nasal pertaining to the nose.
n. acariasis characterized by mild nasal discharge and hyperemia, occasionally severe rhinitis. See also ***Pneumonyssoides caninum***.
n. actinobacillosis a chronic granulomatous lesion in the nasal cavity of the sheep, causing nasal obstruction and discharge, usually unilaterally.
n. amyloidosis in horses analogous to AL-amyloidosis in humans; can occur independently of a generalized disease, affecting nasal vestibule and anterior septum and turbinates. Usually presents with mild nasal discharge, labored breathing and occasionally epistaxis with sufficient nodular or diffuse deposits to obstruct the nasal passage.
n. areae, n. plane the polygonal, raised, epidermal markings on the skin of the nasolabial plane of the dog. The pattern of marking is individual to each dog and can be used for identification, similar to the use of fingerprints in humans.
n. breath flow of the breath from the nostrils as distinct from the breath from the mouth.
n. breath volume as determined by holding the palms of the hands in front of the nostrils; diminution or cessation of flow are readily appreciated.
n. catarrh chronic nasal discharge without obvious physical cause. A specific problem of unknown etiology in rabbits, although *Bordetella bronchiseptica* is thought to be implicated. Manifested by sneezing, constant nasal and ocular discharge and matting of the fur on the insides of the forelimbs. Called also snuffles.
n. cavity erectile tissue erectile tissue present only in some patients; usually collapsed.
n. cavity hemorrhage see **epistaxis**.

VetBooks.ir

N-2: Nasal deviation in a horse.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

n. cavity obstruction by mucosal inflammation, foreign body, neoplasm; detected by assessing the nasal breath flow.
n. cavity olfactory region located on ethmoturbinates, turbinates and nasal septum; covered by olfactory epithelium including sustentacular, basal and olfactory cells.
n. cavity respiratory region covers most of the cavities; covered by respiratory epithelium containing many, mainly serous, glands and carrying cilia.
n. cavity-sinuses see paranasal **sinuses**.
n. cavity vestibular region place of transition from skin to respiratory epithelium.
n. conchae see Table 10.
n. cycling reciprocal change in degree of congestion between nostrils; when the mucosa of one nasal cavity becomes congested the mucosal congestion of the opposite nasal cavity diminishes.
n. deviation 1. occurs as a congenital deviation of the maxilla and nasal septum and leads to malocclusion of the maxillary teeth. 2. can occur as a result of altered osteoblastic and osteoclastic activity from bacterial exotoxins as occurs in atrophic rhinitis. 3. in older animals can result from **paranasal** sinus cysts or sinonasal neoplasia.
n. discharge may be unilateral or bilateral, serous, purulent, hemorrhagic, or contain food material.
n. diverticulum see nasal **diverticulum**.
encapsulated n. hematoma persistent because of its size; blood is accumulated under respiratory mucosa so as to resemble a polyp. Like a polyp the hematoma obstructs the flow of breath through the nasal cavity.
enzootic n. adenocarcinoma contagious neoplasm of the ethmoidal turbinates with sporadic but world-wide occurrence in sheep and goats; may be clustered on some farms. Caused by enzootic nasal tumor virus-1, a beta-retrovirus with close homology to the jaagsiekte retrovirus. A disease of mature animals manifest with seromucous and seropurulent nasal discharge, sneezing, stertorous respiration, facial deformity in some, progressive weight loss and death in 3–6 months. Adenocarcinomas which occur as soft, greyish-tan, cauliflower-like neoplasms develop in the ethmoidal area and compress, invade and replace adjacent bones of the head. Called also enzootic nasal tumor.
n. fold see facial **fold**[1].
n. foreign bodies take the form of grass seeds or sticks poked up while the animal is scratching its muzzle in allergic rhinitis, especially in cattle. Cause sneezing, nasal discharge, inspiratory dyspnea, snoring noise and rubbing of the nose. Foreign bodies may be viewable or palpable.
n. fossa see nasal **fossa**.
n. fundus the caudal part of the nasal cavity, close to the ethmoid bone.
n. granuloma see **enzootic** nasal granuloma, **mycotic** nasal granuloma, ***Schistosoma*** *nasalis*.
n. hematoma cause unilateral nasal obstruction; are usually the result of foreign body injury, rarely due to inept passage of a nasal tube or endoscope. See also progressive **ethmoidal** hematoma.
n. hemorrhage see **epistaxis**. Called also rhinorrhagia, nose bleed.
n. meatus see nasal **cavity**.
n. mucosal inflammation see **rhinitis**.
n. obstruction causes respiratory stertor, mouth breathing, and small airstreams from the nostrils. It may be caused by a palpable foreign body.
n. odor smell of the nasal breath; may be necrotic, smell of ketones.
n. passage see nasal **cavity**.
n. plane see nasal **plane**.
n. polyp see nasal **polyp**.
progressive n. hematoma see progressive **ethmoidal** hematoma.
n. schistosomiasis infection with the blood fluke ***Schistosoma***, which is largely asymptomatic but can cause dyspnea, snoring and profuse nasal discharge.
n. septum a vertical plate of bone and cartilage covered with mucous membrane that divides the cavity of the nose. See also **septum**.
n. sinus see paranasal **sinus**.
n. swab cotton swab on a stick, passed up the nostril to obtain a sample of exudate and epithelial debris for microbiological or cellular examination.
n. turbinates nasal conchae; see Table 10.
n. vestibule the part of the nasal cavity just inside the nostrils that is lined with skin.
n. wash, n. flush flushing of the nasal cavity, usually with sterile saline, to recover cells or infectious agents for cytology or culture.

N-3: Nasal discharge of mucous and milk in a calf with a cleft palate.

nascent [*nas'ənt, na'sənt*] 1. being born; just coming into existence. 2. just liberated from a chemical reaction, and hence more reactive.
n. DNA see **Okazaki fragments**.
nasion [*na'ze-on*] a landmark found at the middle point of the frontonasal suture.
nas(o)- word element. [L.] *nose*.
nasociliary [*na"zo-sil'e-ar"e*] pertaining to the eyes, brow, and root of the nose.
nasodigital pertaining to the specialized epidermal tissue of the planum nasale and footpads of carnivores.
nasofrontal [*na"zo-fron'təl*] pertaining to the nasal and frontal bones.
nasogastric [*na"zo-gas'trik*] pertaining to the nasal cavity and the stomach.
n. tube see nasogastric **tube**.
nasolabial [*na"zo-la'be-əl*] pertaining to the nose and lip.
n. gland multilobular, tubuloalveolar, seromucoid glands in the muzzle and lips of cattle, sheep, goats.
nasolabiogram **labiogram**.
nasolacrimal [*na"zo-lak'rĭ-məl*] pertaining to the nose and lacrimal apparatus.
n. apparatus see **lacrimal** apparatus.
n. duct see lacrimal **duct**.
n. duct obstruction congenital or acquired blockage of the nasolacrimal duct causing ipsilateral epiphora. May result from foreign bodies, accumulation of inflammatory debris, or

VetBooks.ir

neoplasia, inflammation, or injury of the duct or surrounding nasal tissues.

n. furrow formed in the embryo by the fusion of the maxillary process and the lateral nasal fold; develops eventually into the nasolacrimal duct.

n. groove nasolacrimal furrow.

n. radiography see **dacryocystorhinography**.

n. sac see **lacrimal** sac.

n. system see **lacrimal** apparatus.

nasomaxillary pertaining to the maxilla and the nasal cavity.

n. aperture see nasomaxillary **aperture**.

nasomyiasis infection of the nasal cavity by fly larvae. See ***Oestrus ovis***.

naso-oral pertaining to the nose and mouth.

nasopalatine [*na"zo-pal'ə-tīn*] pertaining to the nose and palate.

nasopharyngeal [*na"zo-fə-rin'je-əl*] pertaining to the nasal and pharyngeal cavities.

n. meatus see nasopharyngeal **meatus**.

n. polyp see nasopharyngeal **polyp**.

n. spasm see reverse **sneeze**.

n. stenosis seen mainly in cats where scar tissue forms above the soft palate, probably as a result of previous trauma or inflammation, obstructing airflow through the nasopharynx. There is stenorous and open-mouth breathing.

n. swab a sterile swab inside a plastic sleeve is passed up the nostril to the pharynx, the swab exteriorized, then withdrawn inside the sleeve and the appliance withdrawn.

nasopharyngitis [*na"zo-far"in-ji'tis*] inflammation of the nasopharynx.

nasopharyngolaryngoscope [*na"zo-fə-ring"go-lə-ring'go-skōp*] a flexible fiberoptic endoscope for examining the nasopharynx and larynx.

nasopharyngoscopy [*na"zo-far"in-gos'kə-pe*] visual examination of the pharynx via a fiberscope passed up the nostril.

nasopharynx [*na"zo-far'inks*] the part of the pharynx above the soft palate.

nasosinusitis [*na"zo-si"nəs-i'tis*] inflammation of the paranasal sinuses.

nasty child syndrome constrictive foreign bodies, usually rubber bands or string, applied around the scrotum, muzzle, neck, tail or limbs of dogs or cats.

nasus [*na'səs*] [L.] *nose*.

natal [*na'təl*] 1. pertaining to birth. 2. pertaining to the nates (buttocks).

natality [*na-tal'ĭ-te*] the birth rate.

natamycin [*nat"ə-mi'sin*] a polyene antibiotic used in topical treatment of fungal infections of the skin, eye and nasal cavity.

nates [*na'tēz*] [L.] *the buttocks*.

natimortality [*na"tĭ-mor-tal'ĭ-te*] the proportion of stillbirths to the general birth rate.

National Animal Disease Center (NADC) a central research facility of the Agricultural Research Service, United States Department of Agriculture, located in Ames, Iowa conducting basic and applied research on diseases of livestock and poultry.

National Animal Health Monitoring System (NAHMS) established in 1983 for the purpose of collecting, analyzing, and disseminating data on animal health, management, and productivity across the USA. It conducts national studies on the health and health management of America's domestic livestock populations.

National Association of Veterinary Technicians in America (NAVTA) provides direction, education, support and coordination for its members, and works with other allied professional organizations for the competent care and humane treatment of animals.

National cautery kit for electrocautery which includes a rheostat, pistol and appropriate cautery tips. The pistol is a handheld applicator with a finger operated on–off switch.

National Center for Foreign Animal and Zoonotic Disease Defense (FAZD Center) focuses on research, education and outreach relating to exotic animal, emerging, and/or zoonotic diseases. Founded in April 2004 as a Department of Homeland Security Center of Excellence, the FAZD Center leverages the resources of multiple major universities and minority serving Institutions.

National Fallen Stock Scheme in the UK, a voluntary, nationally coordinated collection and disposal service for dead farm animals to comply with EU regulations which ban on-farm burial or incineration.

National Formulary (NF) see **United States National Formulary**.

National Institute for Research in Dairying at Reading, UK, this was for many years the world's leading institution for research into dairying, especially in the fields of mastitis and milking procedure. Called also NIRD. Now called Animal Grassland Research Institute.

National Office of Animal Health (NOAH) an organization representing the animal medicine industry in the United Kingdom. It aims to provide safe, effective, quality medicines for the treatment and welfare of animals.

National Organic Program USDA national program that develops, implements, and administers national production, handling, and labeling standards for organic agricultural products. It accredits certifying agents (foreign and domestic) to inspect organic production to certify that it meets USDA requirements.

National Research Council (NRC) a body representing the (United States) National Academy of Sciences, National Academy of Engineering, and the Institute of Medicine, and established to further knowledge and advise the US government. It issues a series of publications on the nutrient requirements of each species of domestic animal, laboratory animals, primates and fish.

National Residue Program a testing program for chemical residues in domestic and imported meat, poultry and egg products. Administered by the Food Safety and Inspection Service of the USDA.

National Surveillance Unit (NSU) established in 2003, it is solely concerned with animal disease surveillance and surveillance enhancement. It coordinates activities related to US animal health surveillance and is intended to facilitate the development of a National Animal Health Surveillance System.

National Veterinary Accreditation Program (NVAP) a voluntary program in the USA that certifies private veterinary practitioners to work cooperatively with Federal veterinarians and State animal health officials to ensure State and Federal animal health regulations and to ensure that exported animals will not introduce diseases into another State or country. Participating veterinarians must be licensed in the State(s) where they participate and practice.

natremia [*nə-tre'me-ə*] see **hypernatremia**.

natrium (Na) [L.] *sodium*.

natriuresis [*na"tre-u-re'sis*] the excretion of abnormal amounts of sodium in the urine.

natriuretic [*na"tre-u-ret'ik*] 1. pertaining to or promoting natriuresis. 2. an agent that promotes natriuresis.

n. peptides key regulators of salt and water homeostasis, and blood pressure. They are valuable biomarkers, particularly of congestive heart failure. Includes **atrial** natriuretic peptide (ANP), brain or B-type (BNP), C-type (CNP), dendroaspis (DNP), and urodilatin.

natural [*nach'ə-rəl*] occurs in nature, without the intervention of humans.

n. focus the ecology that is best suited to a biological system, e.g. an individual insect-borne disease; the area in which the disease naturally flourishes best; an ecological niche.

n. history history of a process or organism as it occurs in nature, e.g. course of a disease from infection to resolution.

naturally bred see **bull-bred herd**.

naturopath [*na'chər-o-path"*] a practitioner of naturopathy.

naturopathy [*na"chər-op'ə-the*] an early American system of healing that views disease as a manifestation of alterations in the processes by which the body naturally heals itself. It emphasizes health restoration as well as disease treatment using diet modification, nutritional supplements, herbal medicine, acupuncture, Chinese medicine, hydrotherapy, massage, joint manipulation and lifestyle counseling.

nausea [*naw'ze-ə*] a subjective sensation in humans which probably occurs in animals. It is an unpleasant sensation, vaguely referred to the epigastrium and abdomen, with a tendency to vomit. In dogs and cats, observed as hypersalivation with repeated licking and swallowing. Nausea may be a symptom of a variety of disorders, some minor and some more serious. Nausea is usually felt when nerve endings in the stomach and other parts of the body are irritated, e.g. in motion sickness. The irritated nerves send messages to the center in the brain that controls the vomiting reflex. When the nerve irritation becomes intense, vomiting results.

navel [*na'vəl*] the umbilicus, the scar marking the site of entry of the umbilical cord into the fetal belly.

n. bleeding a problem in young piglets, up to 2 days old. Blood oozes from navel causing severe anemia, frequently death: prefarrowing vitamin C for more than 6 days before farrowing prevents most outbreak problems; called also umbilical hemorrhage.

VetBooks.ir

n. ill see **omphalitis**. Called also omphalophlebitis.
navelwort ***Cotyledon*** *umbilicus*.
navicular [*nə-vik'u-lər*] boat-shaped; applied to certain bones, such as the navicular bones of the horse's foot and human ankle.
n. block a specially carved block of wood in which a horse's foot is lodged to enable a radiograph of the navicular bone to be taken at a suitable angle.
n. bone 1. the distal sesamoid bone of a horse's foot; it lies on the palmar side of the coffin joint and serves to change the direction of the deep digital flexor tendon as it inserts on the distal phalanx. Its palmar surface is covered with fibrocartilage, its dorsal surface with hyaline cartilage and its dorsal surface is pocked with a row of nutrient foramina. Called also distal sesamoid bone. 2. (rare) the central tarsal bone.
n. bursa inflammation in the horse may contain *Brucella abortus*; a cause of intermittent lameness.
n. disease a chronic degeneration of the navicular bone in which there is damage to its flexor surface and the overlying flexor tendon in the front feet of horses. There may be an accompanying navicular bursitis and osteophyte formation. Characterized by intermittent lameness and pointing when the animal is standing. Called also podotrochlitis.
NAVLE North American Veterinary Licensing Examination.
NAVTA National Association of Veterinary Technicians in America.
Nb chemical symbol, *niobium*.
NBE net base excretion in urine. See net **acid** excretion.
NCAHS National Center for Animal Health Surveillance, USA. Contains two distinct units, the National Surveillance Unit (NSU) and the National Animal Health Monitoring System (NAHMS) unit.
NCBA National Cattlemen's Beef Association, the major association of cattle breeders, producers and feeders in the USA. Once called the National Cattlemen's Association.
nCi nanocurie; see **becquerel**.
NCS not clinically significant.
Nd chemical symbol, *neodymium*.
N'Dama a West African small, humpless type of beef cattle, fawn, dun or light red in color, with lyre or crescent horns. There are a large number of varieties.
NDF neutral detergent fiber.
NE Nomina Embryologica.
Ne chemical symbol, *neon*.
Neapolitan farcy see **epizootic** lymphangitis.
near-drowning nonfatal water inhalation. There is severe injury to the lungs and hypoxia.
Near East fat-tailed a group of sheep breeds used for milk, meat or carpetwool; white, white with a colored face, black, brown or broken colored. Males are horned, females are polled; tails are fat, S-shaped and bi-lobed. Called also Semitic fat-tailed.
near–far–far–near suture pattern an excellent tension suture. The first bite is made at right angles to the wound and close to it, under the wound, to emerge a long way from the wound, on the far side. The second bite begins closer to the wound, and crosses underneath it to emerge beyond the first point of entry. The two ends are tied there.
near-side a horse's left-hand side.
nearest neighbor the basis for the means of analyzing the spatial relations of free-living populations; consists of measuring distance between infected herds and their nearest neighbors.
nearthrosis [*ne"ahr-thro'sis*] a false or artificial joint.
neat an archaic word for cattle.
neatsfoot oil an oil manufactured by boiling cattle hooves. Used in leather maintenance.
Nebovirus a genus in the family *Caliciviridae* for which the type species Newbury virus, which causes calf diarrhea.
Nebraska virus the calf diarrhea ***Rotavirus***.
nebula [*neb'u-lə*] a small corneal opacity. See also **macula** and **leukoma**.
nebulization [*neb"u-lĭ-za'shən*] 1. conversion into a spray. 2. treatment by a spray.
nebulizer [*neb'u-li"zər*] an atomizer; a device for creating an aerosol.
Necator [*ne-ka'tor*] a genus of **hookworm** in the subfamily Necatorinae.
N. americanus the common hookworm of humans, found also in pigs and dogs.
N. suillus see *N. americanus* (above), found in pigs.
necatoriasis [*ne-ka"to-ri'ə-sis*] infection with organisms of the genus *Necator*; hookworm disease. Manifested by anemia and melena.
neck [*nek*] a constricted portion, such as the part connecting the head and trunk of the body, or the constricted part of an organ, as of the uterus (cervix uteri) or other structure.
n. band a band worn around the neck of a dairy cow, attached to which is a name or number plate or plaque.
n. chain used to tether dairy cows in standing stalls in enclosed barns; attached to the cow by a leather or webbing neck band.
n. collar a part of most horse draft harnesses, providing a point of attachment for plow chains or cart or buggy harness. Made of leather stuffed with straw and lined with felt, it closes over the top of the neck, just in front of the withers, lies on the front of the shoulder and is a support for the hames to which the traces or chains are actually attached. Pressure from a badly fitted collar can cause suprascapular nerve paralysis or sweeny.
ewe n. a concave neck; a fault in conformation in most species except sheep.
femoral n. the column of bone connecting the head of the femur its shaft.
n. flexion abnormal presentation of the fetus, with the head and neck deviated ventrally and its dorsal flexure at the pelvis. Ventral deviation of the head and neck.
humeral n. the constriction of the humerus just distal to its head.
n. lesion resorption of tooth structure around the cemento-enamel junction. See feline **odontoclastic** resorptive lesions, **cervical** line lesions.
n. reining see neck **rein**.
tooth n. the narrowed part of certain teeth, between the crown and the root; where the cementum meets the enamel.
n. twist injury see **head** twist injury.
uterine n., n. of uterus cervix uteri.
wry n. see **torticollis**.
n. yoke see **headstock**.
neck stab [*nek*] see **evernazione**.
neckbread butcher's term for the cervical segment of the thymus.
necklace [*nek'ləs*] bands of color across the lower neck and chest of cats.
necrectomy [*nek-rek'tə-me*] excision of necrosed tissue.
necr(o)- word element. [Gr.] *death*.
necrobacillosis [*nek"ro-bas"ĭ-lo'sis*] 1. tissue damage, especially in liver, caused by infection by *Fusobacterium necrophorum*. Manifested usually as areas of necrosis, occasionally as cellulitis or phlegmon. The pus has a characteristic rotting odor. See also **hepatic** abscess. 2. a sporadic infection in rabbits with *Fusobacterium necrophorum*; characterized by necrosis, ulceration and abscessation on the face, head and neck, but can be more widespread and affect viscera. Called also Schmorl's disease.
interdigital n. see bovine **footrot**.
oral n. an infectious stomatitis of calves caused by *Fusobacterium necrophorum*. There are deep necrotic ulcers in the mouth, e.g. lateral to the molar teeth, foul breath, drooling saliva, fever and toxemia. See also calf **diphtheria**. Called also necrotic stomatitis.
ruminal n. see **ruminal** necrobacillosis.
necrobiosis [*nek"ro-bi-o'sis*] the physiological death of individual effete cells in any tissue; a normal mechanism in the constant turnover of many cell populations. See also **apoptosis**.
nodular n. multiple, cutaneous nodules of unknown etiology on the neck, withers and back of the horse. They are composed of degenerate collagen and an eosinophilic and granulomatous

N-4: Necrobacillosis. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

N

response. Called also equine nodular collagenolytic granuloma or eosinophilic granuloma.

necrocytosis [*nek"ro-si-to'sis*] death and decay of cells.

necrogenic [*nek"ro-jen'ik*] productive of necrosis or death.

necrogenous [*nə-kroj'ə-nəs*] originating or arising from dead matter.

necrology [*nə-krol'ə-je*] statistics or records of death.

necrolysis [*nə-krol'ĭ-sis*] separation or exfoliation of necrotic tissue.

toxic epidermal n. an acute exfoliative disease of skin and mucous membranes in dogs, cats and monkeys. Characterized by full thickness epidermal necrosis and accompanied by erythema, vesicles, bullae and ulcers, and systemic signs of fever, anorexia and lethargy. It is associated with concurrent infections or neoplasia, and drug reactions.

necroparasite an organism that lives in dead tissue.

necrophagous [*nə-krof'ə-gəs*] feeding upon dead flesh.

necrophilous [*nə-krof'ĭ-ləs*] showing a preference for dead tissue; said of microorganisms.

necropneumonia [*nek"ro-noo-mo'ne-ə*] gangrenous pneumonia.

necropsy [*nek'rop-se*] examination of a body after death. See also **autopsy**.

necrose [*nek'rōs*] to become necrotic or to undergo necrosis.

necrosis [*nə-kro'sis*] pl. *necroses* [Gr.] death of tissues or individual cells within a living animal.

aseptic n. necrosis without infection.

caseous n. necrosis in which the dead tissue becomes completely amorphous, having lost all architectural features. Is typically crumbly or semi-solid ('cheesy') in texture. Typically seen in the center of mature abscesses.

central n. necrosis affecting the central portion of an affected organ, cell or lobule of the liver.

cheesy n. see caseous necrosis (above).

coagulation n., coagulative n. death of cells, the protoplasm of the cells becoming fixed and opaque by coagulation of the protein elements, the cellular outline persisting. The original tissue architecture can still be discerned in histological sections of affected tissue.

colliquative n. see liquefactive necrosis (below).

ischemic n. necrosis of any tissue due to interruption of its blood supply.

liquefactive n. necrosis in which the necrotic material becomes softened and liquefied; may be removed leaving a cavity.

moist n. necrosis in which the dead tissue is wet and soft.

n. necrosis see **Roeckl's granuloma**.

Zenker's n. hyaline degeneration and necrosis of striated muscle; called also Zenker's degeneration.

necrospermia [*nek"ro-spur'me-ə*] a condition in which the spermatozoa are dead or motionless. See also **immotile cilia syndrome**.

necrotic [*nə-krot'ik*] of or pertaining to cell death.

n. cervicovaginitis necrosis in cows and ewes, usually as a result of trauma during parturition.

n. colitis common in older cats as a cause of chronic, foul, bloody diarrhea.

n. dermatitis gangrene and necrosis of inflamed, wet skin caused by *Clostridium septicum*; characterized by a sudden onset of severe depression, a short course of a few hours and a high death rate; mostly in 4–16 week old chicks.

n. ear syndrome extensive necrosis of ear edges in baby pigs probably caused by biting by pen mates plus *Staphylococcus hyicus*.

n. enteritis 1. subacute or chronic enteritis in pigs, usually a sequel to an acute episode of enteritis caused by *Salmonella* spp. or *Campylobacter hyointestinalis* or *Lawsonia intracellularis* coupled with other anaerobic flora. Characterized by unthriftiness, and intermittent or chronic diarrhea. 2. an acute, rapidly fatal necrohemorrhagic enteritis in young chickens caused by *Clostridium perfringens* type C. 3. an alternate name for enterotoxemia in piglets caused by *Clostridium perfringens* type C.

n. glossitis necrosis and loss of the tip of the tongue in feeder steers; cause unknown.

n. hepatitis see **infectious** necrotic hepatitis.

n. laryngitis see calf **diphtheria**.

n. rhinitis a cellulitis of soft tissues of the face and nose of pigs. The face is swollen and the nasal cavity occluded. It causes dyspnea, stertor and difficult mastication. *Fusobacterium necrophorum* is the cause, usually entering through fight wounds. Called also bullnose.

N-5: Necrotic enteritis.

n. stomatitis see oral **necrobacillosis**.

n. tips see avascular **chorion**.

n. ulcer of swine see **ulcerative** granuloma of swine.

n. vulvovaginitis usually the result of injury during dystocia.

necrotizing [*nek'ro-tīz"ing*] a disease process, usually inflammation, associated with or causing necrosis.

necrotomy [*nə-krot'ə-me*] 1. dissection of a dead body. 2. excision of a sequestrum.

necrotoxin [*nek'ro-tok"sin*] a factor or substance produced by certain staphylococci that kills tissue cells.

neddy vernacular for horse; called also nag, cayuse, steed.

needle [*ne'dəl*] 1. a sharp instrument for suturing or puncturing. 2. to puncture or separate with a needle.

acupuncture n's stainless steel needles with silver-plated handles 0.5–1 inch long, which are inserted into tissues at those points on the skin surface which are considered relevant to the problem being treated. Called also dry-needle acupuncture.

aneurysm n. one with a handle used in ligating blood vessels.

aspirating n. a long, hollow needle for removing fluid from a cavity.

aspiration biopsy n. a needle to which suction can be applied in order to withdraw a core of tissue from a solid organ.

atraumatic n. surgical needles with suture material fused to the end, which is less traumatic to tissues then suture doubled back through the end of a needle. See **swage** (2).

blunt-point n. a noncutting, blunt-pointed needle used in general surgery and for suturing liver and kidney. Needle pricks are less likely. This is an issue in modern surgery on humans.

n.-cannula a needle used as a cannula, as for introduction of an intravenous catheter or for passing a suture thread.

cataract n. one used in removing a cataract; no longer used.

discission n. a two-way needle or cannula which permits flushing and aspiration of liquid cataract material. See also **discission**.

n. driver see needle holder (below).

n. feeling the sensation perceived by the operator when the insertion of an acupuncture needle reaches the acupuncture point.

fine n. aspiration see fine needle **aspiration**.

n. grass *Stipa* spp. Called also spear grass.

Hagedorn's n. a form of flat suture needle.

n. holder a strong scissor-type instrument used to hold a suture needle while pushing it through tissue. The handles are ratcheted and have to be squeezed to release the needle. The face of each blade is grooved so that the needle will not twist or swivel while being driven. The natural action is for a right-handed surgeon.

N-6: Needle holders. Mayo-Hegar (left), Olsen-Hegar (right). From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

hypodermic n. a hollow, sharp-pointed needle to be attached to a hypodermic syringe for injection of solutions.
knife n. a slender knife with a needle-like point, used in ophthalmic operations.
ligature n. a long-handled, slender steel needle, having an eye in its curved end, used for passing a ligature underneath an artery.
n. puncture puncture biopsy of a mass, tissue or fluid accumulation in order to relieve pressure or to collect sample for field or laboratory examination.
reverse cutting n. a curved cutting needle with the cutting edge on the back of the curve rather than on the concave surface.
Rosenthal n. used for aspiration of bone marrow.
round bodied n. a noncutting surgical needle used for suturing tissues that separate easily such as intestine, liver, lung and fascia. Called also taperpoints.
spatula n. a suture needle flattened in one axis rather than round; designed so as to permit maintenance of depth within a lamellar structure, especially for corneal suturing.
n. stick injury accidental puncture of the skin by needles while in use or as a result of inappropriate disposal with the risk of introducing infectious agents.
stop n. one with a shoulder that prevents too deep penetration.
tape n. a special, heavy duty needle with a palm-fitting handle, for sewing with tape.
taperpoint n. see round bodied needle (above).
tapercut n. a suture needle with a flattened shaft, so that it is three times as wide as it is thick, and a point which has a gradually diminishing triangular cross-section, a cutting point. Modern design has a circular cross-section and a short cutting tip.
needling includes introduction and withdrawal of needles, lifting and thrusting, twirling, and combinations of the three basic movements in acupunctorial technique.
NEEE Near Eastern equine encephalitis.
neem [nēm] see ***Azadirachta indica***.
Neethling virus the poxvirus that causes the severe form of **lumpy skin disease**.
NEFA non-esterified fatty acids.
neg negative.
negative [neg'ə-tiv] 1. having a value of less than zero. 2. indicating lack or absence, as coagulase-negative or Brucella-negative. 3. characterized by denial or opposition.
negative sense in RNA viruses, the genomic RNA is of opposite polarity, 5′ to 3′, to messenger RNA so that after adsorption, penetration, uncoating and release of the viral RNA into the cytoplasm of the cell, the viral RNA must first be transcribed to produce messenger RNAs which is initially accomplished by a RNA dependent RNA polymerase that is a structural component of the virus and released along with the viral RNA.
negatron [neg'ə-tron] a negatively charged electron.
negligence [neg'li-jens] in law, the failure to do something that a reasonable person of ordinary prudence would do in a certain situation or the doing of something that such a person would not do. Negligence may provide the basis for a lawsuit when there is a legal duty, as the duty of a veterinarian, to provide reasonable care to patients and when the negligence results in damage to the patient.
contributory n. a defense against a negligence suit, in which evidence is presented that the client contributed to the unsatisfactory outcome of a case by being negligent himself/herself, e.g. by not returning the animal for further treatment soon enough.
Negri bodies [na'gre] see Negri **body**.
Nei Ching the Yellow Emperors' Classic of Internal Medicine as part of the history of Chinese medicine.
Neisseria [ni-se're-ə] a genus of gram-negative bacteria in the family *Neisseriaceae*. Many species commonly found as normal flora in the oral cavity and respiratory tract of many species and only rarely associated with disease. In humans *N. meningitidis* is the cause of meningococcal meningitis and *N. gonorrheae* is the cause of gonorrhea.
N. animaloris* and *N. zoodegmatis formerly described as eugonic fermenter 4a and 4b. Gram-negative, rod-shaped bacteria isolated from cases of multifocal interstitial pneumonia in miscellaneous Carnivora. Also cause zoonotic wound infections.
nelia ***Acacia*** *osswaldii*.
Nelson scissors [nel'sən] blunt-pointed, curved or straight-bladed, long-handled scissors designed for thoracic surgery.
Nelson's syndrome [nel'sən] the development of an ACTH-producing pituitary tumor after bilateral adrenalectomy in Cushing's syndrome.
nemadectins a subgroup of milbemycins differing slightly in chemical structure from other milbemycins.
nemaline body [nem'ə-lēn] the name of the lesion arises from the electron microscopic image; an inclusion-like structure found in nemaline rod **myopathy**.
nematocerans [nem"ə-tos'ər-ənz] members of the suborder of insects Nematocera. It includes the gnats, mosquitoes, midges, black flies and gall flies.
nematocide [nem'ə-to-sīd"] 1. destroying nematodes. 2. an agent that destroys nematodes, including **phenothiazine**, **piperazine**, **benzimidazole**, the **imidazothiazoles**, the **tetrahydropyrimidines**, **organophosphorus compounds**, **macrocyclic lactones** and a wide variety of miscellaneous compounds.
nematocysts [nem'ə-to-sists"] the stinging capsules of marine animals in the phylum Cnidaria. They are the characteristic feature of members of the phylum.
nematode [nem'ə-tōd] a roundworm; any individual organism of the phylum Nematoda. Parasitism with any of the worms in this group represents a significant proportion of the diseases of animals. Includes: *Ancylostoma*, *Ascaris*, *Capillaria*, *Dictyocaulus*, *Dioctophyme*, *Dirofilaria*, *Habronema*, *Haemonchus*, *Metastrongylus*, *Muellerius*, *Onchocerca*, *Ostertagia*, *Oxyuris*, *Parafilaria*, *Parascaris*, *Protostrongylus*, *Rhabditis*, *Skrjabinema*, *Spirocerca*, *Strongyloides*, *Strongylus*, *Syngamus*, *Thelazia*, *Trichuris*, *Toxocara*, *Trichinella*, *Trichostrongylus*.
n. galls hard, fibrous excrescences produced in the seedheads of grasses by chronic inflammation created by an invasion by larvae of grass seed nematodes, e.g. *Anguina* spp.
grass-seed n. the grass seed nematode *Anguina lolii* infests certain pasture grasses carrying the toxic bacterium *Rathayibacter toxicus* that produces corynetoxins and causes a fatal poisoning in animals eating the grass. Called also *A. fenesta*, *A. agrostis*. See also ***Lolium*** *rigidum*, corynetoxicosis.
nematodiasis [nem"ə-to-di'ə-sis] state of infestation with nematodes.
cerebral n. sporadic occurrence of chance invasion of brain by migrating nematode larvae, e.g. strongyles in horses. See also **cerebrospinal** nematodiasis. Called also kumri.
Nematodirella a genus of worms in the trichostrongyloid family Molineidae.
N. cameli found in camel and reindeer.
N. dromedarii found in dromedary and sheep.
N. longispiculata found in the small intestine of sheep, goats and other ruminants.
nematodiriasis infestation in the small intestine with the nematode *Nematodirus* spp. Characterized clinically by persistent diarrhea and wasting. Usually found in mixed infestations.
Nematodirus a genus of roundworms in the trichostrongyloid family Molineidae, cause of **nematodiriasis**.
N. abnormalis found in sheep, goats and camels.
N. andrewi found in sheep.
N. aspinosus found in rabbits and hares.
N. battus a parasite of sheep and cattle; causes nematodiriasis.
N. filicollis found in sheep, cattle, goat and deer.
N. helvetianus found in cattle and occasionally sheep.
N. hsuei found in sheep.
N. lamae found in sheep.
N. leporis found in rabbits and hares.
N. odocoilei found in sheep.
N. oiratianus found in camels and wild ruminants.
N. spathiger found in the small intestine of sheep, cattle and other ruminants.
N. tarandi found in sheep.
neo- word element. [Gr.] *new, recent*.
neoantigen [ne"o-an'tĭ-jən] a newly acquired and expressed antigen, e.g. a T antigen, present in cells infected by oncogenic viruses.
neoarsphenamine an organic arsenical antiprotozoal agent which used to be used extensively, particularly in the treatment of swine dysentery and blackhead of turkeys, but is now replaced by more effective compounds.
neoarthrosis [ne"o-ahr-thro'sis] see **nearthrosis**.
Neoascaris vitulorum see ***Toxocara*** *vitulorum*.
Neobassia proceriflora toxic Australian plant in family Chenopodiaceae; contains soluble oxalates causing nephrosis; can cause

N

heavy mortalities in sheep, characterized by hypocalcemia, coma and death; called also soda bush, *Threlkeldia proceriflora*.

Neobenedenia cutaneous, ocular and oral flukes of marine fish; in order Capsalidae; characterized by being transparent. Called also *Benedenia*.

neoblastic [*ne"o-blas'tik*] originating in or of the nature of new tissue

neocerebellum [*ne"o-ser"ə-bel'əm*] the cerebellar hemispheres. Phylogenetically, the newer parts of the cerebellum, especially those supplied by corticopontocerebellar fibers.

neocortex [*ne"o-kor'teks*] neopallium.

Neocuterebra a genus of flies in the family Oestridae, the larvae of which parasitize animals.

N. squamosa found in the African elephant.

Neodactylogyrus a genus of monogenetic flukes in the family Dactylogyridae, which parasitize marine and freshwater fish.

Neodiplostomum a genus of intestinal digenetic trematodes in the family Diplostomatidae. Includes *N. multicellulata* (in herons), *N. perlatum* (in piscivorous birds), *N. tamarini* (in New World primates).

neodymium (Nd) [*ne"o-dim'e-əm*] a chemical element, atomic number 60, atomic weight 144.24. See Table 4.

neogenesis [*ne"o-jen'ə-sis*] tissue regeneration.

neohemocyte experimental, artificial erythrocytes consisting of hemoglobin contained in liposomal membranes, capable of transporting and delivering oxygen to tissues.

neokinetic pertaining to the nervous motor mechanism regulating voluntary muscular control.

neomembrane [*ne"o-mem'brān*] a false membrane.

neomycin [*ne"o-mi'sin*] an aminoglycoside antibiotic produced by *Streptomyces fradiae*; the sulfate is used as an intestinal antiseptic and in treatment of systemic infections due to gram-negative bacteria. High doses and prolonged treatment can be nephrotoxic and ototoxic.

n. B framycetin.

neon (Ne) [*ne'on*] a chemical element, atomic number 10, atomic weight 20.183. See Table 4.

neon fish disease [*ne'on*] see ***Pleistophora*** *hyphessobryconis*.

neonatal [*ne"o-na'təl*] pertaining to the period immediately after birth; the duration varies between species; in humans refers to the first four weeks of life; in animals the first two weeks, at the most, seems appropriate to most clinicians. Some neonatal disorders are listed in entries below. Others are listed elsewhere under titles specific to their anatomic location, including **hyaline** membrane disease, **respiratory** distress syndrome.

n. cardiac murmur is observed in foals and most disappear before the fifth day. Persistence after that time may suggest valvular dysfunction. Many congenital murmurs are functional and cause no signs of disease.

n. diarrhea see undifferentiated **diarrhea** of the newborn.

n. distress see neonatal maladjustment syndrome (below).

n. edema usually caused by obstruction to lymphatic flow by defective development of lymph drainage system.

n. hyaline membrane disease see **hyaline** membrane disease.

n. hyperbilirubinemia see neonatal jaundice (below).

n. hypoglycemia a metabolic disease of newborn piglets caused by restriction of food intake. Clinical signs include weakness, shivering, hypothermia and terminal convulsions.

n. isoerythrolysis see **alloimmune** hemolytic anemia of the newborn.

n. isoimmune purpura see neonatal thrombocytopenic **purpura**.

n. jaundice is an important clinical sign in foals because of the possibility of alloimmune hemolytic anemia. Some cases of benign, physiological jaundice also occur in foals. There is jaundice but no other clinical or pathological abnormality. Called also neonatal hyperbilirubinemia.

n. maladjustment syndrome a disease of newborn thoroughbred foals caused by premature severance of the umbilical cord in assisted foalings and by hypoxia due to other causes. The foals may be normal for some hours after birth. Clinical signs include aimless wandering, apparent blindness, and convulsions including a sound like a dog barking. Called also barkers and wanderers.

n. mortality death in the neonatal group.

n. neoplasm occurs rarely. Lymphosarcoma, benign and malignant melanoma and myeloid leukosis are recorded. Sporadic bovine leukosis, manifested by many subcutaneous tumors, is the most common form of the disease.

n. ophthalmia see **conjunctivitis** neonatorum.

n. septicemia many bacteria, which are not widely invasive in older animals, can cause septicemia in neonates because of their immunological immaturity; common examples are *Escherichia coli*, *Listeria monocytogenes*, *Salmonella* spp., streptococci, e.g. *S. suis*.

n. spasticity an inherited disease of calves which are normal at birth but soon develop a susceptibility to tetanic convulsions when stimulated. See also inherited congenital **myoclonus**.

n. streptococcal infection occurs in all species, but is especially important in piglets and foals. Bacteremia and septicemia may result in the animal's death or the development of arthritis, endocarditis, meningitis or ophthalmitis. Causative bacteria are: foals—*Streptococcus zooepidemicus* (*S. pyogenes equi*); piglets—*S. suis* types 1 and 2, *S. equisimilis*; calves—*S. pyogenes*; lambs—*S. faecalis* and group C streptococci.

n. vigor amount of physical activity displayed by the newborn animal; an important determinant of the potential viability of the patient.

neonate [*ne'o-nāt*] a newborn animal. The duration of the state of neonaticity varies between 48 hours for a chicken and about 4 weeks for mammals, depending on the ability of the animal to survive without its dam. The age-limit definition is not accurately defined.

n. abandonment abandoned newborn of any species due principally to poor maternal instincts in the dam. See also **mismothering**.

neonatologist [*ne"o-na-tol'ə-jist*] a veterinarian who specializes in neonatology.

neonatology [*ne"o-na-tol'ə-je*] the branch of theriogenology or medicine dealing with disorders of the newborn animal.

neonicotine see **anabasine**.

neonicotinoids a class of insecticides which act selectively on nicotinic acetylcholine receptors of insects, but have low affinity for vertebrates; used as antiparasitic agents.

Neonyssus a genus of mites in the family Rhinonyssidae.

N. columbae, N. melloi nasal mites of pigeons.

neopallium [*ne"o-pal'e-əm*] that part of the pallium (cerebral cortex) showing stratification and organization of the most highly evolved type; called also isocortex and neocortex.

neoplasia [*ne"o-pla'zhə*] the formation of a neoplasm, which may be benign or malignant. In neoplasia there is a transformation of normal body cells under the influence of various inborn genetic errors and environmental insults, any of which can result in damage to critical sequences in the cell's genetic code. The altered cells pass on inappropriate genetic information to their progeny cells and begin to proliferate in an abnormal and destructive way. In both types of neoplasia, cell growth is unregulated. In *benign* neoplasia the cells continue to proliferate, but relatively slowly and do not spread to distant sites or break down spontaneously. They cause clinical disease mainly by causing pressure on healthy tissue. In *malignant* neoplasia the cells proliferate more rapidly, the mass of abnormal tissue enlarges, degenerates, and can enter the blood and lymphatic vessels and body cavities and thus reach other parts of the body. This migration is called **metastasis**.

neoplasm [*ne'o-plaz-əm*] 1. a **tumor**. 2. any new and abnormal growth arising as the result of **neoplasia**. Neoplasms of particular organs and of particular cell types are to be found under their individual headings, e.g. pharyngeal, adenocarcinoma.

benign n. a neoplasm having none of the characteristics of a malignant neoplasm (see below), i.e. it grows slowly, expands without metastasis, and usually does not recur. See also **neoplasia**.

n. fever due to extensive necrosis in rapidly growing tumors.

histoid n. a neoplasm whose cells and organization resemble those of the tissue from which it is growing.

malignant n. a neoplasm with the characteristics of anaplasia, invasiveness and metastasis. See also **neoplasia**.

oral n. is usually squamous cell carcinoma of the gum epithelium. It impedes mastication.

organoid n. a neoplasm whose cellular architecture resembles that of some organ in the body.

transmissible n. a neoplasm capable of being transmitted between individuals. Includes **bovine** viral leukosis, avian **leukosis**, **Rous sarcoma** complex, **Marek's disease**, canine transmissible **venereal** tumor, squamous cell **carcinoma** of cattle, and canine viral **papillomatosis**.

VetBooks.ir

neoplastic [ne"o-plas'tik] pertaining to neoplasia or a neoplasm.
n. disease see **neoplasia**.
Neopolitan mastiff a very large (110–150 lb), heavy-boned dog with loose-fitting skin over the body and the massive head with wrinkles and a pendulous dewlap. The tail may be docked by one-third. The coat is short and colored black, blue, gray or brown.
neopulmo the functional division of the respiratory system of birds formed by the parabronchi from the laterodorsal and latero-ventral bronchi.
neopulmon a part of the avian lung composed of an anastomotic system of parabronchi, ventral and lateral to the primary bronchus in some species of birds.
Neorickettsia a genus in the family *Anaplasmataceae*, order *Rickettsiales*. Members parasitize intestinal epithelial cells, monocytes and macrophages and are transmitted by ingestion of infected metacercariae of trematodes.
N. elokominica the cause of **Elokomin fluke fever**.
N. helminthoeca the cause of **salmon** poisoning in dogs.
N. risticii the cause of equine monocytic **ehrlichiosis**. Previously *Ehrlichia risticii*. Infection occurs sporadicaly in dogs and cats.
neorickettsiosis [ne"o-rĭ-ket"se-o'sis] clinical disease specifically caused by organisms in the genus *Neorickettsia*, but broadly sometimes applied to those in the order *Rickettsiales*, which includes some reclassified as *Ehrlichia* and *Anaplasma* spp.
Neoschoengastia a genus of mites in the family Trombiculidae.
N. americana infest chicken, quail and turkey, and may cause dermatitis.
Neospora [ne-os'pə-rə] closely resembles *Toxoplasma*; canids are definitive hosts; ruminants, horses, pigs and other animals are intermediate hosts; causes ascending paralysis or paresis in puppies, abortion in ruminants and horses (*N. caninum*) and occasionally equine protozoal **myeloencephalitis** (*N. hughesi*).
N. abortion *N. caninum* is a major cause of abortion in cattle worldwide and can infect a range of other mammals, but not humans. Infection of cattle is persistent and lifelong, and vertical infection results in abortion in some pregnancies producing a syndrome of sporadic endemic abortion in a herd that has infected female cattle. Epidemic abortion occurs with point source infection from dog feces in naïve herds. Calves infected while *in utero* may die and be aborted, may be born with neurological disease, but commonly are born clinically normal, but infected and may themselves subsequently abort their calves when pregnant.
neosporosis [ne"o-spə-ro'sis] infection by the protozoa *Neospora caninum*. In dogs, clinical signs are referable to the central nervous system and myositis. Young puppies are most commonly and severely affected, showing a characteristic ascending limb paralysis with hyperextension, cervical weakness and dysphagia.
neostigmine [ne"o-stig'mēn] an anticholinesterase used in the treatment of myasthenia gravis and (uncommonly) glaucoma and as an antidote for nondepolarizing muscle relaxants, such as tubocurarine.
n. test muscle weakness caused by myasthenia gravis is temporarily reversed following the administration of neostigmine; used as a diagnostic test.
neostriatum [ne"o-stri-a'təm] the more recently developed part of the corpus striatum, comprising the caudate nucleus and the putamen.
Neostrongylus [ne"o-stron'jĭ-ləs] a genus of nematodes in the family Protostrongylidae.
N. linearis found in the lungs of sheep and goats.
neoteny [ne-ot'ə-ne] prolongation of the larval form in a sexually mature organism.
neothalamus [ne"o-thal'ə-məs] the part of the thalamus connected to the neopallium.
Neotrombicula autumnalis [ne"o-trom-bik'u-lə] an acarine mite in the family Trombiculidae that causes dermatitis, usually on the head and extremities, in most animal species. Called also *Trombicula autumnalis*.
Neotyphodium a genus of endophytic fungi with species symbiotic in *Lolium perenne*, *Festuca arundinacea*; produce toxic lolitrems and ergot alkaloids. Previously classified as *Acremonium* spp. Unspecified species of *Acremonium* have been reported as a cause of eumycotic mycetoma and systemic mycosis in dogs, but these may now be classified as within the genus *Neotyphodium*.
N. chisosum inhabits *Stipa robusta* and produces lysergic acid amide, isolysergic acid amide and ergonovine that cause deep somnolence in horses and cattle. Called also *Acremonium chisosum*.
N. coenophialum inhabits *Festuca arundinacea* and *F. elatior* and produces ergot alkaloids that cause fescue toxicosis. Previously *Acremonium coenophialum*.
N. lolii inhabits *Lolium perenne* and produces lolitrems that cause perennial ryegrass staggers. Previously *A. lolii*.
neoureterostomy a surgical technique to reposition intramural ectopic ureters.
neovascularization [ne"o-vas"ku-lər-ĭ-za'shən] formation of new blood vessels.
Nepeta [nep'ə-tə] a genus of plants in the family Labiatae.
N. hederacea causes pulmonary edema and enteritis in horses. Called also *Glechoma hederacea*, ground ivy.
N. cataria see **catnip**.
nepetalactone [nep"ə-tə-lak'tōn] the volatile terpenoid found in catnip (*Nepeta cataria*).
nephelometer [nef"ə-lom'ə-tər] an instrument for measuring the concentration of substances in suspension by the amount of light that is scattered by the suspended particles.
nephelometry [nef"ə-lom'ə-tre] measurement of the concentration of a suspension by means of a nephelometer.
nephralgia [nə-fral'jə] pain in a kidney.
nephrectomy [nə-frek'tə-me] surgical removal of a kidney. The procedure is indicated when chronic disease or severe injury produces irreparable damage to the renal cells. Tumors, multiple cysts and congenital anomalies may also necessitate removal of a kidney. A single healthy kidney can carry on the functions formerly performed by both kidneys.
nephric [nef'rik] pertaining to the kidney.
nephridium [nə-frid'e-əm] pl. *nephridia* [L.] 1. either of the paired excretory organs in each body segment of certain invertebrates, having the inner end of the tubule opening into the coelomic cavity. 2. various excretory structures such as the nephron of the embryo.
nephritic [nə-frit'ik] 1. pertaining to or affected with nephritis. 2. pertaining to the kidneys; renal. 3. an agent useful in kidney disease.
nephritis [nə-fri'tis] inflammation of the kidney; a focal or diffuse proliferative or destructive disease that may involve the glomerulus, tubule or interstitial renal tissue. See also **glomerulonephritis**, interstitial nephritis (below), **nephrosis**, **pyelonephritis**.
autoimmune n. see **glomerulonephritis**.
embolic n. caused by infected emboli lodging in renal vessels. One or more abscesses may develop, causing signs referable to toxemia. There may be intermittent pyuria. Renal dysfunction is likely only if most of the renal mass is destroyed.
glomerular n. see **glomerulonephritis**.
interstitial n. a diffuse lesion characterized by interstitial inflammation and fibrosis, sometimes attributed to hematogenous infection with *Leptospira* spp. There is a secondary glomerular and vascular injury. It is manifested by polyuria, urine of low specific gravity, and terminal uremia.
lupus n. glomerulonephritis associated with systemic lupus erythematosus.
parenchymatous n. nephritis affecting the parenchyma of the kidney.
suppurative n. a form accompanied by suppuration and abscessation of the kidney.
transfusion n. nephropathy following transfusion from an incompatible donor.
nephritogenic [nə-frit"o-jen'ik] causing nephritis.
nephr(o)- word element. [Gr.] *kidney*.
nephroblastoma [nef"ro-blas-to'mə] a rapidly developing malignant mixed tumor of the kidneys, made up of embryonal elements. It may reach an enormous size, even distending the abdomen. Occurs in young pigs.
nephrocalcinosis [nef"ro-kal"si-no'sis] deposition of calcium phosphate in the renal tubules, resulting in renal insufficiency. Occurs in association with **hypercalcemia**. In cultivated finfish can be caused by a high CO_2 content of the water or by a high calcium: magnesium ratio in the diet.
nephrocapsectomy [nef"ro-kap-sek'tə-me] excision of the renal capsule.
nephrocardiac [nef"ro-kahr'de-ak] pertaining to the kidney and the heart.

nephrocele [*nef'ro-sēl*] hernia of a kidney.
nephrocolic [*nef"ro-kol'ik*] 1. pertaining to the kidney and the colon. 2. renal colic.
nephrocystitis [*nef"ro-sis-ti'tis*] inflammation of the kidney and bladder.
nephrogenic [*nef"ro-jen'ik*] producing kidney tissue.
nephrogenous [*nə-froj'ə-nəs*] arising in a kidney.
nephrogram [*nef'ro-gram*] a contrast radiograph of the kidney.
nephrography [*nə-frog'rə-fe*] radiography of the kidney. See also **pyelography**.
nephroid [*nef'roid*] resembling a kidney.
nephrolith [*nef'ro-lith*] a calculus in a kidney.
nephrolithiasis [*nef"ro-lĭ-thi'ə-sis*] a condition marked by the presence of renal calculi. See also **urolithiasis**.
nephrolithotomy [*nef"ro-lĭ-thot'ə-me*] incision of kidney for removal of calculi.
nephrology [*nə-frol'ə-je*] the branch of medicine dealing with the kidneys.
nephrolysin nephrotoxin, a toxin destructive to kidney tissue.
nephrolysis [*nə-frol'ə-sis*] 1. freeing of a kidney from adhesions. 2. destruction of kidney substance.
nephroma [*nə-fro'mə*] a **tumor** of kidney tissue.
congenital mesoblastic n. a mesenchymal tumor composed of fibromatous and myxomatous areas.
embryonal n. nephroblastoma.
nephromegaly [*nef"ro-meg'ə-le*] enlargement of the kidney.
nephron [*nef'ron*] the structural and functional unit of the **kidney**, each nephron being capable of forming urine by itself. The nephron consists of the renal corpuscle, the proximal convoluted tubule, the descending and ascending limbs of the loop of Henle, the distal convoluted tubule, and the collecting tubule. Each kidney is an aggregation of many nephrons. The specific function of the nephron is to remove from the blood plasma certain end-products of metabolism, such as urea, uric acid and creatinine, and to regulate excretion of sodium, chloride, potassium and other ions. By allowing for reabsorption of water and some electrolytes back into the blood, the nephron also plays a vital role in the maintenance of normal fluid balance in the body. The nephron is a complex system of tubules. Blood is brought to the nephron via the afferent arteriole. As the blood flows through the glomerulus (a network of capillaries), about one-fifth of the plasma is filtered through the glomerular membrane and collects in the glomerular (Bowman's) capsule, which encases the glomerulus. The fluid then passes through the proximal tubule, from there into the loop of Henle, then into the distal tubule, and finally into the collecting tubule (collecting duct). As the fluid is making its tortuous journey through these various tubules, most of its water and some of the solutes are reabsorbed into the blood via the peritubular capillaries. The water and solutes remaining in the tubules become urine.
intact-n. hypothesis see **intact-nephron hypothesis**.
n. loop see renal **tubule**.
nephronophthisis [*nef"ron-of'thĭ-sis*] wasting disease of the kidney substance.
nephropathy [*nə-frop'ə-the*] any disease of the kidneys.
analgesic n. see **analgesic** nephropathy.
familial n. different types of renal disease have been recorded as occurring on a familial basis in Finnish-Landrace sheep and several breeds of dogs, including Lhasa apsos, Shih tzus, Samoyeds, Bull terriers, Norwegian elkhounds, Cocker spaniels and Basenjis.
hypercalcemic n. see **nephrocalcinosis**.
juvenile n. suspected of being familial in many dog breeds especially Malamute, Miniature schnauzer, Keeshond, German shepherd; characterized by renal failure in immature or young adult dogs. The pathogenesis is poorly understood, hence the retention of the title nephropathy.
mycotoxic n. caused by mycotoxins, such as ochratoxin and citrinin, produced by *Penicillium* and *Aspergillus* spp.
pigment n. see **hemoglobinuric** nephrosis.
reflux n. pyelonephritis in which the renal scarring results from vesicoureteric reflux, with radiological appearance of intrarenal reflux.
tubulointerstitial n. a familial renal disease in Norwegian elkhounds; the disease is caused by a nonspecific renal lesion, by an unknown pathogenesis and obviously inherited but the inheritance mode is unknown.
nephropexy [*nef'ro-pek"se*] surgical fixation of a floating or hypermobile kidney (**nephroptosis**).
Nephrops norvegicus Norwegian lobster, a popular food crustacean. Called also scampi.
nephroptosis [*nef"rop-to'sis nef"ro-to'sis*] downward displacement of a kidney; called also floating kidney.
nephropyelitis [*nef"ro-pi"ə-li'tis*] pyelonephritis.
nephropyelography [*nef"ro-pi"ə-log'rə-fe*] radiography of the kidney. See also **pyelography**.
nephropyelostomy [*nef"ro-pi"ə-los'tə-me*] a diversion of urine to the exterior by placement of a catheter into the renal pelvis.
nephropyelocentesis [*nef"ro-pi"ə-lo-sen-te'sis*] aspiration of urine from the renal pelvis.
nephrorrhagia [*nef"ro-ra'jə*] hemorrhage from the kidney.
nephrorrhaphy [*nef-ror'ə-fe*] suture of the kidney.
nephrosclerosis [*nef"ro-sklə-ro'sis*] hardening of the kidney associated with chronic glomerulonephritis and in humans especially with hypertension and disease of the renal arterioles.
nephroscope [*nef'ro-skōp*] an instrument inserted into an incision in the renal pelvis for viewing the inside of the kidney; it is equipped with three channels, for telescope, fiberoptic light input and irrigation.
nephroscopy [*nə-fros'kə-pe*] visualization of the kidney by means of the nephroscope.
nephrosis [*nĕ-fro'sis*] disease characterized by purely degenerative lesions (with no associated inflammation) of the renal parenchyma.
amyloid n. chronic nephrosis with amyloid deposition in glomerular capillaries, in basement membranes of tubules and eventually around tubules.
biliary n. the renal component of acute hepatic failure characterized by oliguria and azotemia.
infectious avian n. see infectious **bursal** disease.
lipid n. nephrosis marked by edema, albuminuria, and changes in the protein and lipids of the blood and accumulation of globules of cholesterol esters in the tubular epithelium of the kidney.
lower nephron n. now called acute renal tubular necrosis where tubular degeneration occurs as a consequence of ischemia and nephrotoxins. Complete urinary outflow obstruction follows, resulting in acute renal failure. Also seen after severe injuries, especially crushing injury to muscles. See also **crush syndrome**.
ischemic n. see **renal** ischemia.
mycotic n. caused by ingested toxins of *Aspergillus ochraceus*, *Penicillium viridicatum*. Characterized by enlarged, terminally fibrosed kidneys, polyuria and polydipsia. See also **mycotoxicosis**.
toxic n. caused by many toxins, e.g. mercury, arsenic, copper, aminoglycoside antibiotics.
nephrosonephritis [*nə-fro"so-nə-fri'tis*] renal disease with nephrotic and nephritic components.
nephrosplenic entrapment see left **colon** displacement colic.
nephrostoma [*nə-fros'tə-mə*] one of the ciliated funnel-shaped orifices of the excretory tubules that open into the celom in the embryo; best seen in lower vertebrates.
nephrostomy [*nə-fros'tə-me*] creation of a permanent opening into the renal pelvis.
nephrotic syndrome [*nə-frot'ik*] a condition marked by edema, marked proteinuria, hypoalbuminemia and hypercholesterolemia.
nephrotome [*nef'ro-tōm*] one of the segmented divisions of the embryonic mesoderm connecting the somite with the lateral plates of unsegmented mesoderm; the source of much of the urogenital system. Called also intermediate cell mass.
nephrotomogram [*nef'ro-to'mo-gram*] a tomogram of the kidney obtained by nephrotomography.
nephrotomography [*nef"ro-to-mog'rə-fe*] radiological visualization of the kidney by tomography after introduction of a contrast medium.
nephrotomy [*nə-frot'ə-me*] incision of a kidney.
nephrotoxic [*nef'ro-tok"sik*] destructive to kidney cells.
n. nephritis an experimental disease induced by the injection of anti-rat-kidney antibodies. Called also Masugi nephritis.
nephrotoxicity [*nef"ro-tok-sis'ĭ-te*] quality of being toxic for kidneys.
nephrotoxin [*nef'ro-tok"sin*] a toxin having a specific destructive effect on kidney tissue. Includes some poisonous plants, toxic substances such as ethylene glycol or melamine and cyanuric

VetBooks.ir

acid, and side-effects of some drugs if used at incorrect doses, in inappropriate species or in the presence of pre-existing renal disease; includes nonsteroidal anti-inflammatory drugs (especially in cats), aminoglycosides, angiotensin-converting enzyme (ACE) inhibitors.

nephrotropic [*nef"ro-tro'pik*] having a special affinity for kidney tissue.

nephrotuberculosis [*nef"ro-too-bur"ku-lo'sis*] renal disease due to *Mycobacterium tuberculosis.*

nephroureterectomy [*nef"ro-u-re"tər-ek'tə-me*] surgical removal of a kidney and ureter.

neps small (2 mm) aggregations of matted wool fibers created during processing.

Neptunia amplexicaulis Australian plant in the legume family Mimosaceae; selectively absorbs selenium and can cause selenium poisoning. A selenium-converter plant. Called also selenium weed. Also grows preferentially on selenium-rich soils and is therefore an indicator plant.

neptunium (Np) [*nep-too'ne-əm*] a chemical element, atomic number 93, atomic weight 237. See Table 4.

nequinate [*nə-kwin'āt*] a quinolone cocciostat used in poultry.

Nerine a plant genus in the family Liliaceae which causes poisoning when eaten by cattle. The toxic agent is lycorine, which causes salivation, vomiting and diarrhea. Called also nerine.

nerioside a cardiac glycoside found in ***Nerium oleander*** and one of the causes of poisoning by this plant.

Nerium oleander [*ne're-əm*] widespread plant originally from the Mediterranean region in the family Apocynaceae; popular garden specimens in hot climates. Contain cardiac glycosides, especially nerioside and oleandroside. Signs include dyspnea, cardiac arrhythmia, diarrhea and sudden death. Lesions include cardiomyopthy. Called also *N. indicum*, *N. odorum*, oleander.

Nernst equation [*nernst*] gives the amplitude and sign of the electronic potential created when a semipermeable membrane separates charged ions.

nerve [*nərv*] a macroscopic cordlike structure of the body, comprising a collection of axons and associated connective tissue that conveys impulses between a part of the central nervous system and some other body region. For a complete list of the named nerves of the body, see Table 14. Depending on their function, nerves are known as sensory, motor or mixed. Sensory nerves, or afferent nerves, contain axons of neurons that carry information from the periphery of the body to the brain and spinal cord. Sensations of heat, cold, pressure, proprioception and pain are conveyed by the sensory nerves. Motor nerves, or efferent nerves, contain axons of neurons that transmit impulses from the brain and spinal cord to the periphery, especially the muscles. Mixed nerves are composed of both motor and sensory nerves, and transmit messages in both directions. Together, the nerves make up the peripheral nervous system, as distinguished from the central nervous system, which consists of the brain and spinal cord. There are 12 pairs of **cranial** nerves, which carry messages to and from the brain. Spinal nerves arise from the spinal cord and pass out between the vertebrae. The various nerve fibers and cells that make up the autonomic nervous system innervate the glands, heart, blood vessels and involuntary muscles of the internal organs. For a complete list of nerves, see Table 14.

accelerator n's the cardiac sympathetic nerves, which, when stimulated, accelerate the heart rate.

n. biopsy specimens taken from representative nerves by separation and removal of a proportion of the nerve fascicles may provide useful information in the investigation of neuromuscular disorders and neuropathies. Consideration must be given to any resulting motor or sensory deficits that might result from the procedure. In dogs, the common peroneal, ulnar and tibial nerves are the usual sources.

n. cuff device used in the surgical repair of nerves to protect the site of anastomosis from an in-growth of connective tissue and to promote linear regeneration of neural elements.

depressor n. 1. an inhibitory nerve whose stimulation depresses a motor center. 2. a nerve that lessens activity of an organ.

dermal n. network the organization of sensory nerve fibers to the dorsal root ganglia found in the dermis.

n. endings comprise afferent and efferent endings. *Afferent endings* transform sensations into acceptable stimuli by the CNS; include diffuse-free endings, free, modified free or encapsulated (e.g. tactile corpuscles, Krause's endbulbs, Golgi–Mazzoni corpuscles, genital corpuscles, lamellated corpuscles, Herbst corpuscles, Uffini corpuscles). *Efferent endings* transform nerve impulses into stimuli delivered to effector end organs; they include neuromuscular spindles, Golgi tendon organs.

excitor n. one that transmits impulses resulting in an increase in functional activity.

excitoreflex n. a visceral nerve that produces reflex action.

n. fiber a process of a neuron, especially the long slender axon which conducts nerve impulses away from the cell. It may be medullated or nonmedullated.

fusimotor n's those that innervate the intrafusal fibers of the muscle spindle.

gangliated n. any nerve of the sympathetic nervous system. Called also ganglionated.

n. growth factor a protein dimer composed of two identical polypeptide chains secreted by nerve cells and necessary for the growth and survival of certain classes of nerve cells during development.

n. impulses the electrochemical change in a nerve fiber's membrane which is caused by stimulation, e.g. from a stretch receptor, and which transmits a record of the sensation, or, in another case, of a motor instruction to an effector organ.

inhibitory n. one that transmits impulses resulting in a decrease in functional activity.

intrinsic n. some evidence exists for the presence of autonomous nerves, without connection to the CNS, in the adventitia of small arteries and arterioles.

medullated n. myelinated nerve.

modified free n. endings see nerve endings (above).

myelinated n. one whose axons are encased in a myelin sheath.

pelvic n's nerves of the parasympathetic outflow. See Table 14.

peripheral n. any nerve outside the central nervous system. Injury to a nerve causes pain initially and if tissue is destroyed, loss of function follows; signs are weakness or paralysis, atrophy, lower temperature and depressed reflexes.

pilomotor n's those that supply the arrector muscles of hair.

pressor n. an afferent nerve whose impulses stimulate a vasomotor center and increases intravascular tension.

retinal n. fiber layer layer of the retina lying just external to the inner limiting membrane and composed of the ganglion cell axons which pass centripetally to the optic disk where they become the optic nerve and turn at approximately right angles to exit the eye.

secretory n. an efferent nerve whose stimulation increases glandular activity.

sensory n. a peripheral nerve that conducts impulses from a sense organ to the spinal cord or brain; called also afferent nerve. See also **nerve**.

n. sheath see **neurilemma**.

n. sheath tumor neurilemmoma or schwannoma.

somatic n's the sensory and motor nerves supplying skeletal muscle and somatic tissues.

somatic afferent n's sensory neurons whose cell bodies reside in spinal and cranial nerve ganglia.

somatic efferent n's motor neurons originating in ventral gray columns of the spinal cord and certain parts of the brain and are connected to striated muscles derived from embryonic somites.

spinal n. a segmental nerve which consists of afferent and efferent axons from its dorsal and ventral roots.

splanchnic n's those of the blood vessels and viscera, especially the visceral branches of the thoracic, lumbar and pelvic parts of the sympathetic trunks.

n. stimulator an electrical device used to deliver a short stimulus to a peripheral nerve as a test of its function. It can be used to assess the effects of a neuromuscular blocking agent during clinical anesthesia.

sudomotor n's those that innervate the sweat glands.

sympathetic n's 1. see **sympathetic** trunk. 2. any nerve of the sympathetic nervous system.

n. terminal nerve ending.

trophic n. one concerned with regulation of nutrition.

n. trunk the main body of a nerve; subsequently divides into branches.

unmyelinated n. one whose axons are not encased in a myelin sheath.

VetBooks.ir

vasoconstrictor n. one whose stimulation causes narrowing of blood vessels.
vasodilator n. one whose stimulation causes dilatation of blood vessels.
vasomotor n. one concerned in controlling the caliber of vessels, whether as a vasoconstrictor or vasodilator.
vasosensory n. any nerve supplying sensory fibers to the vessels.
visceral afferent n's nerves with cell bodies in spinal and cranial ganglia and which provide sensory innervation from thoracic and abdominal tissues.
visceral efferent n's the parasympathetic component of the autonomic nervous system.
nervi erigentes [*nur'vi*] nerves containing preganglionic, parasympathetic motor fibers to the genitalia that are involved in erection of the penis. Called also pelvic splanchnic nerves.
nervi vasorum [*nur'vi*] nerve supply to the blood vessels.
nervimotor [*nur"vi-mo'tər*] pertaining to a motor nerve.
nervone [*nur'vōn*] a cerebroside isolated from nerve tissue.
nervous [*nur'vəs*] 1. pertaining to a nerve or nerves. 2. unduly excitable.
n. acetonemia see nervous **ketosis**.
autonomic n. system the branch of the nervous system that works without conscious control. The somatic nervous system governs the striated or skeletal muscles, whereas the autonomic governs the glands, the cardiac muscle, and the smooth muscles, such as those of the digestive system, the respiratory system and the skin. The autonomic nervous system is divided into two subsidiary systems, the sympathetic system and the parasympathetic system. It is also divided into central and peripheral sections. The core of the central section is the hypothalamus which receives afferent input from many other parts of the brain including the cerebral cortex. Its efferent output goes to many lower centers in the nervous system that have visceral control as their functions, e.g. the respiratory center in the medulla. The peripheral section consists of nonmyelinated nerve fibers that leave the central nervous system in the craniosacral outflow (parasympathetic system) or the thoracolumbar outflow (sympathetic) system, and terminate in effector organs after passing through a ganglion, visible paravertebral ganglia in the sympathetic system, or ganglia embedded in the wall of the target organ in the parasympathetic system.
central n. system the portion of the nervous system consisting of the brain and spinal cord. See also **nervous**, **brain**, **cerebral**.
n. dysfunction can occur in any of four ways: (1) Excitation or irritation, leading to an increase in the number of of nerve impulses transmitted or facilitation in their passage. (2) Release phenomena, from the damping, modifying effects of higher centers; includes spasticity, exaggerated tendon jerks. (3) **Paralysis**, due to reduction or cessation of transmission of nerve impulses. (4) Nervous **shock**, a temporary cessation of activity in the nervous system as a whole in response to an insult applied to a part of it.
n. excitation see nervous dysfunction (above).
n. paralysis see nervous dysfunction (above).
peripheral n. system the portion of the nervous system consisting of the nerves and ganglia outside the brain and spinal cord.
n. release phenomena see nervous dysfunction (above).
n. shock see nervous dysfunction (above).
n. system the organ system that along with the endocrine system, correlates the adjustments and reactions of an organism to internal and environmental conditions, comprising the central, peripheral and autonomic nervous systems.
nervousness [*nur'vəs-nis*] a state of excitability, with great mental and physical unrest.
nervus [*nur'vəs*] pl. *nervi* [L.] nerve.
nesidiectomy [*ne-sid"e-ek'tə-me*] excision of the islet cells of the pancreas.
nesidioblast [*ne-sid'e-o-blast"*] any of the cells giving rise to islet cells of the pancreas.
nesidioblastosis [*ne-sid"e-o-blas-to'sis*] pancreatic ductular and islet cell proliferation in children and in dogs with islet cell neoplasms.
nesiritide [*nə-sir'i-tīd*] a recombinant form of human natriuretic peptide, for restricted use as a diuretic in acutely decompensated congestive heart failure.
nest 1. the bed or shelter constructed by a bird for deposition of its eggs and rearing of its young. 2. a bed prepared by an animal. 3. an accumulation of cells in a foreign location.
n. building a signal of oncoming broodiness in female birds and of imminent parturition in some mammals.
nesting see **avian** nesting.
nestling a baby bird once the eyes have opened. See also **hatchling** and **fledgling**.
net, nett the correct amount; not subject to further deductions; the amount remaining after all deductions have been made.
n. calf crop calves surviving until weaning.
n. energy energy available to the ingester for metabolic purposes which is that remaining after subtracting that lost in feces, urine, via combustible gases, and that used in metabolizing the feed. See also **metabolizable** energy.
Netherland dwarf a very small, cobby rabbit with short ears and a coat in a wide variety of colors; a very popular pet.
netilmicin [*net"il-mi'sin*] a semisynthetic aminoglycoside antibiotic.
netobimin a broad-spectrum pro-benzimidazole anthelmintic.
nettle [*net'əl*] a common name used for the stinging nettles (*Urtica incisa, U. urens* and *U. dioica*), but also for a variety of other plants including bull nettle (*Solanum carolinense*), white horsenettle (*S. elaeagnifolium*), dead nettle (*Lamium amplexicaule*), field nettle (*Stachys arvensis*), spurge nettle (*Jatropha stimulosa*), mulga nettle (*Haloragis odontocarpa*).
n. rash see **urticaria**. Called also hives.
nettlerash urticaria.
nettling mimicking the effect of a nettle. Causing irritation to the skin and eyes, and to the bronchi if inhaled and the oral mucosa if ingested.
network [*net'wərk*] a mesh-like structure of interlocking fibers or strands.
immunological n. idiotypes produced in an immune response may in turn act as antigens, provoking anti-idiotype antibodies whose idiotypes may act as antigens, and so forth, leading to a network of interacting reactions. Considered to be the possible basis for the overall regulation of immune responses.
Network of Animal Health (NOAH) [*net'wərk*] an on-line resource of the American Veterinary Medical Association.
Neubauer ruling [*noi'bou-ər*] a specific pattern of precise markings on a hematocytometer slide that facilitates the counting of leukocytes, erythrocytes and platelets in blood and all cells in other fluids.
neurad toward the neural axis or aspect.
neural [*noor'əl*] pertaining to a nerve or to the nerves.
n. crest cells a group of neuroepithelial cells which condenses dorsal to the neural tube in the embryo; they subsequently migrate and set up dorsal root ganglia, the ganglia of the autonomic nervous system, and the pigment cells of the integument (melanocytes).
n. folds in the embryo, the sides of the invaginated neural plate that meet and fuse over the neural groove to form the neural tube.
n. groove the longitudinal furrow in the neural plate of the embryo.
n. plate the thickened ectoderm dorsal to the notochord in the embryo that gives rise to the neural tube.
n. retina separated from the outer layer of the optic retina by the intraretinal space; constitutes the *pars optica retinae*, with its neuroepithelial layer (contains rods and cones—the receptor cells), bipolar ganglion layer, multipolar ganglion layer, and a layer of axons of the latter layer. Light must pass through the latter three layers before reaching the receptor cells.
n. substrates functional units of the central nervous system, often composed of a series of structural units which may be widely separated anatomically but which interact to support or drive complex nervous system functions, such as hunger and sleepiness. They are the counterparts of simple centers, e.g. the respiratory center, which control simple physiological mechanisms.
n. tropic influence the tropic influence of nerves on, for example, muscle, demonstrated by the atrophy of muscle when it is denervated.
n. tube the precursor of the central nervous system in the embryo, formed by invagination and fusion of the neural plate.
neuralgia [*nŏŏ-ral'jə*] pain in a nerve or along the course of one or more nerves. Assumed to occur in animals.
neuraminic acid [*noor"ə-min'ik*] a nine-carbon sugar; parent of a family of amino sugars containing nine or more carbon atoms (the sialic acids or nonulosaminic acids).
neuraminidase [*noor"ə-min'i-dās*] 1. an enzyme that cleaves the terminal *N*-acetylneuraminic acid from mucoproteins. 2. a structural

VetBooks.ir

component occurring as a spike in the envelope of ortho- and paramyxoviruses.

neuranagenesis [noor"an-ə-jen'ə-sis] regeneration of nerve tissue.

neurapophysis [noor"ə-pof'ə-sis] the structure that forms either side of the neural arch; also, the part supposedly homologous with this structure in a so-called cranial vertebra.

neurapraxia [noor"ə-prak'se-ə] failure of nerve conduction in the absence of structural changes, due to blunt injury, compression or ischemia.

mandibular n. see **mandibular** neuritis.

neurarthropathy [noor"ahr-throp'ə-the] neuroarthropathy.

neuratrophia [noor"a-tro'fi-a] impaired nutrition of the nervous system.

neuratrophic [noor"a-tro'fik] characterized by atrophy of the nerves.

neuraxial edema [nŏŏ-rak'se-əl] see inherited congenital **myoclonus**.

neuraxis [nŏŏ-rak'sis] 1. axon. 2. central nervous system.

neuraxon axon.

neuraxonal dystrophy see inherited ovine degenerative **axonopathy**.

neurectasia, neurectasis the surgical stretching of a nerve; neurotony.

neurectomy [nŏŏ-rek'tə-me] excision of a part of a nerve.

posterior (low) digital n. used for relief of incurable lameness in horses, usually resulting from navicular disease or fractures of the navicular bone or wing of the third phalanx. The procedure is relatively simple and can be performed under local or general anesthesia, but the consequences for a neurectomized horse can be disastrous. Rules of racing in many places limit or exclude participation of neurectomized horses.

neurectopia [noor"ək-to'pe-ə] displacement or abnormal situation of a nerve.

neurenteric [noor"ən-ter'ik] pertaining to the neural tube and archenteron of the embryo.

neurepithelium [noor"ep-i-the'le-əm] see **neuroepithelium**.

neurergic [nŏŏ-rur'jik] pertaining to or dependent on nerve action.

neurexeresis [noor"ek-ser'ə-sis] the operation of tearing out (avulsion) of a nerve.

neurilemma [noor"ĭ-lem'ə] the plasma membrane of a Schwann cell, forming the sheath of Schwann of a myelinated or unmyelinated peripheral nerve.

neurilemmitis [noor"ĭ-lem-i'tis] inflammation of the neurilemma.

neurilemmoma [noor"ĭ-lem-o'mə] a tumor of a peripheral nerve sheath (neurilemma); called also schwannoma. Occur as small subcutaneous tumors on the head of goldfish.

neurinoma [noor"ĭ-no'mə] neurilemmoma.

neurite axon.

neuritis [nŏŏ-ri'tis] pl. *neuritides*; inflammation of a nerve; also used to denote noninflammatory lesions of the peripheral nervous system. See also **neuropathy**. There are many different forms of neuritis. Some increase or decrease the sensitivity of the body part served by the nerve; others produce paralysis; others cause pain and inflammation. The cases in which pain is the chief symptom are generally called **neuralgia**. Neuritis and neuralgia affect the peripheral nerves, the nerves that link the brain and spinal cord with the muscles, skin, organs, and all other parts of the body. These nerves usually carry both sensory and motor fibers; hence both pain and some paralysis may result.

allergic n. see experimental allergic neuritis (below).

autoimmune n. see experimental allergic neuritis (below).

cauda equina n. see **cauda equina neuritis**.

equine exudative optic n. a cause of sudden bilateral blindness in old horses of unknown etiology. There are signs of acute inflammation with optic neuritis and later atrophy.

experimental allergic n. (EAN) an ascending polyneuritis produced experimentally by the administration of nerve tissue. The condition resembles **Guillain–Barré syndrome**, **cauda equina neuritis** in horses, and **coonhound** paralysis. Called also allergic, autoimmune neuritis.

interstitial n. inflammation of the connective tissue of a nerve trunk.

mandibular see **mandibular** neuritis.

multiple n. neuritis affecting several nerves at once; polyneuritis.

optic n. inflammation of the optic nerve causing blindness (compare with **papilledema**); may be visible funduscopically at the optic nerve head (papillitis). Called retrobulbar neuritis when there are no funduscopically visible lesions.

parenchymatous n. neuritis affecting primarily the axons and the myelin of the peripheral nerves.

retrobulbar optic n. see optic neuritis (above).

toxic n. neuritis due to some poison.

traumatic n. neuritis following and due to injury.

neur(o)- word element. [Gr.] *nerve, neurology, neurological*.

neuroaminidase see **neuraminidase**.

neuroanastomosis [noor"o-ə-nas"tə-mo'sis] surgical anastomosis of one nerve to another.

neuroanatomy [noor"o-ə-nat'ə-me] anatomy of the nervous system.

neuroanesthesia anesthesia in animals with neurological disease, particularly of the central nervous system.

neuroanesthesiology the study of neuroanesthesia.

neuroarthropathy [noor"o-ahr-throp'ə-the] any disease of joint structures associated with disease of the central or peripheral nervous system.

neuroaxial dystrophy see inherited ovine degenerative **axonopathy**.

neuroaxonal dystrophy a degenerative disease believed to be inherited in several breeds of dogs and cats. Progressive signs of cerebellar dysfunction with ataxia, hypermetria, proprioceptive deficits, incoordination and tremors develop from an early age. It has been reported in Rottweilers, Collie sheepdogs and Bull mastiffs.

neurobehavioral [noor"o-be-hāv'u-rəl] relating to neurological status as assessed by observation of behavior.

neurobiologist [noor"o-bi-ol'ə-jist] a specialist in neurobiology.

neurobiology [noor"o-bi-ol'ə-je] biology of the nervous system.

neuroblast [noor'o-blast] an embryonic cell from which nervous tissue is formed.

neuroblastoma [noor"o-blas-to'mə] rare neoplasm arising from primitive neuroepithelial cells which differentiate toward neuroblasts (neuroblastoma) or neurons (ganglioneuroma). They usually arise in the central or autonomic nervous system or in the adrenal medulla (sympathicoblastoma).

neurocanal [noor"o-ka-nal'] vertebral canal.

neurocardiac [noor"o-kahr'de-ak] pertaining to the nervous system and the heart.

neurocentrum [noor"o-sen'trəm] one of the embryonic vertebral elements from which the spinous processes of the vertebrae develop.

neurochemistry [noor"o-kem'is-tre] that branch of neurology dealing with the chemistry of the nervous system.

neurochorioretinitis [noor"o-kor"e-o-ret"ĭ-ni'tis] inflammation of the optic nerve, choroid and retina.

neurochoroiditis [noor"o-kor"oi-di'tis] inflammation of the optic nerve and choroid.

neurocirculatory [noor"o-sur'ku-lə-tor"e] pertaining to the nervous and circulatory systems.

neurocladism [nŏŏ-rok'lə-diz-əm] the formation of new branches by the process of a neuron; especially the force by which, in regeneration of divided nerves, the newly formed axons become attracted by the peripheral stump, so as to form a bridge between the two ends.

neuroclonic marked by nervous spasm.

neurocommunications [noor"o-kə-mu"nĭ-ka'shənz] the branch of neurology dealing with the transfer and integration of information within the nervous system.

neurocranium [noor"o-kra'ne-əm] the part of the cranium enclosing the brain.

neurocrine 1. denoting an endocrine influence on or by the nerves. 2. pertaining to neurosecretion.

neurocristopathy [noor"o-kris-top'ə-the] any disease arising from maldevelopment of the neural crest.

neurocutaneous [noor"o-ku-ta'ne-əs] pertaining to nerves and skin, or the cutaneous nerves.

neurocyte a nerve cell of any kind.

neurocytoma [noor"o-si-to'mə] a brain tumor of undifferentiated cells of nervous origin. Called also neuroepithelioma.

neurodegeneration [noor"o-de-jen"ər-a'shən] selective degeneration of neurons; may be entire neuron (neuronopathy) or restricted to the axon (axonopathy); may also be central, or peripheral, or central and peripheral.

neurodegenerative diseases [noor"o-de-jen'ər-ə-tiv] diseases characterized by **neurodegeneration**. Lesions are microscopic only but in chronic disease with massive involvement there may be grossly visible atrophy of affected nervous tissue.

VetBooks.ir

neurodendrite, neurodendron [noor"o-den'drīt] dendrite.

neurodermatitis [noor"o-dur"ma-ti'tis] a general term for a dermatosis presumed to result primarily from self trauma, usually scratching, biting, rubbing or chewing, from behavioral causes.
canine n. see **acral** lick dermatitis.
feline n. see idiopathic **hyperesthesia** syndrome.

neurodynia [noor"o-din'e-ə] pain in a nerve.

neuroectoderm [noor"o-ek'to-dərm] the portion of the ectoderm of the early embryo which gives rise to the central and peripheral nervous systems, including some glial cells.

neuroectodermal [noor"o-ek"to-dur'məl] pertaining to or emanating from neurectoderm.

neuroeffector [noor"o-ə-fek'tər] of or relating to the junction between a neuron and the effector organ it innervates.

neuroencephalomyelopathy [noor"o-en-sef"ə-lo-mi"ə-lop'ə-the] disease involving the nerves, brain and spinal cord.

neuroendocrine [noor"o-en'do-krin] pertaining to neural and endocrine influence, and particularly to the interaction between the nervous and endocrine systems.
n. cell present in skin and oral mucosae of some species; thought to act as pressure receptors.
n. cell tumor rare tumors of neuroendocrine cells in the skin and oral mucosa, where they are pedunculated and located on the lips and gums. In the skin, they occur on the lips, ears or digits, where they may grow rapidly and ulcerate. Called also Merkel cell tumor.
n. receptors receptors located on the membrane of the target cell.
n. system the nervous system plus the endocrine system and the interactions between them.

neuroendocrinology [noor"o-en"do-krĭ-nol' ə-je] the study of the interactions of the nervous and endocrine systems.

neuroepithelial [noor"o-ep"ĭ-the'le-əl] pertaining to the neuroepithelium.
n. body an APUD respiratory system cell occurring in the bronchiolar mucosa either singly or as small aggregates.

neuroepithelioma [noor"o-ep"ĭ-the"le-o'mə] see **neurocytoma**.

neuroepithelium [noor"o-ep"ĭ-the'le-əm] 1. epithelium made up of cells specialized to serve as sensory cells for reception of external stimuli. Called also sense, or sensory, epithelium. 2. the ectodermal epithelium, from which the central nervous system develops.

neurofibril [noor"o-fi'bril] one of the delicate threads running in every direction through the cytoplasm of a nerve cell, extending into the axon and dendrites.

neurofibroma [noor"o-fi-bro'mə] a tumor of peripheral nerves due to abnormal proliferation of Schwann cells. In cattle neurofibromas appear as subcutaneous swellings. They seem to be transmitted from a cow to her calf. Called also fibroneuroma, schwannoma.

neurofibromatosis [noor"o-fi-bro"mə-to'sis] seen commonly as swellings on peripheral and intercostal nerves, and on the myocardium in old cows at the abattoir. Also occurs in very young calves and may be hereditary. May be visible as subcutaneous swellings. See also **neurofibroma**.

neurofibrosarcoma [noor"o-fi"bro-sahr-ko'mə] an occasional malignant tumor in animals, originating from Schwann cells of the peripheral nervous system and seen most commonly in cattle.

neurofilament [noor"o-fil'ə-ment] any of the slender, fibrillar elements which, along with the neurotubules, forms a neurofibril.

Neurofilaria cornelliensis see ***Parelaphostrongylus tenuis***.

neurofilariasis [noor"o-fil"ə-ri'ə-sis] a disease caused by *Parelaphostrongylus tenuis*; principally a parasite of deer but also infests llamas, horses and sheep in which the worms invade the spinal cord and cause a syndrome of lameness, incoordination and paralysis. Called also moose disease (sickness).

neurogenesis [noor"o-jen'ə-sis] the development of nervous tissue.

neurogenic [noor"o-jen'ik] 1. forming nervous tissue, or stimulating nervous energy. 2. originating in the nervous system.

neurogenous [nŏŏ-roj'ə-nəs] arising from the nervous system, or from some lesion of the nervous system.

neuroglia [nŏŏ-rog'le-ə] the supporting cells of central nervous system, consisting of astrocytes, oligodendrocytes and microglia; called also glia.

neuroglial [nŏŏ-rog'le-əl] emanating from or pertaining to neuroglia.

neurogliocyte [nŏŏ-rog'le-o-sīt"] one of the cells composing the neuroglia.

neuroglioma [nŏŏ-rog"le-o'mə] a tumor composed of neuroglial tissue.

neurohemal organs organs in which intimate relationships between axons and terminal blood vessels are established.

neurohistology [noor"o-his-tol'ə-je] histology of the nervous system.

neurohormone [noor'o-hor"mōn] a hormone stimulating the neural mechanism.

neurohumor a chemical substance formed in a neuron and able to activate or modify the function of a neighboring neuron, muscle or gland.

neurohumoral pertaining to or emanating from neurohumor.
n. substances include epinephrine, norepinephrine, acetylcholine, possibly histamine, serotonin and γ-aminobutyric acid.
n. transmission the transmission of a nervous impulse from neuron to neuron or from neuron to effector organ by means of a neurohumoral substance.

neurohypophysis [noor"o-hi-pof'ə-sis] the posterior lobe of the pituitary gland. It stores and secretes two hormones, oxytocin and antidiuretic hormone (vasopressin), which are released in response to neural stimulation.

neuroid [noor'oid] resembling a nerve.

neuroimmunology [noor"o-im"u-nol'ə-je] that branch of science which deals with the interaction of the nervous and immune systems in health and disease, as in the effect of autonomic nervous activity on the immune response and the role of antibodies in myasthenia gravis.

neurokeratin [noor"o-ker'ə-tin] non-lipid component of the myelin sheath.

neurolathyrism [noor"o-lath'ĭ-riz-əm] the form of **lathyrism** manifested as irreversible paralysis of the legs.

neurolemma [noor"o-lem'ə] neurilemma.

neurolemmal pertaining to or emanating from the neurilemma.

neurolemmitis neurilemmitis.

neurolemmocytus see **Schwann cell**.

neurolemmoma neurilemmoma, schwannoma.

neuroleptanalgesia [noor"o-lep"tən-əl-je'ze-ə] a state of quiescence, reduced awareness and analgesia produced by the simultaneous administration of a neuroleptic agent, e.g. acepromazine, and a narcotic analgesic, e.g. meperidine. Fixed-dose combinations used extensively in veterinary science are droperidol–fentanyl citrate and etorphine–acepromazine.

neuroleptanalgesic [noor"o-lep"tən"əl-je'zik] a suitable combination of agents used to produce **neuroleptanalgesia**.

neuroleptanesthesia [noor"o-lep"tən-es-the'zhə] a state of neuroleptanalgesia and unconsciousness produced by the simultaneous administration of a narcotic analgesic agent and a neuroleptic agent, e.g. a mixture of methadone and acepromazine for dogs and a mixture of pethidine and acepromazine in horses, supplemented by the inhalation of nitrous oxide and oxygen.

neuroleptanesthetic [noor"o-lep"tən-əs-thet'ik] an agent producing neuroleptanesthesia, such as the combinations droperidol–fentanyl, acepromazine–meperidine, acepromazine–oxymorphone and diazepam–oxymorphone.

neuroleptic [noor"o-lep'tik] 1. modifying psychotic behavior. 2. any drug that favorably modifies psychotic clinical signs; the main categories of neuroleptics include the phenothiazines, butyrophenones and thioxanthenes. Called also antipsychotic and major tranquilizer. Drugs of this type stabilize mood and reduce anxiety, tension and hyperactivity. They are also effective in helping to control agitation and aggressiveness.

neurolipidoses [noor"o-lip"ĭ-do'ses] a group of lysosomal storage diseases in which lipids accumulate in the central nervous system, e.g. gangliosidosis, galactocerebrosidosis, leukodystrophy, glucocerebrosidosis and sphingomyelinosis.

neurologic, neurological [noor"o-loj'ik] pertaining to or emanating from the nervous system or from neurology.
n. assessment evaluation of the health status of a patient with a nervous system disorder or dysfunction. The purposes of the assessment include establishing a diagnosis to guide the veterinarian in prescribing medical and surgical treatments and in planning and implementing nursing measures to help the patient cope effectively with daily living. Includes evaluation of **cranial** nerves, **gait**, **mental** state, muscle **tone** (1), **postural** reactions, **sensory** perceptivity, spinal nerves and visceral function.
n. deficit any defect or absence of function of a peripheral nerve or a system; e.g. nystagmus is a vestibular deficit.

neurologist [nŏŏ-rol'ə-jist] a specialist in neurology.

neurology [*nŏŏ-rol'ə-je*] that branch of veterinary science which deals with the nervous system, both normal and in disease.
clinical n. that especially concerned with the diagnosis and treatment of disorders of the nervous system.
neurolymphomatosis [*noor"o-lim"fo-mə-to'sis*] lymphoblastic infiltration of a nerve.
n. gallinarum see **Marek's disease**.
neurolysin [*nŏŏ-rol'ĭ-sin*] a cytolysin with a specific destructive action on neurons.
neurolysis [*nŏŏ-rol'ĭ-sis*] 1. release of a nerve sheath by cutting it longitudinally. 2. operative breaking up of perineural adhesions. 3. relief of tension upon a nerve obtained by stretching. 4. exhaustion of nervous energy. 5. destruction or dissolution of nerve tissue.
neuroma [*nŏŏ-ro'mə*] a tumor or new growth largely made up of nerve cells and nerve fibers.
acoustic n. a benign tumor within the auditory canal arising from the eighth cranial (acoustic) nerve.
amputation n. traumatic neuroma occurring after amputation of an extremity or part.
traumatic n. an unorganized bulbous or nodular mass of nerve fibers and Schwann cells produced by hyperplasia of nerve fibers and their supporting tissues after accidental or purposeful sectioning of the nerve.
neuromalacia [*noor"o-mə-la'shə*] morbid softening of the nerves.
neuromere [*noor'o-mēr*] 1. any of a series of transitory segmental elevations in the wall of the neural tube in the developing embryo; also, such elevations in the wall of the mature rhombencephalon. 2. a part of the spinal cord to which a pair of dorsal roots and a pair of ventral roots are attached.
neuromuscular [*noor"o-mus'ku-lər*] pertaining to nerve terminations in muscles.
n. blockade deliberate paralysis of the motor end-plates; important in veterinary surgery for immobilization. It is effected by the use of competitive (non-depolarizing) agents such as *d*-tubocurarine, and depolarizing agents such as succinylcholine.
n. blocking agents drugs capable of producing neuromuscular blockade (above).
n. jitter in electromyography, the variation in response time of a single muscle fiber following application of a stimulus; largely attributed to fluctations in the time for endplate potentials to reach the action potential threshold. Assessment of jitter is a sensitive test for myasthenia gravis.
n. junction the point of junction of a nerve fiber with the muscle that it innervates. It includes an area of folded sarcolemma of the muscle fiber known as the muscle end-plate, and an axon terminal located in the folds and containing vesicles of the neurotransmitter acetylcholine. Called also **myoneural junction**.
n. junction disease examples are **tick** paralysis, **botulism**, **myasthenia** gravis.
n. paralysis paralysis caused by malfunction at the neuromuscular junction, e.g. after administration of a neuromuscular blocking agent. The paralysis may be flaccid or spastic.
phase-II n. block alteration of the end-plate threshold to depolarization by acetylcholine following prolonged use of a depolarization agent such as succinylcholine.
n. spindle consists of muscle fiber, afferent and efferent nerve endings and connective tissue; maintains muscle tone via stretch reflex mediated through two neurons at spinal cord level.
n. transmission release of acetylcholine from the nerve ending and activation of the receptors in the muscle end-plate.
neuromycotoxins [*noor"o-mi'ko-tok"sinz*] fungal toxins which affect nervous functions, e.g. ergotamine, tunicamycin, lolitrems.
neuromyelitis [*noor"o-mi"ə-li'tis*] inflammation of nervous and medullary substance; myelitis attended with neuritis.
neuromyopathy [*noor"o-mi-op'ə-the*] any disease of nerves and muscles combined.
neuromyositis [*noor"o-mi"o-si'tis*] neuritis with myositis.
neuron [*noor'on*] a nerve cell; any of the conducting cells of the nervous system, consisting of a cell body, containing the nucleus and its surrounding cytoplasm, and the axon and dendrites. Neurons are highly specialized cells having two characteristic properties: irritability, which means that they are capable of responding to stimulation; and conductivity, which means that they are able to conduct impulses. They are composed of a cell body (the neurosome or perikaryon), containing the nucleus and its surrounding cytoplasm, and one or more processes (nerve fibers) extending from the cell body. The processes are actually extensions of the cytoplasm surrounding the nucleus of the neuron. A nerve cell may have only one such slender fiber extending from its body, in which case it is classified as unipolar. A neuron having two processes is bipolar, and one with three or more processes is multipolar. Most neurons are multipolar, this type of neuron being widely distributed throughout the central nervous system and autonomic ganglia. The multipolar neurons have a long single process called an *axon* and several branched extensions called *dendrites*. The dendrites receive stimuli from other nerves or from a receptor organ, such as the skin or ear, and transmit them through the neuron to the axon. The axon conducts the impulses to the dendrite of another neuron or to an effector organ that is thereby stimulated into action. Many processes are covered with a layer of lipid material called **myelin**. Peripheral nerve fibers have a thin outer covering called the neurilemma.
adrenergic n. nerve cells which secrete norepinephrine as a neurotransmitter; they are mostly sympathetic postganglionic nerves plus some within specific brainstem foci.
association n. see internuncial neuron (below).
cholinergic n. nerves which synthesize the neurotransmitter acetylcholine in their terminals; they include α-motor neurons of the spinal cord, cranial nerves innervating skeletal muscle, preganglionic sympathetic and postganglionic parasympathetic neurons.
dark n. shrunken basophilic neurons; considered to be histological artefacts.
internuncial n. neurons found in the brain and spinal cord that conduct impulses between neurons such as from afferent to efferent neurons. Called also association neurons or interneurons.
Golgi n's see **Golgi neurons**.
lower motor n's see lower **motor neuron**.
motor n. see **motor neuron**.
neurosecretory n. [*noor"o-sə-kre'tə-re*] neurons of the hypothalamus that receive nervous impulses from higher centers and translate them into the regulation of hormone secretion.
nonadrenergic-noncholinergic (NANC) n's release nitric oxide as a neurotransmitter.
parvicellular n. in the hypothalamus; regulate the secretion of adenohypophyseal hormones via releasing and inhibiting factors.
postganglionic n's neurons whose cell bodies lie in the autonomic ganglia and which relay impulses beyond the ganglia to the effector organ.
preganglionic n's neurons whose cell bodies lie in the central nervous system and whose efferent fibers terminate in the autonomic ganglia.
n. transmission the transmission of impulses along axons by means of electrical impulses and across synapses by neurotransmitters, especially norepinephrine and acetylcholine.
upper motor n's see upper **motor neuron**.
neuronal pertaining to or emanating from a neuron.
n. abiotrophy see hereditary neuronal **abiotrophy** of Swedish Lapland dogs.
n. ceroid-lipofuscinosis see ceroid **lipofuscinosis**.
n. glycoproteinosis see **glycoproteinosis**.
n. heterotopia a collection of nerve cells at a site where they are normally absent.
n. inclusion-body disease an idiopathic disease of female Japanese Brown cattle; characterized by an acute onset of excitability, fever, sweating, sudden death plus cytoplasmic inclusion bodies in axons in the pons, medulla, midbrain.
n. lipodystrophy see **gangliosidosis**.
multisystemic n. degeneration in red-haired Cocker spaniel dogs; signs commence at about 6 months of age with behavioral changes, gait and balance disorders, tremors, some seizures sufficient to warrant euthanasia.
n. processes dendrites and axons.
n. vacuolar degeneration a probably inherited scrapie-like neuronopathy in young Australian Angora goats; ataxia commences at 3 months of age and progesses to severe paresis; characterized by vacuolation of large brain and spiral cord neurons.
neuronopathy [*noor"on-op'ə-the*] any disease affecting nerve cells.
n. and pseudolipidosis see **mannosidosis**.
neuronophage [*nŏŏ-ron'o-fāj*] a phagocyte that destroys nerve cells.

VetBooks.ir

neuronophagia [noor"on-o-fa'jə] phagocytic destruction of nerve cells.

neuronophagic pertaining to or emanating from neuronophagia.

n. nodule a focus of microglia formed around degenerating neurons.

neuronotmesis partial or complete severance of a nerve, with disruption of the axon and its myelin sheath and of the connective tissue elements; regeneration is unlikely. See also **axonotmesis**.

neuropapillitis [noor"o-pap"ĭ-li'tis] optic neuritis affecting the optic nerve head.

neuroparalysis [noor"o-pə-ral'ĭ-sis] paralysis due to disease of a nerve or nerves.

neuropathic [noor"o-path'ik] pertaining to disease of the nervous system.

n. syndromes see **neuropathy**.

neuropathogenicity [noor"o-path"o-jə-nis"ĭ-te] the quality of producing or the ability to produce pathological changes in nerve tissue.

neuropathology [noor"o-pə-thol'ə-je] pathology of the nervous system.

neuropathy [nŏŏ-rop'ə-the] a general term denoting functional disturbances and pathological changes in the peripheral nervous system. The etiology may be known (e.g. poisoning by arsenicals, ischemic or traumatic neuropathy) or unknown. Encephalopathy and myelopathy are corresponding terms relating to involvement of the brain and spinal cord, respectively. The term is also used to designate noninflammatory lesions in the peripheral nervous system, in contrast to inflammatory lesions (neuritis).

central peripheral n. see Boxer progressive **axonopathy**.

diabetic n. a chronic symmetrical sensory polyneuropathy; seen, less often in dogs than in cats, as weakness in the hindlimbs, plantigrade stance and inability to jump.

entrapment n. a neuropathy due to mechanical pressure on a peripheral nerve.

equine proliferative optic n. cauliflower-like mass protruding into the vitreous from the optic disk; an incidental unilateral finding in older horses; vision is not impaired. Believed to be an astrocytoma or due to a lipid storage disorder.

giant axonal n. a familial disease of German shepherd dogs, characterized by ataxia, hypotonia, reduced pain sensation, and loss of reflexes and proprioception in the hindlegs, which develops from a young age. Vomiting, associated with esophageal dilatation, also occurs.

hereditary n. recorded in Tibetan mastiff as an inherited defect in myelin production. Weakness, loss of reflexes and quadriplegia develop quickly and at an early age.

hereditary sensory n. an inherited abnormality in which affected dogs have impaired perception of pain in the feet and lower limbs from a young age; causes extensive self-mutilation of toes and footpads. It occurs in German shorthaired pointers, English pointers and English springer spaniels. Called also acral mutilation syndrome.

infiltrative splanchnic n. see **proventricular** dilatation disease.

progressive n. disease of young Cairn terriers with many similarities to globoid cell **leukodystrophy**. Affected dogs show quadriparesis, ataxia and head tremors.

progressive inflammatory n. (PIN) neurological illnesses occurring in workers in pig slaughterhouses using compressed air to blow pig brains out of skulls. It is hypothesized that exposure to brain mist results in an autoimmune response causing peripheral neuropathy.

retrobulbar n. see *Dryopteris*.

trigeminal n. see **mandibular** neuritis.

neuropeptide [noor"o-pep'tid] any of the molecules composed of short chains of amino acids (endorphins, enkephalins, vasopressin, etc.) found in brain tissue.

neuropharmacology [noor"o-fahr"mə-kol'ə-je] the scientific study of the effects of drugs on the nervous system.

neuro-ophthalmology [noor"o-of"thəl-mol'ə-je] that branch of ophthalmology dealing with portions of the nervous system related to normal ocular function.

neurophthisis wasting of nerve tissue.

neurophysin [noor"o-fi'sin] any of a group of soluble proteins secreted in the hypothalamus that serve as binding proteins for vasopressin and oxytocin, playing a role in their transport in the neurohypophyseal tract and their storage in the posterior pituitary.

neurophysiology [noor"o-fiz"e-ol'ə-je] physiology of the nervous system.

neuropil, neuropile [noor'o-pil] a dense feltwork of interwoven cytoplasmic processes of nerve cells (dendrites and axons) and of neuroglial cells in the central nervous system and some parts of the peripheral nervous system.

neuroplasm [noor'o-plaz-əm] the protoplasm of a nerve cell.

neuroplasty [noor'o-plas"te] surgical repair of a nerve.

neuropodium [noor"o-po'de-əm] a bulbous termination of an axon in one type of synapse.

neuropore [noor'o-por] an opening in the cranial or caudal end of the neural tube of the developing embryo that closes eventually.

neuroradiology [noor"o-ra"de-ol'ə-je] radiology of the nervous system.

neuroretinitis [noor"o-ret"ĭ-ni'tis] inflammation of the optic nerve and retina.

neuroretinopathy [noor"o-ret"ĭ-nop'ə-the] pathology of the optic nerve and retina.

neurorrhaphy [nŏŏ-ror'ə-fe] suture of a divided nerve.

neurosarcoma [noor"o-sahr-ko'mə] a sarcoma with neuromatous elements.

neuroscience [noor'o-si"əns] the embryology, anatomy, physiology, biochemistry and pharmacology of the nervous system.

neurosclerosis [noor"o-sklə-ro'sis] hardening of nerve tissue.

neurosecretion [noor"o-sə-kre'shən] 1. the secretory activities of nerve cells. 2. a substance secreted by nerve cells.

neurosecretory [noor"o-sə-kre'tə-re] pertaining to or emanating from the secretory activities of nerve cells.

n. bodies the form in which neurosecretions are passed along axons to release them into the blood.

n. neurons neurons capable of secreting neurosecretions.

n. substances substances secreted by neurosecretory neurons, e.g. oxytocin, antidiuretic hormone, releasing factors, inhibiting factors.

neurosis [nŏŏ-ro'sis] pl. *neuroses;* an emotional disorder that can interfere with an animal's ability to lead a normal life; sometimes called psychoneurosis. Examples are **weaving**, **crib**-biting and psychogenic **dermatosis**.

neurosome [noor'o-sōm] 1. cell body of a neuron. 2. small particle in a neuron cell body.

neurospasm [noor'o-spaz"əm] nervous twitching of a muscle.

neurosplanchnic [noor"o-splangk'nik] pertaining to the cerebrospinal and sympathetic nervous systems.

neurospongioma [noor"o-spon"je-o'mə] neuroglioma.

neurospongium [noor"o-spon"je-əm] 1. the fibrillar component of neurons. 2. a meshwork of nerve fibrils, especially the inner plexiform layer of the retina.

Neurospora [nŏŏ-ros'pə-rə] a genus of fungi, comprising the bread molds, capable of converting tryptophan to niacin; used in genetic and enzyme research.

neurosurgeon [noor"o-sur'jən] a physician who specializes in neurosurgery.

neurosurgery [noor'o-sur"jər-e] surgery of the nervous system.

neurosuture [noor"o-soo'chər] neurorrhaphy.

neurotendinous [noor"o-ten'dĭ-nəs] pertaining to both nerve and tendon.

neurotensin [noor"o-ten'sin] a tridecapeptide which induces vasodilatation and hypotension; present in human brain tissue and postulated to be a neurotransmitter.

neurothekeoma [nŏŏr"o-the"ke-o'mə] benign tumors arising from Schwann cells; occur rarely in dogs.

neurotherapy [nŏŏr"o-ther'ə-pe] the treatment of nervous disorders.

neurotization [nŏŏ-rot"ĭ-za'shən] 1. regeneration of a nerve after its division. 2. the implantation of a nerve into a paralyzed muscle.

neurotmesis [noor"ot-me'sis] neuronotmesis.

neurotome [noor'o-tōm] 1. a needle-like knife for dissecting nerves. 2. neuromere.

neurotomy [nŏŏ-rot'ə-me] dissection or cutting of nerves.

neurotony [nŏŏ-rot'ə-ne] the surgical stretching of a nerve; neurectasia; neurectasis.

neurotoxic [noor'o-tok"sik] pertaining to or emanating from a neurotoxin.

n. state a case of poisoning by a neurotoxin.

neurotoxicity [noor"o-tok-sis"ĭ-te] the quality of exerting a destructive or poisonous effect upon nerve tissue.

neurotoxin [noor'o-tok"sin] a substance that is poisonous or destructive to nerve tissue.

VetBooks.ir

neurotransmission [noor"o-trans-mish'ən] see **nerve** impulses.
neurotransmitter [noor"o-trans'mit-ər] a substance (e.g. norepinephrine, acetylcholine, dopamine) that is released from the axon terminal of a presynaptic neuron on excitation, and which travels across the synaptic cleft to either excite or inhibit the target cell.
adrenergic n. see **norepinephrine**.
n. receptor each neurotransmitter has its own receptor molecule; these show a high degree of structural homology.
neurotrauma [noor"o-traw'mə] mechanical injury to a nerve.
neurotrophy [nŏŏ-rot'rə-fe] nutrition and maintenance of tissues as regulated by nervous influence.
neurotropic [noor"o-tro'pik] pertaining to or emanating from neurotrophy, e.g. neurotropic osteopathy.
neurotropism [nŏŏ-rot'ro-piz-əm] 1. the quality of having a special affinity for nervous tissue. 2. the alleged tendency of regenerating nerve fibers to grow toward specific portions of the periphery.
neurotubule [noor"o-too'būl] any of the long, straight, parallel tubules within neurons, which together with neurofilaments form neurofibrils.
neurovaccine [noor"o-vak-sēn'] a vaccine virus, classically rabies, prepared by growing the virus in the brain and spinal cord of a rabbit.
neurovascular [noor"o-vas'ku-lər] pertaining to both nervous and vascular elements, or to nerves controlling the caliber of blood vessels.
neurovisceral [noor"o-vis'ər-əl] see **neurosplanchnic**.
neurula [noor'u-lə] the early embryonic stage following the gastrula, marked by the first appearance of the nervous system.
neurulation [noor"u-la'shən] formation in the early embryo of the neural plate, followed by its development into the neural tube.
neuter [noo'tər] 1. to desex an animal. This has assumed an important role in the management and control of companion animal populations. **Castration** and **ovariohysterectomy** are the usual procedures. 2. a desexed animal. 3. a castrated male cat.
neutral [noo'trəl] neither basic nor acid.
n. endopeptidase synthesized by tracheobronchial epithelium, this is an important enzymatic regulator of airway neuropeptides which stimulate increased vascular permeability and smooth muscle contraction.
n. stress evokes responses which do not affect the comfort, well-being or reproduction of the patient.
neutralization [noo"trəl-ĭ-za'shən] the state of having been converted to neutrality from acid or base. Used also in microbiology to indicate neutralization of a toxin or of infectivity.
n. tests tests based on the ability of an antibody to neutralize the biological activity of an antigen. These may utilize antitoxins and toxins or immune serum and viruses or bacteria. The tests are often quantitative whereby antibody (serum) is serially diluted; the reciprocal of the highest dilution of serum neutralizing a standard amount of toxin or virus or bacteria is the neutralizing antibody titer of that serum.
neutralize [noo'trəl-īz] to render neutral.
neutrino [noo-tre'no] a subatomic particle with an extremely small mass (theoretically zero rest mass) and no electric charge.
neutroclusion [noo"trō-kloo'zhən] class I malocclusion involving abnormalities of individual teeth.
neutrocyte [noo'tro-sīt] neutrophil (2).
neutron [noo'tron] an electrically neutral or uncharged particle of matter existing along with protons in the atoms of all elements except the mass 1 isotope of hydrogen.
neutropenia [noo"tro-pe'ne-ə] a diminished number of neutrophils in the blood. See also **pseudoneutropenia**.
cyclic n. periodic neutropenia. See also canine **cyclic** neutropenia.
malignant n. agranulocytosis.
periodic n. see canine **cyclic** neutropenia.
neutrophil [noo'tro-fil] 1. one of the three granular leukocytes having a nucleus with three to five lobes connected by threads of chromatin, and cytoplasm containing lysosomes that stain characteristically and enable neutrophils to be distinguished from basophils and eosinophils; called also a granulocyte or polymorphonuclear leukocyte. See also **heterophil** (1). 2. any cell, structure or histological element readily stainable with neutral dyes.
band n. a neutrophilic leukocyte whose nucleus is not divided into segments. A late stage of maturation preceding the fully mature segmented neutrophil normally found in circulation.
n. chemotactic factor see **chemotactic factor**.
circulating n. pool those circulating freely in the larger blood vessels; the pool sampled when blood is withdrawn. There is movement between this and the marginated pool (see below).
hypersegmented n. increased number of nuclear lobes; seen in hyperadrenocorticism or during treatment with corticosteroids, and in blood that has been in transit for long periods.
hyposegmented n. a lack of nuclear lobes; may occur in chronic infections and is a feature of **Pelger–Huët anomaly**. A normal finding in chinchillas and is seen occasionally in rabbits.
n.:lymphocyte ratio correlates directly with the magnitude of the total leukocyte count in response to disease in domestic animals; it varies from 0.5 in cattle to 3.5 in dogs.
marginated n. pool those in microcirculation, in close approximation to vascular endothelium. They may move into and out of the circulating pool or stick and move into adjacent tissue spaces.
maturation n. pool cells in the late stages of maturation; consists of metamyelocytes, band and segmented neutrophils ready for release into the marrow sinusoids and then to peripheral blood. Called also post-mitotic pool.
pavementing of n's. lining of endothelial surfaces before emigration to the interstitial space in an acute inflammatory response.
stab n. see band neutrophil (above).
toxic n. one with blue-black or large reddish cytoplasmic granules and diffuse cytoplasmic basophilia and vacuolation; caused by disruption of maturation.
neutrophil-releasing activity see **leukocytosis**-inducing factor.
neutrophilia [noo"tro-fil'e-ə] an increase in the number of neutrophils in the blood.
inflammatory n. increased numbers of neutrophils in response to inflammation, which can vary between species. In an *acute* response, the neutrophilia is accompanied by a left shift corresponding with release of segmented neutrophils followed by less mature cells from the storage pool within hours. When depleted, there is evidence of accelerated myelopoiesis within days. There is usually an accompanying lymphopenia, eosinopenia and occasionally a monocytosis. In a *chronic* response evidence of the left shift may diminish, depending on the species and type of inflammation. The magnitude of inflammatory neutrophilia is most marked in dogs and cats and the least in cattle due to their small stored neutrophil pool.
physiological n. release of catecholamines causes a shift of mature neutrophils from the marginated neutrophil pool to the circulating pool, thus there is not a left shift. Depending on the species, the magnitude of increase can be substantial being greatest in the cat because of their large storage neutrophil pool.
shift n. see physiological neutrophilia (above).
steroid n. see steroid **leukogram**.
true n. one in which there is an increase in the total blood granulocyte pool. It is seen in chronic infection.
neutrophilic [noo"tro-fil'ik] 1. pertaining to neutrophils. 2. stainable by neutral dyes.
nevi [ne'vi] plural form of **nevus**.
nevocarcinoma see malignant **melanoma**.
nevoid [ne'void] resembling a nevus.
nevus [ne'vəs] pl. *nevi* [L.] a circumscribed stable malformation of the skin and occasionally of the oral mucosa, which is not due to external causes; the excess (or deficiency) of tissue may involve epidermal, connective tissue, adnexal, nervous, or vascular elements; called also mole.
connective tissue n. any nevus occurring in the dermal connective tissue and characterized by nodules, papules or plaques, or by combinations of such lesions. Histologically, there is inconstant focal or diffuse thickening and abnormal staining of collagen.
epidermal n. congenital skin tumors that do not contain melanocytes, which vary widely in appearance, size and distribution, and which are commonly hyperkeratotic.
hair follicle n. occur on the proximal extremities and have thick, brushlike hairs protruding.
intradermal n. a nevocytic nevus in which the nevus cells occur in nests in the upper part of the dermis, with no evidence of the proliferative process by which they originated.
melanocytic n. any nevus, usually pigmented, composed of melanocytes. See also **melanoma**.
pigmented n., n. pigmentosus one containing melanin; the term is usually restricted to nevocytic nevi (moles), but may be applied to other pigmented nevi.

sebaceous n. an epidermal nevus containing an overgrowth of sebaceous glands, frequently growing larger during puberty or early adult life, and rarely giving rise to a variety of new growths, including basal cell carcinoma.

n. vascularis, n. vasculosus, vascular n. a reddish swelling or patch on the skin due to hypertrophy of the skin capillaries. Seen on the scrotum of old dogs, sometimes bleeding.

new duck disease see ***Riemerella*** *anatipestifer*.

New Forest named after the New Forest in the UK.

N. F. disease see **infectious** bovine keratoconjunctivitis.

N. F. eye see **infectious** bovine keratoconjunctivitis.

N. F. pony an English pony, any solid color, 12.2–14.2 hands high; an all-round riding pony.

New Hampshire red a deep red dual-purpose breed of chicken, probably derived from Rhode Island red. Used extensively for crossbreeding.

new methylene blue (NMB) see new methylene blue **stain**.

new process said of oil cake or meal. See **solvent** extraction of oil seeds.

New York dressed poultry a special poultry meat inspection technique in which the viscera are left in the carcass.

New Zealand cattle tick see ***Haemaphysalis*** *longicornis*.

New Zealand rabbit a large breed of rabbit with pink eyes and fur of white, red or black. The white variety is known as the New Zealand white and as a laboratory rabbit.

newborn animals [*noo'born*] recently born. See also **neonatal**, **neonate**.

Newbury virus Newbury agents-1 and -2 are, as yet, unclassified strains of bovine calicivirus; associated causatively with diarrhea in calves.

Newcastle disease [*noo'kas-əl*] an infectious, highly contagious disease of chickens, turkeys and many wild birds, occasionally infecting humans, caused by avian paramyxovirus-1, in the genus *Avulavirus*. The disease causes very heavy losses in birds of all ages and frequently occurs as massive outbreaks. There are a number of clinical forms of the disease, including a nervous form characterized by tremor, opisthotonos and paralysis, and a mortality rate of 90%, an acute respiratory form with high mortality, up to 90% in chickens, an acute respiratory form without significant death losses, and a clinically inapparent form. The disease is also classified, on epidemiological grounds, into velogenic (peracute), mesogenic (acute) and lentogenic (subacute) forms, which are caused by viruses with a corresponding variation in virulence. A disease notifiable to the OIE (see Table 22). Called also avian pneumoencephalitis.

Newfoundland a very large (100–150 lb) and very strong, longhaired dog with massive head, small pendulous ears and bushy tail. Most commonly black, but some other colors are recognized, depending on the country. A black and white version is known as Landseer. The breed is predisposed to subaortic stenosis, cardiomyopathy and hypothyroidism. Called also 'Newfie'.

Newman's stain a defatting stain, useful for the examination of direct smears of milk.

Newmarket named after the famous racing center in the United Kingdom.

N. cough see **equine** influenza.

N. itch see **ringworm**.

newsprint low grade paper used for newspapers. Old newspapers are fed to cattle as an alternative roughage and may occasionally be ingested by dogs. Significant amounts of lead are accumulated in tissues; no cases of poisoning have been recorded in cattle, though it has been recorded in dogs.

newt [*nōōt*] amphibians in the family Salamandridae, subfamily Pleurodelinae. The newts spend some of their lives on land, in a form called efts, and then metamorphose to aquatic or semi-aquatic adults. Small, and lizard-like with four limbs and a tail, they are popular as house pets or decorations. Skin secretions may be toxic and all newts are potential carriers of *Salmonella*, which presents a public health hazard when kept as pets. See also **salamander**.

n. poisoning dogs and cats mouthing newts and salamanders may develop salivation, muscular weakness and motor incoordination leading to paralysis, vomiting and diarrhea, caused by a salivary toxin.

newton (N) [*noo'tən*] the SI unit of force; the force that, when acting continuously upon a mass of 1 kilogram, will impart to it an acceleration of 1 meter per second squared.

nexin the connecting link between microtubules in cilia and flagella.

nexus [*nek'səs*] 1. a bond, as between members of a series or group. 2. a gap junction.

NF National Formulary.

NFE nitrogen free **extract**.

ng nanogram.

ngaio tree ***Myoporum*** *laetum*.

ngaione a hepatotoxic furanosesquiterpene present in the poisonous tree ***Myoporum*** *laetum* and in a fungus growing on sweet potatoes. See also ***Ceratostomella fimbriata***.

NGF nerve growth factor.

NGL no gross lesions.

NH_3 ammonia.

Ni chemical symbol, *nickel*.

niacin [*ni'ə-sin*] a water-soluble vitamin of the B complex found in various animal and plant tissues. Essential for normal carbohydrate metabolism. Most natural animal feeds have high enough content to avoid need for supplementation, except for pigs fed a heavy corn diet. Called also nicotinic acid, vitamin PP. See also **nicotinamide**.

n. nutritional deficiency causes hemorrhagic diarrhea, dermatitis, anemia and a severe stomatitis with ulceration of the mouth and tongue ('black tongue'). In cats, the signs are diarrhea, emaciation and death. Called also pellagra.

n. production a test for differentiating *Mycobacteria tuberculosis* (positive) and *M. avium* (negative).

niacinamide [*ni"ə-sin'ə-mīd*] (USP); called also **nicotinamide** (INN).

nibbling reaction seen in sheep with scrapie; the patient makes rapid, exaggerated, nibbling movements with the upper lip for the duration of a light stroking of the wool over the hindquarters.

Nicandra physalodes toxic plant in the family Solanaceae; contains an unidentified toxin which causes sudden death, ruminal tympany; called also apple of Peru.

nicarbazin [*ni-kahr'bə-zin*] an efficient coccidiostat but causes mottling of the egg yolk and lowered egg production in laying hens. Excessive dosing causes incoordination, inanition and loss of weight.

nicergoline an ergoline derivative functioning as an α_1-adrenoceptor antagonist; used for enhancing behavior of aged dogs.

niche [*nich*] a small recess, depression or indentation, especially a recess in the wall of a hollow organ that tends to retain contrast media, as revealed by radiography.

ecological n. the geographical location in the physical environment which the particular organism occupies best, in which it thrives best. The boundaries are determined by the suitability of the climate and the feed provided and competition with predators and collaboration with synergists.

nick 1. said of a mating that is likely to produce superior offspring. 2. slang for body condition; an animal in good body condition is said to be in good nick. 3. a break in a strand of nucleic acid.

nickel (Ni) [*nik'əl*] a chemical element, atomic number 28, atomic weight 58.71. See Table 4.

nicker a soft, short repetitive decrescendo sound used by horses to communicate.

nicking [*nik'ing*] 1. localized constriction of the retinal blood vessels. 2. making a small cut. A specific surgical procedure done on the underside of a horse's tail, which is then set so it is carried higher. Called also ventral caudal myotomy. Considered an unnecessary mutilation in most circles and may be illegal. 3. in animal breeding the phenomenon observed when the offspring are significantly better than either of the parents.

niclofolan a nitrosubstituted analog of hexachlorophane used as a fasciolicide and effective against mature liver flukes in sheep.

niclosamide [*nĭ-klo'sə-mīd*] a nitrosalicylanilide anthelmintic effective against tapeworms in all species except *Echinococcus granulosus* and *Dipylidium caninum* in dogs. Has some activity against paramphistomes in ruminants.

Nicotiana [*nik"o-she-a'nə*] a genus of plants in the family Solanaceae in South Africa, Australia and the America; contain nicotine which causes dyspnea, incoordination, tremor and convulsions; includes *N. attenuata*, *N. debneyi*, *N. glauca* (tree tobacco), *N. gossei*, *N. megalosiphon*, *N. suaveolens* (*N. debneyi*, *N. exigua*), *N. trigonophylla*, *N. velutina*. Most of the species are also called wild or native tobacco.

N. tabacum ingestion of the leaves or stalks of this plant by sows in early pregnancy causes congenital arthrogryposis of their

piglets. Cows may also be affected. The teratogen is the alkaloid anabasine. Called also tobacco—the commercial tobacco plant.

nicotinamide [nik"o-tin'ə-mīd] (INN) the amide of the B group vitamin, niacin, occurring naturally in the body and interconvertible with niacin; used in the prophylaxis and treatment of pellagra in humans. Called also niacinamide (USP).

n. adenine dinucleotide (NAD) a coenzyme that is involved in many biochemical oxidation–reduction reactions. The symbols for the oxidized and reduced forms are NAD+ and NADH.

n. adenine dinucleotide phosphate (NADP) a coenzyme similar to nicotinamide adenine dinucleotide but involved in fewer reactions. The symbols for the oxidized and reduced forms are NADP+ and NADPH.

nicotine [nik'o-tēn, nik'o-tin] a very poisonous piperidine alkaloid that in its pure state is a colorless, pungent, oily liquid, having an acrid burning taste. It is a constituent of tobacco and is produced synthetically.

n. poisoning dogs and cats are occasionally poisoned following ingestion or dermal or oral mucosal exposure to tobacco products or nicotine patches or other replacement products. Clinical signs include hypersalivation, vomiting, hyperactivity, tremors, dyspnea, tachycardia, muscle weakness and finally respiratory paralysis.

n. sulfate has been used as an anthelmintic but is very poisonous. Signs of poisoning may include excessive salivation, dyspnea, vomiting, tremors and convulsions. Death is due to respiratory paralysis. Has also been used as an insecticide and acaricide. It was once used against sheep scab and is still used against poultry lice.

nicotinic [nik"o-tin'ik] pertaining to the transmission of nerve impulses mediated by nicotinic receptors.

n. acid see **niacin**.

n. receptors cholinergic receptors of autonomic ganglion cells and motor end-plates of skeletal muscle that are stimulated by low doses of nicotine and blockaded by high doses or by tubocurarine.

n. synapses synapses in which nicotinic transmitters effect the transmission of impulses.

nicotinism [nik'o-tin-iz"əm] nicotine poisoning, marked by stimulation and subsequent depression of the central and autonomic nervous systems, with death due to respiratory paralysis.

nicoumalone [ni-koo'mə-lōn] acenocoumarol.

nictitans pertaining to and often used as a synonym or abbreviation for membrana nictitans. See **nictitating membrane**.

nictitating membrane *palpebra III*, see also **membrana** nictitans, **third eyelid**.

n. m. flap advancement of the third eyelid across the globe with surgical fixation of it into the dorsolateral conjunctival fornix. Used as an indiscriminate treatment for corneal disease but offering two major disadvantages. Topically applied medications cannot reach the cornea, and observation of worsening corneal disease (or even rupture) is not possible.

n. m. prolapse occurs when the globe of the eye is depressed in the orbit, as in dehydration and emaciation. It is also a diagnostic sign of tetanus in many species; the membrane flicks across the eye whenever the animal is startled.

nictitation [nik"tĭ-ta'shən] the act of winking.

nidation [ni-da'shən] implantation of the fertilized ovum in the endometrium of the uterus in pregnancy.

NIDDM non-insulin-dependent diabetes mellitus.

nidicolous said of a bird that does not leave the nest for a long time after it is hatched.

nidifugous said of birds that leave their nests soon after they are hatched.

nidogen [ni'də-jen] an adhesive glycoprotein involved in the cell/basal lamina/matrix interface. Called also entactin.

Nidorella foetida toxic plant, a member of the Asteraceae family; contains an unidentified toxin which causes hepatic insufficiency and photosensitization.

nidus [ni'dəs] pl. *nidi* [L.] 1. a nest; point of origin or focus of a morbid process, e.g. a urolith, a local infection. 2. nucleus (2).

NIEA negative inotropic effect of activation.

Niemann–Pick disease [ne'mahn pik'] see **sphingomyelinosis**.

Nierembergia South American plant genus in the family Solanaceae.

N. hippomanica contains brunfelsamidine and produces tremors, convulsions and death in ruminants and horses.

N. veitchii contains a calcinogenic glycoside which causes enzootic calcinosis.

nifedipine [ni-fed'ĭ-pēn] a calcium channel blocker used principally as a vasodilator.

nifuraldezone a nitrofuran antibiotic used to treat enteritis in calves.

nifuratel an oral nitrofuran antibiotic with activity against protozoa and fungi.

nifuroxime a topical nitrofuran with antiprotozoal and antifungal properties.

nifurtimox a nitrofuran derivative used as an antitrypanosomal agent.

night blindness [nīt] nyctalopia; reduced or absent vision in dim light. Seen with many forms of retinal degeneration including those due to hypovitaminosis A and progressive retinal atrophy. Testing for night blindness entails behavioral testing through an obstacle course in varying light conditions.

congenital n. b. see congenital stationary night **blindness**.

night lighting the management practice of exposing laying hens and brood mares to bright lights at night time to stimulate egg production in the hens and to stimulate the early appearance of estrus at the beginning of the mating season in the mares.

night stool cecotroph.

Nightcliff gardners' disease named after a suburb of Darwin, Northern Territory, Australia which is an endemic focal area for **melioidosis**.

nightshade [nīt'shād] there are many toxic plants in the family solanaceae with variants of this name, including black nightshade, black-berry nightshade,, garden nightshade (*Solanum nigrum*), Brazilian nightshade (*S. seaforthianum*), climbing nightshade, woody nightshade (*S. dulcamara*), cutleaf nightshade, three-flowered nightshade (*S. triflorum*), silver-leafed nightshade (*S. elaeagnifolium*), Sturt's nightshade, Thargomindah nightshade (*S. sturtianum*), woolly nightshade (*S. mauritianum*). Deadly nightshade (*Atropa belladonna*) is commonly confused with *Solanum* spp., but it contains different toxicants. See also ***Solanum***, ***Atropa belladonna***.

nigra [ni'grə] [L.] *black;* see **substantia** nigra.

nigricans [ni'grĭ-kənz] blackening.

nigroid bodies see **corpora** nigra.

nigropallidal encephalomalacia [ni"gro-pal'ĭ-dəl] a condition caused by ingestion of *Centaurea solstitialis* or *C. repens*. In horses it causes somnolence, aimless wandering and difficulty in prehending and then eating feed.

nigrostriatal [ni"gro-stri-a'təl] projecting from the substantia nigra to the corpus striatum; said of a bundle of nerve fibers.

nikethamide [nĭ-keth'ə-mīd] a central nervous system and respiratory stimulant.

Nikolsky's sign [nĭ-kol'ske] in pemphigus vulgaris and some other bullous diseases, the outer epidermis separates easily from the basal layer on exertion of firm sliding manual pressure.

Nile tilapia (*Oreochromis niloticus*); an important fish in aquaculture, particularly in Africa and Asia. See also **tilapia**.

nilgai (*Boselaphus tragocamelus*) a large Asian antelope, gray or tan, with small conical horns. Imported into the USA for game hunting, most notably on the King Ranch in Texas. Called also nilgai antelope.

Nili-Ravi one of the Murrah type of domestic breeds of Indian buffalo; usually black, sometimes brown; wall eyes and white marks on head, legs and tail are common.

nimodipine a calcium channel antagonist with anticonvulsant activity.

nimorazole a 5-nitroimidazole derivative with antimicrobial activity similar to metronidazole. Has been used in the treatment of intestinal protozoal infections.

nine-mile fever see **Q fever**.

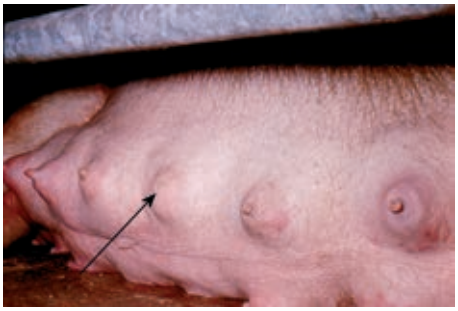
niobium (Nb) [ni-o'be-əm] a chemical element, atomic number 1, atomic weight 92.906. See Table 4.

Nipah virus [ne'pə] a respiratory disease of pigs caused by a paramyxovirus in the genus *Henipavirus*; is related to Hendra virus; transmitted from bats and is zoonotic causing a fatal encephalitis in humans. See Nipah virus **encephalitis**.

nipper [nip'ər] a tool for clipping, e.g. for claws and beaks of small cagebirds.

hoof n. a pincer-like tool with the blades curved in to face each other at the ends which are composed of two chisel edges

VetBooks.ir



N-7: Inverted nipples. Courtesy of JT Done.

opposing one another. Used in horses and cattle to nip off the bottom edge of the wall of the hoof and the adjoining sole.

pig tooth n. the equivalent of an electrician's side-cutters. A single-handed, scissor type tool, the blades consisting of two chisel edges facing one another laterally. Used to nip off the needle teeth of baby pigs.

nipple [*nip'əl*] fleshy projection on each mammary gland of the bitch, queen and other species; exit for milk produced by the gland. In ruminants called the **teat**.

n. drinkers nipple-shaped metal devices mounted on tanks of water or on mains pipes that have a ball in the point and from which animals can get a sufficient daily intake of water by licking or, in the case of birds, pecking the tip of the device.

inverted n. hereditable in swine; nipple is inverted inwards and the affected section of udder will not give milk.

n. necrosis see **teat** necrosis.

Nippon Inu an ancient Japanese dog. There are three types, each recognized as a separate breed. The **Akita** is the largest, the **Shiba inu** the smallest, and the Kari, a medium-sized dog.

Nippostrongylus braziliensis [*nip"o-stron' jə-ləs*] a trichostrongyloid nematode found in the intestine of rats.

NIRD abbreviation for National Institute for Research in Dairying, now called Animal Grassland Research Institute, Reading, UK.

NIRD mastitis control program see NIRD **mastitis** control program.

NIRS near infrared reflectance spectroscopy.

nisin [*ni'sin*] an antibiotic substance isolated from cultures of lactic acid producing streptococci and reputed to have antibacterial activity against gram-positive bacteria.

Nissl [*nis'əl*] named for Franz Nissl (1860–1919), German neurologist.

N. bodies large granular bodies that stain with basic dyes, forming the reticular substance of the cytoplasm of neurons, composed of rough endoplasmic reticulum and free polyribosomes.

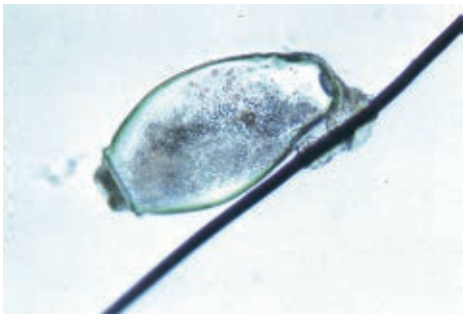
N. granules location of synthesis of most nervous system proteins.

N. substance Nissl bodies.

nit louse egg.

nitarsone [*nī-tahr'sōn*] an arsenical compound used as a feed additive for the prevention and treatment of histomoniasis in turkeys. Called also 4-nitrophenylarsonic acid. See also organic **arsenical**.

nitazoxanide [*ni"tə-zok'sə-nīd*] a synthetic nitrothiazolyl-salicylamide derivative. Studies have suggested efficacy in the treatment of cryptosporidiosis, cyclosporiasis, giardiasis, amebiasis and/or helminth infections. Antiprotozoal activity is believed to be due to interference with the pyruvate:ferredoxin oxidoreductase-dependent electron transfer essential in anaerobic energy metabolism. Side effects onclude abdominal pain, diarrhea and vomiting.



N-8: Nit (louse egg) cemented to hair. From Kummel BA, Color Atlas of Small Animal Dermatology. Mosby, 1989.

nitenpyram a neonicotinoid administered orally to dogs and cats for its rapid, short-term effect against fleas.

nithiazide drug used in the treatment of histomoniasis and hexamitiasis in turkeys.

nitralin a dinitroaniline compound used as a herbicide. The toxicity is low and poisoning would occur only with serious error in usage; signs of poisoning are nervousness, diarrhea, anorexia and loss of weight.

nitrate any salt of nitric acid. High intakes by animals (mostly ruminants) may occur when they eat large quantities of lush herbage that has been heavily fertilized with a nitrogen fertilizer such as potassium or ammonium nitrate. It can also occur after a long drought during which nitrification bacteria accumulate large amounts of nitrate in the soil and the first growth after the drought breaks may also be toxic. Pigs fed on food residues may ingest potassium nitrate used in meat curing when their swill contains butcher's residues.

n. explosives nitroglycerin and others used to blast out water holes and left in the hole may cause subsequent nitrate poisoning.

n. poisoning unusual unless animals get access to unguarded fertilizer or butcher shop residue containing potassium nitrate. Poisoning signs (dyspnea, depression, seizures and death) are due to methemoglobin formation and resulting hypoxia. Chief importance is as a constituent of ruminant diet and its conversion in the rumen to nitrite causing **nitrite** poisoning.

n. reduction test a biochemical reaction used in the identification of bacteria. It is based on the reduction of nitrate to nitrite and/or the release of nitrogen gas.

nitrazine yellow a dye used in a test for degree of composition of meat. If the dye stays yellow the meat is safe, gray-green is a doubtful result, and a purple color indicates that the meat is not suitable for human consumption.

nitremia excess of nitrogen in the blood, e.g. in uremia.

nitric [*ni'trik*] pertaining to or containing nitrogen in one of its higher valences.

n. acid. a highly caustic, fuming acid that has a characteristic choking odor. It was used at one time in the immediate treatment of rabid animal bites to prevent rabies becoming established, and as a cauterizing agent in the eradication of various kinds of warts. It is also used in the form of its potassium and sodium salts. It can be fatal if swallowed, and large amounts of nitric acid applied to the skin can cause necrosis.

n. oxide is produced during the ensiling process and animals in confined spaces and exposed to silo gas may develop severe respiratory disease due to irritation of the alveolar epithelium. Called also silo-filler's disease. See also **atypical interstitial pneumonia**.

nitride [*ni'trīd*] a binary compound of nitrogen with a metal.

nitrification [*ni"trī-fī-ka'shən*] the bacterial oxidation of ammonia and organic nitrogen to nitrites and nitrates in the soil.

nitrifying [*ni'trī-fī"ing*] oxidizing ammonia into nitrites and then into nitrates; said of certain bacteria.

nitrile [*ni'tril*] an organic compound containing trivalent nitrogen attached to one carbon atom, $-C\equiv N$.

nitrite [*ni'trīt*] any salt of nitrous acid; organic nitrites are used in the treatment of angina pectoris in humans.

n. poisoning causes methemoglobinemia and anemic anoxia, primarily in ruminants. Signs are dyspnea and coffee color of blood. Pregnant cows may abort several days to weeks later. Nitrite may come preformed in feed contaminated by a chemical agent, or in nitrate-rich food in which the nitrate is converted to nitrite during processing, e.g. low temperature cooking, heating of hay in a stack or moldering. Most cases are in ruminants which convert nitrate to nitrite in the rumen, the source being nitrate-rich plants. See also **nitrate**.

n.-treated fish meal used as a preservative and color-preservation agent the nitrite is converted biologically to a toxic nitrosamine, dimethylnitrosamine.

nitrituria [*ni"trī-tu're-ə*] the presence of nitrites in the urine.

nitro abbreviation of nitrogen. Usually taken to indicate the presence of an $-NO_2$ radical.

n.-chalk a fertilizer in the form of lime or chalk mixed with ammonium nitrate.

n. compounds toxins in *Astragalus* spp. plants which are converted to nitrite in the rumen, and cause nitrite poisoning,

and into other toxins causing weakness and paralysis. See also ***Carduus***.

nitroblue tetrazolium [*ni'tro-bloo tet"rə-zo'le-əm*] a yellow dye converted to a blue color on reduction.

n. t. test used to measure the phagocytic activity of polymorphonuclear leukocytes by the amount of color change in the dye.

nitrocellulose [*ni"tro-sel'u-lōs*] 1. pyroxylin, a base which is dissolved in alcohol or ether to form collodion. 2. the most common membrane used for immunoblot.

nitrofuran [*ni"tro-fu'ran*] a group of antibacterials, including nitrofurantoin, nitrofurazone, etc., that are widely used in food animals because of their effectiveness against gram-negative bacteria. They are used orally formass medication in both feed and water. See also **furazolidone**, **nitrofurantoin**, **nitrofurazone**, **nifuroxime**, **nifuratel**.

nitrofurantoin [*ni"tro-fu-ran'to-in*] a nitrofuran derivative antibacterial agent used in the treatment of urinary tract infections.

nitrofurazone [*ni"tro-fu'rə-zōn*] a nitrofuran derivative antibiotic used mostly for topical application, and orally for treatment of coccidiosis in poultry and in swine dysentery. Heavy or continuous dosing may cause paralysis or convulsions in calves. Called also Furacin.

nitrogen (N) [*ni'tro-jən*] a chemical element, atomic number 7, atomic weight 14.007. See Table 4. It is a gas constituting about four-fifths of common air; chemically it is almost inert. It is not poisonous but is fatal if breathed alone because of oxygen deprivation. Nitrogen occurs in proteins and amino acids and is thus present in all living cells.

n. balance the state of the body in regard to the rate of protein intake and protein utilization. When protein is metabolized, about 90% of the protein nitrogen is excreted in the urine in the form of urea, uric acid, creatinine and other nitrogen end products. The remaining 10% of the nitrogen is eliminated in the feces. A *negative* nitrogen balance occurs when more protein is utilized by the body than is taken in. A *positive* nitrogen balance implies a net gain of protein in the body. Negative nitrogen balance can be caused by such factors as malnutrition, debilitating diseases, blood loss and glucocorticoids. A positive balance can be caused by exercise, growth hormone and testosterone.

acid detergent insoluble n. measure of the nitrogen remaining in the acid detergent fiber residue of a feed sample. An indicator of heat damage during storage or processing which can render food protein unavilable to animals.

blood urea n. (BUN) see **urea** nitrogen.

n. dioxide see **nitric** oxide.

n. fixation conversion of atmospheric nitrogen into organic nitrogenous compounds by bacteria which may be symbiotic, e. g. *Rhizopus* spp., which grow on the roots of legumes and put those plants in an advantageous position with respect to nonlegumes.

n.-free extract (NFE) consists of carbohydrates, sugars, starches and a major portion of the hemicellulose in feeds. Calculated when crude protein, fat, water, ash and the fiber are added and the sum is subtracted from 100.

liquid n. compressed nitrogen in liquid form; used as a supercoolant for freezing and storage of frozen semen, and in cryosurgery.

n. mustards a group of toxic, blistering alkylating agents homologous to dichlorodiethyl sulfide (mustard gas), some of which have been used as antineoplastics. The group includes mechlorethamine (mustine), cyclophosphamide, thiotepa, chlorambucil and melphalan.

nonprotein n. (NPN) 1. the nitrogenous constituents of the blood exclusive of the protein bodies, consisting of the nitrogen of urea, uric acid, creatine, creatinine, amino acids, polypeptides and an undetermined part known as rest nitrogen. Measurement of nonprotein nitrogen is used as a test of renal function, but has been largely replaced by measurement of specific substances, e.g. urea and creatinine. 2. also used in relation to feeds and refers to those nitrogen-containing constituents which are not proteins, e.g. nucleic acids, amino sugars, urea, etc.

n. trichloride see **agene process**.

n. washout test measures the rate at which the nitrogen concentration in the expired air is reduced when the horse is made to breathe pure oxygen. The rate is less in incompetent lungs, e.g. those affected by emphysema.

nitrogenous [*ni-troj'ə-nəs*] containing nitrogen.

nitroglycerin [*ni"tro-glis'ər-in*] a chemical well known as an explosive but also a venodilator and used medically, principally in the treatment of angina pectoris in humans; called also glyceryl trinitrate.

3-nitro-4-hydroxyphenylarsonic acid a feed additive used as a growth promotant; is capable of causing organic arsenical poisoning.

nitroimidazoles antiprotozoal agents, the most common being metronidazole.

nitromersol an organic mercurial used as a disinfectant on the skin and for surgical instruments.

nitromide see **3,5-dinitrobenzamide**.

nitrophenide a coccidiostat with low usefulness because of its toxicity, manifested by paralysis, at relatively low dose rates.

nitrophenol [*ni"tro-fe'nol*] a parasiticide which is applied to buildings and fixtures. Can cause poisoning manifested as high fever, dyspnea, stumbling gait, terminal convulsions, a short course of a few hours and a high mortality rate. A substituted nitrophenol (**disophenol**) is used as an anthelmintic against blood-sucking nematodes such as hookworms and *Haemonchus* spp.

4-nitrophenylarsonic acid see **nitarsone**

nitropropanol one of the nitro compunds in *Astragalus* spp. from which neurotoxins, e.g. miserotoxin, are developed in the plant.

3-nitro-1-propanol the β-glycoside of this substance is miserotoxin, the toxic agent of ***Astragalus*** *miser*, the timber milk vetch.

3-nitropropionic acid one of the nitro compounds in *Astragalus* spp. which are precursors to neurotoxins in the plant.

nitroprusside sodium nitroferricyanide, a vasodilator used in the treatment of heart failure in dogs, and used as a reagent in Rothera's test for ketone bodies.

cyanide n. reaction detects sulfhydryl group compounds and is used to test urine in screening tests for the metabolic diseases, cystinuria and homocystinuria.

nitrosamines [*ni-trōs'ə-mēn*] highly hepatotoxic compounds formed in the rumen by the combination of amines and nitrite. They do not appear to occur naturally in large quantities in animal foods, but are a concern in human foods. Nitrosamine poisoning has also been caused by feeding nitrite-treated fishmeal and *Solanum incanum*.

nitroscanate [*ni"tro-skan'āt*] an anthelmintic used in cats and dogs; effective against some cestodes.

nitrosohemochrome the compound responsible for the red color of cooked corned beef.

nitrosomyoglobin the compound formed in meat by the interaction of myoglobin and nitrite in the curing process; creates a rich red color which soon disappears because of oxidation of the compound.

nitrosourea any of a group of lipid-soluble biological alkylating agents, including carmustine and lomustine, which cross the blood–brain barrier and are used as antineoplastic agents.

nitrothiazoles a group of related compounds used in the treatment of histomoniasis in turkeys. Used excessively they can depress fertility and cause liver and kidney damage.

nitrotoxin [*ni-tro" tok'sin*] includes miserotoxin, karakin.

nitrous [*ni'trəs*] pertaining to or containing nitrogen in its lowest valence.

n. oxide a gas used by inhalation with oxygen as an analgesic; called also laughing gas, N_2O.

nitrovin a nonantibiotic nitrofuran, used in some countries as a growth promotant in poultry, pigs and calves.

nitroxynil, nitroxinil an injectable fasciolicide with good efficiency against *Fasciola hepatica* in cattle and sheep and against *Haemonchus contortus* strains that are resistant to benzimidazoles.

nivalenol see **deoxynivalenol**.

nizatidine a histamine H_2-receptor antagonist, similar to cimetidine, used to reduce gastric acidity in the treatment of gastrointestinal ulceration.

NK cell natural killer **cell**.

nm nanometer.

NMB new methylene blue.

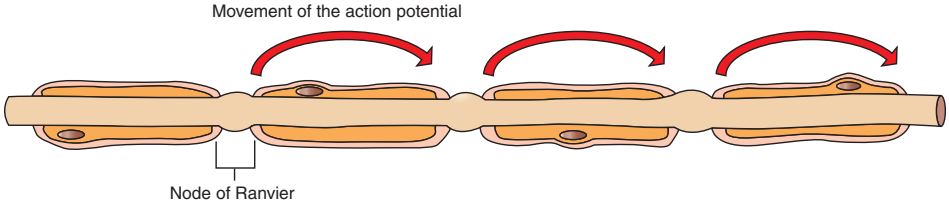
NMDA *N*-methyl-D-aspartate

No chemical symbol, *nobelium.*

no- absence of.

n.-effect level, n.-observed-effect level, n.-observed-adverse-effect level the maximum dose of a poison that can be given over a stated period without producing detectable ill effects.

n.-lesion pathology the clinical pathology of diseases in which no physical lesion is demonstrable.
n.-visible lesion (NVL) case a case in which no gross lesion is demonstrable by a routine postmortem examination.
no-reflow phenomenon a failure of reperfusion to occur after adequate fluid therapy for shock due to microvascular injury.
no-see-ums slang for midges, sandflies.
NOAH Network of Animal Health (American Veterinary Medical Association); National Office of Animal Health (UK).
nobbling illegal interference with a horse before a race to ensure that it does not race well.
nobelium (No) [no-bel'e-əm] a chemical element, atomic number 102, atomic weight 253. See Table 4.
Nocardia [no-kahr'de-ə] a genus of gram-positive, modified acid-fast bacteria, with branching filaments that break into cocci or bacilli, in the family *Nocardiaceae*. Most are soil saprophytes which uncommonly may cause pyogranulomatous infections in a number of species.
N. asteroides, N. brasiliensis may cause **mastitis** in cattle, pneumonia, mastitis and lymphadenitis in pigs, sheep and goats, and cutaneous or systemic **nocardiosis** of dogs and cats.
N. farcinica there is some uncertainty about the taxonomic status of this species; causes bovine farcy.
N. otitidiscaviarum causes dermatitis on guinea pig ears.
nocardial [no-kahr'de-əl] pertaining to or caused by nocardia.
nocardiosis [no-kahr"de-o'sis] infection with *Nocardia* spp. See also bovine **farcy**.
cutaneous n. caused by *N. asteroides* and manifested by the formation of pyogranulomas and the drainage to the surface of pus which may contain sulfur granules.
systemic n. lesions may be in any organ; the disease rarely is disseminated, but most commonly causes pyogranulomatous pleurisy and pneumonia producing a voluminous effusion and a resulting dyspnea. In fish the most common lesion is a granulomatous disease. Nocardiosis of Pacific oysters is almost indistinguishable grossly from Denman Island disease caused by *Mikrocytos mackini*.
noci- word element. [L.] *harm, injury*.
nociception [no"si-sep'shən] perception of a painful stimulus.
nociceptor [no"si-sep'tər] a receptor that is stimulated by injury; a receptor for pain.
noci-influence [no"se-in'floo-əns] injurious or traumatic influence.
nocturnal [nok-tur'nəl] active by night.
node [nōd] pl. *nodi;* a small mass of tissue in the form of a swelling, knot or protuberance, either normal or pathological.
n. of Aschoff and Tawara atrioventricular node.
cutaneous n. an elevated, solid lump, without a necrotic center, about 0.5 inch diameter, caused by acute or chronic inflammation, with an unbroken surface. Called also cutaneous nodule.
Flack's n. see **sinoatrial** node.
hemal n's see **hemal** node.
Keith's n., Keith-Flack n. see **sinoatrial** node.
lymph n. see **lymph node**.
primitive n. enlarged cranial end of the primitive streak.
n's of Ranvier constrictions of myelinated nerve fibers at regular intervals of about 1 mm at which the myelin sheath is absent and the axon is enclosed only by Schwann cell processes; responsible for rapid conduction of nerve impuses by so-called saltatorial conduction.
sinoatrial (S-A) n. see **sinoatrial** node.
n. of Tawara atrioventricular node.
nodose [no'dōs] having nodes or projections.
nodosity [no-dos'i-te] 1. a node. 2. the quality of being nodose.
nodular [nod'u-lər] marked with, or resembling, nodules.
n. dermatofibrosis see nodular **dermatofibrosis**.
n. episcleritis see nodular granulomatous **episcleritis**.
n. fasciitis see nodular granulomatous **episcleritis**.
n. necrosis see **Roeckl's granuloma**.
n. scleritis see nodular granulomatous **episcleritis**.
n. worm ***Oesophagostomum*** *columbianum* in sheep, *O. radiatum* in cattle.
n. worm disease see **esophagostomiasis**.
Nodularia spumigena [nod"u-la're-ə] a toxic cyanobacterium occurring in blooms in brackish or salt water and causing sudden death or acute hepatoxicity in animals drinking infested water. Toxin is **nodularin**.
nodularin hepatoxic cyclic pentapeptide from *Nodularia spumigena*.
nodulation [nod"u-la'shən] the formation of or presence of nodules.
nodule [nod'ūl] a small boss or node that is solid and can be detected by touch.
acral pruritic n. see **acral** lick dermatitis.
aggregated lymphatic n's groups of small masses of lymphoid tissue. In the intestinal mucosae they are **Peyer's patches**.
n. of Arantius see semilunar valve nodule (below).
cutaneous n. see cutaneous **node**.
milker's n's see **pseudocowpox**.
semilunar valve n. a small mass of fibrous tissue in the center of the free edge of each semilunar valve. Called also nodule of Arantius.
nodulectomy see **lumpectomy**.
nodulus [nod'u-ləs] pl. *noduli* [L.] nodule.
nodus [no'dəs] pl. *nodi* [L.] node.
noils short and broken fibers combed out of the wool staple during processing.
noise [noiz] 1. a loud, harsh and objectionable sound. 2. interference in an ecological or electronic system, but insufficient to stop the system. 3. in statistics when extraneous, uncontrolled variables cause errors in the distribution of data.
n. phobia an anxiety disorder seen in dogs with excessive fear of noises, such as thunder, fireworks, or gunshots.
n. pollution noise in the environment that adversely affects, in our context, the animal inhabitants. No such ill effects have been demonstrated.
Nolina genus of North American plants in the family Agavaceae; contain a hepatotoxin, probably steroidal saponins, causing hepatogenous photosensitization. Includes *N. microcarpa, N. texana*. Called also sacahuiste, bear grass.
Nolletia gariepina South African plant in the family Asteraceae; contains an unidentified toxin causing kidney and liver damage in cattle.
noma [no'mə] oral facial necrotic syndrome, an idiopathic disorder similar to oral necrobacillosis; a rapidly spreading pseudomembranous to gangrenous stomatitis.
Nomarski interference phase microscope see interference **microscope**.
nomenclature [no'mən-kla'chər] terminology; a classified system of technical names, as of anatomical structures, organisms, etc.
binomial n. the system of designating plants and animals by two latinized words signifying the genus and species.
Nomina Anatomica (NA) a book that formerly listed the internationally approved official body of human anatomical nomenclature. It now contains items in gross anatomy, histology and embryology; was the basis of the veterinary equivalent nomenclature (the NAV) but has now been superseded by the *Terminologia Anatomica*. See also **International Federation of Associations of Anatomists**, **International Committee on Veterinary Anatomical Nomenclature**, **Nomina Anatomica Avium**, **Nomina Anatomica Veterinaria**.
Nomina Anatomica Avium (NAA) the internationally approved list of terms used to describe the gross anatomy of birds.



N-9: A nerve impulse jumps from one node of Ranvier to the next, producing rapid conduction of the nerve impulse.
From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

Nomina Anatomica Veterinaria (NAV) the veterinary counterpart of the NA, now in its 5th edition, and based largely on the NA. It is no longer published as a book, but is only available as a PDF online: http://www.wava-amav.org/Downloads/nav_2005.pdf.

Nomina Embrylogica (NE) the standardized list of terms used to describe embryology and fetal structures. It has been succeeded by Terminologia Embryologica (TE).

nominal data [*nom'ĭ-nəl*] a type of data in which there are limited categories but no order. Named data such as breed or sex.

nomogram [*nom'o-gram*] a graph with several scales arranged so that a straightedge laid on the graph intersects the scales at related values of the variables; the values of any two variables can be used to find the values of the others.

nomotopic [*no"mo-top'ik*] occurring at a normal place.

non-acid-fast readily decolorized by acids after staining; said of bacteria.

non-infectious infections [*non"in-fek'shəs*] hypothetically viruses which produce no disease but may be capable of reducing resistance to other agents.

non-invasive [*non"in-va'siv*] 1. not penetrating the skin, e.g. a non-invasive test. 2. a neoplasm which spreads over a surface and does not invade and destroy healthy tissue.

non-NAV terms anatomical terms not included on the official list of terms, the Nomina Anatomica Veterinaria. Such non-NAV terms are largely discouraged by most publications.

non-neuronal [*non"no͞o-ro'nəl*] pertaining to or composed of non-conducting cells of the nervous system, e.g. neuroglial cells.

non-normality said of values of which the frequency distribution is markedly different from that of the normal (3) probability distribution.

non-perforating abomasum ulcer see **abomasal** ulcer.

non-self see **not-self**.

non-sister chromatid chromatid from two different homolog chromosomes.

non-starter a term used to describe young chickens and turkeys that fail to begin normal food consumption. Mainly due to management conditions, but viral infections and contaminated drinking water can have similar results.

noncatecholamines [*non"kat"ə-kol'ə-mēnz*] adrenergic drugs which do not contain the catechol nucleus but still activate, directly or indirectly, the α- and β-receptors. They include ephedrine, amphetamine, phenylephrine, methoxamine and metaraminol.

nonchaser a Greyhound which will not chase the lure.

nonchromaffin lacking chromaffin characteristic.

n. paraganglia the chemoreceptor organs such as the aortic and carotid bodies.

n. paraganglionoma see **chemodectoma**.

nonchromogenic not producing colored pigments. Said of bacteria, e.g. nonchromogenic *Mycobacterium* spp.

nonciliated bronchiolar epithelial cell see **Clara cell**.

noncompetitive antagonist see noncompetitive **antagonism**.

noncompliance 1. failure of the owner to follow instructions, particularly in administering medication as prescribed; a cause of a less than expected response to treatment. 2. failure by a professional business to meet or maintain standards set in place by the regulatory agencies that govern said businesses (eg FDA). These businesses are termed to be in 'noncompliance' and measures must be taken to correct the area(s) of deficiency or face penalities from those regulatory agencies.

nonconductor [*non"kən-duk'tər*] a substance that does not readily transmit electricity, light or heat.

noncytocidal infection one in which cells are not killed but continue to grow and divide. Characteristic of persistent virus infections.

nondepolarizing agents anticholinergic drugs that compete with acetylcholine at cholinergic receptors. Used as muscle relaxants. Called also competitive drugs. Examples are *d*-tubocurarine, gallamine, pancuronium.

nondisease a diagnosis reserved for cases in which abnormalities are observed in examinable functions but in which no disease can be demonstrated.

nondisjunction [*non"dis-junk'shən*] failure (1) of two homologous chromosomes to pass to separate cells during the first division of meiosis, or (2) of the two chromatids of a chromosome to pass to separate cells during mitosis or during the second meiotic division. As a result, one daughter cell has two chromosomes or two chromatids, and the other has none. Death of the fetus or chromosomal anomalies may result.

nonelectrolyte [*non"e-lek'tro-līt*] a compound which, dissolved in water, does not separate into charged particles and is incapable of conducting an electric current.

nonequilibrium reaction reaction in which the concentration of the substrates and products is much smaller than the value of the equilibrium constant so that the value of ΔG is large and negative. These reactions are important in providing directionality in pathways in that the flux through the reaction is usually controlled by allosteric factors.

nonheme iron proteins [*non'hēm*] proteins containing iron usually in the form of iron-sulfur centers rather than iron in the heme configuration.

nonhuman primate see **primate**.

noninflammatory degenerative, neoplastic.

nonkeratinizing squamous cell tumor see **transitional cell** tumors.

nonliving disease agents agents causing disease which are not infectious agents; includes chemicals, physical agents, allergens, genetic conditioning.

nonmilk feed ingredients used in milk replacers for calves but made from materials other than milk, principally as an economy measure.

n. carbohydrates carbohydrates other than lactose; very young animals have little intestinal disaccharidase other than lactase and the addition of nonmilk carbohydrate to milk replacers will lead to dietary problems.

n. proteins include proteins from legume seeds, especially soy beans, fish, potatoes, rapeseed.

Nonne–Apelt reaction, test a test for the presence of globulin in cerebrospinal fluid.

nonoxynol a group of compounds of the general composition, $C_{15}H_{24}O(C_2H_4O)_n$, which are assigned a number according to the value of *n*. Nonoxynol 4, 15 and 30 are nonionic surfactants; nonoxynol 9 is a spermaticide.

nonparametric said of statistical techniques which do not depend on the data having a normal or some other definable distribution.

nonphotochromogen Runyon's group III bacteria of the mycobacteria.

nonpolar [*non-po'lər*] not having poles; not exhibiting dipole characteristics.

nonproprietary names [*non"pro-pri'ə-tar-e*] generic names; said of drugs.

nonprotein body constituents other than proteins.

n. calorie calories provided by carbohydrates or lipids.

n. nitrogen (NPN) the nitrogenous constituents of the blood exclusive of the protein bodies. Measurement is used as a test of renal function. See also nonprotein **nitrogen**.

nonrandom selection some individuals or values have more chance of being selected than others.

nonrespiratory originating elsewhere than in the respiratory system.

nonreturn rate the proportion of cows not seen to come back into estrus within a specified period after breeding, and are thus considered to be pregnant. They can also be classified as 28, 35, 60 or 90 day nonreturns depending on the interval since mating that is specified.

nonscreen film see nonscreen **film**.

nonsegregational methods those methods of statistical examination in epidemiological studies where disease etiologies are complex or multiple and in which it may not be appropriate to segregate animals into classes on the basis of whether they have been exposed to one or other of the suspected causes. Includes the use of studies of small isolated populations and of twins.

nonspecific [*non"spə-sif'ik*] 1. not due to any single known cause. 2. not directed against a particular agent, but rather having a general effect.

nonsporting dog a group of dog breeds in registration and show ring classifications. Breeds included vary between countries and registration bodies, but often it includes, among others, the Boston terrier, Chow Chow, Dalmatian, French bulldog, German pinscher, Keeshond, Lhasa apso, Poodle and Schipperke. Generally, those other than the working, hunting, toy or terrier breeds.

nonsteroidal anti-inflammatory drugs (NSAIDs) a group of drugs having analgesic, antipyretic and anti-inflammatory activity due to their ability to inhibit the synthesis of prostaglandins.

Traditional NSAIDs, which include aspirin, acetaminophen, phenylbutazone, indomethacin, tolmetin, ibuprofen and related drugs, inhibit both cyclo-oxygenase-1 (COX-1) and cyclo-oxygenase-2 (COX-2). Excessive use in animals can lead to development of gastric and intestinal ulcers, especially in cats. *Coxhibs* are selective Cox-2 inhibitors that include deracoxib and firocoxib.

nonstick surfaces see **polytetrafluoroethylene**.

nonsuppurative [*non"sup'u-ra"tiv*] pertaining to inflammation without the production of pus, e.g. nonsuppurative polyarthritis of lambs and calves.

nonsweating disease see **anhidrosis**.

nontapetal region that part of the ocular fundus surrounding the tapetum; variably melanotic.

nontropical sprue see **sprue**.

nonunion [*non-ūn'yən*] failure of the ends of a fractured bone to unite.

nonviable [*non-vi'ə-bəl*] not capable of living.

nootropic [*no"o-tro'pik*] having a positive effect on organ function, especially of the nervous system; drugs that enhance cognitive function which may be difficult to assess in animals; the so-called smart drugs. Many are stimulants, including amphetamines and xanthines.

nor- chemical prefix denoting (1) a compound of normal structure (having an unbranched chain of carbon atoms) that is isomeric with one having a branched chain, or (2) a compound whose chain or ring contains one less methylene (CH_2) group than does that of its homolog.

noradrenaline [*nor"ə-dren'ə-lin*] see **norepinephrine**.

noradrenergic activated by or secreting norepinephrine.

Norberg angle, Norberg's index the angle formed by a line connecting the centers of both femoral heads and one drawn between the center of a femoral head and the craniodorsal rim of the acetabulum on the same side. It is a means of assessing hip laxity and is used in the detection of hip dysplasia.

norbormide a selective rodenticide affecting only rats (*Rattus* spp.). Not toxic for domestic animals, primates, birds and fish.

Nordic goat from Norway, Sweden, Finland; longhaired, polled or horned, many colors, dairy goat.

nordihydroguaiaretic acid one of a group of chemicals which cause renal cysts when administered to experimental animals.

norepinephrine [*nor"ep-ĭ-nef'rin*] a catecholamine which is the neurotransmitter of most sympathetic postganglionic neurons and also of certain tracts in the central nervous system. It is also a neurohormone stored in the chromaffin granules of the adrenal medulla and released in response to sympathetic stimulation, primarily in response to hypotension. It produces vasoconstriction, an increase in heart rate, and elevation of blood pressure. It is used as a vasopressor, administered by intravenous infusion, to restore blood pressure in certain cases of acute hypotension and as an adjunct in the treatment of cardiac arrest. Called also norepinephrine.

norethandrolone [*nor"əth-an'drə-lōn*] a synthetic androgen having less androgenic activity than testosterone but equal anabolic activity. Used primarily as a growth promotant in poultry.

norethisterone, norethindrone [*nor"əth-is'tər-ōn*] a progestin used as a contraceptive and to treat menstrual disorders in women.

norfloxacin [*nor-flok'sə-sin*] a fluoroquinolone antibiotic, used particularly in urinary tract infection.

Norfolk terrier a small (11–12 lb) lively, compact dog with short legs, small turned over, v-shaped ears, and a medium length (optional) docked tail. The coat is hard and wiry in black and tan, shades of red or wheaten, or grizzle. Previously a variety of the **Norwich terrier**, which is essentially identical, but has erect ears.

norharmane a β-carboline alkaloid found in plant members of the family Zygophyllaceae.

Noric horse all colors, including spotted, Austrian draft horse. Called also Pinzgau, Pinzgauer.

norloline an alkaloid thought to provide some of the toxic effects of *Lolium temulentum*—darnel grass.

norm a fixed or ideal standard.

normal [*nor'məl*] 1. agreeing with the regular and established type. When said of a solution, it denotes one containing one chemical equivalent of solute per liter of solution; e.g. a 0.5 normal (0.5 N) solution has a concentration of 0.5 Eq/L. The use of standard units (Eq/L) is now generally preferred in pharmacy and clinical medicine although elsewhere molarity (M) is used. 2. in the context of infectious diseases, not immunized or infected. 3. statistically speaking, the values of a variable which follow a bell-shaped or Gaussian distribution.

n. distribution see normal **distribution**.

n. limits limits of the classification of 'normal' in the results of a test. Called also reference interval.

n. saline contains 0.9% sodium chloride. Called also isotonic saline.

N-10: Normande dual-purpose cows.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

normalize to convert a set of data by, for example, converting them to logarithms or reciprocals so that their previous non-normal distribution is converted to a normal one.

Norman–Landing disease type 1, GM_1 gangliosidosis.

Normande cattle dual-purpose cattle, red brown and white, sometimes brindled, red spectacles, originated from local French breeds.

normetanephrine [*nor-met"ə-nef'rin*] metabolite of norepinephrine excreted in the urine and found in certain tissues.

norm(o)- word element. [L.] *normal, usual, conforming to the rule.*

normoblast [*nor'mo-blast*] a nucleated precursor cell in the erythrocytic series; see **rubricyte**.

normoblastosis metarubricytosis.

normocalcemia [*nor'mo-kal-se'me-ə*] a normal concentration of calcium in the blood.

normocapnemia normocapnia.

normocapnia [*nor"mo-kap'ne-ə*] normal concentration of carbon dioxide in the blood.

normochromasia [*nor"mo-kro-ma'zhə*] normochromia.

normochromia [*nor"mo-kro'me-ə*] normal color of erythrocytes.

normocyte [*nor'mo-sīt*] an erythrocyte that is normal in size, shape and color.

normocytosis [*nor"mo-si-to'sis*] a normal state of the blood in respect to erythrocytes.

normoglycemia [*nor"mo-gli-se'me-ə*] normal concentration of glucose in the blood.

normokalemia [*nor"mo-kə-le'me-ə*] a normal concentration of potassium in the blood.

normonatremia [*nor"mo-nə-tre'me-ə*] a normal concentration of sodium in the blood.

normospermic producing spermatozoa normal in number, motility and morphology.

normotensive [*nor"mo-ten'siv*] characterized by normal tension, tone, or pressure, as by normal blood pressure.

normothermia [*nor"mo-thur'me-ə*] a normal state of temperature.

normotonia [*nor"mo-to'ne-ə*] normal tone or tension.

normoventilation [*nor"mo-ven"tĭ-la'shən*] normal respiratory exchanges.

normovolemia [*nor"mo-vo-le'me-ə*] normal blood volume.

normoxemia normal blood concentrations of oxygen.

Norrbottenspets a small (18–33 lb), spitz-type farm and hunting dog from Norway. The thick coat is whte with piebald coloring and lies close to the body. The ears are erect and the bushy tail curls over the body. Called also Nordic spitz.

North American cattle tick see ***Rhipicephalus*** (*Boophilus) annulatus*.

North American Veterinary Licensing Examination (NAVLE) a computer based licensing examination administered by the National Board of Veterinary Medical Examiners. It replaced both the National Board Examination (NBE) and Clinical Competency Test (CCT) in 2000. It is a requirement for licsensure to practice veterinary medicine in all licensing jurisdictions in North America.

North Dutch frill a medium-sized canary with voluminous frills.

VetBooks.ir

North Ronaldsay a breed of sheep kept on the island of North Ronaldsay, close to the Orkney Isles. It has an extraordinary susceptibility to primary copper poisoning. It ordinarily subsists on a diet of seaweed which has a low content of copper and molybdenum and a high content of zinc. Exposure to normal terrestrial herbage may cause fatal copper poisoning.

Northern blot an immunologic technique for the detection of specific messenger RNAs following separation by electrophoresis, through hybridization with a labeled complementary DNA probe. Called also Northern transfer.

Northern short-tailed sheep a group of European breeds of horned, carpetwool sheep with short tails; black, gray or brown. It includes Icelandic, Orkney, Romanov and Shetland.

Northern transfer see **Northern blot**.

nortryptyline [*nor-trip'tə-lēn*] a tricyclic antidepressant used in the treatment of behavior problems in dogs and cats.

Norvirhabdovirus a genus in the family *Rhabdoviridae*.

Norwegian associated in some way with Norway.

N. buhund, N. sheepdog a medium-sized (26–40 lb), spitz-type herding dog with a short, dense coat in black or shades of wheaten, sometimes with black markings on the face, ears and tip of the curled tail. The ears are large, pointed and erect. Called also Norwegian sheepdog, Norsk buhund.

N. elkhound a medium-sized (40 lb) compact, spitz-type dog with a short body, very thick, medium length coat, pointed erect ears and a bushy tail tightly curled over the back. The hair is gray, tipped with black, and there is a thick, light-colored undercoat. The breed is predisposed to progressive retinal atrophy. The national dog of Norway.

N. forest cat a medium- to large-sized, muscular cat with a woolly undercoat and long outer coat in any color combination. The breed is affected by glycogenosis IV.

N. lundehund a small to medium-sized spitz-type dog with large erect ears, curved tail and short, rough coat which is usually shades of brown with black tipping and white markings. It is a Norwegian breed developed for hunting the puffin (*lunde*) on Arctic islands. It has an extremely flexible body and has a minimum of six toes on each foot. Called also Norwegian puffin dog.

N. red cattle red or red and white dairy cattle, may be polled, originated from two native Norwegian breeds.

N. scabies see Norwegian **scabies**.

N. tetany-paresis a special form of **lactation tetany** (1) caused by feeding cows on a herring and cellulose, low-energy high-protein, diet which is very low in magnesium.

Norwich canary a very popular breed, it is short, cobby bird with silky plumage. It is sometimes crested with a saucer-shaped hat of feathers (called Crested Norwich or Gloucester).

Norwich terrier a small (11–12 lb) dog which is almost identical to the **Norfolk terrier**, but has erect ears.

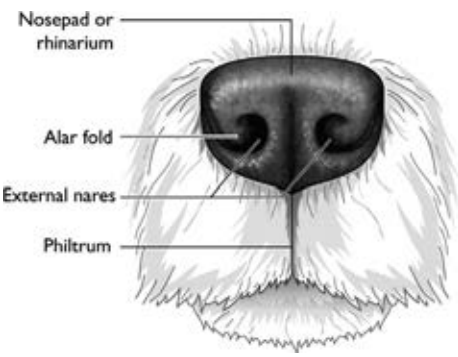
noscapine an alkaloid present in opium; used as a nonaddictive antitussive.

nose [*nōz*] the specialized structure of the head that serves both as the organ of smell and as the first segment of the respiratory apparatus. Air breathed in through the nose is warmed, humidified and filtered by the richly vascular mucous membrane. On breathing out through the nose some of the heat gained is returned to the nasal mucous membrane. See also **nasal**.

n. bleed see **epistaxis**.

bald n. see nasal **dermatitis**.

butterfly n. in dogs, a partially unpigmented nose.



N-11: Anatomic structures of the canine nose.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

collie n. see solar **dermatitis**.

Dudley n. see nasal **depigmentation**.

n. lead, n. tong, n. grip, bulldog a scissor-like instrument with the blades curved towards each other and fitted with a knob on each of their ends. The tool is inserted into the nostrils with the blades opened, positioned on either side of the septum, then closed tight. The end of the nasal septum is grasped between the ends of the tongs. Provides fair restraint for a cow having a minor interference, such as an intravenous injection. Comparable in effect to a twitch on a horse.

parasympathetic n. unilateral or bilateral dryness, hyperkeratosis and sometimes loss of pigmentation of the nasal planum in dogs. There may be fissuring and ulceration of the nares and nasal philtrum. These are the result of damage, either inflammatory or neurogenic, to the glands responsible for lubricating the nasal planum and nasal vestibule.

n. picking a vice in quail kept in overcrowded conditions. The birds pick at the soft tissue where the beak and skin join. Causes blood loss and subsequent beak deformity.

pinched n. see stenotic **nares**.

n. printing epidermal contours in the skin of the nose of dogs and the muzzle of ruminants are reflections of dermal structures; they are individually distinctive and can be replicated by applying ink to the part with an inking pad and imprinting on paper; provide a means of identification similar to fingerprints in humans. See also **transponder**, **nasal** areae.

sore n. see nasal **dermatitis**.

snow n. see nasal **depigmentation**.

winter n. in dogs, one with pale pigmentation; believed to be due to loss of exposure to sunlight and said to recover pigmentation when exposure increases.

wry n. see **nasal** deviation.

nosebag canvas bucket with a poll strap to go over the horse's poll and to contain a small meal for the horse. A portable manger.

noseband a broad leather band worn across the nose between the eyes and the nostrils and connecting the two cheek straps. Usually part of a **cavesson**.

drop n. worn below the bit and around the muzzle. Used to prevent the horse opening its mouth too wide. Pressure on the band, produced by the reins, causes compression of the nasal cartilages.

sheepskin n. has the effect of obscuring forward shadows which might balk the horse. See also **shadow roll**.

nosebleed [*nōz'blēd*] see **epistaxis**.

Nosema [*no-se'mə*] a genus in the phylum Microsporidia, which are spore-forming, unicellular parasites. All are obligate intracellular parasites.

N. apis found in bees.

N. branchialis, N. lophi found in fish.

N. cuniculi see ***Encephalitozoon cuniculi***.

nosematosis [*no-se"mə-to'sis*] see **encephalitozoonosis**.

nos(o)- word element. [Gr.] *disease*.

nosocomial [*nos"o-ko'me-əl*] pertaining to or originating in a hospital.

n. infections those acquired during hospitalization or during attendance at any veterinary medical facility.

nosode homeopathic remedies prepared from a product of disease such as infected tissues or causal organisms.

nosogeny [*no-soj'ə-ne*] the development of a disease; pathogenesis.

nosography [*no-sog'rə-fe*] a nomenclature of disease entities.

nosology [*no-sol'ə-je*] classification of patients into groups.

nosoparasite [*nos"o-par'ə-sīt*] an organism found in a disease that it is able to modify, but not to produce.

nosopoietic [*nos"o-poi-et'ik*] causing disease.

Nosopsyllus fasciatus [*nos"o-sil'əs*] a flea that infests mice and rats. It maintains plague in rats but is reluctant to bite humans and is rarely involved in cases in them.

nosotaxy [*nos'o-tak"se*] the classification of disease.

Nostoc rivulare cyanobacterium contains the toxic peptide microcystin, causing sudden death or hepatic necrosis.

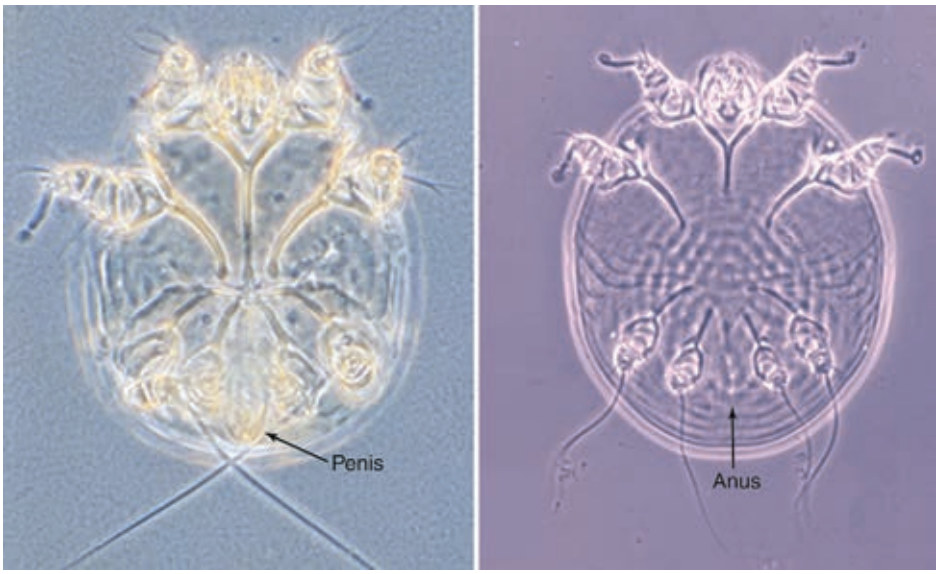
nostril [*nos'tril*] either of the two apertures (nares) of the nose that lead into the nasal vestibule. See also nasal **cavity**.

n. dilatation accompanies dyspnea, is also present in tetanus as part of the generalized muscular tetany.

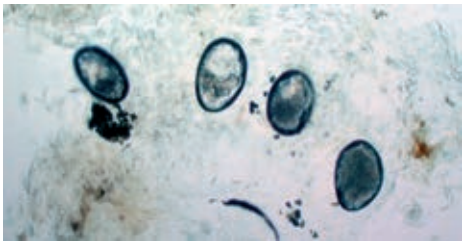
false n. a blind pouch of skin dorsal to the true nostril in the horse. Called also nasal **diverticulum**.

N

false n. cyst developmental abnormality in the false nostril of a horse.
hemorrhage from n. see **epistaxis**.
regurgitation from n. a common finding in food animals as part of a syndrome of esophageal obstruction; in all animals with megaesophagus; also in horses with gastric dilatation and cows with severe rumen distention; also occurs in recumbent ruminants with motor paralysis as in bovine parturient hypocalcemia or general anesthesia; in all animals with cleft palate.
n. vibrissae the special tactile hairs around the nostrils.
nostrum [*nos'trəm*] a quack, patent or secret remedy.
not-self a term denoting antigenic constituents foreign to the organism (self), which are eliminated through antibody or cell-mediated **immunity**.
notarium the bony structure created by the fusion of two or more thoracic vertebrae as occurs in some birds. Called also os dorsale.
notch [*noch*] an indentation, especially one on the edge of a bone or other organ.
acetabular n. in the medial part of the rim of the acetabulum.
antitragohelicine n. in the caudal process of the cartilage of the pig's ear separating it from the tragus and antitragus.
aortic n. a small downward deflection in the arterial pulse or pressure contour immediately following the closure of the semilunar valves, sometimes used as a marker for the end of systole or the ejection period. Called also dicrotic notch.
cardiac n. an indentation in the ventral margin of the lungs that allows the heart in its coverings to lie against the chest wall. Useful for ultrasound examination, auscultation, pericardiac and cardiac puncture. The extent of the notch varies between species and enlarges during expiration.
costal n. indentations in the sternum with which the costal cartilages of the ribs articulate.
dicrotic n. see aortic notch (above).
glenoid n. in the cranial part of the rim of the glenoid cavity of the scapula.
greater sciatic n. indentation in the dorsal edge of the ilium over which the sciatic nerve passes.
intertragic n. the notch in the auricular cartilage between the tragus and antitragus.
lesser sciatic n. indentation in the lateral border of the ischium between the ischial spine and the ischial tuber.
mandibular n. separates the coronoid and condylar processes of the mandible.
mandibular vascular n. the notch on the lower edge of the mandible below which facial vessels cross to reach the face in some species such as the horse.
nasoincisive n. deep notch separating the pointed nasal bone and the incisive bone. Conspicuous in horses and ruminants, small in pigs and non-existent in carnivores.
pretragic n. the palpable depression rostral to the tragus of the ear.
tragohelicine n. the slot in the auricular cartilage between the tragus and the medial border of the ear cartilage; a useful surgical landmark.
vertebral n. the notch in the pedicle of the vertebral arch, at the cranial and caudal ends of each vertebra which combines with similar features on adjacent vertebrae to create an intervertebral foramen.
notching pliers an instrument used to produce an **ear** mark.
notchplasty, notchoplasty an orthopedic procedure to remove osteophytes, which form on the inner margin of the lateral femoral condyle because of stifle instability resulting from cranial cruciate ligament rupture, and reshaping of the intercondylar notch to facilitate placement of the fascial graft during reconstruction of the joint.
notencephalocele hernial protrusion of brain at the back of the head; occipital encephalocele.
notencephalus [*no"ten-sef'ə-ləs*] a fetus affected with notencephalocele.
NOTES Natural Orifice Transluminal Endoscopic Surgery which combines laparoscopic and endoscopic techniques in order to access the peritoneal cavity by means of the mouth, anus or vagina.
Notholaena distans rockfern. See ***Cheilanthes***.
notifiable [*no"tĭ-fi'ə-bəl*] necessary to be reported to the relevant government authority. Said of individual diseases.
not(o)- word element. [Gr.] *the back*.
notobiotic gnotobiotic.
notochord [*no'to-kord*] a cylindrical cord of cells on the dorsal aspect of an embryo, marking its longitudinal axis; a defining characteristic of all chordates. It is the center of development of the axial skeleton. Its remnants in adult mammals are found in the pulpy centers of the intervertebral disks.
Notocotylus a genus of intestinal flukes (digenetic trematodes) in the family Notocotylidae.
N. attenuatus found in the ceca and rectum of fowl, duck, goose and wild aquatic birds. Can cause erosion, diarrhea and emaciation in young birds.
N. impricatus found in domestic poultry.
N. thienemanni found in domestic and wild ducks.
Notoedres a genus of mange mites in the family Sarcoptidae.
N. cati causes **notoedric mange** in cats and occasionally rabbits.
N. douglassi occurs in gray squirrels; causes severe dermatitis in koalas and bandicoots in captivity.
N. muris causes ear mange in rats.
N. oudemansi found on rats.
notoedric mange [*no"to-ed'rik*] a crusting, pruritic dermatitis on the ears and neck of cats caused by *Notoedres cati*. It may extend onto the face, paws and elsewhere on the body. Called also head mange. Occasionally occurs on rabbits.



N-12: *Notoedres cati* mite.
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.



N-13: *Notoedres cati* eggs and fecal pellets in a skin scraping from a cat.

Nova Scotia duck tolling retriever a medium-sized, compact hunting dog with a dense, medium length coat of red or orange with some white markings, and a well feathered tail. The breed is noted for its hunting activity in which it jumps and plays in the water to attract waterfowl to within range of the hunter, later retrieving the downed bird. Called also Toller.

Novirhabdovirus a genus of rhabdoviruses that infect fish. Includes **infectious** hematopoietic necrosis virus, **viral hemorrhagic septicemia** virus, and snakehead rhabdovirus.

novobiocin [*no"vo-bi'o-sin*] an antibacterial produced by *Streptomyces niveus*, used in the treatment of infections caused by staphylococci and other gram-positive organisms. Called also albamycin, cathomycin.

noxious [*nok'shəs*] hurtful; injurious; pernicious.

n. gases those encountered in nature include ammonia, hydrogen sulfide, methane, sulfur dioxide; industrial intoxicants include ammonia, carbon monoxide, cyanide and a variety of toxic smokes and fumes.

Noyes forceps see alligator **forceps**.

Np chemical symbol, *neptunium*.

NPH *N*eutral *P*rotamine *Hagedorn*; isophane insulin suspension.

NPN nonprotein nitrogen.

NPO nil per os; non per os. No food or water to ge given.

NPOH 3-nitropropanol.

NPY neuropeptide-Y.

NRA neutrophil-releasing activity.

nRBC nucleated red blood cell(s).

NRC National Research Council.

ns nanosecond.

NSAIDs nonsteroidal anti-inflammatory drugs.

NSD Nairobi sheep disease.

nsec nanosecond.

NSH nutritional secondary hyperparathyroidism.

NSHP nutritional secondary hyperparathyroidism.

NSU National Surveillance Unit.

nu [*noo*] thirteenth letter of the Greek alphabet, N or *ν*.

Nubian see **Anglo-Nubian**.

nucha [*noo'kə*] the nape, or top, of the neck.

nuchal [*noo'kəl*] pertaining to the top of the neck.

n. crest see nuchal **crest**.

n. disease fistulous withers and poll evil.

n. ligament a powerful elastic apparatus that serves to support the head without muscular effort. It joins either the occipital bone or the axis to the dorsal thoracic spines (withers in the horse) and is continuous with the thoracolumbar part of the supraspinous ligament. The dorsal, rope-like funicular part is connected by the lamellar part to the spinous processes of the cervical vertebrae. In some species the lamellar part consists of two independent sheets closely applied to each other; in others it is absent.

nuclear [*noo'kle-ər*] pertaining to a nucleus.

n. bag fibers fibers found in neuromuscular spindles; have an extensive nerve supply.

n. chain fibers fibers, which like nuclear bag fibers, are found in neuromuscular spindles; shorter but more numerous than the bag variety.

n.:cytoplasmic ratio comparison of the size of nucelus with amount of cytoplasm in a cell; a characteristic of different types of circulating cells and can be one of the criteria for malignancy.

n. ground substance, n. matrix the matrix substance in a nucleus, surrounded by the limiting membrane.

n. imaging see **scintigraphy**.

n. medicine technologist see **radiological** technologist.

n. molding the shape of a nucleus is altered due to crowding by an adjacent nucleus or growth of a neighboring cell; a characteristic of malignancy.

n. remnant a piece of nucleus that persists in a mature erythrocyte.

n. sap soluble phase of the nuclear matrix.

n. transfer see **cloning**.

nuclease [*noo'kle-ās*] any of a group of enzymes that cleave or digest nucleic acids into fragments or single nucleotides.

S1 n. a single-strand-specific endonuclease that degrades DNA and RNA to nucleoside 5′-monophosphates. The enzyme is a single polypeptide chain of molecular weight 32 000 and is isolated from 'takadiastase', a digestive enzyme preparation from *Aspergillus oryzae*. Widely used in molecular biology to map the position of mRNA to its DNA, and also used to remove single-stranded tails from DNA fragments, to produce blunt ends to open up hairpin-loop structures.

nucleated [*noo'kle-āt"əd*] having a nucleus or nuclei.

n. erythrocyte erythrocyte precursors up to the reticulocyte (polychromatic erythrocyte) stage when the nucleus is no longer present (in mammals). Not normally seen in peripheral blood; indicative of a regenerative anemia with early release of maturing cells. Also seen in lead poisoning, in the absence of anemia, and in myeloproliferative diseases.

nucleation sites the ends of microtubules in the cytoplasmic skeleton; contributes to the growth of protofilaments.

nuclei plural of *nucleus*.

nucleic acids threadlike, high-molecular-weight molecules that occur naturally in the cells of all living organisms. They form the genetic material of the cell and direct the synthesis of protein within the cell. Nucleic acids are composed of repeating smaller units, called *nucleotides* or bases, which are made up of a pentose sugar, a nitrogenous base, and a phosphate group. There are two major classes of nucleic acids: **deoxyribonucleic acid** (DNA) whose pentose sugar is deoxyribose, and **ribonucleic acid** (RNA) whose pentose sugar is ribose. The major purine and pyrimidine bases in the nucleic acids are adenine (A), guanine (G) and cytosine (C), which occur in both, and thymine (T) in DNA and uracil (U) in RNA. RNA is present in both the nucleus and the cytoplasm of many cells. Most of the cytoplasmic RNA is associated with ribosomes (called rRNA), which are the site of protein synthesis. RNA molecules perform several functions in the cell, depending on the type of RNA molecule and its specific properties. DNA is a major constituent of chromosomes in the nuclei of all cells. Its chief function is to provide a genetic message that is encoded in the sequence of bases.

n. acid sequencing see **DNA** sequencing.

nuclein an intermediate product in the decomposition pathway between nucleoprotein and nucleic acid.

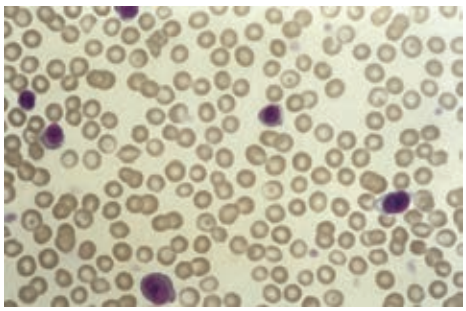
nucleocapsid [*noo"kle-o-kap'sid*] a minimum unit of viral structure, consisting of a protein capsid with the enclosed nucleic acid. For some viruses the nucleocapsid is enclosed within an envelope.

nucleofugal [*noo"kle-of'u-gəl*] moving away from a nucleus.

nucleohistone [*noo"kle-o-his'tōn*] the nucleoprotein complex made up of deoxyribonucleic acid (DNA) and histones. It is the principal constituent of chromatin.

nucleoid [*noo'kle-oid*] 1. resembling a nucleus. 2. a nucleus-like body sometimes seen in the center of an erythrocyte. 3. the genetic material (nucleic acid) of a rickettsia, chlamydia and some viruses, e.g. poxviruses, situated in the center of the microorganism.

nucleolar [*noo-kle'o-lər*] pertaining to or emanating from nucleolus.



N-14: Nucleated erythrocytes in a smear of blood from a dog. From Sirois M. Principles and Practice of Veterinary Technology, 2nd Edition. Mosby, 2004.

VetBooks.ir

nucleoli [noo-kle'o-li] plural form of *nucleolus*.
nucleolonema [noo"kle-o"lo-ne'mə] a network of strands formed by organization of a finely granular substance, perhaps containing RNA, in the nucleolus of a cell.
nucleolus [noo-kle'ə-ləs] pl. *nucleoli* [L.] a rounded refractile body in the nucleus of most cells, which is the site of synthesis of ribosomal RNA, becoming enlarged during periods of synthesis and smaller during quiescent periods; multiple nucleoli occur in some cells.
n. organizer site chromosomal sites for attachment of nucleoli.
nucleon [noo'kle-on] a particle of an atomic nucleus; a proton or neutron, the total number of which constitutes the mass number of the isotope.
nucleonics [noo"kle-on'iks] the study of nucleons or of atomic nuclei and their reactions; nuclear physics.
nucleopetal [noo"kle-op'ə-təl] moving toward a nucleus.
nucleophile [noo'kle-o-fil"] an electron donor in chemical reactions involving covalent catalysis which donates electrons to the second molecule (electrophile) in the reaction.
nucleoplasm [noo'kle-o-plaz"əm] karyoplasm; the protoplasm of the nucleus of a cell.
nucleoprotein [noo"kle-o-pro'tēn] any of a class of conjugated proteins, consisting of nucleic acids and simple proteins, e.g. a histone.
nucleosidase [noo"kle-o-si'dās] an intracellular enzyme that is capable of causing the decomposition of nucleosides.
nucleoside [noo'kle-o-sīd"] any of a class of compounds produced by hydrolysis of nucleotides, consisting of a sugar (a pentose or a hexose) and a purine or pyrimidine base.
nucleosome [noo'kle-o-sōm] any of the complexes of histone and DNA in eukaryotic cells, seen under the electron microscope as beadlike bodies on a string of DNA.
nucleotidase [noo"kle-o-ti'dās] an enzyme that splits nucleotides into nucleosides and phosphoric acid.
5-n. elevated concentrations may be detected in liver disease.
nucleotide [noo'kle-o-tīd] any of a group of compounds obtained by hydrolysis of nucleic acids, consisting of a purine or pyrimidine base linked to a sugar (ribose or deoxyribose), which in turn is esterified with phosphoric acid. See also **nucleoside**, **deoxyribonucleic acid**.
cyclic n's those in which the phosphate group bonds to two atoms of the sugar forming a ring, as in cyclic AMP and cyclic GMP, which act as intracellular second messengers.
n. sequences see **DNA** sequencing.
single n. polymorphisms (SNPs) single base pair differences that differ among individuals of the same species.
nucleotidyl [noo"kle-o-tid'əl] a nucleotide residue; for example, nucleotidyl transferase.
nucleotoxin [noo'kle-o-tok"sin] a toxin from cell nuclei, or one that affects cell nuclei.
nucleus [noo'kle-əs] pl. *nuclei* [L.] 1. cell nucleus; a spheroid body within a cell, contained in a double membrane, the nuclear envelope, and containing the **chromosomes** and one or more nucleoli. The contents are collectively referred to as *nucleoplasm.* The chromosomes contain **deoxyribonucleic acid** (DNA), which is the genetic material that codes for the structure of all the proteins of the cell. 2. a mass of gray matter in the central nervous system, especially such a mass marking the central termination of a cranial nerve. 3. in organic chemistry, the combination of atoms forming the central element or basic framework of the molecule of a specific compound or class of compounds. 4. the dense core of an atom; called also atomic nucleus. It is made of protons and neutrons held together by the strong nuclear force. Traveling in orbit around the nucleus is a cloud of negatively charged particles called **electrons**. The number of protons in the atomic nucleus gives a substance its identity as a particular **element** (2).
n. abducens located in the floor of the fourth ventricle; its axons constitute the abducent nerve.
n. ambiguus the nucleus of origin of motor fibers of the glossopharyngeal, vagus and accessory nerves that supply the striated muscle of the pharynx and larynx. Found in the medulla oblongata.
arcuate n., n. arcuati small irregular areas of gray substance on the ventromedial aspect of the pyramid of the medulla oblongata.
atomic n. nucleus (3).
basal n. large brain nuclei, the caudate and lentiform nuclei, which combine with the white matter to form the corpus striatum. Important in the regulation of motor function. Called also basal ganglia.
caudate n., n. caudatus an elongated, arched gray mass closely related to the lateral ventricle throughout its entire extent, which, together with the putamen, forms the neostriatum.
central nervous system n. aggregations of neurons within the brain.
cerebellar n. there are a number of them; they are surrounded by the medulla oblongata caudal to the cerebellum.
cochlear n. (dorsal and ventral) the nuclei of termination of sensory fibers of the cochlear part of the vestibulocochlear (eighth cranial) nerve, which partly encircle the inferior cerebellar peduncle at the junction of the medulla oblongata and pons.
cranial nerve n. aggregations of cell bodies associated with the cranial nerves, which in general are organized as continuations of the four gray matter components of the spinal cord plus three others which appear in the medulla oblongata developed for innervation of the organs in the head.
cuneate n. sensory nuclei in the dorsal part of the medulla oblongata that receive fibers from the dorsal column of the spinal cord; it is divided into medial and lateral nuclei components.
dentate n., n. dentatus the largest of the deep cerebellar nuclei lying in the white matter of the cerebellum.
Edinger–Westphal n. located in the midbrain and a center for coordination of oculomotor activity.
facial n. in the medulla oblongata and the origin of the facial nerve.
gracile n. a sensory nucleus located in the medulla oblongata adjacent to the cuneate nucleus.
habenular n. the gray matter of the habenula.
hypoglossal n. located in the medulla oblongata, the origin of the hypoglossal nerve.
lateral geniculate n. concerned in the transmission of visual stimuli. Called also lateral geniculate body.
lenticular n., lentiform n. the part of the corpus striatum just lateral to the internal capsule, comprising the putamen and globus pallidus.
medial geniculate n. a nucleus within the thalamus; involved in transmission of auditory stimuli. Called also medial geniculate body.
motor n. any collection of cells in the central nervous system giving origin to a motor nerve.
oculomotor n. the cells of the midbrain which make up the origin of the oculomotor nerve.
olivary n., n. olivaris 1. a folded band of gray matter enclosing a white core and producing the elevation (olive) on the medulla oblongata. 2. olive (2).
n. of origin any collection of nerve cells giving origin to the fibers, or a part of the fibers, of a peripheral nerve.
paraventricular n., n. paraventricularis a band of cells in the wall of the third ventricle in the supraoptic part of the hypothalamus; many of its cells are neurosecretory in function and project to the neurohypophysis, where they secrete oxytocin (and, to a lesser extent, antidiuretic hormone).
pontine n., n. pontis groups of nerve cell bodies in the part of the pyramidal tract within the ventral part of the pons, upon which the fibers of the corticopontine tract synapse, and whose axons in turn cross to the opposite side and form the middle cerebellar peduncle.
pulpy n., n. pulposus a semifluid mass of fine white and elastic fibers forming the center of an intervertebral disk. It serves to distribute pressure over the vertebral body. It shows early age changes, may calcify and herniate through the fibrous rings that enclose it to cause disk disease.
red n. an oval mass of gray matter (pink in fresh specimens) in the anterior part of the tegmentum and extending into the posterior part of the hypothalamus; one of the important relay stations in the extrapyramidal motor pathway of the CNS; origin of the rubrospinal tract in the cord; called also nucleus ruber.
n. ruber red nucleus.
salivatory n. groups of preganglionic parasympathetic neurons concerned with salivary secretion organized into a rostral nucleus, of the facial nerve, and the caudal nucleus, of the glossopharyngeal nerve.
sensory n. the nucleus of termination of the afferent (sensory) fibers of a peripheral nerve.

suprachiasmatic n. anatomic nucleus which innervates the pineal gland; thought to play a part in the management of circadian rhythms.
supraoptic n., n. supraopticus one just above the lateral part of the optic chiasm; many of its cells are neurosecretory in function and project to the neurohypophysis, where they secrete antidiuretic hormone (ADH) and, to a lesser extent, oxytocin; other cells are osmoreceptors that stimulate ADH release in response to increased osmotic pressure.
tegmental n. several nuclear masses of the reticular formations of the pons and midbrain, especially of the latter, where they are in close approximation to the superior cerebellar peduncles.
thoracic n., n. thoracicus a column of cells in the dorsal gray column of the spinal cord, extending from the seventh or eighth cervical segments to the second or third lumbar level.
trapezoid body n. a relay station in the auditory pathways.
trigeminal n. there are three sensory nuclei and one motor nucleus of the trigeminal nerve found in the brainstem; the sensory nuclei comprise the mesencephalic nucleus, the nucleus of the descending tract, and the principal sensory nucleus, but none is exclusive to the trigeminal nerve, all of them receiving sensory inputs from other cranial nerves.
trochlear n. source of the trochlear nerve; located in the tegmentum of the midbrain.
vagus n. any of four nuclei within the medulla oblongata; comprises the dorsal nucleus, the nucleus ambiguus, the nucleus of the tractus solitarius and the spinal nucleus of the trigeminal nerve.
vestibular n., n. vestibularis the four cellular masses (superior, lateral, medial and inferior) in the floor of the fourth ventricle, in which the branches of the eighth cranial (vestibulocochlear) nerve terminate.
nuclide [*noo'klīd*] a species of atom characterized by the charge, mass, number and quantum state of its nucleus, and capable of existing for a measurable lifetime (usually more than 10^{-10} s).
nude mouse inbred strain of laboratory mouse which is hairless and has no thymic tissue. Because it has no source of T lymphocytes, it suffers from a defect in cell-mediated immunity and is highly susceptible to infections. This trait is utilized for immunological studies. Called also athymic mouse.
null an absence of information, as contrasted with zero or blank or nil, about a value.
n. cell called also null lymphocyte; see null **cell**.
n. hypothesis a statistical hypothesis which states that one variable has no association with another variable, or set of variables. That is, the observed results can be explained by chance alone.
n. lymphocyte see null **cell**.
nullipara [*nə-lip'ə-rə*] a female who has not produced a viable offspring; **para** 0.
nulliparity [*nul"i-par'i-te*] the state of being a nullipara.
numbat a small (1 to 2 pounds) diurnal Australian marsupial (*Myrmecobius fasciatus*) in the Family Myrmecobiidae, found in restricted areas of southwest Western Australa. It climbs and digs to feed on subterranean termites.
number [*num'bər*] a symbol, as a figure or word, expressive of a certain value or a specified quantity determined by count.
atomic n. a number expressive of the number of protons in an atomic nucleus, or the positive charge of the nucleus expressed in terms of the electronic charge; symbol Z.
mass n. the number used to express the mass of a nucleus, being the total number of nucleons, protons and neutrons in the nucleus of an atom or nuclide; symbol A.
numerator the upper part of a fraction.
n. relationship see **additive** genetic relationship.
Numidicola antennatus lice of guinea fowl.
Numidinae see **guinea fowl**.
Numinbah horse sickness see *Ageratina adenophora*.
nummular [*num'u-lər*] 1. coin-sized and coin-shaped. 2. made up of round, flat disks. 3. arranged like a stack of coins.
numnah a thick felt pad cut to the shape of a saddle and worn under it as protection for the horse's back. Fitted with straps which fasten it to the saddle and prevent it moving.
nurse [*ners*] see **animal** nurses.
nursery [*nur'sə-re*] a building or part of a building constructed especially for the rearing of animals on a largely milk diet. Requires special attention to mechanical services and the maintenance of a stable external environment. Hygiene, preferably an all-in, all-out management strategy, and strict microbial isolation are important parts of the management system.
n. pigs the growth phase of early-weaned pigs between weaning until they enter the grow-finish building. Pigs weaned at 3 weeks of age will spend 3 weeks in hot nursery pens where the ambient temperature is initially 85° to 90°F and the subsequent 3 weeks in the cold nursery where ambient temperature is 65°F.
n. diarrhea enteropathogenic bacterial or viral infections in young animals.
nursing [*ners'ing*] see **suckling**.
artificial n. feeding on milk replacer; implies by sucking a teat, on a bottle or a multiple sucking device usually described as a calfeteria.
n. sickness a metabolic disorder of lactating mink associated with hyperglycemia, progressive weight loss, emaciation, extreme dehydration and sometimes death.
nutation [*noo-ta'shən*] the act of nodding, especially involuntary nodding.
nutmeg liver [*nut'meg*] see **hepatic** congestion.
nutraceutical [*noo"trə-soo'ti-kəl*] a nutrient with drug-like properties but not legally recognized as a therapeutic agent.
n. medicine use of macronutrients, micronutrients and nutritional supplements as therapeutic agents.
nutria (*Myocastor coypu*) a large chestnut brown South American, semi-aquatic rodent which is farmed extensively for its fur. It is herbivorous, diurnal and very fertile. Introduced into North America and Europe for fur farming, escapees have become pests, damaging waterways and native vegetation. Called also coypu, swamp beaver.
nutrient [*noo'tre-ənt*] 1. nourishing; aiding nutrition. 2. a nourishing substance, food or component of food. Includes minerals, vitamins, fats, protein, carbohydrate and water.
n. allowance the total feed provided to an animal for a day. Includes its basic nutritional requirements plus allowances for waste in the feeding process, special allowances for special states and activities, and for special qualities of the feed being used.
n. analysis chemical analysis of feedstuff with measurement of fiber, protein, fat, carbohydrate, individual minerals and vitamins.
n. artery one of the arterial blood supplies to a typical long bone; enters the bone via an oblique canal. Other blood supply routes to bone include metaphyseal, epiphyseal and periosteal arteries.
n. content the proportion of a feed or diet that is digestible and assimilable. See also **total digestible nutrients**.
n. partitioning the theory that there is a prioritization of physiologic functions for available nutrients and not an equal distribution process. A proposed order from highest to lowest priority is maintenance, pregnancy, growth, lactation, reserve deposition and reproductive cyclicity.
n. profile a listing of the optimal concentration of each nutrient in dog and cat foods; published by the Association of American Feed Control Officials.
n. requirements daily requirement for each nutrient for each animal species at the recognized stages of life and production; usually presented in feeding tables.
n. veins mimics the nutrient artery.
nutrigenomics [*noo"tri-je-no'miks*] the interaction of nutrients and food with genes and the relationship with health.
nutriment [*noo'tri-mənt*] nourishment; nutritious material; food.
nutrition [*noo-tri"shən*] the sum of the processes involved in taking in nutriments and assimilating and utilizing them. It includes all the processes by which the body uses food for energy, maintenance and growth. See also **malnutrition**, **inanition**, **starvation**, **thirst**, **nutritional**.
critical care n. provision of nutritional support for patients in critical care units; usually requires modification of normal nutritional requirements to meet the demands of stress, injury and disease, and to support recovery from these states.
enteral n. see **enteral** feeding.
intravenous n. see parenteral nutrition (below).
N. Labeling and Education Act of 1990 an amendment to the (US) Federal Food, Drug, and Cosmetic Act which defines how foods, claimed to affect disease, are not regulated as drugs.
parenteral n. a technique for meeting a patient's nutritional needs by means of intravenous feeding; sometimes called *hyperalimentation*, even though it does not provide excessive amounts of nutrients. Nutrition by intravenous feeding may be total

parenteral nutrition (TPN) or supplemental. TPN provides all of the carbohydrates, proteins, fats, water, electrolytes, vitamins and minerals needed for the building of tissue, expenditure of energy, and other physiological activities.

total parenteral n. (TPN) see parenteral nutrition (above).

nutritional [*noo-trĭ'shən-əl*] pertaining to or emanating from nutrition.

n. anemia see nutritional **anemia**.

n. assessment chemical analysis of ration ingredients or, more commonly, consultation of a table of approximate composition of feedstuffs.

n. deficiency disease disease caused by a deficiency of a particular nutrient in the feed. Includes the micro- and macronutrients of minerals, vitamins, carbohydrates, fats and proteins. The specific diseases are described under their individual titles.

n. gout an excess of protein in the diet may cause visceral and even articular **gout** in poultry and reptiles.

n. hyperparathyroidism see nutritional secondary **osteodystrophia fibrosa**.

n. infertility infertility due to a nutritional deficiency, principally caloric.

n. muscle degeneration degeneration of skeletal and cardiac muscle, usually in young herbivores, as a result of deficiency of selenium or vitamin E or both. Mineralization of affected muscle fibers is a feature, so that it can appear chalky white ('white muscle disease'). Called also (incorrectly) nutritional (or enzootic) muscle dystrophy.

n. myodegeneration see **enzootic** muscular dystrophy.

n. myopathy see **enzootic** muscular dystrophy.

n. panniculitis disease of cats, mink, foals and pigs associated with the feeding of fish offal, fish meal or rations containing high concentrations of unsaturated fatty acids. Palpable thickening and solidity of subcutaneous fat; may be associated with myopathy, gastric ulcer or hepatosis dietetica.

n. secondary hypercalcitonism see nutritional secondary **hypercalcitonism**.

n. secondary hyperparathyroidism see nutritional secondary **hyperparathyroidism**.

n. status the state of the body with respect to each nutrient and to the overall state of the body weight and condition.

n. stress the stress of inadequate nutrition of total nutrients.

n. supplement addition of a nutrient to an existing diet to make good what might be only a temporary shortfall. May be made available in a salt or mineral mix or block, or may be mixed in with a feed or even in drinking water. For pastured animals other means are used but foliar dusting comes close to being a nutritional supplement.

nutritionally related disease disease caused by deficiencies or excesses of specific feed nutrients or of a total ration; also includes diseases in which susceptibility to a separate risk factor is increased by a nutritional aberration, e.g. enterotoxemia (*Clostridium perfringens* type D) in lambs.

nutritious [*noo-trĭ'shəs*] affording nourishment.

nutritive [*noo'trĭ-tiv*] pertaining to or promoting nutrition.

n. ratio the ratio of digestible protein to other digestible components in the feed.

nutriture [*noo'trĭ-chur"*] nourishment.

Nuttallia see ***Babesia***.

nuttalliosis see **babesiosis**.

nux vomica [*nuks*] powdered nut of the plant *Strychnos nux-vomica*. In earlier times was used as a stimulant to appetite. Also finds use in small animals as a herbal remedy, but the strychnine content presents the possibility of toxicity.

NVAP National Veterinary Accreditation Program.

NVE no visible estrus.

NVL no visible lesion. Said of cows that react positively to a tuberculin test but no lesions can be found in them at necropsy.

NVO no visible oestrus. Called also NVE.

nyala (*Tragelaphus angasii*) a medium-sized bushbuck antelope with spiral horns and a fringe under the throat, neck and chest.

nyctalopia [*nik"tə-lo'pe-ə*] **night blindness**.

Nycteribiidae a family of flies similar to the hippoboscids and found on bats.

nycterine occurring at night.

nyct(o)- word element. [Gr.] *night, darkness*.

nyctohemeral [*nik"to-hem'ər-əl*] pertaining to both day and night.

nyctotyphlosis night blindness, or nyctalopia.

Nye tourniquet a strong rubber cord with a friction grip holder. Used also as a muzzle.

Nylander test a test for glucose in the urine using a solution containing bismuth subnitrate which forms a black precipitate in a positive reaction.

nylon [*ni'lon*] a long-chain polymer available in monofilament and multiple filament forms.

nymph [*nimf*] a developmental stage in certain arthropods (e.g. ticks, mites and lice) between the larval form and the adult, and resembling the latter in appearance.

nymphomania [*nim"fo-ma'ne-ə*] behavioral state in which the female is in estrus continually or for longer periods at shorter intervals than is normal. Transrectal palpation may reveal cystic follicles or there may be no detectable abnormality.

nymphomaniac [*nim"fo-ma'ne-ak*] an individual patient habitually showing signs of nymphomania.

Nyquist limit the maximum frequency shift that can be accurately interpreted in a pulsed Doppler ultrasound unit.

nystagmiform [*nis-tag'mĭ-form*] nystagmoid.

nystagmograph [*nis-tag'mo-graf*] an instrument for recording the movements of the eye in nystagmus.

nystagmoid [*nis-tag'moid*] resembling nystagmus.

nystagmus [*nis-tag'məs*] a periodic, rhythmic, rapid involuntary movement of both eyes in unison. The movement may be vertical, horizontal or rotary. Common causes are lesions of the cerebellum or the vestibular apparatus, or increased intracranial pressure.

aural n. labyrinthine nystagmus.

cerebellar n. one characterized by tremor, without fast and slow components. Called also pendular nystagmus.

Cheyne's n. a peculiar rhythmical eye movement resembling Cheyne–Stokes respiration in rhythm.

congenital n. may be a primary functional defect or secondary to lesions in the visual pathways, sometimes associated with albinism. Reported in cattle, cats (particularly Siamese), and dogs.

dissociated n. that in which the movements in the two eyes are dissimilar.

gaze n. nystagmus made apparent by looking to the right or to the left.

horizontal n. that in which the eyes move from side to side with the fast component opposite to the side of the lesion; seen with central or unilateral peripheral vestibular disease.

jerk n. vestibular nystagmus (see below).

labyrinthine n. vestibular nystagmus due to labyrinthine disturbance.

latent n. that occurring only when one eye is covered.

lateral n. involuntary horizontal movement of the eyes.

optokinetic n. nystagmus induced by looking at objects moving across the field of vision.

oscillatory n. pendular nystagmus.

pendular n. that which consists of to-and-fro movements of equal velocity.

positional n. that which occurs, or is altered in form or intensity, on assumption of certain positions of the head.

postrotatory n. a normal finding after the animal has been rotated, with the fast phase away from the direction of rotation.

resting n. that occurring while the head is stationary.

retraction n., n. retractorius a spasmodic backward movement of the eye occurring on attempts to move the eye; a sign of midbrain disease.

rotatory n. involuntary rotation of the eyes about the visual axis.

spontaneous n. that occurring without specific stimulation of the vestibular system.

vertical n. involuntary up-and-down movement of the eyes.

vestibular n. nystagmus due to disturbance of the labyrinth or of the vestibular nuclei; the movements are usually jerky.

undulatory n. an inherited disorder of Finnish Ayrshire cattle; there is a synchronous, tremor-like movement of the eyes but affected animals are otherwise healthy.

nystatin [*ni-stat'in*] a polyene antibiotic produced by *Streptomyces noursei*; used topically in treatment of infections due to *Candida albicans*, *Aspergillus* spp., yeasts and some dermatophytes.

nystaxis [*nis-tak'sis*] see **nystagmus**.

nyxis [*nik'sis*] puncture, or paracentesis.

VetBooks.ir

O

O chemical symbol, *oxygen;* [L.] *oculus* (eye); [L.] *octarius* (pint); opening.
O_2 oxygen.
o- symbol, *ortho-*.
Ω the Greek capital letter omega; symbol for ohm.
ω omega, small letter; twenty-fourth letter in the Greek alphabet.
O antigen see O **antigen**.
O-F test see **oxidation-fermentation test**.
oak [ōk] tress and shrubs in the genus ***Quercus***. Includes chestnut oak (*Q. prinus*), English oak, sessile oak (*Q. pretraea, Q. robur*), European oak (*Q. robur*), Gambel's oak (*Q. gambelii*), jack oak (*Q. marilandica*), northern red oak (*Q. rubra* var *borealis*), post oak (*Q. stellata*), sand shin oak (*Q. havardii*), scarlet oak (*Q. coccinea*), shin oak, shinnery oak (*Q. havardii*), yellow-barked oak (*Q. velutina*).
poison o. ***Toxicodendron*** *diversilobum, T. quercifolium*.
silky o. ***Grevillea*** *robusta*.
oat [ōt] member of the plant genus *Avena* in the family Poaceae.
oats see **Avena** *sativa*.
o. grain seed of *Avena sativa,* and as 'oats' the favored grain for the feeding of horses. Too light in energy concentration for the heavy feeding of ruminants.
o. grass *Avena pubescens*. See also **oatgrass**.
o. hair calculi large, intestinal trichobezoars composed entirely of oat hairs and capable of causing intestinal obstruction.
o. hay made from cereal oat crop (*Avena sativa*) it is a popular feed for herbivores but it may have a high nitrate content if it has been well fertilized, and if it gets moldy and overheated, develops a high nitrite content and is poisonous. Must be harvested in the boot stage for adequate nutritional quality. See also **nitrite** poisoning.
o. hulls a high-fiber, low-protein, low-energy feed.
o. sickness stiffness and restriction of movement in horses soon after a heavy feed of grain; a vague syndrome thought to be due to sensitivity to grain of any sort in particular horses.
o. straw used as bedding and as feed when supplemented with a nitrogen-rich feed such as urea. Like oaten hay may cause nitrite poisoning if moldy.
oat-shaped cell inflammatory cells seen in pneumonic lung, and characterized by elongated or streaming nuclei.
oaten pertaining to or emanating from oats.
oatgrass *Arrhenatherum elatius* (tall oatgrass), *Danthonia* (California oatgrass), *Trisetum flavescens* (golden oatgrass, yellow oatgrass).
OB obstetrics.
ob- word element. [L.] *against, in front of, towards*.
obcecation [ob"se-ka'shən] incomplete blindness.
obedience training a standardized program of training for dogs calculated to give owners mastery of their dogs at all times. The grades of increasing excellence vary between countries. A popular grading is Companion Dog (CD), Companion Dog Excellent (CDX), Utility Dog (UD) and Utility Dog Excellent (UDX).
Obeliscoides a genus of nematodes in the family Trichostrongylidae.
O. cuniculi found in the stomach of rabbits; in heavy infestations causes gastritis.
Obermayer's test a test for indican in the urine using a solution of ferric chloride and hydrochloric acid and added chloroform. A blue-violet color develops in a positive test.
obese [o-bēs'] characterized by **obesity**.
obesity [o-bēs'i-te] excessive accumulation of fat in the body; increase in weight beyond that considered desirable with regard to species, age and bone structure, and to a degree greater than that regarded as overweight. A quantitative definition is 15% above optimal weight in dogs and 20% in cats. See also **overweight**, **body condition score**.
o. fold pyoderma see fold **dermatitis**.
obex [o'beks] a small triangular membrane at the caudal end of the roof of the fourth ventricle of the brain.
object–film distance in the taking of a radiograph the distance between the object and the film; the shorter the distance the sharper the image and the less the magnification.
objective [ob-jek'tiv] 1. perceptible by the external senses. 2. the lens or system of lenses of a microscope nearest the object that is being examined.
immersion o. one designed to have its tip and the coverglass over the specimen connected by a liquid instead of air.
obligate [ob'li-gāt] necessary, essential.
o. accumulators see **accumulator plants**.
obligatory [əb-lig'ə-tor"e] unavoidable; something that is bound to occur.
o. water diuresis polyuria resulting from a decrease or inactivity of antidiuretic hormone on distal tubules and collecting ducts.
oblique [o-blēk'] slanting; inclined.
obliquity [o-blik'wi-te] the state of being oblique or slanting.
obliteration [ob-lit"ər-a'shən] complete removal, by disease, degeneration, surgical procedure, irradiation, etc.
oblongata [ob"long-gah'tə] medulla oblongata. See also **brain**.
Obodhiang virus a rhabdovirus closely related to **rabies** virus.
O'Brien–Elschnig forceps [o-bri'ən] thumb-operated fixation tissue forceps similar to O'Brien forceps except that there is a slide catch that keeps the teeth locked together.
O'Brien forceps [o-bri'ən] thumb-operated tissue forceps with blades tipped by long rat-teeth, two on one side, one on the other.
observation 1. something perceived by the senses of the clinician, e.g. pallor of mucosae, as distinct from an interpretation of what is sensed, e.g. anemic. 2. housing of an animal that needs to be quarantined for observation due to the threat of it having contracted various contagious or zoonotic disease processes, e.g. a rabies suspect.
obsessive-compulsive behavior [əb-ses'iv-kəm-pul'siv] normal activities or behavior for the species, but repetitive or constant, even to the point of being damaging to the animal. Includes tail chasing, flank licking and licking.
obstacle test method for behavioral testing of vision by placing objects such as hay bales, colored cones, or furniture in a random pattern in a hall or laneway. The patient is then made to move through the test course in varying light levels; sometimes called maze test.
obstetric, obstetrical [ob-stet'rik] pertaining to or emanating from obstetrics.
o. anesthesia an anesthetic procedure designed especially for patients undergoing cesarean operation or intrauterine manipulation of the fetus. The particular additional responsibility in this kind of anesthesia is the survival of the fetus.
o. assistance assistance to the dam in the expulsion of the fetus varying from simple traction to episiotomy, fetal manipulation in the uterus, fetotomy and cesarean section.
o. chains see obstetric **chain**.
o. instruments there is a large range including long-handled and finger-grip fetotomy knives; eyehooks, either long-handled or threaded onto obstetric rope; fetotome; obstetric wire; Kuhn's crutch for repelling or rotating the fetus; obstetric forceps; traction chains and handles; fetal extractor.
o. saw wire saw used in fetotomes. There are two types, Swedish and **Gigli wire** saws.
obstetrician [ob"stə-trish'ən] a veterinarian who specializes in obstetrics and reproductive medicine, in general. See also **theriogenologist**.
obstetrics [ob-stet'riks] classically in human medicine the branch of medical science dealing with pregnancy, labor and the

puerperium. In the veterinary context it is usually limited to the care of the dam and the unborn young during a parturition that cannot be completed, or has slowed to the point that the life of one or both patients is at risk.

obstipation [*ob"stĭ-pa'shən*] intractable constipation.

obstruction [*ob-struk'shən*] the act of blocking or clogging; state of being clogged; refers usually to a tubular structure. See **intestinal**, **laryngeal**, **nasolacrimal** duct obstruction, **esophageal**, **oviductal**, **urethral**, **ureteral** obstruction.

pseudo-o. functional, rather than physical, obstruction of the small intestine can occur with hypomotility and ileus.

ventricular outflow o. see **ventricular** outflow obstruction.

obstructive having the characteristic of obstruction.

o. colic see equine **colic**.

o. pulmonary disease see chronic obstructive **pulmonary** disease.

obstruent [*ob'stroo-ənt*] 1. causing obstruction. 2. any agent or agency that causes obstruction.

obtund [*ob-tund'*] to render dull or blunt.

obtundation [*ob"tən-da'shən*] depression as a result of intracranial disease.

obtundent [*ob-tun'dənt*] 1. aware of environment , but decreased responsiveness to normal stimuli. 2. a soothing or partially anesthetic agent.

obturating pertaining to, having the characteristic of obturation.

obturation the act of closing off, as in intestinal obstruction; in orthodontics filling a root canal.

obturator [*ob'tə-ra'tər*] 1. a disk or plate that closes an opening, e.g. to close a cleft palate temporarily or permanently; the obturator foramen is the large opening in each os coxae that in many species is almost entirely occluded by a sheet of fibrous tissues, the obturator membrane. 2. a sharp or blunt probe used within an endoscopic sheath to assist gaining access to an anatomical regions, for example in the placement of an arthroscope. See also **trocar**.

o. muscles the muscles that rotate the thigh laterally. See also Table 13.

o. nerve degeneration causes permanent obturator nerve paralysis (below).

o. paralysis commonly follows pressure on the obturator nerve during parturition, especially in cattle; causes inability to adduct the thighs and the cow does the splits. When recumbent the legs are splayed with one on either side of the body.

Occam's razor a principle named after William of Occam, a 14th century philosopher. The generalization states that, if there are a number of explanations for observed phenomena, the simplest explanation is preferred. Called also scientific parsimony.

occipital [*ok-sip'ĭ-təl*] pertaining to the occiput; located near the occipital bone, such as the occipital lobe.

o. bone the unpaired bone constituting the back and part of the base of the skull. See also Table 10.

o. crest see external occipital **crest**.

o. fracture see **basisphenoid** fracture.

o. lobe see occipital **lobe**.

o. somites the most anterior of the embryo's somites; they are the origin of the occipital cartilages of the skull.

occipitalization [*ok-sip"ĭ-təl-ĭ-za'shən*] synostosis of the atlas with the occipital bone.

occipitoatlantal of or relating to the occipital bone of the skull and the atlas cervical vertebrae.

occipitoatlantoaxial pertaining to the occiput, the atlas and the axis.

O-1: Obturator paralysis. From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

o. malformation see **atlanto-occipital** malformation of Arab horses.

occipitocervical [*ok-sip"ĭ-to-sur'vĭ-kəl*] pertaining to the occiput and neck.

occipitofrontal [*ok-sip"ĭ-to-fron'təl*] pertaining to the occiput and the forehead.

occipitomastoid [*ok-sip"ĭ-to-mas'toid*] pertaining to the occipital bone and mastoid process.

occipitomental [*ok-sip"ĭ-to-men'təl*] pertaining to the occiput and chin.

occipitoparietal [*ok-sip"ĭ-to-pə-ri'ə-təl*] pertaining to the occipital and parietal bones or lobes of the brain.

occipitotemporal [*ok-sip"ĭ-to-tem'pə-rəl*] pertaining to the occipital and temporal bones or regions.

occipitothalamic [*ok-sip"ĭ-to-thə-lam'ik*] pertaining to the occipital lobe and thalamus.

occiput [*ok'sĭ-pət*] the back of the skull. The external occipital protruberance and the occipital crests; may normally be very prominent in some dogs. Sometimes traumatized with hematoma formation resulting.

occlude [*ə-klōōd'*] to fit close together; to close tight; to obstruct or close off.

occlusal [*ŏ-kloo'zəl*] pertaining to closure; applied to the masticating surfaces of the teeth. The cat does not have any teeth with occlusal surfaces.

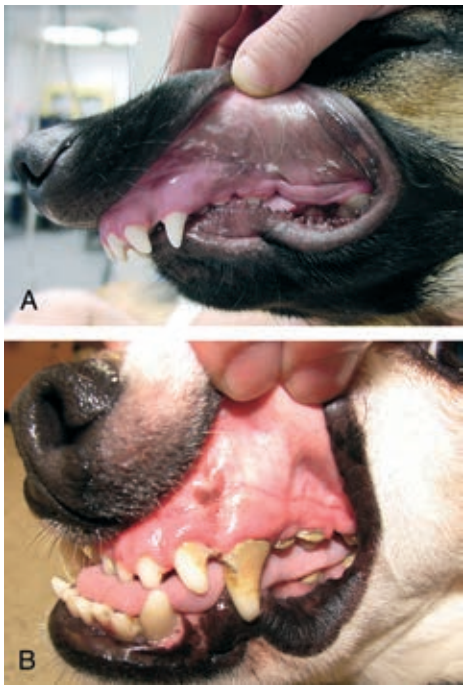
occlusio pupillae pupil occlusion; a complete fibrovascular membrane across the pupil.

occlusion [*o-kloo'zhən*] 1. the act of closure or state of being closed; an obstruction or a closing off. 2. the relation of the teeth of both jaws when in functional contact during activity of the mandible. A system for classification of occlusion in carnivores exists: Class 0 is normal occlusion (called also orthoclusion); Class I is a malocclusion in which the jaws are of normal length, but there are abnormalities in the position of individual teeth; includes anterior and posterior crossbites, base-wide and base-narrow canines, rotated teeth (called also neutroclusion); Class II malocclusion includes those due to a short mandible or long maxilla (called also distoclusion); Class III malocclusion includes those due to a long mandible or short maxilla (called also mesioclusion); Class IV malocclusions have Class II on one side and Class III on the other (called also mesiodistoclusion).

abnormal o. see **malocclusion**.

coronary o. see **coronary** occlusion.

functional o. contact of the maxillary and mandibular teeth that provides the highest efficiency in the centric position and during



O-2: (A) Class II malocclusion in a dog. (B) Class III malocclusion in a dog. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

VetBooks.ir

all exclusive movements of the jaw that are essential to mastication without producing trauma.
inflow o. a technique used in cardiac surgery to produce complete circulatory arrest by temporarily interrupting venous return.
traumatic o. any abnormality of occlusion which causes injury to structures within the mouth.
occlusive [ŏ-kloo'siv] pertaining to or effecting occlusion.
occult [ŏ-kult'] obscure or hidden from view.
o. blood test examination, microscopically or by a chemical test, of a specimen of feces, urine, gastric juice, etc., to determine the presence of blood not otherwise detectable. Feces are tested when intestinal blood loss is suspected but there is no visible evidence of blood in the stools. This is most likely when the bleeding is low grade and into the small intestine. Positive results can be due to swallowed blood, intestinal ulcers or neoplasms, and inflammatory bowel disease. Red meat or fish in the diet can give positive test results.
o. virus the virus or infectious agent cannot be isolated but there is strong circumstantial evidence that it is present.
occupation time parameter for usage of pens in a feedlot.
occurrence in epidemiological terms means frequency of a disease without defining incidence or prevalence.
OCD osteochondrosis dissecans.
ocelli simple eyes of insects.
ocelot (*Leopardus pardalis*) a member of the family Felidae, native to Central and South America. It is small, golden to silver color with dark metallic spots on the body and stripes on the head and neck; sometimes kept as a pet.
ochratoxicosis [o"krə-tok"si-ko'sis] the nephropathy caused by poisoning by the mycotoxin **ochratoxin** A. Characterized by degeneration of renal epithelium, polydipsia, polyuria, diarrhea and uremia. Pigs most affected. Resembles Balkan nephropathy in humans.
ochratoxin, ochratoxin A [o'krə-tok"sin] mycotoxin synthesized by *Aspergillus ochraceous* and some *Penicillium* fungi with nephrotoxic, immunotoxic, teratogenic and hepatotoxic activities and found in a wide variety of climates and geographical regions as a natural contaminant of poultry and livestock feedstuffs. Causes nephropathy in all species tested with large species differences in potency, pigs being most sensitive. Teratogenicity and immunotoxicity occur only at doses higher than those causing nephrotoxicity. Categorized as a group 2 carcinogen by the WHO.
Ochroconis galloparvum a genus of dematiaceous members of the Fungi Imperfecti.
O. gallopavum a thermophilic dematiaceous hyphomycete known to cause dactylariosis, an encephalitis in chickens and poults. Previously called *Dactylaria gallopava* and *Diplorhinotrichum gallopavum*.
O. humicola recovered from cats, a tortoise and fish. Previously classified as *Scolecobasidium humicola*.
ochrometer [o-krom'ə-tər] an instrument for measuring capillary blood pressure.
ochronosis [o"krə-no'sis] a yellow, brown or chocolate discoloration of cartilage, tendon sheaths and ligaments but not bone. Caused by deposit of alkapton bodies as the result of a metabolic disorder. Affected parts must be condemned as not suitable for human consumption.
ocular o. brown or gray discoloration of the sclera, sometimes involving also the conjunctivae and eyelids.
Ochsner forceps a strongly built, curved hemostat with rat-tooth tips to the blades.
Ocicat a new breed of cats, derived from crossing a chocolate point Siamese with a hybrid Abyssinian pointed Siamese. It is large with a long nose, large ears and a distinctive spotted coat in many different colors. Named because of its resemblence to an ocelot.
O'Connor program a breeding management system designed to ensure pregnancy in beef cows, based on a 63 day breeding season, having the cows in good body condition, the cows gaining weight during the breeding season, removal of sucking calves, and the use of fertile bulls.
OCT ornithine carbamoyl transferase, a liver specific enzyme.
octa- word element. [Gr., L.] *eight*.
octachloronaphthalene one of the toxic highly **chlorinated naphthalenes**.
octadepsipeptides see **emodepside**.
octan occurring on the eighth day (every 7 days).
^{13}C-octanoic acid stable isotope of octanoic acid, a naturally occurring medium chain fatty acid which is rapidly and completely absorbed in the duodenum and oxidized in the liver to CO_2. Used as a measure of gastric emptying.
^{13}C-o. acid breath test an indirect measure of gastric emptying.
octatropine anisotropine.
octavalent [ok"tə-va'lənt] having a valency of 8.
octopus [ok'tə-pəs] cephalopod in the order Octopoda; has eight legs and eats crustaceans and shellfish.
blue-ringed o. (*Hapalochlaena* spp.) small, highly poisonous bane of surf beaches; has blue rings on the tentacles which show up when it is handled. The venom contains **tetrodotoxin** and causes deaths in humans.
octreotide [ok-tre'o-tīd] a long-acting, synthetic somatostatin analog that inhibits secretion of insulin, growth hormone, glucagon and other hormones; used in the treatment of endocrine disorders of the pituitary and pancreas, including insulinomas.
ocular [ok'u-lər] 1. pertaining to the eye. 2. eyepiece (of a microscope).
o. albinism complete lack of melanin within the typically pigmented ocular structures (iris, ciliary body, retinal pigment epithelium and choroid).
extrinsic o. muscles see extraocular **muscles**. See also Table 13.1F.
o. filariasis see **thelaziasis**, **onchocercosis**.
o. globe see **eye**.
o. implant drug delivery devices placed in or around the eye to provide constant release of medication to the eye. The devices may be soluble or insoluble.
o. lymphomatosis see **Marek's disease**.
o. neurectoderm **ectoderm** which gives rise to ocular tissues.
o. reflexes a series of subcortical neurological responses involved in normal ocular function; see **pupillary** light reflex, **corneal** reflex, **consensual** pupillary light reflex and **palpebral** reflex.
o.-skeletal dysplasia see **oculoskeletal dysplasia**.
o. ultrasound ultrasound examination of the eye is used to detect foreign bodies, intraocular masses, retinal detachment, lens luxation and vitreous pathology (syneresis, asteroid hyalosis, vitreous hemorrhage, etc.) when the usually clear ocular media (cornea, anterior chamber, lens, vitreous) prevent direct examination.
ocul(o)- word element. [L.] *eye*.
oculocardiac reflex bradycardia or cardiac arrest in the anesthetized animal as a result of manipulating the eye. A potential hazard of ophthalmic surgery.
oculocentesis paracentesis of the eye (aqueocentesis, sub-retinal aspirate, vitreocentesis).
oculocephalic reflex see **doll's eye** reflex.
oculocutaneous [ok"u-lo-ku-ta'ne-əs] pertaining to or affecting both the eyes and the skin.
o. hypopigmentation affected Angus cattle are brown instead of black and have heterochromia; they are photophobic.
oculofacial [ok"u-lo-fa'shəl] pertaining to the eyes and face.
oculogyration [ok"u-lo-ji-ra'shən] the movement of the eye about the anteroposterior axis.
oculomotor [ok"u-lo-mo'tər] pertaining to or affecting eye movements.
o. nerve the third cranial nerve; it contains motor and parasympathetic fibers. Various branches of the oculomotor nerve provide for muscle movement in most of the extraocular and intraocular muscles and resulting in globe movement, constriction of the pupil, accommodation and eyelid opening. See also Table 14.
o. nerve paralysis causes pupillary dilatation and absence of pupillary light reflex if parasympathetic fibers are compromised (internal ophthalmoplegia) and ventrolateral deviation of the globe, defective eye movement and palpebral ptosis if the extraocular motor fibers are involved (external ophthalmoplegia).
oculomotorius the oculomotor nerve.
oculomycosis [ok"u-lo-mi-ko'sis] any fungal disease of the eye.
oculonasal [ok"u-lo-na'səl] pertaining to the eye and the nose.
oculoplastic [ok"u-lo-plas'tik] plastic surgery of the eye, eyelids, ocular muscles, lacrimal apparatus, or orbit.
oculopupillary [ok"u-lo-pu'pĭ-lar-e] pertaining to the pupil of the eye.
oculoskeletal dysplasia [ok"u-lo-skel'ə-təl dis-pla'zhə] a syndrome of disproportionate dwarfism and retinal dysplasia sometimes with

O-3: Odd-eyed white cat.

retinal detachment and blindness reported in Labrador retrievers and Samoyeds.

oculovestibulocephalic reflex [*ok"u-lo-ves-tib'u-lo-sə-fal'ik re'fleks*] see **doll's eye** reflex.

oculozygomatic [*ok"u-lo-zi"go-mat'ik*] pertaining to the eye and the zygoma.

oculus [*ok'u-ləs*] pl. *oculi* [L.] eye.

OD 1. [L.] *oculus dexter* (right eye). 2. overdose.

odd-eyed cat complete heterochromia in which a cat has one blue eye and the other is yellow, green, or brown.

oddi sphincter see **sphincter** of Oddi.

oddments in wool marketing includes locks, bellies, crutchings, stained wool.

odds [*odz*] a method of expressing probability, e.g. at odds of 3 to 2 this can be converted to conventional terminology by using each number as the numerator and the sum of them as the denominator, i.e. 3/5, 2/5 or 60% or 40% or 0.6, 0.4. The odds are quoted as for or against. So that at odds of 3 to 2 the chances for an event happening are 3/5. The odds against it happening are 2/5.

posterior o. probability determined after consideration of the results of a study.

o. ratio the ratio, used particularly in case-control studies, estimates the chances of a particular event occurring in one population in relation to its rate of occurrence in another population.

Odland's bodies keratinosomes.

Odobenus rosmarus see **walrus**.

Odocoileostrongylus tenuis see ***Parelaphostrongylus tenuis***.

odontalgia [*o-don-tal'jə*] pain in a tooth; toothache.

odontectomy [*o"don-tek'tə-me*] extraction of a tooth.

odontic [*o-don'tik*] pertaining to the teeth.

odont(o)- word element. [Gr.] *tooth*.

odontoameloblastoma [*o-don"to-am"ə-lo-blas-to'mə*] a tumor containing areas of ameloblastic epithelium and compound or complex odontoma.

odontoblast [*o-don'to-blast*] one of the connective tissue cells that deposit dentin and form the outer surface of the dental pulp adjacent to the dentin.

odontoblastic emanating from or pertaining to odontoblast.

o. layer the epithelioid layer of odontoblasts in contact with the dentin of teeth.

o. processes see **dentinal** fibers.

Odontoceti the suborder of toothed whales. Includes sperm whales, porpoises, grampuses, dolphins, beaked whales, bottle-nosed whales and narwhals.

odontoclast [*o-don'to-klast*] an osteoclast associated with absorption of the roots of deciduous teeth.

odontoclastic [*o-donto'-klast'-ik*] pertaining to odontoclasts. **feline o. resorption lesions** non-carious defects of enamel, dentin, cementum and alveolar bone, predominantly around the cementoenamel junction but also around the root canal or pulp chamber of molars and premolars, in cats; commonly lead to loss of teeth, particularly in mature age cats. Called also neck or cervical line lesions.

feline o. resorptive lesions non-carious defects of enamel, dentin, cementum and alveolar bone, predominantly around the cementoenamel junction but also around the root canal or pulp chamber of molars and premolars, in cats; commonly leads to loss of teeth, particularly in mature age cats. Called also neck or cervical line lesions or simply tooth resorption.

odontodysplasia cystica congenita [*o-don'to-dis-pla'zhə sis'ti-kə kən-jen'ĭ-tə*] a disease of calves recorded in Germany and thought to be due to environmental influences; characterized by abortion or stillbirth and congenital fibrous, cystic enlargement of mandibles and maxillae, and absence or deformity of some teeth.

odontogenesis [*o-don"to-jen'ə-sis*] the origin and development of the teeth.

o. imperfecta dentinogenesis imperfecta.

odontogenic [*o-don"to-jen'ik*] 1. forming teeth. 2. arising in tissues that give origin to the teeth.

o. cyst epithelium-lined cysts derived from cell rests or malformed enamel organs. See also **dental** cyst.

odontogeny odontogenesis.

odontoid [*o-don'toid*] like a tooth.

o. process see odontoid **process**.

odontologist [*o"don-tol'ə-jist*] dentist.

odontology [*o"don-tol'ə-je*] 1. scientific study of the teeth. 2. dentistry.

odontolysis [*o-don-tol'ĭ-sis*] the resorption of dental tissue.

odontoma [*o-don-to'mə*] a non-neoplastic malformation, a hamartoma, consisting of a mixture of enamel, dentin and cementum.

ameloblastic o. contains true neoplastic ameloblastic tissue. See **ameloblastic** odontoma.

complex o. all the dental tissues are represented but not in an organized form.

composite o. one consisting of both enamel and dentin in an abnormal pattern.

compound o. all the dental tissues are present and organized into denticles, tooth-like structures.

radicular o. one associated with a tooth root, or formed when the root was developing.

temporal o. most commonly in the mastoid process of the petrous temporal bone manifested as a discharging sinus at the base of the ear. Called also dental or dentigerous cyst.

odontopathy [*o"don-top'ə-the*] any disease of the teeth.

odontoplasty [*o-don'to-plas"te*] remodeling of a tooth involving the removal of enamel.

odontoprisis [*o-don"to-pri'sis*] see **bruxism**.

odontosis [*o"don-to'sis*] formation or eruption of the teeth.

odontotomy [*o"don-tot'ə-me*] incision of a tooth.

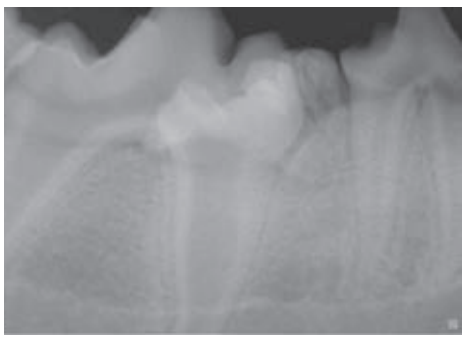
odor [*o'dər*] a volatile emanation, usually unpleasant, perceived by the olfactory sense of the clinician. See also **taint**.

boar o. the rank male odor of the male pig, present in the meat of uncastrated male pigs more than 4 months old. Caused by androsterone. See also **boar** taint.

butyric acid o. odor of rancid butter.

irradiation o. meat sterilized by irradiation may develop a hydrogen sulfide odor.

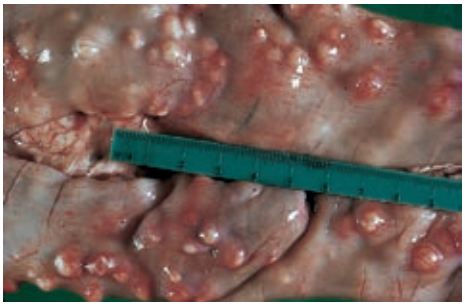
sexual o. includes boar odor. Buck goat meat has a similar taint but in other ruminants the odor is much weaker. Female odors are not noteworthy with the possible exception of the meat from a sow in estrus at the time of slaughter.



O-4: Small abnormal supernumerary teeth associated with the mandibular molars typical of a compound odontoma.
From DuPont GA, DeBowes JL, Atlas of Dental Radiography in Dogs and Cats. Saunders, 2008.

VetBooks.ir

odorant [o'dər-ənt] any substance capable of stimulating the sense of smell.
-odynia word element. [Gr.] *pain*.
odynometer [o"din-om'ə-tər] an instrument for measuring pain; see also **algometer**.
odynophagia [od"ĭ-no-fa'jə] painful swallowing of food.
oe- for words beginning thus, see also those beginning *e-*.
Oeciacus vicarius [e-si'ə-kəs] the cliff swallow bug, possibly an overwintering vector for the western equine encephalomyelitis virus.
oedema edema.
Oedemagena a genus of flies similar to *Hypoderma* spp.
O. tarandi found in the caribou, musk-ox and reindeer. Causes significant damage to the skin and the lesions are conducive to blowfly strike. Called also reindeer warble fly.
Oenanthe [e-nan'the] a genus of the plant family Apiaceae; contain the toxin oenanthotoxin, a toxic alcohol which causes sudden death, convulsions and no lesions; includes *O. aquatica* (horsebane), *O. crocata* (hemlock water dropwort), *O. fistulosa* (water dropwort), *O. lachenalii* (parsley water dropwort), *O. palustris*, *O. pimpinelloides*, *O. sarmentosa*, *O. silaifolia*.
oenanthetol one of the poisonous alcohols in the plant *Oenanthe crocata*.
oenanthetone one of the poisonous alcohols in the plant *Oenanthe crocata*.
oenanthotoxin one of the poisonous alcohols in the plant *Oenanthe crocata*. Used loosely also to identify the group of three acetylenic alcohols, oenanthotoxin, oenanthetol, oenanthetone. Causes pupillary dilatation, salivation and convulsions in cattle, pigs and horses. Sheep are not as susceptible.
oesophageal see **esophageal**.
Oesophagodontus [e-sof"ə-go-don'təs] a nematode genus in the family Strongylidae.
O. robustus one of the large strongyles of horses. Causes **strongylosis**.
Oesophagostomum [e-sof"ə-gos'to-məm] a genus of roundworms in the family Chabertiidae. Found in the large intestine. Cause the important disease **esophagostomosis** (esophagostomiasis) in sheep. Includes *O. aculeatum*, syn. *O. apiosternum* (monkeys); *O. asperum*, syn. *O. indicum* (goats, sheep); *O. bifurcum* (monkeys); *O. brevicaudatum* (pig); *O. columbianum* (sheep, goats, camels and wild antelopes); *O. dentatum* (pig); *O. georgianum* (pig), *O. granatensis* (pig), *O. hsiungi* (pig), *O. longicaudatum*,. *O. quadrispinulatum* (pig), *O. maplestonei* (pig), *O. multifoliatum* (goat, sheep), *O. okapi* (okapi); *O. quadrispinulatum* (pig), *O. radiatum* (water buffalo, cattle); *O. rousseloti* (pig); *O. staphanostomum* (monkeys), *O. venulosum* (camel, deer, goat, sheep), *O. walkeri* (eland).
oesophagus [ə-sof'ə-gəs] see **esophagus**.
oestrogen see **estrogen**.
oestrogenism see **estrogenism**.
Oestromyia leporina a fly similar to *Hypoderma* spp. which parasitizes moles and muskrats.
oestrone see **estrone**.
Oestrus a genus of bot flies in the family Oestridae.
O. ovis a widespread species that deposits its larvae on the nostrils of sheep and goats. Invasion of the nasal cavity causes irritation manifested by sneezing, nose rubbing, noisy breathing and nasal discharge. It may cause ocular myiasis in humans. Called also sheep nasal bot fly.
oestrus estrus.



O-5: *Oesophagostomum dentatum*, the 'nodular worm' of swine, induce formation of large nodules within the wall of the large intestine. From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

OFA Orthopedic Foundation for Animals; an organization dedicated to recording statistical data on orthopedic diseases, especially hip dysplasia in dogs.
off term used when talking of a horse's age, e.g. '6 off' for a horse which has just passed 6 years, as opposed to 'rising 7' for approaching 7 years.
off-center said of an X-ray beam which is not centered exactly over the part to be examined; the rays will be diverging as they pass it and the image will be distorted.
off feed the animal's food intake is less than normal.
off-flavor abnormal unappetizing flavor.
off-focus in radiography the radiation composed of X-rays produced by the interaction of electrons with objects, usually metal, other than the tube's target.
off-label see **extra-label**.
off-patent drugs see **generic** (2).
off-shears said of sheep which have been recently shorn.
off-side the off-side of a horse is the horse's right hand side. The horse is always mounted from the left or near side.
offal 1. nonmeat edible products from animal slaughter. Includes brains, thymus, pancreas, liver, heart, kidney, tripes, sausage casings, chitterlings, crackling rind. 2. by-product of milling, called also weatlings, middlings. A high-protein supplement for herbivores.
specified bovine o. the term used in the UK to denote tissues that can be infected with the agent of bovine spongiform encephalopathy (BSE), namely brain and spinal cord, spinal ganglia, retina, and terminal small intestine. In the USA and some other countries, called 'specified **risk** materials'.
Office International des Epizooties (OIE) see **World Organisation for Animal Health**.
office laboratory procedures clinical pathology tests suitable for use in a consulting room or from a country practitioner's vehicle.
official drugs [o-fi-'shəl] medicines authorized by pharmacopeias and recognized formularies. Use of drugs other than these could be regarded by a court of law as being experimental.
OFFLU the joint OIE and FAO network of expertise on influenza, established in 2005 to support international efforts to monitor and control infections of avian influenza in poultry and other bird species, and to share biological material and data to support early development of human pandemic vaccines.
offspring progeny generally; includes calf, lamb, kid, pig, foal, chicken, poult, duckling, puppy, kitten, cria. See also Table 16.
ofloxacin [o-flok'sə-sin] a second generation fluoroquinolone antibiotic.
Ogmocotyle a genus of intestinal flukes (digenetic trematodes) in the family Notocotylidae.
O. indica a parasite of sheep, goats and cattle, infecting stomach and small and large intestines, but thought to be nonpathogenic.
Ohara's disease [o-hah'rah] see **tularemia**.
OHCS hydroxycorticosteroids.
OHE medical record abbreviation for ovariohysterectomy.
ohm (Ω) [ōm] the SI unit of electrical resistance, being that of a resistor in which a current of 1 ampere is produced by a potential difference of 1 volt.
ohmmeter [ōm'me-tər] an instrument that measures electrical resistance in ohms.
Ohm's law the electric current flowing through a conductor is equal to the voltage divided by the resistance.
-oid suffix meaning resembling.
OIE Office International des Epizooties. See **World Organisation for Animal Health**.
OIF ovulation induction factor.
oil [oil] 1. an unctuous, combustible substance that is liquid, or easily liquefiable, on warming, and is not miscible with water, but is soluble in ether. Such substances, depending on their origin, are classified as animal, mineral or vegetable oils. 2. a fat that is liquid at room temperature.
automobile o. see crankcase oil (below).
o. of chenopodium extracted from the plant *Chenopodium ambrosioides*. An old-time anthelmintic.
o.-contamination the coating of spilled crude oil on waterbirds that destroys the waterproofing and insulating properties of their feathers, predisposing them to hypothermia and impairing flight and swimming abilities. It also blocks nares, causes aspiration

pneumonia, and has toxic effects on kidneys, reproduction and the gastrointestinal tract.
crankcase o. waste oil from engines; palatable to cattle; calves may drink large amounts if they gain access. Lead poisoning may result, but the introduction of unleaded petroleum has significantly reduced the lead concentration in this material and practically abolished this risk. See also **lead**[1] poisoning. Called also sump oil.
o. crop crops grown primarily for their oil production, e.g. linseed, safflower, sunflower, rapeseed.
crude petroleum o. crude oil and its several distillates are all relished by cattle and can cause poisoning. The oil as it is extracted from subterranean deposits varies widely in its additional contents. These may be salt or sulfur and cause poisoning by those substances. Oil causes vomiting and death from aspiration pneumonia. Animals do not do well and oil stays in the gut, appearing in the feces for long periods.
diesel and fuel o. see **crude oil**.
essential o. volatile oils extracted from plant sources by distillation or cold-pressing; many are used in alternative therapies such as aromatherapy. Some, including oils of camphor, citrus, melaleuca, pennyroyal and witnergreen, have significant toxicity for dogs and cats and should not be used.
ethereal o. see essential oil (above).
fixed o. an oil that does not evaporate on warming and occurs as a solid, semisolid or liquid.
o. gland see **uropygial glands**.
irritant o. occurs in plants; causes gastroenteritis; includes bryonin, croton and castor oils.
mineral o. a mixture of liquid hydrocarbons from petroleum. Mineral oil is available in both light (light liquid petrolatum) and heavy (liquid, or heavy liquid, petrolatum) grades. Light mineral oil is used chiefly as a vehicle for drugs, though it may also be used as a cathartic and to cleanse the skin. Heavy mineral oil is used as a cathartic, solvent and oleaginous vehicle. Excessive intake over a long period results in hypovitaminosis A.
o. pollution aquatic birds are worst affected because of pasting together of feathers, poisoning because of contamination of food source, blocking of nares and eyes and starvation because of unpalatability of food supply.
o. products includes kerosene (or kerosine, or paraffin), gasoline (or petrol), diesoline and additives to lubricating oils, e.g. highly chlorinated naphthalenes; any of them may cause poisoning.
o. spill accidental or negligent discharge of industrial oil on a body of water; effect is that the oil floats and pollutes the shore and covers aquatic birds and mammals with fatal results in most cases; salvage depends on capture of affected birds and animals and removing the oil.
sump o. see crankcase oil (above).
sweet o. olive oil.
sweet birch o. see **methyl** salicylate.
turpentine o. see **turpentine** oil.
volatile o. an oil that evaporates readily; such oils occur in aromatic plants, to which they give odor and other characteristics. See also essential oil (above).
o. of Wintergreen see **methyl** salicylate.
yew o. an irritant oil in *Taxus* spp., but not the principal toxin in that plant—**taxine** is.

oilseed the seeds of the linseed plant, rapeseed or canola, peanut, safflower (*Carthamus tinctorius*); biproduct oils from seeds include corn, grapeseed, olive, sesame, sunflower.

ointment [oint'mənt] a semisolid preparation for external application to the body. Official ointments consist of medicinal substances incorporated in suitable vehicles (bases).

okapi (*Okapia johnstoni*) a member of the giraffe family Giraffidae, but with short legs and neck. It has a similar head, face and lips to the giraffe, is about 5 ft tall at the withers and has horizontal stripes on its hindquarters and limbs, resembling those of a zebra.

Okavirus a genus in the family *Roniviridae*, order *Nidovirales*; members infect crustaceans, mostly prawns. The type species is gill-associated virus.

Okazaki fragments [o-kah-zah'ke] DNA sequences, 100 to 200 nucleotides long, synthesized on the lagging strand of DNA in DNA replication. The fragments are subsequently ligated together to form a continuous strand. They are produced because of the need for DNA polymerase to always synthesize in a 5′ to 3′ direction.

Okie a system of grading of feeder calves purchased for feedlots and based on percentage of beef versus dairy blood in the breeding. The bulk of these cattle are yearling, baldy-faced, Hereford cross steers. The name is a contraction of Oklahoma.

OL [L.] *oculus laevus* (left eye).

-ol word termination indicating an alcohol or a phenol.

olamine [ol'ə-mēn] USAN contraction for ethanolamine.

olaquindox a growth stimulant used as a feed additive for pigs.

Olax benthamiana Australian plant in the family Olacaceae; causes cyanide poisoning.

old dog encephalitis see old dog **encephalitis**.

Old English mastiff see **Mastiff**.

Old English sheepdog a large, compact dog distinguished by its profuse, shagg coat in gray, grizzle, blue or blue merle, with or without white markings, that covers the body, including the face, and obscures most of the body features. The tail is either naturally short or docked to a very short length. Called also the English bobtail. The breed is predisposed to congenital deafness, myelopoietic disorders, inherited cataracts and demodectic mange.

old man's beard ***Clematis*** *vitalba*.

old tuberculin see **tuberculin**.

Old World the Eastern Hemisphere; that part of the world (generally Europe, Asia, Africa) which was known before the discovery of America.

Oldenburgh 1. polled, German mutton and wool sheep. Called also Oldenburg whitehead, German whitehead. 2. a German breed of carriage horses, later refined through the introduction of Thoroughbred blood. Now an all purpose saddle horse, prized for dressage. They are usually black, brown or gray.

-ole suffix meaning a small.

oleaginous [o"le-aj'i-nəs] oily; greasy.

oleander [o"le-an'dər] ***Nerium oleander***, but also used in the common name of other plants.
yellow o. ***Cascabela*** *thevetia* (*Thevetia peruviana*).

oleandomycin a macrolide antibiotic extracted from cultures of *Streptomyces antibioticus*, similar to, but less active and more toxic than erythromycin. Used as the phosphate salt.

oleandroside a digitoxin-like glycoside, one of the toxic substances in *Nerium oleander*.

oleate [o'le-āt] 1. a salt of oleic acid. 2. a solution of a substance in oleic acid.

olecranarthritis [o-lek"rən-ahr-thri'tis] inflammation of the elbow joint.

olecranarthropathy [o-lek"rən-ahr-throp'ah-the] disease of the elbow joint.

olecranoid [o-lek'rə-noid] resembling the olecranon.

olecranon [o-lek'rə-non] the bony projection of the ulna at the elbow.

olefin [o'lə-fin] see **alkene**.

oleic acid [o-le'ik] a long-chain, 18-carbon, monounsaturated fatty acid found in animal and vegetable fats, particularly olive oil; the double bond is located at carbons 9,10; precursor of n-9 or omega 9 fatty acids.

olein [o'le-in] 1. pertaining to oleic acid. 2. a principal constituent of nondrying fats and oils. Called also triolein, glyceryl trioleate. Animal fat containing a high proportion of olein has a greasy character.

ole(o)- word element. [L.] *oil*.

oleo oil the oily fraction of rendered animal fat.

oleoresin [o"le-o-rez'in] 1. a compound of a resin and a volatile oil, such as exudes from pines, etc. 2. a compound extracted from a drug by percolation with a volatile solvent, such as acetone, alcohol, or ether, and evaporation of the solvent.

oleostearin a firm fraction of rendered animal fat, used in margarine manufacture.

oleotherapy [o"le-o-ther'ə-pe] treatment with oil, particularly by injection.

oleothorax [o"le-o-tho'raks] intrapleural injection of oil to compress and inactivate the lung.

oleovitamin [o"le-o-vi'tə-min] a preparation of fat-soluble vitamins in fish liver or edible vegetable oil.

oleum [o'le-əm] pl. *olea* [L.] oil.

olfact [ol'fakt] a unit of odor, the minimal perceptible odor, being the minimal concentration of a substance in solution which can

be perceived by a large number of normal individual animals, expressed in terms of grams per liter.

olfact- [ol'fakt] prefix meaning sense of smell.

olfaction [ol-fak'shən] 1. the act of smelling. 2. the sense of smell.

olfactology [ol"fak-tol'ə-je] the science of the sense of smell.

olfactometer [ol"fak-tom'ə-tre] an instrument for testing the sense of smell.

olfactory [ol-fak'tə-re] pertaining to the sense of smell.

o. bulb see olfactory **bulb**.

o. glands in the mucosa of the nasal olfactory region; branched tubuloalveolar glands secreting serous fluid; cleanse the mucosal surface, dissolve odor-producing substances.

o. hair modified cilia projecting from olfactory cells in the mucosa of the nasal olfactory area.

o. mucosa specialized olfactory cells in a region of nasal mucosa covering ethmoturbinates, turbinates and nasal septum.

o. nerve the first cranial nerve made up of about 20 bundles and concerned with the sense of smell. The cell bodies are situated in the olfactory mucous membrane of the nose. Nerve fibers lead caudad through openings in the cribriform plate of the ethmoid bone and connect with the cells of the olfactory bulb. From there the fibers pass inward to the cerebrum. See also Table 14.

o. neuroblastoma rare neoplasm, commonest in pups and kittens, characterized by local invasion of surrounding bone.

o. pit primordia of the nasal cavities commencing as pits in the olfactory placodes of the embryo. The pits deepen and finally open into the oral cavity as the choanae; the external orifices become the nostrils. Called also nasal pit.

o. system includes the olfactory part of the nasal mucosa, the olfactory nerves and the olfactory bulbs of the cerebrum.

o. tract a band of white nerve fibers visible on the ventral surface of the brain running caudally from the olfactory bulbs.

o. tractotomy surgical removal or transection of the olfactory tracts to produce an anosmia may be performed in cats as a means of controlling spraying and inappropriate urination.

olifantvel [Af.] the thickened, wrinkled, alopecic skin caused by ***Besnoitia*** *besnoiti* in cattle.

oligemia [ol"ĭ-je'me-ə] deficiency in volume of the blood. Estimation of the degree of oligemia, the severity of dehydration, is a vital assessment in many diseases of animals. See **packed cell volume**, **dehydration**.

olig(o)- word element. [Gr.] *few, little, scanty.*

oligochromasia [ol"ĭ-go-kro-ma'se-ə] deficiency of hemoglobin in the blood.

oligochymia [ol"ĭ-go-kĭ'me-ə] deficiency of chyme.

oligocythemia [ol"ĭ-go-si-the'me-ə] deficiency of the cellular elements of the blood.

oligodactyly [ol"ĭ-go-dak'tə-le] congenital absence of one or more digits. Called also hypodactyly.

oligodendrocyte [ol"ĭ-go-den'dro-sīt] non-neuronal (glial) cell of the central nervous system that produces myelin in the developing brain and maintains it thereafter.

oligodendroglia [ol"ĭ-go-dən-drog'le-ə] oligodendrocyte.

oligodendroglioma [ol"ĭ-go-den"dro-gli-o'mə] brain or spinal cord tumor thought to arise from oligodendrocytes.

oligodipsia [ol"ĭ-go-dip'se-ə] abnormally diminished thirst.

oligodontia [ol"ĭ-go-don'shə] congenital absence of some of the teeth. Considered a serious fault of conformation in some dog breeds.

oligodynamic [ol"ĭ-go-di-nam'ik] active in a small quantity; refers to the antimicrobial effect of very dilute solutions of metals such as silver and copper.

oligogalactia [ol"ĭ-go-gə-lak'she-ə] deficient secretion of milk.

oligohemia oligemia.

oligohydramnios [ol"ĭ-go-hi-dram'ne-os] deficiency in the amount of amniotic fluid.

oligohydruria [ol"ĭ-go-hi-droo're-ə] hypersthenuria.

oligomeganephronia [ol"ĭ-go-meg'ə-nə-fro'ne-ə] congenital renal hypoplasia in which there is a reduction in the total number of nephrons, and hypertrophy of the nephrons.

oligomer [ol'ĭ-go-mər] a short polymer.

oligomucous cell [ol'ĭ-go-mu'kəs] a cell which develops into a goblet cell in the intestinal epithelium.

oligomycin [ol'ĭ-go-mi'sin] antibiotic inhibitor of oxidative phosphorylation, acting at the O-sensitive subunit of F_0F_1-ATPase.

oligonucleotide [ol"ĭ-go-noo'kle-o-tīd] a polymer made up of a few to a hundred or more nucleotides. Can be made synthetically to a specified sequence.

o. ligation assay a technique for detecting a single nucleotide polymorphism (SNP) allele in a gene.

oligopeptides [ol"ĭ-go-pep'tīd] small peptides containing mixtures of amino acids.

oligophosphaturia [ol"ĭ-go-fos"fə-tu're-ə] deficiency of phosphates in the urine.

oligoplasmia [ol"ĭ-go-plaz'me-ə] deficiency of blood plasma.

oligopnea [ol"ĭ-gop-ne'ə] hypoventilation. Usually refers to reduced rate; apnea is complete cessation.

oligoptyalism [ol"ĭ-go-ti'ə-liz-əm] diminished secretion of saliva.

oligosaccharide [ol"ĭ-go-sak'ə-rīd] a carbohydrate which yields only a small number, usually 3 to 10, of monosaccharides on hydrolysis.

oligospermia [ol"ĭ-go-spur'me-ə] low volume of ejaculate; not to confuse with oligozoospermia, which is low number of spermatozoa in the ejaculate.

oligotrophia, oligotrophy a state of poor (insufficient) nutrition.

oligozoospermia [ol"ĭ-go-zo"o-spur'me-ə] low number of spermatozoa in the ejaculate.

oliguria [ol"ĭ-gu're-ə] reduced daily output of urine, which may be physiologic or pathologic. This has veterinary significance if the net intake is normal or if water is available ad lib; then it is a sign of renal insufficiency.

olingo (*Bassaricyon gabbii*) small, arboreal, nocturnal member of the Procyonidae; native to rainforests of Central and South America.

olivary [ol'ĭ-var"e] shaped like an olive.

o. body called also olivary nucleus; see **olive** (2).

o. nucleus see **olive** (2).

olive 1. the tree *Olea europaea* and its fruit. 2. olivary body; a rounded elevation lateral to the upper part of each pyramid of the medulla oblongata.

o. oil an emollient lubricant and mild laxative.

olivifugal [ol"ĭ-vif'u-gəl] moving or conducting away from the olive.

olivipetal [ol"ĭ-vip'ə-təl] moving or conducting toward the olive.

olivocerebellar tract [ol"ĭ-vo-ser"ə-bel'ər] nerve fibers passing from olive to contralateral cerebellum.

olivopontocerebellar [ol"ĭ-vo-pon"to-ser"ə-bel'ər] pertaining to the olive, the middle peduncles and the cerebellar cortex.

Ollier's disease [o-le-a'] multiple enchondromatosis, dyschrondroplasia.

Ollulanus [ol"u-lan'us] a genus of trichostrongyloid nematodes in the family Ollulanidae.

O. tricuspis found in the stomach of cats, foxes, wild cats and pigs. Causes chronic gastritis and emaciation in pigs and vomiting and wasting in cats.

olsalazine [ol-sal'ə-zēn] 5-amino-salicylate; used in the treatment of ulcerative colitis.

Olsen-Hegar needle holder a combination instrument constructed as a needle holder except that the half of each blade nearest to the pivot is shaped like a regular scissor blade. Used for driving the needle, then cutting the suture without changing instruments.

-olus suffix meaning a small.

-oma word element. [Gr.] *tumor, neoplasm.*

OMAGOD *o*ral *m*ucosal *a*nd *g*um *o*bscure *d*isease. An acronym for idiopathic oral ulceration present in up to 5% of normal sheep. A 'tongue-in-cheek' name coined during the 2001 outbreak of foot-and-mouth disease in the United Kingdom. Not to be confused with the instant messaging slang, OMG (oh my God), even though in the circumstances in which the term evolved that may have been applicable.

omarthritis [o"mahr-thri'tis] inflammation of the shoulder joint.

omasal [o-ma'səl] pertaining to or emanating from the omasum.

O-6: Olson-Hegar needle holder–scissors combination. From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide, 2nd Edition. Mosby, 2011.

VetBooks.ir

o. atony due to poorly digestible roughage in the diet; feed stagnates, leading to atony and eventually impaction.
o. functional stenosis achalasia of the reticulo-omasal sphincture as part of the syndrome of vagus indigestion of cows; causes accumulation of ingesta in the reticulorumen.
o. impaction usually identified at necropsy. Clinically there is recurrent indigestion with anorexia, scant, hard feces and possibly palpation of hard, distended omasum through the right flank or per rectum.
o. sulcus see omasal **groove**.
o. transport failure see **vagus** indigestion.

omasitis [o"mə-si'tis] usually accompanies rumenitis and, like it, is caused by infection with e.g. *Fusobacterium necrophorum* or with normal fungal inhabitants of the forestomachs, secondary to rumenoreticular acidosis as a sequel to grain engorgement; a necropsy finding rather than a clinical diagnosis.

omasoabomasal pertaining to the omasum and the abomasum.

omasum [o-ma'səm] the third and smallest compartment of the forestomachs of the ruminant. Connects with the reticulum through the reticulo-omasal orifice and with the abomasum through the omasoabomasal orifice. There is growing evidence that it functions mainly to absorb water and nutrients. Called also the bible because of its many, tightly packed leaves.

omega [o-ma'gə] the twenty-fourth and last letter of the Greek alphabet, Ω or ω.

3-omega fatty acids see omega-3 **fatty acids**.

omental [o-men'təl] pertaining to or emanating from the omentum.
o. bursitis see intra-abdominal **abscess**.
o. hernia passage of a loop of intestine through a tear in the omentum.
o. tear see omental hernia (above).
o. veil a lace-like omentum such as occurs in carnivores, pigs and the horse.

omentectomy [o"mən-tek'tə-me] excision of all or part of the omentum.

omentitis [o"mən-ti'tis] inflammation of the omentum.

omentofixation [o-men"to-fik-sa'shən] fixation of the omentum to the abdominal wall, especially to establish collateral circulation in portal obstruction or, in ruminants, to avoid recurrence of abomasal displacement. Called also omentopexy.
Hanover method o. in a right flank laparotomy the omentum is included in the suture line when the incision is closed.
Utrecht method o. through a left flank incision the omentum is sutured to the midline with a suture that passes through the abdominal wall and is tied on the outside of the skin.

omentopexy [o-men'to-pek"se] see **omentofixation**.

omentorrhaphy [o"mən-tor'ə-fe] suture or repair of the omentum.

omentum [o-men'təm] pl. *omenta* [L.] a fold of peritoneum extending from the stomach to adjacent abdominal organs. Lace-like in pigs, carnivores and the horse, sheetlike in ruminants.
gastrocolic o. the part of the greater omentum attached to the colon.
gastrohepatic o. the part of the lesser omentum attached to the liver.
greater o. the double fold of peritoneum derived from the dorsal mesogastrium that extends from the greater curvature of the stomach over the floor of the abdomen like an apron; poorly developed in the horse and well developed in ruminants.
lesser o. a peritoneal fold joining the lesser curvature of the stomach and the first part of the duodenum to the porta hepatis.
o. majus greater omentum.
o. minus lesser omentum.

omeprazole [o-mep'ra-zōl] a substituted benzimidazole that is a long-acting inhibitor of gastric ATPase; a proton pump inhibitor. Used in the treatment of esophageal and gastric inflammation and ulceration.

omicron [om'ī-kron] fifteenth letter in the Greek alphabet, O or o.

omitis [o-mi'tis] inflammation of the shoulder.

omnivore [om'-ni-vor] an **omnivorous** animal.

omnivorous [om-niv'ə-rəs] eating both plant and animal foods.

omocervical artery see Table 9.

omohyoid [o"mo-hi'oid] pertaining to the shoulder and the hyoid bone.

OMP orotidine 5′ monophosphate.
OMP decarboxylase enzyme catalyzing the synthesis of uridine monophosphate, the first pyrimidine nucleotide essential for RNA structure.

O-7: Omphalitis (navel ill). Swelling of the external umbilicus with purulent exudate. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

OMP synthesis synthesis of the first nucelotide in the pathway of pyrimidine synthesis.

omphalectomy [om"fə-lek'tə-me] excision of the umbilicus.

omphalelcosis ulceration of the umbilicus.

omphalic [om-fal'ik] pertaining to the umbilicus.

omphalitis [om"fə-li'tis] inflammation, usually by infection, of the tissues of the umbilicus, usually involving the umbilical veins. Called also navel ill. See also **joint-ill**.
avian o. caused by infection of the yolk by *Escherichia coli*, *Proteus* spp., bacilli and enterococci and manifested by embryonic and early chick mortality. The yolks are caseous or watery and the chickens edematous. Called also mushy chick disease.

omphal(o)- word element. [Gr.] *umbilicus*.

omphaloangiopagus [om"fə-lo-an"je-op'ə-gəs] twin fetuses, one of which derives its blood supply from the umbilicus or placenta of the other. Called also allantoidoangiopagous.

omphaloarteritis [om"fə-lo-ahr"tə-ri'tis] inflammation of the umbilical arteries.

omphalocele [om'fə-lo-sēl"] protrusion, at birth, of part of the intestine through a defect in the abdominal wall at the umbilicus.

omphalomesenteric [om"fə-lo-mes"ən-ter'ik] pertaining to the umbilicus and mesentery.
o. duct the duct which connects the yolk sac with the embryonal alimentary tract in vertebrates.
o. vessels arteries and veins carrying blood between the embryonal circulation and the yolk sac; destined to contribute to the blood supply to the gut and the portal venous drainage.

omphalopagus [om"fə-lop'ə-gəs] conjoined twins joined at the umbilicus.

omphalophlebitis [om"fə-lo-flə-bi'tis] inflammation of the umbilical veins. See also **joint-ill**.

omphalorrhagia [om"fə-lo-ra'jə] hemorrhage from the umbilicus.

omphalorrhea [om"fə-lo-re'ə] effusion of lymph at the umbilicus.

omphalorrhexis [om"fə-lo-rek'sis] rupture of the umbilicus.

omphalosite [om'fə-lo-sīt"] the underdeveloped member of allantoidoangiopagous twins, joined to the more developed member (autosite) by the vessels of the umbilical cord.

omphalotomy [om"fə-lot'ə-me] the cutting of the umbilical cord.

Omsk hemorrhagic fever see **encephalitis**.

on call 1. said of a large animal veterinarian who, while at home, is on call for out-of-hours night or weekend cases. 2. see **calling**.

***onc* genes** genetic elements that are causatively associated with cancer. Originally applied to genes found in rapidly transforming oncogenic retroviruses, particularly sarcoma viruses, which were designated v*onc* genes, most of which have a cellular homolog termed c*onc*. The term has been broadened to include genes found in other viruses and other cellular genes that are causatively associated with cancer.

Onchocerca [ong"ko-sur'kə] a genus of nematode parasites in the family Onchocercidae. They are important as causes of **onchocercosis**. Their life cycles depend on the carriage of larval microfilariae by a variety of insects, chiefly black flies and midges (families Simuliidae and Ceratopogonidae). The microfilariae are found in the lymph and connective tissue spaces of the skin. Called also *Wehrdikmansia*.
O. armillata the microfilariae are found in the skin of the hump, withers, neck, dewlap and umbilicus and the adults in the aorta of cattle, buffalo, sheep, goats and donkeys.
O. bohmi see ***Elaeophora bohmi***.
O. cebei found in nodules on the brisket and the lateral aspects of the hindlimbs of buffalo. Called also *O. sweetae*.

O. cervicalis found in the ligamentum nuchae of the horse and mule. The microfilariae are commonest in the area of the linea alba. Etiologically related to the occurrence of fistulous withers, poll evil, equine conjunctivitis and previously equine recurrent uveitis (periodic ophthalmia).
O. cervipedis found in the subcutaneous tissues of the neck and limbs of deer.
O. dukei adults are found in nodules in subcutaneous and perimuscular sites in cattle, mostly in the thorax, abdomen, diaphragm and thighs.
O. flexuosa occurs in deer.
O. garmsi parasites of deer.
O. gibsoni found in nodules under the skin of the brisket or the lateral aspect of the hindlimbs of *Bos taurus* and *Bos indicus* cattle.
O. gutturosa found in cattle and buffalo in the ligamentum nuchae, on the scapular cartilage and in the hip, shoulder and stifle areas.
O. lienalis found in the gastrosplenic ligament, on the capsule of the spleen and above the xiphisternum in cattle.
O. ochengi found in cattle, in nodules in cutaneous and subcutaneous sites on the udder, scrotum and flanks.
O. raillieti adult worms are found in the ligamentum nuchae, in subcutaneous cysts on the penis and in perimuscular connective tissue of donkeys.
O. reticulata a parasite of horses, mules and donkeys. Adult worms are found in the connective tissue of flexor tendons and suspensory ligament of the fetlock, mostly in the forelimb.
O. rugosicauda found in the subcutaneous fascia in the shoulders and back of roe deer.
O. sweetae see *O. cebei* (above).
O. synceri found in subcutaneous tissues in African buffalo.
O. tarsicola a parasite of deer.
O. tubingensis a parasite of deer.
O. volvulus causes dermatitis and ocular disease in humans.

onchocerciasis [*ong"ko-sər-ki'ə-sis*] infestation by the filarioid worm *Onchocerca* spp.; can cause a variety of diseases listed generally under the heading of **onchocercosis**.

onchocercosis [*ong"ko-sər-ko'sis*] the diseases caused by infection with the nematodes *Onchocerca* spp. The presence of large numbers of microfilariae in the skin is associated with a severe, summer dermatitis called also wahi, kasen in cattle and summer mange or allergic dermatitis in horses. See also equine **allergic** dermatitis. The adult worms cause little problem to the animals but the hides and carcasses are damaged and reduced in value. The relationship between the worms and the occurrence of fistulous withers, poll evil and tendonitis is unproven. The lesions in the aorta caused by *O. armillata* are often extensive but appear to cause little clinical disease.

onchosphere see **oncosphere**.

Oncicola [*on-sik'ə-lə*] a genus of thorny-headed worms (acanthocephalans) in the family Macracanthorhynchidae.
O. campanulatus found in the intestine of dogs.
O. canis found in the intestine of dogs, coyotes, cats, lynx and bobcats. Chance infections can occur in young turkeys and cause cysts in the esophageal wall.

onc(o)- word element. [Gr.] *tumor, swelling, mass*.

oncocyte [*ong'ko-sīt*] oxyphil cells with acidophilic and granular cytoplasm, found in the endocrine glands and epithelial tissues.

O-8: Onchocercosis in the eye of a horse. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

oncocytoma [*ong"ko-si-to'mə*] a rare benign neoplasm arising from oncocytes; most frequently reported in the laryngeal area in young dogs.

oncofetal antigen [*ong"ko-fe'təl*] a fetal antigen that is also produced by some types of cancer cells, such as carcinoembryonic antigen (CEA) or alpha-fetoprotein (AFP). See also oncofetal **antigen**.

oncogenes [*ong'ko-jēnz*] 1. genes carried by tumor viruses that are directly and solely responsible for the neoplastic transformation of host cells. Many oncogenes function after integration into the DNA of the host cell and some up-regulate normal downstream host cell genes to cause neoplasia. 2. any genetic element linked to cancer.

oncogenesis [*ong"ko-jen'ə-sis*] the production or causation of tumors. Called also carcinogenesis.
multistep o. a theory of tumor induction involving several sequential stages including initiation, promotion and mutations.
viral o. some retroviruses, papovaviruses, adenoviruses, hepadnaviruses, herpesviruses and poxviruses can all be oncogenic.

oncogenic [*ong"ko-jen'ik*] giving rise to tumors or causing tumor formation; said especially of tumor-inducing viruses.

oncogenous [*ong-koj'ə-nəs*] arising in or originating from a tumor.

oncology [*ong-kol'ə-je*] the sum of knowledge regarding tumors; the study of tumors.

oncolysate [*ong-kol'ĭ-sāt*] any agent that lyses or destroys tumor cells.

oncolysis [*ong-kol'ĭ-sis*] destruction or dissolution of a neoplasm.

oncoma [*ong-ko'mə*] a tumor.

Oncorhynchus genus of finfish in family Salmonidae; include *O. clarki* (cutthroat trout), *O. gorbuscha* (pink salmon), *O. keta* (chum salmon), *O. kisutch* (coho salmon), *O. mykiss* (rainbow trout), *O. nerka* (sockeye salmon), *O. tshawytscha* (Chinook salmon).

Oncornavirinae a subfamily of viruses in the family *Retroviridae*, members of which cause leukosis in animals and include the viruses of avian leukosis, bovine viral leukosis, Rous sarcoma, murine leukemia virus, feline leukemia virus.

oncornavirus [*ong-ko'mə-vi'rəs*] a member of the family ***Retroviridae***.
o.-associated cell membrane antigen see feline oncornavirus cell membrane **antigen** (FOCMA).

oncosis [*ong-ko'sis*] a morbid condition marked by the development of tumors.

oncosphere [*ong'ko-sfēr*] the larva of the tapeworm contained within the external embryonic envelope within the egg and armed with six hooks. Called also onchosphere.

oncotherapy [*ong"ko-ther'ə-pe*] the treatment of tumors.

oncotic [*ong-kot'ik*] pertaining to swelling.
o. pressure see oncotic **pressure**.

oncotomy [*ong-kot'ə-me*] incision of a tumor or swelling.

oncotropic [*ong"ko-tro'pik*] having special affinity for tumor cells.

oncovirus [*ong'ko-vi"rəs*] any virus that causes cancer. Includes the viruses of avian **leukosis**, **Rous sarcoma** complex, **feline** leukemia virus, **feline** sarcoma virus, **bovine** viral leukosis.

ondansetron [*on-dan'sə-tron*] a serotonin 5-HT_3 receptor antagonist, used as an antiemetic.

Ondiri disease see **bovine** petechial fever.

one cell–one antibody rule the principle that any given B lymphocyte produces a specific antibody with a particular H chain isotype and one L chain isotype; because of class switching can be rephrased to imply one cell–one antibody specificity.

one-day event a contraction of the three-day event but like that contest is aimed at selecting the best all-round horse and rider. The events usually contested are show-jumping, dressage and cross-country.

one-hit theory lysis of an erythrocyte by complement can result from only one site of injury to the cell.

one-stage prothrombin time see **prothrombin** time test.

Ongole cattle draft, dairy, zebu type Indian cattle; gray-white with shorthorn horns.

onion *Allium cepa*; feeding of large quantities of bulbs causes hemolytic anemia, the hemolytic agent is *n*-propyl disulfide.
branched o. weed ***Trachyandra*** *divaricata*.
Cape poison o. see ***Ornithoglossum viride***.
o. grass ***Romulea*** *rosea* (*R. australis*).

O

o. grass + *Helminthosporium biseptatum* causes incoordination and fall in fertility rate to very low level. Called also romulosis.
poison o. ***Dipcadi glaucum***.
o. poisoning accidental ingestion of large quantities of onions or cooked dishes rich in onions causes a Heinz **body** hemolytic anemia in dogs and cats. There is methemoglobinemia and hemoglobinuria.
sea o. ***Drimia*** *maritima*.
o. weed ***Bulbine*** *bulbosa*.
wild o. ***Allium*** *validum*, ***Dipcadi glaucum***.
onion skinning said of blood vessels.
onlay [on'la] a graft applied or laid on the surface of an organ or structure.
onomatology the science of names and nomenclature.
ONPG test *o*-nitrophenyl-β-D-galactopyranoside test, a test used to distinguish different bacterial species.
Ontario encephalitis, Ontario encephalomyelitis see hemagglutinating **encephalomyelitis** virus disease of pigs.
ontogeny [on-toj'ə-ne] the developmental history of an individual.
onychauxis [on"ĭ-kawk'sis] overgrowth or thickening of nails.
onychectomy [on"ĭ-kek'tə-me] excision of a claw or nail or claw or nail bed. A surgical procedure carried out on single, damaged or diseased claws and at other times in domestic cats for social reasons and exotic cats, canines and ursids for the well-being of handlers and cage-mates.
nail clipper o. a guillotine-type nail clipper is used to remove the third phalanx in cats.
onychia [o-nik'e-ə] inflammation of the nail or claw bed, resulting in loss of the nail or claw.
Onychium contiguum Indian fern in the family Adiantaceae (ferns); contains the toxin ptaquiloside; causes neoplasm of the bladder wall and intermittent hematuria in cattle. Called also fuh.
onych(o)- word element. [Gr.] *the nails*.
onychodystrophy [on"ĭ-ko-dis'trə-fe] malformation of a nail or claw.
lupoid o. symmetrical sloughing of claws occurs, followed by regrowth of misshapen, crumbling claws. Histological changes show a lichenoid interface dermatitis. German shepherd dogs and Rottweilers appear to be predisposed.
onychogenic [on"ĭ-ko-jen'ik] producing or stimulating the formation of the substance of the claw, nail or hoof.
onychogryphosis, onychogryposis [on"ĭ-ko-grĭ-fo'sis] abnormal hypertrophy and curving of the nails or claws. In a racing Greyhound, a serious defect that reduces racing performance.
onychoid resembling a nail or claw.
oncholysis [on"ĭ-kol'ĭ-sis] loosening or separation of a nail or claw from its bed; onychoschizia.
onychomadesis [on"ĭ-ko-mə-de'sis] complete loss of the nails (claws).
onychomalacia [on"ĭ-ko-mə-la'shə] softening of the nail or claw.
onychomycosis [on"ĭ-ko-mi-ko'sis] fungal disease of the nails or claws; the nails (claws) become misshapen, discolored, thickened and friable.
onychopathy [on"ĭ-kop'ə-the] any disease of the nails or claws.
onychorrhexis [on"ĭ-ko-rek'sis] spontaneous splitting or breaking of the nails or claws.
onychoschisis fissures in the nails or claws.
onychosis [on"ĭ-ko'sis] disease or deformity of a nail or the nails.
onychotomy [on"ĭ-kot'ə-me] incision into a fingernail or toenail.
onyx [on'iks] 1. a variety of hypopyon. 2. a claw or nail.
oo- word element. [Gr.] *egg, ovum*.
ooblast [o'o-blast] a primitive cell from which an oocyte ultimately develops.

O-9: Lupoid onychodystrophy in a dog. Numerous dystrophic nails growing in abnormal directions. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

O-10: Onychomycosis in a dog.

Oochoristica [o"o-ko-ris'tĭ-kə] a genus of tapeworms in the family Listowiidae. Primarily parasitic in reptiles.
O. megatoma found in squirrel monkeys. See ***Mathevotaemia***.
oocyst [o'o-sist] the resistant stage of the life cycle of coccidial parasites. It contains a zygote that under appropriate conditions sporulates to become an infective oocyst (containing sporocysts and sporozoites). It may also remain infective for long periods.
o. patches see **oocyst** plaques.
o. plaques raised patches up to 0.5 inch diameter in small intestinal epithelium in goats and sheep caused by heavy infestation by coccidial oocysts.
oocyte [o'o-sīt] a female gametocyte, egg or ovum, ovocyte or rarely ocyte, in the process of development; it is derived from an oogonium, and is called a primary oocyte prior to completion of the first maturation division, and a secondary oocyte between the first and second maturation division.
o. activation sequence of events triggered by the fertilizing sperm and that are required for initiation of embryonic development. Activation of oocytes can be obtained in vitro by applying chemical and electrical stimulation and is a step required for cloning.
